- (3) *What is* is motionless and lies complete within its limits or boundaries (fragment 8, lines 26-33). Parmenides asserts that reality is totally immovable in the sense of staying in the same place. “If all that exists is a single continuous plenum, there is nowhere for it to move as a whole, nor has it any parts which could change places internally.”¹⁰¹ The impossibility of kinesis is the climax of Parmenides’ message: “The argument for confining all reality within *peirata* [i.e., limits or boundaries] seems to be this. What is *apeiron* is essentially unfinished, incomplete, never a perfect whole however much of it one may include. But reality cannot be incomplete.”¹⁰² Once more, the denial of motion and change renders all human experience as illusory and excludes the possibility of any cosmogony.¹⁰³ At this point of *On Nature*, the compelling grandeur of Parmenides’ language is simply astonishing. In Bringhurst’s rendering:

“It is motionless, too, in its strong moorings,
 with neither beginning nor end,
 while birth and death are driven out to sea
 by real understanding of the real.
 Remaining itself and in itself, it rides
 in place all by itself, perpetually
 poised and in position. Irresistible recursion
 holds it in its moorings that protect it all around.
 WHAT IS is unailing – this is the law –
 because WHAT IS is missing nothing.
 WHAT ISN’T – just supposing it were present –

and the imperishability of the one reality, which is eternal and one, unique. The multiplicity of existing things in which the ordinary unthinking human believes is palpably illusory then. *Ibid.*, p. 30.

¹⁰³ Guthrie, *ibid.*, p. 38.

would be lacking in absolutely everything.¹⁰⁴

- (4) *What is* has nothing to do with coming-into-being, locomotion or alteration, which are names without content (fragment 8, lines 34-41). This is a recapitulation of the main conclusions already reached about the nature of reality, though a new reflection is added. Coming into being and perishing, movement in space and change of quality are all unreal. These are mere empty words standing for nothing real.¹⁰⁵ All thought must have a real object, and this real object is unique, whole and unmoved. Parmenides identifies thought with *being*, and what thinks with *what is*.¹⁰⁶ Bringham captures Parmenides' subtle thinking in these words:

WHAT IS is thought itself,
as well as what is thought of.
You will not find thought apart from being,
to which it is betrothed.
In the same way, time
is not – and is not going to become –
something other than and separate from being.
Being's share of being
holds being motionless and whole.¹⁰⁷

- (5) *What is* is like a round ball or a perfect immovable sphere (fragment 8, lines 42-49). What is cannot be in greater or less degree in one direction or another. There are no intervals of not-being to separate portions of homogenous being.¹⁰⁸ This one true being does not occupy space but is rather purely conceptual. "It is grasped by intellectual insight, not by the senses. It is immutable and timeless, neither changing in quality nor moving in space. It is unique, completely homogeneous, and indivisible. [...] It is not a body filling space with its physical bulk... [...] Space has been abolished, as time was abolished by the denial of past and future."¹⁰⁹ In Bringham's rendering:

... being is complete one every side..
Like the body of a smoothly rolling ball,
it is the same from center to edge in every direction.
It isn't any bigger, and it isn't any smaller,
in one place of another. It can't be, because
WHAT ISN'T isn't there
to keep it from perfecting its identity. [...]
WHAT IS is entirely inviolate.
Equalling itself on every side,
it rides against its moorings uniformly.¹¹⁰

The remaining lines of fragment DK B8 concern the false world of seeming. Now the goddess will tell the philosopher of the world of appearances. Only the doctrine of one being contained the truth for Parmenides, and the physical world of plurality and change was simply false.¹¹¹ There is not a world containing a plurality of many different things arising from a single *arché*. One thing exists, namely *what is*, and nothing else. Aristotle understood from the outset that only the doctrine of one being contained the truth for

¹⁰⁴ Bringham, "The Fragments of Parmenides", *ibid.*, pp. 151, 153.

¹⁰⁶ Guthrie, *ibid.*, pp. 41-42.

¹⁰⁷ Bringham, "The Fragments of Parmenides", *ibid.*, p. 153. It goes on like this: "Every conceivable name has been given to being, / bestowed by human beings, who believe / that generation and destruction, / absence and presence, and changes / of location and complexion constitute the real." *Ibid.*, p. 153.

¹⁰⁸ Guthrie, *ibid.*, p. 44.

¹⁰⁹ Guthrie, *ibid.*, p. 45.

¹¹⁰ Bringham, "The Fragments of Parmenides", *ibid.*, pp. 153, 155.

¹¹¹ Guthrie, *ibid.*, p. 55.

Parmenides, and that the physical world of plurality subject to change was simply false, as can be seen from these excerpts from three different works of his:

- a) *Metaphysics* 986b 28: “Convinced that, beside what is, what is not is nothing, of necessity he supposed that one thing exists, namely what is, and nothing else.”
- b) *De caelo* 298b 14: “Some earlier philosophers, e.g. Melissus and Parmenides, flatly denied generation and destruction, maintaining that nothing which is either comes into being or perishes; it only seems to us as if this happens.”
- c) *Physics* 191a 27: “They say that no existing thing either comes into being or perishes because what comes into being must originate either from what exists or from what does not, and both are impossible: what is does not become (for it already is), and nothing could come to be from what is not.”¹¹²

Let us now return to “Parmenides” once again. Stanzas 6 and 7 of this complex composition concerns the astonishing moment of revelation Parmenides experiences as he realizes that *what is* is an eternal, indivisible and motionless unity of utter perfection, endowed with all the characteristics that have been outlined above. The poetic voice strives hard to record the purely physical or bodily reaction of the thinker in the face of this unique mystical experience: the focus is on his mind and on his heart in the first place, and then on a seemingly chaotic enumeration or catalogue of the multiplicity of things in this world that are reduced to one true *being*:

And Parmenides lay in the goat-dunged, heavy-stemmed
grass, imagining things and thinking
of all of them *there* in the inwoven ply, his mind flying
and gulping, trying for the whole cascade:
his brainlobes pumping like lungs, like a muscle,
the nervecords thundering in the bones’ coulisses,
and the heart’s whole cargo coming
tumbling up into him:
goddesses, girls, white water, olive trees,
sharks’ roe, the sea-haze,
the migrating eye of the flounder

... *have to be there*
always. Everywhere.

In “Finding the Form of an Ancient Text”, Bringhurst explores the kind of typographical challenge *The Fragments* posed to him. At some point, he reflects: “What I wanted to bring across is the intellectual sensuosity and passion I was hearing in the poem: a voice enraptured by ideas and probing for him, both at the same time.”¹¹³ The thought occurs that this is exactly what the poet is trying to convey in the stanzas just quoted above. Bringhurst’s language is muscular and has a purely physical texture that is simply impressive. The mind of the Eleatic thinker is trying to assimilate “*the whole cascade*” of the revelation the goddess is imparting to him. Submerged in a state of heightened awareness and intense intellectual activity, his brainlobes, his nervecords and his heart are all linked to bodily parts (lungs, muscle and bones) which are being strained to their fullest capacity. Then, *what is* is conceptualized as being not a perfect sphere or rolling ball, but as an “inwoven ply” where there is enough room for every single, conceivable thing in this

¹¹² Quoted by Guthrie, *ibid.*, p. 55.

¹¹³ Bringhurst et al., “Finding the Form of an Ancient Text”, *Carving the Elements*, pp. 94-95.

world. One is inevitably reminded of Borges' *aleph*, a most curious object capable of embodying within its boundaries the universe in its entirety. But in the case of Parmenides' *being*, time and space seem to be abolished altogether, and the kaleidoscopic richness of the world is reduced to just one undifferentiated continuum or plenum where all things are fused into a whole. Immortals and mortals (*goddesses* and *girls*), as well as the primordial sea (as symbolized by *white water*, *sharks' roe*, *sea-baze* and *the migrating eye* of a fish called *flounder*) and earth (as symbolized by *olive trees*) have been there always as indistinguishable expressions of *what is*. It comes as no surprise at all that the whole revelation should have "*distressed and dumbfounded*" Parmenides, and yet he was courageous enough to keep on pursuing the intimation that "*what is is everything that is*" to unfathomable extremes, until he reaches the moment at which everything intermingles into "*the endless, full, / indivisible stillness: / the lock / on the safe of creation.*" That is to say, the eternal, finished, continuous, motionless being that is the core of reality, the "*safe of creation.*" One is inevitably reminded of fragment 20 (Cornford's) of Parmenides, which reads as follows: "*The name of the one thing that is utterly / untroubled is WHAT IS.*"¹¹⁴ At this point, the last stanza of Parmenides looks like an afterthought. After the composition of *On Nature*, after the mental and physical extenuation that it brought to the philosopher, he decided to take up law and provide his fellow citizens with a number of laws in Elea. They were enforced for a period of time in his city, according to the eminent historian Plutarch:

Parmenides then took up law
and wrote numerous statutes,
a very great number of statutes
which, Plutarch reports,
were enforced for some years in Elea.

Bringhurst has shared his fascination with the Presocratics with other eminent thinkers and poets – Plato, Aristotle, Simplikios, Henri Estienne, Joseph Scaliger, Gerard Manley Hopkins, Martin Heidegger, Jan Zwicky, Guy Davenport, Charles Kahn and Peter Koch, among others. At the age of 23, Hopkins wrote a four-page essay on Parmenides which Bringhurst particularly admires. He writes: "His great text, which he repeats with religious conviction, is that Being is and Not-being is not – which perhaps one can say, a little overdefining his meaning, means that all things are upheld by instress and are meaningless without it [...] To be and to know or Being and thought are the same."¹¹⁵ We are fortunate to have Bringhurst's translation of the 20 extant fragments of such a lucid mind as Parmenides'. In the Introduction to *Carving the Elements*, Bringhurst explains what the whole enterprise meant to him; it was above all "an exercise in carving thought – primarily by hand", and something else:

This is the story of making a book [...] Why tell the story at all if its actually incarnate in the artefact? Isn't he silent eloquence of the thing itself enough? It is, of course – but objects tell their stories only at first hand, to those who get to know them. Books made the way The Fragments of Parmenides was made are inevitably costly and inevitably scarce. They honor the text, but they restrict its circulation. Because of the craftsmanship they embody, they also honor the humanity of humans – yet only a few humans will ever be able to handle them long enough and look at them closely enough to soak that silent knowledge up again. So while the letterpress edition of *The Fragments* was very satisfying to make, it seemed

¹¹⁴ Bringhurst, "The Fragments of Parmenides", *ibid.*, p. 161.

¹¹⁵ Bringhurst, "The Fragments of Parmenides", *ibid.*, p. 135. The essay is published in *The Journals and Papers of Gerard Manley Hopkins*, edited by Humphrey House & Graham Storey: Oxford University Press, 1979, 127-130.

to us – long before it was even completed – that after it was done we ought to take another step.

We wanted to share the text and translation more broadly first of all. We also wanted to share, insofar as possible, the physical sense of connexion we had developed – each in our own way – with the tradition of humanist learning that had made Parmenides’ poem a possibility and kept his name and thought afloat through a lot of turbulent, difficult times. This seemed to mean producing two more books: a more affordable and portable edition of the text and translation itself, and an equally affordable and portable account of what went on.¹¹⁶

We are among the few fortunate people to have had the opportunity to see, touch and read one copy (104/120) of the numbered limited edition of *The Fragments of Parmenides*, bound in quarter leather, under the call number B235. P23 F7 2003, at the Rare & Special Collections of the Library of the University of British Columbia in the summer of 2010 (July 23). The book is prefaced with DK B3 (fragment 4 in Bringham’s translation) in both Greek and English: “... because to be and to have meaning are the same.” The 20 fragments are grouped under three sections: part I comprises fragments 1-7; part II comprises fragment 8 (the heart of the poem); and part III consists of fragments 9-20. Then comes an essay, “Afterword: The Poetry of Philosophy and the Survival of Pagan Thinking”, followed by Notes, Concordance, and Colophon. While reading *The Fragments of Parmenides* at UBC library in the summer of 2010, we came across a manuscript note by Robert Bringham, dated 3 April 2004. What follows is a transcription of this unpublished manuscript text. I can think of no better way of expressing what I felt right then, there, reading *The Fragments of Parmenides*:

Thirty years ago, I first walked into the Rare Book reading room at UBC. I was new in town. I needed to get in touch with what belonged here. I also needed to stay in touch with the rest of time and space. Books are the best means yet invented for accomplishing these ends: simple, low-tech models of the world into which people weld their hearts and souls.

Books, like everything humans make, are subject to fashion, but getting in touch means what it says: touching, holding things in your mind and hand. And touching pierces fashion. Holding a 16th-century book in your hand, turning its pages, reading the paper and type as well as the text, can teach you things you cannot learn from any book *about* the 16th century.

Manuscript books were made in Greece 2500 years ago. None of them survive, but the letterforms, the language, and parts of the texts survive. This book, *The Fragments of Parmenides*, made in the first years of the 21st century, is an effort to reach back with one hand – 2500 years back – and forward to the present with the other, touching something at both ends. Books like this are rare because they cannot be anything else. But lucky for us, this is a place where you can touch them.

Robert Bringham · 4 April 2004

III · MILETOS & IV · A SHORT HISTORY

The first Presocratics were Thales, Anaximander and Anaximenes, all of them citizens of Miletos, an Ionian Greek city on the west coast of Asia Minor and a centre radiating a tremendous commercial and intellectual energy in the beginning of the 6th century BCE. Guthrie says that “shipping, trade and industry combined to give this busy harbor-city a

¹¹⁶ Bringham et al., *Carving the Elements*, p. 13 and pp. 15-16.

leading position and wide connexions, extending to the Black Sea in the north, Mesopotamia in the east, Egypt in the south and the Greek cities of South Italy in the west. Its government was aristocratic, and its leading citizens lived in an atmosphere of luxury and of a culture which may be broadly described as humanistic and materialistic in tendency.”¹¹⁷ Plato and Aristotle said that leisure was the mother of philosophy, that disinterested intellectual activity only thrives in leisure, once the practical needs of life are satisfied. Needless to say, the Milesian philosophers had the prerequisite leisure and the stimulus for disinterested intellectual inquiry, which is the spring of philosophy. In that historical and social context, the ultimate source of philosophy is wonder or curiosity in the face of the mystery implicit in *what is*. It was certainly curiosity, and not “thought of mastering the forces of nature in the interests of human welfare or destruction, which led them to those first attempts at a grand simplification of natural phenomena.”¹¹⁸ This respectful attitude towards the real must have been an appealing motive for Bringham to pay attention and devote time to the study of the Presocratics: unlike the Egyptian and Mesopotamian peoples (interested in knowledge in so far as it served a practical purpose), the Greeks possessed “that love of truth and knowledge for their own sakes” which they embodied in their own word *philosophia*, literally ‘the love of wisdom’.¹¹⁹ And so the Presocratics started asking ultimate and universal questions concerning the genesis of exiting things, the substance of which they are made.

The change from a mythical or theological to a physical or natural view of the universe came with Thales of Miletos, who with his fellow-citizens Anaximander and Anaximenes formed what is now known as the Milesian School. A thread of continuity is in fact discernible in what we know of their doctrines as preserved in fragments in later authors, Aristotle chief among them. They asked the same questions: “Can this apparently confused and disordered world be reduced to simpler principles so that our reason can grasp what it is and how it works? What is it made of? How does change take place? Why do things spring and grow, then decline and die? How can one explain the alternation of day and night, summer and winter?”¹²⁰ And the answers they gave to these questions abandoned mythological solutions and embraced intellectual ones instead. They could no longer believe in a world ruled by the caprice of the anthropomorphic gods in whom their contemporaries believed. They were convinced that there was an inherent orderliness beneath the manifold phenomena of the world, and that the rational explanation of nature was to be sought within nature itself. The human mind was able to grasp the simpler and more orderly pattern hidden beneath the bewildering confusion of visible phenomena as perceived by the senses.

¹¹⁷ Guthrie, *A History of Greek Philosophy*, Volume I, pp. 29-30.

¹¹⁸ Guthrie, *A History of Greek Philosophy*, Volume I, p. pp. 30-31.

¹¹⁹ Guthrie dwells also on other key concepts, which are the Greeks’ interest in ultimate causes, their love of order, their discovery of form and their gift for abstraction: “The Greek asked ‘Why?’, and this interest in causes leads immediately to a further demand: the demand for generalization. [...] This advance to higher generalizations constitutes the essence of the new step taken by the Greeks.” (p. 36) This is closely connected to their discovery of form, which “marks the advance from percepts to concepts, from the individual examples perceived by sight or touch to the universal notion which we conceive in our minds” (p. 36). This conceptual attitude to form was more deeply ingrained in the Greeks than in the Egyptians or the Mesopotamians, for instance, for whom knowledge was valuable as long as it served practical purposes. In this respect, their gift for abstraction, “with its limitless possibilities and [...] its inherent danger, was the peculiar property of the Greeks.” (p. 37) This must have been an intoxicating experience for these early thinkers, says Guthrie.

¹²⁰ Guthrie, *A History of Greek Philosophy*, Volume I, p. 44.

Two pieces in *The Old in Their Knowing* concern the Milesian school of Asia Minor: “Miletos” and “A Short History”¹²¹, the third and fourth poems in the sequence. They are short, elusive and enigmatic compositions, in that they leave a tremendous amount of relevant information unsaid. Much is taken for granted, but we guess that nowadays there is a short supply of readers familiar with ancient Greek philosophy, at least to the level required by these poems if they are to be understood in their full complexity. Thales is at the heart of “Miletos”¹²², a short jewel-like poem in its brevity, endowed with the purity and perfection of crystal. It is therefore worth quoting in full:

One looked down and the other looked around
when Anaximander and Anaximenes
learned their master Thales
had been drowned.

Thales of Miletus (b. c. 624 BCE – d. 548-545 BCE, at the age of 78) was already a renowned philosopher in antiquity, counted as one of the legendary Seven Wise Men, or *sophoi*, and held in high honour among the Greeks as the ideal sage and scientist. A practical genius and a man of affairs, Thales had a reputation for practical statesmanship and for his skill in engineering, he engaged actively in trade and had a practical interest in navigation. He is also said to have put his geometrical knowledge to practical use in measuring the pyramids and calculating the distance of ships at sea. In mathematics, Thales was universally believed to have introduced geometry into Greece, and he was specifically credited with five theorems. No writings by Thales survive though, and no contemporary sources exist; thus, his achievements are difficult to assess. The only thing we have is fragments preserved in subsequent authors. Inclusion of his name in the canon of the legendary Seven Wise Men led to his idealization, and numerous acts and sayings, many of them no doubt spurious, were attributed to him, such “Know thyself” and “Nothing in excess.” As Guthrie suggests, “the temptation to fasten particular discoveries on to individuals with a general reputation for wisdom was strong in antiquity.”¹²³ However, he is remembered primarily for his cosmology based on water as the essence of all matter, with the Earth a flat disk floating on a vast sea. Water is the first cause, the *arche* of all things existing. In his *Metaphysics* (A, 983b 6ff), Aristotle gives us the passage in which he introduces the first principle of Thales:

Most of the earliest philosophers thought that the principles which were in the nature of matter were the only principles of all things: that of which all things that

¹²¹ This is the editorial history of both poems: (1) “Miletos” was first published in A.5 *Eight Objects* (1975) and then it was reprinted in A.6 *Bergsbrund*, A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*. (2) “A Short History” was first published in C.22 “Eight Poems and Translations”, in *Arion: A Journal of Humanities and the Classics* (Boston) ns 1.4 (1973/1974): 561–575. Contents: [•] Excerpt from “The Third Generation: A Treatise on the Gods” (rev. from A.2); “Strophe from Sophocles” (trans. from Greek, rpt. from A.2); “Herakleitos” (rpt. from A.2); • “The Petelia Tablet” (trans. from Greek, incl. in R.1; rpt. in A.14, A.47, B.67, A.76, A.92), “Four Glyphs” (rpt. from A.2); [•] “Isthmian” (rev. from A.1); • “A Short History” (incl. in R.1; rpt. in A.5, A.6, A.14, A.47); “Antistrophe from Leopardi” (trans. from Italian, rpt. from A.2). It was also included in *Carmina propria et opuscula translata* (1975), and reprinted in A.5 *Eight Objects*, A.6 *Bergsbrund*, A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*.

¹²² Miletos, Bringham tells us in his glossary at the end of *The Beauty of the Weapons* (1982), is “A city in Ionian Greece, the home of Thales and his famous pupils, Anaximander and Anaximenes, who together formed the “Milesian school” of Greek thought”. He also illuminates us on the identity of Hippolytus (c. 170-235): “A bishop at Rome, later exiled to Sardinia. His book, *Philosophoumena*, traces a number of Christian heresies to Presocratic roots, and in so doing unwittingly preserves otherwise unavailable fragments of the early Greek thinkers”.

¹²³ Guthrie, *A History of Greek Philosophy*, Volume I, p. 53.

are consist, and from which they first come to be and into which they are resolved as a final state (the substance remaining but changing in its modifications), this, they said, is the element and principle of all things, and therefore they think that nothing is either generated or destroyed, since this sort of entity is always preserved... [...] there is always some permanent substance, or nature (φύσις), either one or more, which is conserved in the generation of the rest from it.

On the number and nature of such principles they do not all agree. Thales, who led the way in this kind of philosophy, says that the principle is water, and for this reason, declared that the earth rests on water. His supposition may have arisen from the observation that the nourishment of all creatures is moist, and that warmth itself is generated from moisture and lives by it; and that from which all things come to be is their first principle. Besides this, another reason for his supposition would be that the semina of all things have a moist nature, and water is for moist things the origin of their nature.¹²⁴

So Thales was the first to suggest a single material substratum for the universe – namely, water, or moisture. For him, water is the ultimate *arche*, the underlying substance out of which all things are made. So all things were once water and are still water; water is the underlying substratum of all things: the starting-point or beginning and the originating cause as well. Water is life-giving and pervades the greater part of the earth's surface, it pervades every region of our atmosphere, and life as we know it is impossible without water. A likely consideration in Thales' choice was the seeming motion that water exhibits, as seen in its ability to become vapor; for what changes or moves itself was thought by the Greeks to be close to life itself, and to Thales the entire universe was a living organism, nourished by exhalations from water. In this respect, Guthrie speaks of the *animism of the pre-scientific mind* and claims that it is no coincidence that the Presocratics should have chosen as *arche* any of the elements except for earth, because “earth would not serve their purpose as the *arche*, for they needed something which should be not only the material of change, but also its potential author.” Elements to these early thinkers were alive in an age “before any distinction had been thought of between spirit (or life) and matter, animate and inanimate.”¹²⁵ To be the *arche* of the world, this substance must contain within itself the cause of motion and change, and to a Greek mind this meant that it must be of the nature of psyche, life- or soul-stuff. This condition Thales thought best satisfied by water, or more generally the element of moisture, which was both alive and everlasting,¹²⁶ and everlasting life is the mark of the divine, and of nothing else.

In any case, Thales' significance lies less in his choice of water as the essential substance than in his attempt to explain nature by the simplification of phenomena and in his search for causes within nature itself rather than in the caprices of anthropomorphic gods. Like his successors the philosophers Anaximander (610-546/545 BCE) and Anaximenes of Miletos (flourished *c.* 545 BCE), Thales is important in bridging the world of myth and reason. All three were the first natural philosophers, for they were “the first to attempt on a rational basis that simplification of reality which has been the quest of the human mind of all ages.”¹²⁷ There is a deep-rooted tendency in the human mind to seek what persists through change. Hence the Presocratics' search for an underlying principle, a persistent stuff, beneath the multiplicity of existing things in the world. And introducing “unity and tidiness into the world is something which appeals to man's aesthetic no less

¹²⁴ Quoted by Guthrie in *A History of Greek Philosophy*, Volume I, p. 55.

¹²⁵ Guthrie, *A History of Greek Philosophy*, Volume I, p. 64.

¹²⁶ Guthrie, *A History of Greek Philosophy*, Volume I, p. 67.

¹²⁷ Guthrie, *A History of Greek Philosophy*, Volume I, p. 56.

than to his rational interests,”¹²⁸ says Guthrie. Indeed, “the search for a unity in the universe behind the multiplicity of phenomena is perennial and universal. It is a religious and aesthetic, a philosophic and a scientific need; and it appears at all periods of history.”¹²⁹

With this background information in mind, we should now turn to Bringham’s four-line composition. It is strongly ironic, if we bear in mind that the man for whom the first principle of all things was water (the sole fount of being) should have died by water itself, drowned. We do not know exactly the circumstances of Thales’ death, but Bringham very subtly evokes the whole doctrine of the Greek philosopher with astonishing economy and a wry sense of humour. The news that the master has drowned is imparted precisely to his two disciples, Anaximander and Anaximenes. But why should they react in the way they do?, one may ask. Why does Anaximander look down and why does Anaximenes look around? It might be worth while the effort to look if only briefly at their own philosophical models of the world.

Often called the father of astronomy, Anaximander is the first thinker to develop a cosmology or systematic philosophical view of the world. As pointed out above, he is thought to have been a pupil of Thales of Miletos. Evidence exists that he wrote treatises on geography, astronomy, and cosmology that survived for several centuries, and that he drew a map of the known world. As a rationalist he prized symmetry and introduced geometry and mathematical proportions into his efforts to map the heavens. Thus, his theories departed from earlier, more mystical conceptions of the universe and prefigured the achievements of later astronomers. A novel element in Anaximander’s theory was his rejection of the older notion that the Earth was somehow suspended or supported from elsewhere in the heavens; instead, he asserted that the Earth remained in its unsupported position at the centre of the universe because it had no reason to move in any direction and therefore was at rest. By the way, this may well account for the fact that in Bringham’s poem Anaximander looked down as he learnt of Thales’ death by water. For Thales the earth was floating on water; for him, it remained fixed in space, it did not move, and so he looked down to make sure than his feet were pressing firmly on the ground. For Anaximander the *arche* or first principle of reality was what he called the *apeiron* (boundless, unlimited), a non-perceptible substance from which the whole world derived. The best extant account of Anaximander’s *apeiron* is Simplicius’ (*Physics*, 24.13):

Anaximander named the *arche* [...] and element of existing things ‘the boundless’, being the first to introduce this name for the *arche*. He says that it is neither water nor any other of the so-called elements, but a different substance which is boundless, from which there come into being all the heavens and the worlds within them. Things perish into those things out of which they have their being, as is due; for they make just recompense to one another for their injustice according to the ordinance [or perhaps ‘assessment’] of time – so he puts it in somewhat poetical terms.

It is clear that when he observed how the four elements change into each other, he did not think it reasonable to conceive of one of these as underlying the rest, but posited something else. Moreover he does not account for genesis by a qualitative alteration of the element, but by a separation of the opposites caused by the eternal motion.¹³⁰

¹²⁸ Guthrie, *A History of Greek Philosophy*, Volume I, p. 57.

¹²⁹ Guthrie, *A History of Greek Philosophy*, Volume I, p. 70.

¹³⁰ Quoted by Guthrie, *A History of Greek Philosophy*, Volume I, p. 76. According to Guthrie the notion of the non-perceptible was crucial in Anaximander’s model. He says: “There was no reason for regarding water, earth, fire or any such familiar, sensibly manifest phenomenon as prior to the rest. The original matrix of the

Anaximander subscribed to the philosophical view that unity could definitely be found behind all multiplicity, representing the primitive unity of all phenomena. Anaximander regarded the *apeiron* as an enormous mass surrounding the whole of our world, and it may have even presented itself to his mind as a vast sphere. Now, the *apeiron* (deathless and imperishable¹³¹) preceded the “separation” into contrasting qualities; the *apeiron* was an initial indeterminate fusion of all the opposites. After the formation of a world-order by the separation of the opposites into their proper stations, the next stage is the emergence of animal and human life: life arises in the moist element through the action on it of the sun’s warmth.¹³² These primary opposites were designated by Anaximander by article and adjective as the hot, the cold, the wet and the dry. In this respect, only one sentence of Anaximander’s writings survives; it has been included in Simplicius’ quote above: “things perish into those things out of which they have their being, according to necessity”. In Bringham’s poem “A Short History”, it is translated in italics at the very heart of the poem (stanzas 2 and 3):

What Anaximander in fact says is,
*The necessity is
 that things flare out into that out of which
 they came to be, because*

*they pay one another the penalty
 and compensation for
 the mutual injustice of their
 chronological order.*

That sentence of Anaximander describes the emergence of particular substances such as water or fire in metaphors drawn from human society, in which injustices are penalized. For example, neither hot nor cold prevails permanently, but each “pays reparations” in order to keep a balance between them. As Guthrie puts it:

Anaximander had noticed that it is the natural tendency of each of the elements to swallow its opposite. Fire and water must inevitably be in conflict. When they meet they struggle until one or the other prevails, and either the fire is put out and nothing but the water remains, or else the water is dried up and fire remains in sole possession of the field. Conversely this may be described, in Simplicius’s words, as the conversion of water into fire and *vice versa*. There is of course an intermediate stage, clearly visible to observation, of the conversion of water into steam or vapour, which for the Greeks are included in the term *aer*. In the world as a whole, complete and final victory is never granted to one or the other of the opposing forces [...]: the balance between them is always being restored or maintained. If one gains a local advantage, the other is encroaching elsewhere.¹³³

universe must be something more primitive and ultimate than any of them, of which they are all alike secondary manifestations or modifications, obtained by a process of ‘separating out.’” (p. 78)

¹³¹ Guthrie quotes Aristotle’s words (Physics, 203 b6) on the *apeiron* as being divine: “Everything either *is* an origin or *has* an origin: the unlimited has no origin, for that would be a limit of it. Moreover, being an origin [or source or principle: *arche*], it is ungenerated and imperishable.... Therefore, as I say, there is no origin for it, but it appears to be the origin of other things and to encompass all things and direct all things, as those philosophers say who do not posit besides the unlimited other causes such as Mind or Love; and this they say is the divine, for it is immortal and imperishable, as Anaximander and most of the writers on nature call it.” (pp. 87-88). Anaximander’s *apeiron* as *arche* serves the twofold purpose of including or surrounding all things and of being the directive force. It was eternally alive and eternally in self-caused motion.

¹³² Guthrie, *A History of Greek Philosophy*, Volume I, p. 101.

¹³³ Guthrie, *A History of Greek Philosophy*, Volume I, p. 81.

These words suggest that the process of becoming and perishing is circular. “Perishing does not mean vanishing into nothingness, but changing into a different form of matter. This circularity, symbolized by Anaximander as the alternation of ‘injustice’ and ‘reparation’, seems to have been central to his thought.”¹³⁴ And yet Hippolytus¹³⁵ seems to have interpreted Anaximander’s only surviving words as a reference to time: “*And he talks of time,*” said Hippolytus, / *the fat-bearded presbyter,* / *of Anaximander, Milesian / sage, then nine centuries dead.*” He was wrong, Bringhurst demonstrates by going back to the original Greek text as preserved by Simplicius (*Physics*, 24.13) and translating it into English. Anaximander did speak of an infinite plurality of worlds, of an everlasting succession of single worlds in time. In that context, “his statement that things perish into that out of which they come, because they make just recompense to one another, seems rather to describe the cyclic, seasonal rhythm that goes to the maintenance of a single cosmos, not the reabsorption of the separated contents of a cosmos back into the primal *apeiron*.”¹³⁶

The last stanza in Bringhurst’s poem “A Short History” closes with these words: “*Anaximander does not talk of time. / He lays open the way for / Anaximenes’ love of the live air / as a bluer arcanum.*” The third philosopher of the Milesian school and younger contemporary of Anaximander, Anaximenes was his friend, pupil and successor. It seems that his writings survived into the Hellenistic Age, but they no longer exist except in passages in the works of later authors. Consequently, interpretations of his beliefs are frequently in conflict. Firmly set in the monist tradition, for him the only conceivable explanation of the nature of things was still one which showed how ‘all things proceed from one and are resolved into the same.’¹³⁷ Whereas Thales held that water is the basic building block of all matter and Anaximander chose to call the essential substance *apeiron* (boundless, unlimited), Anaximenes substituted *aer* (“mist”, “vapour”, “air”) for his predecessors’ choices as the *arche* or first principle of reality. Thus, he abandoned the almost nameless *apeiron* of Anaximander and chose a different *arche* for all things: air. Perhaps our best starting-point for a consideration of Anaximenes lies in these words from Simplicius (*Phys.*, 24.26, A5):

Anaximenes of Miletus, son of Eurystratus, the companion of Anaximander, also posits a single infinite underlying substance of things, not, however, indefinite in character like Anaximander’s but determinate, for he calls it air, and says that it differs in rarity and density according to the different substances. Rarefied, it becomes fire; condensed, it becomes first wind, then cloud, and when condensed still further water, then earth and stones. Everything else is made of these. He too postulated eternal motion, which is indeed the cause of the change.¹³⁸

¹³⁴ Guthrie, *A History of Greek Philosophy*, Volume I, pp. 84-85.

¹³⁵ In the final notes in *The Beauty of the Weapons* (1982) and in *The Calling: Selected Poems 1970-1995* (1995), Bringhurst gives us basic information regarding Hippolytus (c. 170–235): “A bishop at Rome, later exiled to Sardinia. His book, *Philosophoumena*, traces a number of Christian heresies to Presocratic roots, and in so doing unwittingly preserves otherwise unavailable fragments of the early Greek thinkers.”

¹³⁶ Guthrie, *A History of Greek Philosophy*, Volume I, pp. 111-112.

¹³⁷ Guthrie, *A History of Greek Philosophy*, Volume I, p. 115.

¹³⁸ Quoted by Guthrie, *A History of Greek Philosophy*, Volume I, p. 121. Consider also these words by Hippolytus (*Ref. I*, 7, I, A7) as quoted by Guthrie: “Anaximenes, another Milesian and the son of Eurystratus, says the *arche* is infinite air, out of which proceeds whatever comes to be or has done so in the past or will exist in the future, gods also and the divine. Everything else is made from its products. Now in form the air is like this: when it is most evenly distributed [...] it is invisible, but it is made visible by hot and cold and wet and movement. It is in constant movement, otherwise the things which change could not do so. It assumes different visible forms as it is rarefied or condensed. When dispersed more finely, it becomes fire. Winds on the other hand are air in process of condensation, and from air cloud is produced by concentration (lit. ‘felting’). The continuation of this process produces water, and still further condensation earth, while stones are the most condensed form of all. Thus the most important features in genesis are contraries, hot and cold.” (pp. 121-122).

So for Anaximenes the *arche* is air, that out of which all things had their being and into which they were all resolved again. His desire of knowledge prompted him to discover a natural explanation of the manifold variety of physical phenomena consistent with a monistic view of reality. This he thought he had detected in the processes of condensation and rarefaction. It is clear that he believed in degrees of condensation of moisture that corresponded to the densities of various types of matter. When “most evenly distributed”, *aer* is the common, invisible air of the atmosphere. By condensation it becomes visible, first as mist or cloud, then as water, and finally as solid matter such as earth or stones. If further rarefied, it turns to fire. Thus, hotness and dryness typify rarity, whereas coldness and wetness are related to denser matter. Guthrie claims that in Anaximenes’s philosophic system “the *arche* of the universe was not matter in that sense. It was eternal being, and because eternal and the *arche* of everything else, it was of necessity uncaused, or else self-caused. It was not only the matter or subject of motion, but itself the cause. [...] The *arche* was something alive, not only eternal [...] but immortal [...] and therefore divine.”¹³⁹ With characteristic intellectual boldness, Anaximenes saw that a single order underlies the chaos of our perceptions and that we are able to comprehend that order.

Like Anaximander, Anaximenes assumed that the original source and fount of being (that is, for him, the air), had been in motion for all time, and that this was what made its changes possible. For him, motion is everlasting and it makes change take place. Anaximenes’ assumption that *aer* is everlastingly in motion suggests that he thought it also possessed life. Because it was eternally alive, *aer* took on qualities of the divine and became the cause of other gods as well as of all matter. The same motion accounts for the shift from one physical state of the *aer* to another. There is evidence that he made the common analogy between the divine air that sustains the universe and the human “air”, or soul, that animates people.¹⁴⁰ Such a comparison between a macrocosm and a microcosm would also permit him to maintain a unity behind diversity as well as to reinforce the view of his contemporaries that there is an overarching principle regulating all life and behaviour. Anaximenes’ thought is typical of the transition from mythology to science. Yet his thought is not completely liberated from earlier mythological or mystical tendencies, as seen from his belief that the universe is hemispherical. Thus, his most important contribution lies in his suggestion that known natural processes (i.e., condensation and rarefaction) play a part in the making of a world.

The world for Anaximenes is a living and breathing creature, and this may well account for the fact that he looks around in Bringham’s poem “Miletos” as he learns of Thales’ death by water. He posited air as the *arche* of all existing things, and air was to be seen everywhere around him. As Aëtius puts it in another illuminating fragment quoted by Guthrie: “Anaximenes of Miletus, son of Eurystratus, declared that the origin of existing things was air, for out of it all things come to be and into it they are resolved again. “just as our soul,” he says, “which is air, holds us together, so breath and air surround the whole cosmos.” Air and breath are used synonymously.”¹⁴¹ In the closing stanza of “A Short

¹³⁹ Guthrie, *A History of Greek Philosophy*, Volume I, p. 118.

¹⁴⁰ Guthrie says that “In making air his selection, an air in perpetual motion, Anaximenes also was respecting an age-old and still flourishing popular belief which associated, and in fact identified, breath and life. That the air which we breathe should be the life itself which animates us is a common idea, and the breath-soul a world-wide conception. [...] The equation of air with soul or life [...] must have originated in the mists of early popular belief.” *Ibid.*, p. 128. Needless to say, life and death are bound up with the taking in and letting out of breath. Thus, Anaximenes looked upon the air as (a) the *arche* and divine, and (b) the stuff of the human soul. *Ibid.*, p. 132. In a context of animistic thinking, the world for Anaximenes is alive and breathing, it is a living and breathing creature.

¹⁴¹ Guthrie, *A History of Greek Philosophy*, Volume I, p. 131.

History” Anaximander is presented as paving the way for Anaximenes’ new philosophic system, in which *live air* is conceived as being a *bluer arcanum*, a mystery surrounding everything we know to exist with a halo of divinity. His love of air as the ultimate *arche* of reality is conveyed in beautiful, alliterative words in Bringham’s poem.

V · EMPEDOKLES: SEVEN FRAGMENTS & VI · EMPEDOKLES’ RECIPES

Robert Bringham devotes two poems in his sequence *The Old in Their Knowing* (i.e., “Empedokles: Seven Fragments” and “Empedokles’ Recipes”¹⁴²), to the fascinating figure of the Presocratic philosopher Empedokles, whom Bringham characterizes as being “one of the three canonical Presocratic thinkers who composed Greek hexameters rather than prose.”¹⁴³ The other sages who wrote hexameters were, of course, Herakleitos and Parmenides. Of the Eleatic philosopher Bringham produced a mastery translation into English, published in a deluxe edition by typographer Peter Koch in 2003. Of the three canonical philosophers Bringham says something of paramount importance, borrowing a handful of resonant words from Eliot’s well-known essay “The Metaphysical Poets”:

... these three Presocratics were notably men who incorporated their sensibility into their erudition: their mode of thought was directly and freshly altered by their feeling. In Parmenides especially there is a direct intellectual apprehension of sensation, or a recreation of feeling into thought, which is exactly what we find... well, in Heidegger, in Kierkegaard, in Wittgenstein, in Nietzsche, often in Pascal.¹⁴⁴

It is therefore only fair that Bringham should have devoted part of his time and attention to the Sicilian sage. In the extant fragments which have survived the wreck of time, there is powerful sense in which feeling and thought belong together, are fused into a “mutual indwelling” which Bringham says is the mark of all great poetry composed since Dante. In Empedokles’ surviving fragments “the poetry keeps slipping out of philosophy and not vice versa; the poetry is continually taking control.”¹⁴⁵ As he puts it somewhere else, “in his work, ideas dance and sing. That, if anything, ought to be what we mean by philosophical poetry”.¹⁴⁶ Thus, thinking and singing are one in the Empedoklean profound and reflective

¹⁴² This is the editorial history of the poems in brief: (1) “Empedokles: Seven Fragments” was first published as C.12 • “Empedokles: Six Fragments”, in *Prism International* (Vancouver) 13.3 (Spring 1974): 20-21. Translation from Greek, revised and enlarged as “Empedokles: Seven Fragments” in A.5 *Eight Objects*, A.6 *Bergschrund*, A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*, and in R.1. (2) “Empedokles’ Recipes” was published as C.24 [Two poems] in *The University of Windsor Review* 10.2 (Spring/Summer 1975): 39-43. Contents: “Empedokles’ Recipes”, which was included in R.1 and reprinted in A.5 *Eight Objects* and A.6 *Bergschrund*, and revised in A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*; “Deuteronomy” (rpt. from A.3). In addition, Robert Bringham has devoted two illuminating essays to Empedokles: (1) D.8 • “Postscript to a Translation of Empedocles”, published in *The Ohio Review* 16.3 (Spring 1975): 68-73. (2) B.79 In *Thinking and Singing: Poetry and the Practice of Philosophy*, edited by Tim Lilburn. Toronto: Cormorant Books, 2002: pp. 79-93, 155-172. Contributions: • “The Philosophy of Poetry and the Trashing of Doctor Empedokles” (essay, based in part on D.8; revised in A.83 *Everywhere Being Is Dancing*) and • “Poetry and Thinking”, essay based on a lecture delivered in January 2001 at Luther College, University of Regina (rev. in A.81 *The Tree of Meaning*).

philosophical poems. Borrowing Giordano's words as translated by Bringhurst himself, "True philosophy is also music, poetry, and painting; true painting, too, is music and philosophy; true poetry or music is a form of holy wisdom; so is painting."¹⁴⁷

The philosopher Empedokles of Acragas¹⁴⁸ (b. c. 490 BCE, Acragas, Sicily – d. 430, the Peloponnese, Greece), also a poet, physiologist, religious teacher, statesman, and self-styled god¹⁴⁹, came of a wealthy and aristocratic family and was a champion of democracy. According to legend only, Empedokles was a self-styled god who brought about his own death, as dramatized by the English poet Matthew Arnold in "Empedocles on Etna", by flinging himself into the volcanic crater atop Mount Etna to convince followers of his divinity. To his contemporaries he did indeed seem more than a mere mortal; Aristotle reputedly hailed him as the inventor of rhetoric (and he was thought to be indeed an outstanding orator), and Galen regarded him as the founder of Italian medicine. Lucretius admired his hexametric poetry. Like Parmenides or Herakleitos before him, he was both ποιητής (a poet) and φυσιόλογος (a naturalist), seeking in hexametric metre the common root of poetry, philosophy, and science, which is wonder in the face of *what is*. This was no minor intellectual accomplishment according to Bringhurst, who claims that "The moment we leave the conceptual jail where philosophy and poetry are confined to separate cells, we find ourselves in plenty of good as well as fresher air."¹⁵⁰ Although we possess more of the text of Empedokles than of any other Presocratic philosopher, of the original 5,000 lines to which his two poems amounted only 400 lines have survived from his poem *Peri phýseōs* (*On Nature*), offering an explanation of the natural world on scientific and rational grounds, and fewer than 100 verses from his poem *Katharmoi* (*Purifications*),¹⁵¹ religious in content and

¹⁴⁷ Bringhurst, "The Philosophy of Poetry and the Trashing of Doctor Empedokles", *ibid.*, p. 105.

¹⁴⁸ See entry on 'Empedocles' in *Encyclopaedia Britannica*, vol. 9, p. 5241.

¹⁴⁹ Fragment 112 says: "Friends, who inhabit the great town that looks down on yellow Acragas, up on the heights of the citadel, intent on fine works, harbouring with honour the stranger, unacquainted with want, I bid you hail. I an immortal god, no longer a mortal, go about among you all, honoured as is meet, crowned with fillets and blooming garlands. When with these I come to flourishing cities, I am an object of reverence to men and women. They follow me in thousands, asking wither leads the way to profit, some desiring oracles, whereas others seek to hear the words of healing for every kind of disease, long time transfixed by sore anguish." Guthrie, *ibid.*, Vol. II, p. 246. The lofty arrogance and immense superiority of the philosopher to the common man are self-evident in these words.

¹⁵⁰ See Bringhurst's essay "The Philosophy of Poetry and the Trashing of Doctor Empedokles", included in *Everywhere Being Is Dancing. Twenty Pieces of Thinking*, p. 104.

¹⁵¹ On the fragmentary nature of Empedokles' work and on the way it has been preserved by the ancient doxographers, Bringhurst offers a beautiful meditation on the extant verses of the philosopher in "The Philosophy of Poetry and the Trashing of Doctor Empedokles", *ibid.*, pp. 102-103: "The scraps of literary gossip that survive tell us that Empedokles wrote at least two substantial works, *Peri phýseōs* and *Katharmoi*. Neither was anywhere near the size of the *Odyssey* or *Paradise Lost*, but both were book-length poems in the modern sense, approaching the length of, say, *A Draft of XXX Cantos*. In that case, they were works big enough to allow and demand a periodic flattening of tone. The fragments which survive are not passages chosen by Mathew Arnold as touchstones; they are bits picked to illustrate points in philosophy, theology, or natural science, some of them are quoted by admirers – Simplicios, for example. Others are quoted by antagonists such as Hippolytus of Rome, an early-third-century bishop who set himself the task of tracing Christian heresies to the teachings of pagan philosophers. Suppose, for comparison, that someone were to raid Pound's work, taking only the lines which invite reinsertion into a history of China or a study of monetary theory. What if nothing remained of St.-John Perse except extracts chosen to ornament a treatise on textiles or a textbook of geography?"

The Empedokles who composed the full texts of *Peri phýseōs* and *Katharmoi* is someone we can evidently never get to know. The Empedokles who spoke or wrote the extant fragments is a historical, or metahistorical, fiction, authored by the first Empedokles but edited by everybody else, with everybody else's ambiguous and changeable intentions. Few of these ex-officio editors are or have been interested in dealing with the text on its own terms. This accident fiction, the author of the fragments, is the only Empedokles we have. One thing that is true about him now was evidently not true in his time. He is – because, broken and

purpose, describing “the pilgrimage of the spirit, banished by its own fault from the realms of the blessed to which it properly belongs, and doomed to undergo a cycle of incarnations in all manner of forms of earthly life.”¹⁵² Few of the fragments can be assigned with certainty to one poem or another. Like Herakleitos, Empedokles recognized the limitations of human thought – he acknowledged the inadequacy of human faculties to fathom all the secrets of nature. He was no believer in the infallibility of the senses, feeble instruments (like the mind), and so humans can scarcely hope for epistemological certainty in their confrontation with reality. But unlike Parmenides, who condemned the senses straightaway, Empedokles acknowledged that the senses are aids to knowledge and none is to be preferred.¹⁵³

Though strongly influenced by Parmenides, who emphasized the ultimate unity of all things, Empedokles assumed instead that all matter was composed of four essential roots or ingredients – fire, air, water, and earth. He posited that an ultimate plurality¹⁵⁴ made the physical world possible, and that nothing either comes into being or is destroyed but that things are merely transformed, depending on the ratio of basic substances, to one another. Thus, he believed that *nothing can come out of nothing*, that *what exists cannot perish*, and that *the sum of being is constant*.¹⁵⁵ As Guthrie puts it, “What is real cannot come to be or perish, and it is everywhere, since to admit emptiness is to concede the reality of what is not. But from this Parmenides had deduced two further conclusions – that reality was a unity and that it was immovable – which Empedocles did not find so compelling.”¹⁵⁶ A plurality of ever-existing primary entities were the roots of everything, the spring of mortal things, and so say fragment 6 (“Hear first the four roots of all things: bright Zeus, life-bringing Hera, Aidoneus, and Nestis who with her tears makes springs well up for mortals.”) and fragment 17.18 (“Fire and water and earth and the immeasurable height of air.”).¹⁵⁷ According to Aristotle (*Metaphysics* 985a31), Empedokles was the first to speak of four material elements as the ultimate *archai*¹⁵⁸ of everything we know to exist, but “the conception of four primitive forms of matter was arrived at gradually rather than by a sudden inspiration. Its beginnings are in myth, and may be seen in the division of the universe in Homer (*Il.* 15.189 ff.) whereby the heavens fell to the lot of Zeus, the sea to Poseidon, and the misty darkness to Hades, while the earth was held by them all in common.”¹⁵⁹ Empedokles conceived of the four elements as immutable and indestructible: they are sentient, everlasting, immortal and divine. The philosopher carries the notion of the kinship of nature so far as to say that nothing is without sense. To Empedokles “the

smoothed in the river of history, he has *become* – the author of some oddly shaped and interesting short poems.”

¹⁵² See W.K.C. Guthrie, *A History of Greek Philosophy*, vol. II, p. 124.

¹⁵³ Guthrie cites fr. 3.9 in this respect: “Come now, observe with all thy powers how each thing is clear, neither holding sight in greater trust compared with hearing, nor noisy hearing above what the tongue makes plain, nor withhold trust from any of the other limbs [organs, parts of the body], by whatever way there is a channel to understanding, but grasp each thing in the way in which it is clear.” *A History of Greek Philosophy*, vol. II, p. 139.

¹⁵⁴ Guthrie, *ibid.*, p. 138.

¹⁵⁵ Guthrie, *ibid.*, p. 139.

¹⁵⁶ Guthrie, *ibid.*, p. 140.

¹⁵⁷ Guthrie, *ibid.*, p. 141.

¹⁵⁸ The four Empedoklean elements take “the rank of genuine *archai*: none is prior to any other, nor is there anything else more fundamental. Heraclitus may have mentioned them all, but he exalted the priority of fire; Thales and Anaximenes had promoted water and air respectively to be sole *arche* generating the rest; for Anaximander they came out of the *apeiron*, and for the Pythagoreans they were the final product of the One. All these rival claims had been made obsolete by the insistence of Parmenides that no unity can ever generate a plurality. Only by a plurality of equal and ultimate *archai* or elements can the phenomena be saved.” Guthrie, *ibid.*, p. 142.

¹⁵⁹ Guthrie, *ibid.*, p. 141.

unity of all living organisms”¹⁶⁰ was a fact. All four elements combine to form all things in this world: “... by the mixture of water, earth, air and sun [fire] there came into being the shapes and colours of all mortal things that are now in being, put together by Aphrodite...” (fr. 71).¹⁶¹

Aphrodite stands for Love, one of the elemental movers in the Empedoklean conception of reality, for Empedokles believed that two everlasting forces, Love and Strife (the powers of attraction and repulsion), interact to bring together and to separate the four substances.¹⁶² By mingling with the ever-living elements Love and Strife inspire them “with the feelings which cause them either to come together in mutual embrace or to draw apart in cold exclusiveness each to itself”.¹⁶³ Strife makes each of these elements withdraw itself

¹⁶⁰ Guthrie, *ibid.*, p. 136.

¹⁶¹ Guthrie, *ibid.*, p. 141. Guthrie gives us this enlightening reflection: “The notion of elements has now for the first time acquired a definite meaning as forms of matter which are (a) ungenerated and indestructible, (b) qualitatively unalterable, (c) homogeneous throughout (fr. 17.35). In all this they are, as it were, the Parmenidean One multiplied by four, but in other respects they depart from that norm. Although Empedocles accepted the Eleatic denial of empty space, he did not admit as a necessary consequence that local motion was impossible. Given four substances instead of one, they could take one another’s places, the last in a series of moving objects slipping into the place of the first, without needing empty space to move into. With motion permitted, his ‘beings’ take on two characteristics denied by Parmenides to his single Being, which make the genesis of a cosmos possible: they are (a) in motion and (b) divisible. [...] The divisibility and movement of the four ‘roots’ make it possible that ‘there is no birth or death of mortal things, but only mingling and separation of what is mingled’. Apparent change is only rearrangement.” Guthrie, *ibid.*, pp. 147-148.

¹⁶² Fragment 17, telling of the four roots and of Love and Strife, is worth quoting in full: “I shall tell a twofold tale. At a certain time one alone grew out of many, and at another it grew apart to be many out of one. Double is the birth of mortal things and double their failing. The one race is born and dies through the coming together of all things, the other is nurtured and then vanishes as they scatter again. They never cease thus to alternate continually, now all coming together into one through Love, and now again each one drawing apart by Strife’s hatred. Thus in that they have learned to grow one from many, and as the one is divided turns into many again, in this way they suffer becoming and have no steadfast life; but in that they never cease from alternately coming together and separating, they are for ever, unshaken on their circular path.

But come, hear my discourse, for learning increases wisdom. As I said before in disclosing the limits of my discourse, I shall tell a twofold tale. At a certain time one alone grew out of many, and at another it grew apart to be many out of one: fire and water and earth and the immense height of air, and cursed Strife apart from these and equal in every respect, and Love among them, equal in length and breadth. Her must thou see with the mind, nor sit with eyes bemused: she it is who is acknowledged to be implanted in the limbs of mortals, whereby they think kindly thoughts and do peaceful works, calling her Joy by name and Aphrodite. No mortal man is aware of her as she circles round among these [i.e. the elements and Strife], but do thou listen to the unfolding of a discourse that is not deceitful. All these are equal and coeval, but each is master in a different province and each has its own character, and they prevail in turn as time circles round. And besides these nothing comes into being or ceases to be. If they were continually perishing, they would no longer be; and what could increase this All? Whence would it come? And how also could it perish, for nothing is empty of these things? No, there are just these, but running through one another they become now some things and now others and yet ever and always the same.” Guthrie, *ibid.*, p. 153.

¹⁶³ Guthrie, *ibid.*, p. 159. Two more fragments are worth quoting in this context: (1) Fr. 22: “For all of these – the shining sun, earth, sky and sea – are one with their own parts which are scattered far from them in mortal things; and in the same way all that are fitted rather for mixture are assimilated by Aphrodite and hold one another dear. But enemies are those that are farthest from each other in origin, composition and moulded form, in every way unaccustomed to unite and very grim by the bidding of Strife, because it has brought about their birth.” And (2) Fr. 21: “Come now, see this witness to my former words, should anything in them have been lacking in form: the sun white to see and hot all over, all the divine things which are bathed in heat (?) and the bright ray, and the rain in all things dark and cold; and from the earth spring things rooted and solid. In Anger all are diverse and sundered, but in Love they come together and are desired of each other. For out of these are born whatever was and is and will be – trees, men, women, beasts, birds and water-feeding fishes, yea and long-lived gods highest in honours. There are just these, but running through one another they alter their appearance: so far does mixture effect change.” Guthrie, *ibid.*, p. 158.

from the others; Love makes them mingle together. The real world is at a stage in which neither force dominates. In the beginning, Love was dominant and all four substances were mixed together; during the formation of the cosmos, Strife entered to separate air, fire, earth, and water from one another. Subsequently, the four elements were again arranged in partial combinations in certain places; springs and volcanoes, for example, show the presence of both water and fire in the Earth. Thus, the Empedoklean cosmic cycle starts then with a state of unity, with an unlimited spherical mass¹⁶⁴ in which Love has completely mingled the four elements so completely that their separate natures are simply indistinguishable. Their natural tendency to seek their like is made possible by the intervention of Strife. Thus, attraction and repulsion, or liking and hatred, strive for mastery among the four roots, animating them to coalesce together or separate from one another. The cosmos is formed by a mixture of these immutable roots in different proportions, and the motion necessary to produce the mixture is caused not by the roots themselves but by two distinct forces (Love and Strife) working upon them. The whole process is cyclical.¹⁶⁵ As Guthrie explains it:

There is a period when Love rules unopposed, having fused all the elements into a unity. Then Strife enters the Sphere and begins to separate them until finally he has taken full possession and each element is isolated from the rest. After this Love reasserts itself, pervades the whole once more and gradually brings the separated elements together until once more they are completely united. A universe of 'mortal things', such as that in which we live, is a temporary stage intermediate between the supremacy of Love and Strife, a product of the tension and conflict between them. [...] There is not one cosmogony, but an endless succession of worlds.¹⁶⁶

The whole cosmic cycle is then governed by the two opposing forces counteracting each other. It has several stages: (1) the sphere of Love unites all four roots harmoniously into an indistinguishable whole so thoroughly blended or inextricably mingled that there is peace and rest, whereas Strife remains on the outer fringe or limits of the Sphere; (2) the advance of Strife: Strife enters the Sphere and disrupts the primordial harmony, so that the tendency of each element to seek its like asserts itself and they begin to draw apart toward the formation of the world (conceived of as a separation of the elements from a primal mixture into their cosmic arrangement and into living creatures); (3) the stage of Strife triumphant, which is probably "an instantaneous changeover from the completion of the separating process to the beginning of gradual reunion by Love"¹⁶⁷; and (4) the advance of Love: Love increases her power over the elements and Strife is gradually driven out beyond their confines, and so the elements gradually unite with one another to form another world containing mortal creatures like plants and animals.

The Empedoklean conception of reality outlined above is essential background information for a proper understanding of Bringham's poems concerned with this sage's

¹⁶⁴ Hippolytus (*Ref.* 7.2913, fr. 29) has preserved a description of the primordial state of unity: "Of the shape of the cosmos, what it was like when ordered by Love, he speaks like this: 'No twin branches spring from its back, there are no feet nor nimble knees, no parts of generation, but it was a Sphere and in all directions equal to itself.'" Guthrie, *ibid.*, p. 168.

¹⁶⁵ Simplicius (*De caelo*, 293.18) describes the process in these terms: "Others maintain that the same cosmos comes to be and perishes alternately, and again arises and perishes, and that this succession goes on for ever. Thus Empedocles says that Love and Strife gain the ascendancy in turn: Love brings all things together into one, destroys the cosmos created by Strife and makes of it the Sphere, whereas Strife separates the elements again and creates a world like this." Guthrie, *ibid.*, p. 168.

¹⁶⁶ Guthrie, *ibid.*, p. 167.

philosophy. Bringhurst's piece "Empedokles: Seven Fragments" brings together seven of the surviving fragments we possess of the Presocratic philosopher. Whereas fragments 1 to 5 appear to be lifted from *On Nature*, fragments 6 and 7 appear to be drawn from *Purifications*, though, as pointed above, there is no way of ascertaining which book fragments are to be assigned to with absolute certainty. Sections 1, 2 and 3 of Bringhurst's poem focus on the zoogony of living creatures on earth as conceived of by Empedokles. The starting point for each are the Empedoklean fragments 57, 61 and 62 respectively. It might be advisable to start from the very beginning then, by quoting Aëtius' summary of the evolution of animal life in Empedokles' philosophical system:

Empedocles says (i) the first generations of plants and animals were not entire, but divided, with parts not grown together; (ii) the second, in which the parts grew together, were like creatures of fantasy; (iii) the third was the generation of the whole-natured; (iv) the fourth was no longer engendered from the elements like earth and water but from each other, when for some their nourishment became thick and for other the beauty of women excited the seminal motion. The kinds of all living creatures were distributed according to the character of their mixture: some had a more natural inclination to water, as many as had a preponderance of fire flew up into the air, the heavier made for the earth, and those in whose composition the elements were equally balanced....¹⁶⁸

In the first stage, solitary limbs wander in search of mutual mixture. Fragment 57, Aristotle *de caelo* Γ2, 300b30 (line 1) and Simplicius *de caelo* 587, 1 (lines 2-3) – "On the earth many heads sprang up without necks, arms wandered bare, bereft of shoulders, and eyes strayed alone in need of foreheads."¹⁶⁹ – is the starting point for section 1 of Bringhurst's poem:

Maxillae went into motion without mandibles,
arms walked naked, unhinged from their shoulders,
eyeballs wandered without brows...

In his essay on Empedokles, Bringhurst says that "This is not philosophy; it is surrealism: one of the most ancient and widespread of all artistic modes."¹⁷⁰ Heads without necks, eyes lacking faces. This is the first stage of zoogony: fragmentary bodily parts emerge from the combination of the four Empedoklean roots – life originates in moistened earth (mixture of earth and water) under the action of heat (fire), which hardens the ingredients and fashions them into the living creatures. This is then the first or "the earliest stage of organic life in the period when Love is gaining and the process of evolution is from separation to combination".¹⁷¹ Under the rule of Love, first the parts of animals such as heads, hands and feet appeared here and there at random, then they came together to give rise to the monsters described in section 2 of Bringhurst's poem. The four surviving lines of Empedokles in fragment 61, Aelian *Nat. anim.* XVI, 29 – "Many were born with faces and breasts both front and back, oxen with the heads of men, and conversely there sprang up creatures in human form with the heads of oxen, and mixtures partly of men and partly of

¹⁶⁸ Guthrie, *ibid.*, 201.

¹⁶⁹ In Kirk & Raven's version, "Here sprang many faces without necks, arms wandered without shoulders, unattached, and eyes strayed alone, in need of foreheads." See *The Presocratic Philosophers*, p. 303.

¹⁷⁰ Bringhurst's essay "The Philosophy of Poetry and the Trashing of Doctor Empedokles", included in *Everywhere Being Is Dancing. Twenty Pieces of Thinking*, p. 100.

¹⁷¹ Guthrie, *ibid.*, p. 201.

women's nature, fitted with shadowed [private] parts."¹⁷² – are the starting point for Bringhurst's version:

A lot of them sprouted sternums and eyes on both sides.
Ungulates with human faces, also the opposite,
ox-headed bipeds, appeared. Other mixtures: creatures
part man and part woman, with umbrous, broadleaved limbs.

These lines present the enigmatic conception of isolated limbs combining at first haphazard into all sorts of strange creatures before they settle into the familiar species of a world like our own. These ox-men hybrids and monsters are reminiscent of certain mythological figures in ancient Greece, such the Minotaur, the Chimaera, centaurs and Hermaphroditos, and so Empedokles might have had them in mind when composing these lines,¹⁷³ populated by such strange creatures. At this stage it is almost inevitable to think of the Darwinian theory of the survival of the fittest, even if no words of Empedokles have survived on this issue.¹⁷⁴ Monstrosities gave way to men, women and animals as we know them in the next stage. With the advance of Strife, 'whole-natured' (or growing as a whole) creatures emerge out of the primordial ingredients. Fragment 62 as preserved by Simplicius, *Phys.* 381, 31 – "Come now and hear this, how fire as it was separated raised up the nocturnal scions of men and pitiable women: it is no erring or ignorant tale. Whole-natured forms first sprang up from the earth, having a portion of both water and heat. These the fire sent up, wishing to come to its like. Not yet did they display the comely shape of limbs, nor voice nor the part proper to men."¹⁷⁵ – is the starting point for section 3 of Bringhurst's poem:

This is how the fire, as it separated, germinated
the night-flowering seedlings of human beings. Listen.¹⁷⁶
Crooked forms imprinted out of earth existed first. They
were partly water and partly opaque shape. Fire
desired to arrive at its own image, therefore fire
forced them into flower. They didn't yet have attractive limbs,
nor the hand and the lonely voice that fuse in a man.

