

PROTEON XPR36: POWERFUL AND FLEXIBLE PROTEIN-TO-PROTEIN INTERACTION ANALYSIS

M. Martin ⁽¹⁾.

⁽¹⁾ Bio-Rad Laboratories.

The ProteOn XPR36 instrument provides SPR technology for studying protein to protein interactions combined with the power and flexibility of a high-throughput device. As a result of that up to 36 interactions can be measured in real-time to speed up your research: improved flexibility and experiment design, improved efficiency in optimizing experimental conditions and excellent data quality by allowing to compare data from different experiments in a single chip.