We are confronted here with an account of the origin of the human race. Earth is depicted as being *terra matrix*, Mother Earth, out of which all forms of life originate. Earth is the

¹⁷² In Kirk & Raven's version: "Many creatures were born with faces and breasts on both sides, man-faced ox-progeny, while others again sprang forth as ox-headed offspring of man, creatures compounded partly of male, partly of the nature of female, and fitted with shadowy parts." See *The Presocratic Philosophers*, p. 304.

¹⁷³ Guthrie, *ibid.*, p. 205.

¹⁷⁴ Simplicius (*Phys.* 371.33) says: "Empedocles says that during the rule of Love first of all there came into being at random parts of animals such as heads, hands and feet, and then there came together those 'oxen with the heads of men', 'and conversely there sprang up', naturally, 'men with the heads of oxen', that is, compounded of ox and man. As many of these parts as were fitted together in such a way as to ensure their preservation became animals and survived, because they fulfilled mutual needs – the teeth tearing and softening food, the stomach digesting it, and the liver converting it into blood. The human head, when it meets a human body, ensures the preservation of the whole, but being inappropriate to the ox-body it leads to its disappearance. All that did not come together according to the proper formula [*logos*] perished." Guthrie, *ibid.*, p. 204.

¹⁷⁵ Guthrie, *ibid.*, p. 206. In Kirk & Raven's version: "Come now, hear how fire as it was separated raised up the nocturnal shoots of men and pitiable women: it is no erring nor ignorant tale. Whole-natured shapes first sprang up from the earth, having a portion of both water and heat. These fire sent up, wishing to come to its like: they did not yet display the desirable form of limbs nor voice, which is the part proper to men." Kirk et al., *The Presocratic Philosophers*, p. 304.

¹⁷⁶ An extra line following this one appears in all earlier versions prior to the 1995 *The Calling* incarnation: "The lesson is relevant and full of information. Listen."

original mother of all living things alike. That the notion of humans, animals and plants stem from earth itself is an old universal found in cosmogonies around the world is out of the question. Let us think of *Gaia* and *Ouranos* in Hesiod's *Theogony*, for instance. Tales of the marriage of earth and sky are almost an anthropological universal and illustrate the need of water to make earth fertile.¹⁷⁷ "The first men and women originate from less differentiated forms of life, which in turn were constructed out of earth, water and fire as a result of fire struggling to rejoin its like."¹⁷⁸ Fire is presented as being the agent in the zoogony depicted in this fragment, which is reminiscent of fragment 73: "Love, the agent of mixture, mingles earth with water, fashions the living creatures in it, and hardens them by fire."¹⁷⁹ In the luminescent lines of this fragment the action of Strife at work is discernible in that fire, though mingled with the other fundamental elements, is being "separated and impelled to reach its like, the fire in the earth reaching outwards towards the large mass of fire at the circumference of the cosmos. In this process curious living forms arise compounded of earth mixed with water and fire, without limbs, organs or distinction of sex."¹⁸⁰ The living shapes are 'whole-natured' because, unlike previous creatures, they are "both complete beings (not mere fragments) and organic wholes (not adventitious collections of parts)."¹⁸¹ It is only the fourth stage of the advance of Strife in the Empedoklean doctrine, in which we now live, that further discrimination brings into being the world of self-reproducing male and female creatures, divided into land-animals, birds and fish.

The starting point for section 4 of Bringham's poem is fragment 105 as preserved by Porphyrius *ap. Stobaeum Anth.* I, 49, 53, where Empedokles says that the heart is "nurtured in the sea of pulsing blood, where especially is what men call thought: for the blood around the heart is thought."¹⁸² Blood is depicted as being the centre of humans' cognitive faculties, or, to put it differently, as the organ of thought.¹⁸³ In Bringham's hands Empedokles' fragment becomes a jewel-like short lyric:

... tumbling in the surf and undertow
of blood, where the thing called thought is. Thought
is, in fact, the blood around the beating¹⁸⁴ heart.

Of these lines the poet himself says: "That is an image which, after two and a half millennia, and after all the anatomical researches of Galen, Servetus, and William Harvey, still gets my attention."¹⁸⁵ The central notion at the heart of the poem is precisely that *human beings think with the blood*.¹⁸⁶ Thought is corporeal and is affected by bodily alterations.

¹⁸² Guthrie, *ibid.*, p. 229. In Kirk's version: "... [The heart] dwelling in the sea of blood which surges back and forth, where especially is what is called thought by men; for the blood around men's hearts is their thought." Kirk et al., *The Presocratic Philosophers*, p. 311.

¹⁸³ Guthrie, *ibid.*, pp. 227-228.

¹⁸⁴ 'Human' instead of 'beating in *Eight Objects* (1975) and *Bergschrund* (1975).

¹⁸⁵ Bringham's essay "The Philosophy of Poetry and the Trashing of Doctor Empedokles", included in *Everywhere Being Is Dancing. Twenty Pieces of Thinking*, p. 99.

¹⁸⁶ As Guthrie says, "Men think with the blood, and sensation also is a purely physical process. That is why Aristotle says that for Empedocles and other early thinkers 'sensation and thought were the same'. He means that 'they all assume thought to be corporeal like sensation, and that like is both perceived and thought of by like.'" *Ibid.*, p. 228. He quotes Theophrastus (*De sensu*, 10-11, A86): "Men think mainly with the blood, for here the elements of the body are most thoroughly mingled. Those then in whom the mixture is equal or nearly so, with the elements neither too far apart nor too small nor too large, are wisest and keenest of

Blood and heart are, by the way, recurrent words in Bringhurst's poems, where physics is inextricably linked to metaphysics, where bodily and mental functions go hand in hand (as in "The Flowers of the Body" or "Sutra of the Heart"), and body, mind and speech constitute a fascinating complex vortex (as in the section "Body, Speech, Mind" of *Tzubalem's Mountain*). Also, in its concision and linguistic economy, section 4 of "Empedokles: Seven Fragments" is strongly reminiscent of such early short masterpieces as the lyrics entitled "A Quadratic Equation" or "Poem About Crystal". As if it were a boat, the heart is tumbling in the sea of blood, where the mixture of the fundamental ingredients out of which the universe is made is balanced – the ratio is perfect. And thought, that most quintessentially human of all faculties, pervades the liquid blood surrounding the beating heart.

Section 5, a short composition of only two verse lines, is inspired by fragment 24 of Empedokles:

... sighting in on the peaks, one after the other, and not just
talking one straight trail through the understory words.

These enigmatic lines are purely fragmentary, and so the meaning remains utterly vague and imprecise. They contain no complete grammatical sentence in full. And yet, two pivotal words – the opening word, *sighting*, and the last word, *words* – appear to suggest that this is a meditation on perception (and knowledge) and on language. The perceiving *I* is placed somewhere above, probably on a mountain top, or even further above, contemplating the panoramic view below. That the perceiving self should be beyond the human realm remains truly enigmatic. The peaks of the mountain are below and the perceiving *I* is coming to terms with what is being perceived from such a height. There is not one simple *straight trail* or easy way of apprehending what surrounds the perceiving self, and language proves to be an inadequate tool of knowledge. This is pure conjecture, though. The fragment seems to evoke the limitations of human knowledge, the impossibility of understanding any simple thing in all its manifold complexity for good.

Sections 6 and 7 of "Empedokles: Seven Fragments" are lifted from fragments 115 and 127 respectively, both of them thought to be included in Empedokles' *Katharmoi*¹⁸⁷ (*Purifications*), which concerns practical precepts for purification and the pilgrimage of the soul in the wheel of reincarnations (the cycle of incarnation) in successive mortal lives till it reaches a state of final bliss or apotheosis. Beneath both fragments is Empedokles' conception of man as an exiled god, as the philosopher thinks of man as a fallen god or divine spirit in search of blissful peace for eternity. He believed in the possibility of transmigration from one form of existence to another, from lower to higher forms. Fragment 115, Hippolytus *Ref.* VII, 29, 14 (ll. 1-2, 4-14) and Plutarch *de exilio* 17, 607C (lines 1, 3, 5, 6, 13), provides the starting point for Bringhurst's version of the

perception, and so, in proportion, are those who come nearest to them; whereas those in the opposite state are almost witless." (p. 228)

¹⁸⁷ According to Guthrie, the title of this poem by Empedokles "signifies means of purification, either by lustration, libation, sacrifice and other forms of ritual, or by obedience to certain precepts of restraint. Such purification was necessary when, whether wittingly or unwittingly, a man had made himself unclean by offending against some divine ordinance. The causes of this *miasma* or *mysos* might range from homicide to accidental trespass in a sacred grove. [...] Practical precepts in the extant fragments of the *Katharmoi* of Empedocles include, besides the rite of purification by water, abstention from meat and beans and from laying hands on the bay: according to Hippolytus they also included sexual continence. The rest of the poem puts these precepts in their cosmic setting and explains their necessity, by telling of the fate of the souls of all living creatures." *Ibid.*, pp. 244-245.

Empedoklean poem, the longest of the extant fragments the poet chooses to translate into the living fabric of his seven-part composition. In Guthrie's version, it reads like this:

There is an oracle of Necessity, an ancient decree of the gods, eternal, sealed with broad oaths: when any errs and pollutes his own limbs with the blood of slaughter, or following Strife (?) swears a false oath – the spirits whose portion is length of life – they must wander for three ten thousand seasons away from the blessed ones, being born through time in all manner of forms of mortal creatures which tread in turn the troublous paths of life. The mighty heavens pursue them to the sea, the sea spews them out on the floor of the earth, earth to the rays of the shining sun, and he casts them into the circling heavens. One receives them from another and all abhor them. Of these I too am now one, an exile from the gods and a wanderer, having put my trust in raving Strife.¹⁸⁸

In Bringhurst's rendering of Empedokles' hexameters, the fragment becomes an impressive poem of astonishing beauty and perfection:

There is an instrument of mandamus, an edict issued
long ago by the gods. It does not expire. It is sealed
edge to edge with promises. It says that whenever
one of the demons who are doomed to immortality hexes
his hands, commits a murder or perjury, he is to be
banished for three hundred centuries. He is to be born
into mortal bodies, exiled from happiness, inhabiting
one incarnation of pain after another. The high air
hounds him into the sea, and the sea deposits him
in the dirt, which heaves him into the sunlight, and the sunlight
drives him back into the undertow of air. Each takes him
from the other, but none of them offers him shelter.
I am one of these, a vagrant, a refugee from gods.
Me. I believe in a drunken brawl.

Bringhurst's version shows divine souls caught in the wheel of incarnation, being tossed from one life of torment to another by the dismissing elements of the universe. The cyclic wandering of the migrating *daimon*, of the individual soul that has sinned, is depicted with dexterity and consummate skill. The edict issued by the gods so long ago ordains a series of incarnations as the consequence of sin. The misery of incarnation is self-evident. The transmigration of souls and the cycle of births offer an image of the soul as helpless wanderer, seeking the warmth and protection of the elements and finding no consolation anywhere. What we are witnessing here is a most dramatic description of the guilty spirit's journey through the four elements, and their indignant rejection of it. According to Guthrie, fragment 115 brings together several threads of Empedokles' thinking on transmigration – “bloodshed as the cardinal sin, the cycle of reincarnation” –, but this impressive fragment “develops the idea that the souls which go the round of mortal bodies are in themselves divine spirits: the divinity to which they ultimately attain is a return to

¹⁸⁸ See Guthrie, *ibid.*, pp. 251-252. In Kirk & Raven's version, fragment 115 reads as follows: “There is an oracle of Necessity, ancient decree of the gods, eternal, sealed with broad oaths: when anyone sins and pollutes his own limbs with bloodshed, who by his error makes false the oath he swore – spirits whose portion is long life – for thrice ten thousand years he wanders apart from the blessed, being born throughout that time in all manner of forms of mortal things, exchanging one hard path of life for another. The force of the air [*lit.* aither] pursues him into the sea, the sea spews him out onto the floor of the earth, the earth casts him into the rays of the blazing sun, and the sun into the eddies of the air; one takes him from the other, but all abhor him. Of these I too am now one, an exile from the gods and a wanderer, having put my trust in raving Strife”. *The Presocratic Philosophers*, p. 315.

their original and proper state.”¹⁸⁹ Apparently a firm believer in the transmigration of souls, Empedokles declared that those who have sinned must wander for 30,000 seasons through many mortal bodies and be tossed from one of the four elements to another. Escape from such punishment requires purification, particularly abstention from the flesh of animals, whose souls may once have inhabited human bodies. As a matter of fact, Empedokles believes that the souls of all living creatures are “immortal *daimones* whose home is with the blessed, but who have been seduced by Strife into sin and are now exiled by an inexorable decree and condemned to be tossed in torment from one element to another of the sublunary world. Only by strict adherence to the rules of purity, and by gaining an understanding of the divine nature, will they escape from the round of incarnation in separate animal bodies and regain the company of the gods”.¹⁹⁰ The ruler of the age of blessedness is Aphrodite, or Love, but that state of innocence ends with bloodshed – i.e., the killing and eating of animals. Of course, the basis of the Empedoklean doctrine is the firm belief in the transmigration of the soul: eating an animal, a person may be eating a dead relative of their own. The soul may live in plants and in animals, and though there is a hierarchy of lives – humans being a higher form of existence than animals, animals a higher form of existence than plants – all souls form part of the living mesh of things, the universal kinships of existence. Empedokles himself says in fragment 117, Diogenes Laertius VIII, 77, that, like other divine spirits, he has been condemned to mortality and has gone through several mortal lives: “Before this have I been a boy and a girl, a bush and a bird and a dumb fish of the sea.”¹⁹¹ Now he is “a fugitive and a wanderer from the gods”¹⁹², but divinity is attainable after the painful cycle of incarnations.

The seventh section in Bringhurst’s poem is inspired by fragment 127, Aelian *Nat. anim.* XII, 7: “Among beasts they are born as lions with lairs in the hills and beds on the ground, and as laurels among fair-tressed trees.”¹⁹³ Kirk suggests that these lines explain “how in each successive life a *daimon* might ascend through ever higher realms of creation (plants, beasts, man), undergo the best form of incarnation possible within each, and finally regain his original status as a god.”¹⁹⁴ In Bringhurst’s version these two hexameters become a short lyric poem:

They come among the animals as mountain cats
and among the broadleaf trees in the forms of laurels.

¹⁸⁹ Guthrie, *ibid.*, p. 251.

¹⁹⁰ Guthrie, *ibid.*, p. 245. Guthrie also suggests that “The notion of gods undergoing a fixed period of exile from heaven for wrongdoing, and specifically for perjury, is taken by Empedocles from Hesiod’s *Theogony*, lines 793-804. The most binding oath that the gods can swear is by the waters of Styx, says Hesiod, and continues: “Whoever of the gods who dwell on the summits of snowy Olympus pours out this water in swearing falsely, he lies a full year without breath. Nor does he touch the nourishment of ambrosia and nectar, but he lies breathless and voiceless on a strewn couch, enveloped in cruel torpor. When this sickness is over, at the end of a great year, one trial after another, each more difficult, awaits him. Nine years is he kept from the ever-living gods, for nine whole years having no share in their councils or their banquets; but in the tenth he rejoins the assembly of the immortals who dwell in Olympus.” *Ibid.*, p. 252. To this Homeric belief in the fate of the god who engages in quarrel and strife and then forswears the oath to desist, Empedokles added the Pythagorean doctrine of the transmigration of souls and the cycle of births.

¹⁹¹ Guthrie, *ibid.*, p. 250. In Kirk and Raven’s version: “For I have already been once a boy and a girl, a bush and a bird and a leaping journeying fish”. *The Presocratic Philosophers*, p. 319.

¹⁹² Guthrie, *ibid.*, p. 246.

¹⁹³ Kirk et al., *ibid.*, p. 317.

¹⁹⁴ Kirk et al., *ibid.*, p. 317. He quotes fragments 146 and 147, Clement *Strom.* IV, 150, I and V, 122, 3: “But at the end they come among men on earth as prophets, bards, doctors and princes; and thence they arise as gods highest in honour, sharing with the other immortals their hearth and their table, without part in human sorrows or weariness”. (*Ibid.*, p. 317)

Empedokles is mentioning here *mountain cats* and *laurels* as incarnations of the journeying soul into higher forms of existence in the realms of animals and plants respectively. The repetition of /m/ is used to wonderful sonorous effect in these euphonic lines. The generic ‘they’ is meant as a reference to the migrating souls in search of blessedness, in their attempt to return to divinity in the company of the immortal gods. The motion is from lower to higher forms of existence, more refined and perfect in a way. The fragment has a rare and precious unity and simplicity. Without the background doctrine of the transmigration of soul, the lines remain mysterious and enigmatic. But read against the Empedoklean belief in the cycle of lives the soul undergoes, they do make perfect sense.

“Empedokles’ Recipes” tessellates three extant fragments of Empedokles into a unique composition concerning the philosopher’s notion of the proportionate mixture in the composition of organic tissues. Hence the reference to the ‘recipes’ in the title of the poem. In all, three recipes are given throughout the whole piece: one for the composition of blood and muscle (in the first stanza), another for bone (second stanza), and yet another for the mind (stanzas 3 and 4). Let us return to the first recipe. Among Empedokles’ extant fragments are some on blood and flesh and on bones, which are to be interpreted in the context of the generation of the isolated parts of animals. Fragment 98 (Simplicius in *Phys.* 32, 6) in particular is the starting point for Bringhurst’s meditation on the composition of flesh: “Earth chanced in about equal quantity upon these, Hephaestus, water, and shining *aither*, anchored in the perfect harbours of Cypris, either a little more or a little less among more of them. From these arose blood and the various forms of flesh.”¹⁹⁵ In Bringhurst’s hands, this fragment becomes this stanza:

Blood and muscle: roughly equal
quantities of storm, earth,
fire, and the high clear air
spilling together into lagoons.¹⁹⁶

Blood is presented as if it were a form of flesh itself, since the same recipe is given for both of them. In this, as in the next recipe, the poet deploys a simple strategy reminiscent of “A Quadratic Equation”: the first term of the definition, *A* (blood and muscle), is followed by *B* without any explicit verbal link (the copulative verb *be*). *A* equals *B*; this is the simple formula beneath the stanza. All four elemental roots or ingredients posited by Empedokles as being the *archai* of all existing things take part in the formation of blood and muscle. We have several basic ingredients then: water (for *storm* stands for water), earth, fire and air. All of them coalesce in the right proportion to form lagoons, which are probably meant to evoke the flowing and liquid nature of blood. There is only one verbal form, an *-ing* form (*spilling*) suggesting some kind of motion implicit in the whole genesis process. The remaining words are mostly nouns in their majority, which reminds us that we are back in a primordial time of cosmogony, as it were.

In the second recipe, Bringhurst resorts to fragment 96 (Simplicius, in *Phys.* 300, 21), on the composition of bones, in search of inspiration for his second stanza: “And

¹⁹⁵ Guthrie, *ibid.*, p. 213. In Kirk’s version: “And earth chanced in about equal quantity upon these, Hephaestus [i.e. fire], rain and gleaming air [*lit.* aither], anchored in the perfect harbours of Cypris [*i.e.* Love], either a little more of it or less of it among more of them. From these arose blood and the various forms of flesh”. *The Presocratic Philosophers*, p. 302.

¹⁹⁶ This line reads “as they came together in lagoons” in the *Eight Objects*, *Bergschrund* and *The Beauty of the Weapons* versions of the poem.

kindly earth received in its broad melting-pots two parts of the glitter of Nestis out of eight, and four of Hephaestus; and they became white bones, marvellously joined by the gluing of Harmonia.”¹⁹⁷ Bones are also made of elements combined not in any haphazard combination, but according to a certain proportion and harmony. Thus, bones consist of four parts of fire, two of water, and two of earth that make up the total of eight. In Bringham’s rendering, this recipe becomes a three-line stanza of utter precision and beauty: “*Bone: made in caverns out of / two parts earth and two parts luminous / hunger trapped with four parts starving fire.*”¹⁹⁸ Guthrie explains that Empedokles believed all natural substances – metals and minerals as well as organic tissues – to be differentiated from one another by a different proportion of the four elemental roots or ingredients out of which the whole universe is made. His belief in the kinship of all nature “makes it improbable that he regarded inanimate objects as composed of an entirely different basis from animate. The difference would be one of degree...”¹⁹⁹ Blood is the organ of rational thought because the proportionate mixture of all four elements is perfectly balanced and resembles that of the divine sphere. In the case of the bone, a central organic substance in the human body, the ratio of mixture brings together into perfect harmony earth, water and fire. That bone should be made somewhere underground, in caverns, comes as no surprise, for Mother Earth is conceptualized as being the origin of all things in many cosmogonies around the world. In those hidden caverns earth combines with “*luminous hunger*” (which we learn is water in the third stanza) and with fire, which is starving because it seeks to reunite itself with the divine fire of higher spheres.

In the two closing stanzas, the poet dwells on exegetical details of interpretation as gathered in the doxographical body of literature originating from Empedokles’ surviving fragments. This is made explicit in the two verse lines “*The commentators say that Empedokles’ / hunger is nothing but water.*” The ‘*luminous hunger*’ mentioned in the second stanza is meant as a reference to water. Of greater interest is the second interpretation of Empedokles’ words or recipe for bones: some commentators say that it is in fact a formula for the composition of the mind:

mind: made in volcanoes
out of cauterized eyes and vaporized
muscle, blood and bone.

In the 19th century Matthew Arnold produced an eloquent poem on Empedokles flinging himself into the crater of the Etna to impress all those present with the fact that he was in fact a deity, an immortal god. Volcanoes were important in the very physical setting with which the philosopher was familiar in his lifetime. Empedokles lived in a land of intense volcanic activity, and so it is only natural that the mind would be thought to have been made in volcanoes. Inside the fiery heat of volcanoes, cauterized eyes (the *wandering eyeballs* of the first fragment in “Empedokles: Seven Fragments”) and vaporized muscle, blood and bone combine to form the mind. The circle is now complete: Empedokles’ last recipe thus brings together the blood and muscle of the first stanza with the bone of the second stanza into a unique synthesis.

¹⁹⁷ Kirk et al., *The Presocratic Philosophers*, p. 302.

¹⁹⁸ This stanza reads differently in the *Eight Objects*, *Bergschrund*, and *The Beauty of the Weapons* versions: “Bone: made in caverns out of / two parts earth, two parts gleaming / hunger, and four parts fire.”

¹⁹⁹ Guthrie, *ibid.*, p. 215.

VII· PHEREKYDES

“Pherekydes”²⁰⁰, the seventh poem in the sequence *The Old in Their Knowing*, is devoted to another early Greek philosopher. It is a unique poem in that it combines original Greek fragments as rendered into English by Bringham himself with an original meditation on the gist of Pherekydes’ peculiar cosmogony. Thus, the resulting composition is of a rare beauty and perfection again, of an elegant simplicity that salvages what little is extant of the mind of another ancient sage. Indeed, Pherekydes is not a negligible figure in the history of Greek cosmological speculation. Whatever surviving fragments we do possess of him tell us of a fascinating creation-myth that makes him one of the essential forerunners of philosophical cosmogony. The reputed teacher of Pythagoras and contemporary of Thales and Anaximander in Asia Minor, Pherekydes of Syros²⁰¹ (fl. c. 550 BCE) was an important Greek mythographer and cosmogonist who lived in the sixth century BCE, at a time of lively philosophical speculation. He was traditionally associated with the Seven Wise Men of Greece, especially Thales of Miletos. In *Metaphysics* (1091b8) Pherekydes was characterized by Aristotle as a theologian who mixed philosophy and myth. As a matter of fact, he was moving across the fascinating frontier between myth and philosophy, and so he is an important witness to early Greek thought at a decisive moment in the beginnings of Western philosophy. In this respect, he is a sort of bridge between mythic and pre-Socratic thought. Pherekydes is credited with originating metempsychosis, the doctrine that holds the human soul to be immortal, passing into another body, either human or animal, after death. Also, he is known as the author of *Heptamychos*,²⁰² one of the first attested prose works in Greek literature, extant in fragments only, describing the origin of the cosmos and the birth of the gods. This is a mythopoeic account rich in colourful narratives of a divine marriage and a battle of gods. The order of the events in Pherekydes’ book Kirk et al. summarize as follows: “(a) the three pre-existing deities; (b) the making by Chronos out of his own seed of things disposed in five recesses, which produce other generations of gods; (c) the making of cloth by Zas, the depiction on it of Earth and Ogenos, the wedding of Zas and Chthonie, and the presentation of the cloth, followed (?) by the spreading of it over the winged oak; (d) the battle between Kronos and Ophioneus; (e) the assignment of portions to different deities...”²⁰³

Bringham’s poem consists of two clearly distinguishable parts: whereas the first part constitutes a rendering into English of two of the surviving original Greek fragments telling of Pherekydes’ creation-myth, the second concerns a sort of exegetical meditation on what remains of the philosopher’s mind nowadays, almost 2,500 years later. It might be wise to start by invoking the first of the two original fragments beneath the first part of

²⁰⁰ “Pherekydes” was originally published as C.25 [Two poems], in *Prism International* 14.2 (Summer 1975): 14–15. Contents: “Pherekydes” (incl. in R.1; rpt. in A.5, A.6, A.14, A.47, A.76, A.92); “An Augury” (rpt. from C.21). It was also included in R.1 *Carmina propria et opuscula translata* (1975) and reprinted in A.5 *Eight Objects*, A.6 *Bergschrund*, A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*.

²⁰¹ See the entry on ‘Pherekydes’ in *Encyclopaedia Britannica*, volume, 22, p. 13080.

²⁰² On the existence of his book there are three surviving fragments worth quoting in full: (1) Diogenes Laertius I, 119: “There is preserved of the man of Syros the book which he wrote of which the beginning is: ‘Zas and Chronos always existed and Chthonie...’” (2) Suda s.v. Pherekydes: “Everything he wrote is as follows: Seven Recesses or Divine Mingling or Theogony. (And there is a Theology in ten books containing the birth and succession of the gods.)” (3) Diogenes Laertius I, 116: “This man is said to be by Theopompus to have been the first to write on nature and the gods. – Some relate that he was the first to bring out a book in prose.” See Kirk et al., *The Presocratic Philosophers*, p. 51. As Kirk makes clear, “What Theopompus (fourth century BC) must actually have said is that Pherekydes first wrote about the gods *in prose*, as opposed to e.g. Hesiod.” *Ibid.*, p. 51.

²⁰³ Kirk et al., *The Presocratic Philosophers*, p. 69.

“Pherekydes”: according to Diogenes Laertius I, 119 (fr. 1), “There is preserved of the man of Syros the book which he wrote of which the beginning is: ‘Zas and Chronos always existed and Chthonie; and Chthonie got the name of Ge, since Zas gave her Ge as a present [*or prerogative*].”²⁰⁴ This fragment enunciates the three primeval and eternal deities present at the moment of the creation of the *kosmos*. Not much is said in these few words, but they appear to be pregnant with subtle layers of meaning, for we learn (1) that there were three fundamental deities at the beginning of time; (2) that these three deities were eternal, for they “always existed”; and (3) that Chthonie undergoes a change of name to Ge as she gets a present from Zas, which is a marriage gift, as we shall see below. In Bringham’s hands, this handful of words become two simple verse lines: “Pherekydes, in summary, thus: *In the beginning / were time, earth, and the god.*” Another extant fragment sheds light on that preserved by Diogenes Laertius. Damascius, *de principiis* 124 bis, says: “Pherecydes of Syros said that Zas always existed, and Chronos and Chthonie, as the three first principles... and Chronos made out of his own seed fire and wind [*or breath*] and water... from which, when they were disposed in five recesses, were composed numerous other offspring of gods, what is called ‘of the five recesses’, which is perhaps the same as saying ‘of five worlds’...”.²⁰⁵ This fragment speaks of the primeval deities (Zas, Chronos and Chthonie²⁰⁶), of the initial creation of fundamental elements by Chronos, and the recesses where the god put his seed²⁰⁷ out of which a host of gods came into being. Bringham calls them by their simple, common names: time (Chronos), earth (Chthonie) and the god (Zas). These three basic principles of the *kosmos* always existed.²⁰⁸

So at the beginning of time there were three everlasting divine principles: time, earth and the god. Chronos’ seed was placed in the five recesses and gave birth to other innumerable offsprings of gods. Out of the union of earth and the god through marriage comes everything we know to exist into being. And so Bringham continues the retelling of Pherekydes’ creation-myth in these terms:

²⁰⁴ Kirk et al., *The Presocratic Philosophers*, p. 56.

²⁰⁵ Kirk et al., *ibid.*, p. 56.

²⁰⁶ “The names are unusual. Ζάς (accusative Ζάντα) is obviously an etymological form of Ζεός, and is perhaps intended to stress the element -ζα (an intensive prefix), as in ζάθεος, ζαής. Χθονίη, from Χθών, is presumably intended to represent Earth in a primitive role, perhaps as the abode of chthonic daimons, and at all events with stress on its under-parts. As for Χρόνος, it has been argued, notably by Wilamowitz, that the true reading must be Κρόνος: Kronos played an important role in Pherecydes’ theogony according to one extant fragment, 57, and ‘Time’ is a sophisticated cosmological concept for the sixth century B.C. But Χρόνος, which is widely supported in the sources, is almost certainly correct; the other two figures are etymologizing variants of well-known theogonical figures, and we naturally anticipate a similar case with the third. The substitution of Χρόνος for Κρόνος is just what we should expect here. It appears likely that by the later stages of the theogony the primeval trio assumed their familiar form as Zeus, Kronos and Hera.” Kirk et al., *ibid.*, p. 57.

²⁰⁷ “Damascius is following Eudemus. Chronos makes fire, wind and water out of his own seed, and this is implied to take place at an early stage. [...] The idea that the human seed is creative, and therefore that a primary deity’s seed is cosmologically creative, is neither surprising nor illogical. What is surprising here, however, is the things which are thus created...[...] It seems probable that the three unexpected products of Chronos’ seed – fire, wind and water – are an intrusive later interpretation of the nature of the seed itself, and that originally it was Chronos’ semen that was placed in the recesses. As for these, the seven in the title as given by the Suda might be obtained by adding to the five recesses connected with Chronos in 50 the other two pre-existing deities Zas and Chthonie, the latter of which, certainly, had a local and indeed a recess-like connotation.” Kirk et al., *ibid.*, p. 58.

²⁰⁸ “Zas and Chronos and Chthonie ‘always existed’: this resolves the difficulty of creation *ex nihilo*. An analogous declaration is seen, some two generations later, in Heraclitus’ world-order, which no god or man made, but always was, and is, and shall be... [...] It is surprising to see this concept stated so explicitly, at this relatively early date. Yet the gods who always existed are probably conceived as original forms (by etymology) of conventional figures from the traditional theogony; and one of them is ‘Time’, which might naturally be felt, without any deep abstract reflexion, to have been unborn.” See Kirk et al., *ibid.*, p. 56.

And the tissue of being

*was woven by the god and given as a marriage gift
on the marriage of the underground and the god:
the embroidered surface of the world*

*thrown over the tree roots' wingspread, over the nakedness
of gods; and the thread-ends
swept out and forgotten.*

The two complex images intertwined into the living fabric of these verse lines are, on the one hand, the marriage of Zas and Chthonie (the god and mother earth) and, on the other hand, the giving of a wedding gift (a cloth representing Ge and Ogenos, i.e. earth and ocean) to Chthonie on the part of the god. First of all, Zas marries Chthonie, and on the third day of the wedding ceremony the god makes a great cloth as a wedding gift for the bride. He decorates it with Ge (earth) and Ogenos (Pherekydes' name for the ocean, Okeanos), and then he gives it as a present to his wife. The gigantic embroidered cloth represents the earth's surface in the broad sense. As Chthonie receives the gift from the god, she gets the name of Ge²⁰⁹ (earth). Though she initially might be thought to represent *the solid structure of earth*, then she comes to embody *the variegated surface of the earth*, combining both Ge and Ogenos. Kirk suggests that "the weaving or embroidering of earth and Okeanos is an allegory of an actual creation-act."²¹⁰ In this sense, the act of creation itself is described mytho-poetically as Zas making a beautiful cloth decorated with the earth and the sea that he presents to Chthonie as a wedding gift. The relevant fragment beneath Bringhurst's poem is fragment 53, Grenfell and Hunt, *Greek Papyri*, series II, no. 11, p. 23, III century AD (DK 7B2):

His halls they make for him, many and vast. And when they had accomplished all these, and the furniture and manservants and maidservants and everything else necessary, when everything was ready, they hold the wedding. And on the third day of the wedding Zas makes a great and fair cloth and on it he decorates Ge and Ogenos and the halls of Ogenos 'for wishing [*or some such word*] marriages to be yours, I honour you with this. Hail to you, and be my consort.' And this they say was the first Anacalypteria: from this the custom arose both for gods and men. And she replies, receiving from him the cloth...²¹¹

In the second place, the gigantic embroidered cloth is then laid on a winged oak. Fragment 55 as preserved by Isidorus (the Gnostic, 1st-2nd century AD) ap. Clement. Al. *Strom.* VI, 53, 5 (DK 7B2) speaks of this cloth placed on the tree: "... that they may learn what is the winged oak and the decorated cloth upon it, all that Pherecydes said in allegory about the gods, taking his idea from the prophecy of Ham."²¹² Though Bringhurst does not mention the winged oak explicitly, he refers to "*the embroidered surface of the world / thrown over the tree roots' wingspread, over the nakedness / of the gods.*" Kirk et al. give a most illuminating explanation of what the oak stands for which is worth quoting in full:

²⁰⁹ "Chthonie gets the name of Ge, Earth, at a subsequent stage, presumably when Zas presents her with the cloth embroidered with earth in 53. But at that point she apparently takes over the control and guardianship of marriages; this was Hera's prerogative [...] According to the general view, and in so far as Chthonie·Ge is the wife of Zas-Zeus she is also thought of as becoming Hera. Hera was probably not an earth-goddess in origin, but there are other isolated cases where she replaces Gaia..." Kirk et al., *ibid.*, pp. 57-58, note 2.

²¹⁰ Kirk et al., *ibid.*, p. 57.

²¹¹ Kirk et al., *ibid.*, p. 61.

²¹² Kirk et al., *ibid.*, p. 63.

The oak represents the solidly fixed substructure and foundations of the earth. [...] Its trunk and branches are the support and roots of the earth. That the earth has roots is part of the popular world-picture [...], and a tree's branches, in winter, appear as large inverted roots. That the roots of earth *and* sea were sometimes conceived as being above Tartarus, and that Tartarus itself could be imagined as a narrower pit beneath, is clearly shown by the important description at *Theogony* 726ff. [...] The throat or neck that is Tartarus (or a part of it) corresponds with the trunk of the oak-tree, the roots which are above it correspond with the branches. The oak is 'winged' partly, at least, because of the spreading, wing-like appearance of these same branches. On them Zas has laid the cloth embroidered with Earth and Ogenos; these represent the earth's surface, flat or slightly convex, rather, as indeed it appears to be. We cannot say whether Ogenos is conceived as a surrounding river or as the sea. The oak is specified because it is associated more than any other tree with Zeus [...], and because of its notable strength and the great spread of its branches. Thus according to the interpretation offered here Zas must have chosen, or magically grown, a broad oak as the foundation of the earth... [...] Zas then weaves a cloth, decorating it with earth and Okeanos, and lays the embroidered cloth on the outspread branches of the oak to form the earth's surface.²¹³

Before the world is ordered for good, a cosmic battle takes place between Chronos and Ophioneus. But Bringhurst makes no explicit mention of this episode in Pherekydes' story. Thus, the first part of the poem finishes with three simple lines that remind the reader of the genesis of all living things out of Mother Earth: "*All things thereafter have been born / in the belly of the earth, in the seven / valleys, out of the seven inland streams.*" And what follows these lines is the second part of the composition, a meditation or exegetical act of interpretation on the part of the poetic voice about what Pherekydes relates in his creation-myth. At the very core of the meditation is a summary of the creation myth: "*a god put a veil on the ugly mud / and married it*", which is a reference to Zas (the god) marrying Chthonie (conceived as the ugly underground). Upon his death, "*Pherekydes' dust, when he was buried, sifted home.*" That all living things should go back to the womb of Mother Earth when they die comes as no surprise at all. Pherekydes himself was no exception to the rule. What remained of him in the form of dust "*sifted home*" – i.e., it went back to earth itself. His dust is one and the same thing with earth itself now, and so what remains of him after 2,500 years is nothing more than the variegated surface of Earth in its manifold manifestations:

There remains of the mind of Pherekydes:
the esker and the glacial milk,
the high spring runoff in the gorge,

and the waterfalls hammered out of cloud
against the mid cliff,
vanishing in the hungry Himalayan air.

Bringhurst is absolutely precise about the use of geological terms in the closing lines of his poem. Thus, (1) an *esker* is a long narrow area of small stones and earth that has been left by a large mass of ice that has melted, or, to put it differently, a long winding ridge of stratified sand and gravel; (2) *glacial milk* consists of fine-grained, silt-sized particles of rock, generated by mechanical grinding of bedrock by glacial erosion, and when it becomes suspended in river water, it makes the water appear cloudy; (3) *runoff* is rain, water or other liquid that runs off land into streams and rivers; (4) a *gorge* is a deep narrow valley with steep sides; and (5) a *waterfall* is the place where a stream or river falls from a high place, for

²¹³ Kirk et al., *ibid.*, pp. 64-65.

example over a cliff or rock. All five geological terms bring together earth and water into a complex and fascinating image at the heart of these two stanzas. Of Pherekydes' mind this is what remains: bits and pieces of earth eroded by the action of ice, as well as water flowing freely to find its way down a cliff "*vanishing in the hungry Himalayan air.*" Of the four roots or ingredients (earth, water, fire and air), only fire appears to be missing here. That Bringham's 12-part sequence of poems in *The Old in Their Knowing* is tightly woven is demonstrated by a simple fact: "Pherekydes" ends with a reference to what has survived the passing of time (his ashes being incorporated into the natural rotation of the elements on earth), in much the same way "Herakleitos" ends with a section and verse line that tells of what is left of him – "*Wind stirs his ashes*" – and "Pythagoras" begins its first section with a reference to what is left of the philosopher's mind: "*the mind of Pythagoras stands on two columns of words.*"

VIII · PYTHAGORAS

The eighth poem in *The Old in Their Knowing* sequence is "Pythagoras", a complex composition whose genesis must be traced back to 1974.²¹⁴ Unlike the two pieces devoted to Empedokles ("Empedokles: Seven Fragments" and "Empedokles' Recipes") or even certain sections in "Herakleitos", "A Short History" or "Pherekydes", "Pythagoras" does not contain exact translations from original Greek fragments dealing with the philosopher's life or doctrine. However, in the 2005 *The Old in Their Knowing* incarnation of the text, the poet does give us three fragments (by Plutarch, Porphyry and Aristotle, respectively) as the starting point or inspiration for his composition on this influential philosopher and mystic. Essentially, this five-part poem is an original meditation on what remains of this sage after 2,500 years, and so the emphasis is laid from the start on the fragmentary nature – *the shattered tatters of wisdom* and *luminescent remnants* – of the Pythagorean thinking and singing. In philosophy, as in great poetry, ideas sing and dance, according to Bringham. And Pythagoras' ideas do sing and dance in a poem which turns out to be central to the poet's entire corpus. That it saw the light of day as early as 1974 and that it should have been preserved up to the 2009 edition of the author's *Selected Poems* testifies to its relevance and invaluable position in the author's oeuvre. Pythagoras' intellectual stature deserves no less than this. Plato's own metaphysics is imbued with ideas that are recognizably Pythagorean in origin, and the influence of Plato (and so of Pythagoras) on subsequent Western philosophy is simply far-reaching and vast.

Pythagoras of Samos,²¹⁵ Πυθαγόρας in classical Greek, (b. c. 570 BCE, Samos, Ionia [now in Greece] – d. c. 500, Metapontum, Lucania [now in Italy]), is a Greek philosopher, mathematician, and founder of the Pythagorean school or brotherhood that, although

²¹⁴ "Pythagoras" was originally published as A.4 • *Pythagoras*. Kanchenjunga Broadsheet No. 2. San Francisco & Vancouver: Kanchenjunga Press, 1974. Broadsheet, 22 × 56 cm, 500 copies. Contents: A poem. It was also included in R.1 *Carmina propria et opuscula translata* (1975) and reprinted in A.5 *Eight Objects*, A.6 *Bergsbrund*, A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*. It was also published as B.7, in the bilingual anthology (English and Portuguese) *Quingumbo: Nova Poesia Norte-Americana*, organização de Kerry Shawn Keys. São Paulo: Editora e Livraria Escrita, 1980: pp. 277-299. Contributions: "Anecdote of the Squid", "Essay on Adam", "Poem about Crystal", "A Quadratic Equation", "Genesis Frozen", "Scholium", "An Augury", "Song of the Summit", "The Beauty of the Weapons", "Some Ciphers", "Pythagoras" (all rpt. from A.6, except "The Beauty of the Weapons", rpt. from A.1). With Portuguese translations by several hands.

²¹⁵ See the entries on 'Pythagoras' and 'Pythagoreanism' in *Encyclopaedia Britannica*, vol. 23, p. 13780 and p. 13781 respectively.

religious in nature, formulated principles that influenced the thought of Plato and Aristotle and contributed decisively to the development of mathematics and Western rational philosophy. He was said to be the first man to call himself a *philosopher*, or *lover of wisdom*, and Pythagorean ideas exercised a marked influence on Plato, and through him, on all of Western philosophy. Born on the island of Samos in the eastern Aegean, he was the son of a gem-engraver called Mnesarchus,²¹⁶ and he might have travelled widely in his youth, visiting Egypt, Babylonia and other places in search of enlightenment and knowledge. The value of learning was deeply rooted in Greek consciousness, and Pythagoras was regarded as an outstanding exemplar of wisdom. Thus, several surviving fragments claim that Pythagoras was a man of extensive learning. For instance, in fr. 129 (Diogenes Laertius, VIII, 6) Herakleitos says “Pythagoras son of Mnesarchus practiced inquiry most of all men, and having made a selection of these writings contrived a wisdom of his own, a polymathy, a worthless artifice.”²¹⁷ Ion of Chios in fr. 4 (Diogenes Laertius, I, 120) speaks of Pythagoras as being “wise in all things,”²¹⁸ whereas Empedokles says in his fragment 129 (Porphyrius, *Life of Pythagoras* 30): “There was among them a man of surpassing knowledge, who possessed vast wealth of understanding, capable of all kinds of cunning acts; for when he exerted himself with all his understanding, easily did he see every one of all the things that are, in ten and even twenty human lives.”²¹⁹

About 532 BCE, Pythagoras left his home island in the reign of Polycrates, at the age of 40,²²⁰ and he migrated to Croton, the leading Greek colony in southern Italy (Magna Grecia), apparently to escape Samos’s tyrannical rule, and established his ethico-political academy there. To a philosophical genius and a preacher of the ascetic life like Pythagoras, the need to escape a life of luxury and dissipation under Polycrates’ tyranny must have been decisive. In Croton he settled soon and attained a position of authority and influence in the city.²²¹ There he set up a philosophical school or religious sect called Pythagoreanism, where all members took strict vows of secrecy, and all new mathematical results for several centuries were attributed to his name. Indeed, Pythagoreanism originated as a religious brotherhood or an association for the moral reformation of society; brothers were sworn to strict loyalty and secrecy. His followers pursued the religious rites and practices developed by Pythagoras, and studied his philosophical theories. The brotherhood had much in common with the Orphic communities, which sought by rites and abstinence to purify the believer’s soul and enable it to escape from the “wheel of birth”. Pythagoreanism held that reality, at its deepest level, is mathematical, that philosophy (*philosophia*, i.e. ‘love of wisdom’) can be used for spiritual purification, that the soul can rise to union with the divine, and that certain symbols (like the *tetractys*) have mystical significance. It was the first important Western system of thought to advocate abstention from flesh (i.e. vegetarianism). The society took an active role in the politics of Croton and other neighbouring cities, where Pythagoreans occupied the leading positions. Real power was in

²¹⁶ Kirk et al., *The Presocratic Philosophers*, p. 222: Aristoxenus in fr. 11A Wehrli, Diogenes Laertius I, 118, (DK 14, 8), “Pythagoras, son of Mnersarchus the gem-engraver, and a Samian (as Hermippus says) or (as Aristoxenus says) a Tyrrhenian from one of the islands which the Athenians held after expelling the Tyrrhenians”.

²¹⁷ Quoted by Guthrie, *ibid.*, p. 157.

²¹⁸ Quoted by Guthrie, *ibid.*, p. 158. Diogenes Laertius, VIII, 8, Ion, fr. 4 DK.

²¹⁹ Quoted by Guthrie, *ibid.*, p. 161.

²²⁰ Kirk et al., *The Presocratic Philosophers*, p. 222: Aristoxenus in fr. 16, Porphyrius, *Life of Pythagoras* 9 (DK 14, 8), “Aristoxenus says that at the age of forty, seeing that the tyranny of Polycrates was too intense for it to be becoming for a free man to endure such domination and despotism, he made his departure for Italy for that reason.”

²²¹ Guthrie tells us that his motive in acquiring power was “not personal ambition but a zeal for reforming society according to his own moral ideas.” *Ibid.*, p. 175.

their hands, but this eventually led to their downfall. The Pythagorean meeting-places were burned, and Pythagoras was forced to flee the city. He is said to have ended his days in Metapontum, where he was forced to take refuge in a temple of the Muses and starved to death.²²² Thus, the school became extinct during the fourth century BCE.

It is difficult to distinguish Pythagoras's teachings from those of his disciples.²²³ None of his writings have survived,²²⁴ and most of the information about Pythagoras was written down centuries after he lived, so very little reliable information is known about him. Furthermore, Pythagoreans invariably supported their doctrines by indiscriminately citing their master's authority: the master was revered as a great mathematician, scientist and mystic, as the ultimate source of their doctrine and discoveries. Ancient Pythagoreans usually quoted their master's doctrines with the phrase *autos ephe* ("he himself said"), thus emphasizing the essentially oral nature of his teaching. In practice, many of the accomplishments credited to Pythagoras may actually have been accomplishments of his colleagues and successors. Pythagoras, however, is generally credited with the theory of the functional significance of numbers in the objective world and in music: numbers were the ultimate reality, the principles of mathematics were the principles of all things. Other discoveries often attributed to him (e.g., the incommensurability of the side and diagonal of a square, and the Pythagorean theorem for right triangles) were probably developed only later by the Pythagorean school. The bulk of the intellectual tradition associated to Pythagoras and his disciples bring together both mystical wisdom and scientific scholarship, that is, their philosophy was intended to be in the service of an ascetic lifestyle of austerity and moderation in accordance with the divine.

²²² Guthrie, *ibid.*, p. 179.

²²³ Pythagoras, Guthrie tells us in *A History of Greek Philosophy*, vol. I, was as much a philosopher as a religious and a political leader for Pythagoreans. This had several inevitable consequences: (1) The legends gathered round the figure of the founder: "In a society which is a religious sect rather than a philosophical school, the name of the founder is held in particular veneration. He tends to be, if not actually deified, at least heroized or canonized, and in consequence his memory gets surrounded by a haze of legend". (*Ibid.*, p. 148) This accounts for the fact that he was identified with the Hyperborean Apollo, a fundamental deity to the sect, and that he was credited with supernatural powers such as ubiquity, a golden thigh and prophesying. (2) The tendency to trace back to Pythagoras all their doctrines and discoveries: "In a religious school there is a particularly strong temptation, not only to venerate the founder, but to attribute all its doctrine to him personally. It is 'the word of the Master'. This is not simply due to a pious desire to honour his memory, but is bound up with the religious view of truth which the Pythagoreans shared with adherents of the mystery-religions. They were indeed philosophers, and made scientific discoveries; but these they regarded in much the same light as the revelations which were an essential part of initiation into the mysteries. Many of their most important discoveries were mathematical, and there was always in the Greek mind a close connexion between mathematical, astronomical and religious speculation". *Ibid.*, p. 149. (3) The secrecy with which some of their teaching was surrounded: "An obvious difficulty for the historian [of philosophy] is constituted by the secrecy" of the school. Philosophical researches were undertaken by the Pythagoreans with the conscious purpose of making them the basis for religion, and mathematics was a holy occupation. Pythagoreanism had its secrets, and "not everything was to be divulged to all men." Certain doctrines were to be held in awe, "coupled with a feeling that they should not be spoken of." There is more evidence supporting the jealous guarding of mathematical secrets than teachings about the gods, the soul or the doctrine of transmigration. This feeling against open discussion of Pythagorean doctrine must have led to "omissions and distortions in ancient writings on the subject; for where the truth is not freely communicated, its place is naturally filled by baseless rumour." *Ibid.*, pp. 150-153.

²²⁴ See Kirk et al., *The Presocratic Philosophers*, p. 216: "Pythagoras wrote nothing. Hence a void was created which was to become filled by a huge body of literature, much of it worthless as historical evidence of Pythagoras' own teachings. It included accounts of Pythagorean physics, ethics and political theory as well as metaphysics; biographies of Pythagoras; and several dozen treatises (many still extant) whose authorship was ascribed to early Pythagoras."

The fundamental difficulty one is inevitably confronted with when dealing with Pythagoras and the Pythagoreans is twofold. On the one hand, the chief difficulty is the scantiness of contemporary sources of information²²⁵, as most of the early records have perished and so we must rely on later sources that offer but a fragmentary view of the Pythagorean philosophic system. Thus, Plato mentions Pythagoras once (*Republic*, 600B) and the Pythagoreans once (*Republic*, 530D); Aristotle, the earliest author to give any detailed information about the Pythagoreans, refers to Pythagoras once in his *Metaphysics* A, 986a30 (but the authenticity of the passage is doubtful) and in his *Rhetoric* B 1398b14; and the most abundant part of our information originates with the revival of Pythagoreanism about the time of Cicero and the rise of Neoplatonic philosophy in the third century CE (Porphyry and Iamblichus chief among them). On the other hand, the nature of the school itself, advocating secrecy within the brotherhood and attributing all the discoveries to the founder, makes its teachings particularly impenetrable, especially at this distance of time. There is no way of attributing with certainty fundamental ideas or teachings to Pythagoras himself. Philosophy in the Pythagoreans' hands becomes something completely different from what it had meant to the Ionian philosophers in Asia Minor: whereas for Thales, Anaximander, Anaximenes and Herakleitos the motive for philosophy had been essentially curiosity and technical improvement, for the Pythagoreans the chief motive was "the search for a way of life whereby a right relationship might be established between the philosopher and the universe."²²⁶ Given the secrecy inherent in the brotherhood, when the school disappeared in the 4th century BCE, many of their teachings went to the graves with the last Pythagoreans. At this point, the most fundamental aspects of Pythagoreanism can be best summarized as follows, borrowing Guthrie's illuminating words: Pythagoras himself taught the transmigration of souls and posthumous rewards for the meritorious; Pythagoras was a man of science and a religious teacher, a polymath, a man of prodigious learning; the veneration of Pythagoras by his disciples exalted him to legendary status, regarding him as a man endowed with astonishing capacities and crediting him with miracles; the Pythagoreans formed a society of their own, practicing a distinctive and extraordinary way of life marked by silence and secrecy, asceticism and moderation, abstaining from bloodshed and flesh and beans while complying with other superstitious taboos; and they were acknowledged experts in astronomy, harmonics and the science of number.²²⁷

A poem of outstanding beauty and remarkable complexity, "Pythagoras" opens with a Latin epigraph, "*lemuribus vertebratis, ossibus inter tenebras*", which Bringhurst himself translates as "for the vertebrate ghosts, for the bones among the darkneses" in his glossary on odd terms at the end of *The Beauty of the Weapons* (1982). These Latin words appear to

²²⁵ W.K.C. Guthrie, *A History of Greek Philosophy*, vol. I, pp. 157-171, provides a detailed analysis of the sources available to the historian of philosophy for the rigorous study of Pythagoras and the Pythagoreans. He groups them under three distinct categories: (1) Sources of the sixth and fifth centuries BCE: Xenophanes of Colophon as quoted by Diogenes Laertius (VIII, 36, Xenoph. Fr. 7 DK); Herakleitos as quoted by Diogenes Laertius (IX, 1, Heracl. fr. 40 and fr. 129 DK); Ion of Chios as quoted by Diogenes Laertius (VIII, 8, Ion, fr. 1, fr. 2 and Fr. 4 DK); Herodotus (especially book IV, chapters 93-94); and Empedokles (fr. 129). (2) Fourth-century sources excluding Aristotle and his pupils: Plato (in the seventh book of his *Republic*, 600B and 530D); Isocrates (ch. 28 of *Busiris*); Heraclides of Pontus as quoted by Porphyry (*De Abst.* I, 26). (3) Post-Platonic sources: two pupils of Aristotle, Aristoxenus and Dicaearchus; the Sicilian historian Timaeus from Taormina; and the Neoplatonic lives of Pythagoras by Porphyry and Iamblichus, two compilers whose material exhibits two related faults – a love of the marvellous and a religious and superstitious character which accounts for their singular lack of any critical faculty in compiling their fragments.

²²⁶ W.K.C. Guthrie, *A History of Greek Philosophy*, vol. I, p. 148.

²²⁷ Guthrie, *ibid.*, pp. 166-167.

suggest that the poet is invoking the presence of the Greek sage, now almost 2,500 years dead, asking him to emerge from out of the mists of time and make himself visible. What we are witnessing here is Bringhurst's attempt at salvaging invaluable fragments of wisdom that still have something to teach us. Section 1 of Bringhurst's poem is thus concerned with the surviving fragments that contain a wealth of information about the Presocratic thinker, or rather, it is a meditation on the legacy of Pythagoras as preserved in the extant remnants that have survived in spite of the passage of time. Two distinct parts are discernible in the design of this short poem: whereas the first part is a catalogue of the Pythagorean remnants, the second one is an apt depiction of Pythagoras' thinking as a building of which not much is left standing. This the exhaustive catalogue of what is left of the sage's remnants:

Remnants: the 39 rules, a sundial
untied like a shoelace, a theory of number
dismembered and scattered like dice. And the third-hand
chatter over the transmigration of souls.
And a story: Pythagoras wouldn't eat meat

and his legs buckled under him.

Pythagoras left no writings of his own; his wisdom was firmly steeped in orality. Here, with an astonishing economy, Bringhurst manages to embody in just six lines a handful of essential tenets of Pythagoreanism:

- (1) The Pythagorean belief that the soul is immortal²²⁸ and commonly reborn in a different body is evoked in the words "*the third-hand / chatter over the transmigration of souls.*" Pythagoras was a believer of metempsychosis and believed in transmigration²²⁹, that is, the reincarnation of the soul again and again into the bodies of humans, animals, or vegetables until it became immortal. Conformity with the divine was possible if one followed the path towards salvation offered by philosophy; that was the legitimate final aim of human lives according to Pythagoras.²³⁰ In this respect, in one of the extant fragments of his *Life of Pythagoras* (19, DK, 14.8a), Porphyry writes as follows on the immortality of the soul and the transmigration doctrine: "What he said to his disciples no man can tell for certain, since they preserved such an exceptional silence. However, the following facts in particular

²²⁸ Guthrie explains how the immortality of the soul means much more than mere survival. In Homer the *psyche* survived after death, but it was "the merest simulacrum of the man, lacking strength and wits, both of which it owed to its association with the body. It is compared to a shadow, an image, a dream, to smoke, to a twittering bat. [...] The real self was the body. Death meant separation from the body, and hence from life... [...] Indeed to speak of the human soul as immortal was blasphemy. Only the gods were immortal, and they were exceedingly jealous of their immortality. It would go ill with a mortal who claimed it for himself, for that would be to set himself up against Zeus and the Olympians." *Ibid.*, p. 196. This conception of the relations between gods and humans was firmly ingrained in the Greek consciousness and so the great writers of the period (Herodotus, Pindar, the great tragedians) insisted on the necessity to remember one's mortality. However, the Pythagoreans, like the Orphics, believed in "the idea of assimilation to the divine as the legitimate and essential aim of human life." *Ibid.*, p. 199. Somewhere else, Guthrie says that "between mortals and immortals, gods and men, a barrier was fixed, and it was *hybris* to cross it. Nothing too much, observe the limit; and immortality and divinity were unquestionably beyond the limit appointed for man." *Ibid.*, p. 206.

²²⁹ As for reincarnation, in fragment 7 (Diogenes Laertius VIII, 36), Xenophanes claimed that he believed in the transmigration of souls as he mentions the story of his interceding on behalf of a dog that was being beaten, professing to recognize in its cries the voice of a departed friend: "Once they say that he was passing by when a puppy was being shipped, and he took pity and said: "Stop, do not beat it; for it is the soul of a friend that I recognized when I heard it giving tongue." See Kirk et al., *ibid.*, p. 219. Pythagoras himself is supposed to have claimed that he had been Euphorbus, the son of Panthus, in the Trojan War, as well as various other characters, a tradesman, a courtesan, etc.

²³⁰ Guthrie, *ibid.*, p. 199.

became universally known: first that he held the soul to be immortal, next that it migrates into other kinds of animal, further that past events repeat themselves in a cyclic process and nothing is new in an absolute sense, and finally that one must regard all living things as kindred. These are the beliefs which Pythagoras is said to have been the first to introduce into Greece.”²³¹ (This is, by the way, one of the fragments beneath Bringham’s own poem and he quotes it in the original Greek in the 2005 *The Old in Their Knowing* incarnation of his poem.) It is a fundamental passage indeed for it contains several important ideas central to Pythagoreanism: the immortality of the soul, metempsychosis (the migration of the soul to other animal bodies) as a cyclical process, and the doctrine of the kinship of all animate nature (all souls belong to a gigantic universal family), which makes the transmigration of the souls possible and explains why Pythagoras preached the abstention from animal life. For the Pythagoreans the notion of the kinship of all life was of paramount importance: the universe as whole was “a living and breathing creature.” Guthrie explains this with astonishing beauty and clarity in a paragraph worth quoting in full:

If the world was a living, eternal and divine creature, and lived by breathing in air or breath from the infinite around it; and if man too got his life by breathing (which was evidence that the human soul itself was air); then the natural kinship between man and the universe, microcosm and macrocosm, must be close. The universe was one, eternal and divine. Men were many and divided, and they were mortal. But the essential part of man, his soul, was not mortal, and it owed its immortality to this circumstance, that it was neither more nor less than a small fragment or spark of the divine and universal soul, cut off and imprisoned in a perishable body.²³²

For Pythagoras and his disciples the path to salvation, towards the purification of the soul and reunion with the divine, lay in philosophy (*philosophia*), which meant “using the powers of reason and observation in order to gain understanding.”²³³ This also partly accounts for the sect’s worship of Apollo, the most Hellenic of gods, the epitome of reason, limit, moderation and order, and also for the Pythagoreans’ passion for the study of the *kosmos* as the embodiment of beauty, perfection and order. Thus, assimilation with the divine in the *kosmos* was the ultimate, legitimate goal of life for Pythagoras: “(a) the world is a *kosmos* – that untranslatable word which unites [...] the notion of order, arrangement or structural perfection with that of beauty. (b) All nature is akin, therefore the soul of man is intimately related to the living and divine universe. (c) Like is known by like, that is, the better one knows something the more one is assimilated to it. Hence (d) to seek through philosophy for a better understanding of the structure of the divine *kosmos* is to realize and cultivate the divine element in oneself.”²³⁴ By studying the beauty and order on a grand scale in the *kosmos*, humans become “*kosmoi* in miniature, organic structures composed of the same stuff and reproducing the same principles of order.”²³⁵

²³¹ Guthrie, *ibid.*, p. 186.

²³² Guthrie, *ibid.*, p. 201. The notion of the kinship of all life gave the Pythagoreans an aim in life: “to cultivate the soul, shake off the taint of the body, and rejoin the universal soul of which their individual souls were in essence parts. So long as the soul was condemned to remain in the wheel of transmigration [...] so long as it still impure. By living the best and highest type of human life it might ultimately shake off the body altogether, escape from the wheel of rebirth, and attain the final bliss of losing itself in the universal, eternal and divine soul to which by its own nature it belonged.” *Ibid.*, pp. 202-203.

²³³ Guthrie, *ibid.*, p. 205.

²³⁴ Guthrie, *ibid.*, pp. 206-207. For a detailed analysis of the evolution of the Greek word *kosmos* see Guthrie, *ibid.*, p. 208, note 1. To put it very briefly, the meaning of the word evolved gradually through these stages: (a) order or arrangement of anything, (b) order in the world, (c) the world *as* an order, (d) the world in general, with no special reference to its ordered structure. That the world exhibited a rationally comprehensible order was a decisive discovery. It meant a break with current religious beliefs and marked the dividing line between religion and philosophy.

²³⁵ Guthrie, *ibid.*, p. 211.

- (2) The “*sundial / untied like a shoelace*” is meant as a reference to the acknowledged expertise of the Pythagoreans in astronomy. They combined with perfect naturalness adherence to a set of religious and superstitious beliefs with the rational pursuit of mathematical science and cosmic speculation.²³⁶ Plato mentions the Pythagoreans only once in his *Republic* (530D), where he has Socrates say about the course of study to be laid down for the philosophical Guardians of the republic: “I think we may say that, just as our eyes are made for astronomy, so our ears are made for harmony, and that the two are, as the Pythagoreans say, and as we should agree, sister sciences.”²³⁷ Astronomy is of paramount importance because its study is not to be limited to the stars and their visible motions. Reaching beyond them, the philosopher will gain an insight into the mathematical principles and laws of motion underlying them. By applying itself to the study of the perfection of the cosmos, for only like knows like, the philosopher’s soul will come to be imbued with its beauty and order. Thus, to study the visible cosmos in its regular and ordered dimension will emphasize the soul’s kinship with the divine.
- (3) The “*39 rules*” are probably intended as a reference to the so-called *acusmata* or *symbola*²³⁸, i.e. the rules by which the members of the Pythagorean brotherhood abide. These rules²³⁹ are either straightforward moral precepts or have a Pythagorean oracular meaning to be deciphered in accord with their moral and political ideas. There were ascetic practices (many of which had, perhaps, a symbolic meaning) in the way of life of the sect. On the basis of metempsychosis, Pythagoras preached the abstention from flesh, and so he is said to have had a plant-based diet. This was one of the elemental tenets of Pythagoreanism from the outset. Some represent Pythagoras as forbidding all animal food, advocating a plant-based diet, and prohibiting consumption of beans. Other authorities contradict the statement and limited the abstention to certain species. There is a similar discrepancy as to the prohibition of fish and beans. But temperance of all kinds seems to have been urged. Bringham says that he “*wouldn’t eat meat / and his legs buckled under him,*” because he had no proteins (and not much energy) in his organism. The killing and eating of animals was entirely against their principles, and so they abstained from animal food, ate vegetables and bread, and drank nothing but water, on the ground that animals share with humans “the right to a soul” (Diogenes Laertius, VIII, 12).²⁴⁰ Abstention from flesh was essential then because to eat it was a form of cannibalism given the universal kinship of all life, and so the Pythagoreans were life-long vegetarians.²⁴¹ In fragment 137 DK, Empedokles himself would reason that by eating animal flesh, one may be unwittingly devouring their own son or father in altered shape, just because of the transmigration of souls.
- (4) For the Pythagoreans the ultimate element of reality was number, and indeed they were responsible for important advances in the science of mathematics. The Egyptians and the Babylonians had already done much in the field of mathematics, and even if the Ionian

²³⁶ Guthrie, *ibid.*, p. 181. Guthrie reminds us that “Philosophy for Pythagoras and his followers had to be first and foremost the basis for a way of life: more than that, for a way of eternal salvation. When the study of man and the cosmos is undertaken as a means of help and guidance in right living, the resulting system of nature must be one that will afford such help. To the Pythagoreans the most important part of philosophy was that which taught of man, of the nature of the human soul and its relations with other forms of life and with the whole.” *Ibid.*, p. 182.

²³⁷ Guthrie, *ibid.*, p. 162.

²³⁸ Guthrie gives a few examples of these precepts which are certainly older than Pythagoras: To abstain from beans. Not to pick up what has fallen from the table. Not to stir the fire with a knife. To roll up one’s bedclothes on rising and smooth out the imprint of the body. To touch the earth when it thunders. Etc. *Ibid.*, p. 183.

²³⁹ According to Kirk et al., “Various late authors preserve collections of maxims which they represent as parts of Pythagorean teaching. They were evidently transmitted by word of mouth, as the name *acusmata* (‘things heard’) indicates. The Pythagorean initiate was presumably required to commit them to memory, as containing a catechism of doctrine and practice.” *Ibid.*, p. 229.

²⁴⁰ Guthrie, *ibid.*, p. 190.

²⁴¹ Guthrie, *ibid.*, p. 195.

philosophers (Thales among them, with his geometrical theorems) had a keen interest in number and geometry, it was the Pythagoreans that laid the foundations of Greek mathematics. The Greeks did not invent mathematical science, but they accomplished much in its systematization by putting it on an exact and universal basis.²⁴² Hence, Bringhurst speaks of “*a theory of number / dismembered and scattered like dice.*” Thus, in *De Caelo* (286a10), Aristotle illustrates the Pythagoreans’ reverence for numerical philosophy with these words: “As the Pythagoreans say, the whole word and all things in it are summed up in the number three; for end, middle and beginning give the number of the whole, and their number is the triad. Hence we have taken this number from nature, as it were one of her laws, and make use of it for the worship of the gods.”²⁴³ If, in his journey towards purification and salvation of the soul, the proper object of study of the philosopher is the *kosmos*, then he must look into things with open eyes to identify the underlying mathematical principles governing the universe in its entirety. Another belief attributed to Pythagoras was that of the doctrine of the “harmony of the spheres”, which posited that the planets and stars moved according to mathematical equations, which corresponded to musical notes and thus produced a symphony. To this notion and to the centrality of number to Pythagorean doctrine we shall presently come back below.

It is now due time we turned to the second part of the first section of “Pythagoras”. These verse lines are built around a metaphor simple enough: Pythagorean thinking is a gigantic fallen house or a building whose blocks are now nothing more than debris – “*Rubble / of picked-over thought, shattered²⁴⁴ pediments, cracked / roof tiles laid up with mortar now gone in the rain.*” The notion of fragmentation is present in the poem from the very opening line, so that a subtle semantic constellation is being built around the words *remnants, dismembered, scattered, rubble, shattered* and *cracked*. That is the subterranean train of thought pervading the whole section from beginning to end. But of all fragments in the world these are the least dispensable of all, or at least that is the message the poetic voice appears to be delivering by the end of poem. Solitary seabirds fly over the remnants of Pythagorean thinking, surrounded by uncared-for high grass that has taken over and gained dominion over space. There is “*nothing erect / except these pillars: / the mind of Pythagoras stands on two columns of words.*” The pillars are nothing more than the table of opposites preserved by Aristotle in an eloquent passage in his *Metaphysics* (986a22), which is the second source of inspiration for Bringhurst’s poem. It is the heart beating subtly and beautifully at the core of the third section of the poem, as we shall see below. On them stands Pythagoras’ immortal mind, even if they look like a simple enumeration of ten basic principles upon which reality rests. They are primitive, fundamental, and therefore absolutely dispensable. But the pillars are also the beautiful columns illustrating the cover of *The Old in Their Knowing* in one of its two material incarnations in 2005, for which Peter Koch et al. were responsible.

Pythagoras’ philosophy of number is at the heart of the second section of Bringhurst’s poem. Consisting of only two three-line stanzas, this jewel-like composition resembles other short lyric poems so characteristic of the author’s literary output – “Poem About Crystal” in particular comes to one’s mind immediately. For the Pythagoreans the world was alive with mysterious forces that their mind was capable of perceiving. Number was the ultimate substratum or *arche* for them. In this sense, their approach to the *kosmos* was essentially formal, which means that phenomena were not relevant in themselves but only as the expression of number. “Number was responsible for ‘harmony’, the divine principle

²⁴² Guthrie, *ibid.*, p. 218.

²⁴³ Guthrie, *ibid.*, p. 193.

²⁴⁴ ‘Broken’ in *Pythagoras* (1974), *Eight Objects* (1975), *Bergschrund* (1975) and *The Beauty of the Weapons* (1982).

that governed the structure of the whole world. Numbers not only explained the physical world, but also symbolized or stood for [...] moral qualities and abstractions.”²⁴⁵ Their view of mathematics was metaphysical, so that the acquisition of knowledge and the discovery of underlying mathematical principles beneath the order and perfection of the *kosmos* was like a religious initiation, rather than mere intellectual speculation for its own sake. In *Metaphysics* 985b23, Aristotle speaks of their explanation of the world in terms of numbers: “Contemporary with *and before* these men, the Pythagoreans (as they are called), who were the earliest to apply themselves to mathematics, at the same time were making advances in this subject and, because of their absorption in it, assumed the principles of mathematics to be the principles of everything.”²⁴⁶ Numbers had a mystical significance that the Pythagoreans had in their mind all the time. Bringhurst’s poem is worth quoting in full before we proceed to a detailed critical analysis:

Not the calculus. Numbers. Integers
tethered into crystal structures: copper, antimony...
Integers driven like nails into inflexible void.

Dull-eyed disciples, centuries later, sitting
down to count the catalog,
mumbling over multipliers.

It is necessary to have a numerical mind to be able to perceive numbers and integers in *crystal structures*, in *copper* or *antimony*. Whenever they turned to look, the Pythagoreans found numerical relationships in the physical, audible world. The numerical explanation of the world made it possible for them to claim that all things in the universe were numbers. They were somehow inescapable, all-pervasive, as Bringhurst’s metaphor whereby he equates them with *nails driven into the inflexible void* suggests. At this point, it might be wise to quote several relevant fragments from Aristotle’s *Metaphysics* on numbers as being the ultimate element of reality. From these three quotations, we deduce that the philosopher refers to the Pythagorean number-doctrine in three ways: *things are numbers*, *things imitate or represent numbers*, and *the elements of numbers are the elements of things*. Here are the relevant passages:

- (1) *Metaph.*, 987b28: “They say that things themselves are numbers.” And *Metaph.*, book N, 1090b20: “The Pythagoreans, because they saw many of the attributes belonging to sensible bodies, assumed existing things to be numbers – not separately existing numbers, but that things are actually composed of numbers. Their reason was that numerical properties were inherent in the musical scale, in the heavens, and in many other things.”
- (2) *Metaph.*, 987b11: “The Pythagoreans say that existing things owe their being to imitation (*mimesis*) of numbers.”
- (3) *Metaph.*, 985b32: “Since the nature of everything else seemed to be entirely assimilated to numbers, and numbers to be primary throughout the world of nature, they assumed the elements of numbers to be the elements of all that exists, and the whole universe to be a *harmonia* and a number.”²⁴⁷

One of the key words in these passages is *harmonia*, which, according to Guthrie, was fundamental for the Pythagoreans and it meant primarily ‘the joining or fitting of things together’, then ‘the stringing of an instrument with strings of different tautness’, and so ‘a musical scale’. That the word *harmonia* should have this musical connotation is made clear by Aristotle’s words on the harmony of the spheres in *De Caelo* (290b12): the whole

²⁴⁵ Guthrie, *ibid.*, p. 213.

²⁴⁶ Guthrie, *ibid.*, p. 232.

²⁴⁷ Guthrie, *ibid.*, p. 229.

universe produced a beautiful kind of music thanks to the very motions of the celestial bodies floating in space.²⁴⁸ Though Aristotle did admit the fact that they constructed the whole universe out of numbers “not as existing apart from sensible things”²⁴⁹ (*Metaphysics*, 1080b16), his chief complaint against the Pythagoreans is that they confused formal and material causes as they claimed that “things consist of number, in the literal sense that physical bodies themselves are made of numbers”,²⁵⁰ as if number were the actual stuff or matter of which all things are composed. In his opinion, that was their terrible mistake: they imagined physical bodies to be constructed out of what were in fact intangible abstractions, for numbers had neither weight nor sensible existence. From a different point of view, in saying that things are numbers they failed to recognize the abstract nature of numbers.²⁵¹

Aristotle’s words might be a good starting point again for our analysis of the third section of “Pythagoras”, which concerns the ultimate essence of the *kosmos* according to the Pythagoreans. In *Metaphysics* 987a13, he says: “The Pythagoreans similarly posit two principles, but add something peculiar to themselves, namely that the finite and the infinite are not attributes of other natural substances like fire or earth or something similar. Rather they hold that the infinite itself and unity itself are the substance of that of which they are predicated, and this is why they say that number is the substance of all things.”²⁵² This means that the Pythagoreans regarded unity and limit as substances forming the basic element of everything else. Hence Bringhurst’s poem opens with these illuminating words on the cosmogony of everything that exists: “*Unity is a substance, not a property. Light / is finite and motionless. Darkness / is the everlasting verb.*” In the beginning was the number, not the word (the verb), as the Bible says in the Book of Genesis. From limit (light, order) and unlimited (darkness, chaos) emerge numbers, odd and even; from numbers emerge geometrical figures; from geometrical figures (solid bodies built up of surfaces, surfaces of planes, planes of lines and lines of points) emerge all physical objects.²⁵³ Out of chaos emerged the order of life, which has a numerical basis. The generation of things from numbers goes through three distinct stages:

- (1) *Generation of numbers from their elements.* These elements that make up numbers are for the Pythagoreans, ultimately, the limited and the unlimited, and secondarily the odd and the even and the unit. Aristotle says: “The elements are the even and the odd, and of these the latter is limited and the former unlimited. The One is composed of both of these (for it is both even and odd) and number springs from the One; and numbers, as I have said, constitute the whole universe.” (*Metaph.* 986a17) In this context, the limited, the unlimited and the One are the actual substances of things.²⁵⁴ The limited and the unlimited combine to give rise to the unit, which is regarded as “standing outside the number-series of which it is the principle or *arche*”,²⁵⁵ and as being odd and even at the same time, for zero was

²⁴⁸ Guthrie, *ibid.*, p. 220.

²⁴⁹ Guthrie, *ibid.*, p. 234.

²⁵⁰ Guthrie, *ibid.*, p. 236. In *Metaphysics* 1090a30, Aristotle complains that when they “construct physical bodies out of number – things which possess lightness and weight out of elements which possess neither – they appear to be talking about some other universe and other bodies, not those that we perceive.” Quoted by Guthrie, *ibid.*, p. 235.

²⁵¹ Guthrie, *ibid.*, pp. 241-242.

²⁵² Guthrie, *ibid.*, p. 235.

²⁵³ Guthrie, p. 239 and p. 259.

²⁵⁴ Guthrie, *ibid.*, p. 235.

²⁵⁵ Guthrie, *ibid.*, p. 244.

unknown to the Greeks. The unit is then the ultimate principle of all things because it is the immediate principle of number and all things are made of number.

- (2) *Generation of geometrical figures from numbers*. As Guthrie puts it, “from the monad combining with the unlimited spring numbers, from numbers points, from points lines, from lines plane figures, from plane figures solids; and finally, from solid figures are made sensible bodies.”²⁵⁶
- (3) *Generation of physical bodies from geometrical figures (cosmogony)*. Aëtius (based on Theophrastus) says: “There being five solid figures, called the mathematical solids, Pythagoras says that earth is made from the cube, fire from the pyramid, air from the octahedron, and water from the eicosahedron, and from the dodecahedron is made the sphere of the whole.”²⁵⁷ Observation of their occurrence in nature in the form of mineral crystals might have prompted the Pythagoreans to offer this explanation.²⁵⁸

Now, Bringhurst’s poem flows on into a series of seemingly enigmatic statements, verging on gnomic revelation, that make perfect sense as soon as they are set against Aristotle’s words below regarding an elemental table of contraries or opposites. “Without contraries there is no progression”, said William Blake in *The Marriage of Heaven and Hell* at the end of the 18th century, which confirms our intimation that elemental things come in pairs. Bringhurst deploys simple, declarative sentences where the recurrent verb is *to be*. After all, we are back in an elemental world of primordial elements; we are witnessing the beginning of the universe, *der Ursprung des Kosmos*, as it were:

Strangeness is four-square.
Plurality curves,
and the darkness is plural,
and only the left hand moves.

And the darkness... this... *these*
darknesses are everywhere.

The sundial’s tooth is the token,
like a carpenter’s rule. The sharpened
darkness is simply the index.
Light
does not move, but²⁵⁹ light is the tool.

The illuminating fragment from Aristotle’s *Metaphysics* (986a22) hidden beneath Bringhurst’s poem offers a table of essential opposites out of which the universe in its entirety is made:

Others of this same school say that there are ten principles, which they arrange in twin columns, namely:

²⁵⁶ Guthrie, *ibid.*, p. 256.

²⁵⁷ Guthrie, *ibid.*, p. 267.

²⁵⁸ Guthrie, *ibid.*, p. 269.

²⁵⁹ “And” in all earlier versions of the poem in *Pythagoras, Eight Objects, Bergschrund* and *The Beauty of the Weapons*.

limit	unlimited
odd	even
one	plurality
right	left
male	female
at rest	moving
straight	crooked
light	darkness
good	bad
square	oblong

... How these principles may be brought into line with the cause we have mentioned [...] is not clearly explained by them; but they appear to class the elements [...] as matter, for they say that substance consists of and is formed from them as from internal constituents.²⁶⁰

These are the pillars, *the two columns of words on which the mind of Pythagoras stands*, as Bringham points out in section 1 of “Pythagoras”. There are two elemental opposites or ultimate principles, limit and the unlimited, from which all other principles appear to be different manifestations. It is curious to note that in this table of contraries “unity, limit, etc. appear on the same side as goodness because they are good, whereas plurality and the unlimited are bad. [...] limit and unity are to be equated with the male, the unlimited and plurality with the female element in nature.”²⁶¹ Key words from these columns occur in Bringham’s poem: *plurality, darkness, left, light*. These are the ingredients of a cosmogony, of that crucial moment when the *kosmos* as an ordered and structured design of precious beauty comes into being. Darkness pervades everything but light is *the tool* that imposes order, shape and limit upon what is chaotic, formless and unlimited. Outside the sphere where all the process is going on is void, “into which and out of which the cosmos breathes.”²⁶² That “*darkness, or darknesses, are everywhere*” possibly meant as a reference to the infinite, for the Pythagoreans say that “what is outside the heaven is infinite” and they “place the infinite among perceptible things.” (Aristotle, *Physics*, 203a6)²⁶³ The growth of the cosmos proceeded from the centre outwards, and, once in being, it is probably believed to be everlasting.²⁶⁴

The fourth section of “Pythagoras” is a subtly complex composition. The poetic voice elaborates on the notion of light as *the unmoving tool* (“*Light / does not move, but light is the tool*”) present at the moment of creation of the *kosmos*. As in Pound’s *The Pisan Cantos*, light (and transparency) is of the essence and at stake here. Light is knowledge, the final or definitive grasping of the mechanisms at work beneath the world of appearances. It is understanding, the understanding that number is a form of transparency that accounts for the principle of all things in the *kosmos*. Two movements are discernible in the design of the piece. First, once the universal principle of transparency (conceived as both the perfect harmony of the real and as knowledge of its workings) is announced, the speaking voice comes to dwell on different manifestations of transparency in the second stanza. Second, the third stanza, in italics, brings together a handful of words that the poet explicitly

attributes to Pythagoras, but are a poetic rendering of some of the key ideas in his philosophical thinking. These words spoken by what looks like a poetic persona of Pythagoras are a good example of what Bringhurst means when he refers to the precious comingling of thinking and singing – ideas dance and sing in these words as uttered by Pythagoras reincarnated in the poet for a while. Turning back to the first movement for the soul in this composition, it might be wise to remember that Bringhurst’s poems are rich in abundant references to sharp-edged objects, to clarity, stone, speech, silence and subtle motion, all of which somehow coalesce into the complex image or vortex depicted in these lines:

Shaving the obsidian
to the clarity of the clean talon;
leaving no furrow or footprint or stripped stem,
no trace of rest between two intervals of motion;
the tongue to cast no shadow
on the word, the hand no shadow on the stone.

In search of enlightenment for the mind (in an attempt to gain an insight into the essence of the world), the poetic voice embarks on an epistemological process whereby the real is stripped of all that is superfluous ornament and dispensable attributes. Confronted with a world of which number is the ultimate substratum, the Pythagorean mind seeks to reduce everything down to the most elemental clarity. To explain the world in numerical terms means that form is more important than matter, that phenomena are not interesting in themselves but rather as the embodiment or expression of universal principles ultimately reducible to number, to mathematical equations or theorems of universal validity. And the mind remains intact in its dealings with the things of this world: the obsidian is shaved to the clarity of the clean talon of the prey bird that kills with a kind of amoral beauty and flies away with a tremendous naturalness; the mind leaves no trace behind (no furrow, no footprint, no stripped stem), while the tongue (speech) leaves no shadow on the word and the hand, endowed with a natural capacity for destruction, leaves no shadow on the stone either. A precious and beautiful transparency is achieved in the culmination of the process. It points to the harmony of the *kosmos* and, at the same time, at the harmony the mind attains deep inside in trying to get to know its like (for *like knows like*).

The second part or movement of the poem consists of a tessellation of gnomic statements that have the texture of transcendence. The reader is inevitably reminded of the sense of secrecy that must have surrounded the Pythagorean brotherhood and their teachings, passed within the sect with extreme caution and with a sense of awe-inspiring devotion or mysticism. To the Pythagoreans, intellectual discoveries of universal principles at work beneath the realm of appearances were tantamount to undergoing a religious experience. At this distance of time, the poet makes a tremendous effort to salvage the flesh and the spirit of whatever words rich in cryptic meaning Pythagoras must have uttered to convey his oral teachings to his disciples – those still “*mumbling over multipliers*” (section 2 of “Pythagoras”) centuries later after the death of their revered master in the temple in Metapontum. Seemingly, there appears to be no connection at all between these statements, which have in common an intense lyricism conveyed through elegantly simple words:

*Darkness arcs over the head, said Pythagoras.
Forget the head. Paint portraits of the mind.
Darkness flows between closed fingers.
Draw me the god without the body. Only*

*the intangible tangency, sculpture like the plucked string,
speech on the model of inaudible singing.
The plane is tuned by tightening the line.*

The density of meaning (or semantic density) of these lines is simply astonishing and inexhaustible. No synthesis or rephrasing can pin down all the subtle nuances of meaning that Bringhurst manages to convey in these lines with such impressive dexterity and linguistic economy. However, beneath these statements are a handful of essential aspects closely connected to Pythagoreanism that can be briefly summarized as follows: (a) the firm belief in the power of the mind to unveil universal principles (i.e., number) as the basis of all things in this world; (b) curiosity in the face of the awe-inspiring grandeur of the *kosmos* (a structured whole of beauty and perfection), which is the proper object of study of the immortal human soul, inclined by nature to seek the perfection of its like and return to the divine through the path of *philosophia*; and, closely related to the two previous aspects, (c) the fundamental dichotomy of individual and universal soul, microcosm and macrocosm, which are brought together in the Pythagorean theory of ‘the harmony of the spheres’. The Pythagoreans posited number as the principle on which heaven and the whole universe depended. Beneath this doctrine lay an “attempt to explain the whole vast cosmic plan by reference to the basic discovery of the founder: the all-pervading influence of, and intimate connexion between, the laws of mathematics and of music.”²⁶⁵ The notion of ‘the harmony of the spheres’ is therefore a tremendous mathematical-musical-cosmological synthesis. Their extraordinary theory of the ‘harmony of the spheres’ held a tremendous fascination for later generations of the ancient world, as well as for the humanists of the Renaissance and the Elizabethan writers. In one of the extant fragments, the Roman bishop Hippolytus (*Ref.* 1, 2, 2, *Dox.* p. 55) puts it succinctly: “In this way Pythagoras showed the monad to be god, and having made a profound study of the nature of number he asserted that the cosmos sings and is harmoniously constructed, and he was the first to reduce the motion of the seven planets to rhythm and melody.”²⁶⁶ The notes are sounded simultaneously as the heavenly bodies are revolving all the time, and the combined effect is musical and pleasant if we could hear it.²⁶⁷

In his poem, Bringhurst evokes all these ideas only indirectly, tangentially as it were. *Darkness* is meant to evoke the incommensurability of the *kosmos*, the mystery inherent in it, and the sense of awe-inspiring grandeur that surrounds it to the eyes of the Pythagoreans. That “*darkness flows between closed fingers*” means that the infinite is everywhere and possibly that there is no way of knowing anything at all once and for all. The truth is elusive; it loves

²⁶⁵ Guthrie, *ibid.*, p. 295. Plato agreed with this theory and incorporated the notion of the melody of the stars in his own myth at the end of the *Republic*, by saying that “the sounds were produced not by the moving stars themselves, but by the voice of a Siren stationed on the circle of each.” *Ibid.*, p. 295.

²⁶⁶ Guthrie, *ibid.*, p. 298.

²⁶⁷ Guthrie, *ibid.*, p. 299. Aristotle had some objections to make to the Pythagoreans’ doctrine of the harmony of the spheres. But in so doing, he provides an excellent account of the whole theory in *De Caelo* (291a8) says: “It follows that the theory that music is produced by their movements [*sc.* the movements of the planets and the outer heaven], because the sounds they make are harmonious, although ingeniously and brilliantly formulated by its authors, does not contain the truth. It seems to some that bodies so great must inevitably produce a sound by their movement: even bodies on the earth do so, although they are neither so great in bulk nor moving at so high a speed, and as for the sun and moon, and the stars, so many in number and enormous in size, all moving at a tremendous speed, it is incredible that they should fail to produce a noise of surpassing loudness. Taking this as their hypothesis, and also that the speeds of the stars, judged by their distances, are in the ratios of the musical consonances, they affirm that the sound of the stars as they revolved is concordant. To meet the difficulty that none of us is aware of this sound, they account for it by saying that the sound is with us right from birth and has thus no contrasting silence to show it up; for voice and silence are perceived by contrast with each other, and so all mankind is undergoing an experience like that of a coppersmith, who becomes by long habit indifferent to the din around him.” *Ibid.*, p. 296.

to hide, as Herakleitos puts it in one of the surviving fragments. “*Forget the head. Paint portraits of the mind.*” is a two-fold injunction that invites the star-gazer to forget about his own narcissistic self and to pay attention to *what is*, to what the mind makes of what the senses perceive in the form of eternal and elemental mathematical truths. “*The god without the body*” is possibly number, the ordering principle at the basis of *what is*, and “*The plane is tuned by tightening the line*” is intended as a reference to the Pythagoreans’ notion that point evolves into line, line into plane, and plane into the solid bodies that make up the sensible objects of the world (this is the so-called ‘fluxion theory’). Also, “*the plucked string*” and “*inaudible singing*” refer to the celestial music of the spheres, produced by the subtle motion of the heavenly bodies up above in the sky. The whole theory rests on the metaphor of the *kosmos* as a musical instrument of gigantic proportions as it were. A speech based on this inaudible singing is posited as the best option possible: it would certainly have the texture of transparency and intellectual precision, as well as the beauty and order of the *kosmos* out there.

The fifth and closing section of “Pythagoras” concerns music, silence and darkness, but also the immortality of the soul, which is one of the most fundamental tenets of Pythagoreanism. “*Do not drink the darkness,*” Pythagoras is made to say in this poem, and the words are strongly reminiscent of Dylan Thomas’ “Do not go gentle into that good night”. But we do know that the soul is immortal for the Pythagoreans, who believed in metempsychosis. The soul travels incessantly from one body into another through the cycle of rebirths (the wheel of reincarnation) until it reunites itself with the divine, for the human soul is but a little spark of the universal soul that pervades the *kosmos*, which dances and sings endlessly, forever. In this sense, the discovery that the world of nature was constructed on a mathematical plan was essential to the Pythagoreans. It is no exaggeration to say that the discovery of an independent numerical order inherent in the nature of things must have been an intoxicating experience to them. Leaving aside the possibility of any material *arche* (forgetting about matter or physical stuff like water or air or fire or the *apeiron*, which the Milesians and Ionian philosophers posited as the ultimate principle of reality), they attempted to defined things in terms of form.²⁶⁸ Numbers were the essential basis of everything, and so Pythagoras looked for numerical relationships in physical, audible sound too. In all probability the discovery of mathematics doing its subtle work in the formation of the musical scale prompted them, “by an audacious stroke of generalization, to explain the whole of reality in mathematical terms.”²⁶⁹ Nowadays, we know that everything in the physical world is described in terms of numerical equations. What we perceive as physical qualities (colour, light, heat or masses) is replaced by numbers and mathematical formulae, and so Pythagoras and his disciples were right to affirm that “things are numbers.”²⁷⁰ In number lay the key not only to musical sounds but to the whole of nature. There was a mathematics of nature that they could easily read in the book of the *kosmos* with astonishing dexterity. After all, it must be remembered that the Pythagoreans were not concerned with finding the basic material stuff of the universe, nor with explaining the physical changes by which it had come into being, but with the explanation of order and beauty and fitness.²⁷¹

²⁶⁸ As Guthrie puts it, the “genius of Pythagoras lay in his dismissal of the physical and individual in favour of the formal element as real and permanent.” *Ibid.*, p. 317.

²⁶⁹ Guthrie, *ibid.*, p. 237.

²⁷⁰ Guthrie, *ibid.*, p. 238.

²⁷¹ Guthrie, *ibid.*, p. 226.

Bringham's short poem, consisting of only seven lines, looks like one of those surviving fragments of pre-Socratic philosophy preserved in an ancient papyrus. It conveys something of the quiet deep amazement the Pythagoreans must have felt in the face of the inner order of nature, as they discovered "the independent existence of a numerical scheme behind the musical scale. The existence of an inherent order, a numerical organization within the nature of sound itself."²⁷² To the Pythagoreans everything was an embodiment of number, including such abstractions as justice, mixture or opportunity. In this context, the fundamental discovery of Pythagoras was "the numerical ratios that determined the concordant intervals: he found numerical laws for the relations of the notes of the octave."²⁷³ The idea of the musical relations in the octave represented by simple numerical ratios is beneath Bringham's words on the music of silence pervading the *kosmos*:

Octaves of silence
do not exist and do not echo. Intervals
of darkness disassemble
endlessly. *Do not drink
the darkness*, said Pythagoras.
The soul cannot become pure darkness.
Possibly. Possibly.

These lines are, of course, also reminiscent of the theory of the harmony of the spheres, of the celestial music produced by the motion of the heavenly bodies. To the Pythagoreans mathematics, music and the universe were inextricably linked to one another. Guthrie explains this elemental aspects in these illuminating words:

[The Pythagoreans were] acknowledged experts in astronomy, harmonics and the science of number. They regarded all these studies as closely allied, because in their view the key to the understanding both of the movements of the stars and of the notes in the musical scale lay in the establishment of a numerical relation. We may allow ourselves to note that the actual union of astronomy and harmonics in the remarkable theory of the 'harmony of the spheres', adopted by Plato, is described and attested as Pythagorean in the same century by Aristotle. This is the view that physical objects moving as rapidly as the heavenly bodies must necessarily produce a sound; that the intervals between the several planets and the sphere of the fixed stars correspond mathematically to the intervals between the notes of the octave, and that therefore the sound which they produce has a definite musical character.²⁷⁴

There is a music of silence in the universe which humans do not appear to hear any more, probably because we desperately need to cleanse our senses first so as to be able to return

²⁷² Guthrie, *ibid.*, p. 225.

²⁷³ Guthrie, *ibid.*, p. 221. Guthrie says that "The discovery of Pythagoras, that the basic intervals of Greek music could be represented by the ratios 1:2, 3:2, 4:3, made it appear that the *kosmos* – order and beauty – was imposed on the chaotic range of sound by means of the first four integers 1, 2, 3 and 4. These add up to 10, which provided striking confirmation, if it was not the actual ground, of the Pythagorean belief that the number 10 'was something perfect, and contained in itself the whole nature of number' (Arist. *Metaph.* 986a8). This number they represented graphically by the figure known as tetractys, which became a sacred symbol for them." *Ibid.*, pp. 224-225. And somewhere else, Guthrie adds: "In calling certain intervals concordant, therefore, the contemporaries of Pythagoras referred to melodic progression. The essential point, however, is that the three intervals of octave, fourth and fifth were regarded as primary, as the elements out of which any musical scale or composition was built. To Pythagoras went the credit of perceiving that this basic framework depended on fixed numerical ratios 1:2 (octave), 3:2 (fifth), 4:3 (fourth). These numbers, of course, represent the rate of vibration of a string, or of the column of air in a pipe." *Ibid.*, p. 223.

²⁷⁴ Guthrie, *ibid.*, p. 167.

to a primeval state of sensitive alertness to the world, to the real. To the Pythagoreans, the *kosmos* is singing all the time, even if we do not care to listen to what it has to say. “*Octaves of silence / do not exist and do not echo*”, not for us 21st-century citizens of the world that have forgotten that there was a time when humankind raised their eyes to the sky above and saw “portraits of the mind” of everlasting value and truth. To the Pythagoreans, however, there was a music to be heard in the heavens, in the unfathomable darkness of the everlasting *kosmos*, and they made it their legitimate goal in life to learn its beauty and perfection to purify their souls. And indeed Bringhurst’s poem ends with a beautiful meditation on the soul. The two faces of Pythagoreanism – the philosophical and scientific, on the one hand, and the religious and ethical, on the other hand – are inseparable till the end. Pythagoras taught the doctrine of the transmigration of the soul, which was immortal. It owed “its immortality to its essential kinship with the divine, universal soul, and so it may hope to return to its divine source when purified.”²⁷⁵ But, the soul is a *harmonia* too. “The immortality of the soul depended on its being a harmony, but a harmony in the sense in which the cosmos was a harmony. That is, a harmony not ultimately of physical opposites but of numbers.”²⁷⁶ That “*the soul cannot become pure darkness*” possibly means that the soul is immortal, that death is no extinction of the soul, as it lives on in a disembodied state in the world until its next incarnation.²⁷⁷ From a different standpoint, Bringhurst’s words might be interpreted as meaning that possibly the human soul is incapable of achieving such beauty and such perfection as is discernible in the “pure darkness” of the universe. This is just a reminder that we should try to make of our life (*Lebenslauf*) an authentic or meaningful *Gestalt* that is imbued with the unsurpassed beauty and order and perfection of the world at large, of which we are but a tiny part.

IX · DEMOKRITOS

“Demokritos”²⁷⁸, the ninth composition of *The Old in Their Knowing*, is a complex eight-part poem and a moving meditation on the atomic theory as propounded by the materialism of Demokritos, another essential pre-Socratic thinker who breathed and thought intensely and beautifully almost 25 centuries ago. In Bringhurst’s poem all eight parts are tessellated into a perfect *Gestalt* that makes sense as each single part flows into the next without abrupt transitions. However, the way the eight sections that make up “Demokritos” have been arranged does not follow the lineal unfolding or progression of the philosopher’s thinking. Thus, whereas sections 2 and 6 concern the fundamentals of Demokritos’ physical doctrine

²⁷⁵ Guthrie, *ibid.*, p. 306.

²⁷⁶ Guthrie, *ibid.*, p. 315.

²⁷⁷ Several relevant fragments are worth quoting in this respect: (1) Clem. Alex. *Strom.* III, 17 (DK, 44B14): “The words of Philolaus are also worth quoting. This Pythagorean says: ‘The ancient theological writers and prophets also bear witness that the soul is yoked to the body as a punishment, and buried in it as in a tomb.’” (2) Claudianus Mamertus, *De Statu Animae*, II, 3 (DK, 44B22): “Concerning the human soul he [Philolaus] says this: the soul is set in the body by means of number and an immortal and incorporeal harmony. And a little later: the soul loves the body, because without it can make no use of the senses. But when separated from it by death, it leads a disembodied life in the world.” (3) Macrobius, *Somm. Scip.* I, 14, 19 (DK, 44A23): “Pythagoras and Philolaus called the soul a harmony.” Guthrie, *ibid.*, p. 311.

²⁷⁸ “Demokritos” was first published as C.34 • “Demokritos.” *Pearl* (Odense, Denmark) 7 (Summer 1979): 10-11. It was reprinted in A.14 *The Beauty of the Weapons*, A.47 *The Calling*, A.76 *The Old in Their Knowing*, and A.92 *Selected Poems*. It was also reprinted as (1) B.18 *The New Canadian Poets, 1970–1985*, edited by Dennis Lee. Toronto: McClelland and Stewart, 1985: pp. 26-39. Contributions: “These Poems, She Said”, “Deuteronomy”, “Demokritos”, “Leda and the Swan”, “The Stonecutter’s Horses” (all rpt. from A.14), “Sarah” (rpt. from A.23); and as (2) C.64 [Three Poems] *In Forma di Parole* (Bologna) terza serie 2.1 (1994): 176-186. Contents: “Song of the Summit”, “Demokritos”, “The Song of Ptahhotep” (all rpt. from A.14).

about the constitution of the *kosmos* (structured around such fundamental concepts as atoms, motion, being and void), sections 3 and 4 are a meditation on his theory of knowledge and on perception as explained by the sage's materialistic theory, sections 1 and 5 are concerned with ethical issues, and sections 7 and 8 are mysterious compositions that speak of the earth, the mind and the eagle's bones in the form of an illuminating afterthought or coda. These four pairs of sections embody the complex, kaleidoscopic thinking of this unique man who had a tremendous impact on subsequent Western philosophy. Whereas the Milesian thinkers posited one single *arche* as the ultimate principle of all existing things, Demokritos postulated the existence of a plurality of *archai* (the so-called *atoms*) that resembled the Parmenidean One in all respects as the essential substratum of reality, which also had room for the void. We might start at the beginning, though, asking ourselves about the essential facts of Demokritos' life, writings and philosophical thinking.

Knowledge of the Greek sage's life is only fragmentary and largely limited to untrustworthy tradition. Demokritos²⁷⁹ (b. c. 460 BCE – d. c. 370) remains a central figure in the development of the atomic theory of the universe. It seems that he was a wealthy citizen of Abdera, in Thrace; that his curiosity and love of knowledge prompted him to undertake voyages of study and to travel widely in the East²⁸⁰ (Egypt, Persia and Babylon, and maybe Ethiopia and India too) in search of wisdom; and that he reached an advanced old age (probably over a hundred).²⁸¹ His undoubted teacher was the philosopher Leucippus, but the pupil was a much more prolific author and displayed a keen interest not only in the ultimate constitution of reality but also in ethical matters.²⁸² He was something of an encyclopaedic writer,²⁸³ producing an output only comparable in volume and range of interests to that of Aristotle. According to Diogenes Laertius, his works numbered over 60 (ethical, physical, mathematical, musical, technical and unclassified), but, unfortunately, only a few hundred fragments have survived, mostly from his treatises on ethics. The overall impression one gathers from the extant fragments is one of “serenity, good humour and fortitude”,²⁸⁴ which is in accordance with his surviving ethical precepts. Indeed, his ethical system, founded on a practical basis, posited an ultimate good which consisted in a sort of ataraxia or undisturbed peace of mind – a state in which the soul lives peacefully and tranquilly, unaffected by fear or superstition or any other negative feeling. And yet, Demokritos' major contribution is the so-called atomic theory. “Atomism,” claims Guthrie, “is the final, and most successful, attempt to rescue the reality of the physical world from the fatal effects of Eleatic logic by means of a pluralistic theory.”²⁸⁵ Whereas Eleatic philosophy held that *what is* must be *one and immovable* (for there is no such thing as void

²⁷⁹ See the entry on ‘Democritus’ in *Encyclopaedia Britannica*, vol. 8, pp. 4496-4497.

²⁸⁰ Fragment 246 reads: “Foreign travel teaches the self-sufficient life: barley bread and straw to lie on are the best cures for hunger and weariness.” It seems Demokritos spoke these words from his own experience. See W.K.C. Guthrie, *A History of Greek Philosophy*, vol. II, p. 387.

²⁸¹ Diogenes Laertius, 9.41 and 34, according to Guthrie, *ibid.*, p. 386.

²⁸² Guthrie explains that Demokritos had “more universal interests” and that he “wrote a large number of published works which were carefully edited and highly praised for their purely literary merits.” See *A History of Greek Philosophy*, vol. II, p. 383.

²⁸³ Guthrie says that “the total is impressive both in amount and in scope. [...] It includes treatises on theory of substance (*physis*), cosmology, astronomy, geography, physiology, medicine, sensation, epistemology, mathematics, magnetism, botany, musical theory, linguistics, agriculture, painting [...] and other topics. Pronouncements from many of these works are cited by later writers, but the works themselves have not survived, in spite of Cicero's eulogies of their style.” [Cicero, *De or.* 1.11.49.] *Ibid.*, p. 388.

²⁸⁴ Guthrie, *ibid.*, p. 387. Guthrie adds that “his sobriquet of the Laughing Philosopher, moved to mirth by the follies of mankind as Heraclitus to tears, is first alluded to by Cicero and best known from Horace.” [Cicero, *De or.* 2.58.235 and Horace, *Ep.* 2.1.194.]

²⁸⁵ Guthrie, *ibid.*, p. 389.

and so without a void separate from it reality cannot move) and that things can be no more than one if there is nothing to keep them apart, Leucippus and Demokritos' atomic theory posits the existence of a plurality of beings (atoms) moving in the void, which accounts for the existence of an infinite number of worlds. As Aristotle puts it:

But such being, he [Leucippus] claimed, is not a unity. It consists of a plurality of things infinite in number and too small to be seen. They move in the void (for there is void), and their combination causes coming-to-be, their separation dissolution. They act and are acted upon as they happen to touch (for in this way they are not one) and generate by coming together and interlocking. A true unity can never give rise to multiplicity, nor a true plurality produce unity. That is impossible, but as Empedocles and others say that things are acted upon by means of pores, so he claimed that alteration and every form of being-acted-on takes place in this way: dissolution and destruction occur by means of the void, as also does growth when solid bodies slip in [*s.c.* to fill empty spaces].²⁸⁶

Now, Demokritos' physical and cosmological doctrines were an elaborated and systematized version of those of his teacher, Leucippus, as explained in the quote above by Aristotle himself. The ultimate principles of reality are atoms and the void, which accounts for the world's changing phenomena. Demokritos asserted that the void had an equal right with reality, or being, to be considered existent. And the admission of void brought with it the possibility of plurality and motion. He conceived of the void as a vacuum, an infinite space in which an infinite number of atoms that make up being (i.e., the physical world) moved. The Parmenidean Being is thus replaced with multiple beings that satisfy the Eleatic conditions of being: "what is must be a plenum", "generation and destruction in a literal sense are impossible", and "what is one cannot become many, nor many things one."²⁸⁷ Atoms, these most elementary of realities, are the basis of the first European theory of the atomic structure of matter.²⁸⁸ These atoms are eternal and invisible; absolutely small, so small that their size cannot be diminished (hence the name *atomon*, or "indivisible"); absolutely full and incompressible, as they are without pores and entirely fill the space they occupy; and homogeneous, differing only in shape, arrangement, position, and magnitude. But, while atoms thus differ in quantity, differences of quality are only apparent, owing to the impressions caused on our senses by different configurations and combinations of atoms. Because all phenomena are composed of the same eternal atoms, it may be said that *nothing comes into being or perishes* in the absolute sense of the words, although the compounds made out of the atoms are liable to increase and decrease, explaining a thing's appearance and disappearance, or "birth" and "death". Furthermore, Demokritos devoted considerable attention to perception and knowledge. He asserted that sensations are changes produced in the soul by atoms emitted from other objects that impinge on it; the atoms of the soul can be affected only by the contact of other atoms. We shall turn to this below.

As pointed out above, Bringham's poem in eight parts focuses primarily on Demokritos' atomic theory of reality, on his theory of knowledge (and perception), on ethical precepts, and on other seemingly unclassified concerns of the ancient sage. *Philosophia* is literally *love of wisdom*, and so it is only natural that such a man imbued with a intense zeal for knowledge should have directed his attention to those fundamental

²⁸⁶ Aristotle (*GC*, 325a23), quoted by Guthrie, *ibid.*, p. 390.

²⁸⁷ Guthrie, *ibid.*, p. 390.

²⁸⁸ Guthrie, *ibid.*, p. 392.

questions that have occurred time and again throughout the history of Western philosophy: What is the essence of the real? To what extent are the senses reliable and knowledge of the world possible? How should human beings conduct their lives to make them meaningful works of art and achieve happiness? It might be wise to turn to the philosopher's meditation on *physis* (sections 2 and 6 of "Demokritos") in the first place. The principles of his materialistic atomism are condensed with intense lyricism in section 2 of Bringhurst's poem. The main starting point for this magnificent section of Bringhurst's poem is a fragment lifted from Aristotle's *Metaphysics* A4, 985b4 (DK 67A6), which W.K.C. Guthrie renders into English as follows:

Leucippus and his associate Democritus name plenum and void as elements, calling them 'being' and 'not-being': the full and solid is being, the empty and rare is not-being. Hence they say that being exists no more than not being, because void exists no less than body. These are the material causes of things, and just as those who posit a single underlying substance generate everything else by its affections, so they too say that the differences [*sc.* in the atoms] are responsible for everything else. These according to them are three: shape, arrangement and position, for they say that they differ in 'rhythm', 'touching', and 'turning'. 'Rhythm' is shape, 'touching' is arrangement, and 'turning', position. For instance, A differs from N in shape, AN from NA in arrangement, Z from N in position.²⁸⁹

In Bringhurst's hands this fragment becomes a precious short lyric poem where the line separating poetry and philosophy is completely blurred; in a sense this is philosophical poetry, but in another sense it is always the poetry that takes control. To borrow Bringhurst's words, here ideas sing and dance beautifully to the rhythm of *what is* and *what isn't*. This is a supreme example of *melopoeia* and, particularly, of *logopoeia*, the dancing of the intellect among words:

What is is no more than what isn't;
the is, no advance on the isn't. Is
is isn't with rhythm.
Touching and turning the isn't is is.
Not being is basic. As silence is,
isn't is – during, before, and after the sound.
Isn't is everywhere. In you. Outside.
Presence is absence keeping time.

Though the language might sound paradoxical or enigmatic, this section enunciates the two basic principles of reality with utmost clarity: *what is* (being or atoms that make up the physical world) and *what isn't* (the void). The void has the same right to existence as atoms themselves; they are in fact the only ultimate existing things in this universe. On the general nature of atoms, Guthrie explains that "What exists must still be ungenerated and imperishable, unchangeable, incapable of being added to or subtracted from,

²⁸⁹ See Guthrie, *ibid.*, pp. 392-393. Kirk et al. render this fragment from the original Greek into English slightly differently: "Leucippus and his associate Democritus hold that the elements are the full and the void; they call them what is and what is not respectively. What is is full and solid, what is not is void and rare. Since the void exists no less than body, it follows that what is not exists no less than what is. The two together are the material causes of existing things. And just as those who make the underlying substance one generate other things by its modifications, and postulate rarefaction and condensation as the origin of such modifications, in the same way these men too say that the differences [*sc.* in their elements] are the causes of other things. They hold that these differences are three – shape, arrangement and position; being, they say, differs only in 'rhythm, touching and turning', of which 'rhythm' is shape, 'touching' is arrangement and 'turning' is position; for A differs from N in shape, AN from NA in arrangement, and Z from N in position." See Kirk et al., *The Presocratic Philosophers*, p. 414.

homogeneous, finite and a plenum, continuous and indivisible. ‘What is’ may have void outside it, but none (and hence no movement) within.’²⁹⁰ Being the underlying matter of all things, atoms have no qualities in themselves and their essential characteristic is precisely indivisibility²⁹¹ (hence the name *atom*). They are infinite in number and in shape, so that they do represent an infinite variety of form. Being invisible, so small as to escape our senses altogether, they are the basis of all visible and sensible objects.²⁹² The whole sensible world is accounted for “on the supposition that there are millions of such solid, imperishable entities of microscopic size, surging in infinite space.”²⁹³ Their motion is eternal and inherent in the atoms themselves, and so “*Is / is isn’t with rhythm*”, which emphasizes the dynamic aspect and ceaseless movement of atoms moving in all directions in the void. On this shifting of atoms in relation to each other depends the whole nature of the phenomenal world. “*Touching and turning the isn’t is is*”, that is to say, atoms collide and combine with one another amid the void. *Rhythm*, *touching* and *turning* are three key words in this context, for they refer to shape, arrangement and position of the atoms themselves, as they interact with one another amid the void. These are, in fact, the only differences between atoms without sensible qualities whose ultimate substance is one and the same. In addition, that “*Not being is basic*” means that the void is as fundamental as atoms are. Here the poet makes use of an eloquent simile: *not being* is to silence what *being* is to sound. Or, to put it differently, in much the same way silence surrounds or punctuates sound (during, before and after it occurs), *not being* (the void) is ubiquitous and it surrounds *being* all the time – “*Isn’t is everywhere. In you. Outside.*” The void is inescapable and it makes plurality of eternal beings and their motion possible. The verse line “*Presence [being] is absence [the void] keeping time*” concludes the section. No more extra words are needed to convey the sense that atoms and the void are the two elements needed to make a *kosmos*. Void and being are then eternally coexistent, simultaneous and ubiquitous.

“*The uncountable rhythms uncountable / worlds – more in some places than others.*” These are the opening words of section 6 of “Demokritos”, another jewel-like composition of rare beauty and perfection dealing with an infinite number of microscopic atoms let loose in finite empty space. The word *rhythm*²⁹⁴ is the word Demokritos used to refer to the shapes of the atoms. Atoms are thus infinite in number and in form. Being infinite, the number of worlds must have also been infinite. Indeed, this little poem concerns essentially the notion of infinite atoms and the plurality of worlds, as well as the nature of their motion, even if Aristotle complained that Leucippus and Demokritos left the cause and nature of this motion unexplained.²⁹⁵ Just as the atoms are uncaused and eternal, so too, according to

²⁹⁰ Guthrie, *ibid.*, p. 392.

²⁹¹ Guthrie claims that indivisibility “followed from their faithfulness to the pattern of the One of Parmenides, its homogeneity and fullness. [...] Leucippus proved the indivisibility of the atoms thus: each of the things that is, *is* in the proper sense. In what is there is nothing that is not, hence no void. Division cannot occur without void, therefore it is impossible for them to be divided...” *Ibid.*, pp. 395-396. In this sense, “each atom was to be a reproduction of the One” of Parmenides. *Ibid.*, p. 396. And somewhere else, Guthrie claims that the primary condition that atoms had to satisfy were the Eleatic canons of unity: “What is one must be free from any possibility of change, not susceptible to addition or subtraction, a plenum, continuous and indivisible. It is a single whole, without parts, on the primitive logical ground that one and many are contradictory attributes which cannot apply to the same thing. [...] The infinite divisibility of matter was inconceivable.” *Ibid.*, p. 503.

²⁹² Guthrie, *ibid.*, p. 394.

²⁹³ Guthrie, *ibid.*, p. 392.

²⁹⁴ Guthrie, *ibid.*, p. 458, note 2.

²⁹⁵ Aristotle says in *Metaphysics* A4, 985b19: “But the question of movement, whence or how it belongs to things, they too, like the others, carelessly neglected.” And in *De caelo*, 300b8 he says: “Leucippus and Democritus, who say that the primary bodies are always in motion in the infinite void, ought to tell us what sort of motion and what is their natural motion.” And in *Metaphysics* 1071b31, Leucippus is coupled with

Demokritos, is motion, and so it is idle to look for its cause. It remains clear that it is void that makes the motion of the atoms possible, but this motion has no temporal beginning and there is not a first active agent of motion.²⁹⁶ On the exact nature of motion, Bringhurst says in his poem: “*Motion, on closer inspection, appears / to be limited to reverberation and falling.*” Guthrie explains that there have been two contending views regarding the nature of motion as postulated by Demokritos: “one, that it was a confused and aimless motion in all directions, the other, that it was a downward fall, or rain, of atoms due to weight.”²⁹⁷ It seems that the first view is the correct and generally accepted one. The origin of the universe is as follows. The original motion of the atoms was in all directions – it was a sort of “vibration”; hence there resulted collisions and, in particular, a whirling movement, whereby similar atoms were brought together and united to form larger bodies and worlds.²⁹⁸ Thus, in their eternal jostling some of the atoms are fused together, become entangled and generate perceptible bodies.²⁹⁹ This happened not as the result of any purpose or design but rather merely as the result of “necessity” – i.e., it is the normal manifestation of the nature of the atoms themselves. Atoms and void being infinite in number and extent, and motion having always existed, there must always have been an infinite number of worlds, all consisting of similar atoms in various stages of growth and decay.

Let us now dwell on the notion of innumerable worlds for a while. Bringhurst speaks of “*uncountable / worlds – more in some places than others*” in his poem. And there is an extant fragment preserved by Hippolytus (Ref. 1.13.2, A40) worth quoting in this particular context which might have been the source of inspiration for the poet’s meditation on the plurality of universes. Demokritos said that

there are innumerable worlds of different sizes. In some there is neither sun nor moon, in others they are larger than in ours and others have more than one. These worlds are at irregular distances, *more in one direction and less in another*, and some are flourishing, others declining. Here they come into being, there they die, and they

Plato and presented as saying that motion is everlasting, “but from what cause, or what kind it is, they do not say, nor the reason why it is in this direction or in that.” Quoted by Guthrie, *ibid.*, pp. 396-397.

²⁹⁶ Guthrie claims that “Pre-Parmenidean Ionians had also said that motion was eternal, but for them this conception was inevitably linked with that of life. What owed its motion to no cause outside itself was alive; if its motion was eternal, as that of the *arché* must be, it was not only alive but divine. The materialism of Leucippus and Democritus has restored the idea of motion as natural to matter and hence belonging to it from all time, but from this conception they have removed the last traces of animism. The motion is purely lifeless and mechanical. It happened ‘automatically’ or ‘of necessity’.” This was made possible by one thing only: the conscious postulation of an absolute void. Thus, in rejecting a first active agent of motion, they were closer than Aristotle to modern European scientists since Galileo and Descartes. *Ibid.*, p. 399.

²⁹⁷ Guthrie, *ibid.*, pp. 300-301.

²⁹⁸ Guthrie explains it in these terms: “Accounts of the cosmogony of Leucippus start from the picture of countless atoms of various shapes and sizes in motion in empty space. They jostle, collide and become entangled, and here and there a complex of them sets up the kind of vortex-like motion which was believed necessary to create a world. The formation of the cosmos is then explained as flowing from the action of the vortex and its effect on the subsequent motion of the atoms.” *Ibid.*, p. 400. And again: “Leucippus and Democritus saw no reason to offer a positive cause for the motion of the atoms save the fact that they were free in infinite void... [...] Motion was to be accepted as an inherent and eternal characteristic of matter when unimpeded by any obstacle. It was a confused and irregular motion in all directions...” *Ibid.*, p. 404.

²⁹⁹ Consider this relevant fragment by Simplicius (*Cael.* 242.21, 67A14): “These atoms, separate one from the other in the void which is infinite, and differing in shape, size, position and order, are in motion in the void, overtake one another and collide. Some rebound at hazard, other become entangled when their shapes, sizes, positions and order are favourable, and thus it happens that they bring about the generation of composite things.” Quoted by Guthrie, *ibid.*, p. 405.

are destroyed by collision with one another. Some of the worlds have no animals or vegetable life nor any water.³⁰⁰ [*Italics ours*]

To Demokritos' mind (fr. 34), man was a miniature cosmos (or microcosm³⁰¹) that resembled the world at large (or macrocosm). At their hearts was the same ultimate substratum of indivisible atoms dancing for eternity. As there is no limit to the atoms (or to their unceasing motion and jostling) and no limit to the void where they float and collide in all directions, it is natural to think that innumerable systems or worlds have formed. Our universe is only one of an infinite series of worlds that have been created and then have perished over time, endlessly. Worlds grow towards maturity and then they decline and eventually die, as if they were living organisms. And yet there is no trace of animistic or teleological explanation in this materialistic explanation of reality: beneath this *infinite variety of cosmic systems*³⁰² there are only infinite atoms colliding in infinite void forever. "From all eternity there is an infinite number of atoms of different shapes moving in infinite space with an irregular and aimless motion, and so at irregular distances. Where a large interval of space happens to be empty of them, a whole lot of atoms pours in and for a reason not stated sets up a circular eddy. [...] Only when it takes this circular form does a cosmos result."³⁰³ As they tumble over one another, atoms are attracted to one another, like is drawn to like (a cardinal law of atomism) and worlds come into being.³⁰⁴ However, there is no trace of a cyclical return in any form: "Worlds come into being and pass away, but there is no repetition of *this* world. As the infinite millions of atoms jostle in infinite space

³⁰⁰ Guthrie, *ibid.*, p. 405.

³⁰¹ Guthrie dwells on this fundamental idea: "It is usually accepted that Democritus was the first known Greek to apply to man the term *microcosm* (*micros kosmos*, i.e. little world-order; the word *kosmos* has by now undoubtedly acquired the meaning 'world', while still emphasizing the element of system and order which distinguishes it from pre-cosmic chaos). [...] Man and world are built out of the same elements, atoms and void, following the same laws. Even the soul-atoms exist outside the human organism, and are breathed in along the air. This however serves only to remind us that even if Democritus coined the phrase, the idea of an intimate relationship between macrocosm and microcosm was far older. The breathing-in of soul from the universe, the kinship of organic and inorganic nature, the association of human goodness and natural bounty in myths of the Golden Age, the emphasis on the identity of elements in ourselves and the universe, the ordering of the whole world on psychological principles of desire and aversion – some or all of these ideas can be traced in Hesiod, in Anaximenes, in the Pythagoreans, in Empedocles or Diogenes of Apollonia." *Ibid.*, pp. 471-472.

³⁰² Guthrie, *ibid.*, p. 405.

³⁰³ Guthrie, *ibid.*, p. 408.

³⁰⁴ Diogenes Laertius has preserved an exhaustive account of the origin of the cosmos according to Leucippus which is worth quoting in full: "The whole is infinite, as aforesaid. Part of it is full and part empty, and these he calls elements. Worlds unlimited in number are formed from these and dissolved into them. The manner of their formation is this. Many bodies [atoms] of all sorts of shapes are cut off from the infinite and stream into a great void, and these when collected in a mass produce a single vortex, following the motion of which they collide and revolve in all sorts of ways and begin to be sorted out, like to like. But when owing to their numbers they can no longer be carried round in equilibrium, the small atoms pass to the void without, as if through a strainer. The rest hold together, become entangled and move in conjunction with one another, so forming a first spherical complex. From this complex a kind of membrane becomes detached, containing within itself bodies of every kind. These whirl round in proportion to the resistance of the centre, and the membrane becomes thin as the contiguous bodies continually flow together by contact in the vortex. In this way the earth was formed, by the cohesion of the bodies which had moved to the centre. The enclosing membrane in turn is augmented by the influx of atoms from outside; and as it whirls around, it adds to itself those that come into contact with it. Some of these become interlocked and form a complex that is wet and muddy at first, but drying out as they are carried round in the universal vortex they finally catch fire and form the substance of the stars.... All the stars are ignited by the speed of their motion.... Just as a cosmos is born, so also it grows, declines and perishes by some sort of necessity, the nature of which he does not specify." Guthrie, *ibid.*, pp. 406-407.

through infinite time, all sorts of formations will occur. Some may even be identical, but if that happens it is purely by chance.”³⁰⁵

Section 6 closes with an enigmatic three-fold command on the part of the poetic voice. After dwelling on the motion of infinite atoms afloat amid the void, bringing about perceptible things and innumerable worlds for eternity, the speaking voice in the poem addresses a generic ‘you’ to give him/her what looks like three universal pieces of moral advice: “*Never look down without turning. / Never live with your back to the mountains. / Never mend net with your back to the sea.*”³⁰⁶ The mysterious halo surrounding these statements might well evoke the moral precepts (the so-called *acusmata* or *symbola*) of the Pythagoreans themselves, who would comply with a set of rules concerning the abstention from flesh and beans, awkward norms related to the transmigration of souls and metempsychosis, or the sacred mysticism of number, among other aspects. The order not to look down without turning is truly obscure: Does it evoke the eternal motion of atoms, turning in space or falling down? Is it a reminder that everything existing in the cosmos shares an ultimate substratum (or *physis*) made up of atoms dancing in the void? Possibly. The two following pieces of advice do remind readers of the need for them to live in harmony with the surrounding world, as embodied by the mountains (earth) and the sea (water). To acknowledge that mountains and the sea are ultimately made of the same stuff as humans is the noble, moving expression of humility and gratitude in the face of *what is*. *What is* is larger than ourselves and comprises both animate and inanimate things, both human and non-human elements in the cosmos. A certain peace of mind and an ascetic form of living may well lie precisely in this elemental acknowledgement that everything falls into place in this world. *Facing the mountains, be a mountain yourself; mending a net looking at the sea, be the sea yourself*. This is then the final piece of advice: bear in mind that you are a tiny part in the grander scheme of things and that you belong with it.

Sections 3 and 4 of “Demokritos” tackle the matter of perception and the theory of knowledge in the context of atomic materialism. As a matter of fact, Demokritos devoted considerable attention to perception and knowledge. Though he was primarily concerned with investigating the nature of being (ontology), he did not neglect another fundamental question: how and to what extent we humans can know the truth about the world around us. He asserted that sensations are changes produced in the soul by atoms emitted from other objects that impinge on it; the atoms of the soul can be affected only by the contact of other atoms. Section 3 opens with these words: “*That which splits off from the edgeless has edges. / It dries into light, it ignites into fire.*” They are reminiscent of Leucippus’ cosmology as preserved in the fragment by Diogenes Laertius quoted in a footnote above. It is as if atoms were split off from an infinite whole with no edges and they started revolving, gyrating in an infinite variety of movements until like began to search like to fuse into the sensible bodies of the cosmos, with precise contours and shapes. Atoms colliding with one another sometimes “become interlocked and form a complex that is wet and muddy at first, but drying out as they are carried round in the universal vortex they finally catch fire and form the substance of the stars.... All the stars are ignited by the speed of their

³⁰⁵ Guthrie, *ibid.*, p. 429.

³⁰⁶ These words inevitably bring to one’s mind the closing lines of *The Blue Roofs of Japan* (1986): “Facing the water, be music. / Be still facing fire. / Be laughter. / Facing the earth, be darkness. / Facing the sky, be quiet, wide, and blue.” In these lines all four elemental constituents of reality are brought together: water, fire, earth and sky (air). What these words encourage the reader/hearer to do is to seek to achieve a full communion with the world, of which humans are just a tiny part in the living fabric of things.

motion....” (See note on Diogenes Laertius’ fragment above.) Stars are then made of atoms that catch fire owing to the sheer speed of their motion, to the very rapidity of their rotation. In Leucippus’ cosmology, Guthrie says that “What is wet and earthy is composed of large atoms, whereas fire is a body consisting of spherical atoms of the smallest size. [...] The bulk of fire in the universe is located in its outer regions.”³⁰⁷ Bringhurst’s words in section 3 do make sense now:

Fire and mind I believe to be
round, though knowledge is always
lopsided, like elm leaves.

As atoms collide or get entangled with one another, they produce sensible bodies and compounds. The result is fire, water, an animal, a plant, or a human being. As Guthrie puts it, “large and heavy atoms form the earth, specially light and mobile ones fly outward and become fire, and the atoms of the intermediate bodies water and air must be of correspondingly intermediate size. Only of fire, so far as we know, did Democritus specify a shape, namely round and smooth, and even then it must be remembered that the atoms of the soul [...] are also round.”³⁰⁸ To the other three elements (water, earth and air) Demokritos did not assign a definite shape. We do know for sure that he supposed fire and mind to be made of spherical, tiny atoms. Aristotle (*De anima*, 403b31) says: “Democritus says the soul is fire, and hot, for of the infinite shapes and atoms existing he says the spherical are fire and soul.... Similarly Leucippus.... The round ones are soul, because shapes of this kind are best able to slip through anything and to move other things by their own movement.”³⁰⁹ Hence this they have at least in common: fire and soul consist of spherical atoms of the smallest size possible. The soul has a fiery nature, as it were. With their spherical perfection sharply contrasts knowledge, which is “*always / lopsided, like elm leaves.*” Knowledge of the real on the part of humans is no straight line, no elemental circle of utter simplicity, for coming to terms with the universe in an attempt to make sense of it is no easy task at all. To Demokritos’ mind, motion is the primary characteristic of life,³¹⁰ but life is also associated with heat. “For thought to take place, the soul must be rightly tempered; and this means that if we become *too hot or too cold*, the mind wanders (Theophr. *Sens.* 58).”³¹¹ So human knowledge is *lopsided* indeed: first we must rely on the first-hand data provided by the senses, which might not be altogether reliable. Then the mind must operate with those basic, raw data to make sense of them and impose order upon the seeming chaos of the real.

Demokritos paid considerable attention to sensation, which is the basis of his theory of knowledge. Both perception and knowledge constitute the irreducible core of meaning in sections 3 and 4 of Bringhurst’s poem. A quotation lifted from Aristotle’s *De sensu*, 4, 442a 29, is the starting point for Bringhurst’s mediation on touch as the ultimate basis of all sensation: “Democritus and the majority of natural philosophers who discuss perception are guilty of a great absurdity; for they represent all perception as being

³⁰⁷ Guthrie, *ibid.*, p. 411. Guthrie claims that as atoms collide and unite to form sensible bodies, there is a “tendency of larger and heavier bodies to seek the centre of the vortex and smaller and lighter ones to be squeezed outwards” (*ibid.*, p. 413), which is the reason why the bulk of fire is thought to be located in the outer regions of the universe.

³⁰⁸ Guthrie, *ibid.*, p. 414.

³⁰⁹ Guthrie, *ibid.*, p. 430.

³¹⁰ Guthrie, *ibid.*, p. 431.

³¹¹ Guthrie, *ibid.*, p. 432. Guthrie adds: “Soul has the finest texture and smallest atoms of all, being neither visible nor even perceptible as heat at all.” *Ibid.*, p. 432.

touch.”³¹² The closing lines of the third section already anticipate the theory of knowledge which is at the heart of the fourth section:

Nose, eyes, ears, tongue
and fingers are fingers – all fingers
groping for imprints in the intermittent air.

All five sense organs are explicitly mentioned in a sort of metonymic series (where the nose stands for smell, eyes for vision, ears for hearing, tongue for taste and fingers for touch), and all of them are reduced to fingers, that is to say, to touch. Why should Bringhurst affirm that all sense organs are ultimately fingers?, we might ask ourselves. The answer to this question must be sought in Demokritos’ conception of sensation. As Guthrie claims, “sensation is the result of an alteration in our own bodies, or parts of them, caused by the impact of atoms from without. [...] Every act of sensation must involve actual physical contact, so that all sensation becomes a form of touch.”³¹³ Thus, sensation is not just determined by the atomic composition of the things perceived, but also by an interaction of the things perceived with the body of the perceiving subject. Demokritos postulates the existence of certain passages (*poroi*) in the perceiver’s body which must be of the right size for the things perceived to fit them.³¹⁴ The senses are not completely reliable and provide only ‘bastard knowledge or cognition’ of the world (as opposed to the ‘legitimate cognition’ by reason), for the only existing things in reality are atoms and the void. In this respect, Sextus (*Math.* 7.135-6; fr. 9 of Demokritos) says: “In reality we grasp nothing precisely, but as it shifts according to the disposition both of our body and of the things that enter into and press upon it.”³¹⁵ This means that the truth is elusive, eel-slippery, and so it cannot be pinned down for good. Or, to put it differently, it seems that absolutely precise or complete knowledge of any thing in the world is an impossible battle to win, for it is simply unattainable, out of human reach. Pythagoras is thought to have been the first one to have called himself *philosophos* (*a lover of wisdom*), precisely because he believed that only immortal gods were capable of truly knowing anything for sure and of attaining invaluable, precious wisdom.

In any case, sensible objects are constantly “giving off films of atoms which retain the approximate form of their surfaces and so constitute ‘images’ of them. These actually enter the eye, where they appear as the reflexion of the object, and stimulate the sensation.”³¹⁶ These images emanating from the objects themselves enter the beholder’s eye, and this is how vision occurs. The same happens in the case of the other sense organs: they receive the myriad impressions or emanations emitted by the objects themselves in all directions. They traverse the air and reach their destination: our sense organs. Therefore, Bringhurst speaks of “*fingers / groping for imprints in the intermittent air*” at the close of section 3 to refer to these emanations from physical objects. And section 4 opens with these words: “*Such giants we are, and so hardly / here, mere shapes in the dust, and our / deaf hands yelling so loud, / the diaphanous blood, the diaphanous / bone...*” Humans are conceived as being “giants” (complex combinations of atoms) but also as being nothing more than “shapes in the dust”, with our “deaf hands” (i.e., all sense organs) in search of reliable information about the ultimate truth inherent in the real. Only the blood running through our veins and the

³¹² Kirk et al., *The Presocratic Philosophers*, p. 428.

³¹³ Guthrie, *ibid.*, p. 438. According to Guthrie, an illuminating fragment from Lucretius (2.434) on sensation as a form of touch is worth quoting here: “Tactus enim, tactus, pro divom numina sancta, / corporis est sensus.”

³¹⁴ Guthrie, *ibid.*, p. 439.

³¹⁵ Guthrie, *ibid.*, p. 440.

³¹⁶ Guthrie, *ibid.*, p. 442.

bones in our skeleton seem to be *diaphanous* or crystal-clear amid such an incessant rain of atoms in the world out there, emitting imprints left lingering just mid-air for our sense organs to catch them rapidly before they vanish into utter nothingness. But sensation, the basis of knowledge, is *lopsided* too. Things leave subtle traces or images floating in an unstable substance such as air is. Guthrie explains this in detail:

... just as a single atom is below the level of perception, so also is a single film or 'image', which is probably only one atom thick. The films are, however, thrown off from their objects in rapid succession, and they (or the air bearing their imprints), entering the eye without interruption, give an effect of continuity. Otherwise there would be no continuity in sensation or unity in the object perceived, any more than in an object whose individual atoms could be perceived singly. It follows that there is not only a threshold of size below which bodies are imperceptible, but also a lower limit of perception in time.³¹⁷

This explanation concerns sight, but the same process applies to the other senses. For instance, hearing is "caused by air entering the empty hollow of the ear. [...] Once the sound has entered, the ear (like the eye in sight) acts only as a channel through which it is dispensed all over the body. In both sight and hearing, we perceive (as Plato later put it) not *with* but *through* the sense-organs: the sensitive soul is ubiquitous in the body."³¹⁸ The mind is the thinking portion of the soul located in the head, whereas soul-atoms alternate with body-atoms throughout the whole body.³¹⁹ In Bringham's own meditation, the myriad impressions gotten from the world outside through the sense organs pervade the whole body, including "the intestine", for the truth is so small (atoms are invisible and indivisible elements) that it dissolves into our living organism as it were:

... and the truth so small as it crumbles it swims
in and out of the intestine,
floats through the ear's net, the eye's net,
the sieve of the palm.

In some of the surviving fragments on the theory of knowledge, Demokritos draws a distinction between the *genuine cognition* of reason and the *bastard cognition* of the senses.³²⁰ In his materialistic conception of the universe, both thought and sensation had to rely on a purely physical mechanism. Thus, Aëtius (4.8.5 and 10, 67 A 30) says: "Leucippus, and Democritus say that sensations and thoughts are alterations of the body. Leucippus, Democritus and Epicurus say that sensation and thought take place by the impact of

³¹⁷ Guthrie, *ibid.*, pp. 444-445.

³¹⁸ Guthrie, *ibid.*, p. 447. Thus, sound-particles, emitted by the sources of sound, impinge on the hearer's ear. They first strike the intervening air and conform it to their own likeness. So it is not the actual effluence from the object, but an 'image' of it 'stamped upon' the air, which enters the organ of the perceiver. *Ibid.*, p. 447.

³¹⁹ Guthrie, *ibid.*, p. 433.

³²⁰ In this context, Guthrie dwells on the meaning of the word *sophos* in classical Greek, as well as on the differences between gods and mortals when it comes to cognition of the real. There were five senses (plus a sixth one, common sense, according to Aristotle), but the gods might possess senses lacking to ordinary mortal human beings. It is interesting to notice how the word *sophoi* was used to refer to poets, prophets and religious teachers – extraordinary humans endowed with access to superhuman sources of cognition. To arrogate to oneself the title of *sophos* was to lay claim to divine powers, almost an act of *hybris*. Pythagoras would call himself only *philosophos* (i.e., lover of wisdom), for he believed that "no one is wise save God". "Demokritos believed that poets wrote "under divine inspiration and by a holy spirit", and that prophetic dreams, voices and visions were a reality... Neither poets nor prophets were thinking things out intellectually..." See Guthrie, *ibid.*, p. 450.

images from outside. Neither occurs to anyone without the impact of an image.”³²¹ In this context, thought is a form of sensation and so it results from a disturbance of the soul-atoms by atomic complexes from the world outside. In some sense, thought is derived from sensation, for it receives its data from the senses, which are therefore not negligible or dispensable at all. The truth is ultimately in *what appears* to the sense organs and affects the soul of the perceiving subject.³²² And yet the truth is hard to discover (for “it loves to hide”, as old Herakleitos said). Guthrie summarizes Demokritos’ theory of knowledge as preserved in the extant fragments with astonishing economy:³²³

- (1) *What appears to the senses is true.* A few relevant fragments are worth quoting here: (i) Aristotle, *De anima* 404a27: “For Democritus soul and mind were simply identical, for what is true is the phenomenon (or ‘that which appears’). (ii) Aristotle, *GC*, 315b9: “But since they [Leucippus and Democritus] held that truth was in appearance, and the phenomena were infinitely numerous, they made the atomic shapes infinite, so that by changes in the compound the same thing makes a contrary impression on different people...” (iii) Aristotle, *Metaphysics* 1009b12: “... in short, because they [pre-Platonic thinkers] identify thought with sensation and that with bodily alteration, they necessarily say that what appears in sensation is true...”
- (2) *What appears to the senses must be rejected.* Sextus in three relevant passages says: (i) *Math.* 7.369 (DK, A110): “Some have abolished all phenomena, like Democritus.” (ii) *Math.* 8.6 (DK, A59): “Plato and Democritus considered that only the objects of thought exist: but Democritus’ reason was that nothing perceptible by sense existed in nature, whereas Plato’s was that sensible things were always becoming but never being.” (iii) *Math.* 8.56 (not included in DK): “Democritus and Plato throw things into confusion by rejecting the senses, annihilating their objects, and holding only to the intelligible.”
- (3) *Sensible phenomena lead to knowledge indirectly.* The mind may attain knowledge through the media of the senses, as is attested by some surviving fragments: (i) Galen, *De medic. empir. fr.* Schöne, 1259, 8 (DK, fr. 125): “Wretched mind, do you take your evidence from us and then throw us down? That throw is your overthrow.” (ii) Theophrastus, *Sens.* 69: “[Democritus said that] things appear different to people in different condition, and again that no one person attains the truth more than any other. This is unreasonable, for it is likely that the better man would see it more clearly than the worse, and the healthy than the sick, for his condition is closer to nature.”
- (4) *Knowledge is altogether impossible.* On the impossibility of absolute knowledge about reality and on the relativity of sensations, Sextus gives voice to a complete pessimism as to the possibility of human knowledge. He says: (i) *Math.* 7.135 (DK, fr. 9): “Democritus in some

³²¹ Guthrie, *ibid.*, p. 451. He claims that the term ‘image’ is a technical one meaning “a purely material film of atoms thrown off by an object and travelling to the perceiving subject.” Bringhurst uses the word ‘imprints’ to refer to this in section 3 of “Demokritos”.

³²² Guthrie, *ibid.*, pp. 452-453. Aristotle (*Metaphysics* 1010a1) criticized the materialism of Leucippus and Demokritos on the ground that “They sought the truth about reality, but on the assumption that the only real things were the sensible.” To Aristotle’s more sophisticated mind, reality was divided into sensible (corporeal) and intelligible (incorporeal), and Demokritos (and all the pre-Socratic philosophers except for Parmenides) had accounted for knowledge in purely materialistic terms. However, Guthrie claims that we tend to overlook a simple fact: that epistemology occupied a humble place in the minds of pre-Socratic philosophers, who were ultimately concerned with *the search for being* (ontology). Thus, their essential interest was investigating being, not the faculties with which humans attempt to grasp being. After Parmenides’ conviction that the objective world in no way corresponds to the unreal, shifting and contradictory world of sense-perception, a lot of intellectual stamina, scientific passion and unshakable faith was required of Demokritos to rescue the purely physical dimension of reality as the basis of knowledge. In the face of the Eleatic challenge, Demokritos sought to affirm the existence of a sensible world where a plurality of elemental atoms in motion was real. *Ibid.*, pp. 454-455.

³²³ Guthrie, *ibid.*, pp. 456-461.

places abolishes the things that appear to the senses and asserts that none of them appears according to truth but only according to opinion: the truth in things that exist is that there are atoms and void.” (ii) *Math.* 7.136: “And in his *Confirmations*, although he had promised to assign the power of conviction to the senses, he is none the less found condemning them, for he says, ‘In reality we know nothing for certain, but what shifts according to the condition of the body and of the things which enter it and press upon it.’” (iii) *Math.* 7.137: Sextus quotes Demokritos’ own words: “And again he says (fr. 10): ‘That we do not comprehend what is or is not the true character of each thing has often been made clear’; and in the work *On Forms* (fr. 6): ‘Man must learn on this principle that he is separated from reality.’, and again (fr. 7), ‘This argument too shows that we know nothing truly about anything, but each man’s opinion is a reshaping.’, and further (fr. 8), ‘Yet it will be clear that it is impracticable to get to know the true character of each thing.’” Other relevant fragments are these: (i) Demokritos, fr. 117 (Diogenes Laertius 9.72): “In reality we know nothing, for truth is in the depths.” (ii) Aristotle, *Metaphysics*, 1009b2ff: “Democritus says that either truth does not exist or else it is hidden from us.”

- (5) *Complete skepticism about the possibility of knowledge is unjustified.* Demokritos offered a way out of a pessimistic disbelief in the possibility of knowledge. Though truth is not in sense-impressions themselves, through them the mind might ultimately be led to it. (i) Sextus (*Math.* 7.138-139) says: “But in his *Canons* he says that there are two kinds of cognition, one through the senses and the other through the intellect. Of these he calls that through the intellect ‘legitimate’, and attests its trustworthiness for the judgment of truth, and that through the senses ‘bastard’, denying that it is free from error in the discernment of truth. To quote his actual words: ‘There are two forms of cognition, one legitimate, one bastard. To the bastard belong all these: sight, hearing, smell, taste, touch. The other is legitimate, and separate from these.’ Then in preferring the legitimate to the bastard he adds: ‘When the bastard cognition cannot see any further in the direction of smallness, or hear or smell or taste or perceive by touch, but [we advance?] to the more minute....’” Guthrie says that the sentence breaks off at this point, but the meaning is clear: “the senses give us our impressions of the macroscopic world, but when it is a question of understanding the microscopic (where alone reality is to be grasped), the intellect takes over.”³²⁴

The truth is hard to discover, but not impossible to reach. In section 4 of his poem, Bringham speaks of “*the truth so small as it crumbles it swims / in and out of the intestine*”, which is possibly meant as a reference to the tiny size of atoms and also to the soul-atoms pervading the whole body of the perceiving subject. To this, the poet adds a most enlightening afterthought: “[*the truth*] *floats through the ear’s net, the eye’s net, / the sieve of the palm.*” Hearing, sight and touch are all invoked in these lines to indicate that senses provide us but with a tentative approach to the invisible realities of the truth, which is eel-slippery and elusive, hard to catch. Hard as they may try to catch the truth for good, the truth always manages to flee away. Indeed, the sharp-minded Demokritos was convinced that “the truth must lie somewhere beyond sense-perception.”³²⁵ According to the pre-Socratic thinker, no one attains the truth by sense-perception alone, for senses cannot reveal things for what they are – i.e., aggregates of atoms and void. Truth is indeed in the depths, and so we should not stop at the surface of things. Though the senses might look like a barrier separating humans from things and their ultimate essence, in fact they can lead us ultimately to the truth. Hence, knowledge is not impossible of attainment. It is through sensation that we receive our first awareness of sensible reality and of the basic properties of perceptible things. From sense impressions it is then possible to reach the truth beneath actual phenomena, which are windows wide open on the unseen. So long as we do not stop

³²⁴ Guthrie, *ibid.*, p. 459, note 1.

³²⁵ Guthrie, *ibid.*, p. 462.

at the surface of things, we can reach an understanding of the nature of invisible realities, which is hidden from the senses.

Unlike Leucippus, Demokritos had also a keen interest in ethics, and so numerous moral precepts have been preserved in the form of luminescent fragments. Sections 1 and 5 of “Demokritos” are an eloquent illustration of the sage’s profound concern with ethics, of his ethical thought. The extant fragments do not suggest though that Demokritos offered a systematic exposition of ethical theory. From a gathering of these fragments it is easy to detect that “the prevailing effect is one of homespun practical wisdom, with a distinct leaning towards prudence and safety first.”³²⁶ The starting point or source of inspiration for the first half of section 1 is fragment 276, which contains an advice against having children. The upbringing of one’s children is treacherous, and “even if it is successful it is full of struggle and care, and its failure exceeds all other anguish (fr. 275). Hence it is best to have none”.³²⁷

Bearing children is even more dangerous,
said Demokritos, than buying a mirror,
yet this wealth strangely easy to come by –
a bed and two books,
bread and fruit and a strong pair of shoes.

These lines are strongly reminiscent of the Thoreau of *Walden* who spent two years living in solitude in the woods near Concord. For Demokritos, the supreme good lies in ascetic living, one that demands nothing more than such simple necessities as sound sleeping, enough reading matter, plain food, and good shoes for walking in the open air. “The right state of the body leads to that spiritual serenity and happiness the attainment of which is man’s chief end,” explains Guthrie.³²⁸ The Greek word *euthymia*, translated as ‘cheerfulness’ or ‘contentment’, defines the goal of living in Demokritos’ ethical thought. In the only extant doxographic fragment on this subject, Diogenes Laertius makes the concept clear: “The *telos*, he holds, is contentment. It is not the same thing as pleasure, as some have erroneously taken it to be. Rather it is that by which the life of the soul is made calm and stable, undisturbed by fear, superstition or any other emotion. He calls it also well-being, and by many other names”.³²⁹ This is also called *ataraxia* or *athambia* – i.e., freedom from disturbance or imperturbability. The legitimate aim of human life is then to avoid any kind of emotional or mental disturbance. Biased in favour of prudence and the safe middle way, Demokritos would advise humans to observe moderation and measure, to keep disturbance to a minimum, to embrace a balanced life and moderation in enjoyment, to practise self-control, and to take the least possible action in public affairs or political activities.³³⁰ To sum up, “moderate pleasures and a balanced life are thought to be necessary for contentment because excess or defect of pleasure ‘causes change and brings about great movements in the soul, and souls that are moved over long intervals are neither stable or contended.’”³³¹ This instability is clearly prejudicial to peace of mind, as explored in the second half of section 1 of “Demokritos”, for which Bringhurst has used another extant fragment as his starting point:

³²⁶ Guthrie, *ibid.*, p. 491.

³²⁸ Guthrie, *ibid.*, p. 470.

³²⁹ Guthrie, *ibid.*, pp. 492-493.

³³⁰ Guthrie, *ibid.*, pp. 493-494.

³³¹ Guthrie, *ibid.*, p. 497.

In spite of bad government there was good weather,
but after the heart the first thing
to sour is always the water.
The demon's summerhouse is the soul.

Bad government does not matter much as long as the weather is good. For good weather is enough for an ascetic person who does not need much apart from strong shoes to walk outdoors. The superior dignity of the soul is out of the question. However, the sage reminds us that the human soul is easily corruptible; the demon likes to spend his summer time in the soul, the poetic voice tells us. The tone of these lines is therefore admonitory. Be careful, seems to say the speaking voice in the poem, lest the demon should decide to stay in your soul and turn it sour, as if it were fresh water.

Section 5 of Bringhurst's poem concerns the theme of death. Demokritos encourages human beings to face death with courage and determination, as it is an inevitable part of life after all: "*A man must be ready for death / always, as sound must always be ready / for silence.*" As Guthrie says, "for Democritus, as later for Epicurus, the individual soul is dispersed at death, and its component particles scattered throughout the universe: 'Democritus and Epicurus say that the soul is mortal, and perishes along the body.' [Aëtius 2.7.4 (68 A 109)] Consequently no man needs make himself miserable by fears of torments and punishments after death."³³² This appears to be the core meaning at the heart of the opening lines of Bringhurst's poem: death and life go hand in hand, in much the same way sound and silence belong together. Here there is a subtle intertextual connection with the sound and silence of section 2 of "Demokritos", where the former stands for *being* (atoms) and the latter for *non-being* (the void). Fear of death is human though, and inevitable, for it means the cessation of life, the abandoning of this precious world of ours, the annihilation of the self with all the baggage of experiences it has treasured throughout a whole lifetime. Hence, the poetic voice adds this final comment at the end of the piece:

There are of course contrary yearnings,
called information and music, but call it
laughter or call it beatitude,
a good joke is the most you can ask.

"Contrary yearnings" are meant as a reference to *eros* or desire, to the unappeasable or unquenchable thirst for life shared by all humans of all times and places. That everybody wants to live seems to be a truism; it is a universal anthropological compulsion inherent in human nature. Other names the poetic voice uses to name this vital instinct, this desire for life, are *information* and *music* – concepts that entail some form of presence, as they are on the side of life and being. In any case, whichever the term one might use to refer to this yearning after life, only "a good joke" is all you can expect to receive from life, says Demokritos. After all, he was the Laughing Philosopher, "moved to mirth by the follies of mankind as Heraclitus to tears."³³³

Sections 7 and 8 of "Demokritos" deal with two more of the universal interests of the sage from Abdera: the very nature of the Earth itself and the physiological constitution of such an emblematic animal as the eagle. As for the shape of the Earth, unlike Leucippus,

³³² Guthrie, *ibid.*, pp. 434-435.

³³³ Guthrie, *ibid.*, p. 387.

who believed it to be flat and round, Demokritos had the original idea that it was “elongated, of length one and a half times its breadth.”³³⁴ None conceived of it as being a sphere, but it was possibly a revolving earth for both of them. Aëtius (3.12.2, A96) preserves a curious fragment on the fact that the earth is tilted: “Because the southerly part of the surrounding [atmosphere] is weaker, the earth as it grew tilted in that direction; for the northerly parts are intemperate, the southern temperate, hence it grew heavier in the latter quarter where it is abundant in fruits and produce.”³³⁵ This may well account for the opening verse line of section 7 of “Demokritos”: “*Thus the earth goes south each summer.*” The remaining verse lines of the composition are built round an astonishing image in which the mind resembles a widgeon that spends the winter cold in the north (the northern intemperate) and then rises to a new form of life in autumn to ride the currents of wind and sea waves amid a gale:

The mind moults in the north like a widgeon
and rises, hunting or grazing, in autumn,
riding the gale,
the stain of the voice like a handprint at intervals
in the unravelling rigging.

There is also room in these lines for speech, as evoked by the metaphor “*the stain of the voice.*” Mind, body and speech belong together in Bringhurst’s poetry. In our intellectual confrontation with the world, it is not just the mind that does the whole work of apprehending the invisible realities. Speech also plays a crucial role, and so *the stain of the voice* is said to be discernible like *a handprint in the unraveling rigging*. Mind and speech, like the senses and all sensation, are a form of touch too (they are fingers too). This seems to be the implication at stake here. In much the same way knowledge of reality does not depend solely on sense-impressions, and so we must transcend the raw data our sense organs provide us with, the voice (i.e., speech) also manages somehow to go beyond the surfaces in our attempt to grasp the invisible.

Let us now turn to section 8 of “Demokritos”. The biological work of Demokritos must have “rivalled Aristotle’s in comprehensiveness and attention to detail,”³³⁶ tells us Guthrie. From this we gather that he was a man endowed with an omnivorous curiosity; wherever he turned to look, he would find something worth paying attention to. *Breathing through the feet*, to borrow Bringhurst’s words from a seminal essay in his entire corpus – it seems to us that this is what the pre-Socratics knew how to do best of all. Paying attention to the world in its manifold manifestations and subtle nuances was an expression of their reverence towards the real, the embodiment of their gratitude to *what is* and *what isn’t*. We, 21st-century citizens of the world, appear to have forgotten this most elementary of lessons. This is a good reason to turn back to the surviving fragments of these philosophers, in search of illumination, to cleanse our senses and start to look at the world anew, from an altogether fresh perspective. The closing section of Bringhurst’s “Demokritos” may well look like a carefully wrought afterthought, a sort of coda to the whole eight-part composition. The way the eight sections have been arranged is of course deliberate, and so everything falls exactly into place. Whereas the opening section of “Demokritos” dwells on a sort of moral precept on the convenience of not bearing

³³⁴ This is fragment 15, quoted by Guthrie, *ibid.*, p. 422.

³³⁵ Guthrie, *ibid.*, p. 423. Guthrie claims that “the warmth rarefies the air [...] and makes it less able to support half of the earth, which accordingly sinks. This confirms Aristotle’s statement that for Democritus, as for Anaximenes and Anaxagoras, the earth owed its support in the centre of the cosmos to the air, in which, owing to its flatness, it ‘settled like a lid’”. *Ibid.*, pp. 423-424.

³³⁶ Guthrie, *ibid.*, p. 465.

children of one's own, the closing section directs the reader's attention to the realm of the non-human:

Incidentally you may notice,
said Demokritos,
the eagle has black bones.

As if in passing, the sage tells us that the eagle has black bones. A short three-line stanza of haiku resonances is enough to convey the sense of wonder in the face of this simple fact. Why should have Demokritos told us that this majestic bird has black bones, unlike humans for instance? It does not matter much whether he got the physiological detail right. What is truly important is the love of detail of Demokritos, as well as the sense of reverence and the scientific passion of the poet-philosopher that these words appear to express. The sage who said that nothing in reality existed except for atoms and the void was a true lover of detail, and love of detail is expressive of the philosopher's love of intellectual rigour and precision. This is no negligible virtue at all.

X · XENOPHANES

"Xenophanes"³³⁷, the tenth piece in *The Old in Their Knowing*, is a moving meditation in three parts on another essential Pre-Socratic sage who lived in ancient Greece in the sixth and fifth centuries BCE. His intellectual vigour and his capacity to reflect on a wide range of issues of interest make him an indispensable figure in the history of Greek thought. Xenophanes (b. c. 560 BCE, Colophon, Ionia – d. c. 478) was both a philosopher and a religious thinker, a poet and a rhapsode,³³⁸ and also a reputed precursor of the Eleatic school of philosophy, which stressed unity rather than diversity and viewed the separate existences of material things as apparent rather than real.³³⁹ Born in the Ionian city of Colophon, he was probably exiled from Greece by the Persians who conquered his native land about 546. His was a wandering life: after living in Sicily (in Messana and Catana) for a time and wandering elsewhere in the Mediterranean, he settled at Elea in southern Italy, where he is said to have founded the Eleatic school. Late in his life he spent some time in the court of Hieron at Syracuse. He enjoyed an exceptionally long life; he would have been at least 92 at his death. Xenophanes embraced an ideal of moderation and the enjoyment of the good things of life without the ostentatious display of wealth. His was also a beautifully ascetic mind, in love with virtue and harmony of the soul.

³³⁷ "Xenophanes" was first published in *The Beauty of the Weapons* (1982), and then it was reprinted as (1) B.17 *The Penguin Book of Canadian Verse*, edited by Ralph Gustafson. 4th rev. ed. Harmondsworth, Middlesex: Penguin Books, 1984: pp. 340-342. Contributions: "Xenophanes" (rpt. from A.14); "Essay on Adam" (rpt. from A.6); "Poem about Crystal" (rpt. from A.6); and as (2) B.27 *Fifteen Canadian Poets Times Two*, edited by Gary Geddes. Toronto: Oxford University Press, 1988: pp 490-505. Contributions: "The Beauty of the Weapons", "The Sun and Moon", "Poem about Crystal", "Anecdote of the Squid", "Xenophanes", "The Stonecutter's Horses", "The Song of Ptahhotep" (all rpt. from A.14), "For the Bones of Josef Mengele, Disinterred June 1985" (rpt. from A.32). It was revised in A.47 *The Calling*, A.76 *The Old in Their Knowing* and A.92 *Selected Poems*.

³³⁸ See the entry on 'Xenophanes' in *Encyclopaedia Britannica*, vol. 30, p. 18018.

³³⁹ According to W.K.C. Guthrie, *A History of Greek Philosophy*, vol. II, p. 361, Xenophanes had "the reputation of being the founder of the Eleatic school, to which we owe the first attempt to base an ontology on strict deductive logic."

Xenophanes' poems survive only in fragments, and yet he is the first Greek philosopher of whose undisputed writings we can still read an appreciable quantity which amounts to 118 lines.³⁴⁰ Parmenides (fl. c. 450 BCE) is considered as the founder of the Eleatic school, but Xenophanes' philosophy probably anticipated his views. It is unfortunate that Aristotle did not devote much attention to Xenophanes, whom he dismissed as not being a serious enough student of the physical world.³⁴¹ As a result, it has been claimed that Xenophanes was less a philosopher of nature in the manner of Parmenides, who looked for abstract principles underlying natural change, than a poet and religious reformer who applied generally philosophical and scientific notions to popular conceptions. His thinking appears to be primitive in comparison with later Eleaticism, which developed its philosophy of appearance and reality into a much more sophisticated system. Thus, Xenophanes' philosophy found expression primarily in the poetry that he recited in the course of his travels. In his elegiac fragments he ridicules the doctrine of the transmigration of souls, condemns the luxuries introduced from the nearby colony of Lydia into Colophon, and advocates wisdom and the reasonable enjoyment of social pleasure in the face of prevalent excess. But he is best known for his trenchant attacks on the immorality and anthropomorphism ascribed to the gods and goddesses of ancient Greece by Homer and Hesiod. To this we shall return below.

Robert Bringhurst devotes a three-part poem to the thinking and singing of Xenophanes. The structure of the composition is crystal-clear, for Bringhurst is a poet who aims at being understood and enjoyed by the reader. When brought together into a single *Gestalt*, all three parts fall into place as if they were constituent parts of a perfect circle. In the first place, the poet focuses on the philosopher's physical ideas concerning the ultimate substance of reality and the existence of fossils, and, secondly, he proceeds to a myth-like meditation on Xenophanes' ideas about heavenly bodies and his lively criticism of the anthropomorphic depiction of Olympian gods and goddesses by Homer and Hesiod. The closing lines of the second section and the third section in its entirety take the reader back to the opening lines of the poem and remind him of the alternation of wet and dry ages in Xenophanes' cyclical view of reality, in which water and earth are immersed in a struggle of almost cosmic dimensions all the time. Nothing but earth remains as the ultimate substance of which the whole cosmos is made. First thing is facts, and so part 1 of "Xenophanes" opens with straightforward statements on the ultimate composition of reality:

Earth is the ultimate substance.
 What is, is made out of earth. We
 who climb free of it,
 milkthistles, mallards and men,
 are made out of earth that is driven by water.

³⁴⁰ W.K.C. Guthrie, *ibid.*, p. 362. Guthrie explains that Xenophanes wrote his poems in hexameters, elegiacs and iambs. "He is credited with epics on the foundation of Colophon and Elea, which if true makes him the earliest Greek poet to treat of contemporary and recent history. [...] He was also famous for his *Silloi*, a title [...] indicating poems of mockery and parody." *Ibid.*, p. 365.

³⁴¹ In *Metaphysics* (986b 10ff.), Aristotle speaks of the Eleatic philosophers who denied movement and taught that reality is one in a different sense from the Milesians: "Yet so much it is relevant to note at present. Parmenides seems to be concerned with logical unity, Melissus with material. That is why the former says it is finite, the latter infinite. But Xenophanes, the first of these unifiers, whose disciple Parmenides is said to have been, in no way made himself clear, neither does he seem to have had a grasp of either of these conceptions. He simply considered the whole world and said that the one exists, namely the god. These men therefore, as I said, may be omitted from our present inquiry, two of them – Xenophanes and Melissus – altogether, as being somewhat primitive, though Parmenides indeed speaks with more insight." See Guthrie, *ibid.*, pp. 368-369.

There is a certain lack of precision in Xenophanes' description of the physical world, and yet he manages to convey the fundamental tenets of his own view of reality in the surviving fragments of his work available to us. The immediate source of inspiration for Bringhurst's meditation on the philosopher's conviction that all creatures are born from earth is fragment 27 (of dubious authenticity, though preserved by Aëtius), "From earth come all things, all things end in earth", which might be interpreted as meaning that earth was an *arche* in the Milesian sense,³⁴² and fragment 29 (Simplicius, *in Phys.* 189, 1), "All that is born and grows is earth and water."³⁴³ However, fragment 33 (Sextus, *adv. math.* X, 34) is also particularly relevant in this context: "For we are all born out of earth and water."³⁴⁴ As Guthrie claims, all three fragments "describe the same thing, namely the origin of organic life from the earth, which, in order to produce it, had to be moist. The *arche* of the cosmos is not in question because, being everlasting, it has no *arche*."³⁴⁵ Now, the idea that everything is composed of and originates from water and earth might seem a rudimentary physical theory, but the belief that all living things were originally born from the earth was very common among ancient Greeks. For earth to be able to bear all living things, it had to be made fertile, and the vehicle of such fertility was moisture. It was a simple fact of observation for the Greeks that rain or water in general made dry and barren soils fruitful, and so it was natural for them to presume that all things came into being out of earth itself under the influence of water. Thus, all living things are made of these two essential substances. There were also mythological accounts available, close at hand:

For those who preferred religious or mythological explanations, the earth was a person, the goddess Gaia, the Great Mother, and her fertilization took the form of marriage with the sky-god, Ouranos, Aither, or Zeus. He by his rain became the father of men and animals as well as plants, and the Earth was their mother, who brought them to birth when she had received the fertilizing drops.

It was natural and right for those who held this belief to say that all things are born from Earth, the common mother, and so they frequently did. But it was equally correct to say that they are born from earth and water, since assuredly the earth will not be fecund when dry.³⁴⁶

That all living creatures come from earth and water is made clear by Bringhurst's words in the opening lines of "Xenophanes". The declarative sentence "*Earth is the ultimate substance*" announces in simple terms what the gist of the first section of the poem is all about: everything we know to exist can be reduced ultimately to earth, the *materia prima*. That the poet should mention *milkthistles* (standing for plants in general), *mallards* (animals) and *men* (human beings) is no random choice at all. All three elemental categories embody the whole of reality in its entirety. Furthermore, all three nouns are subtly united by sound itself through alliteration (the /m/ phoneme is repeated in all three words), thus pointing to the existence of an ultimate substratum beneath the multifarious plurality of reality. Plants, animals and humans emerge from the entrails or womb of earth itself into the day of light, as if they were set free from bondage in the innermost recesses of mother earth.

³⁴² In this respect, Guthrie reminds us that "Aristotle himself, reviewing earlier philosophers in his *Metaphysics* (989a5), says that 'none of those who posit a unity makes earth the element', and in *De anima* he repeats (405b8) that all the other elements had been chosen save earth. Of course he is thinking primarily of the Milesians, and might be supposed to exclude Xenophanes for that reason, since he distinguishes him from them. But his reason for making the distinction was that Xenophanes believed the cosmos to be eternal, and so could not have believed in any *arche* at all as the Milesians understood it." *Ibid.*, p. 385.

³⁴³ Guthrie, *ibid.*, p. 383 and p. 385. Kirk et al. provide a different translation of fr. 29: "All things that come-to-be and grow are earth and water." *Ibid.*, p. 176.

³⁴⁴ Guthrie, *ibid.*, p. 385. See Kirk et al.: "For we all came forth from earth and water." *Ibid.*, p. 176.

³⁴⁵ Guthrie, *ibid.*, p. 386.

³⁴⁶ Guthrie, *ibid.*, p. 386.

However, water does play an important part in the whole process as well, and so the emphasis is laid on the alternation of dry and wet stages in the second stanza of section 1, which dwells on Xenophanes' remarks on fossils and on his belief in the struggle of earth and water. Doxographers said that Xenophanes believed that "the earth was subject to alternate encroachments of land on sea and sea on land."³⁴⁷ An impressive description of fossils preserved by Hippolytus (*Ref.* 1, 14, 5-6) serves as the source of inspiration for Bringhurst's accomplished meditation on fossils:

Xenophanes thinks that a mingling of earth with sea takes place and that in course of time it is dissolved by the wet element, claiming as proofs that shells are found in the midst of the land and on mountains; and in the quarries at Syracuse, he says, the impressions of a fish and of seaweed have been found, on Paros the impression of a bay-leaf in the depth of the stone, and on Malta flattened shapes of all sea-creatures. These, he says, were formed when everything, long ago, was covered in mud, and the impression dried out of the mud. All men are destroyed when the earth is carried down to the sea and turns to mud, then a new generation begins. Such is the foundation of all the worlds.³⁴⁸

Fossils are "evidence that the sea once covered what is now dry land, and that the solid rock was once soft mud"³⁴⁹ and, at the same time, Xenophanes appears to suggest that the sea is *in retreat* in what is a cyclical process.³⁵⁰ That these notions should have caught Bringhurst's omnivorous attention comes as no surprise at all. Being a poet in love with the sheer physicality of the world and the author of *Bergschrund*, an early poetry collection rich in geological references, Bringhurst speaks of Xenophanes' ideas on fossils in these terms: "I have found chiton shells high / in the mountains, the fingerprints of fish / in the stonecutter's stone", and these are words that are strongly reminiscent of Hippolytus' in the quote above, even if they are no literal translation. In their incessant struggle with each other, water and earth seek to achieve dominance over one another, they "*lurch, wrestle and twist in their purposeless / war, of which we / are a consequence, not an answer.*" Beneath these lines is possibly fragment 34 (Sextus, *adv. math.* VII, 49), on the limitations of human knowledge: "No man knows, or ever will know, the truth about the gods and about everything I speak of..."³⁵¹ This is the second fragment invoked by Bringhurst himself as a source of inspiration for the second stanza of section 1 of "Xenophanes" in his 2005 edition of the Pre-Socratics sequence. Like the rest of creatures, we humans are the result, the consequence, of the eternal struggle of water and earth, "*not an answer*". Which teaches us an elemental lesson of

³⁴⁷ Guthrie, *ibid.*, p. 387.

³⁴⁸ Guthrie, *ibid.*, pp. 387-388. Kirk et al. offer a slightly different translation: "Xenophanes thinks that a mixture of the earth with the sea is going on, and that in time the earth is dissolved by the moist. He says that he has demonstrations of the following kind: shells are found inland and in the mountains, and in the quarries in Syracuse he says that an impression of a fish and of seaweed has been found, while an impression of a bay-leaf was found in Paros in the depth of the rock, and in Malta flat shapes of all marine objects. These, he says, were produced when everything was long ago covered with mud, and the impression was dried in the mud. All mankind is destroyed whenever the earth is carried down into the sea and becomes mud; then there is another beginning of coming-to-be, and this foundation happens for all the worlds." *Ibid.*, p. 177. Kirk et al. suggest that "Xenophanes may have been the first to draw attention to the real significance of fossils. The conjecture that the earth's surface had once been mud or slime was again not new; this was a Milesian theory possibly originating with Thales and certainly held by Anaximander, who believed that life started from mud." *Ibid.*, p. 177.

³⁴⁹ Guthrie, *ibid.*, p. 388.

³⁵⁰ Guthrie claims that "Xenophanes is not speaking of the origin or destruction of the cosmos. The cyclical process which he describes is confined to the earth, and even that is never destroyed. We have no details, but it is clear that when the sea has advanced sufficiently to eliminate life and turn the earth to mud, it retreats to allow the reemergence of dry land and life." *Ibid.*, p. 389.

³⁵¹ Kirk et al., *ibid.*, p. 179.

humility and the need for gratitude in the presence of *what is*: being vulnerable and limited as we are, humans can never get to know anything for good, with absolute certainty.

The second section of Bringhurst's "Xenophanes" consists of three clearly distinct parts: the first part concerns the philosopher's physical ideas on heavenly bodies; the second one deals with the relations between immortal gods and mortal humans and, more specifically, with Xenophanes' attack on the anthropomorphic depiction of the gods in conventional religion; and the third part subtly evokes the alternation of wet and dry ages in his conception of the physical world in just two verse lines of utter precision and beauty. Now, the sun and the earth are recurrent elements in Bringhurst's poetry, and the two opening stanzas of section 2 explore the daily renewal and setting of the sun. The starting point for these lines is a fragment from Hippolytus (*Ref.* 1, 14, 3) that is worth quoting in full: "The sun comes into being each day from little pieces of fire that are collected, and the earth is infinite and enclosed neither by air nor by the heaven. There are innumerable suns and moons, and all things are made of earth."³⁵² In Bringhurst's hands, this fragment becomes an impeccable stanza of myth-like resonances:

The earth gives birth to the sun
each morning, and washes herself in the water,
and slits the sun's throat every night
with a splintered stone, and washes
herself once again in the water.

Mother Earth is the ultimate substance underlying everything in this world, and so the sun is conceptualized as coming into being from earth itself every morning with the sunrise. And the sun is born only to die out at night with the sunset. As if she were a human mother, earth bathes herself in water after giving birth to the sun and after sacrificing it every night, to get rid of the blood on her hands. In its diurnal revolutions, the sun is born out of the earth and goes back to her quite reluctantly so as to fulfil a sort of sacrificial offering in which the mother slits the throat of the victim. This sacrifice is of a cosmic nature, as it ensures the smooth revolutions of the sun around the earth. To the naked eye, the shivering light rays of the sun seem to suggest that he is scared to death of its own setting: some days it looks like "*a fattening goose*", crossing the skies *in ignorant stupor*; other days it looks like "*a shuddering rabbit caught in the snare.*" It does not matter much, the poetic voice tells us, as "*One way / or the other, his death is the same.*" To sum up, the whole world is alive with a divine presence, for god is one and the same with the universe; life and death follows each other in a cyclical process here symbolized by the sun's renewal and death every day.

Let us now turn to the second part of section 2 of "Xenophanes", which concerns the anthropomorphism of the ancient gods of Greece. Surviving fragments of Xenophanes reflect his contempt for contemporary anthropomorphism and for the widespread popular acceptance of Homeric mythology.³⁵³ Indeed, Homer and Hesiod were the two men held

³⁵² Kirk et al., *ibid.*, p. 173.

³⁵³ As Guthrie puts it, he "was chiefly known to the ancient world as a writer of satirical criticism and denunciation, and the extant verses provide ample evidence that such was indeed his attitude to poets, philosophers, and the ordinary run of men. [...] But the fullest weight of his displeasure was reserved for Homer and Hesiod, the two poets who as Herodotus said had determined for the Greeks the nature of their gods." *Ibid.*, pp. 370-371. It is out of the question that the *Iliad* and the *Odyssey* are enjoyed as marvellous poems and exciting tales of warfare and travel showing great insight into human nature, but they truly laid the

responsible for the creation of a theogony for the Greeks, since they “gave the gods their names, distributed their privileges and skills, and described their appearance”, as Herodotus points out.³⁵⁴ The gods play a prominent part in Homer and Hesiod, and so Xenophanes launches his attack on religious grounds. Hence, he brings three charges against the poets: (1) that they portray the Olympian gods and goddesses as immoral, which accounts for his trenchant attacks on the immorality ascribed to them; (2) that they cast them in human shape – i.e., in anthropomorphic terms; and (3) that deity must be self-sufficient and there can be no hierarchy within it, and so each god or goddess is their own master and lacks nothing in any respect. The starting point for Bringhurst’s meditation on the nature of the gods and goddesses of the ancient Greeks are two eloquent fragments which he quotes in the original Greek in the 2005 edition of *The Old in Their Knowing*: (1) fragment 24 (Sextus *adv. math.* IX, 144): “He sees as a whole, perceives as a whole, hears as whole.” and (2) fragment 15 (Clement *Strom.* V, 109, 3): “But if oxen and horses or lions had hands, or could draw and fashion works as men do, horses would draw the gods shaped like horses and lions like lions, making the bodies of the gods resemble their own forms.”³⁵⁵ This condemnation of the poets for ascribing a human shape to the immortals (as well as immoral acts and unworthy sufferings) is at the core of Bringhurst’s poem. However, the poet appears to lay the emphasis precisely on Xenophanes’ criticism of anthropomorphic divine beings. His verse lines embody three little movements for the reader’s soul which are worth analyzing in depth. There appear to exist three crucial aspects inherent in the nature of the gods and goddesses that we humans are in desperate need of understanding. All three are formulated in the negative, which is no happy coincidence:

- (1) “*We must learn to be thought / by the gods, not to think them,*” says Bringhurst. It is an act of *hybris* on the part of human beings to dare think the gods (their own physical appearance and character), instead of letting them think us. Gods are omnipotent and so, in their infinite wisdom, they are in a position to think humans, to shape us in one way or another. Only these powerful deities can truly achieve the truth and wisdom concerning all sorts of matters, including the nature of mere mortals. Xenophanes was convinced that the blame was to be put on the poets, who were responsible for describing the gods in purely human terms. In this respect, fragment 11 (Sextus *adv. math.* IX, 193) is quite informative in affirming: “Homer and Hesiod have ascribed to the gods all deeds that among men are a reproach and a disgrace: thieving, adultery, and mutual deception.”³⁵⁶
- (2) “*Not to think gods have two eyes and ten fingers, / thirty-two teeth and two / asymmetrical footprints.*” It seems only natural that humans should ascribe their own physiological shape, states of mind and deeds to the gods in an act of self-projection. Hence we tend to think that the gods are born and die, just like humans, as fragment 14 (Clement, *Strom.* V, 109, 2) makes clear: “Men suppose that gods are brought to birth, and have clothes and voice and shape like our own.”³⁵⁷ What is more, every human community shapes their gods in their likeness, as fragment 16 (Clement, *Strom.* VII, 22, 1) suggests: “Ethiopians imagine their

foundations of the religious, moral and literary education of the Greeks. In fact, Xenophanes (fr. 10) says: “What all men learn is shaped by Homer from the beginning.” Quoted by Guthrie, *ibid.*, p. 371.

³⁵⁴ Quoted by Guthrie, *ibid.*, p. 371.

³⁵⁵ See Guthrie, *ibid.*, p. 371 and p. 374. Translated slightly differently by Kirk et al. in *The Presocratic Philosophers*: (1) fragment 24, Sextus *adv. math.* IX, 144: “All of him sees, all thinks, and all hears.” (p. 170) and (2) fragment 15, Clement *Strom.* V, 109, 3: “But if cattle and horses or lions had hands, or were able to draw with their hands and do the works that men can do, horses would draw the forms of the gods like horses, and cattle like cattle, and they would make their bodies such as they each had themselves.” (p. 169)

³⁵⁶ See a different translation by Kirk et al., *ibid.*, p. 168: “Homer and Hesiod have attributed to the gods everything that is a shame and reproach among men, stealing and committing adultery and deceiving each other.”

³⁵⁷ See Kirk et al., *ibid.*, p. 169: “But mortals consider that the gods are born, and that they have clothes and speech and bodies like their own.”

gods as black and snub-nosed, Thracians as blue-eyed and red-haired.”³⁵⁸ Fragment 1 (quoted above), the original source of inspiration for Bringhurst’s reflection on anthropomorphism, suggests that even animals would shape their gods after themselves if they had just hands to draw the deities in forms that would resemble their own bodies. What is so powerful about Bringhurst’s statement on anthropomorphism is precisely the simplicity and transparency of his language: he speaks of eyes, fingers, 32 teeth and two asymmetrical footprints. These are the essential brushstrokes that define the body of any recognizably human being: humans have two eyes, ten fingers (five per hand), 32 teeth that allow them to masticate their food, and two feet to stand on and walk (they are bipeds), which leaves their hands free to accomplish many other things. But gods and goddesses are not like this; they do not resemble humans in any straightforward manner.

- (3) “*Not to think / here in the unstoppered bowls / of our skulls we hold luminous / godbreath.*” Guthrie explains that “if Xenophanes believed in a god at all, this divinity must be non-anthropomorphic, morally good, everlasting, completely self-sufficient and independent.”³⁵⁹ Xenophanes described the nature of this god in some of the extant fragments: (i) Fragment 23 (Clement, *Strom.* V, 109, 1): “God is one, greatest among gods and men, in no way like mortals either in body or in mind.” (ii) Fragment 24 (Sextus *adv. math.* IX, 144): “He sees as a whole, perceives as whole, hears as a whole.” (iii) Fragments 26 + 25 (Simplicius, *in Phys.* 23, 11 + 23, 20): “Always he remains in the same place, not moving at all, nor indeed does it befit him to go here and there at different times; but without toil he makes all things shiver by the impulse of his mind.”³⁶⁰ Thus, Homer and Hesiod were wrong to assume that gods are born and die, wear human clothes to cover their human bodies, have human voices, and behave as thieves and adulterers. God is essentially one and resembles man in no way, and yet the god is “not incorporeal, but has body of his own, only not of human shape”,³⁶¹ possibly spherical, finite and identical with the universe.³⁶² Xenophanes was convinced that god is one, unmoved, identical with the universe, ungenerated³⁶³ and so he is not in any way like human beings. After his proclamation of the eternity and unity of god, he also insists on his omniscience: he needs no sense organs of perception to penetrate reality or attain the truth. Humans, by comparison, are fallible and vulnerable,³⁶⁴ even if we dare think that “*in the unstoppered bowls of ours skulls*” (notice the impressive metaphor here) there is a spark of “*luminous godbreath*”. Humans are not divine in any way whatsoever, the poet tells us emphatically. And so the closing lines of this movement for the soul insist on the fact that there is nothing special about the very matter which our skulls hold: a sort of mush made of “*rocksalt and silt*” (for

³⁵⁸ See Kirk et al., *ibid.*, p. 169: “The Ethiopians say that their gods are snub-nosed and black, the Thracians that theirs have light blue eyes and red hair.”

³⁵⁹ Guthrie, *ibid.*, p. 373.

³⁶⁰ Kirk et al., *ibid.*: (i) Fragment 23: “One god, greatest among gods and men, in no way similar to mortals either in body or in thought.” (ii) Fragment 24: “All of him sees, all thinks, and all hears.” (iii) Fragments 26 + 25: “Always he remains in the same place, moving not at all; nor is it fitting for him to go to different places at different times, but without toil he shakes all things by the thought of his mind.” *Ibid.*, pp. 169-170.

³⁶¹ Guthrie, *ibid.*, p. 376.

³⁶² In *Metaphysics* (986b 10ff.), Aristotle speaks of the Eleatic philosophers and concludes that Xenophanes considered the whole world / heaven (*ouranos*) and said that the one exists, namely the god. This idea suggests, according to Guthrie, “a rather magnificent picture of the philosopher-poet standing alone in a wide empty landscape on a clear night, flinging out his arms in an all-embracing gesture and crying, ‘The One exists, and it is God’; that is, looking up at the heavens and declaring that the world was one and divine. [...] Aristotle is saying that by fixing his attention on the nature of the universe Xenophanes came to the conclusion that the One was God.” *Ibid.*, p. 380. To the extent that Xenophanes identified God and the world, he may be called a pantheist. *Ibid.*, p. 381.

³⁶³ Guthrie concludes that “for Xenophanes the cosmos was a spherical body, living, conscious, and divine, the cause of its own internal movements and change. [...] the cosmos itself was a divinity and therefore had no beginning or dissolution but was everlasting.” *Ibid.*, pp. 382-383.

³⁶⁴ Consider, for instance, these two fragments: (1) fr. 34: “No man knows or will know the plain truth about the gods and about all that I speak of.” and (2) fr. 18: “The gods did not reveal to men all things in the beginning, but in course of time, by searching, they find out better.” Guthrie, *ibid.*, p. 376.

earth is the ultimate substance), just “*like our toenails*”. Whereas toenails are “*matted / like felt*”, the grey matter of the brain is “*swollen / like hope*”. Notice the syntactic parallelism, which highlights the ultimate substance of which everything is made.

The two closing lines of section 2 of “Xenophanes” evoke once again the alternation of wet and dry ages in the philosopher’s conception of the incessant war being waged by water and earth: “*What is, is earth. What dies / is earth driven by water.*” Beneath these lines is fragment 33 (Sextus, *adv. math.* X, 34), quoted above and translated as “For we are all born out of earth and water” (Guthrie) and as “For we all came forth from earth and water” (Kirk et al.).³⁶⁵ In their concision and gnomic dimension, these words recall many of the declarative statements found in the Oriental sages sequence of *The Book of Silences*, another sequence central to Bringhurst’s *oeuvre* that has been a work in progress for a long time. In any case, they remind the reader of what to Xenophanes was a fact: that everything that exists is ultimately earth, and that water is always struggling with earth in a cyclic process whereby the surface of the earth is covered with the sea, just to give way to another stage at which the sea is in retreat. These lines take the reader back to the first section of the poem, where the physical theory of Xenophanes was set forth in detail. Thus, the circle drawn by the poem is almost full and complete.

Section 3 of “Xenophanes” is another jewel-like short lyric of utter concision and perfection that belongs among the best of Bringhurst’s compositions of its kind. It is based on the original Greek fragment 28 (Achilles, *Isag.* 4, p. 34, 11 Maass): “At our feet / We see this upper limit of the earth / Coterminous with air, but underneath / It stretches without limit.”³⁶⁶ These lines are a description of a flat-topped, not a spherical earth, afloat amid an immensity of pure air. Bringhurst metamorphoses these four verse lines into a unique piece of music in which ideas sing and dance at the same time, and as a result thinking and singing go hand in hand:

The earth has one end. It is under
our feet. You may think
differently; I am convinced
there is no other.

Not only is earth the ultimate substance out of which all living things are made, as the opening line of “Xenophanes” announced from the very outset, but also the firm ground on which our feet stand to keep us erect or upright. Thus, the earth itself is the limit from a purely physical standpoint. It does not allow us to forget that we humans are also earth in the end, and so we do belong with the grander scheme of things. Firmly pressing against the ground are the feet, and breathing through the feet was of the essence to Bringhurst, for whom hands are more damaging and less respectful than feet are. There is something moving about the conviction with which the poetic voice speaks its mind in the closing section of Bringhurst’s poem: there is no room for doubt or hesitation as to earth being the ultimate substance or substratum and the ultimate limit.

³⁶⁵ Guthrie, *ibid.*, p. 385, and Kirk et al., *ibid.*, p. 176.

³⁶⁶ Guthrie, *ibid.*, p. 394. See Kirk et al.: “Of earth this is the upper limit which we see by our feet, in contact with air; but is underneath continues indefinitely.” *Ibid.*, p. 175.

XI · OF THE SNARING OF BIRDS

“Of the Snaring of Birds” was originally published in *Cadastre* (1973) under the title “Strophe from Sophocles”³⁶⁷, which was a translation of the first stanza in a chorus from the ancient Greek playwright’s well-known tragedy entitled *Antigone*. Later, this original translation of the first strophe was expanded to include the whole chorus from *Antigone* (lines 332-375) in a poem re-titled “Of the Snaring of Birds”³⁶⁸, one of the 12 compositions that constitute *The Old in Their Knowing*. Sophocles must have truly been a source of inspiration for Bringham for a number of reasons, and not just because he is one of the giants of the Western canon. Sophocles evolved for his plays a plain style that was very different from the magniloquence of his senior contemporary Aeschylus; this simplicity and elegance of language, along with an astonishing profundity of thought must have been certainly appealing to the poet. Once more, Ezra Pound, or the acknowledged master, may have put Bringham on the right trail. Pound himself gave thought to Sophocles as well: he translated the Greek playwright’s play *Women of Trachis* into English. What is more, Pound uses the expression “Sophoclean light” in his poem “Ité”³⁶⁹ to criticize the misty derivativeness of English poetry since the 1890s up to his day (1915, the year of publication of *Lustra*, where “Ité” is included). Sophocles is thus presented as symbolizing a hard kind of poetry, as opposed to soft, sentimental, abstract poetry. Yet the early version of the classical Greek text we find in “Strophe from Sophocles” in *Cadastre* was but the beginning of a long process in which Bringham tries to come to terms with the original. As pointed out above, “Strophe from Sophocles” was to be subsequently modified and expanded into the poem entitled “Of the Snaring of Birds”, included for the first time in his twelve-poem sequence called “The Old in their Knowing”³⁷⁰ in *The Beauty of the Weapons* (1982),

³⁶⁷ “Strophe from Sophocles” was later published as C.22 in *Arion: A Journal of Humanities and the Classics* (Boston) ns 1.4 (1973/1974): 561-575, in a sequence entitled “Eight Poems and Translations” (a revised excerpt from “The Third Generation: A Treatise on the Gods”, “Strophe from Sophocles”, “Herakleitos”, “The Petelia Tablet”, “Four Glyphs”, “Isthmian”, “A Short History”, and “Antistrophe from Leopardi”). Afterwards, it was also published as C.36 [Two poems], *American Poetry Review* (Philadelphia) 9.6 (Nov./Dec. 1980): 34, along with “The Greenland Stone” (also included in *Cadastre*, 1973). Both poems, delivered to *APR* editors by William Arrowsmith, are erroneously attributed to William Bringham.

³⁶⁸ “Of the Snaring of Birds” was as such published for the first time in A.14 *The Beauty of the Weapons* (1982). Afterwards, it was reprinted in (i) B.40 *The Burning Words*, by Gaoyuan Wei. Cambridge, England: privately printed, 1992: pp. 29-30. Contribution: “Of the Snaring of Birds” (rpt. from A.14), with Wei’s Chinese translation (T.Ch.3) on pp. 10-11; and in (ii) C.54 [Five poems]. *Crab Creek Review* (Seattle) 4.1 (Fall/Winter 1986): 6-8 (see also p 2). Contents: “Poem About Crystal”; “A Quadratic Equation”; “Of the Snaring of Birds”; “The Beauty of the Weapons”; “Study for an Ecumenical Window”, all rpt. from A.26 (US edition of *The Beauty of the Weapons*). Later, it was revised in A.47 *The Calling* (1995), further revised in A.76 *The Old in Their Knowing* (2005) and slightly revised again in *Selected Poems* (2009).

³⁶⁹ “Ité” (the Latin ‘ite’ means *go*) reads as follows: “Go, my songs, seek your praise from the young and from the intolerant, / Move among the lovers of perfection alone. / Seek ever to stand in the bard Sophoclean light / And take your wounds from it gladly.” The phrase ‘Sophoclean light’ may derive from ‘lumen siccum’ (dry light), of the medieval scholastics, we are told in *A Guide to Ezra Pound’s Personae* (1926).

³⁷⁰ It might be advisable to remember once more that “The Old in Their Knowing” sequence was born in 1974 with the publication of the broadside *Pythagoras*, which was later incorporated into the chapbook *Eight Objects* (1975), a sequence of eight poems concerning the primordial lessons of the Presocratics’ philosophy. They were later collected in *Bergschrund* (1975) and expanded into the 12-piece sequence entitled “The Old in Their Knowing” in *The Beauty of the Weapons* (1982), pp. 67-68. In his second groundbreaking anthology, *The Calling* (1995), Bringham recuperated the same sequence with minor changes. 2005 saw the publication of the beautiful book entitled *The Old in Their Knowing*, printed by Peter Koch, in Berkeley (California). [A note in this 2005 edition of the poems reads as follows: “This sequence has appeared in three earlier versions: in *Eight Objects* (Kanchenjunga Press, 1975), in *The Beauty of the Weapons* (McClelland & Stewart, 1982; Copper Canyon Press, 1985) and in *The Calling: Selected Poems 1970-1995* (McClelland & Stewart, 1995). This edition includes the author’s latest emendations.”] More recently, *Selected Poems* (2009) includes again such a central sequence in Bringham’s poetic career. These poems are therefore *a work in progress*, the work of a lifetime, the

which is a magnificent recreation of Sophocles' chorus in its entirety. In the Notations at the end of *Cadastre*, Bringhurst informs us that

The Sophocles doesn't derive from Heidegger's reading of the passage, but neither does it seem to replace Heidegger's reading. (Similarly, Morrison's drawing of Poseidon in his Armor isn't, so far as I know, based on Leonardo's Neptune with his Horses; but the two can be looked at together nevertheless to achieve a degree of stereoscopy.)

With these words, the poet seems to suggest that we should bear in mind Heidegger's exegetical study of the poem in his *Einführung in die Metaphysik* (*Introduction to Metaphysics*, chapter IV, section 3)³⁷¹ in the hope that some sort of stereoscopy might be achieved if his translation is read in conjunction with the original Greek text and the German philosopher's lucid interpretation of Sophocles' words. If Sophocles' chorus is an extended meditation on man's nature –on his virtues and omnipotent domination over all creatures on Earth–, the early “Strophe from Sophocles” is just a miniature meditation that focuses on human beings' relationship with two fundamental natural forces: the sea and Mother Earth. But let us turn first to the original text and the vital circumstances that accompanied the Greek man who composed such a masterpiece amid the splendour of classical Athens, at the heights of its creative powers.

Sophocles was born *ca.* 496 BCE at Colonus, a village outside the walls of Athens, and he died in 406 CE in Athens, the cultural centre of classical Greece. He is one of the classical Athens's three great tragic playwrights along with Aeschylus and Euripides. Few facts are known about his life though. Whatever details are known about his life on earth are worth recording: knowing the man will give us a clue to understand why Bringhurst should have decided to translate a *strophe* from one of his most accomplished plays. Sophocles came from a wealthy family, and he was highly educated, noted for his impressive beauty of physique, athletic prowess, and outstanding artistic talents. Endowed with a sense of social commitment, he participated actively in civic life affairs in the Greek polis. He won his first victory at the Dionysian dramatic festival in 468, defeating the great Aeschylus in the process and beginning a career of unparalleled success and longevity. In total, he wrote 123 dramas for the festivals, of which only seven have survived in their entirety, along with 400 lines of a satyr play, and numerous fragments of plays now lost. All seven of the complete plays that have survived are works of Sophocles' maturity: *Ajax* is generally regarded as the earliest of the extant plays; *Antigone* was first performed in 442 or 441 BCE; *Philoctetes* was first performed in 409, and *Oedipus at Colonus* was produced after his death by his grandson.

palpable expression of the poet's fascination about the Greek world and what it stands for – spiritual integrity, intellectual honesty, naturalness, a firm grasp of reality.

³⁷¹ In “Of the Snaring of Birds”, the linguistic threshold before the poem reads: “*from the Antigone of Sophocles, a version in memory of Martin Heidegger, 1889-1977*”. It is in fact a most eloquent version, not a faithful rendering, of the original text, conceived as a homage to Heidegger, a lover of all things ancient and Greek. As Charles Lillard puts it in a review of *Tzohalem's Mountain* and *The Beauty of the Weapons* published in *The Reader* 2.2 (Vancouver), June 1983: 1-4, “Fittingly, these lines, from a version of Sophocles's *Antigone*, are dedicated to the memory of the German philosopher Martin Heidegger. “Fittingly” for in his *Poetry, Language, Thought* Heidegger suggests “The poet need not think; the thinker need not create poetry; but to be a poet of the first rank there is a thinking that the poet must accomplish, a thinking which has all the purity and thickness and solidity of poetry, and whose saying is poetry.” (p. 2) The German philosopher's influence on Bringhurst thinking and conception of poetry is crucial, and so it is only natural that “Of the Snaring of Birds”, a meditation on humankind inspired by Sophocles' original Greek text, should be a homage to this fundamental thinker.

Needless to say, Sophocles was a superb artist. His command of language and his mastery of form and diction respond flexibly to the dramatic needs of the moment. He has also been universally admired for the sympathy and vividness with which he delineates his characters, especially his tragic women, such as Antigone and Electra. Many of his plays are masterpieces of construction, particularly *Oedipus the King*, to which Aristotle makes constant references in the *Poetics*. He is indeed credited with some major and minor dramatic innovations, such as the introduction of a third actor in the dramatic performance onstage, which enabled him to increase the number of his characters and widen the variety of their interactions. The scope of the dramatic conflict was thereby extended, plots could be more fluid, and situations could be more complex. Thus, the typical Sophoclean drama presents a few characters, impressive in their determination and power, and possessing a few strongly drawn qualities or faults that combine with a particular set of circumstances to lead them inevitably to a tragic fate. With great economy, concentration, and dramatic effectiveness he develops his characters' inexorable rush to tragedy in what looks like a relentless manner. Usually the chief character does something involving grave error. This action or decision affects others, each of whom reacts in their own way, thereby causing the chief agent to take another inevitable step toward ruin – his own and that of others as well.

Apart from being a magnificent craftsman, this master playwright was an inquisitive spirit concerned with investigating the tragic dimension inherent in the human condition. To Sophocles, human beings live for the most part in dark ignorance because they are cut off from the gods – those permanent, unchanging forces and structures of reality. He presents truth in collision with ignorance, delusion, and folly. Ultimately, it is through pain, suffering, and endurance of tragic crisis that people get into contact with the universal order of things and gain some sort of knowledge of themselves. In this respect, *Antigone* is a play about the conflicting obligations of civic versus personal loyalties and religious mores. It marks one of the highest summits of classical Greek drama's formal achievements. The greatest moral dilemma at the heart of the play is that of human or personal liberty: the rights of the individual, who follows the dictates of her conscience, against all sorts of conventional rules and norms, intangible bondage and tyranny, as represented by Creon's edict that no one in the polis is to bury the body of Polinices, a traitor to the city and Antigone's brother. *Antigone* is thus one of the greatest tragedies produced by ancient Greece, one concerned with an important theme and one that explores the human condition. The chorus from *Antigone* (lines 332-375)³⁷² Bringhurst

³⁷² See Sophocles, *Antigone. The Women of Trachis. Philoctetes. Oedipus at Colonus*, edited and translated by Hugh Lloyd-Jones, Cambridge, Massachusetts: Harvard University Press, 1994, p. 35 and p. 37, for a prose English translation of the original Greek text: "Many things are formidable, and none more formidable than man! He crosses the gray sea beneath the Winter wind, passing beneath the surges that surround him; and he wears away the highest of the gods, Earth, immortal and unwearying, as his ploughs go back and forth from year to year, turning the soil with the aid of the breed of horses.

And he captures the tribe of thoughtless birds and the races of wild beasts and the watery brood of the sea, catching them in the woven coils of nets, man the skilful. And he contrives to overcome the beast that roams the mountain, and tames the shaggy-maned horse and the untiring mountain bull, putting a yoke about their necks.

And he has learned speech and wind-swift thought and the temper that rules cities, and how to escape the exposure of the inhospitable hills and the sharp arrows of the rain, all-resourceful; he metes nothing in the future without resource; only from Hades shall he apply no means of flight; and he has contrived escape from desperate maladies.

Skilful beyond hope is the contrivance of his art, and he advances sometimes to evil, at other times to good. When he applies the laws of the earth and the justice the gods have sworn to uphold he is high in the city; outcast from the city is he with whom the ignoble consorts for the sake of gain. May he who does such things never sit by my hearth or share my thoughts!"

chooses to translate is one of the summits or climatic moments in the unfolding of the tragedy itself. Also, Bringhurst's must have admired the clarity, the precision, the command of language on the part of the Greek master in what turns out to be the most moving meditation about human nature in the whole play. Here is the original miniature meditation published as "Strophe from Sophocles":

Strangeness is frequent enough but nothing
is stranger than man –
thus
and across
the grey-maned water,
heavy weather on the southwest quarter,
moves amid sea-thunder,
tacking through the bruise-blue waves.
And he rubs at the earth,
the eternal, the tireless
eldest of goddesses,
driving the plough in its circle year after year
with the offspring of horses.³⁷³

In its later textual incarnation in "Of the Snaring of Birds", consisting of four stanzas (or of two strophes and their corresponding antistrophes), this stanza is extensively revised and reads as follows:

Strangeness is frequent enough, but nothing
is ever as strange as a man is.
For instance,
out there,
riding the grey-maned water,
heavy weather on the southwest quarter,
jarred by the sea's thunder,
tacking through the bruise-blue waves.
Or he paws at the eldest of goddesses,
earth, as though she were made
out of gifts and forgiveness,
driving his plough in its circle year after year
with what used to be horses.

The starting point of Sophocles' meditation is straightforward enough: man is a strange or uncanny³⁷⁴ creature, stranger than any other creature on Earth. Endowed with intelligence and sagacity, he manages to control the implacable forces of Nature to his own satisfaction and benefit. In the Greek framework of perception, the world is a place pervaded by the presence of gods and goddesses, who more often than not interfere in human affairs. But the world is out there for man to conquer with all the strength, might and sagacity he is capable of. The *grey-named water*, which is the embodiment of Poseidon to the Greeks'

³⁷³ Verse lines 334-340 of the Χορός in the original Greek text *Ἀντιγόνη*, ed. Sir Richard Jebb, Cambridge, 1891: πολλὰ τὰ δεινὰ κούδ' ἐν ἀνθρώπου δεινότερον πέλει. / τοῦτο καὶ πολιοῦ πέραν πόντου χειμερίῳ νότῳ / χωρεῖ, περιβρυχίοισιν / περῶν ὑπ' οἴδμασιν. / θεῶν τε τὰν ὑπερτάταν, Γᾶν / ἄφθιτον, ἀκαμάταν, ἀποτρύεται / ἰλλομένων ἀρότρων ἔτος εἰς ἔτος / ἵππειῳ γένοι πολεύων.

³⁷⁴ According to Heidegger, "Dieses Wort, daß der Mensch τὸ δεινότατον, das Unheimlichste sei, will ihm nicht eine besondere Eigenschaft zusprechen, gleich als sei der Mensch sonst noch etwas anderes; vielmehr sagt das Wort: das Unheimlichste zu sein, ist der Grundzug des Menschenwesens, in den je und immer alle anderen Züge eingezeichnet werden müssen. Der Spruch: »der Mensch ist das Unheimlichste«, gibt die eigentliche griechische Definition des Menschen." *Einführung in die Metaphysik* (Band 40 der Gesamtausgabe), Frankfurt am Main: Vittorio Klostermann, 1983, p. 160.

mythopoeic mind, awakes humans' sense of grandeur in the face of the sublime and of the unknown. That human beings are vulnerable, devoid of warmth or protection when they arrive on Earth, is out of the question. That the ocean is stronger than all human beings is also out of the question, yet it remains a challenge for men to sail on it in vessels they have devised with their technical knowledge of tools and strategies (*technê*) that make the world manageable to a certain degree. Hence the sea with its vast expanses of water offers no obstacle at all in spite of bad weather conditions, as humans are reckless in their determination to ride the *bruise-blue waves* comfortably in the bosom of their vessels, aided by favourable winds or not.

The two primordial divine entities in Greek cosmogony (i.e. the mythic account of the origin of the universe) are Heaven (Uranus) and Mother Earth (Gea). Out of their marriage sprang everything – both living and non-living things – that comprises the cosmos. No mention is made here of Heaven, but rather of the Earth in its entirety, which is made of water and solid earth.³⁷⁵ Earth is “*the eldest of goddesses*”, the first mother of mothers. Out of a proverbial generosity, she has sustained innumerable generations of humans, has nourished them and given them all they need to lead a comfortable existence. And men make use of whatever available resources they have (the plough and the brute force of horses) to till it and cultivate it (almost mercilessly) so as to make it yield nourishment to appease their hunger and thirst. There is no respite for Mother Earth, we can read in between the lines; some sort of violence is being exerted on her time and again, and yet she still gives demanding humans generously whatever they demand of her. According to Martin Heidegger, Mother Earth is indeed a primordial goddess upon which man exerts a form of violence: “Beachten wir es wohl: die Erde heißt die höchste der Götter. Gewalt-tätig stört der Mensch die Ruhe des Wachstums, das Nähren und Austragen der Mühelosen.”³⁷⁶

In the stanzas that constitute the core of the chorus, what Sophocles does is to praise human ingenuity and perseverance as the true basis of the progressive achievements of humankind. Beneath the verbal surface of these verse lines is the notion that progress in the arts and sciences is ultimately a progress dependent on human effort and not on divine revelation. So by ascribing scientific and technical progress to human ingenuity alone, Sophocles is embracing a conception of knowledge as progressing steadily and gradually from small beginnings, through men's own powers of discovery and invention. At this point, it might be wise to remember that in ancient Greece two different views of human development were embraced:

Two conflicting views of human development were current in classical Greece. The first, that it represented a degeneration from an original ‘golden race’ in the distant past, was given its standard form by Hesiod (*Works*, 109 ff.). These early men were both good in themselves and happy in their circumstances, for nature produced its fruits in abundance with no toil on their part. According to the second, more realistic view the earliest men were ignorant and brutal in character, and at the mercy of wild beasts and all the forces of a hostile nature. Gradually learning by bitter experience, they improved both morally and in their conditions

³⁷⁵ Heidegger says: “Die erste Strophe nennt das Meer und die Erde, jedes ein Überwältigendes (*δεινόν*) in seiner Weise. Das Nennen von Meer und Erde meint die Genannten freilich nicht in der bloß geographischen und geologischen Bedeutung, nach de runs Heutigen diese Naturerscheinungen begegnen, um dann noch beiher mit einigen kleinen und flüchtigen Gefühlen übermalt zu werden. »Meer«, das ist hier zie zum ersten Mal gesagt und in den winterlichen Wogen genannt, darin es standing seine eigene Tiefe auf- und sich in sie hinabreißt.” *Ibid.*, p. 162.

³⁷⁶ Heidegger, *ibid.*, p. 163.

of life, as one by one the arts of building, weaving, domestication of animals, agriculture, and above all of combining in communities for mutual protection, were discovered and mastered. This less mythical version rapidly gained ground at the expense of the other during the fifth century.³⁷⁷

Thus, the second stanza³⁷⁸ of “Of the Snaring of Birds” presents a view of “man the tactician”. By his sly inventions, man manages to master the art of hunting and of the domestication of air, sea and land animals, in much the same way he manages to domesticate the land through cultivation. There is no living creature in this world that will not eventually fall prey to his nets and yokes, for man is a creative and resourceful being. The birds of the air, the fish of the deep sea, the goats of the mountain, horses and bulls³⁷⁹: all of them are at the mercy of ingenious man, who controls all living creatures from his position at the very top of creation. The texture of Bringhurst’s translation of the original Greek text can be best felt in verse lines of utter simplicity like these, in which the reader’s mind is invited to dance to the rhythm of *melopoeia* and *logopoeia*.

Birds’ minds climb the air, yet he snares them,
and creatures of the field.
These
and the flocks
of the deep sea. He unfurls
his folded nets for their funeral shrouds.

The third stanza³⁸⁰ of “Of the Snaring of Birds” is a moving meditation on several other accomplishments of human beings: speech, politics and architecture (or the art of building). This stanza is pregnant with a wealth of meaning that is worth analyzing in detail. Speech is what distinguishes human beings from all other beings in the world; the ability to convey to others through words what men and women think and feel is a recognizably human attribute. This does not mean, of course, that only humans have a monopoly on language or on meaning. Every single thing in this universe is endowed with meaning, seeks to *mean* something as it were, and speaks a language of its own. Thus, animals have their own systems of communication; they somehow manage to send messages to one another as well. Like humans, they do not live isolated in their own spheres, closed from the inside to everything without. And yet words are a purely human invention: the breath emanating

³⁷⁷ W.K.C. Guthrie, *A History of Greek Philosophy*, vol. II, pp. 399-400. An extant fragment by Xenophanes, by the way, gives the same idea in a nutshell: “Fragment 18 of Xenophanes (“The gods did not reveal to men all things in the beginning, but in course of time, by searching, they find out better.”), where the emphasis is on personal search, on the need for time, which makes this “the first statement in extant Greek literature of the idea of progress in the arts and sciences, a progress dependent on human effort and not –or at least not primarily– on divine revelation. It foreshadows the praise of human ingenuity and perseverance in Sophocles’ *Antigone* (332 ff.)” Ibid., pp. 399-400.

³⁷⁸ The original Greek text in *Αντιγόνη* reads as follows: κουφονόων τε φύλον ὀρνίθων ἀμφιβαλὼν ἄγει / καὶ θηρῶν ἀγρίων ἔθνη πόντου τ’ εἰναλίαν φύσιν / σπείρασι δικτυοκλώστοις, / περιφραδῆς ἀνὴρ· κρατεῖ δὲ μηχαναῖς ἀγραύλου / θηρὸς ὄρεσιβάτα, λασιάχενά θ’ / ἵππον ὀμάζεται ἀμφὶ λόφον ζυγῶν / οὔρειόν τ’ ἀκμῆτα ταῦρον.

³⁷⁹ As Heidegger puts it, “[Die Gegenstrophe] nennt den Vogelschwarm in den Lüften, das Getier im Wasser, Stier und Roß in den Bergen. Das Lebendige, das leichtträumend in sich und in seinem Umkreis schwingt, standing über sich hinwegströmend in immer neuen Gestalten sich erneuert und doch in seiner einen Bahn bleibt, kennt den Ort, wo es nächtigt und wandert. Als Lebendiges ist es dem Meeres und der Erde eingefügt. In dieses in sich rollende Leben, im eigenen Kreis und Gefüge und Grund ungewöhnlich, dahinein wirft der Mensch seine Schlingen und Netze, dieses reißt er aus seiner Ordnung und sperrt es in seine Gehege und Pferche ein und zwingt es unter die Joche. Dort: Ausbruch und Umbruch, hier: Einfang und Niederzwang.” Ibid., pp. 163-164.

³⁸⁰ This is the original Greek text in *Αντιγόνη*: καὶ φθέγμα καὶ ἀνεμόεν φρόνημα καὶ ἀστυνόμους / ὀργὰς ἐδιδάξατο καὶ δυσούλων / πάγων ὑπαίθρεια καὶ δύσομβρα φεύγειν βέλη / παντοπόρος· ἄπορος ἐπ’ οὐδὲν ἐρχεται / τὸ μέλλον· Ἄϊδα μόνον φεῦξιν οὐκ ἐπάξεται / νόσων δ’ ἀμηχάνων φυγὰς ζυμπέφρασταί.

from humans' lungs is endowed with a distinct meaning that is easily recognizable through convention by members belonging to the same speech community. In Bringhurst's rendering of Sophocles' original Greek, the emphasis is laid precisely on the oral dimension of speech with the utmost linguistic economy: "*And the sounds in his own throat / gather the breezes that rise in his mind.*" Words are literally *sounds* born in the throat that allow humans to give voice to the *breezes* (ideas and feelings) in their mind. These sounds are not unintelligible noises, but distinct combinations of sounds that are easily recognizable to the human ear, regardless of whether humans have devised up to 6,000 distinct languages with their own phonemic systems to convey infinite messages in a potentially infinite range of word combinations. This is simply astonishing if we think about it for a while: language (in singular) is the most ambitious creation of the human spirit and languages (in plural) are true repositories of human memory and human knowledge. Nothing is left behind en route, for nothing is truly lost. What makes the progress of humankind possible in the end is precisely language – the infinite treasure-house of all the words, thoughts, ideas and feelings (past, present and future) that humans shape in their minds. Language is still the most mysterious human artefact, and an inexorably creative power. Though mastered and mediated and mediated by every one of us, language belongs to no one. Nobody owns it; it is a boon that belongs to humankind. In our language we both express and share our common human spirit.

The ingenuity and perseverance of humans know of no limits. Humans have thus also mastered the art of living together in harmony, for man "*has learned how to sit on committees*" and devised codes of laws and rules to arbitrate the functioning of society. A long time ago Aristotle claimed that man is "a political animal", which means that man is bound to live with other men and women, otherwise he would lead a solitary and miserable existence away from all human company. Needless to say, in Sophocles' time, the polis was a notion central to the ancient Greeks' minds. It was a right and a duty to stand up to the circumstances of one's city-state, "to add beauty and strength" to the polis, to stand high in it just to honour oneself and fellow citizens. And in another more pragmatic realm, humans have also mastered the art of building "*houses and barns / against blizzards and gales.*" Amid a hostile world, men have learned to seek the warmth and protection of houses, so as not to be at the mercy of the elements and to protect their vulnerable bodies from excessive heat and cold. Now, the closing lines of the third stanza offer a brief though intense meditation on a simple fact: that humans have mastered speech as well as politics and the art of building houses is an inevitable part of the glory and splendour inherent in humankind, and yet misery is also somewhat inescapable. There is nothing humans cannot attain, not a goal out of their reach if they are determined to achieve it, such is their perseverance and their capacity to accomplish things. However, even if humans can touch the sky and build a heaven on earth, they are also capable of the worst things imaginable.

He manages all and yet manages
nothing. Nothing is closed
to the reach of his will,
and yet he has found no road out of hell.
His fate, we all know³⁸¹, is precisely
what he has never outwitted.

By *fate* Bringhurst means *death*. So there is only one thing that humans have not managed to outwit, and that is death. There is nothing they can do to avoid it or to prevent it from happening. In this respect, Heidegger says: "Nur an einem scheitert alle Gewalt-tätigkeit

³⁸¹ "Say" instead of "know" in the earlier version of the poem published in *The Beauty of the Weapons* (1982).

unmittelbar. Das ist der Tod. Er über-endet alle Vollendung, er über-grenzt alle Grenzen. Hierb gibt es nicht Ausbruch und Umbruch, nicht Einfang und Niederzwang.”³⁸² Death is also a mystery, possibly the greatest of all. The idea of an uncanny vacuum opening its arms wide open towards us when we leave this life on earth is simply scary. Death has accompanied humans since the beginning of their adventure on this planet; it is the inevitable shadow walking by one’s side from the very cradle to the very grave. And death is present in many of Bringham’s poems indeed: for instance, *Deuteronomy* (1974), *Jacob Singing* (1977) and *The Stonecutter’s Horses* (1979) are all concerned with men preparing to die. In the recreation of Petrarch’s last will and testament in *The Stonecutter’s Horses*, the first movement of the poem dwells on the need to think about death deeply: “*thinking of death can never be / wasted thinking*” for “*A man carries his death with him / everywhere, waiting, but seldom thinking / of waiting. Death is uncommonly like the soul.*” In general, in Bringham’s poems death is seen as a natural and inevitable part of life. It could not be otherwise when analyzed by a sage’s mind which is calm and serene, not scared in the face of what is ubiquitous and inescapable.

The fourth stanza³⁸³ of “Of the Snaring of Birds”, which has been extensively revised from one textual incarnation to the next, reads as follows in the 2005 edition of *The Old in Their Knowing*:

Wise, yes – or ingenious.
 More knowledge than hope in his hand,
 and evil comes out of it sometimes,
 and sometimes he creeps toward nobility.
 Warped on the earth’s loom
 and dyed in the thought of the gods,
 a man should add beauty and strength to this city.³⁸⁴
 But he is no citizen whatsoever
 if he is tied to the ugly
 by fear or by pride or by greed or by love
 of disorder or order.
 May no one who does not still wonder
 what he is and what he does
 come in and sit at my fireside.³⁸⁵

Two little movements for the soul are discernible in the pattern of these verse lines. In the first movement, man is described as being wise or ingenious, but we are well aware that wisdom is not exactly the same as ingenuity. True wisdom is hard to attain; it is not the same as knowledge or erudition. Sages of all times like the ones whose company Bringham has sought throughout his life (and whose thinking he has captured in his sequences on the Pre-Socratic poet-philosophers and on the Buddhist monk-thinkers) have a clarity of mind that is precious and rare to find among common human beings. If they become wise, it is because their sharp minds are able to go beyond the surface texture of things and to

³⁸² Heidegger, *ibid.*, p. 167.

³⁸³ The original Greek text in *Αντιγόνη* reads as follows: σοφόν τι τὸ μηχανόεν τέχνας ὑπὲρ ἐλπίδ’ ἔχων / τοτὲ μὲν κακόν, ἄλλοτ’ ἐπ’ ἐσθλὸν ἔρπει, / νόμους γεραίρων χθονὸς θεῶν τ’ ἔνορκον δίκαν, / ὑπίπολις ἄπολις ὅτω τὸ μὴ καλὸν / ζῖνεσσι τόλμας χάριν. μήτ’ ἐμοὶ παρέστιος / γένοιτο μήτ’ ἴσον φρονῶν ὃς τὰδ’ ἔρδει.

³⁸⁴ This verse line reads “A man should stand high in his city” in *The Beauty of the Weapons* version.

³⁸⁵ In *The Beauty of the Weapons* version the closing lines read as follows: “if he is tied to the ugly by love of adventure. / May no one who will not wonder what he is and does / suddenly arrive at my fireside.” In *The Calling*, they read thus: “if he is tied to the ugly by fear / or by greed or by love of disorder. May no one / who will not wonder what he is and what he does / suddenly arrive at my fireside.” The last verse line reads “suddenly arrive at my fireside” in the 2009 *Selected Poems* version of the poem.

penetrate a core of irreducible meaning in reality. The sudden revelation or epiphany concerning the ultimate essence of reality is not a gift given to all of human beings. It might be truly blinding. Truth is not what one looks for on purpose, but something that unveils itself when you least expect it. Truth happens or unveils itself to inquisitively quiet, sharply luminous and beautiful minds, which are also hard to find in this world. Furthermore, man is both good and evil. Holding more knowledge than hope in his hand, man is endowed with a natural tendency towards evil and nobility. This is one of the fundamental paradoxes inherent in the human condition: that humans should be able to accomplish the most sublime feats and that, at the same time, they should be capable of committing the most atrocious crimes as well is truly a mystery. In the second movement, the emphasis is on man as exemplary citizen of the polis. A man of honour does his best to stand high in his city and “adds beauty and strength” to his polis. If he happens to be on the side of ugliness for whatever reason, he ceases to be a citizen of any worth. At the end of the poem, the voice speaking these lines says that nobody is welcome to sit by his fireside if they do not still wonder what they are and what they do. A sense of wonder in the face of the mystery that oneself is is an essential prerequisite if they are to be admitted in his company, in his home, as symbolized by the hearth or fireside.

XII · THE PETELIA TABLET

“The Petelia Tablet”³⁸⁶, the closing composition in *The Old in Their Knowing* is a translation from a 4th-century BCE classical Greek text. Originally published in a literary periodical in 1974 and later included in Bringhurst’s MFA Thesis, *Carmina propria et opuscula translata* (1975), the poem found its way into the twelve-part sequence for the first time in *The Beauty of the Weapons* (1982). “The Petelia Tablet” is a strange message in a bottle only rescued from the turbulent waters of time in the 19th century, but also a curious fragment salvaged from the wisdom of ancient Greece: “Said to come from a grave in Petelia (modern Strongoli) 4th century BCE. The tablet was rolled up in a golden amulet case from the Imperial epoch. Bought c. 1830 from a local by Baron Millinger; now in the British Museum (inv. 3155). Rectangular tablet, damaged at the bottom because it was, in a secondary use, cut to fit into the amulet case. A final line runs along the right margin.”³⁸⁷ This is the literal rendering into English given by Fritz Graf and Sarah Iles Johnston:

You will find to the left of the house of Hades a spring
and standing by it a white cypress.
Do not even approach this spring!
You will find another, from the Lake of Memory,
cold water pouring forth; there are guards before it.

³⁸⁶ “The Petelia Tablet” was first published in C.22 “Eight Poems and Translations”, in *Arion: A Journal of Humanities and the Classics* (Boston) ns 1.4 (1973/1974): 561–575. [Contents: [•] Excerpt from “The Third Generation: A Treatise on the Gods” (rev. from A.2); “Strophe from Sophocles” (trans. from Greek, rpt. from A.2); “Herakleitos” (rpt. from A.2); • “The Petelia Tablet” (trans. from Greek, incl. in R.1; rpt. in A.14 *The Beauty of the Weapons*, A.47 *The Calling*, B.67, A.76 *The Old in Their Knowing*, A.92 *Selected Poems*), “Four Glyphs” (rpt. from A.2); [•] “Isthmian” (rev. from A.1); • “A Short History” (incl. in R.1; rpt. in A.5, A.6, A.14, A.47); “Antistrophe from Leopardi” (trans. from Italian, rpt. from A.2).] It was also reprinted in B.67, *World Poetry: An Anthology of Verse from Antiquity to Our Time*, edited by Katharine Washburn, John S. Major & Clifton Fadiman. New York: W.W. Norton & Book-of-the-Month Club, 1998: pp. 83, 284-290, 815-816. Contributions: “The Petelia Tablet” (trans. from Greek, rpt. from A.14); “The Ode of Imr el-Qais” (trans. from Arabic, rpt. from A.2); “Antistrophe” (trans. from the Italian of Leopardi, rpt. from A.2.)

³⁸⁷ See Fritz Graf and Sarah Iles Johnston, *Ritual Texts for the Afterlife. Orpheus and the Bacchic Gold Tablets*, London & New York: Routledge, 2007, p. 6.

perhaps 4th century BC”, the opening lines of the ancient text in classical Greek reads as follows in Bringhurst’s version:

You will come to a well on the left side of hell’s house.
A white cypress stands by it, luminous, pale.
Stay clear of this well at all cost. Don’t drink from this well.
You will come to another, where cold water flows
from the marshes of memory. Sentinels stand there.

The first obstacle for the deceased is to find her way in the underworld to the correct spring where the guardians (the powers of the underworld) wait. And so in Bringhurst’s rendering of the text of the Petelia tablet, the opening lines describe what the soul sees as it wanders in the underworld: a white cypress tree and a spring nearby. The soul is to find the path to the correct spring, and so the tablet text provides instructions to navigate through the darkness to find the spring from which the deceased must drink. The first spring is by the cypress and should be avoided, and the second spring is the correct one. “The solution provided by the tablets is to persist until reaching the second spring, with the result that the deceased obtains a drink from the water of Memory.”³⁹⁰ The white cypress seems to be a marker and a symbol of relief from “the fearsome darkness of the underworld, a sign that gives hope of salvation from the all-encompassing darkness of death.”³⁹¹ Whereas the first spring flows with the water of Forgetfulness, the second (correct) spring flows from the Lake of Mnemosyne, with the waters of Memory. Thus, whereas the former makes the soul forget, the latter makes it achieve memory rather than oblivion. As Edmonds explains, the soul that drinks of Forgetfulness “might wander witless and confused, knowing nothing of their past or future”, whereas the power of Mnemosyne provides “salvation for the individual in the world of the dead by her own recollection of herself” and “permits the deceased to remember her true origins and identity.”³⁹² This function of memory is also inextricably linked to the Orphic belief in metempsychosis and reincarnation, to the notion that the soul goes through a series of incarnations. The prominent role played by memory in the Petelia tablet and other gold tablets suggests that “some doctrine of metempsychosis underlies the religious beliefs of the tablets.”³⁹³ The Pythagoreans and Empedokleans, who had a strong influence precisely in the region around Petelia in southern Italy, claimed that humans went through a series of lives, not only human but also animal and vegetal as well.

At the centre of the narrative of the soul’s journey to the underworld is the description of its confrontation with the powers of the underworld. In the Petelia tablet the soul encounters nameless guardians that question the deceased as she approaches the waters of memory, parched with thirst. Thus, the thirsty soul of the deceased must get past the sentinels standing near the spring. They are not monstrous beasts, not Persephone or Hades himself, rulers of the land of the dead, but nameless, featureless chthonic powers. There is no threat of danger or violence implicit in this confrontation with the underworld powers. Also, these nameless guardians do not pose complex riddles but ask for a simple password of identity, for which no heroic strength or courage or cleverness is required. “In

³⁹⁰ R.G. Edmonds, *Myths of the Underworld Journey: Plato, Aristophanes, and the ‘Orphic’ Gold Tablets*, 2004, p. 35.

³⁹¹ R.G. Edmonds, *ibid.*, p. 49.

³⁹² R.G. Edmonds, *ibid.*, p. 53. He adds: “this focus, through memory, on the individual identity apart from the different lives places value on the self that exists outside of the mortal world, on an immortal part whose proper place lies outside the hierarchies and boundaries of the earthly, political, material world. [...] Memory serves to recall the individual from the mortal world and the normal order back to the world of the immortals.” To sum up, memory provides “a personal immortality through the recollection of the self.” *Ibid.*, p. 53.

³⁹³ R.G. Edmonds, *ibid.*, p. 54.

response to their questions, the deceased must proclaim her identity as a child of Earth and starry Heaven and beg the guardians for a drink.”³⁹⁴ This is the second movement in Bringhurst’s rendering of the original Greek:

Say: *I am earth’s and the starred sky’s child, but the sky’s
blood runs in my veins; you can see this yourselves.
Thirst withers me. Hurry, give me
the cold water flowing from the lake of memory.*

“I am earth’s and the starred sky’s child”: this is the key statement of identity for the deceased to complete successfully her journey into the land of the dead and thus obtain the crucial drink of water of Memory. Earth and sky (Ge and Ouranos) are primordial forces, the first parents of immortal things, and so the formula of self-identification evokes a time before the separation of mortals and immortals, connecting “the deceased with the divine community, evoking the primordial paradise when the gods and humans lived together in bliss.”³⁹⁵ Edmonds elaborates on this crucial idea further:

The deceased employs this mythic motif in a claim of descent that supplants the ties of the human, mundane, and civic *genos* with those of the divine, otherworldly, and primordial *genos*. Ge and Ouranos represent the primordial forces of the cosmos; to claim descent from them is not merely to lay claim to divine descent, but to link oneself to the primordial order, the ideal order from which the present mundane world has degenerated.³⁹⁶

This means that, by claiming to have become part of the race of immortals, the deceased sees herself as one with the original cosmogonic order, one that transcends the vicissitudes of mortal life. The qualification “*but the sky’s / blood runs in my veins; you can see this yourselves*” seems to suggest a more dualistic outlook that privileges the starry sky of the immortals over the material world of the earth. At this point, the deceased’s credentials as a child of the earth and the sky suffice for the sentinels to permit her to drink from the fountain of Memory to quench her unbearable thirst:

They will give you water from the sacred wellhead,
and you will be known heroes from then on.
. going to die
. this writing
. the darkness closing over.

The closing lines appear to suggest that the afterlife represents the beginning of a new form of existence. Death is not the end of the mortal progression, for a new life awaits the soul in the afterworld – either one more life in a series of reincarnations or the final life for the blessed initiate. However, the end of the text inscribed in the Petelia tablet is fragmentary: “Because it had to be trimmed before it could be stuffed into the amulet case in which it was discovered at Petelia, the lines describing the fate of the deceased suffer from lacunae in crucial places.”³⁹⁷ The end appears to promise that the deceased will do something among the heroes, but then the text comes to an end all of a sudden, with “*the darkness closing over*”. The tablet has fulfilled its function as a sort of magical object or amulet protecting the deceased after death.

The Book of Silences

The Unstoppable Stillness of Oriental Wisdom

INTRODUCTION

The Book of Silences is an impressive sequence of dramatic impersonations of Oriental sages central to Robert Bringham's poetic corpus. The poems in it are things of a supreme beauty. What poetry should be, that they are. It belongs with the sequence on the Presocratic philosophers entitled *The Old in Their Knowing* since both sequences concern the wisdom of admirable sages (Oriental and western) and seek to capture the philosophical thinking or poetic philosophizing of thinkers of all ages. These were men who lived in harmony with their surrounding world; they sought to understand the mystery inherent in *what is*, and so their work could be interpreted as being a bold hypothesis about the ultimate nature of reality. When all these pieces of meditation are brought together, they form a rich tapestry of cosmic dimensions that reminds us that *homo sapiens sapiens* has not changed that much, that the fundamental questions that preoccupy human beings and that these monk-scholars and poet-scientists asked such a long time ago remain the same. As humans and thinkers, they were *whole* and their mind was comprehensive and omnivorous. Thus, they did not bother to draw a clear-cut boundary between poetry, science or philosophy, or between being, thinking and singing. After all, poetry, science and philosophy represent different ways of approaching the world, different ways of responding to the grandeur of *what is*. To them the world was truly alive, and far from reducing it to deadened systems of thought, they strove hard to sympathize with the living texture of the mesh of things. The tattered fragments of wisdom that have been preserved of these authors testify to their relevance even today, in the early years of the third millennium, when we live in the ruins of what used to be a functioning and healthy whole. The thinking of these men still talks to us; their words and insights into reality remain absolutely meaningful to us. It comes as no surprise that Bringham, a humanist and polymath himself avid for the ideas of others, should admire in all of them their archaic sense of integrity, their moral, spiritual and intellectual integrity, their inquisitive curiosity, and their voracious (but healthy) appetite for understanding.¹ He also admired the intensity with which their beautiful and sharp minds thought about the world and could penetrate the real, as well as the lyricism and terse texture of their writings whenever these have been preserved.

The sequence first saw the light of day in *Pieces of Map, Pieces of Music* (1986), where Bringham prefaced the poems with an untitled prefatory note that dwells on what both the Buddhist monk-thinkers and the Presocratic poet-philosophers have in common:

The Jain teacher Parśvanatha was, or may have been, a contemporary of Homer. The Zen master Hakuin, born in 1685, was three years older than Alexander Pope, though he sounds more like Herakleitos. This sequence of brief impersonations begins in India with the one and concludes in Japan with the other. The speakers between are the ghosts of other thinkers and singers, most of them from China, most of them students of the Tao and of the Buddhadharmas.

In the midst of an empire as arrogant, ethnocentric, greedy and corrupt as the North American empire at present, the sages of Tang Dynasty China practised and

¹ See Bringham's essay "Breathing Through the Feet: An Autobiographical Meditation", *Pieces of Map, Pieces of Music*, p. 109.

preached a tradition of freedom both from the pride of imperial service and from the anesthesia of complicity. Like the Presocratics, they reached toward the joints and roots of poetry and thinking. Most of them were wanderers, and most of them resettled, taking new names from the neighboring mountains. They are not just people who were places; they are people who *became* places – when everything encouraged them instead to become consumers and provisioners: bureaucrats or managers; trapped, coopted laborers or lords.²

Bringhurst wants “a poetry of knowledge and of thought, not of opinion – and not of belief, which is merely dead thought, severed from the thinking.”³ In this respect, the Oriental sages provided him with a wonderful opportunity (and also a challenge) to investigate the thinking of sages who had been able to produce a poetry of knowledge either in verse form or in prose in such diverse places as China, Japan or India. The life and work of all these Buddhist monks gave Bringhurst the *materia poetica* for his ambitious sequence of dramatic impersonations. This is ancient wisdom, rather cosmic. Reading these poems for the first time, it is as if we got to listen to the voices of the Oriental sages themselves. Though the sequence is entitled *The Book of Silences*, we do get to hear voices of these ancestors telling (or reminding) us of something elemental about the world we live in and about ourselves. In this respect, Bringhurst says that “Poetry is the musical density of being, but sometimes it is *silent*, and sometimes that silence is musically still.”⁴ There is sound and there is silence in these poems, but there is also an appealing music for the mind and the heart, enough nourishing food for thought, and an inexhaustible reservoir of nutriment for the avid reader. But silence is also the prerequisite for deep, intense thinking to happen, and when a mind is capable of thinking beautifully, poetry of lasting value (concerned with truth and beauty and eternity) comes into being. *The Book of Silences* is “a gorgeous embodiment of paradox and rest: the unity of diverse voices, silence in sound, the world and the voice interblooming.”⁵ There is no way of knowing for sure where the line dividing the sages’ thought and Bringhurst’s thought lies; it seems it does not matter much. The alchemy or symbiosis is simply perfect. It could be that these sages are speaking through the voice of Bringhurst himself, or the other way around: that Bringhurst is impersonating their thinking and singing with great dexterity. Poems rich with ideas, permeated by profundity of thought, written in simple language of utter transparency and musicality: this is the ultimate elegance Bringhurst attains in *The Book of Silences*. Once again, he might have been following the footsteps of the master, Ezra Pound (the author of *Cathay*, *Noh*, *The Chinese Character as a Medium for Poetry*, based on Ernest Fellonosa’s papers, and *Confucius*), for whom the Orient held an irresistible fascination as well.

Being a work in progress for a long time, the poems in the sequence *The Book of Silences* underwent revision and modification over a long period of time. The sequence has been revised and expanded time after time with each republication. Thus, the complex editorial history of the entire sequence can be best summarized as follows:

- (1) First textual incarnation: A.32 • *Pieces of Map, Pieces of Music*. Toronto: McClelland and Stewart, 1986. With calligraphy by Yim Tse. 128 p. Paper, 14 × 21.5 cm. ISBN 0-7710-1661-1. (See also A.35, which is the US edition of *Pieces*.) The opening sequence of poems in the book is “The Book of Silences”, which consist of an untitled headnote and 17 poems: • “Parśvanatha” (rpt. in B.65, C.58, C.70, rev. in A.47, A.65, B.69); “Uddalaka

³ Bringhurst, *Pieces of Map, Pieces of Music*, prefatory note to “The Book of Silences”, p. 10.

⁴ Bringhurst, *Pieces of Map, Pieces of Music*, prefatory note to “The Book of Silences”, p. 10.

⁵ See Richard Silberg’s review of *Pieces of Map, Pieces of Music*, published in *Poetry Flash* (Berkeley, Calif.) 175 (October 1987): 20.

- Aruni: A Song for the Weavers” (rpt. from C.50); • “Nagarjuna” (rev. in A.47, A.65, B.69); “Wáng Bì” (rpt. from C.50); • “Sengzhào” (rpt. in A.47, A.65, B.69, C.57, C.58); • “Bodhidharma” (rpt. in A.47, A.65, C.57); “Jízàng” (rpt. from C.50); “Saraha” (rpt. from A.23); • “Saraha’s Exercise for Beginners” (rpt. in A.47); • “Baizhàng Huaihai” (rpt. in A.47); “Hán Shan” (rpt. from C.48); “Línjì Yìxué” (rpt. from C.48); “Nánquán Puyuàn” (rpt. from C.50); “Danxiá Zìchún” (rpt. from C.48); • “Hóng Zìchéng” (rpt. in C.55, C.57); “Jakushitsu” (rpt. from C.43); • “Hakuin” (rev. in A.65).
- (2) Second textual incarnation: A.47 •• *The Calling: Selected Poems 1970–1995*. Toronto: McClelland & Stewart, 1995. 256 p. Paper. 14 × 22 cm. ISBN 0-7710-1651-4. Here the sequence “The Book of Silences” consists of 22 poems: I: • “Short Upanishad” (rpt. in A.65), II: [•] “Parsvanatha” (rev. from A.32), III: [•] “Nagarjuna” (rev. from A.32), IV: “Bodhidharma” (rpt. from A.32), V: “Sengzhao” (rpt. from A.32), VI: [•] “Yongjia Xuanjue” (rev. from C.63), VII: “Saraha” (rpt. from A.32), VIII: “Saraha’s Exercise for Beginners” (rpt. from A.32), IX: “Baizhang Huaihai” (rpt. from A.32), X: • “Yunyan Tansheng” (rpt. in A.65), XI: “Han Shan” (rpt. from A.32), XII: [•] “Linji Yixuan” (rev. from A.32), XIII: [•] “Dongshan Liangjie” (rev. from C.63), XIV: [•] “Yunmen Wenyan” (rev. from C.62), XV: [•] “Fayan Wenyi” (rev. from C.62), XVI: [•] “Xuedou Zhongxian” (rev. from C.63), XVII: “Danxia Zichun” (rpt. from A.32), XVIII: • “Dahui Zonggao” (rpt. in A.65), XIX: “Tiantong Rujing” (rpt. from C.62), XX: [•] “Dogen” (rev. from C.63), XXI: “Jakushitsu” (rpt. from A.32), XXII: “Bankei” (rpt. from B.48, where it appears as Bankei Yōtaku in Los Angeles, dedicated to Leonard Cohen). The sequence is much enlarged from A.32, and the poems are numbered here for the first time. As in C.63, all titles are now printed without accents, apart from the *ś* in “Pārśvanatha”; but the names are spelled with full diacritics in the glossary at the back of the book.
- (3) Third textual incarnation: A.65 •• *The Book of Silences*. Los Angeles: Ninja Press. 2001. [48 + 8] p. Sewn in soft cover, loose in a hard folding case, 17 × 26 cm. With two platinum-print photographs by the designer/printer, Carolee Campbell. “One hundred signed & numbered copies with twelve lettered hors [de] commerce.” The sequence consists now of 29 poems: “Short Upanishad” (rpt. from A.47); “Parsvanatha” (rpt. from A.47); [•] “Nagarjuna” (rev. from A.47); [•] “Wang Bi” (rev. from A.32); “Bodhidharma” (rpt. from A.47); “Sengzhao” (rpt. from A.47); “Jizang” (rpt. from A.32); “Yongjia Xuanjue” (rpt. from A.47); • “Nanyang Huizhong”; “Saraha” (rpt. from A.47); “Baizhang Huaihai” (rpt. from A.47); “Nanquan Puyuan” (rpt. from A.32); “Han Shan” (rpt. from A.47); “Zhaozhou Congshen” (rev. from C.73); “Yunyan Tansheng” (rpt. from A.47); “Linji Yixuan” (rpt. from A.47); “Dongshan Liangjie” (rpt. from A.47); • “Xiangyan Zhixian”; “Yunmen Wenyan” (rpt. from A.47); [•] “Fayan Wenyi” (rev. from A.47); “Xuedou Zhongxian” (rpt. from A.47); “Danxia Zichun” (rpt. from A.47); “Dahui Zonggao” (rpt. from A.47); “Tiantong Rujing” (rpt. from A.47); [•] “Dogen Kigen” (rev. from A.47); • “Keizan Jokin”; “Jakushitsu Genko” (rpt. from A.47); “Bankei Yotaku” (rpt. from A.47); [•] “Hakuin Ekaku” (rev. from A.32). Separately bound section entitled • “Contents and Notes.”
- (4) Fourth textual incarnation: A.92 •• *Selected Poems*. Kentville, Nova Scotia: Gaspereau Press. 2009. 272 p. 14 × 21.5 cm. ISBN 978-1-55447-068-6. The Book of Silence is the seventh section in this collection and it comprises 28 poems: “Short Upanishad”, “Pārśvanātha”, “Uddālaka”, “Nāgārjuna”, “Bodhidharma”, “Sengzhào”, “Yongjiā Xuánjué”, “Sarāha”, “Sarāha’s Exercise for Beginners”, “Baizhang Huaihai”, “Nanquan Puyuan”, “Hán Shān”, “Yúnyán Tánshèng”, “Línjì Yìxué”, “Dòngshān Liángjiè”, “Xiāngyán Zhìxián”, “Yunmen Wenyan”, “Fayan Wenyi”, “Lianhua Fengxian”, “Xuedou Zhongxian”, “Danxia Zichun”, “Dahui Zonggao”, “Tiāntóng Rújìng”, “Dōgen”, “Keizan”, “Jakushitsu”, “Bankei Yōtaku”, “Hakuin”. Most of them are reprinted from A.47 or A.65 with minor textual variants.

For our critical analysis below we will be quoting from the latest textual incarnation of the poems, though. As can be gathered from the editorial history of the poems included in the sequence outlined above, some of the pieces published in earlier incarnations of *The Book of Silences* have not been reprinted in subsequent versions, and some new compositions have been added with each republication. Where textual variants are relevant, they are noted down in customary form in footnotes. At any rate, the poems seem to be arranged according to a chronological criterion depending on the historical period the different Buddhist sages lived in.

In *The Book of Silences*, Bringhurst impersonates a series of Eastern monks and religious teachers. When published for the first time in *Pieces of Map, Pieces of Music* (1986), Bringhurst's twelfth volume, the sequence of poems in *The Book of Silences* was enthusiastically praised by different literary critics. The book itself, *Pieces*, is a heterogeneous⁶ collection encompassing the dramatic impersonations of the Buddhist monk-thinkers; a handful of "mistranslations" from different modern and classical languages included in "The Lyell Island Variations"; five poems under the heading "Gift and Presences" concerned with bones and being; a long narrative poem entitled "Tending the Fire", which is a creation-myth steeped in the oral literatures of North America; *The Blue Roofs of Japan*, a jazz duet for two interpenetrating voices; and a section entitled "Thinking & Talking: a Prose Caboose", which includes an essay and an interview where the poet discusses his own poetics. Each poem in the Oriental sages sequence is devoted to the teaching of a given Zen or Taoist master and is set against a facing page of calligraphy (a short Chinese or Japanese calligraphy) that sheds light on the meaning of each composition. The visual dimension added by Yim Tse's Chinese calligraphy in the edition of *Pieces of Map, Pieces of Music* adds strength to the sequence. According to Ronald Hatch, the volume adds to Bringhurst's "reputation as a seer", as the dramatic impersonations conjure up the names of ancient poet-philosophers and then "recreates their concepts in contemporary verse". This is poetry of pure vision. Through the stark simplicity of their language, they "open the reader to a new and wider sense of his place in the universe." One detects in the poems "an austere idealism which would like to flee the world of the senses

⁶ In a review of *Pieces of Map, Pieces of Music* published in *Wascana Review* (Regina) 22.1 (Spring 1987): 92-95, Ron Clark writes: "Robert Bringhurst's *Pieces of Map, Pieces of Music* is not a simple book, thematically, nor it is simply a book of poetry. In addition to poems of the conventional kind there are a jazz score for two voices, an autobiographical meditation, an interview with the author, and a number of didactic prose pieces that outline the philosophical concerns informing the book. Many of these ideas have certainly been heard before in the work of Gary Snyder, Jerome Rothenberg, and the Black Mountain poets, and Bringhurst is not remiss in acknowledging his "elders"." (p. 92) For his part, Steven Pugmire, in his review of *Pieces of Map, Pieces of Music* published in *Western American Literature* 23.1 (May 1988): 88-89, dwells on the amazing breadth of the collection, which he considers a multidimensional book made of disparate elements: "Even in an age of multi-media presentations, it is difficult to imagine a work with more dimensions than Robert Bringhurst's *Pieces of Map, Pieces of Music*, a thin, seemingly conventional paperbound books of poems and essays. It shouldn't work. Imagine a shotgun blast of ideas and characters: Zen masters, Josef Mengele, poems with superscriptions in French, German, Spanish, and Polish, an origin tale, a jazz duet, an autobiographical essay, and an interview. Yet Bringhurst ties these disparate elements together in a display of dimensional virtuosity." See p. 88. And Glenn Sheldon, in a review of *Pieces of Map, Pieces of Music* published in *Small Press Review* (El Cerrito, California) 20:12 (December 1988): 12, writes of the range of the book in these terms: "What to make of Robert Bringhurst's twelfth book of poems will puzzle more than one reader. Bringhurst, a Canadian poet, finds material for his work from both the western and the eastern hemispheres, from Taoism [*sic*] to Zen Buddhism, from the Socratic discourse to the Hebrew prophetic tradition. Bringhurst was raised in Alberta, Montana, Utah, Wyoming and British Columbia (where he now lives, on Bowen Island). A blurb on the back cover of this book states that Bringhurst reads and translates from several ancient and modern languages. So it is no wonder that a reader of *Pieces of Map, Pieces of Music* senses the whole, spinning, planet Earth within these works." See p. 12.

altogether.”⁷ In any case, the sequence of *The Book of Silences* shows the work of a passionate cultural historian and so we get to listen to a multitude of voices. As a true adventurer among past minds, “studying many wisdoms to find the one,” he gives us “Zen puzzles accompanied by their calligraphic equivalents that make the head spin and leave one grinning at what is literally the last word on everything.”⁸ What Bringhurst is after is a “humble and primitive music”⁹ in the form of impersonations of the thinking of Indian, Chinese and Japanese Buddhist sages of different ages, marked by cadences which are sure and hypnotic at the same time. These poems leave readers gasping as they hear the voice of these monk-thinkers of old speaking of the mind.

The Book of Silences is written in the language of wisdom and vision, Ron Clark suggests in an early review of *Pieces*. There is considerable beauty and craftsmanship in these poems, but also profundity of thought. Each of the poems in the sequence offers “a meditation upon the ineffable and paradoxical qualities of absolute being” and “attains a profound silence in the very heart of language, opening horizons of possibility and leaving us at the edge of mystery and wonder.”¹⁰ Bringhurst is interested in a poetry of knowledge and thought, and so “a deep sense of the encompassing oneness of being” pervades the dramatic impersonations where he explores the thinking of the Oriental sages. In his poems “thought and being fuse into a single undifferentiated consciousness, and there the reader is invited to discover that supraconceptual core at the core of everything.”¹¹ It is truly refreshing to find a poet in the postmodern world who is still interested in the archaic and primordial truths the Oriental sages explored so long ago, a poet concerned to awaken the reader’s sensibility to a new dimension, which is truer and deeper, amid the mediocrity inherent in the post-modern, post-capitalist, industrial societies where we happen to live. One finds peace of mind, tranquillity, beauty and knowledge in these poems, but also enlightening insights into being, for throughout the whole sequence, “gracefully, like a long, level sigh, runs the idea of being” and the poet “develops wonderful sleepy, circular rhythms that give the reader a real sense that “being” can take on many different, diaphanous shapes.”¹² Bringhurst’s poems breathe through their feet. Being firmly rooted in the stuff of life itself, these philosophical poems are marked by a flawless verbal expression that stems directly from the poet’s “passionate involvement with earth.”¹³ Indeed, his poems testify to “a profound understanding, ultimately instinctive, of how language works” so that his poems “fall on the ear with the illusion of perfect naturalness, as though each world could not possibly be anything else.”¹⁴ At the palpitating heart of the sequence is “the mind regarding the mind”, which is not a favourite subject of poetry nowadays. This subject is hard to tackle; it defies verbalism straightaway. And yet Bringhurst is convinced that poetry has nothing quintessentially to do with language:

Downes’ review of *Pieces of Map, Pieces of Music*, “Breathing in Tune and Time”, published in *Event* (New Westminster, B.C.) 16.2 (Summer 1987): 115-117. “It becomes clear that even the abstract grammatical patterns of a few of the philosophical poems (English does not seem suited to the subject) are firmly rooted in the stuff of life itself, the physical breath which is also the animating spiritual principle in so many other cultures – Greek, Sanskrit, Hopi. This understanding of where rhythm comes from is strengthened by Bringhurst’s sure hand with visual and tactile imagery which is part of his passionate involvement with earth. He has walked all over Western North America.” See, in particular, pp. 115-116.

¹⁴ G.V. Downes, *ibid.*, p. 116.

“knowledge and technique are merely the handmaidens of vision itself” and “although he rightly avoids using the word ‘mysticism’, one recognizes exactly where he is speaking from, the old trail in a high country where silent prayer or meditation, and experiences arising out of them, are more valuable than the language which attempts to fix them in an outward form”¹⁵ for *being* exists beyond words and resists being caught. In any case, the monologues placed in the mouths of various Oriental sages, monks and wanderers are written in austere language “with a minimum of imagery (but the effectiveness of what images there are is unquestionable) and an elegance of presentation that one rarely finds in a sustained series.” Writing about being and nonbeing is a difficult poetic enterprise, for the poet runs the risk of being trapped in a “a desert of abstractions, a kind of verbal algebra”, but this is not the case with Bringhurst’s sequence: one turns to the inexhaustible beauty of the vividness, directness and lyricism of his limpid language.¹⁶ Following Pound’s pieces of advice, he strips his poems to the core, to an absolute nakedness that is strongly evocative of the Buddhist monks’ austerity and asceticism. What he achieves is an impressive compression of the thinking of these talismanic sages, opening the reader’s mind to the beauty of pure consciousness.

That *Pieces of Map, Pieces of Music* (where *The Book of Silences* first saw the light of day) was a collection of wide-ranging scope and ambition is made abundantly clear by an enthusiastic review by literary critic Robert Solomon, who celebrates the purely visual aspects pertaining to the design of the book and focuses on the polyglot nature of the collection as well as on the influence of Oriental thinking on Bringhurst and other contemporary writers:

The map of this book, written by a man who has lived on both sides of the U.S.-Canadian border but always in the West when it was possible, is daunting, with reference to Ojibwa, Hindi, Sanskrit, Cree, Greek, French, German, as well as Chinese and Japanese. It has calligraphy by Yim Tse on a score or so of its pages, a giant circle (metaphor and guide, one imagines), an empty square and a literal map. Bringhurst’s playfulness is by design, a plan expressed by Paul Reps, another poet gone happily to Eastern sources, as using words to “poem” or “play” the reader, to make him ring the way an Aeolian harp vibrates in a correspondent breeze for Wordsworth. At the end, Bringhurst, who is in the Orientalist tradition of Gary Snyder and Reps, among others, supplies a glossary as *Cast of Buddhas, Ghosts, and Other Creatures.*” This is witty, intellectually stimulating poetry, more accessible than it seems when the opening section, “The Book of Silences” appears. Bringhurst, like John V. Hicks and Daryl Hine, draws an international audience and, like those Canadian poets, has a fine classical background, which complements his knowledge of Amerindian and Eastern ways. Ironically, this book about universal music and map demonstrates how far Canadian poetry has come, and how far some poets intend to go. The writing is rich writing with ties to other writers who turned to the Indian and Oriental cultures for inspiration, from Emerson, Thoreau, Whitman, Pound, Ginsburg [*sic*], and Merton to Reps and Snyder. The collection brings to a dozen the steps Bringhurst has taken on his published journey; it ought to be part of every contemporary poetry collection.¹⁷

It is no happy coincidence that Bringhurst should have entitled his poetry book *Pieces of Map, Pieces of Music*. The title itself suggests that the lyric territory the poet is mapping is wide and vast enough as to encompass innumerable literary traditions (both oral and

¹⁵ G.V. Downes, *ibid.*, p. 116.

¹⁶ G.V. Downes, *ibid.*, p. 117.

¹⁷ See Robert Solomon’s review of *Pieces of Map, Pieces of Music*, in *Small Press (The Magazine and Book Review of Independent Publishing)* (New York) 5.2 (December 1987): 48.

written, modern and ancient) and the voices of sages other than those of Western philosophy. This partly accounts for the use of epigraphs and linguistic thresholds¹⁸ throughout the collection; Bringhurst is in fact fond of using this kind of paratexts in his poetry books. He is a learned author, and so the breadth of his learning and his fascination with the world at large should find an echo in references and allusions to other literary traditions. Once the threshold is crossed, the reader is plunged into the realm of the mind, which is calm and serene, full of wisdom and light. Bringhurst revisits the world of Zen teaching and explores questions of *being* in short burst of language that puzzles the reader, so that the texture of the whole sequence is wise, compassionate and well-crafted, in any case.

I · SHORT UPANISHAD

The opening piece in *The Book of Silences* is entitled “Short Upanishad,”¹⁹ a short lyric poem of utter beauty and perfection, but also a masterpiece in miniature. The poems in Bringhurst’s sequence are not frozen bits and pieces of Oriental sages’ thinking: they are alive with the distinct voice of a sage speaking to us as if from beyond time. Far from being dry texts or tattered fragments of visions long past, each of the poems embodies a living voice and a sort of uninterrupted conversation which the reader is invited to join. Each poem provides an ineffable snapshot of a transcendent reality from its own point of view. When all these visions are put together, *The Book of Silences* as an organic *Gestalt* conveys the sense that wisdom is perennial, that humans have not changed that much since the dawn of time, and that the same fundamental questions have been asked time and again throughout the history of humankind – *What is reality? What is the mind? How do the senses grasp the world? Who am I? What is the purpose of life? How are humans to live to the fullest of their capacity?* Living wisely and thinking deeply is an adventure that requires much stamina, daring and skill. The Oriental sages spent their lifetime seeking answers to these questions with strength of will and determination that is simply moving to us. They were men endowed with a deep drive to know what reality is, what life is for and why we are here. A map of knowing and a map of reality and of the inner geography of the mind: this is what we find in Bringhurst’s poems once these fragments of vision are assembled into a coherent whole. They somehow provide us with a framework for understanding the world and ourselves. Like the great poet Bringhurst is, he takes these fragments of vision and lifts them to little masterpieces of spiritual instruction. He must have longed so ardently to communicate what he found in his walks with these old sages, that he must have strained the possibilities of language to the limit.

When I discovered Bringhurst’s sequence a long time ago, I was attracted by the beauty of its poetry and by the profundity of thought woven into the living fabric of each poem. At the heart of each composition, the dramatic impersonation of each sage spoke to me with astonishing serenity. Since then, I have turned to these poems time and again not

¹⁸ Roman Gadzo in his review of *Pieces of Map, Pieces of Music*, published in *The Fessenden Review* (San Diego, Calif.) 11.4 (1988): 33-34, writes: “The sophisticated reader would immediately recognize the symbols in the dedication to be from the Cree or the Ojibwa. The linguist would be able to translate the phrase into English as “For my friends and brothers.” Other readers, not so high on the obscurantist air, would think the symbols a new form of product code. I regard the snippets of calligraphy, Greek and Cree that precede the text as a dharmic rite of passage to be endured before being allowed to read Bringhurst’s pieces.” See p. 33.

¹⁹ “Short Upanishad” was originally published in A.47 *The Calling* (1995). It was later reprinted in A.65 *The Book of Silences* (2001) and A.92 *Selected Poems* (2009).

just for literary beauty, but also for tranquillity, enlightenment and wisdom. My critical approach to these poems is therefore intensely personal, and I do not make any attempt to hide the passion with which I let the texts speak for themselves. What one finds in these poems is simple and moving: however intensely personal the exploration of each of these Oriental sages might be, their discoveries are universal. So it is not surprising to find that at the heart of each of the poems lies a bit of truth or wisdom. These poems are variations on age-old fundamental questions such as the ultimate essence of reality, the human condition, the nature of *what is* and *what isn't*, the relationship between body and mind, the potential of speech to grasp the truth of reality, the possibility of human knowledge, the meaning of life and the mystery of death, and the place of human beings in the grander scheme of things. Though they might have dwelled forever in the realm of silence, these poems have been put into words and so each strains language with the passion to communicate what cannot be expressed. Lyrical, profound, inspiring, tantalizing, the poems in *The Book of Silences* dwell in a place not far away from ourselves; this place is really no more distant than the heart and the mind. That is why they are relevant to us and speak to us with astonishing sincerity. They capture experiences, insights and experiences of enlightenment that are beyond words, and yet full of meaning. They are a superb constellation of the insights into reality of lucid human beings that lived at different moments of the history of humanity.

It is only natural that Bringhurst should have chosen “Short Upanishad” as the opening piece in his Oriental sages sequence. The poems in the sequence are arranged on the basis of a chronological criterion and the sacred texts of the *Upanishads*²⁰ are among the oldest texts humankind has ever produced and “the oldest body of wisdom literature in the world.”²¹ How old these texts are no one knows for sure, but they were transmitted by means of a meticulously faithful oral tradition. Memorized and passed from generation to generation for hundreds of years before they were written down, the *Upanishads* constitute one of the earliest chapters in the spiritual history of India. They embody much of their ancestral wisdom and so they “come to us like snapshots of a timeless landscape.”²² But, at the same time, given their antiquity, it is amazing that they should speak to us with such astonishing freshness. As Eknath Easwaran puts it, “the insights they give into the nature of the phenomenal world, the human mind, and the underlying reality called God are as dazzling today as ever. And the questions they pose never become dated. They are new for every human being, fresh for every generation, because they are questions that each of us has to answer for ourselves.”²³ What the *Upanishads* do is record experiences or direct encounters with “a land beyond change”, and, in fact, the Sanskrit word (*darshana*) means

²⁰ See the entry on ‘Upanishad’ in the *Encyclopaedia Britannica*, vol. 29, p. 17181: “Upanishad (“Connection”), Sanskrit Upanisad, any of the speculative texts of the Vedas that contain elaborations in prose and verse. The Upanishads, of which approximately 108 are known, record the views of a succession of Hindu teachers and sages who were active as early as 1000 BCE and who flourished about 600 BCE. The texts form the basis of much of later Indian philosophy. They represent the final stage in the tradition of the Vedas, so the teaching based on them is known as the Vedānta (Sanskrit: “Conclusion of the Veda”). The older Upanishads may be part of the Brāhmanas (commentaries) of their respective Vedas but are distinguished from them both by increased philosophical and mystical questioning and by their diminished concern with Vedic deities and sacrificial rites. The special philosophical concern of the Upanishads is with the nature of reality. There is a development toward the concept of a single supreme being, and knowledge is directed toward reunion with it. Some of the Upanishads equate *ātman* (the self) with *Brahman* (ultimate reality). The nature of mortality and of eternal life are discussed, as are such themes as the transmigration of souls and causality in creation.”

²¹ See Eknath Easwaran, *Wisdom of India: Essence of the Upanishads. A Key to Indian Spirituality*, Tomales, CA, USA: Nilgiri Press, 2009, p. 11.

²² Eknath Easwaran, *ibid.*, p. 7.

²³ Eknath Easwaran, *ibid.*, p. 11. Elsewhere, he claims that “The Upanishads are the earliest instance in history of perennial philosophy: the discovery that beneath the incessant change of the phenomenal world lies a changeless reality that can be discovered deep in consciousness by following disciplines that are essentially the same regardless of culture or religion.” *Ibid.*, p. 12.

“sightings”.²⁴ The *Upanishads* are ageless because they describe realities that do not change, or what could be called “the very bedrock of reality,”²⁵ in breathtaking words of moving purity and beauty. There is a world which is not easily visible that lies close at hand nevertheless. It lies within us, in regions of the consciousness we must learn to fathom. Entry into the inner realms of consciousness happens when the doors of perception in everyday experience are closed:

The world of everyday experience is the world of the senses: what we see, hear, taste, smell, and feel, together with the babbling brook of thoughts and feelings that we’re aware of, makes up what we mean by the “real world.” Only when we close the senses and learn to focus our attention on the contents of consciousness itself do we begin to see that there is much, much more to who we are.²⁶

The world we find inside ourselves is simply boundless, as infinite as outer space. Going deeper and deeper into the innermost of consciousness we find ourselves whole. But this immersion into the inner recesses of the self has an important implication. At the heart of the *Upanishads* there is a most potent equation: the core of personality, which is called *Atman* (the self) is the same as *Brahman* (i.e., pure being, the ultimate god underlying reality, the ultimate, deathless, irreducible ground of life, the essence of every single thing). Our immersion in unity teaches us that we and the universe we live in are one and the same. The self and the cosmos become whole, with no barrier dividing humans from the rest of creation.²⁷ Michael N. Nagler explains this tremendous equation of *Atman* and *Brahman* with great lucidity. If “*Brahman* is the irreducible ground of existence, the essence of every thing – of the earth and sun and all creatures, of gods, and human beings, of every power of life,” *Atman* is seen “to be one, the same in everyone.” This is something “experienced at the very center of one’s being, an inalienable fact.” Thus, “in all persons, in all creatures, the Self is the innermost essence. And it is identical with Brahman: our real Self is not different from the ultimate Reality called God.”²⁸

To a master of language like Bringham, to someone concerned with rescuing the best of what has been thought and said by our ancestors, the *Upanishads* must have been truly an undeniable source of inspiration. Hence “Short Upanishad” is his moving homage to this ancestral body of wisdom literature that is lost beyond the mists of time. The poem consists of only three three-line stanzas of perfect symmetry, woven with simple words that explode in the reader’s consciousness, throwing light around them like a flare. One is astonished to see how such a wealth of meaning can be possibly conveyed through so few words. Three little movements for the soul should suffice to communicate to the reader the mystery inherent in *what is*. With awe-inspiring words, scarcely understood but pregnant with promised meaning, the speaking voice manages to declare that *all of life is one*. The tremendous equation *Atman = Brahman* is palpating beneath these verse lines that celebrate the existence of gods and goddesses in forms and forces of the natural world. These Vedic deities are numinous beings, “aspects of a single underlying power called Brahman, which pervades creation yet transcends it completely.”²⁹ Or, to put it differently, one *supreme being* is being worshipped in different manifestations or expressions. But let us turn to the poem itself and see how meaning blooms into full flower.

²⁹ Michael N. Nagler, *ibid.*, p. 21.

Give us places, said the gods.
She made a cow, a horse, a goose, a human being.
Wait, said the gods, we asked for places.

These are places, he replied.
The palm of the hand is a place.
So is the mouth; so is the eye; so is the mind.

Hunger and thirst said,
Where is our place?
She answered, Sit beside the gods.

Bringham's poem opens as if *in medias res*, and the reader is invited to join a conversation that seems to have been going on uninterrupted since immemorial times. One might think that what is at stake here is a sort of cosmogony: we are present at the moment of creation of the world. What is so peculiar about this cosmogony is that every single thing in this world is seen to be made of an ultimate substance that is of a divine nature. In haunting words, the first stanza declares that all living things in this world are places dwelled or populated by gods and goddesses. Animals and human beings are nothing other than the home to the Vedic deities. The implication that follows from this tremendous statement is that gods are pervasive, that their presence is ubiquitous in reality: no matter where one might turn to look, all our eyes get to see is gods and goddesses incarnated in animals' and humans' bodies. Are animals and humans then places within a larger place which is called *the world*? It seems so. And not only are living things places; the very bodily parts are also conceived as being places: the hand, the mouth, the eye and the mind (notice the parallelism that brings this verse line to the foreground of the spiritual landscape in Bringham's poem). Because they are places that the gods ask for as their home, the body is seen to be inhabited by the divine too. In Bringham's poetry *body*, *mind* and *speech* go hand in hand; they are a sort of tremendous equation too. Body and mind are inseparable, there is no barrier dividing them or setting them apart, even if one might think that the former is purely physical whereas the latter is not. Speech is what brings body and mind together; it is what strives to put the inexpressible into words.

The closing stanza of the poem, however, brings mortality, pain and limitation into the scene. Hunger and thirst demand that room be left for them inside the bodies of animals and humans. Thus, they sit next to the immortal gods and goddesses, because they are inescapable forces among all finite living creatures. It is undeniable that hunger and thirst also dwell in animals' and humans' bodies. They are purely physical, but are also figurative or metaphorical: humans' hunger and thirst for understanding cannot be easily appeased, unless we achieve reunion with our real Self, which is *Atman* and Brahman at the same time – our native state, one which is free, unbounded, infinite.³⁰ The *Upanishads*, and Bringham's short Upanishad, urge human beings to live in the world in full awareness of life's unity. *All of life is one*; gods and goddesses are present all around us, pervading our body and mind, for we are just a tiny part amid the grander scheme of things.

³⁰ This is one of the major discoveries at the centre of the *Upanishads* themselves, which Michael N. Nagler summarizes as follows: (1) There is in each of us an inalienable Self that is divine; (2) Love is the first and last commandment of this realization, for the same Self dwells in all; (3) There is a realm deep within ourselves which is our native state; (4) we are part of a compassionate universe, where nothing is "other" than ourselves, and so we are urged to treat that universe with reverence, for there is nothing in the world but God; (5) our native state is a realm where death cannot reach, attainable in this life by those willing to devote their lives to the necessary purification of consciousness. See Michael N. Nagler, *ibid.*, pp. 42-44.

II · PARŚVANĀTHA

“Pārśvanātha”³¹ seeks to capture the thinking of an Indian sage who lived about 27 centuries ago. In the original incarnation of the Oriental sages sequence in *Pieces of Map, Pieces of Music* (1986), “Pārśvanātha” was the opening piece in this ambitious work in progress. Bringhamst has been working on for over 20 years. At that point in the evolution of the sequence, Pārśvanātha was the oldest of all the sages to whom he gave voice in his short dramatic impersonations. With the publication of “Short Upanishad” in *The Calling: Selected Poems 1970-1995* (1995), “Pārśvanātha” became the second piece in the sequence, as the poems were ordered according to a chronological criterion. The *Upanishads* are the oldest extant texts of wisdom literature, and so it was only natural that “Short Upanishad” should become the opening piece. As is common practice with Bringhamst, he gives us essential background information to understand this piece. Thus, in the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music*, he informs us that Pārśvanātha (c. 820-776 BC?) was “A North Indian sage, traditionally counted the 23rd Patriarch of the Jains.” In the “Cast of Suspicious Characters” at the end of *The Calling*, the poet tells us exactly the same. And in the 2001 edition of *The Book of Silences*, the entry devoted to this ancient sage is extremely brief: “Parsvanatha c. 820-776 BC? Northern India.” So in “Pārśvanātha” we have one of the earliest of the Oriental sages to whom Bringhamst turned naturally in search of wisdom and inspiration for his own poetry and literary enterprise. The result is a dramatic impersonation that offers snapshots of the thinking of a man who penetrated reality with a precious sharpness of mind and rare lucidity.

Not much is known for sure of this North Indian sage, except that he led the life of a nobleman for thirty years as the son of king Ashvasena and queen Vama of Varanasi, never married a woman and renounced the world to become a monk at the age of 30. He attained enlightenment (nirvana) after spending many days meditating atop Sammet Sikhar. Closely associated with compassion, Pārśvanātha is the most popular object of Jain devotion and truly beloved among Jains. He must have had a genial personality that made him charismatic to humans. Jainism teaches that each human beings have to help themselves to achieve salvation. Others might help in the process, but the search is intensely personal. Pārśvanātha is one who teaches the world the way to attain salvation. At any rate, in Bringhamst’s accomplished poem on this sage, we get to hear the voice of this man speaking his own mind with moving simplicity and almost transparent words. The

³¹ “Pārśvanātha” was originally published in A.32 *Pieces of Map, Pieces of Music* (1986). Afterwards, it was reprinted in (i) B.65 *The Gift of Tongues: Twenty-Five Years of Poetry from Copper Canyon Press*, edited by Sam Hamill, Port Townsend: Copper Canyon, 1996: pp. 27-30. Contributions: “The Song of Ptahhotep” (rpt. from A.26); “Parśvanatha” (rpt. from A.35, the US edition of *Pieces of Map, Pieces of Music*); (ii) C.58 [Two poems]. *Verse* (Oxford) 4.1 (March 1987): 14-15. Contents: Parśvanatha; Sengzhào, both rpt. from A.32. See also editorial comments by Mark Abley on pp. 8-9; (iii) C.70 “Parsvanatha.” *Verse* 12.2: *The Best Verse: Ten Years of Poetry* (1995): 26. Rpt. from C.58. “Pārśvanātha” was then revised in A.47 *The Calling* (1995), and reprinted from A.47 in (i) B.69 *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece. “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”, “Thin Man Washing”, “Sunday Morning” (all rpt. from A.47); • brief essay, “In Praise of Vacant Lots.”; (ii) A.65 *The Book of Silences* (2001); and (iii) A.92 *Selected Poems* (2009).

emphasis is not on morality or such humane values as compassion, but on something grander that goes beyond human egotism: the ultimate nature of reality. Metaphysics rather than ethics is thus at the palpitating heart of this composition. From a purely linguistic point of view, the poem is a masterpiece of perfect symmetry: it consists of three stanzas that correspond to a prelude to Pārśvanātha's piece of thinking, the body of the sage's meditation on mind and knowing, and a concluding remark on the all-important role of ancestors in the transmission of wisdom from one generation to another over time. Thus, the opening verse lines of the poem celebrate the ultimate unity of the whole of reality: "What is whole has no face. What / is apart from the whole has no body." The meaning is crystal-clear, or so it seems upon re-reading the poem innumerable times: *what is* is a *Gestalt*, an organic whole or unity where no isolated or distinct parts are discernible. Nothing exists apart from this whole, it has no body at all. This is not easy to understand, for the face of *what is* is not seen easily, in a conventional way, particularly through the limited senses humans are endowed with. Though sense organs provide us with first-hand raw materials and perceptions of the world, these data have to be further elaborated and transcended by the penetrating mind. At any rate, these two opening lines announce what the irreducible core of meaning at the heart of the poem is.

In the body of the poem, at its geographical centre, we find a profound meditation on the nature of *being*. Five little movements for the soul are discernible as the sage's thinking flowers into full bloom. Just for the sake of clarity in our exposition, we shall summarize these five steps for the thinking mind as follows:

- (1) *What is is and is not mansided at the same time.* At the heart of this first movement for the soul is the unity/plurality dichotomy. *Being* is one and yet many, for it finds expression in the myriad things of this world – in the trees, mountains, streams, birds, animals, stones, humans that populate Earth. The poet makes use of paradoxical statements, seemingly contradictory, that appear to cancel each other out, for what he is trying to communicate is inexpressible in words of the mouth. Beyond the power of words to capture or grasp the essence of *what is*, there is a firm belief floating somewhere mid-air that everything is subtly connected to everything else, and that the multiplicity of beings (the multiplicity of the perceptual world) can be reduced to the *one* – the indestructible or immortal ground of existence. This affirmation is steeped in the conviction that an invisible order pervades creation and is reflected somehow in each part. This is a oneness to which all diversity can be referred. Hence, the sage's voice says: "Yet somehow it is, and it is / mansided. Somehow it isn't / and is mansided. Somehow / it is mansided and isn't / and is."
- (2) *What is is inexpressible, ineffable, unspeakable.* *Being* is not 100% susceptible of being apprehended through the mind or through speech. Like the senses, the mind is not omnipotent either, and so it cannot truly apprehend the ultimate substance of *what is*. Words are not efficient or reliable tools in our epistemological confrontation with reality either; they will not capture the essence of *what is* because they are simply simulacra, shadows, far away removed from the heart of things. Hence, being "cannot be touched / by the mind or by language," says the sage. Thinking and talking are only humans' favourite paths that lead imperfectly towards *what is*. In spite of and beyond our thinking and talking the whole announced in the first stanza is and isn't at the same time. Or, to put it differently, *being* exists regardless of humans' existence or desperate attempt to understand it. This entails dismissing an anthropocentric view of reality in which man is at the very centre of creation. For Pārśvanātha, humans are not the centre at all. They are a tiny part of something that goes beyond the human realm. Now, in Bringhurst's poetry there is a potent triad that is repeated time and again: body, speech and mind. All three find a room for themselves at the heart of this poem as well. The body was announced in the second line of the poem and is evoked indirectly through the idea of touch and at the mention of *your hand* in the second stanza.

- (3) *A map of human knowledge is pervaded by humility and gratitude towards what is.* A cartography of the self is brought into relief here. We humans have a burning desire to know, to find central principles which make sense of the world we live in. But we have to learn to apprehend a reality beyond ordinary knowing. We spend our time seeking everywhere what lies closer at hand than we think, never guessing that there is a buried treasure within us. One needs not look further than one's mind. And yet we have to go beyond our own mind as well. Free from the conditioning of body and mind and speech in a world unbounded by the limitations of time, space and causality, the self might be in a position to find out *what is* and what the ultimate substratum underlying reality is. One has to leave all manacles and material attachments behind, and so the sage recommends us to forget about ownership: we do not own what we know; reality is sacred and larger than ourselves. Hence, "*This / is a map of our knowing. Own / nothing. Like breath in your lungs, / the truth passes through you.*" Truth was there from the start, from the very beginning of time, pervading the body and the mind, imbuing all living things with a sacred halo. We need make no effort at all then; truth will come of itself to us, uninvited as it were.
- (4) *Being is somewhere at the intersection of space, motion and rest.* Now the sage turns to the basic constituents of *what is*, as it were. Time is not mentioned here as one of the elemental axes that provide the universal framework in which human experience comes to take place. Perishable matter is no more than being "*tainted by death*" and action is the very essence of all living things, pervading living creatures' bones. The will to live to the fullest of one's capacity and to accomplish things in this world seems to be a universal principle; it cannot be easily appeased or satisfied for good. As the poetic voice puts it: "*Like water through cloth, / the unbroken plasma of action / drains through your bones.*"
- (5) *What a human being is (identity or personality) is to be found in whatever lies trapped in his or her hand.* If the mind and speech are not efficient tools to grasp *what is*, then what are humans left with? We have got only our bodies left. The emphasis seems to be laid now on the very stubborn physicality of reality: if what is there to know cannot be truly apprehended through the mind or conveyed to oneself and others through words, then maybe our hands (our senses) might be of help to us in our epistemological confrontation with the world. If being cannot be touched by mind or speech, then it might be touched by one's hands. Hands that are humble and respectful, not damaging, will catch a handful of reality, and that handful of *what is* will spell whatever we might possibly be. Hence, "*What you are will be spelled by whatever / lies trapped in your hand.*"

Bringham's poem closes with a short stanza only two verse lines long. It speaks of our ancestors, of these Oriental sages that are a constant source of inspiration for the poet himself. Longer than the rest of the lines that make up the poem, they offer a depiction of such men as Pārśvanātha himself, whose thinking has survived the passing of time and manages to speak to us with such a moving relevance. They do not make any conscious intellectual effort to grasp *being*; they are just thinking of nothing, not speaking, but singing instead. There is nothing else to do – truth comes when uninvited, when one forgets about one's egoic self and transcends all distinctions, including that one that divides world and self, apprehended and apprehender. Body, speech, mind and being might have a chance to become one and the same thing then:

On the fenceposts, the weathering heads of your brothers
are thinking of nothing. And speechless. And singing.³²

³² In the earlier version of the poem in *Pieces of Map, Pieces of Music*, these lines read as follow: "On the fenceposts the heads of your / hungerless brothers are singing."

III · UDDĀLAKA

That such an accomplished piece as “Uddālaka”³³ should have not been included in the Oriental sages sequence as published in the beautiful 2001 limited edition of *The Book of Silences* comes as an unexpected surprise to the attentive reader. Uddālaka is another essential Hindu sage that has invaluable lessons to teach to those human beings who might be willing to listen to what he has to say. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Uddālaka Aruni was “One of the legendary sages of India. He speaks at length in the Chandogya Upanishad.” Indeed the *Upanishads* in general and the *Chāndogya Upanishad* in particular give us most useful clues for a proper understanding of this poem of Bringhurst. When this piece was originally published as “Uddālaka Aruni: A Song for the Weavers” in *CutBank* in 1986, along with five more poems from the same sequence under the heading “Six Poems from the Book of Silences”, all six poems were preceded by an eloquent passage lifted from the *Aitareya Upanishad* dealing with the creation of bodily parts:

From the mouth came speech, from speech fire. A nose appeared; from the nose came breath, from breath air. The eyes appeared; from the eyes came sight, from sight the sun. The ears appeared; from the ears came hearing; the four quarters. The skin appeared; from the skin came hair, from hair vegetation. The heart appeared; from the heart came the mind, from the mind the moon.³⁴

The Upanishadic sage is mentioned in several *Upanishads*, but he figures prominently in chapter 6 of the *Chāndogya Upanishad*, which records an enlightening dialogue between Uddālaka and Śvetaketu. The teacher is Uddālaka and the student Śvetaketu, his son, engaged in a profound soul-education. The opening stanza of Bringhurst’s poem manages to convey with astonishing economy a part of the elemental lessons the sage is teaching his son, whom he addresses explicitly. The language and the profundity of thought of “Uddālaka” are characteristic of Bringhurst’s poetry, and recall certain passages from *The Blue Roofs of Japan* (also published in 1986) and even some of the pieces in the 12-part sequence of *The Old in Their Knowing*. Uddālaka is no pre-Socratic philosopher, but he is a sage nonetheless, also concerned with asking fundamental questions related to the nature of reality. Thus, the opening words of “Uddālaka” are reminiscent of the Ionian *physikoi*’s investigations into the *arché* and the ultimate substance the world is made of:

Earth is woven of water, as water
of air. The world is earth, and the earth
is all this. This is that. That is you,
Svetaketu, my son. The outer is inner.

Śvetaketu has spent a long time studying all the Vedas under other masters’ guidance and is now back at home at the age of 24, “swell-headed, thinking himself to be learned, and

³³ “Uddalaka” was originally published as “Uddalaka Aruni: A Song for the Weavers” in C.50, [Eleven poems], in *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. It was then slightly revised in A.32, *Pieces of Map, Pieces of Music* and again reprinted in A.92, *Selected Poems*. It was not included in A.47, *The Calling* or in A.65, *The Book of Silences*. In *Pieces of Map, Pieces of Music* the calligraphy accompanying this piece reads: rén shèng = *person holy*.

³⁴ See C.50, [Eleven poems], in *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 38.

arrogant.” Uddālaka wishes to make sure his son is truly learned: “so you must have surely asked about the rule of substitution by which one hears what has not been heard of before, thinks of what has not been thought of before, and perceives what has not been perceived before?”³⁵ Śvetaketu has never been instructed by his illustrious teachers on what his father is telling him about and so he asks Uddālaka to teach him. At that point, Uddālaka explains to him the rule of substitution which makes known the unknown: “It’s just like this, son. By means of just one lump of clay one would perceive everything made of clay – the transformation is a verbal handle, a name – while the reality is just this: “It’s clay.”³⁶ Implicit in these words is a lack of reliance on words to effectively express reality. Insight into reality as it is is attained through self-realization, through one’s own efforts to understand the essential unity of *what is*. In the first stanza of his poem, Bringhamst conveys something of the essential unity that pervades reality (the existent) and this sense of the individual’s oneness with the world. In the living mesh of things, everything is subtly connected to everything else. Weaving is the central metaphor at the heart of the poem. Thus, earth is made (woven) of water and water is made of air. The world and everything in it is earth, but it is also water and air. And the world includes also Śvetaketu, who is earth, water and air too. “*That is you*”: this is what Uddālaka tells his son time and again throughout chapter 6 of the *Chāndogya Upanishad*. This is tantamount to saying *Do not forget that you too are the world*. That “*The outer is inner*” means that the world is part of the geographical landscapes of the self, that the perceiving subject is inextricably linked to everything lying out there that is being perceived.

The opening line of the second stanza might seem enigmatic or out of place at first sight: “*The sea has no end, in spite of its edges*.” While the first stanza is primarily concerned with earth, water and air, the second focuses on the sea surrounding the continental masses of earth. It is infinite, even if the existence of edges might suggest exactly the opposite. However, at the geometrical centre of the composition is a perfect meditation on the nature of trees. Empedokles was interested in trees as some of the most ancient creatures in this world, and trees occupy a central place in Bringhamst’s poetry and thinking too. The starting point for the second stanza of “Uddālaka” might well be found in chapter 6 of the *Chandogya Upanishad*, where we read the following words within the context of a larger meditation on the true nature of the self:

‘Now, take this huge tree here, son. If someone were to hack it at the bottom, its living sap would flow. Likewise, if someone were to hack it in the middle, its living sap would flow; and if someone were to hack it at the top, its living sap would flow. Pervaded by the living (*jīva*) essence (*ātman*), this tree stands here ceaselessly drinking water and flourishing. When, however, life (*jīva*) leaves one of its branches, that branch withers away. When it leaves a second branch, that likewise withers away, and when it leaves a third branch, that likewise withers away, and when it leaves a third branch, that also withers away. When it leaves the entire tree, the whole tree withers away.

‘In exactly the same way,’ he continued, ‘know that this, of course, dies when it is bereft of life (*jīva*); but life itself does not die.

‘The finest essence here – that constitutes the self of this whole world; that is the truth; that is the self (*ātman*). And that’s how you are, Śvetaketu.’

‘Sir, teach me more.’

‘Very well, son.’³⁷

³⁵ *Upanisads*, a new translation by Patrick Olivelle, Oxford: Oxford University Press, 1996 (reissued 2008), p. 148.

³⁶ *Upanisads*, p. 148.

³⁷ *Upanisads*, pp. 153-154.

Given the unity of all things in the universe, Śvetaketu is also the tree his father is telling him about. Life (or the root of the existent) is indestructible and is to be found in every tiny part of this world. It is pervasive in all sentient beings, including trees. This well-wrought stanza embodies Bringhurst's brief and profound reflection on the ultimate nature of trees:

The seed is the tree's thought. The seed
is the speech of the tree. The seed is the tree
thinking and speaking its knowledge of trees.

Body, speech and mind are a powerful triad that is recurrent in Bringhurst's poetry. In fact, one of the central sections in *Tzūbalem's Mountain* (1982) is precisely entitled like this. The seed is conceptualized as being the irreducible core of the tree: it contains in a nutshell as it were the thought and the speech of all trees – present, past and future. In much the same way humans follow their own nature as they start speaking a recognizably human language, it is a part of trees' inevitable nature to grow their branches and leaves upwards in search of air and light, and to grow their roots downwards in search of water and minerals. Bringhurst reminds us that we humans are so self-centred and egoistical that we tend to think that we have the monopoly on speech and thinking, but trees do speak and think in their own way too. If trees speak any language at all, it has to be the tree language, one which is not made of words, but possibly of leaves whispering or rustling in the wind; and if they think at all, they must think tree nature. Thus, they treasure an ancestral form of knowledge that has been passed down from one tree generation to another, just like successive human civilizations have passed down what they consider invaluable wisdom for posterity. Trees know instinctively what it means to be a tree; humans know instinctively (or intuitively) that being human means acknowledging that we belong into the grander scheme of things, both living and non-living, animate and inanimate. "That is you," Śvetaketu is reminded by his father time and again.

The third stanza of "Uddālaka" deals with the nature of the mind. What is the place the mind occupies amid earth, water, air, sea and trees?, one might ask. The mind is shown to be inextricably linked to everything else in the world. Thus, it is "*the white of the eggs in its opening / shell*" and it is also "*the ripening / meat of the seed.*" Now, eggs and seeds have something in common: they hold a creature *in potentia* deep inside themselves. Both the bird in the egg and the plant in the seed strive to get outside, into the day of light. But there is no proper distinction to be drawn between *in* and *out*, between *inside* and *outside*, for "the outer is the inner", as announced in the first stanza. As pointed out above, weaving is the central metaphor at the heart of this poem: things in this world are woven of earth, water and air; and all things strive to become something else, i.e. they are in a perpetual state-of-becoming. "*What is / is the weaving,*" says the speaking voice (Uddālaka's) in the poem. This amounts to acknowledging that everything is in a state of flux somehow, as though everything were being constantly renewed from one moment in time to the next. And in this weaving process, all things are inextricably linked to one another. Even humans have a crucial role to play in all this process of life renewing itself all the time: "*We with our breathing / are working here, / carding and spinning the air.*"³⁸ Humans are the weavers mentioned in the original title of Bringhurst's poem as it was published in *CutBank* in 1986. And his poem is the song given as a gift to us humans to help as work to the accompaniment of ideas singing and dancing within the boundaries of this perfect artefact which is "Uddālaka" itself. But the words in this poem are seeking to find their way out there, and so that is why

³⁸ These two lines are slightly different in C.50, the first textual incarnation of this poem: "are sitting here carding and spinning the air" (only one verse line).

they are singing their song loud and clear, for everyone to listen. After all, what Bringhurst can do best of all is poems like this one that he intends to give his fellow human beings as gifts. This is his gift to the world.

IV · NAGARJUNA

“Nāgārjuna”³⁹ is one of the fundamental poems in *The Book of Silences*. Concerned with the supreme Buddhist ontologist Nāgārjuna, it captures the subtlety of the thinking of this Indian sage who lived in the early centuries of the common era. Insofar as Mahāyāna Buddhism is concerned, Nāgārjuna stands out as the giant among giants who laid the foundation of religious and philosophical quests. This Indian sage is almost the Oriental equivalent of Parmenides, the greatest Presocratic metaphysician who believed in the unity of a motionless, eternal and indivisible *Being* of utter circle-like perfection. Their modes of thinking differ in significant ways, though. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Nāgārjuna was “‘The Serpent Prince,’ a Buddhist metaphysician of the second or the third century AD, now honoured as the principal dialectician of the Madhyamika or ‘Middle Way’ school of Buddhist thought. He taught near Amaravati, on the Krishna River, in Andhra Pradesh.” And in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us very briefly this: “Nāgārjuna (2nd century AD?) ‘The White Serpent.’ A dialectical philosopher who taught near Amaravati, on the Krishna River, in Andhra Pradesh.” An even shorter entry in the 2001 edition of the Oriental sages sequence reads: “Nagarjuna c. 200 AD? South-central India.” It might be wise to start at the beginning: Who was Nāgārjuna? What was the originality of his philosophical thinking?

An Indian Buddhist monk-philosopher and the founder of the Mādhyamika school, Nāgārjuna⁴⁰ (b. c. 150 CE – d. c. 250 CE) is recognized as a patriarch by several later Buddhist schools.⁴¹ Precious little is known of his life or of the exact chronology of the works credited to him. The fact that various texts ascribe different religious qualities to Nāgārjuna and give dates for his life that range over 500 years suggest that the references may pertain to several persons and may include some imaginary accounts. Nonetheless, some elements of Nāgārjuna’s biographies are supported by historical materials. Scholarship now indicates that Nāgārjuna could have lived as early as 50 CE and as late as 280. His dates are usually given as 150-250. The earliest account of Nāgārjuna’s life is in Chinese, supplied about 405 CE by a renowned Buddhist translator, Kumārajīva. It agrees with later Chinese and Tibetan accounts that Nāgārjuna was born into an upper-caste Brahmin family, probably in the southern Adhra region of India. The stories of his boyhood indicate that he had an extraordinary intellectual capacity and underwent a spiritual conversion to Mahāyāna Buddhism. According to Kumārajīva’s account,

³⁹ “Nāgārjuna” was originally published in A.32 *Pieces of Map, Pieces of Music* (1986), revised in A.47 *The Calling* (1995), further revised in A.65 *The Book of Silences* (2001), and reprinted in A.92 *Selected Poems* (2009). It was also reprinted from A.47 in B.69 *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece. “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”, “Thin Man Washing”; “Sunday Morning” (all rpt. from A.47); • brief essay, “In Praise of Vacant Lots.” In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: banruò boluómíduo = Sanskrit prajñā pāramitā, ‘transcendent wisdom’.

⁴⁰ See the entry on ‘Nāgārjuna’ in *Encyclopaedia Britannica*, vol. 20, pp. 11697-11698.

⁴¹ “He was, in short, considered to be the second Buddha and he always occupied the second position in the lineage of Buddhist patriarchs in the various sectarian developments of Tibet, China, and Japan.” See *Nāgārjuna. A Translation of his Mūlamādhyamikakārikā*, with an introductory essay by Kenneth K. Inada, Delhi: Sri Satguru Publications, 1993, p. 3.

Nāgārjuna mastered some Mahāyāna verses of great profundity in a short time and then propagated the truth (dharma) in India, successfully defeating many opponents in scholastic philosophical debates. Traditional accounts also suggest that he lived to an old age and then decided to end his life.

Something of the Mādhyamika philosopher's life and attitude can be gleaned from Nāgārjuna's writings. His critical analytic verses and his didactic treatises, letters, and hymns indicate his deep concern to practice "nonattachment" in engagement with people. There are innumerable influential texts attributed to this Indian sage, although most were probably written by later authors. Two basic works attributed to Nāgārjuna with great certainty are available at present in Sanskrit: *Mūlamādhyamikakārikā* (also known as *Mādhyamika Kārikā*, i.e., *Fundamentals of the Middle Way*) and *Vigrahavyāvartanī* (*Averting the Arguments*).⁴² They are both critical analyses of false views about how existence arises, the means of knowledge, and the nature of reality. Written in versified form, terse and abstract, *Mādhyamika Kārikā* sets forth his own interpretation of the fundamental thought of Buddhism viewed from the Mahāyāna standpoint. The ideas manifest at once simplicity and complexity, subtlety of thought and mastery of language. Through rigorous logical argumentation, as found in the *Mādhyamika Kārikā*, he criticized both Buddhist and Hindu views on existence. Most of his polemics, however, were directed towards the explanations of existence offered by the Buddhist schools of Sthaviravāda (Theravāda) and Sarvāstivāda. Nāgārjuna's position is closely allied to, and probably dependent on, that found in the early Mahāyāna literature known as the *Prajñāpāramitā-sūtras* ("Perfection of Wisdom Verses"), in which the notion of *śūnyatā* is an important term for the wayfarer on the path to enlightenment and becomes the distinguishing term in Mādhyamika school. His philosophy calls into question certain philosophical assumptions such as the existence of stable substances, the linear and one-directional movement of causation, the atomic individuality of human beings, the belief in a fixed identity or selfhood. Nāgārjuna's primary contribution to Buddhist philosophy is precisely the concept of *śūnyatā*, whose clarification is regarded by Buddhists as an intellectual and spiritual achievement of the highest order. His innovative concept of 'emptiness' was to profoundly influence the character of Buddhist thought. The basic tenets of Nāgārjuna's thinking are then these: (1) that all things are empty of an absolute reality and exist only in relation to conditions; (2) that the nature of existence is relational – there is no soul, no single thing, no concept independent of its context; (3) that there is no eternal reality behind changing forms – even unconditioned nirvana (enlightenment) is not independent of the changing forms of existence, and so those beings who have perfected wisdom perceive nirvana and the changing flux of existence together.

Armed with this potent notion of emptiness, Nāgārjuna built his literary corpus embodying a subtle philosophy that can be seen as an attempt to deconstruct all systems of thought which analyzed the world in terms of fixed substances and essences. His method is that of the skeptical philosopher. He embraces not haphazard, but systematic or principled doubt. He calls into question the basic categorical presuppositions assumed to be axiomatic in the Indian philosophical tradition. That doubt should be methodical to penetrate the truth effectively was a revolutionary innovation for philosophy in India. According to

⁴² "Besides the verses of Mādhyamika analysis, there are a large number of Tantric and medical works attributed by Tibetan tradition to a "Nāgārjuna." There are also references in late Indian materials to a great Siddha, or sorcerer, by the name of Nāgārjuna, who acquired his magical power through Tantric practices. Closely allied stories tell of a powerful alchemist who, among other accomplishments, discovered the elixir of immortality. The reports of a great sorcerer, however, are generally not accepted outside the Tibetan tradition as applying to the 2nd-century philosopher." See the entry on 'Nāgārjuna' in *Encyclopaedia Britannica*, vol. 20, pp. 11697-11698.

traditional Brahminical thinking, certain and correct objective knowledge of the world was possible. While anything and everything could be doubted, every doubt could be ultimately resolved. But the early Buddhists were not so sure about the possibility of ultimate knowledge of the world. Given the impermanence of all things and the Buddhist rejection of a persistent personal identity, ultimate knowledge seemed to be out of reach, unattainable. By Nāgārjuna's time, the major schools of Buddhism had accepted that things in the world must be constituted by metaphysically fundamental elements which had their own fixed essence, for otherwise there would be no way to account for humans or natural phenomena. The apparently stable objects of our lived experience were seen as being compounds (aggregates) of elementary, irreducible substances with their own nature. If things and humans were nothing more than atoms in constant flux, how would it possible for a person to have an orderly experience of a world of apparent substances? If no enduring ego persisted through our experienced lives, how would it possible to relate experiences and cognition to a unitary self or subject? Without assuming that humans have fundamental fixed natures, nobody could say that any particular individual was undergoing suffering or said to attain enlightenment or wisdom to achieve nirvana. To put it differently, without some notion of essence, Buddhist claims could not make sense and could not effect a real change in the human character. Buddhism was also inconceivable without causality: the notion that all phenomena are causally interdependent, that all things and events which come to pass in the world arise out of a causal chain. Causes are regular and predictable, and their regularity is accounted for by the fact that things or phenomena have fixed natures of their own. That was the conviction of Nāgārjuna's contemporaries.

Nāgārjuna armed himself with the full battery of accepted rejoinders to fallacious arguments that the Brahminical logicians had long since authorized, such as infinite regress, circularity and vacuous principle to assail the metaphysical and epistemological positions he found problematic. He reminded his contemporaries that Buddha had rejected metaphysical and empirical substantialism through his teachings of no-soul and causal interdependence (i.e., all empirical phenomena arise out of interdependence) and so they should remain faithful to this non-substantialist stance by rejecting the notion of fixed substances. If objects had a stable or fixed essence, the changes brought about by cause would not be logically intelligible or materially possible. According to Nāgārjuna, not only sentient beings but also all phenomena are selfless, without a self-nature or underlying essence. In fact, things, concepts and persons lack essence, they have no fixed nature, and it is only because of this lack of essential or immutable being that change is possible, than one thing can transform into another. Each thing can only have its existence through its lack of inherent, eternal essence. It would be incoherent to assume that anything with a fixed nature or essence could change, for that change would violate empirically its fixed nature and so destroy the original premise. By not having a fixed essence, things and humans can be amenable to change, transformation and evolution. Change is only possible if entities and the way in which we conceptualize them are void or empty of any eternal, fixed, immutable essence. Also, we do not experience anything empirically which does not change, and so never know of fixed essences in the world about us. Furthermore, all things are empty of being independently existent, and this is so because all things always arise dependently. Emptiness in this context means 'the lack of autonomous existence'. It is not that things are in themselves nothing or that they possess a positive absence of essence. Change is possible because a radical indeterminacy permeates everything. Beings relate to one another because their interaction makes them susceptible to ongoing transformation. In a nutshell, all change in the world is possible because of interdependent causality and interdependent causality in turn is only possible because things, phenomena and humans lack any fixed nature and so are open to being transformed.

Now, Bringham's poem on this sage captures the essence of his thinking with utter mastery. There is a sense of harmony and structural symmetry inherent in "Nāgārjuna", which consists of 17 four-line stanzas and five movements for the reader's soul. It opens with a complex definition of *what is*:

What is is swollen like a ripe
fruit, hollow like a cave.
What you touch, hear, taste, see, smell
is the inner perfection of vision.

What reaches into our eyes and our ears
is what is, and that is the wordless, inaudible
song and the brooding, unmusical
speech of the world.

The opening lines of chapter III ("Examination of the Senses") of Nāgārjuna's *Mūlamādhyamikakārikā* read thus: "*Seeing, hearing, smelling, / Tasting, touching, and mind / Are the six sense faculties. / Their spheres are the visible objects, etc....*"⁴³ Along with the five sense organs, the mind is considered to be another sense organ. Thus, Buddhism affirms the continuum of *being* and avoids the simple dichotomy of mind-body or subject-object relationship. In Bringham's initial definition of *what is*, *being* turns out to be a perfect fruit, empty of any essence ("*hollow like a cave*"). All five senses, evoked through action verbs (touch, hear, taste, see, smell), appear to offer a tentative approximation to that lack of essence at the heart of things. In any case, *what is* is uninterruptedly singing and speaking, or, to put it differently, the world has its own song and speech, inaudible and wordless to human ears. This is but one possible explanation of reality ("*just one more opinion*"). There might be others: "*What is is what lies / out of sight, thought and talking.*" *What is* is simply elusive, beyond the reach of the senses (*sight*), the mind (*thought*) and speech (*talking*). Now, body, speech and mind is a recurrent potent triad in Bringham's poems. To Nāgārjuna's mind, they represent "*three / fists clinging to the world*" that we must open if we are to capture what is. Hands might be closed or open, but fists are hands that seek to grasp something and capture it before it vanishes. In our primordial encounter with the world, humans seek to penetrate reality through our senses, the mind and speech, but these are but imperfect tools to apprehend what is simply empty of a fixed essence, as if in a state of perpetual Heraclitean metamorphosis. Only by not knowing can knowing come to happen in the form of effortless attention, seems to claim the poetic voice here. But this is again one more position, one more opinion we must get rid of, for "*All positions / are prisons. / No truth is true.*" These are statements an skeptic would naturally embrace. After all, Nāgārjuna embraces a philosophy of no position – i.e., non-adherence to any fixed dogma or view. If things, phenomena and humans are devoid of a fixed essence, then it does not make any sense to hold on to a fixed view. There seems to be no way of being certain of one's knowledge of the world.

The second part of "Nāgārjuna" dwells precisely on the possibility of definitive or reliable knowledge about the world. The sage's words to this effect are crystal-clear as he claims that "*No instruction is certain, no knowledge complete.*" This means that there is no way of knowing any thing for sure, that human knowledge will always be imperfect and incomplete – i.e., a partial or inaccurate apprehension of *what is*. The kind of doubt

⁴³ See *The Fundamental Wisdom of the Middle Way. Nāgārjuna's Mūlamādhyamikakārikā*, translation and commentary by Jay L. Garfield, Oxford/New York: Oxford University Press, 1995, p. 10.

Nāgārjuna practices in his own philosophy is methodical and disciplined, one aimed at dismantling what is normally taken for granted as being axiomatic assumptions about the world. Therefore, he claims that it is possibly to assert (a) being, (b) not being, (c) both being and not being, and (d) neither being nor not being. How can one be certain of anything at all? Hence Nāgārjuna's persona affirms: "My position / is that I have no position." Lies and fictions are true also, intentions are positions, and dispositions are prisons. What kind of certainty is then one left with once truth, fictions, intentions and positions are reduced to a fallacious attempt at understanding reality which is bound to failure? Part 3 of "Nāgārjuna" celebrates *what is* and lists all its attributes:

What is has no essence.
 What is is interdependent and empty.
 What is is unsingle, undouble, unplural, unborn,
 unenduring, unbearing, undying;

what is has no past and no future, no shape
 and no nature, no being, no having been, going
 to be or becoming, no wholeness and no
 incompleteness, no fingers...

The ontological inclusiveness, excellence, purity and supremeness of *being* is celebrated in these verse lines of terse beauty and simplicity. At the heart of these two stanzas is the concept of *sūnyatā* or emptiness. According to Nāgārjuna, "All things lack entitibood, / Since change is perceived. / There is nothing without entity / Because all things are emptiness."⁴⁴ *What is* is empty or has no fixed essence, it is relational and interdependent, and it does not come into being or perish, for time is cancelled. "If time depends on an entity, / Then without an entity how could time exist? / There is no existent entity. / So how can time exist?"⁴⁵ Time is an unreal fallacy too. It seems that the sage is struggling with words to convey a rare, precious profundity of thought. Disciplined doubt requires great intellectual stamina of the inquirer confronted with reality. *A* and *B* can be affirmed and denied at the same time, and the philosophical mind appears to come to an impasse where the only certainty left is a radical form of doubt.

However, what the sage identifies at the palpitating heart of *what is* is hunger, and it seems to us that hunger is an astonishing expression of desire. Alongside language, hunger is indeed the main concern of the fourth part of Bringham's poem: "What causes *what is* is the hunger / to be and keep being. *What is* is on loan / from *what isn't* and is its reflection." *What is* comes to be because *being* is hungry and wishes to be and to keep being. At the same time, *what is* is inextricably linked to *what isn't*. *What is* either the reflection or the disguise of *what isn't*. In words reminiscent of Parmenides in *On Nature*, the dramatic persona of Nāgārjuna affirms that being is a sort of undistinguishable continuum where the centre or the periphery cannot be easily discerned: "There is no rock bottom. / No centre, no sides, no top and no bottom." In addition, language can never reach reality per se.⁴⁶ All language is metaphorical or figurative in the end: "There are no literal statements. / There is no unmetaphorical language." Words will not do when it comes to capturing *being* so as to communicate *what is* to others. Upon closer inspection, it seems that emptiness is all we are left with. The nothing that is is at the heart of the closing movement of "Nāgārjuna":

⁴⁴ *The Fundamental Wisdom of the Middle Way. Nāgārjuna's Mūlamādhyamikakārikā*, p. 35.

⁴⁵ *The Fundamental Wisdom of the Middle Way. Nāgārjuna's Mūlamādhyamikakārikā*, p. 51.

⁴⁶ "What language expresses is nonexistent. / The sphere of thought is nonexistent. / Unarisen and unceased, like nirvana / Is the nature of things. // Everything is real and is not real, / Both real and not read, / Neither real nor to real." *The Fundamental Wisdom of the Middle Way. Nāgārjuna's Mūlamādhyamikakārikā*, p. 49.

Nothing is not nothing. Nothing
is, and *is* is nothing. All that is
is nothing, yet there is
no nothing there that we can cling to.

Bringhurst is at his best when using gnomic language like this. It is no easy task to try to define the concept of nothing accurately. Nothing is possibly the lack of a fixed essence at the heart of things. Things in the world, phenomena, concepts and human beings are nothing, and nothing is the hunger of *being* wishing to keep on being. Hunger is the question and the answer is “*be pure wonder.*” So there is nothing the senses or the mind can cling to. Being is ultimately untouchable, ungraspable, a form of supreme beauty and perfection that eludes human understanding and human words. The abyss thus separating the perceived world and the perceiving subject is felt to be unfathomable. The hunger and thirst for knowledge inherent in *homo sapiens sapiens* is simply unappeasable and unquenchable, for the minimal tools we have at our disposal prove insufficient or inadequate or inefficient in our epistemological confrontation with the world. The hunger remains there all the time, and the only answer left for humans is to remain curious (to be pure wonder) in the face of the sublime, awe-inspiring grandeur of the world.

V · BODHIDHARMA

“Bodhidharma”⁴⁷ is Robert Bringhurst’s personal tribute to the legendary Indian monk who lived in the fifth or sixth century BCE and is credited with the establishment of the Ch’an (Zen) school of Buddhism that flourished in East Asia. Considered the 28th Indian successor (or Patriarch of Buddhism) in a direct line from the Buddha Gotama, Bodhidharma is recognized by the Chinese Ch’an schools as their first patriarch.⁴⁸ In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Bodhidharma was “A Buddhist monk of the sixth century AD, born in southern India, who immigrated to China after his ordination. There, under his Chinese name, Dámó (‘Penetrating Finger’), he came to be revered as the father of the Zen tradition.” In addition, in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us that Bodhidharma (*fl. c.* 500 AD?) was “a bug-eye monk from southern India who immigrated to China, becoming the titular founder of Chinese Zen.” Somewhere else, in the 2001 edition of *The Book of Silences*, the poet gives us only elementary information regarding this Oriental sage: “Bodhidharma c. 450–c. 530? Traveled widely from south-eastern India to northeastern China.”⁴⁹ When all pieces are put together, we get an accurate picture of this remarkable man surrounded by a

⁴⁷ “Bodhidharma” was originally published in A.32 *Pieces of Map, Pieces of Music*. Afterwards, it was reprinted in A.47 *The Calling*, in A.65 *The Book of Silences*, and in A.92 *Selected Poems*. It was also reprinted as C.57 [Four poems], *Rubicon* (Montreal) 8 (Spring 1987): 103-107. Contents: “Hóng Zichéng”; “Bodhidharma”; “Sengzhào”; “from *The Lyell Island Variations*: V. The Starlight is Getting Steadily Dimmer,” all rpt. from A.32, but with two stanzas missing from the first poem. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: dāmó = *penetrating finger or intelligent touch*.

⁴⁸ See the entry on ‘Bodhidharma’ in the *Encyclopaedia Britannica*, vol. 4, p. 2004. Reading this entry, we also learn that “According to the East Asian tradition Bodhidharma was a native of Conjeeveram near Madras; in 520 he traveled to Kuang (modern Canton). It is said that he was granted an interview with the emperor Wu-ti, who was famous for his good works. To the emperor’s dismay, Bodhidharma stated that merit applying to salvation could not be accumulated through good deeds. For Bodhidharma meditation was the practice necessary to progress along the path to enlightenment.”

⁴⁹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

fascinating legendary halo. Few extant contemporary accounts of his biography have been preserved, and so the exact details of his life and work are lost in the mists of time. It seems that as a youth he converted to Buddhism and became a monk. His master was Prajnatarā, who changed his name from Bodhitāra to Bodhidharma and instructed him to go to China to spread the Buddhist teachings (*Dharma*) there.

Bringhurst's poem consists of three stanzas and of two distinct parts. Whereas the first one tells an enigmatic story, the second focuses on the practice of meditation explicitly. It is said that, upon failing to make a favourable impression in southern China, Bodhidharma spent nine years in a cave, facing a wall, not speaking to anyone for such a long time. In one version of this story, the sage is said to have fallen asleep seven years of this nine-year period of meditation. As a result, becoming angry with himself, he cut off his eyelids to prevent it from happening again. Legend has it that his falling eyelids hit the floor and became tea plants, a useful stimulant that helps Zen practitioners to keep awake during meditation. In another related legend, Bodhidharma refused to resume teaching until his would-be student, Dazu Huike, who had kept vigil for weeks in the deep snow outside of the monastery, cut off his own left arm to demonstrate sincerity. Both legends are tessellated into the first stanza of "Bodhidharma": "*I cut off my eyelids, / he cut off his arm. / He could not hold the cleaver / to cut off the other.*" Though the disciple's gesture could be interpreted as being a gesture of loyalty, Bodhidharma interprets it as a sign of humans' propensity to err. Errors are signs of our vulnerability and fallibility; they betray human limitation:

He could have kept both
had he noticed this sooner.
The scars of our errors
are taken for signs.

The second part of "Bodhidharma" evokes explicitly the practice of this sage's meditation known as "wall-gazing". This type of what might have been "sitting meditation" in front of a wall was attributed to Bodhidharma. It seeks to quiet the mind by emptying it of superfluous thoughts and contradicting ideas. The inner enlightenment comes about once the initiate manages to break through and attain penetration or sudden insight into reality as it is. Therefore, the poetic voice claims that even if there is apparently no other side to the wall he is facing during meditation, it does lead somewhere else: towards enlightenment, towards sudden insight into reality. Bodhidharma gives voice to this conviction with absolute certainty and hence the tone is that of a self-confident master:

There is no other side
to this wall, though the road
is so wide it leads through.
It leads through. That is all.

The legendary dialogue of Bodhidharma with Emperor Wu of southern China is revered in the Zen tradition exactly because it illustrates the primary concern of the Zen practitioner, which is the experience of the pure wisdom that sees reality as empty and serene:

The Emperor said, "Ever since I ascended the throne, I have built temples, copied sūtras, approved the ordination of more monks than I can count. What is the merit of having done all this?"

Bodhidharma said, "There is no merit."

The Emperor said, "Why is that so?"

Bodhidharma said. "These are minor achievements of humans and *devas*, which become the causes of desire. They are like shadows of forms and are not real."

The Emperor said, “What is real merit?”
 Bodhidharma said, “When pure wisdom is complete, the essence is empty and serene. Such merit cannot be attained through worldly actions.”
 The Emperor said, “What is the foremost sacred truth?”
 Bodhidharma said, “Vast emptiness, nothing sacred.”
 The Emperor said, “Who is it that faces me?”
 Bodhidharma said, “I don’t know.”
 The Emperor did not understand.⁵⁰

VI · SENGZHAO

“Sengzhào”⁵¹ is another accomplished poem of technical perfection that testifies to Bringhurst’s command of the English language. It concerns another fundamental Buddhist Chinese sage who thought deeply about being, mind and speech, about the relationship holding between perceiving subject and perceived object, and about the possibility of understanding the ultimate reality of things. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Sengzhào (Seng-chao, 384-414) was “A Buddhist metaphysician, born in Shaanxi. He went to Gansu, reputedly at the age of 14, to study with Kumarajiva. In 401, he returned with his teacher to Chang’an, where he studied and taught at the academy until his death at the age of 31.” In addition, in the “Cast of Suspicious Characters” at the end of *The Calling. Selected Poems 1970-1995* (1995), Bringhurst gives us only essential information concerning this sage: “Sengzhào (Seng-chao, 384–414) A Buddhist philosopher born in Shaanxi. He studied at Chang’an with the captive translator Kumarajiva.” And a brief entry in the 2001 Ninja Press edition of *The Book of Silences* says: “Sengzhao (Seng-chao) 384-414 Chang’an, northern China.”

According to a traditional account of this sage’s life included in the *Gaoseng Zhuan (Biographies of Eminent Monks)*, Sengzhào⁵² was born to a poor family that lived in Jingzhao in 384 CE. Because of the economic difficulties his family had to cope with, Sengzhào had to work as a copyist to make a living, thus becoming efficient in writing and gaining a first-hand knowledge of such classics as the works of Laozi and Zhuangzi. Interested in the profound and in the subtle, he turned his attention to the *Vimalakirtinirdesha Sutra* and relished its beauty and perfection with pleasure and happiness. As a result, and because of his inclination towards everything related to the realm of essences, he made up his mind to become a monk. He had a special talent for profound thinking and he read avidly the

⁵⁰ See *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, edited by Kazuaki Tanahashi, Boston & London: Shambhala, 1999, particularly p. xxxiv.

⁵¹ “Sengzhào” was originally published in A.32 *Pieces of Map, Pieces of Music* (1986). It was then reprinted in A.47 *The Calling* (1995), in A.65 *The Book of Silences* (2001), in A.92 *Selected Poems* (2009), as well as in (i) B.69 *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin. Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece. “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”, “Thin Man Washing”; “Sunday Morning” (all rpt. from A.47); • brief essay, “In Praise of Vacant Lots.” (ii) C.57 [Four poems]. *Rubicon* (Montreal) 8 (Spring 1987): 103-107. Contents: “Hóng Zichéng”; “Bodhidharma”; “Sengzhào”; “from *The Lyell Island Variations: V. The Starlight is Getting Steadily Dimmer*,” all rpt. from A.32, but with two stanzas missing from the first poem. (iii) C.58 [Two poems]. *Verse* (Oxford) 4.1 (March 1987): 14-15. Contents: Parśvanatha; Sengzhào, both rpt. from A.32. See also editorial comments by Mark Abley on pp. 8-9. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: shèng xīn míng jí = *holy mind/heart dark silent*.

⁵² Much of this bio-bibliographical information has been lifted from the entry on Sengzhào by Jeffrey Dippman (Central Washington University) in the *Internet Encyclopaedia of Philosophy*, at <http://www.iep.utm.edu/sengzhao/>. Retrieved on 20 September 2011.

Vaipulya Sutra and the *Tripitaka*. He studied under the Indian Buddhist master Kumarajiva, who praised his disciple without limit. Sengzhào was ready to follow the master anywhere he chose to go, and so when he left Gecang and moved to Chang'an, the disciple followed him faithfully. Afterwards, he would assist his master in the translation of Buddhist treatises into Chinese. Sengzhào was thus the vital intermediary between his Indian master and the Chinese language: the master relied on his disciple's ability to render the original into stylistically acceptable Chinese. This exegetical enterprise increased Sengzhào's understanding of these texts and prompted him to write his own treatises: *Prajñ Is Without Dichotomizing Knowledge*, *Non-Absolute Emptiness*, *Things Do Not Shift* and *Nirvana Is Without Conceptualization*. They were highly admired and venerated in Sengzhào's own lifetime by other Buddhist masters and students for their profundity of thought and subtle meaning. Sengzhào is also credited with an annotated edition of the *Vimalakīrtinirdeśa Sutra*, an obituary of his master, an afterword to the *Saddhamapundrika Sutra* and several prefaces to other important Buddhist texts. Sengzhào died in Chang'an at the age of 31. Had he lived longer, he would have surely produced more invaluable works.

The four treatises already mentioned above are incorporated into Sengzhào's major extant work, which is the *Zhaolun* (*Treatises of Sengzhào*), which consists of a preface, an introduction, the four treatises and correspondence between Sengzhào and Liu Yimin, a lay monk from the nearby Lushan monastery. The *Zhaolun* is the most comprehensive compilation of treatises available to understand Mādhyamika Buddhism in China. Sengzhào's surviving texts are full-length logically coherent texts, characterized by a mastery use of paradox, a stylistic trait that made him a favourite among Chan (Zen) adepts. At the heart of his treatises, there are several fundamental ideas that are worth considering in detail. His primary concern is the mind's proclivity for naming and conceptualizing. To begin with, Sengzhào targets the natural disposition of the human mind towards conceptualization, a habit that fosters a false sense of duality between the perceiving subject and the perceived object. By giving things distinct names, we humans create a false dichotomy between self and other, between truth-seeker and world, or between apprehender and apprehended. In this respect, Sengzhào dwells on the mind's tendency to produce networks of mental constructions and on humans' compulsion to cling to these conceptual fabrications or constructs as real. These constructs arise from the mind's predilection for naming things so as to establish distinctions in the unstoppable flux of reality. By drawing artificial distinctions between things and assigning them a particular name, the mind deludes itself into thinking that it is apprehending the real. However, in its constant pursuit of the truth, the mind clings erroneously to what it mistakes for the real – to ephemeral appearances instead of to the immortal ground of existence or ultimate reality. The truth is right under our feet, in front of our eyes and yet we seem to be unaware of its existence and unable to apprehend reality.⁵³ Thus, things, concepts and words are connected to one another in far from simple ways. In the process of ordinary perception we assign a name to individual manifestations and then conceptualize the conjunction of thing and name into a distinct concept. At that point, we humans think that we do grasp the ultimate reality of the thing in hand. But this is just delusion. According to Sengzhào, who does not question the existence of the phenomenal world, the main problem is that humans rely on conceptualization and naming for their understanding and apprehension of the world. However, the multiplication of conceptual distinctions only

⁵³ Sengzhào insists precisely on this in his treatises. Thus, for instance, in *Things Do Not Shift*, he says: "Being near and yet unrecognized such is the nature of things" (p. 46); and "How sad that the notions of people are always erroneous, that in the very presence of the truth they do not awake to it!" (p. 47). See *Chao Lun. The Treatises of Seng-chao*, a translation with introduction, notes and appendices, by Walter Liebenthal, Hong Kong: Hong Kong University Press, 1968, 2nd revised edition.

complicates the apprehension of the truth. In addition, we humans do not seem to notice that neither subject nor object exist independently: the mind depends upon the real and the real depends upon the mind, or, to put it differently, *what is* finds its genesis in the mind, and what originates in the mind arises from things.

Now, Bringhurst's homage to this Oriental sage is a beautiful poem consisting of four stanzas that correspond to four movements for the soul. The first stanza sets side by side the omnipotent minds of gods and the speechlessness of humans in the face of *what is*: "*The thought of the gods is dark water. The gods / have their destinies too as they move through the world. / Our speech does not reach them.*" The voice speaking these words is that of Sengzhào's dramatic persona addressing the reader directly. He speaks with the calm and serenity of many of those Oriental ancestors that were aware that humans have their own inescapable limitations and that they should learn an elemental lesson of humility and gratitude. But the irreducible core of meaning of this first movement is the notion that there is no way for humans to penetrate the mind of the gods, for their thought is "dark water", not easily decipherable. It is evident that the thoughts of the gods cannot be compared with what is thought by human beings. What is more, human speech is but an imperfect tool in our epistemological confrontation with the world and so it does not even touch gods' thinking. The rest of the stanza is a forceful meditation on the inadequacy of human speech to apprehend anything at all. If *what is* is inexpressible, "not easy and graceful to speak of", *What is the sense in making the effort to speak one's mind to others?*, one might ask. Kumarajiva, Sengzhào's Indian teacher, is the foreigner mentioned in the verse lines that follow. Though "*lame in the tongue / like a caged raven*", Kumarajiva was endowed with a sharp and lucid mind. He knew of the inadequacies of language, of the vagaries of words, and was convinced that true understanding lies outside or beyond speech and conceptualization. In the enlightened sage's non-dual apprehension of the world, all distinctions are transcended, motion and rest⁵⁴, perceiving self and observed object, mind and the world are seen to be one and the same thing. Sengzhào helped his master to translate certain Indian Buddhist treatises into Chinese, and so he refers here to the "*elegant phrase*" of his wording of the Buddhist concepts. In this sense, he was instrumental in rendering the original texts into stylistically acceptable Chinese, in words that were highly admired by his own contemporaries.

The second stanza is the geographical centre of Bringhurst's poem. At this point, we realize clearly that *the thought of the gods* mentioned in the very first opening line of the composition is meant as a reference to reality as a whole: it is as though the myriad forms that populate this world were the manifestations or incarnated expressions of the gods' thinking. Hence, the poetic voice proclaims that the gods' minds and their mindprints are one and the same thing. By contrast, the only trace humans leave behind is ephemeral footprints that vanish into nothingness. Whereas the gods' thoughts are the existent things of reality, humans' thoughts are nothing but evanescent ideas that arise from a dichotomizing way of thinking the world into conceptual fabrications and distinctions clinging to inadequate words. The stanza closes with a calm celebration of the unity of reality: yes and no (like motion and rest, dark and light, or earth and sky) are sides to the same coin, one and the same thing, in much the same way knower (perceiving self) and

⁵⁴ As Sengzhào himself puts it: "That birth and death alternate, that winter and summer succeed each other, that all things glide along and move is a generally accepted proposition. But to me this is not so." (p. 45) "There is rest with motion going on; therefore, though (things) move they are forever at rest." (p. 45) "Impermanence and permanence, though seemingly different, are ultimately the same." (p. 51) And "Then the four seasons, fleet as the wind, and the Great Bear, revolving with lightning speed; if you understand the least of what I have said, (you should realize) that these, rapid as they are, do not move." *Chao Lun. The Treatises of Seng-chao.*

known (*what is*) are also one and the same. Bringhurst manages to convey such profundity of thought with simple, transparent words that sing out loud on the page. In verse lines marked by strong enjambment, the poet sings of the fundamental unity of *what is*:

The gods' minds and their mindprints are one
and the same. With us it is different. Our footprints
fall off as we walk through the world. Our brilliant
assertions tack like October leaves
through the air before mouldering. Yes and no
are at home in each other, not elsewhere. What is
and who knows of its presence are one and the same.

Breathing through the feet, the title of an early essay published in the 1980s, is Bringhurst's way of saying that we humans need to pay attention to *what is*. If only we listened to the unstoppable discourse of *being* with open ears and if only we looked at the world with open eyes, we would realize all of a sudden that the truth is in front of us, right under our feet. The feet are therefore essential to the poet's philosophical thinking; they are also more respectful and less damaging than hands are. In the third movement for the reader's soul, the calm voice of Sengzhào dwells precisely on the various links that unite the human body (as embodiment of the self) with the world (as living incarnation of *what is*) at large. Feet are the most elemental of all links that Sengzhào explores in these verse lines: "*The feet are the link / between earth and the body. Begin there.*" The second link that brings humans and the world together is breath itself: "*The lungs are the link between body and air.*" By breathing in the world, humans are absorbing and internalizing what lies outside themselves. The human soul appears to be directly connected to the universal soul through mere breathing. The remaining sense organs are all invoked as being variations on feet. Thus, the hands are nothing more than "*uprooted feet*" through which we come to touch the living, rugged texture of things, and through which we make or create material things; and "*the eyes are the hands of the head; / its feet are the ears.*" The parallelism of these lines emphasizes the fact that body and world are one and the same thing in the end, for the bodily parts are nothing more than prolongations or extensions of the self that seek lovingly to understand or comprehend *what is*.

The fourth and last stanza of "Sengzhào" is once again a short meditation on being and speech. We humans are part of the living fabric of *being*, which is a pervasive presence everywhere. Hence, "*We are all of us here in the hidden / house of the unnamed.*" Naming the unnameable, expressing the inexpressible, trying to capture *what is* through words is a futile enterprise, the sage's voice tells us. Words will not do when it comes to grasping and communicating to others the ultimate essence of things. Any gesture towards conceptualization and verbalization is bound to fail. By naming things and turning them into abstract concepts, we are reducing the complexity of reality to bare essentials and establishing distinctions where there is only an unstoppable, undistinguishable flux. This leads to delusion, not to true enlightenment of the truth-seeker. In other words, language is not an infallible tool in our attempt at understanding reality. This is why the poetic voice says that those who insist that we must "*name it have ceased to be there.*" If *what is* is ineffable, words will inevitably fail time after time. Though humans feel we need to understand, Sengzhào is precisely urging us to forget about a conscious attempt at knowing. By unknowing, by forgetting about our need to know and to understand, true enlightenment might start to happen.

VII · YONGJIA XUANJUE

“Yongjiā Xuánjué”⁵⁵ concerns another essential Oriental sage that has something invaluable to say after so many centuries have elapsed. An entry in the “Cast of Suspicious Characters” at the end of *The Calling. Selected Poems 1970-1995* (1995) informs us that Yongjiā Xuánjué (Yung-chia Hsuan-chueh, 665–713) was “A poet and monk little interested in monastic life. He spent, it is said, only one day with his teacher Huineng, then returned to his home on the Zhejiang coast where he wrote the *Zhèndào Ge* or *Song of the Path of the Evidence*.” And this is the brief entry in the 2001 textual incarnation of *The Book of Silences*: “Yongjia Xuanjue (Yung-chia Hsuan-chueh) 665-713? Zhejiang coast, China.” Tradition says that only one night was enough for Yongjia Xuanjue to attain enlightenment.⁵⁶ This eighth-century Chinese sage who breathed so long ago is the object of attention of Bringham’s homage in a seven-stanza poem of moving beauty and technical perfection. The composition is a meditation on *what is*, that is to say, an attempt at verbalizing the inexpressible once more as in many of the other poems that constitute the Oriental sages sequence of *The Book of Silences*. These sages spent much of their time in the open air, studying the book of Nature with their own eyes, feet and hands. What they attained was first-hand knowledge that *being* is pervasive and ubiquitous, and that humans belong among this grander scheme of the living mesh of things, human and nonhuman alike. These ancient sages “traveled everywhere on foot along the great rivers of both south and north, crossing oceans and visiting famous mountains and large streams. In navigating oceans and scaling mountains, they tasted to the full the suffering involved in travel by land and sea.”⁵⁷ Their libraries were the woods where they walked in search of the truth; their books were the trees, stones, mountains and rivers they breathed in with their whole bodies, and their only master was the mind, a sharp-edged mind eager to attain enlightenment.

This partly accounts for the profundity of ideas at the heart of “Yongjiā Xuánjué”. No discernible parts are easily identified in the visible linguistic texture of this complex poem. Maybe it could be said to consist of two movements for the soul: whereas the first one (stanzas 1 to 4) dwells on *what is* and tries to define it figuratively, the second one (stanzas 5 to 7) looks like an obscure extended afterthought that defies straightforward interpretation on the part of the reader. The resulting linguistic artefact is exacting,

⁵⁵ “Yongjia Xuanjue” was originally published as C.63 [Four Poems]. *Canadian Literature* 140 (Spring 1994): 79-85. Contents: • “Dongshan Liangjie” (rpt. in A.47, A.65, A.92); • “Xuedou Zhongxian” (rpt. in B.58; rev. in A.47 and rpt. from A.47 in A.65, A.92, C.75); • “Yongjia Xuanjue” (rev. in A.47 and rpt. from A.47 in A.65 and A.92); • “Dogen” (excerpt rev. in B.72, C.71). It was later revised in A.47 *The Calling* (1995) and reprinted from A.47 in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009). In its original textual incarnation in C.63, the poem consists of eight instead of seven stanzas. The first stanza of the poem reads as follows: “Not a river, a road. What flows without flowing. / The sentence we read and reread with our feet, / not the pages we write and rewrite / and rewrite and rewrite with our hands.” The extra stanza (the fourth one in the original) reads thus: “The truth has two sides and two faces, / two bellies, two [sic] backs, but the top of the truth / is the bottom. The truth is that simple; the truth / is that twisted; the truth is that thin.” And in the sixth stanza, verse line 4 reads “you are leaving” instead of “you are staying,” as in later versions of the poem.

⁵⁶ “Yongjia Xuanjue (665-713) was one of the great disciples of Huineng. He came from Benjun. Yongjia is often remembered by his nickname, the “Overnight Guest,” due to his legendary brief encounter with his teacher, Huineng. Yongjia was persuaded by Huineng to stay at Cao Xi only one night. During that night Huineng confirmed Yongjia’s enlightenment. [...] In the year 713 master Yongjia passed away peacefully while sitting in meditation.” See Andrew E. Ferguson, *Zen’s Chinese Heritage: The Masters and their Teachings*, Somerville (USA): Wisdom Publications, 2000, pp. 56-57.

⁵⁷ See *Song of Enlightenment, by Great Master Yung Chia of the T’ang Dynasty*. Commentary by Tripitaka Master Hua, translated into English by Dharma Realm Buddhist University, International Institute for the Translation of Buddhist Texts, Talmage, California, 1983, p. 26.

demanding close attention to specific details and to the overall *Gestalt* of the piece on the part of the reader. The first stanza plunges us straightaway into the outdoor space where this Chinese sage must have spent much of his time, even if, upon closer inspection, we learn that this is a sort of figurative landscape, a *stylization of the mind* to a certain extent as well:

Not a river, a road. What flows without flowing.
The sentence we read and reread
with our feet, not the pages we write
and rewrite and rewrite with our hands.

The poem starts *in medias res* at it were. *What is* is not a river, but a road instead. 2,500 years ago old Herakleitos embraced the flux doctrine that reality is in a state of perpetual change; to the Oriental sage, what matters above all seems to be what remains the same, so that the emphasis is on motion and on rest, on change and stasis as the two sides to the same coin. Hence *what is* is flowing and not flowing – i.e., it is in perpetual motion and yet it stands still at the same time. From here follows the complex metaphor at the geographical centre of this stanza: the road is a long sentence or a gigantic text that our feet read time and again as we walk along it; it has nothing to do with the pages of a book whose pages we write and turn with our own hands. Feet are always more respectful towards *what is* than hands in Bringham's thinking. Pressing firmly on the ground where we stay put, the feet constitute an elemental link between the body and the earth. Hands, on the contrary, serve the purpose of touching things, but in touching things we might be damaging them as well, and we humans are particularly good at damaging whatever we touch.

The second and third stanzas of “Yongjiā Xuánjué” elaborate further on *what is* in detail. They expand the metaphor that *being* is the road humans walk upon with their feet. It is no happy coincidence that the statement “*What is is wherever the living / are walking*” should be repeated twice. It does not matter much where the living (not just human beings but all living things in this world) go, they will stumble upon *what is* along their way, for *what is* is inescapable and pervasive everywhere. That *being* is ubiquitous is made clear in the verse lines following the initial statement, where it is conceptualized as a moving creature with a life of its own: “*It limps through the earth, / swims through the water, flies through the air.*” The parallelism of these verse lines highlights the presence of being everywhere one might turn to look: earth, water and air are the natural elements where it finds itself at home. Once again, the emphasis is laid on the fact that *what is* moves and does not move at the same time: “*and it runs the full distance without ever moving.*” The realm where *what is* limps, swims or flies is a realm of freedom; it is not “*where the dead have planted / their flags,*” which is possibly meant as a reference to humans’ impulse towards domination over what they do not own. And there is precisely enough room for *the dead*, *the unborn* and *the newborn* where the living walk and breathe and live. This first movement of Bringham's poem closes with a stanza that encapsulates a wealth of meaning. It is concerned with the elusive or eel-slippery nature of *what is* and of the truth,⁵⁸ which cannot be easily expressed through words, or touched with one's hands, or conveyed to others in an easy manner. What relation could our spiritual awakening have to words? However hard one might try to catch the truth, it manages to fly away; only when one does surrender and treads the path of *not knowing* (and *not owning*), does knowledge come to pass. If you search for the truth intentionally, you will

⁵⁸ Yongjiā Xuánjué expresses it thus in his *Song of Enlightenment*: “It cannot be slandered / and cannot be praised. / Its substance is like space; it has no shore. / It does not leave where it is; it is always clear. / If you search for it, know that you will not see it. / It cannot be grasped; / it cannot be rejected. / Just what can be obtained within the unobtainable?” See *Song of Enlightenment*, by Great Master Yung Chia of the T'ang Dynasty, p. 53.

not see it. You might go to the far corners of the world in search of it, but you will not see it unless you just let it overwhelm you. At that point, you become enlightened all of a sudden to the Buddha-nature within yourself. Hence, by placidly walking along the path, the truth comes to you of its own accord, unforced, naturally. But, at the same time, this stanza also celebrates the ubiquity of *being*, which blooms into full flower all around. Wherever living things turn to look they feel the benign embrace of *being*:

Your hand cannot hold it; your mind
cannot leave it behind. When you chase it,
it runs. When you walk, it comes toward you.
Wherever you stand, it sprouts all around.

Now, Bringham's poem has got the simplicity and perfection of a circle. In the second movement of "Yongjiā Xuánjué" we are plunged back into the outdoor natural world evoked in the first stanza. The fifth stanza is a spot of obscurity within the poem, but upon closer inspection it yields its meaning generously: *being* has got an inherent unity in it, and it finds its expression in the multiplicity or plurality of living things that make up the world. Hence, from *the face of being* emerge "*self-portraits and portraits*" every day, transient and ephemeral though they might be. One nature pervades all things; one root divides into the myriad things populating this world. Therefore, there is no way of ascertaining whether any of these living things has come, has already left or is staying, for everything flows without flowing. This many-sided nature of *what is* enters our own nature, with which it is united as one. "*Not a river, a road,*" says the sage's voice beneath these lines again, just to remind us that *being* is found embodied in the image of the road being travelled by these ancient monks that felt at home in the open air, under the vast sky, amid a forest or by a running stream. The stream is seen as keeping an uninterrupted dialogue alive with those walking by it: it "*speaks with each one / of their uninterchangeable voices.*" Which is a reminder that all humans are unique and irreplaceable. Mr Old, Mr Serious, Mr Nostril and Anonymous are possibly only a linguistic means to refer to different human types.

And in the closing stanza the speaking voice beneath these lines addresses all human relations possible to beg them to talk to him "*as the trees do, as the wind does, if you also / have something, as they do, to say.*" Nature speaks all the time, and the sage only has to pay attention to hear what it has to tell him. All the phenomena of the universe proclaim that *being* is, that the fundamental substance underlying all living and non-living things is forever still and undisturbed, and yet in motion at the same time. Though it is silent and has no words, it is singing all the time. It remains unclear whether humans have to tell relevant things all the time, or part of the time. The trees and the wind have got something of the utmost importance to say: they do sing of *being* as something that transcends tiny humans that think themselves the centre of the universe when they are not. That is why the trees and the wind are teaching this seventh-century Zen monk a lesson of humility and gratitude after all. A handful of centuries later, Bringham is rescuing his thinking and his singing from the mists of this distant past for us to learn this elemental lesson as well. Outside the transmission of wisdom found in books, there is the possibility to awaken to what is fundamental. Having awakened to one thing, one awakens to everything, for all is subtly connected to everything else. One needs to follow only one's mind. As Yongjiā Xuánjué himself puts it in a most accomplished text on the jewel-like power of the mind,

The mind-mirror is bright;
its reflections are unhindered.
Vast, lustrous, and shining,
it pervades worlds like sand-grains.

In it appear the images of the myriad phenomena;
a pearl of perfect light, neither within nor without.⁵⁹

VIII · SARAHA

“Sarāha”⁶⁰ is possibly the most accomplished of all the compositions making up the Oriental sages sequence. It is also the only poem in *The Book of Silences* that was originally published as a separate broadside in a limited edition of only 150 numbered copies. And it concerns a Buddhist poet-philosopher known as Sarāha, the only one to whom Bringhurst devotes two poems – this one and the poem entitled “Sarāha’s Exercise for Beginners”, which is the companion piece. Sarāha is the primordial spiritual poet, one capable of bringing together poetry and philosophy with perfect naturalness. This must have been appealing to Bringhurst from the start. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Saraha was “A Buddhist philosopher-poet living in Bengal and writing in Apabhramśa, perhaps in the eighth century AD.” And in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us of this sage in these terms: “Sarāha (8th century AD?) A philosopher-poet living in Bengal and writing in the Apabhramśa language.” Even briefer is the entry in the 2001 edition of *The Book of Silences*: “Saraha c. 750? Northeastern India.”⁶¹ In giving voice to Sarāha’s thinking in this accomplished poem, Bringhurst is installing himself in a tradition reaching back to the beginning of time. In emulating the voice of his spiritual master and literary ancestor, he is showing us the depth and breadth of the poetic lineage to which he considers himself heir. Needless to say, the immense creativity that the Oriental sages’ thinking and singing inspired in Bringhurst is astonishing. Indeed, *The Book of Silences* has been a work in progress from 1986 to 2009.

Not much is known of this legendary sage beyond elementary information. The details of his biography are based, however, upon an abundance of Tibetan hagiographies dating hundreds of years beyond even the latest dates assigned to him. Thus, “the figure to whom the name “Sarāha” is given is a construct of the religious imagination, and a vibrant

⁵⁹ See *Song of Enlightenment, by Great Master Yung Chia of the T’ang Dynasty*, p. 42. In the commentary following this excerpt, the Tripitaka Master Hua says: “One’s own Mind is like a great, bright mirror, which reflects all the ten thousand things without any one of them hindering any other. Each thing retains its basic characteristics and is not confused in the substance of the mirror. [...] This Mind-mirror is far-reaching, great, bright, and still, permeating the “Great-thousand” universes, numerous as grains of sand. Nowhere does its light fail to circulate; nowhere does its brightness fail to shine. It is so great that there is nothing outside of it, and so small that there is nothing within it. [...] This perfection of radiance, this brilliance of light, is the fundamental substance of our mind’s light.” Ibid., p. 43.

⁶⁰ “Sarāha” was originally published as A.23 • *Saraha*. Lexington, Kentucky: The King Library Press, 1984. Folded broadside, 26 × 33.5 cm. “Published in an edition of 150 copies, numbered and signed.” Contents: A poem (rpt. in A.32, A.47, A.65, A.92, B.18, C.45). Then it was reprinted in A.32 *Pieces of Map, Pieces of Music* (1986), A.47 *The Calling* (1995), A.65 *The Book of Silences* (2001), and A.92 *Selected Poems* (2009). It was also reprinted somewhere else: (1) B.18 *The New Canadian Poets, 1970–1985*, edited by Dennis Lee, Toronto: McClelland and Stewart, 1985: pp. 26-39. Contributions: “These Poems, She Said”, “Deuteronomy”, “Demokritos”, “Leda and the Swan”, “The Stonecutter’s Horses” (all rpt. from A.14); “Sarāha” (rpt. from A.23). (2) C.45 “Sarāha”, University of Arizona Poetry Center Fall 1985 Calendar of Readings (Tucson, Arizona). Rpt. from A.23. Accompanied by biographical note and announcement of reading. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: wù wǒ tóng gēn = *things I same root*.

⁶¹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

one at that.”⁶² Far from being a monolithic figure, he is variously depicted as being a conveyer of doctrine, an exemplar for living, an object of reverence and a source of blessings. But he is steeped in obscurity and we might never know for sure whether he composed all or any of the large corpus of spiritual songs traditionally attributed to him. Sarāha⁶³ lived possibly in the late 8th and early 9th century CE. Born in eastern India to a Brahmin family, he is considered one of the founders of Buddhist Vajrayana, in particular of the Mahamudra tradition. He was a student of Haribhadra, who was in turn a disciple of Shantarakshita. Sarāha belongs among those masters who gave voice to their experiences not in learned treatises of philosophy, but in songs that are a perfect incarnation of philosophical poetry or poetic philosophy. Performed on the banks of the River Ganga, the *dobās* (songs in couplets) of the great Brahmin Sarāha are his most important work of spiritual philosophy and are compiled in *Dobākosa (The Treasury of Dobā Verses)*. According to Kurtis Schaffer, *dobās*⁶⁴ may be described as “rhapsodies, or emotionally charged verse expressions of spiritual experience whose formation is often piecemeal, owing more to the tides of tradition than any single author.”⁶⁵ Schaffer celebrates the uniqueness of Sarāha’s work in these enthusiastic terms:

Sarāha’s *The Treasury of Dobā Verses* is a gripping, often iconoclastic poetic song. *The Treasury of Dobā Verses* begins with a sarcastic critique of social, ritual, scholastic, and meditation practices considered by Saraha to be absurd and useless or detrimental to spiritual growth. The leitmotifs of the work are the immediacy of the ultimate spiritual experience in human bodily existence, the impossibility of adequately expressing this experience, and the necessity to engage in the proper meditative practice with an altruistic attitude under the guidance of one’s spiritual mentor in order to bring such an ecstatic experience to life in oneself. Yet Saraha’s

⁶² Kurtis R. Schaeffer, *Dreaming the Great Brahmin. Tibetan Traditions of the Buddhist Poet-Saint Saraha*, Oxford: Oxford University Press, 2005, p. 4. Schaeffer claims that most scholarly studies devoted to the Indian sage have focused almost exclusively on trying to reconstruct the details of his biography. But the Brahmin is an “unknowable historical figure” due to the scant sources of reliable information available. Therefore, his study is concerned instead with “studying Tibetan, Nepalese, and Indian hagiographic narratives of Saraha’s life as constituting interesting literary traditions in their own right.” *Ibid.*, p. 4. Thus, his aim is to shift scholarly attention to “the literary life and history of the work [Saraha’s] as it was taught, transmitted and transformed by members of Buddhist traditions in India, Nepal, and Tibet, as well as to the development of the saintly figure of Saraha in Tibetan and Indic narrative traditions.” Schaeffer is interested in “the vicissitudes of the work’s textual corpus” and in the “immense creativity that his image inspired in a number of religious and cultural arenas.” *Ibid.*, p. 5.

⁶³ As for the meaning of the sage’s name itself (Saraha or Sarahapa), “it is composed of the words *sa ra*, which is “arrow,” and *ha pa*, which is “to have shot,” “to have flung.” Therefore, there are two explanations: that this is a name of confidence, and that since the *dākinī* of primordial awareness shot him with an arrow, primordial awareness dawned upon him.” Schaeffer, *ibid.*, p. 135.

⁶⁴ In his *Ornamental Flower for the Dobās*, Chomdern Raldri explains the meaning of the word *dobā*: “Since *dohā* is “plentiful” or “uncontrived,” [dohās] teach the actual mind which is uncontrived by afflictive emotions or concepts [...] it is milking the primordial awareness of one’s mind.” Schaeffer, *ibid.*, p. 130.

⁶⁵ Kurtis R. Schaeffer, *ibid.*, p. 6. Schaeffer explains the concept in detail: “From as early as the seventh century CE, later North Indian Buddhism saw the emergence of a poetic form of religious expression, songs in the late Middle Indo-Aryan dialect of Apabhramśa, of various lengths and consisting primarily of rhymed couplets, extolling the beauty and simplicity of tantric spiritual experience and social practice. In time this genre came to be designated *dobā*, the name of the meter most frequently employed. From the seventh to the twelfth century these songs were performed, commented upon, and transmitted both orally and through manuscripts. [...] Though several have come down to us in Apabhramśa [...] thanks to the efforts of Tibetan, Nepalese, and Indian scholars of the eleventh through the thirteenth century, the largest collection of these Buddhist songs is to be found in Tibetan translation. Saraha’s *Treasury of Dobā Verses* is thus but one of a handful of such late Indian Buddhist poetic works, though in many ways it was the most significant in terms of its impact on later Buddhist literature and thought. Saraha is heralded by a number of Tibetan Buddhist traditions as the paramount Indian “spiritual adept” or *siddha*, and he stands at the heart of a rich hagiographic corpus of writings...” *Ibid.*, pp. 5-6.

work is intriguing not only by virtue of its often beautiful expression of a Buddhist vision of the relation between human existence and ultimate reality, but also because it has come down to us in a state of fantastic variegation and has meant many things in many forms to those who have been involved with it. From version to version, lines are reordered, omitted, or expanded; vocabulary is changed, forming a constellation of variant works with a shifting core.⁶⁶

Sarāha was a singer of spiritual songs and he sang his songs “not in order to argue some particular doctrine or preserve his poetry for posterity, but rather to bring his disciples to enlightenment.” His singing was that of an enlightened being and the act of singing was “nothing less than an enlightened act, geared toward liberating his disciples.”⁶⁷ His songs were a means not just to bring his disciples along the path of enlightenment, but means to teach oneself about one’s true nature.⁶⁸ The work of writing, editing and redaction was left to his disciples. Spiritual songs were thought to have been orally composed and only later written down. Thus, the primacy of speech over writing, of the master’s oral instructions over the written word, is clear from the outset in the Buddhist tradition. Sarāha’s singing was the product of a revelation given to him and the *dobās* were a kind of revealed literature. Of course, writing was essential to the perpetuation of the *dobās* for the benefit of later spiritual seekers, but orality is praised as the lifeblood of the instruction of the adepts. Thus, his role in the creation of the *dobās* is found in the opening passage of Chomden Raldri’s *Ornamental Flower for the Dobās*: “The Great Brahmin of Southern India, Saraha, heard [the Buddhist teachings] under the arcane lord Vajrapāni, student of the Buddha Vajradhāra, and under the dākinī of primordial awareness, Sukhasiddī, and composed this text of the *Dobā*... [Saraha] taught it to Master Padmavajra, Noble Nāgārjuna and Śabareśvara.”⁶⁹ Thus, the power of Sarāha’s words in many of his spiritual songs, marked by what Schaeffer calls “the predominantly apophatic rhetoric of Buddhism,” is precisely their message of ineffability in accord with their revealed nature. There is a contradiction inherent in any attempt to speak of a spiritual experience, which is by definition inexpressible. Songs have the power to convey the inexpressible, to stand above the ordinary language of learned treatises to inspire others towards enlightenment. But, of course, the words of the *dobās* are nothing more than indicators of the truth, not the truth itself.⁷⁰ The essential meaning lies not in the words themselves, but beyond themselves.

The profundity of philosophic thought conveyed in Bringhurst’s poem is of a precious and rare intensity. His three-stanza poem on Sarāha consists of three distinct movements for the reader’s soul. The first movement is a miniature meditation on the nature of *what is* and *what isn’t*. To Sarāha’s mind, enlightenment exists within every single human being. Hence his fundamental plea to aspirants and spiritual seekers was not to search anywhere for truth but in one’s mind,⁷¹ and so the opening lines of “Sarāha” are a celebration of the mind’s power to apprehend the ultimate essence of reality:⁷²

⁶⁶ Schaeffer, *ibid.*, p. 6. Schaeffer offers a translation of Sarāha’s *Treasury of Dobā Verses* alongside a fascinating 13th-century commentary entitled the *Ornamental Flower for the Dobās* by Chomden Raldri (1227-1305). Throughout our analysis of Bringhurst’s poems on Sarāha’s thinking, we will be quoting from Schaeffer’s translation.

⁶⁷ Schaeffer, *ibid.*, p. 84. The Tibetan traditions speak of Sarāha as a singer of songs, not as a writer. “The copying down of the Great Brahmin’s inspired aphorisms were seen as the work of his disciples, grand-disciples, and spiritual descendants.” *Ibid.*, p. 85.

⁶⁸ Schaeffer, p. 96.

⁶⁹ Schaeffer, *ibid.*, p. 86 and p. 129.

⁷⁰ Schaeffer, *ibid.*, p. 97.

⁷¹ Sarāha celebrates the power of the mind with these verse lines: “*Mind itself alone is the seed of all, / From which existence and nirvana emanate. / To the mind, a wish-fulfilling jewel, / Which grants what fruit is desired, I pay homage. / Because the mind is bound, so one is bound. / If just this is released, there is no doubt. / [...] The mind must be apprehended*

What is
 is what isn't. What isn't
 is water. The mind is a deer.
 In the lakes of its eyes,
 the deer and the water
 must drink one another.
 There are no others,
 and there are no selves.
 What the water sees
 is – and is not what you think
 you have seen in the water.

At the heart of this stanza there is a handful of fundamental ideas central to the Indian sage's thinking. In the first place, a potent equation is posited in the very opening lines: *what is* is *what isn't*, which is *water*. From the verse lines that follow we gather that *water* stands for reality, whereas the *deer* stands for the mind, i.e. for the self coming to terms with the world. What interests Sarāha above all other things is the primordial confrontation of self and reality. Eyes are the primary sense organ through which the self absorbs reality, but also the windows wide open onto the world through which the self must let itself be absorbed by reality itself. Hence, "*the deer and the water / must drink one another.*" The perfection of insight remains in the mind, which is radiant light. This is a form of true, non-conceptual primordial awareness of the ultimate nature of things. In some of his verses of his *Treasury of Dobā Verses* (74-75), Sarāha affirms that "*One in whose heart the mentor's words have entered / Will as if see a treasure in the palm of their hand.*"⁷³ Technically speaking, these lines concern the co-emergent primordial awareness through which the mind comes to be non-dually aware of the ultimate essence of reality. "Because this radiant light, the nature of the mind, arises simultaneously with cyclic existence [and] all being, it is called "co-emergent," and since the two obscurations are overcome when that is directly realized and meditated upon, [it is] also called "primordial awareness."⁷⁴ The dualism of perceiving subject and perceived object is thus transcended, and the mind "unaffected by defilements or concepts, dwelling like the unmarred sky, pervades all things."⁷⁵ In this respect, that "*There are no others, / and there are no selves*" means that dualism is transcended. The highest truth is a primordial awareness free from apprehender and apprehended. Or, to put it differently, co-emergence is non-dualistic self-knowing. When mind realizes mind, objects appear as if in a dream: "*Just as salt dissolves in water, / So mind dissolves into nature. / Then self and other are seen to be the same.*"⁷⁶, says Sarāha in lines 387-389 of his poem. The mind is primordial wisdom and it leads the path towards the enlightened body of reality. It is only natural that the ideographic form accompanying Bringhurst's poem in *Pieces of Map, Pieces of Music* (1986) should read as follows: "*Things I same root.*" Sarāha cuts away the

like the sky, / Just like the sky, so should the mind be held. / When this egoic-thought becomes nonegoic, / By this unexcelled enlightenment will be attained." (ll. 167-178 of his *Treasury of Dobā Verses*). Schaeffer, *ibid.*, p. 147. The thought occurs that this is the Oriental equivalent of Walt Whitman's "Song of Myself".

⁷² In his own poetry, Sarāha speaks of the wrong apprehension of reality: "*For some [reality] is conceptually visualized as space, / Still others would have [reality] possess emptiness. / In general they are fixed in contradiction.*" (ll. 47-49 of his *Treasury of Dobā Verses*). As for the reference to *conceptualizing space*, this is "an assertion that the macrocosmic and microcosmic are similar. [Impermanence] is seen in terms of space, time, and direction. In the first case, space is seen as impermanent because the clouds, planets, and stars [are impermanent]. [In the second case,] since time changes, it is seen to be impermanent. [In the third,] due to the directions of the rising and setting of the sun, [direction] is seen to be impermanent. Furthermore, a simple look at the sky refutes [this]." Schaeffer, *ibid.*, p. 136.

⁷³ Schaeffer, *ibid.*, p. 138. These words are evocatively reminiscent of Blake's ten centuries later.

⁷⁴ Schaeffer, *ibid.*, p. 132.

⁷⁵ Schaeffer, *ibid.*, p. 131.

⁷⁶ Schaeffer, *ibid.* p. 161.

errancy of dualistic appearances of subject and object.⁷⁷ When there is absolutely no awareness of self and other, a state of perfect bliss is achieved by the truth-seeker: the reality of the mind shines everywhere and a primordial awareness arises all of a sudden that sheds light on the innermost recesses of all things. Furthermore, “*What the water sees / is – and is not what you think / you have seen the water,*” says Sarāha’s voice at the end of the first stanza in Bringhurst’s poem. What reality sees *is* and it might not exactly conform to what the apprehender sees as a reflection on the water’s surface. This means that perception is not altogether reliable in our intellectual confrontation with the world. Breaking free from the web of illusion or delusion, we must turn the root of all appearances into vain emptiness and install ourselves in the realm of non-conceptualization. Even seeing is conceptual to a certain extent. One must cultivate non-conceptual primordial awareness, free from the bondages of afflictive emotions and conceptualization. In this context, seeing, hearing, touch and so forth are nothing more than “dream visions in the life of the mind.”⁷⁸

The second part (and stanza) of Bringhurst’s poem further elaborates on non-conceptual emergence and on the abandoning of thinking, conceptuality and thought. First, Sarāha gives voice to what looks like a paradoxical statement: “*There is something, no nothing, / but neither. No is / and no isn’t, but neither.*” As the primordial awareness arises, the mind is set free from the external things, which shine like illusions in a dream. It is not possible to draw any distinctions any longer. Being aware of the self, the self itself is “aware of everything as stainless ultimate reality.”⁷⁹ Then, Sarāha encourages the truth-seeker not to “*defile the thought / by sitting there thinking.*” By abandoning thinking, and breaking free from all the fetters of afflictive emotions and conceptualization, the enlightened mind penetrates the essence of reality. By leaving the mind without concepts alone, the ego is no longer deluded or deceived by insubstantiality. “*Do not corrupt your mind, / whose nature is pure, with meditative concentrations,*” says Sarāha in verse line 97 of his *Treasury of Dobā Verses*.⁸⁰ Then nothing exists externally; those who think that what appears to the mind is external are seized with suffering. When the mind is purified to its very essence, it learns that the outer is inner: if primordial awareness dwells in the body, then there must be some kind of underlying unity beneath mind and body and something else. At this point, Sarāha’s poetic persona in Bringhurst’s poem affirms the potent equation of mind, body and speech:

No difference exists
between body and mind, language
and mind, language and body.
What is, is not. You must love,
and let loose of, the world.

⁷⁷ As he himself puts it in 113-118 in his *Treasury of Dobā Verses*, “*In the highest great bliss, / There is no self, there is no other. / In front, behind, throughout the ten directions, / Whatever you see, that is this. / This very day the protector cuts away errancy, / Now you need not ask anyone else.*” Schaeffer, *ibid.*, p. 143. The vision of dualistically appearing subjects and objects ceases the very moment the mind is plunged into primordial awareness: “*Looking and looking at the nature of the primordially pure sky, / Vision of it ceases. / As in time even [conceptuality] ceases*” (139-141), says Sarāha in his verses. Schaeffer, *ibid.*, p. 144.

⁷⁸ Schaeffer, *ibid.*, p. 153. Sāhara says (ll. 255-260): “*Today the glorious master has taught / That nature is primordially nonarising, so I understand. / Seeing, bearing, feeling, memory, / Eating, smelling, wandering, going, and staying, / Chitchat and conversation; / If you know that these are mind, nothing moves from this unitary kind.*” *Ibid.*, p. 153. And again, in lines 335-336: “*Objects are totally purified, unable to be relied upon; / To be taken up only as emptiness.*” *Ibid.*, p. 158.

⁷⁹ Schaeffer, *ibid.*, p. 155.

⁸⁰ Schaeffer, *ibid.*, p. 141. Somewhere else, Sarāha says: “*All being are belittled by thought... [...] / Primordial awareness is unsurpassed by thought.*” Lines 189 and 194. Schaeffer, *ibid.*, p. 149.

Body, mind and speech are something of a talisman in Bringham's poetry. They are the title of a key section (section IV, "Body, Speech and Mind") in *Tzibalem's Mountain* (1982) and they are the gist of an early short lyric poem like "A Quadratic Equation". The three realms of mind, body and speech are inextricably linked to each other, they are one and the same. It is in the body that primordial awareness arises, and the body is the house of the mind, and speech is the means through which we try to communicate the inexpressible. Enlightened body, mind and speech look at the world from a fresh perspective. It is not necessary to travel far away in search of the truth: it is closer at hand, within the limits or boundaries of one's self. The potential for self-enlightenment resides within every single human being, for the Buddha exists in the body too. Thus, in lines 232-234 Sarāha says: "There is no other boundary region like the body; / I, virtuous have seen this for good and with certainty. / Stay in the mountain hermitage and practice self-restraint."⁸¹ What is left for humans to do is to stand awed in the face of the mystery inherent in *what is*, to love the world just for what it is instead of yoking it down under the vacuous burden of conceptualization. To let loose of the world possibly means what Sarāha says in these verse lines (107-112):

Do not divide, do not unify,
Do not fabricate differences in kind;
Transform the whole of these three realms [body, speech, mind]
Into one color, one great passion.
Here there is no beginning, middle, or end,
No existence, no nirvana.⁸²

The third part of "Sarāha" concerns the very nature of poetry itself. The poem turns self-reflective for a while and directs the reader's attention to the fact that poetry has nothing quintessentially to do with words.⁸³ Sarāha is a poet-philosopher, and so he knows firsthand what it means to try to make poems to convey difficult ideas to his disciples. That poems are made out of words seems to be an undeniable fact, but words are nothing more than pointers to the truth, not the truth in themselves. They are bricks out of which

⁸¹ Schaeffer, *ibid.*, p. 152.

⁸² Schaeffer, *ibid.*, p. 142.

⁸³ In an unpublished interview conducted at the *Facultad de Filosofía y Letras* of the University of Córdoba (Spain) on 7 April 2010, when the author was asked what poetry was made out of, he answered thus: "There are many people who use the word *poetry* as the plural of the word *poem*. I tend not to use it that way. I think the plural of *poem* is *poems*, and *poetry* is a good name for the substance, or the quality, or the essence of what makes a poem a poem. Words can call it into being, perhaps. [...] I mean, there are all sorts of popular expressions. I mean, you might use *poetry* to mean, to refer to things that are not necessarily made out of words. We can talk about the poetry in the situation, the poetry of a piece of music, the poetry in a painting, the poetry in a piece of choreography. We talk about *poetic justice*. All these popular expressions are pointing at some quality that isn't necessarily to be found in words. In fact, it might be one of its characteristics: that it resists being confined in words. But words are one of the things we use to try to catch it. So I think of this word machine, these word structures as a little bit like the net that hunters use to try to catch, for instance, butterflies or whatever. So I think it is a kind of figure of speech, too: to think that the thing to catch poetry in is itself poetry. [...] I become more and more convinced as I grow older that poetry is a quality of existence, and that we try to capture this, I don't know, however we can, but the favourite way, or the most famous way, is with human language. I don't see anything inherently poetic in language itself, but it can become poetic, maybe naturally become poetic the way flowers bloom and the sun shines. But I think that if your picture of poetry is confined to these little constructions made out of words that you find in poetry magazines, then you're missing the point. That's just a way of trying to get there, a way to try to touch or point at this thing. The truth is all around us, but it resists being caught, and it resists being carved up into manageable pieces that you can put into a book and on a page. So you are always, we are always, I think, reduced to gestures, to trying to allude to something that we can't quite put on a page or in a book. You don't have to call it poetry, you can call it music or even call it *being*, or even call it whatever you like. But *that*, the thing whatever it is, is what I am interested in. And I hope that the poems participate in that in some way that they direct people's attention toward that."

poems are formed, but not poetry itself. To Bringham, poetry is a quality of existence at large, and speech, human languages, are just one of our favourite means to try to capture *what is*. Poetry is synonymous with *being*, and *being* is somehow ineffable or inexpressible.⁸⁴ Poems are something else: the visible manifestations of poetry carved out of words, in much the same way other art forms are made of some other basic matter. Sarāha stumbles upon this as if he were experiencing a moment of revelation with the texture of transcendence:

I used to write poems,
and like yours, they were made
out of words, which is why
they said nothing.
My friend, there is only one word
that I know now, and I have somehow
forgotten its name.

It remains a true mystery what the word Sarāha has just somehow forgotten is. Once again, the primacy of speech over writing is taken for granted as part of the Buddhist belief that spoken instruction from the spiritual master takes precedence over the writing down of his words on the part of his disciples and descendants. After all, poems (spiritual songs) were for Sarāha just a means to lead his students along the path towards enlightenment.

IX · SARAHA'S EXERCISE FOR BEGINNERS

“Sarāha’s Exercise for Beginners”⁸⁵ is the companion poem of “Sarāha”. In a sense it is also an exacting poem, one that requires of readers that they pay attention to the profundity of thought conveyed in each stanza, pregnant with Sarāha’s philosophical ideas. It is nonetheless intended as a simple exercise for beginners, for those who are not yet familiar with the Indian’s poet-philosopher’s thinking and singing. The starting point of the poem is a brief reflection on the nature of the mind, which is the ubiquitous theme in “Sarāha”, concerned as it is with exploring in depth the relationship between perceiving self and perceived world. A handful of verse lines (477-480) in Sarāha’s *Treasury of Dohā Verses* might have been the source of inspiration for Bringham’s first stanza: “*Let the elephant-mind wander free, / Let it answer to itself. / {Since you understand it, don’t ask anything of it.} / Let it drink the water from the skyward river, / Let it be at lakeshore as is its wont.*”⁸⁶ In the poet’s hands, these lines become a beautiful five-line stanza of utter simplicity:

What is the brain but the back of the face?
Climb down from the elephant
of the mind you are riding, climb down
and leave it to drink

⁸⁴ Sarāha says (lines 283-286): “*Free of color, quality, words, and examples, / It cannot be spoken, and in vain I point it out. / Like the bliss of a young woman, desirous in love, / Who can teach its noble power to whom?*” Schaffer, *ibid.*, p. 154.

⁸⁵ “Saraha’s Exercise for Beginners” was first published in A.32 *Pieces of Map, Pieces of Music* (1986). Afterwards, it was reprinted in A.47 *The Calling* (1995) and in A.92 *Selected Poems* (2009), but it was not included in A.65 *The Book of Silences* (2001). It was also reprinted in B.66 *Parole sull’acqua: Poesie dal Canada anglofono e francofono* (bilingual anthology, English and Italian), a cura di Liana Nissim e Caterina Ricciardi. Roma: Edizioni Empiria, 1996: pp. 200-204. Contributions: “Death by Water” (rpt. from A.14); “Saraha’s Exercise for Beginners” (rpt. from A.32), with Italian translations. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: shi fei yi qi = *yes no one breath*.

⁸⁶ Schaeffer, *ibid.*, p. 167-168.

or to drown in the river.

The metaphor at heart of this stanza is exactly the same as in the Indian sage's poem quoted above: the mind is an elephant, and by asking truth-seekers to climb down the elephant, Sarāha's poetic persona in Bringhurst's piece is encouraging them to leave conceptualization aside, to settle themselves in the realm of primordial awareness, free from the bondages of thought. After all, the brain is "*but the back of the face,*" one more bodily part in humans' physiological morphology. However, we do know that it is in the mind that the potential for self-enlightenment resides after all. But first of all it has to break free from afflictive emotions and concepts to be able to reach into the ultimate essence of reality. Hence, "*What stirs in the heart / comes to rest in the heart / like dust in a cave*" is possibly meant as a reference to those afflictive feelings that reside in the heart as the indestructible vital point in the human body where the luminescence of the mind fades away under the impact of violent emotions. Among the benefits of gaining an awareness of co-emergence is precisely that whichever pain dulls the heart is annihilated and it becomes dust that settles down on the floor, as if in a cave.

However, the core of Bringhurst's poem is to be found in the third stanza, which captures the essence of Sarāha's philosophical thinking. At the heart of this stanza are a string of what looks like tautologies or truisms. First, "*Thought is thought, and not / anything more*", insists the poetic voice. It is no panacea if the truth-seeker is to make any progress at all. Secondly, "*Seeing is seeing*", and even seeing is conceptual. Thought and seeing are nothing more than paths that seek imperfectly to attain enlightenment, which is only possible when a dualistic mode of thinking is transcended and the distinction between inside and outside, between apprehender and apprehended, between self and other, vanishes into nothingness. Thirdly, "*What is is what is*" means that vast reality is manifest and visible from the very beginning of time and humans should be ready to see it just for what it is. All three statements coalesce logically into yet another seemingly paradoxical statement. Thought, seeing and *what is* should lead the spiritual seeker towards unity, which is one and zero at the same time. All distinctions vanish when the mind comes to the realization that nothing is external, that the mind is the light that shines upon and penetrates into all things in this world.⁸⁷ When the egoic mind is released, the supreme nirvana is attained, for the jewel of the enlightened mind shows things as they are:

These three together
are what they are, and their total is one,
which is what there is and is equal
to zero. A is not A; one is not one;
this too is the rule.

Bringhurst's poem closes with a three-line stanza dealing with the unspeakable, the unspoken and the ineffable. The language is kept simple and gnomic: "*Only insofar as one is / speechless can one really / think with words.*" And the message is crystal-clear, in spite of the seeming opaqueness of this statement: the experience the enlightened mind goes through when nirvana is attained is inexpressible. Or, to put it differently, the spiritual awakening undergone by the seeking soul in the face of reality is hard to communicate through words of the mouth. To the Buddhist frame of mind, words are inadequate to express the

⁸⁷ In his verses (lines 504-514) Sarāha says: "*Enlightenment does not dwell in the words or in the home. / Completely aware that this is how it is, / Through the stainless nature of the mind, / Base everything upon nonconceptuality. / This is self, just as this is also other. / What is meditated upon, who meditates – / Free these from the bonds of divisiveness, and / The Self will be liberated. / {Just like what is seen in the ocean:} / <Just as when the ocean becomes placid, / Sea foam dissolves into the water that it is.> / Do not commit the error of self and other.*" Schaeffer, *ibid.*, p. 169.

complexity and intensity of such an experience, and so reaching beyond words into the realm of silence seems to be the only option left. Once one comes to realize that words are not efficient or reliable tools to convey the mystery inherent in *what is*, can one truly start thinking with words.

X · BAIZHANG HUAIHAI

“Baizhang Huaihai”⁸⁸ is Bringhurst’s homage to a Chinese Zen master who lived during the Tang Dynasty. From an entry devoted to this sage in the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music*, we learn the essentials of this sage’s life in a miniature biography provided by the poet himself: “Baizhang Huaihai (Pai-chang Huai-hai, 720-814) Reputedly the author of the first set of Zen monastic rules, including the famous formulation ‘One day no work, one day no eat.’ Born in Fujian, he succeeded Mazū Daoyi (Ma-tsu Tao-i) as Abbot at Nankang in Jiangxi, then moved to Xinwu, also in Jiangxi, under Baizhang Mountain.” Furthermore, in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us very briefly that he was “A Zen monk working in Jiangxi; author of the first set of Zen monastic rules.” And in the 2001 incarnation of the Oriental sages sequence, the poet gives us only basic information concerning the spatio-temporal coordinates of Baizhang’s life: “Baizhang Huaihai (Pai-chang Huai-hai) 720-814? Nankang & Xinwu, southeastern China.”⁸⁹ Being the dharma heir of Mazu Daoyi, his disciples included Huangbo Linji and Puhua. Baizhang is said to have established what might have been the first set of rules regulating Zen monastic discipline. Among those rules is the well-known formulation “A day without work is a day without food”, which points directly to the Zen monks’ farming activities as part of their ascetic daily routine, which helped them to survive in times of want, unlike other sects which seemed to rely more on donations. As to the plausible interpretation of this monastic rule formulated in the form of an aphorism, the thought occurs that there are at least two possible interpretations: one is literal and is meant to suggest that unless one attends one’s responsibilities in the monastery to ensure the provision of daily food, there will not be a chance to eat; another is figurative and has to do with the notion that a day spent in idle leisure is a sad waste of time, for work is a kind of nourishing food or nutriment for the human soul. Whichever the case, the rule is intended to encourage diligence and discipline among Zen monks, to banish idle leisure and laziness. Baizhang’s teachings and sayings were translated as *Sayings and Doings of Pai-Chang* (1978) by Thomas Cleary.

Bringhurst’s piece is written in crystal-clear language, and yet the transparency of the words on the page hides a wealth of meaning and a semantic density that is not easily apprehended upon a first quick reading of the text. Rereading “Baizhang Huaihai” with all the careful attention it deserves, we learn that this is possibly a miniature meditation on how humans come to know anything at all about reality. Thus, throughout the whole piece the reader’s attention is directed towards the mind and the role it plays when the perceiving subject comes to terms with the perceived world of phenomena. A living composition on

⁸⁸ “Baizhang Huaihai” was first published in A.32, *Pieces of Map, Pieces of Music* (1986), and then it was reprinted in A.47 *The Calling* (1995) and, slightly revised, in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009). In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: yī rì bù zuò / yī rì bù shí = *one day no work, one day no eat*.

⁸⁹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

epistemology: this is what Bringhurst's poem might be, but also a perfect illustration of what philosophical poetry or poetic philosophy might be. Thinking and singing go hand in hand once again within the tiny confines of this short meditation, as in the best poems of the sequence on the Pre-Socratic thinkers, or as in the best passages of Bringhurst's elegantly written prose pieces collected in *The Tree of Meaning* or in *Everywhere Being Is Dancing*. In this particular case, Bringhurst gives voice to the Oriental sage's thinking and so, in what follows, we shall try to elucidate how his thinking unfolds. These are the two opening stanzas of the poem:

The mind appears to be
because of what the mind
appears to think of.
Nothing is external. Only

knowing is external. Only
knowing is beyond the reach
of knowing. Pure unbeing
is a seamless understanding of the world.

Just for the sake of clarity in the exposition in our critical analysis, we shall subdivide the sage's train of thought into smaller discernible units. Even though we are well aware that this is an artificial approach, we do not intend to replace the original composition with a purely explicatory commentary. At least three key ideas are discernible here:

- (1) *The mind seems real to us because of the ontological reality of all the things in the world it thinks of.* Or, to put it differently, it is what the mind thinks of that gives it ontological reality. The mind exists because it perceives what are no doubt real objects in the world. Now, Zen is characterized by a direct dealing with the fundamental facts of existence: it abhors generalizations; it enjoys fact, particulars and details instead. By insisting on the idea that the mind's existence is dependent on the very existence of the objects populating this world, the Zen mode of thinking is emphasizing the very physicality of material things, which is an undeniable fact.
- (2) *Everything that is exists in the perceiver's mind, or the mind is the world.* Though this might come as a contradictory statement to the one above, it seems to logically follow from it. If the mind is made up of all the things it perceives in this world, then the whole world is somehow inside the mind, it is absolutely internal.⁹⁰ This is a form of extreme idealism that denies the dualism of perceiving subject and perceived object, as it postulates the essential unity of both of them. It does not, however, deny the objective existence of the world. Hence, "*Nothing is external*" and "*only knowing is external*": in searching for insights into the real, the mind seeks erroneously outside itself for enlightenment when the truth is present there, close at hand, from the start. Knowing *knowing* appears to be not feasible though, for there is no way of ascertaining when one is knowing for sure.
- (3) *Only by shedding one's body and mind is it possible to attain reliable knowledge of the truth.* Rujing Tiantong embraced "the casting off of body and mind" for the truth-seeking individual to gain a valuable insight into the nature of existence. As soon as one gets rid of all the wearisome burden that intellectualizing accumulates upon our shoulders, understanding or sudden enlightenment occurs. "*Pure unbeing*" possibly denotes this breaking through, this getting rid of all superfluous burdens that prevent us from touching the world with our

⁹⁰ This is, by the way, a recurrent idea in Bringhurst's poetry too: the mind is made of all the animals and plants and places in this world, says the poet somewhere else. See, for instance, the opening lines of section IV of *Conversations with a Toad*: "*The mind is the other. The mind / is a long complication of water. The mind / is time, space and all creatures. The mind / is the world.*"

own naked hands; and “*seamless understanding*” is one where there is no split self, looking inwards upon itself and outwards upon the objects of perception it seeks to understand.

As a way of conclusion, the poetic voice claims in the third stanza that “*thinking comes to pass*” only when we acknowledge that knowing and thinking as such do not exist. The path to knowledge for the Zen mind is the sudden breaking through of *satori* – i.e., the enlightenment attained through personal and unmediated confrontation with one’s own being, which hides the ultimate truth of reality one is seeking after all the time. The language deployed by Bringhurst is the pregnant language of paradox, capable of conveying subtle nuances of meaning of impressive complexity to the reader:

When it is known that there is
no such thing as knowing,
thought that no such thing as thinking
is, then thinking comes to pass.

Bringhurst’s composition is a well-wrought artefact in which all words and ideas fall exactly into place to form a beautiful *Gestalt*. At several points throughout out thesis, it has been claimed that the author revisits his own poems time and again to revise, polish and perfect them even more. Sometimes the changes may involve nothing more than substituting a punctuation sign, the replacement of one word by another, or a slightly different line arrangement, but on other occasions the revision may entail the complete rewriting of a whole stanza that changes considerably the whole piece. “Baizhang Huihai” is no exception in this respect. Whereas the first part of the poem concerns the way the mind comes to terms with the real, the second part deals with the nature of *what is*. This is the natural progression of the sage’s train of thought. Of *what is*, the poetic persona highlights two fundamental aspects: (1) “*In all of what is, there is / nothing quite lifeless,*” which means that all in this world is truly alive, even if we humans, self-centred and egoistical as we tend to be, often forget this elemental truth; and (2) “*What is is what you cannot / carry with you and what can’t / be left behind,*” which looks like a paradoxical definition of *being*. After all, words are not completely reliable tools to a Zen monk, who firmly believes in the unmediated personal confrontation of one’s own being with the world as the only path towards enlightenment. It might be worth recalling that in the Buddhist tradition “the spoken takes precedence over the written, and the unspeakable over the spoken,” as Bringhurst points out in the Japanese calligraphy that precedes the sequence of “The Book of Silences” in *The Calling*.

XI · NANQUAN PUYUAN

Being deeply concerned with the serious vocation of poetry, Robert Bringhurst is well aware that there is a wealth of ideas about the ultimate nature of reality to be found in the company of the ancestors, both western and eastern. Ancestors are not quite dead, but truly alive to the mind and to the heart of a poet who is after the universal, after invaluable insights into those fundamental questions that have been asked time and again throughout the history of humankind. Whereas the 12 poems in *The Old in Their Knowing* sequence show him trying to master the lessons of the Pre-Socratics, the sixth-century BCE philosopher-poets living in Asia Minor in the very cradle of Western philosophy, the sequence of often shorter poems in *The Book of Silences* gives us a picture of the poet coming to terms with the elemental teachings of Oriental sages from the Far East. The resulting poems are short impersonations of these sages’ thinking that are reminiscent of the more complex dramatic

monologues Bringhurst composed in the 1970s, particularly the impressive biblical pieces entitled *Deuteronomy* (1974), and *Jacob Singing* (1977), as well as *The Stonecutter's Horses* (1979), on the last will and testament of the Italian humanist Petrarch. As Bringhurst himself puts it in the 2001 edition of *The Book of Silences*, “The speakers of these poems are the ghosts of Asian monks, hermits, philosopher-poets and intellectual trouble-makers, most of them Buddhists, some of them Taoists, some of them too far now in the past to place in any lineage of which we know the name.”⁹¹

Now, in this context “Nanquan Puyuan”⁹² concerns another Oriental sage who lived in China many centuries ago. What this short poem with narrative aspirations conveys is possibly the sense of quietude and calm imperturbability this sage sought to achieve throughout his life in every small gesture of everyday existence. Nanquan Puyuan (Nanch’uan P’u-yuan), 737-834?, was born in Zhengzhou, Henan (China) and spent his life in Anhui Province, in northeastern China. Not much is known of his life, except that he was a Zen master, that he led a solitary life, and that he devoted much of his time to practicing meditation in search of some form of final enlightenment.⁹³ In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Nanquan Puyuan was “a Zen monk trained, like Baizhang, under ‘The Old Horse,’ Mazu Daoyi, in Jiangxi. His own hermitage was farther north, in the oak forests of Anhui.” This biography in miniature is informative enough, as it tells us in a nutshell what ideal of ascetic life Nanquan Puyuan probably embraced. He was named after a mountain in present-day Anhui Province, as he lived as a hermit amid the solitude of the woods nearby. Trees must have meant much to this sage, possibly as much as they mean to Bringhurst himself. As a Zen monk he must have been an ascetic man, dismissing unnecessary material comforts that might hinder the path towards enlightenment.

In Bringhurst’s poem on the figure of Nanquan Puyuan, the emphasis is laid precisely on a sense of beautiful serenity and imperturbable peace of mind. “Let me tell you a story,” announces the speaking voice in the very first line of the poem, which might be Nanquan Puyuan’s or not. The reader’s expectations are somewhat defeated though, as not much happens in this story the sage is about to tell us. Consisting of three movements for the soul, which roughly correspond to the opening, middle and end of a conventional story, the piece seeks to teach a simple lesson in between the lines: it is of the essence that humans be *present* with their entire being in every simple experience and moment in time. There are three characters in Puyuan’s story: a gardener, a cook and a jay. The plot, if this

⁹¹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

⁹² “Nanquan Puyuan” was originally published as C.50, [Eleven poems], in *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. It was then reprinted in A.32, *Pieces of Map, Pieces of Music*, in A.65, *The Book of Silences*, and in A.92, *Selected Poems*. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: yì jiàn guò qīng tiān = *one arrow outdistance blue sky*.

⁹³ “Nanquan Puyuan (748-835) was a disciple of Mazu Daoyi and the teacher of famous Zhaozhou (in Japanese, Jōshū). His lay surname was Wang, and he came from Xinzheng, in Zheng Province. Even before he became an old Zen teacher his students referred to him as “Old Teacher Wang.” Before meeting Mazu, he was already widely versed in the various schools and scriptures of Mahayana Buddhism. At their first meeting, he is said to have “instantly forgotten the net of delusions and delighted in samadhi.” [...] After gaining transmission from Mazu, Nanquan built a solitary hut on Mt. Nanquan in Chizhou and remained there for more than thirty years practicing Zen. A high-ranking official named Lu Geng invited Nanquan to descend from the mountain and honored him by becoming his student. Due to this event, Nanquan’s reputation spread widely and students numbering in the hundreds came to study under him.” See Andrew E. Ferguson, *Zen’s Chinese Heritage: The Masters and Their Teachings*, Somerville (USA): Wisdom Publications, 2000, pp. 104-105.

might be called a plot at all, unfolds in straightforward and simple declarative sentences marked by strong enjambment:

Let me tell you a story. The gardener
and the cook sat together
in the garden. A jay sang. The gardener

tapped his fingernails against
his wooden chair.

The jay does what jays are supposed to do best of all – singing –, whereas the gardener and the cook are sitting together in the garden, apparently doing nothing, in silence in what is possibly an idyllic quiet place. The jay sings twice and then falls silent all of a sudden. In the face of its singing and non-singing, the reactions of the humans involved in this simple scene are different: while the gardener taps his fingernails against his wooden chair, the cook remains unperturbed, “*sitting / quietly, while all this / was happening, sipping his tea.*” That the gardener should echo the jay’s singing with the tapping of his fingernails against the wood of the chair he is sitting on is possibly meant to suggest that there is a subtle connection between these seemingly discrete creatures. Jays use their throats to produce their own music; humans use their hands to emulate the sounds of nature. Possibly this is a too far-fetched interpretation, though, and none of this was intended by the author. But the thought occurs, nevertheless, that the gesture of the fingertips tapping against the wooden chair is no random choice: it might denote impatience on the part of the gardener, or it might consciously echo the singing of the bird, even if only quite clumsily, as though to acknowledge the jay’s presence in the whole scene. Whichever the case, the closing lines of the poem make clear that the whole piece is built around a pair of simple dichotomies – i.e., motion vs. stasis and sound vs. silence. Of course, it is not a happy coincidence that the cook should be sipping his tea quietly while the jay was singing. The tea ceremony has a special significance for Zen practitioners, as it requires that one’s presence of mind be complete throughout the whole process of making, serving and drinking one’s tea. That the final tone should be one of peace and serenity is in accordance with an anecdote concerning the sage’s death:

When Nanquan was near death, the head monk said, “Master, where will you be a hundred years from now?”

Nanquan said, “I’m going to be an ox living down at the bottom of the mountain.”

The monk said, “May I follow you to that place [as an ox]?”

Nanquan said, “If you follow me, you must do so with a single blade of grass in your mouth.”

The master then became ill. He said to the monks, “The stars’ light is dim but eternal. Don’t say that I’m coming or going.” When he finished speaking, the master died.⁹⁴

XII · HAN SHAN

“Hán Shān”⁹⁵ concerns the legendary figure of a Tang Dynasty poet who lived in the ninth century CE and whose name means literally “Cold Mountain”. He lived as a hermit in a

⁹⁴ See Andrew E. Ferguson, *Zen’s Chinese Heritage: The Masters and Their Teachings*, Somerville (USA): Wisdom Publications, 2000, pp. 106-107.

remote region most of his lifetime, dedicated to the composition of poems scattered on stones, bamboo, wood, walls and the rocks in the mountains he called home. All these poems were collected afterwards by Lu Ch'iu-Yin, Governor of T'ai Prefecture, who gives us a moving portrait of the legendary poet.⁹⁶ In a brief but enlightening entry in the "Cast of Buddhas, Ghosts and Other Creatures" at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Hán Shan (c. 800 AD) was "The hermit poet of Cold Mountain, in the Tiantai Range, Zhejiang."⁹⁷ In the "Cast of Suspicious Characters" at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst writes almost the same: "Hán Shan (fl. c. 800 AD) The hermit poet of Cold Mountain in the Tiantai Range, Zhejiang." And in the separately bound section entitled "Contents & Notes" of the 2001 edition of *The Book of Silences*, Bringhurst gives us only essential information regarding this Oriental sage: "Han Shan "Cold Mountain" c. 800 Tiantai Range, Zhejiang Province, eastern China." The recluse is thought to have composed around 600 poems, but not all of them survived. All have an even number of lines, with an odd number of characters in each line throughout the same poem. From the over 300 surviving poems⁹⁸ of this legendary poet is his life to be reconstructed with more or less precision. Hán Shān's poems have often been translated into English, but one of the most accomplished translations is that of the American poet Gary Snyder, whose "Cold Mountain Poems" were published in *Evergreen Review*, no. 6, in 1958. Indeed, Han Shan was a sympathetic figure for the Beat Generation, Gary Snyder and Jack Kerouac among them. In the "Preface to the Poems of Han-Shan by Lu Ch'iu-Yin, Governor or T'ai Prefecture", Gary Snyder meditates on Han-Shan thus:

Kanzan, or Han-Shan, "Cold Mountain" takes his name from where he lived. He is a mountain madman in an old Chinese line of ragged hermits. When he talks about

⁹⁵ "Han Shan" was originally published as C.48 • "Hán Shan", *Prism International* 24.2 (January 1986): 43. It was then reprinted in A.32 *Pieces of Map, Pieces of Music* (1986), in A.47 *The Calling* (1995), in A.65 *The Book of Silences* (2001), and in A.92 *Selected Poems* (2009). It was also reprinted in B.69, *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece. "Poem about Crystal", "Deuteronomy", "Herakleitos", "Parśvanatha", "Nagarjuna", "Sengzhào", "Hán Shan", "Yúnmén Wényan", "Thin Man Washing"; "Sunday Morning" (all rpt. from A.47); • brief essay, "In Praise of Vacant Lots." The calligraphy accompanying this poem in *Pieces of Map, Pieces of Music* reads: hán shan lù bù dào = *Cold Mountain reach no road*.

⁹⁶ See Gary Snyder, *Riprap and Cold Mountain Poems*, Berkeley: Counterpoint, 2004, p. 35-36: "No one knows just what sort of man Han-Shan was. There are old people who knew him: they say he was a poor man, a crazy character. He lived alone seventy li west of the T'ang-hsing district of T'ien-t'ai at a place called Cold Mountain. He often went down to the Kuo'ch'ing Temple. At the temple lived Shih-te, who ran the dining hall. He sometimes saved leftovers for Han-shan, hiding them in a bamboo tube. Han-shan would come and carry it away; walking the long veranda, calling and shouting happily, talking and laughing to himself. Once the monks followed him, caught him, and made fun of him. He stopped, clapped his hands, and laughed greatly – Ha Ha! – for a spell, then left.

He looked like a tramp. His body and face were old and beat. Yet in every word he breathed was a meaning in line with the subtle principles of things, if only you thought of it deeply. Everything he said had a feeling of the Tao in it, profound and arcane secrets. His hat was made of birch bark, his clothes were ragged and worn out, and his shoes were wood. Thus men who have made it hide their tracks: unifying categories and interpenetrating things. On that long veranda calling and singing, in his words of reply Ha Ha! – the three worlds revolve. Sometimes at the villages and farms he laughed and sang with cowherds. Sometimes intractable, sometimes agreeable, his nature was happy of itself. But how could a person without wisdom recognize him?"

⁹⁷ From the entry included in the "Cast of Suspicious Characters" at the end of *The Calling: Selected Poems 1970-1995* (1995), we learn exactly the same: that Hán Shan was "The hermit poet of Cold Mountain in the Tiantai Range, Zhejiang."

⁹⁸ "I ordered Tao-ch'iao and the other monks to find out how they had lived, to hunt up the poems written on bamboo, woods, stones, and cliffs – and also to collect those written on the walls of people's houses. There were more than three hundred. On the wall of the Earth-shrine Shih-te had written some *gatha*. It was all brought together and made into a book." Gary Snyder, *ibid.*, p. 38.

Cold Mountain he means himself, his home, his state of mind. He lived in the T'ang dynasty – traditionally A.D. 627-650, although Hu Shih dates him 700-780. This makes him roughly contemporary with Tu Fu, Li Po, Wang Wei, and Po Chü-i. His poems, of which three hundred survive, are written in T'ang colloquial: rough and fresh. The ideas are Taoist, Buddhist, Zen. He and his sidekick Shih-te (Jittoku in Japanese) became great favorites with Zen painters of later days – the scroll, the broom, the wild hair and laughter. They became Immortals and you sometimes run onto them today in the skidrows, orchards, hobo jungles, and logging camps of America.⁹⁹

Born into a wealthy or noble family possibly in the town of Handan, Hán Shān had a privileged early life. Well educated and widely travelled, he served as a military and applied unsuccessfully for different government posts. It seems he did not advance much in the bureaucracy and the official examinations, which required a perfect command of the classics and a perfect body (and Hán Shān had an injured foot, perhaps because of a riding accident). He even married and moved to the countryside, where he became a farmer. However, with the passing of time, he became more and more dissatisfied with his lifestyle and the worldly affairs of men and so he decided to leave home and what was to him the madness of the civilized world. Taking with him just a handful of books, he wandered from one place to another until he reached a remote place called Cold Mountain¹⁰⁰ in the Tiantai Range, which would become his true home. There he would build a hut, dig a pond and plant vegetables to get himself his own food, in much the same way Henry David Thoreau would do in Walden some ten centuries later. Upon seeing that the hut and the garden demanded constant attention of him, he moved to an empty rock cave deep in the mountains where there was nothing but echo and some rays of the morning sun.¹⁰¹ His cave, called 'Hanyan', was a day's travel from Guoqing Temple, where two close friends of his, Fenggan and Shih-te, lived. Shih-te would visit Hán Shān's home from time to time. Hán Shān spent his time there as a hermit, writing the memorable poems for which he is remembered after such a long time. After so many centuries, his strong voice is heard loud and clear with moving relevance. A profound and quiet elegance is easily discernible in his poems. Written in straightforward language of utter simplicity, they fall into three distinct categories: first, the biographical poems about his life prior to his arrival at Cold Mountain; secondly, the religious and political poems critical of conventional attitudes; and thirdly, the transcendental poems dealing with his life as a hermit at Cold Mountain. Thematically, Hán Shān draws heavily on Buddhist and Taoist notions, and so his poems explore life's shortness and transience and the simplicity of life in communion with nature, while they also display a deep concern for humanity. Like most Zen masters, who are totally identified with nature, Hán Shān views the surrounding natural world at Cold Mountain as his host and himself as nature's guest. His inner life is complete when it merges into nature and becomes one with it.

⁹⁹ Gary Snyder, *Riprap and Cold Mountain Poems*, Berkeley: Counterpoint, 2004, p. 35.

¹⁰⁰ Some of the poems translated by Snyder speak of Cold Mountain. Thus, poem 5 of Snyder's "Cold Mountain Poems" reads as follows: "I wanted a good place to settle: / Cold Mountain would be safe. / Light wind in a hidden pine – / Listen close – the sound gets better. / Under it a gray-haired man / Mumbles alone reading Huang and Lao. / For ten years I haven't got back home / I've even forgotten the way by which I came." Ibid., p. 43. And poem 7: "I settled at Cold Mountain long ago, / Already it seems like years and years. / Freely drifting, I prowled the woods and streams / And linger watching things themselves. / Men don't get this far into the mountains, / White clouds gather and billow. / Thin grass does for a mattress, / The blue sky makes a good quilt. / Happy with a stone underhead / Let heaven and earth go about their changes." Ibid., p. 45.

¹⁰¹ In this respect, Han-Shan was a precursor of Bringhurst's own Tzuhalem, the nineteenth-century Coast Salish Indian who lived on the mountain with his many wives.

Bringhurst's composition manages to convey the serenity and elegance of Hán Shān's poetry. Like his Oriental predecessor, Bringhurst has always sought the quiet solitude of the mountains and the company of trees, away from civilization, amid a saner ecology of *what is*. His poem consists of three discernible parts: the first part deals with the mind and equates it to the moon shining over the hills; the second one dwells on the ultimate sense and nature of *what is*; and the third part is a farewell on the part of the legendary poet, challenging humans to live their lives in a genuine fashion. The poem opens thus with a beautiful meditation on the part of the poetic persona on Han Shan's mind, which resembles the moon up in the sky. The mind is to the skull, what the moon is to the night sky: it shines and illuminates the dark recesses of the human head. What is simply astonishing about Bringhurst's simile is that the mind is described in purely physical terms: its texture and colour, its taste, its smell and its feel, are exactly the same as those of the swollen moon, as seen in motion above the hills and reflected in the unfathomable pools of autumn. The perceiving subject and the perceived object become one and the same, and a fundamental identity between man and nature is affirmed:

Friends, the mind, or at any rate
my mind at this moment, is much
like the moon. It is swollen
with light, it is dry and in motion.

Its taste and its smell, its feel
in the skull, are as those of the moon
over the steep hills and the bottomless
pools of deep autumn.

Man is after all a tiny part in the grander scheme of things, a sparkling element in the living mesh of things, where he belongs. *I am in Nature and Nature is in me*, seems to say the poetic voice. And this is an essential Zen tenet: humans and Nature are not separate, they are one and the same thing, they recognize each other in their primeval or pristine encounter. Hán Shān was well aware that amid the solitude of Cold Mountain he was more truly himself, away from the hypocrisies of the so-called civilized world. That he chose to live as a hermit, away from human intercourse, is an eloquent gesture in itself. That he should have decided to spend his time reading and composing seemingly ephemeral poems on the rocks of the mountains he considered his natural home is expressive of a lucid mind that was after grander things in his life. Hán Shān must have been an appealing personality to Bringhurst himself, not just because of his own lifestyle of asceticism characterized by the practice of *breathing through the feet*, but also because of the elegant simplicity and profundity of thought of his poems. The thought occurs that the Oriental sage also breathed through his hands as he painted his poems on rocks, trees and bamboo. Here was a man capable of living on peaceful and respectful terms with Nature. He embraced a form of ecology that must have surely been a source of inspiration to Bringhurst as well.

At the geometrical heart of "Hán Shān" (i.e., the third stanza) we find an attempt to communicate the unspeakable. *What is* is elusive sometimes; *being* is no easy to pinpoint. Han Shan's persona addresses his *friends* (fellow human beings) explicitly to convey to them the mystery inherent in everything that exists. The four-line stanza brings together the pool and the hills from the two previous stanzas. No straightforward definition of being is easy to find, and so the language deployed here is paradoxical and verges once again on gnomic revelation:

Friends, what is is much like the pool.

What is not is not unlike the air,
and what neither is nor is not neither is
nor is not like or unlike the hills.

Three categories of *being* are distinguished: (i) *what is* resembles the pool, which is water and a mirror that reflects everything that looks into its clear waters; (ii) *what isn't* resembles the air, which is invisible and untouchable; and (iii) *what neither is nor is not* resembles and does not resemble the hills at the same time. *Being* is beyond verbalism. As we have already seen, Zen refuses to be caught in the maze of abstract speculation and conceptual vocabulary. It is curious to see how Hán Shān (or Bringhurst's dramatic impersonation of him in this poem) makes use of words and how he communicates what cannot be communicated. "As soon as appeal is made to words, we leave life itself and involve ourselves in every kind of "logical" controversy. We construct our own traps and then struggle to escape from them."¹⁰² From the almost hopeless intricacies of intellection it is difficult to escape. This is the reason why Hán Shān gives voice to the following conclusion: "*there is no / comparison, is no description, assertion, / negation. I tell you conclusively, / there can be no conclusions.*" Being is ineffable; words are not reliable or effective tools to convey the kind of spiritual commotion that *satori* brings to the truth-seeker. This partly accounts for the fact that many Zen masters were highly enigmatic in their behaviour and bizarre in their pedagogic methodology. The goal was the experience of *satori*: an awakening that allowed the truth-seeking individual to penetrate the structure of reality. In realizing that the mind resembles the moon in the night sky, Hán Shān is undergoing a sort of epiphany, or experiencing a moment in time with the texture of transcendence. That Bringhurst should convey this in simple and elegant language is truly a miracle.

"Hán Shān" closes with the sage's farewell to humankind, as it were. The tone of the last stanza is one of calm and serenity, learned through first-hand experience of what it means to lead a genuine human life. This is something of a histrionic farewell: the poet says goodbye to his fellow human beings and encourages them somehow to take their own paths in life: "*Those who know how to live / will leave with me / in different directions.*" Han Shan does not wish any form of fame or immortality, not even a group of unconditional followers, and yet his poems turned him into one of the immortals. *Find your own way, dare think and live for yourself* – this seems to be the lesson he has to teach before leaving. Poems 11 and 23 of Snyder's "Cold Mountain Poems" might be a good conclusion to our critical introduction to Hán Shān:

Spring-water in the green creek is clear
Moonlight in Cold Mountain is white
Silent knowledge – the spirit is enlightened of itself
Contemplate the void: this world exceeds stillness.

*

My home was at Cold Mountain from the start,
Rambling among the hills, far from troubles.

Gone, and a million things leave no trace
Loosed, and it flows through the galaxies
A fountain of light, into the very mind –
Not a thing, and yet appears before me:

¹⁰² Daisetz T. Suzuki, *Zen Buddhism: Selected Writings of D.T. Suzuki*, ed. by William Barrett, Westminster, MD, USA: Doubleday Publishing, 1996, p. 305.

Now I know the pearl of the Buddha-nature
Know its use: a boundless perfect sphere.¹⁰³

In the Afterword to his *Riprap and Cold Mountain Poems*, Snyder quotes Du Fu as saying that “The ideas of a poet should be noble and simple.” Bringhurst’s ideas are both noble and simple and profound. That is why it is a pleasure to re-read his poems, inexhaustible bits of wisdom. Furthermore, Snyder says: “There are poets who claim that their poems are made to show the world through the prism of language. Their project is worthy. There is also the work of seeing the world *without* any prism of language, and to bring that seeing *into* language. The latter has been the direction of most Chinese and Japanese poetry.”¹⁰⁴ Such is the case of Bringhurst’s poetry as well.

XIII · YUNYAN TANSHEG

“Yúnyán Tánshèng”¹⁰⁵ is Bringhurst’s piece on another Chinese sage who lived in the eighth and ninth centuries CE. Compared to other poems in the Oriental sages sequence, it was published relatively late, in 1995, when Bringhurst decided to expand it in significant ways. Thus, from an entry included in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), we learn the basics of this Oriental sage: “Yúnyán Tánshèng (Yün-yen T’an-sheng, 780–841) ‘Frowning Cloud.’ The teacher of Dòngshan Liángjiè.” And in the 2001 edition of *The Book of Silences*, Bringhurst says this: “Yunyan Tansheng (Yun-yen T’an-sheng) 780-841? Hunan, central China.” Bringhurst’s poem is reminiscent of the serene minimalism of much Oriental poetry, not only in the straightforwardness and transparency of the language used in the two parts “Yúnyán Tánshèng” consists of, but also in the characteristic imagery they display. Indeed, “Zen refuses to make use of abstract terms, to indulge in metaphysical speculations, or to involve itself in a series of questions and answers. Its discourse is always short, pithy, and right to the point.”¹⁰⁶ Thus, part 1 opens with the simple words of a host inviting the guest (the reader) to cross the threshold into a cosy room where tea is about to be served: “Come in. Have some tea. / There is water in the pot, / and there is fire in the stove.” Three simple verse lines will suffice to set the tone of serenity that pervades the whole composition. From the very outset, the parallelism of Bringhurst’s words point to the simplicity the poet aims at: words invisible as air that hide a treasure of ideas, an impressive profundity of thought. Now, tea is the most visible emblem of the Orient: the ceremony of making and serving tea to others demands that the people present be careful and attentive throughout the whole process. A curious metamorphosis happens as the tea leaves are mixed with boiling water to produce a stimulant that might be useful for the Zen meditation practitioner to stay awake.

However, the gist of the first part of Bringhurst’s poem is something else: it has to do with the precedence of the spoken over the written, of speech over writing, and of the unspeakable over the spoken in the Buddhist tradition. It eludes pure rationalization, it escapes the realm of discursive understanding. Zen encourages truth-seeking human beings to attain enlightenment by themselves, just by seeing into their genuine self-nature. Serenity and truth were there, inside ourselves, from the very start, even if everyday life

¹⁰³ Snyder, *ibid.*, p. 49 and p. 61.

¹⁰⁴ Snyder, *ibid.*, p. 98.

¹⁰⁵ “Yúnyán Tánshèng” was originally published in A.47 *The Calling* (1995), and then reprinted in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009).

¹⁰⁶ Suzuki, *ibid.*, p. 285.

circumstances make us live on the superficiality of things, on the surface of reality as it were, without truly delving into its innermost recesses. The experience of *satori* is something inevitably personal and one needs no intermediaries to attain enlightenment or sudden insight into the essence of things. Others' teachings, old precepts, philosophizing or the sheer effort of the intellect will not do: one needs only a first-hand confrontation with living, pulsating facts. A couple of centuries later, another sage, Dahui Zonggao, would burn all the copies available of the venerated *Blue Cliff Record* to encourage people to start looking at the world from a fresh standpoint. Therefore, in "Yunyan Tansheng" there is a reference to "the closed book":

But everything I have to say is written
on the thin lips of darkness
in the closed book: the black leaves

you don't see when you open it – though
each one slips into its place again
as soon as you turn the page.

The textual hinge "But" comes as a surprise. What does Yúnyán Tánshèng's poetic persona intend to convey through these enigmatic words? Possibly these lines are meant to signify that whatever this sage has to say of importance is primarily spoken in the first place, and that if it is to be encoded within the boundaries of a book, his enlightening lessons are probably to be found in "the thin lips of darkness" of its bound pages. His insights are in the dark places inside the book, for they love to hide from the inquisitive gaze of the reader. They are freely playing as no one opens the book to read it. The very moment someone takes the book so as to peep inside, all that is seen is the white pages. The black ones, subversive and eel-slippery, hide into place so that no one can see them. For wisdom is not to be found within the boundaries of a book. Life is a miracle filled with unfathomable mysteries, and the answers to this enigma are not contained in books, after all. One needs to see the world with their own eyes, touch things with their own naked hands, learn everything there is to learn about reality by not knowing, i.e. by unlearning the wearisome burden of unnecessary data accumulated on our shoulders by centuries of acculturation that do not allow us to see into things on our own. That is the lesson Yúnyán Tánshèng possibly intends to teach the reader or the hearer.

The second part of Bringhurst's poem is a perfect example of another jewel-like short lyric, strongly reminiscent of Japanese haikus, but also of the koans Zen monks use in their search after enlightenment. In these lines, the musicality is brought about by repetition – either by the repetition of the same lexical items (*wind* and *stones*) or by the repetition of the same syntactic structures (parallelism). Two movements for the soul are discernible in this pattern of sonorous words tessellated into two stanzas of utter simplicity. In the first movement, the focus is on the non-human sphere of wind and stones: we are back in an elemental world where nothing is truly lifeless, but, quite on the contrary, teeming with life. Humans have no monopoly on language, and the whole of reality speaks and sings its song in its own language. *Everywhere being is dancing and singing*, as Bringhurst would put it. The wind and the stones are endowed with the astonishing capacity to speak and to listen, for everything in this world wants to *mean* something. Unlike human beings, who seem not to have patience any more to listen to what others (humans and non-humans) might have to say, the wind stops for a while to listen to what the wind has to say. The same happens to stones: they speak, but they also hear. Hence:

When the wind speaks, wind listens.

When stones speak, stones
hear what they say.

Now, the second movement is altogether different though: “*Going over the old bridge, / if you see yourself in the stream, what / message can you give to your reflection?*” Humans speak, but do not say much, and do not have the patience necessary to listen to what they themselves or others have to say. The closing lines have the texture of a koan with which the Zen practitioner is to struggle to reach some form of enlightenment. Crossing an old bridge, a human being is confronted with his or her own self-image as reflected in the waters of the flowing stream. The river is the very embodiment of perpetual change, motion or flux of all things in this world of insubstantiality, impermanence and ephemeral phenomena. What is one to say to one’s reflection on the mirror of the stream waters? The image used by the poet may well evoke the act of introspection and psychological investigation involved in the Zen practice of exacting meditation itself. But there is something truly uncanny about these lines: What if one has nothing to say to their own reflection? Does it mean that we are half alive, or half dead, or dead in life, unable to escape the delusion of the senses?

XIV · LINJI YIXUAN

“Línjì Yìxuán”¹⁰⁷ concerns an essential Zen master who lived in China in the ninth century CE. He is one of the greatest and most influential of the Tang period Chan masters, and the founder of the Linji school of Chan Buddhism during Tang Dynasty China. Bringhurst has produced a unique poem of great beauty and formal perfection in which he seeks to capture the thinking of this great ancestor who lived so many centuries ago. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Línjì Yìxuán (Lin-chi I-hsuan, c. 800-867) was “A Zen master from Hebei, founder of the monastic tradition which bears his name. In Japan, where the tradition flourished for centuries, he and his school are known as Rinzai.” And in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us very briefly that he was “A Zen teacher from Hebei, who founded the Línjì or Rinzai School.” Equally short is the entry devoted to him in the 2001 edition of *The Book of Silences*: “Linji Yixuan (Lin-chi I-hsuan) c. 800-867 Traveled throughout China, then settled in Hebei, in the northeast.”

Born to a family called Hsing probably between 810 and 815 in the Ts’ao District in the far western corner of present-day Shantung Province, the area just south of the Yellow River, Línjì Yìxuán¹⁰⁸ (or Rinzai, as he is known in Japan) left his home at a fairly early age to study Buddhism in a number of places and become a Buddhist monk. First he devoted himself to the study of monastic discipline and the different sutras and treatises – the scriptures of traditional Mahayana Buddhism. Afterwards, dissatisfied with these studies, he directed his attention to Chan. As was common practice at this time, Línjì wandered from one place to another seeking instruction from different masters at various monasteries.

¹⁰⁷ “Línjì Yìxuán” was originally published in C.50 [Eleven poems]. *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. Later, it was reprinted in A.32 *Pieces of Map, Pieces of Music* (1986), revised in A.47 *The Calling* (1995), reprinted with minor changes in A.65 *The Book of Silences* (2001) and reprinted in A.92 *Selected Poems* (2009) from A.47. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: rú shuǐ zhong yuè = *like water within-it moon*.

¹⁰⁸ Details concerning the life of this sage are lifted from *The Zen Teachings of Master Lin-Chi*, translated by Burton Watson, Boston & London: Shambhala, 1993, pp. xii-xvii.

Thus, he left his homeland and journeyed to the area south of the Yangtze, where he met the Chan master Huang-po, named after the mountain where he resided with a group of monks. This master under whom Línjì first studied was Hsi-yün (d. ca. 850) of Mount Huang-po, but he would not attain the correct understanding he was desperately searching for. Urged by his own master, the monk decided to leave the group and go elsewhere in search of illumination: Ta-yü was the master he was looking for. Finally, Línjì attained enlightenment while having a conversation with the monk Ta-yü (Dàyù), a hermit who lived in seclusion in a mountain retreat in the same region. After achieving enlightenment, Línjì returned to his master's temple to continue with his training, or probably travelled back and forth between the two masters. Eventually, probably in 851, this sage moved to the Línjì temple in Hebei, after which he and the lineage of Chan Buddhism which he founded were named. He died in his mid-fifties after an intense life of travel and teaching. Chan teachings were introduced to China by a monk from India called Bodhidharma, who arrived in south China late in the fifth century or early in the sixth century. His life is steeped in legend and so almost nothing can be said for sure about him or his teachings. Línjì Yìxué's teaching line was the dominant school throughout China and when Chinese Chan was introduced to Japan in the thirteenth century, it was called Zen. In fact, the Japanese Zen sect known as the Rinzai school is a branch of the lineage Línjì founded.

Chan Buddhism emphasizes the accessibility of enlightenment to all persons as well as transmission outside the scriptures. This partly accounts for the popular appeal of Chan among simple men and women of the time. However, Línjì's own strict teaching style¹⁰⁹ was inspired by his master's and it was characterized by "paradoxical exchanges between student and master, the shouts and blows, and other seemingly irrational or violent actions."¹¹⁰ It included abrupt and harsh encounters with his own disciples, aimed at pushing his students to attain the moment of enlightenment, and so among his methods were common such practices as shouting and administering blows to his students with his stick. However, Línjì Yìxué also made use of iconoclastic sermons and lectures urging students to set themselves free from the influence of masters and doctrinal concepts so as to discover their true Buddha-nature. The *Lin-chi ch'an-shih yü-lu* or *Recorded Sayings of Ch'an Master Lin-chi*, often referred to simply as the *Lin-chi lu*, compiles these sermons and lectures, as well as stories of Línjì's interviews with Chan masters, contemporaries and students, and extensive descriptions of his life and teachings. This compilation is a text of major importance and "the final major formulation of Ch'an thought in China" and is "unparalleled in Ch'an literature for its vividness and forcefulness."¹¹¹

Now, Bringham's homage to Línjì Yìxué is an accomplished poem consisting of two sections that have evolved from one textual incarnation to another with the passing of time. Section 1 consists of eleven (originally twelve¹¹²) two-line stanzas of utter concision and linguistic economy that capture the essence of Línjì's Chan Buddhism. As a whole, section 1 of Bringham's poem looks like a string of jewel-like enigmatic statements that keep on resonating in the reader's mind long after one has finished reading them. Upon closer inspection, this first section can be subdivided into three distinct parts: while it

¹⁰⁹ According to Burton Watson, Línjì Yìxué lived during a complex period in the history of China, at a moment when the nation was plagued by strife and unrest and on its way towards the political disunity that the end of Tang Dynasty China brought with it. "The harsh and troubled nature of the period in which Lin-chi lived perhaps helps in part to account for the radical tenor of his teachings and the urgent, almost militant manner in which he proclaims them." *The Zen Teachings of Master Lin-Chi*, p. xv.

¹¹⁰ *The Zen Teachings of Master Lin-Chi*, p. xii.

¹¹¹ *The Zen Teachings of Master Lin-Chi*, p. ix.

¹¹² Two lines from the earlier version in *Pieces of Map, Pieces of Music* are omitted here right before the two last pairs of verse lines: "Host and guest, we eat one another / for breakfast. This too is the way."

opens with a series of commands in the imperative form that might be interpreted as being instructions for truth-seekers to live truly (to the fullest of human capacity as it were), the second part focuses on the ultimate essence of *being* and on speech, and from this follows a sort of afterthought which declares in vehement words that the only way of setting order upon the world is precisely by not knowing and not owning the world with one's hands. Thus, the orders of the first movement are all conveyed in simple language of crystal-clear clarity, which is one of the appealing stylistic features of Bringhurst's poems. Beneath some of these commands are Línjì's own words as recorded in the *Lín-chi lu*:

- (1) "*Take no shit, said Línjì. / Behead the Buddhas. Cow the pig of the world.*" What Línjì is doing here is encouraging his students to leave aside doctrinal concepts and the teachings of the revered masters. That is shit in the end, for genuine enlightenment is not more distant than one's mind and body. After all, Zen emphasizes precisely the accessibility of enlightenment to everyone who might care to pay attention, for the Dharma of the mind "can enter into the common mortal or the sage, the pure or the filthy, the sacred or the secular."¹¹³ Whichever path he might make up his mind to choose, what matters is that he should take control and do nothing that might entail conscious effort to attain the ultimate truth of things. Bringhurst might have found inspiration for this first elemental statement in the *Lín-chi lu* itself. Hence, beneath these words might well be hiding this passage: "Followers of the Way, if you want to get the kind of understanding that accords with the Dharma, never be misled by others. Whether you're facing inward or facing outward, whatever you meet up with, just kill it! If you meet a buddha, kill the buddha. If you meet a patriarch, kill the patriarch. [...] Then for the first time, you will gain emancipation, will not be entangled with things, will pass freely anywhere you wish to go."¹¹⁴
- (2) "*Take hold of it, use it, but do not / give it a name: this is the ultimate principle.*" Chan Buddhism distrusts the power of words to grasp or capture the essence of things. In principle, language is an unreliable tool in humans' confrontation with reality, and so one must dispel the illusion that they are effective or faithful embodiments of the real. Thus, in speaking of the Dharma of the mind, of the truth of the mind, Línjì utters these illuminating words: "The Dharma of the mind has no fixed form; it penetrates all the ten directions. It is in operation right before our eyes. But because people don't have enough faith, they cling to words, cling to phrases." And then, he urges followers of the Way to "get hold of this thing and use it, but don't fix a label to it. This is what I call the Dark Meaning."¹¹⁵ Direct or unmediated apprehension of the ultimate nature of reality must do away with words, so that the truth-seeker might come to dwell in the realm of the unspeakable or unspoken. No effort is required of him or her as long as the mind is focused on what really matters and words are not allowed to interfere. On the contrary, those who cling to words and let them obstruct them cannot perceive the Way clearly, for their eyes are blinded by language.
- (3) "*Sleep, eat, pee: / this is the essence of the way.*" Línjì wants his adepts to live ordinarily, to lead a simple life where no strained efforts are made to attain enlightenment. Beneath Bringhurst's concise verse lines resonate powerfully these words: "Followers of the Way, the Dharma of the buddhas calls for no special undertakings. Just act ordinary, without trying to do anything particular. Move your bowels, piss, get dressed, eat your rice, and if you get tired, then lie down. Fools may laugh at me, but wise men will know what I

¹¹³ *The Zen Teachings of Master Lin-Chi*, p. 30.

¹¹⁴ *The Zen Teachings of Master Lin-Chi*, p. 52. Somewhere else, Línjì says: "Followers of the Way, what is important is to approach things with a true and proper understanding. Walk wherever you please in the world but don't let yourselves be muddled or misled by that bunch of goblin spirits. The man of value is the one who has nothing to do. Don't try to do something special, just act ordinary. You look outside yourselves, going off on side roads hunting for something, trying to get your hands on something. That's a mistake. You keep trying to look for the Buddha, but *Buddha* is just a name, a word." Línjì's deep distrust of language is self-evident in these words.

¹¹⁵ *The Zen Teachings of Master Lin-Chi*, p. 29 and p. 30.

mean.”¹¹⁶ Obeying the simple impulses of the body should be enough to gain insight into the essence of things. This seems to be the message implicit in these words. Chan Buddhism rejects intellectualization and convoluted speculation, and favours direct, first-hand experience of life itself instead. Needless to say, one of the most elemental experiences is that of bodily necessities: humans need eat, sleep and pee to keep on living a normal, healthy life.

- (4) “Build a boat in the mountains, / cut steps in the sea,¹¹⁷ / but no speculation, no fortification, no bridges,¹¹⁸ / burned or unburned.” At the heart of these paradoxical words palpitates the all-important message that one might try to fulfil what seem unattainable feats (like building a boat in the mountains), but one should avoid intellectualizing at any cost. Unmediated experience of the Dharma of the mind is not something that requires time or hard thinking, because it is something that humans already have within themselves. They do not have to look for it any further than their own mind. Once the mind is freed from its shackles or manacles, it shines with the light of non-discrimination, as it comes to dwell in the realm of emptiness or non-dualism, where all distinctions are transcended and men of the Way come to depend or lean on nothing.¹¹⁹ True, clear and complete understanding is well aware that phenomena of the world are to be perceived as being “empty of characteristics”, for “none have any true reality”.¹²⁰

The second movement of the first section of “Línjì Yìxué” dwells further on the nature of *what is* and on language. It opens with a straightforward statement: “There is nothing to do.” According to Sengzhào (384-414), “what is valued in every age is to have nothing to do. With regard to the Way, when one is mindless, then all things will proceed smoothly.”¹²¹ Enlightenment comes when least expected at all; it is something that comes uninvited, overwhelming the mind in its entirety all of a sudden. One needs make no exhausting effort at all. For his part, Línjì says that “the really first-rate fellow knows right now that from the first there’s never been anything that needed doing.”¹²² Once again, the emphasis is laid on the simple fact that one needs not look much further to find the ultimate essence of things: just be delving into the inner recesses of one’s attentive mind, one will find the answer one is desperately looking for. Things flow naturally if let alone to follow their own course. Hence, “The answer / is perched on your lips like a bird.” The bird might not be chirping at all, it might just perch silently on one’s lips, but it might sing *being* into full bloom any moment. The lines that follow elaborate on this beautiful image of speech as a bird perching, not nesting, in one’s lips: “If it nests in your mouth, how will you speak? / How will you weave if it nests in your hands?” Speech is a beautiful and precious tool among humans, but it is no panacea. The bird of speech cannot stay for long in one’s mouth and build a nest there because it would prevent our own speaking. And it cannot dwell in one’s hands for long either, because it would not allow us to weave things with our own hands. All around us *being* is woven into the essence of the living fabric of things: “Singing and dancing! These are the signs / of the silent and still.” As the very title of one of Bringhurst’s compilations of essays puts it, *everywhere being is dancing (and singing)*, in and through its manifold incarnations, expressions or manifestations. *What is* has got many faces and is manysided, and yet it is one and the same. The opposites of singing (speech or sound) and dancing (motion) are silence and stillness: these are also constituent parts of

¹¹⁶ *The Zen Teachings of Master Lin-Chi*, p. 31.

¹¹⁷ This line reads differently in the *Pieces of Map, Pieces of Music* version: “a ferry at sea”.

¹¹⁸ In A.65 *The Book of Silences* (2001) the only textual variants are these: “no speculations” and “no fortifications”, in the plural, not singular as in the *Pieces of Map, Pieces of Music* and *The Calling* versions.

¹¹⁹ *The Zen Teachings of Master Lin-Chi*, p. 36.

¹²⁰ *The Zen Teachings of Master Lin-Chi*, p. 35.

¹²¹ Words found in the *Pao-tsung lun*, attributed to Sengzhào. *The Zen Teachings of Master Lin-Chi*, p. 30, note 1.

¹²² *The Zen Teachings of Master Lin-Chi*, p. 34.

what is. The closing verse lines of the second movement of section 1 of Bringhurst's poem dwell precisely on the nature of *being*. It is not easy at all to make clear what might be simply unspeakable or ineffable, and this is why the poet needs use gnomic words that might sound obscure or impenetrable to the reader at first :

Is? No. Isn't? No. Is and isn't? Neither is nor isn't?
None of these. None of these and more.¹²³

As Línjì puts it: "As I see it, there's no Buddha, no living beings, no long ago, no now. If you want to get it, you've already got it – it's not something that requires time."¹²⁴ As pointed out above, phenomena are "empty of characteristics" and "none have any true reality." Ultimately all distinctions should be transcended by the non-discriminative mind – i.e., the mind that dwells in the realm of emptiness or non-dualism. To this mind there is no point in telling apart contraries or opposites, because *what is* and *what isn't* exist simultaneously as indivisible sides to the same coin. Línjì puts it in these terms: "All the ten thousand kinds of contrived happenings operate in a place that is in fact no place. Therefore the more you search the farther away you get, the harder you hunt the wider astray you go. This is what I call the secret of the matter."¹²⁵ Part of this secret is discernible in the eyes of the deer as it flees away in horror, as the last lines of section 1 declares. The important insight comes as an afterthought and makes explicit a central idea: "Only a man with no hands / can reorder the world." How is it possible to reorder the world making no use of hands at all?, one might ask. In Bringhurst's thinking, hands are always damaging and disrespectful towards *what is*. One needs to breathe through their feet; to absorb *being* through the living, palpitating pores of one's skin; to breathe in the world and to let oneself be breathed in turn by the gigantic lung of the world itself. Using no hands to reorder the world also means letting things flow smoothly, making no conscious effort to attain final enlightenment or deep insight into the essence of things, acknowledging that we humans also belong to this grander scheme of things, and nothing need to be done by us to keep the world alive. Enlightened beings know that there is nothing for them to do, for being will keep on singing and dancing till the end of time.

The second section of "Línjì Yìxué" is the one that has undergone more profound textual changes¹²⁶ in each successive incarnation of the poem. It consists of five symmetrical stanzas: two four-line stanzas followed by a two-line transition stanza and by two more four-line stanzas. Three parts are then clearly discernible in the overall pattern of this composition: a celebration of the unreality of reality itself; the transcending of the birth-death dichotomy; and a final meditation on the ultimate unity of *what is* as apprehended from the standpoint of non-dualism or emptiness. Thus, the Rinzai master is convinced that the true man has no name, no home and no address. An enlightened being has "no form, no characteristics, no root, no beginning, no place he abides, yet he is vibrantly alive."¹²⁷ It is illusory or deceptive to think that we do have a home, or even that we have something permanent called *identity* or *personality* to which to hold on to

¹²³ This verse line reads differently in the *Pieces of Map, Pieces of Music* version: "No! No! None of these and more".

¹²⁴ *The Zen Teachings of Master Lin-Chi*, p. 33.

¹²⁵ *The Zen Teachings of Master Lin-Chi*, p. 36.

¹²⁶ In *Pieces of Map, Pieces of Music* the opening stanzas read differently: "To hear in the chirp of the bird the original / *isn't*, and in the answering chirp of the bird / that what is is what isn't and this is / the whole of the dusty world / is to die a good death, / trampled by watersnakes, torn / on the antlers of the snowshoe hare. // There is nowhere to go. Nothing / is *there*. What is / is all *here*, and what isn't / is everywhere. // You can begin by renouncing / your home, if you are so brash as to think / that you have one. Know this: the true face / has no features, the true man no name / and of course no address."

¹²⁷ *The Zen Teachings of Master Lin-Chi*, p. 36.

desperately, or even a conventional occupation. “There is nothing to do”: the enlightened beings who are aware of the unreality of reality know this for sure and make no effort at all. Truth-seekers should start then their education process by abandoning what looks like certitudes:

And so,
to begin with, leave home –
if something has made you imagine
you have one. Examine your face

in the mirror of the air,
and sit down with the man
who laughs when you ask him
his name, occupation, address.

The master’s instructions to live fully are simple and clear. Leave the notion of home behind and start thinking of yourself as something that belongs to something which is grander than yourself. In addition, air is invisible or transparent, and so it will not give you a reflection of your face back. This means that there is no self, no identity, no personality. Ideally there should be ideally no occupation either. And there are no distinctions to be made by enlightened beings: death is nothing to care about for “*Dying is one more simple thing everyone does, / like scratching the ear and undressing.*” In non-discriminative thinking, the apprehender of reality is beyond pairs of opposites and contraries, well aware that all phenomena are emptiness, or part of an undifferentiated unity. This is the fundamental idea explored in the third part of section 2 of Bringhurst’s poem, woven with gnomic words that pose an intellectual challenge to the reader who remains alert to subtle nuances of meaning. Thus, there is no way of drawing a clear-cut distinction between *thinking* and *not thinking*, in much the same way there is no way of telling *what is* and *what isn’t* apart. In the ancestral art of swordsmanship, there is no way either of differentiating between sword, swordsman, stroke and not striking. Even harder to understand are the closing verse lines, which affirm that “*One and not one / are one. One is not two. One is also / not one.*” *Being* is one but at the same time it is *manysided*, for it finds expression in the myriad different things populating reality. *What is* and *what isn’t* live side by side too. And so the poetic voice concludes that “*This arithmetic / lives in the flowering / heart of the world.*” Bringhurst’s poem is the best homage possible in honour of Línjì Yìxuán’s thinking. That his thought is still relevant to us is manifest in the very fact that Bringhurst’s poem speaks to us with a rare and beautiful urgency. At a time of egoistic thinking in which no one thinks beyond themselves, the voice of this ancestor speaking through the prism of Bringhurst’s words remind us that there is a larger world out there of which we are a tiny part, and that, if we are to live to the fullest of human capacity and attain true self-realization, it is part of our responsibility to acknowledge that *being* is something larger or vaster than the human realm.

XV · DONGSHAN LIANGJIE

“Dòngshān Liángjiè”¹²⁸ concerns a Zen master who lived in ninth-century China, best known for founding the Soto school of Zen, contributing to the flourishing of Zen in his

¹²⁸ “Dòngshān Liángjiè” was originally published in C.63 [Four Poems]. *Canadian Literature* 140 (Spring 1994): 79-85. Contents: • “Dongshan Liangjie” (rpt. in A.47, A.65, A.92); • “Xuedou Zhongxian” (rpt. in B.58); • “Yongjia Xuanjue”; • “Dogen” (excerpt rev. in B.72, C.71). Later, it was reprinted in A.47 *The Calling* (1995), A.65 *The Book of Silences* (2001), and A.92 *Selected Poems* (2009).

lifetime, and re-evaluating the Five Ranks doctrine. Bringhurst's homage to this old sage from the Orient is an accomplished eight-stanza poem that captures the essence of his thinking. Though this is a complex composition, the poet is willing to help the reader somehow in understanding and enjoying the thought of this Zen master. Hence, an entry included in the "Cast of Suspicious Characters" at the end of *The Calling: Selected Poems 1970-1995* (1995) informs us that Dòngshān Liángjiè (Tung-shan Liang-chieh, 807–869) was "A Zen teacher working in Jiangxi. The Cáodòng or Soto school of Zen is named for him and his student Cáoshan Běnjí." And in the 2001 edition of *The Book of Silences*, Bringhurst gives us only elementary information regarding this Oriental sage: "Dongshan Liangjie (Tung-shan Liang-chieh) 807-869 Jiangxi Province, southeastern China." Not much is known of the exact details regarding his personality and experiences beyond a handful of pieces of information regarding his daily rituals as a monk, his style of spiritual education and a few more events of his life. The two primary sources we have available are Keizan's *Denkoroku* (*Transmission of Light*) and *T'su-t'ang-chi* (*Records from the Halls of the Patriarchs*). This scant information, usually limited to dates, names and general locations, has been preserved in the form of philosophical dialogues between Dòngshān and his various teachers.

Born during the Tang dynasty in the town of Kuei-chi (in the southeast of present-day Chekiang Province), Dòngshān Liángjiè started his studies in Chan Buddhism early in his life, when he was still a young boy, as the common practice of the day prescribed for the elite educated families. One day, as his teacher was reciting the "Heart Sutra", the boy interrupted him at a crucial point to give voice to his essential disagreement with the fundamental doctrine of the scripture. As master Keizan puts it,

When Dongshan was a boy he followed a teacher and recited the Heart Wisdom Scripture. When he came to the point where it says, "There is no eye, no ear, no nose, no tongue, body, or mind," he suddenly felt his face with his hand and said, "I have eyes, ears, nose, tongue, and so on – why does the scripture say they don't exist? The tutor was amazed and said, "I am not your teacher." Then he directed Dongshan to a Zen master, who initiated him. He was fully ordained as a monk when he was twenty-one.¹²⁹

This was a decisive moment in his lifetime and, as a result, at the age of 10 Dòngshān left home to become a monk. He travelled to the nearby monastery on Wu-hsieh Mountain, where he joined the students of Chan Master Ling-mo. Having his head shaved and taking the yellow robes, he started his path towards monkhood. At the age of 21 he was ordained as a monk at the Shao-lin-ssu Temple on Mount Sung. Afterwards, he spent a long time wandering from one place to another, seeking instruction from different Chan masters and hermits in the Hung-chou region. Thus, Keizan informs us that, in the beginning of his study, Dòngshān joined the congregation of Nanquan Puyuan.¹³⁰ Among the most illustrious of his masters was Yúnyán Tanshèng (780-841), of whom Dòngshān became the dharma heir. He called on this great Zen master to inquire him on the teaching of inanimate things. Keizan recounts the encounter:

Dongshan left Guishan and went to Yunyan. Bringing up the preceding events, he asked, "Who can hear the teaching of the inanimate?" Yunyan said, "The inanimate can hear it." Dongshan asked, "Why don't I hear it?" Yunyan raised his whisk and said, "Do you hear?" Dongshan said, "No." Yunyan said, "If you don't

¹²⁹ See *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, translated and with an introduction by Thomas Cleary. San Francisco: North Point Press, 1990, p. 164.

¹³⁰ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. 165.

even hear my teaching, how could you hear the teaching of the inanimate?” Dongshan said, “What scripture contains the ‘teaching of the inanimate?’” Yunyan said, “Haven’t you read where the Infinite Light Scripture says, ‘Rivers, birds, trees and groves, all invoke the Buddha and the Teaching?’” At this Dongshan had an awakening.¹³¹

After a long period of study, at the age of 52 Dòngshān established his own school at Tung-shan in Kao-an of the Yu-chang Hsien province. This became one of the “Fives Houses of Zen” set up at this time by different masters with distinct teaching styles and different ideas. Though with the passing of time these came to be seen as being sects, it was common practice for students to visit the other masters in nearby schools. Dòngshān had his own personal methodology to help his disciples attain enlightenment. Grouped under three categories, students were either of the kind of those who see but do not yet comprehend the Dharma, those in the process of understanding, and those who have already understood. He made use of short poems to expound Zen principles to his students and to himself, as well as metaphors drawn from everyday experiences so that his pupils could understand. Also, he conceived of koan practice as not having a specific goal, which would entail an artificial distinction between ignorance and enlightenment. Thus, he promoted “silent illumination Chan” (sitting just for the sake of sitting) among his disciples and a self-fulfilling path towards enlightenment instead of a competitive path. In addition, one of the most important contributions to Buddhist thought Dòngshān made had to do with his complete re-evaluation of the “Five Ranks” doctrine, which mapped out five stages of comprehension of the relationship between the absolute and relative realities. Dòngshān died at the age of 63, after a whole lifetime devoted to monkhood and Zen. But he had many disciples to provide continuity to his teachings. Among them were T’sao-shan (840-901) and Yun-chu (835-902). The latter would start a branch that survived into the seventeenth century in China. The great Dōgen Kigen was indeed educated in the traditions of Dòngshān’s Zen Buddhism thirteen generations later. As he returned to his homeland, he started the Soto school in Japan.

“Dòngshān Lǎngjiè” opens with a simple celebration of Nature, as embodied by “one tree growing / in the worked earth” and “one bird flying”. They might be interpreted as standing for earth and sky, respectively, or to embody the whole of Nature. One is many, and many is one, when the mesh of living things (human and non-human) is seen as constituting a subtle organic unity. An enigmatic reference follows to a “stone woman” who dances when a “wooden man” sings, as if to convey the sense that the whole cosmos is alive, dancing and singing. What is most interesting about the one tree and the one bird mentioned in the opening lines of Bringhurst’s poem is that they live in perfect harmony with the surrounding world that is their natural home. They have no hands, which, to Bringhurst’s mind, are always disrespectful and damaging to the world itself, but they do have mouths (leaves in the case of the tree and a beak in the case of the bird) with which they eat what the earth so generously gives them for their sustenance; they do have feet (roots in the case of the tree) that link them to the earth and keep them erect; and they do have arms (branches in the case of the tree and wings in the case of the bird) with which “they trace the original / shapes of the mountains.” Contrary to conventional expectations, the tree’s and bird’s arms serve a purpose that has nothing to do with the tree’s branches growing upwards in all directions, in search of light and oxygen for photosynthesis, or with the bird’s wings to fly carelessly up in the sky. As a token of their gratitude, as it were, the tree and the bird use their arms to pay homage to the mountains far away in the horizon. They feel grateful that they belong among a grander scheme of things where mountains are

¹³¹ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, pp. 166-167.

one more element of the gigantic whole. Dòngshān was eager to find the sense and meaning of the teaching of inanimate things. One might contend that trees and birds are not inanimate at all, though mountains might certainly be so. But, by ‘inanimate’¹³² is meant something vaster: all things, including mountains, trees, birds, stones, the sky, murmuring streams are always teaching, clearly, unceasingly, in all times. One has only to imitate the growing tree and the flying bird in their respectful attitude to *what is* and keep one’s feet standing firmly on the ground to breathe through them, for they are our elemental link with the earth, to begin with. This is the notion of *breathing through the feet* that Bringhurst embraces in his 1986 seminal essay, the autobiographical meditation published in *Pieces of Map, Pieces of Music*.

In stanzas 3 to 5 the dramatic persona of Dòngshān Liángjiè speaking in this poem seems to be addressing his pupils. At the core of the teaching he is trying to convey to them (and to us readers) are two fundamental ideas. First, the master seems to encourage his students to practice seated meditation with complete dedication, as a way of self-fulfilling realization, unaware of what is going outside. If outer distractions manage to lead them away from the path towards illumination, that means that “*your mind is unclear / and your meditation imperfect.*” Secondly, Dòngshān promotes the cultivation of a deep questioning of everything, great doubt as a path leading towards enlightenment, for the truth is to be found within oneself, and not somewhere else, outside. “*You may only agree if you disagree / equally,*” says the master. Finally, Dòngshān draws an all-important distinction between the intimate knowledge animals and trees have of the essence of reality, and the imperfect form of knowledge humans appear to attain with much effort. Even though reality is elusive, it is an inherent part in humans, regardless of whether we are aware that this is the case:

Saints and great teachers do not
know reality. Mountain cats, bristlecone
pines, wild buffalo do.
Though you are not it, it is certainly you.

The most enlightening lessons Dòngshān has to teach us are to be found in the closing three stanzas of Bringhurst’s poem, though. Just for the sake of clarity in our critical analysis, we shall map the three elemental lessons briefly:

- (1) The sky is a mind, not a text for humans to decode. Hence, “*A sky full of migrating birds / is a mind, not a text to be studied / for seconds or centuries.*” The migrating birds are not letters or words on the blank page of the sky; the sky is a mind rich in ideas instead. Facing the sky, one needs not resort to intellectualization to penetrate the simplicity of the vast expanses of blue emptiness. Buddhist tradition favours speech over writing, gives preeminence to silence over vacuous words, acknowledges the unspeakable or ineffable that is inherent in the mystery of *what is*. Also, acknowledging that the sky is a mind, not a decipherable enigma or intellectual challenge to humans’ intellect, entails acknowledging that the world is alive with Buddha-nature, that there is a universal substratum uniting all creatures in subtle ways we do not quite perceive. *Being* is pulsating in every tiny part of which reality is constituted; *what is* is a mind that seeks to know and that teaches all the time. At this point, all distinctions and contradistinctions and contradictions are dissolved, for Zen embraces a non-dualistic mode of thinking in which perceiving subject and perceived object become

¹³² Keizan says that “observing carefully, you become fully aware of this mystic consciousness, which is called “inanimate” or “insentient”. It is called inanimate because there is no running after sound and form, no bondage of emotion or discrimination.” *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. 169.

one and the same. Round and clear knowledge does not depend on thought, for *being* is immutable and clear.

- (2) There is an inevitable unity underlying the multiplicity or plurality of beings. Hence “*One plus one / plus one equals one equals many. / One minus one equals equally many.*” These statements give voice through paradox to what looks like a truism or elemental truth: *being* assumes manifold forms in the creatures populating this world. Beneath these words is the notion of microcosm and macrocosm: a single thing contains the universe in its entirety. *E pluribus unum, e pluribus plus*. A blade of grass evokes all the grass existing in the world. One tree growing and one bird flying stand for all the trees and birds in the world. Words will not do, will not suffice to make others understand this, for they are not accurate and they give us only a tentative approximation to things. And yet everything is always teaching, clearly, unceasingly.
- (3) There is at the centre of reality a latent dichotomy between motion and stasis. This is symbolized by the flight of geese crossing the sky and the quietude of the stones and the trees contemplating their sheer love of motion: “*The geese / cross and are gone. Below them the stones / have learned how to dance and the trees / how to fly without leaving their places.*” Though stones and trees cannot defy the gravity law that keeps them firmly rooted on the ground, the former know now how to dance and the latter how to fly without moving, just through sympathetic observation of the geese’s flight. The flying geese have taught them their love of motion, and this pulsating motion makes both stones and trees participate in the universal grace that pervades all creatures, animate and inanimate alike, in this world of ours.

Now, sages (truly enlightened beings) are not saints or teachers, who do not know reality, as claimed in stanza four of “*Dòngshān Liángjiè*”, but something else. Sages are those who penetrate the three above principles, and the ultimate essence of reality. They manage to accomplish this most difficult of tasks just because they know how to pay attention. They use their ears not just for hearing, but for breathing in the whole world; they use their eyes not just for seeing, but for eating the whole world. They never tire of keeping their ears and their eyes wide open to the world out there, and to the world inside themselves. No matter whether they open or close their sense organs, their inner attention is always on guard. Bringham puts it in simple, almost invisible words:

The sages have learned how to breathe
through their ears, how to eat with their eyes.
Time and again they forget
to open and close them.

That *Dòngshān* is a sage himself is demonstrated by the following event in his life as recounted by *Keizan*. On one occasion, having asked *Yúnyán Tansheng* about the best way to see his true being, *Dòngshān* still had some doubts. His master had told him to “ask the messenger within.” Afterwards, he was “greatly enlightened when he saw his reflection in the water as he crossed a river.” At that point in time, he said in verse:

Don’t seek from others
Or you’ll be estranged from yourself.
I now go on alone –
Everywhere I encounter It.
It now is me, I now am not It.
One must understand in this way

XVI · XIANGYAN ZHIXIAN

“Xiāngyán Zhixián”¹³⁴ concerns the thinking of another Oriental sage. In a brief entry at the end of the 2001 Ninja Press edition of *The Book of Silences*, Bringhurst himself provides us with just the essentials regarding the date and place of this sage’s life: “Xiangyan Zhixian (Hsiang-yen Chih-hsien) c. 830-898 Central China.” Here is a ninth-century Chinese thinker who still has something of concord to teach humans breathing the same air eleven centuries later. Bringhurst gives voice to his thinking in a seven-stanza poem structured around two movements for the soul. Both are inextricably linked to one another though, for they constitute a perfect organic *Gestalt* in which ideas flow smoothly into one another. The composition opens with a twofold order addressed to someone who might well be the present-time reader, or any reader of any time who might care to listen to what this sage’s impersonation has to say: “*Eat light. / Where there is nothing to listen / to you, nor to listen to, / listen.*” Light is a recurrent motif in Bringhurst’s poetry: it is light that imbues every single thing in the world with a special aura that renders it visible to the naked eye. Light is to the eye what air is to the lung: whereas the former makes seeing possible, the latter makes breathing possible. And both seeing and breathing are essential to humans’ life. The speaking voice in Bringhurst’s poem urges the reader to “*eat light,*” which is to be interpreted as absorbing the light with one’s whole body, through the skin pores as it were, and not just through one’s eyes. It also urges us to *listen*, even if there is nothing out there to render listening meaningful. But listening always makes sense as soon as we realize that everywhere *being* is dancing and singing, striving to make itself audible to humans and non-humans alike.

Now, the stanzas that follow these opening lines, though still a part of the first movement of the poem, are truly enigmatic. “*The essence of the way*” is said to be found in a “*dragon purring in the dead tree*” and walking in the way is “*the naked eyeball / shining from the skull,*” looking in every direction and absorbing everything it sees. These are words someone else spoke long ago, but they turn to be no words at all, and yet they are attributed to an unknown “you” that might or might not be the reader. The language is paradoxical and the meaning is obscure, hard to decipher. The speaking voice appears to somehow evoke the pre-eminence of speech over writing, of the spoken word over the written one, of the unspeakable over the unspoken. At any rate, throughout the first four stanzas, light, listening and seeing are brought together as paths leading into *being*, the innermost substratum of all things. At the intersection point where light and the eyes meet there are “*two silences*” that nonetheless coalesce into radiance and evoke uninterrupted dialogues that have been going on as if from the dawn of time. The eyes are invented by light itself to “*detain it,*” to grasp or capture it midway despite its volatile or evanescent nature. Light and eyes are silences because they do not speak; they do not speak either to understand each other, to coalesce into perfect harmony:

The light and the eyes it invents to detain it are two
silences, one radiance, many
unfinished yet fully
complete conversations.

¹³³ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. 167.

¹³⁴ “Xiangyan Zhixian” was first incorporated into the Oriental sages sequence in A.65 *The Book of Silences* (2001). It was then reprinted in A.92 *Selected Poems* (2009).

The second movement for the soul of “Xiāngyán Zhìxián” (stanzas 5 to 7) speaks of a time before the poetic *I* at the centre of Bringhurst’s composition was born. Punctuated by the repetition of the time expression “before I was born”, the *mirror*, the *scriptures* and the *bowl* mentioned in these lines are perfected expressions of nothingness. It is no accident that the speaking subject should see nothing, not even his own reflection, in the mirror; or that he should find nothing but speaking voices erasing the written words on the pages of a book; or that he should find the bowl empty, filled with nothing but hunger. Glass, voices erasing the page and hunger are all forms of nothingness as it were:

I looked in the mirror before I was born
and saw nothing but glass. I opened the scriptures
before I was born and heard voices
erasing the page.

How are these enigmatic lines to be interpreted? The meaning is far from clear. What follows is conjecture only. First, the sage Xiāngyán Zhìxián has learnt to forget about his narcissistic self and so he sees not his self-image given back by the polished, shiny surface of the mirror, but just simple glass. Only by transcending the ego, is it possible to see things for what they truly are. Secondly, in scriptures that are supposed to provide him with revealed knowledge, a form of ultimate truth, he hears only voices undoing the words on the page. This, of course, may suggest the pre-eminence of speech over writing in the Buddhist tradition, but it is uncanny that the voices should not prevail somehow. They are as if self-cancelling themselves in erasing the very words on the pages of the scriptures. Or this may be intended as a reminder that knowledge is not to be sought in the insights of others, frozen down in books of wisdom. The truth is much closer at hand: it is inside oneself and so one needs not go any further than oneself. And thirdly, the clean and empty bowl contains nothing but hunger, but hunger is not just physical: humans have thirsted and hungered for the truth ever since the beginning of humankind. What the sage sees with certitude inside the bowl is a catalogue or enumeration of bodily parts that are the very incarnation or abode of physical hunger. What he sees in the bowl is “*nostrils and teeth*,” but, curiously enough, “*no mouth and no belly*.” The rest of the bodily parts include everything else except fingers and hands, which, unlike feet, are damaging in Bringhurst’s thinking:

Wings, but no fingers. Elbows
and earlobes and shoulders and feet
going down on their knees
and then creeping back up, but no hands.

XVII · YUNMEN WENYAN

“Yunmen Wenyan”¹³⁵ was originally published in 1993 in a literary magazine called *Windhorse Review*, along with three more poems from the Oriental sages sequence. The

¹³⁵ “Yunmen Wenyan” was originally published in C.62 [Four poems], *Windhorse Review* (Yarmouth, Nova Scotia) 11/12 (Summer 1993): [6-7]. Contents: • “Lotus Flower Mountain”; • “Rújìng” (rpt. as “Tiantong Rujing” in A.47, A.53, A.53a, A.65, A.92); • “Yúnmén Wényan” (rev. in A.47, rpt. from A.47 in A.65, B.69, A.92); • “Fayan Wényi” (rev. in A.47, A.65, A.92). [There are misspellings in the titles of the latter two poems.] Afterwards, it was revised in A.47 *The Calling*, and reprinted from A.47 in (i) B.69 *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece: “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”,

original text¹³⁶ underwent profound changes in its next textual incarnation in *The Calling: Selected Poems 1970-1995* (1995), where the two-stanza poem became a three-stanza piece of utter beauty and perfection. Bringhurst's poem concerns Yunmen Wenyan, a major Chinese Zen master of Tang China and the founder of one of the five major schools of Chan, the so-called Yunmen school, which flourished into the early Song Dynasty and had a strong influence on the upper classes. A brief entry included in the "Cast of Suspicious Characters" at the end of *The Calling* gives us the essentials concerning this sage: "Yúnmén Wényǎn (Yün-men Wen-yen, 864–949) A Zen teacher born near Shanghai. He taught in northern Guangdong." And in the 2001 Ninja Press edition of *The Book of Silences*, Bringhurst tells us this: "Yunmen Wenyan (Yun-men Wen-yen) "Cloudgate" 864-949 Southeastern China." So here is a Zen monk who lived in the ninth and tenth centuries CE and left a precious legacy in the form of penetrating thinking, the echoes of which are captured by Bringhurst in this moving homage to the master.

Born in the town of Jiaxing near Suzhou and southwest of Shanghai to the Zhang family, Yunmen Wenyan became a monk at an early age under the guidance of Zhi Cheng, a Zen master in his home town. He studied with this teacher for several years, taking his monastic vows at the age of 20. Unsatisfied with the teachings, he sought the instruction of another master, Daozong (also known as Bokushu or Muzhou Daozong), who practised a rigorous and demanding form of Zen in Mu-chou so as to help his disciples gain enlightenment. Upon his encounter with Daozong, he insisted on being accepted as a student and, as the master would not admit him, he had his leg broken as Daozong shut the gate catching the monk's leg and breaking it as a result. Afterwards, Daozong recommend him to seek instruction from the eminent Zen master Xuefeng Yicun of Mt. Hsiang-ku, in Fuzhou. He became his disciple and, after a few years of rigorous discipline, he eventually attained enlightenment. Yunmen Wenyan ended up joining the Lingshu monastery on Mt. Lingshu under Rumin Chanshi, who became his great friend. Upon his death, Yunmen became the head priest of the monastery. Under the patronage and protection of the ruler Liu Yan, he was appointed abbot of the Lingshu monastery. Innumerable visitors from all over China would travel to this monastery in search of enlightenment on the part of the Zen master. As they proved too distracting for Yunmen's taste, he asked the king to help him build a new monastery on Mount Yunmen. At the age of 64, Yunmen moved to his new monastery, where he lived and taught for the rest of his life. He took the name from the mountain on which the monastery was built. He died at the age of 85 or 86, and was buried with great honours. Yunmen Wenyan was particularly renowned for his forceful, subtle and direct teaching, mystical at times. He would avail himself of sudden shouts and of blows with a staff to help his disciples attain enlightenment. One of the most eloquent of the Zen masters, Yunmen had also an impressive wisdom and an amazing skill at oratory. In his use of old cases, stories and paradoxical statements, he was one of the great pioneers of the koan tradition that would evolve much later into a venerated Zen practice. Many of the stories and koans collected in the *Blue Cliff Record* include 18 contributions by Yunmen; eight of his sayings are included in *Records of Serenity*, and five in *The Gateless Gate*.

"Thin Man Washing"; "Sunday Morning" (all rpt. from A.47); • brief essay, "In Praise of Vacant Lots."; (ii) in A.65 *The Book of Silences* (2001), and (iii) in A.92 *Selected Poems* (2009).

¹³⁶ This is the original text published in C.62: "Not only stones and trees are our teachers. / The truth of the world / sparkles in slopbuckets, toilet bowls, turds. / Are your eyes plugged up with light, / your ears with music and your nose with sweet spring air? / Everything that has ever existed is medicine. // Bright emptiness burns in the doorway. / In the cupboard it fills up the dishes and bowls. / The flames in the stove are preaching the law. / Past, present and future have come here to listen."

Bringhurst's poem on this Zen master appears to capture the essence of Yunmen's thinking. If one were to identify the fundamental theme at the core of this composition, it might not be altogether unwise to say that it concerns the possibility of humans' penetrating the ultimate truth of reality by paying attention to everything in this world that is incessantly speaking its own lessons clear and loud for anyone who might be willing to listen. Zen masters go in fear of abstractions and always prefer to be concrete. Instead of talking about *being* or *reality* or *self*, they talk about stones, mountains, flowers, clouds, streams or birds. Thus, to the Zen mind, any sensuous object that is seen or heard or touched is susceptible of being turned into the subject of the deepest metaphysical speculation and significance as well. All creatures in this world, sentient and non-sentient alike, are pervaded by Buddha-nature, and so Nature (which is made up of mountains, trees, animals, flowers, stones and streams) does have something important to tell us about reality and about ourselves. *Being* is universal and is singing its uninterrupted song everywhere you turn to look or to listen to; the only thing demanded of us is that we pay attention. Hence, the first stanza in Bringhurst's poem opens with a forceful statement:

Stones and trees are my teachers, but
there are others. The truth of the world
sparkles in slopbuckets, toilet bowls, turds,
and in festering sores.

Understanding or sudden enlightenment is not to be sought primarily in books, but in the vast world of things that are teeming with life and rich in meanings and lessons to deliver to attentive humans. The poetic persona of the sage in Bringhurst's poem is made to affirm that he has got an infinity of teachers in this world: not just stones and trees set in idyllic settings, but a whole range of things where the Western mind would not bother to look for a tiny speck of truth. But to Yunmen, the *radiance of the truth* is discernible everywhere, even in what looks like vulgar or mediocre things such as excrements or festering sores defiling the purity of the human body. This makes sense if we bear in mind that Zen is characterized by a non-dualistic mode of thinking in which the dichotomy of perceiving subject and perceived object is transcended into the realm of the absolute or unity: Zen takes us to the realm of non-dichotomy. What Zen advocates is an essential unity between humans and the world at large which was present there from the very beginning. This unity is not posited as an intellectual construct, but as an undeniable fact as it were. The idea of a perfect communion or identification between self and Nature is at the very heart of the second stanza. How to communicate what is difficult to communicate when words will not do? The poetic voice makes use of a rhetorical question: "*Are your eyes plugged up with light, / your ears plugged up with music / and your nose with sweet spring air?*" The parallelism of these three verse lines eloquently insists on elemental things of this world (light, music and air) with which we are perfectly and naturally united. The senses are the windows of the body open onto the world out there, of which we are a tiny part after all. At first, this seems to be beyond verbalism; words will not do to convey this sense of the sublime grandeur of *what is*. Eyes, ears and nose are just the bodily organs through which we absorb the world in its entirety to make it amenable to human understanding; they are the windows through which Nature is observed. Aided by the intellect, which Zen does not despise altogether, the senses give us first-hand information about the world, allow us to gain a direct apprehension or grasping of *what is*.

In an enlightening essay entitled "The Role of Nature in Zen Buddhism", D.T. Suzuki dwells precisely on the relationship between Nature and humans in the thinking of the Zen masters. The handful of conclusions he comes to are worth considering in this context for they are relevant to our train of thought here. He opens his essay by dwelling

on ideas associated in the Western mind with Nature, and he claims that the Nature-man dichotomy arises from the Biblical account of creation, in which God gives humankind the power to dominate all creation. This power-relationship is the origin, Suzuki says, of the idea firmly ingrained in the Western mind that Nature is something to be conquered, subdued and exploited by humans for their own material welfare and comfort, for their own selfish ends. This also brings out the problem of human rationality: whereas humans are rational creatures, Nature is purposeless and brutal fact, and it operates blindly. Thus, man feels the need to strive to make Nature amenable to his idea of rationality, to bring it under his control. As soon as man is made in God's image and commanded to dominate Nature, we are witnessing "the real beginning of human tragedy."¹³⁷ The very idea of domination is ego-centred and the struggles that follow from this very idea of power are tragic. Suzuki summarizes these ideas concerning Nature as man's objective world as follows:

. . . let us understand Nature as something antithetical to what is ordinarily known as divine; as something irrational yet amenable to our mechanical, economic, utilitarian treatment; as something not human, not in possession of human feelings, and devoid of moral significance; as something which finally overpowers Man in spite of Man's partial and temporary success. In short, Nature is brutally factual, with no history objectively set before us and to be regarded as commercially exploitable, but finally swallowing us all in the purposelessness of the Unknown.¹³⁸

Of course, this is not the right way of thinking according to Suzuki, for, to begin with, humans are part of Nature itself. Humans are Nature-made, not man-made. "There is nothing in Man that does not belong in Nature," he says. Nature includes all created things, and "To think that these are all under human control is altogether illogical and cannot be consistently maintained. But Western people unconsciously follow this idea and their moral attitude towards Nature is thereby determined."¹³⁹ This notion of treating Nature as something irrational and hostile, inner matter and brute fact, is a purely Western idea, and humans have no right to make Nature obey its will or impose their way on Nature, even less to exploit or abuse it for their own selfish ends. Humans make use of all Nature has to offer economically, "with no sense of kinship with it, hence with no sense of gratitude or sympathetic affiliation."¹⁴⁰ In this Western frame of mind, Nature and man are strangers to one another and there is no way for them to communicate with one another along fluid or smooth lines of respect. Man must remain an outsider confronting sheer emptiness if he

¹³⁷ Daisetz T. Suzuki, *Zen Buddhism: Selected Writings of D.T. Suzuki*, ed. by William Barrett, Westminster, MD, USA: Doubleday Publishing, 1996, p. 278. Suzuki is convinced that "Nature has a great deal more to say to us. Nature is indeed an eternal problem, and when it is solved, we know not only Nature but ourselves; the problem of Nature is the problem of human life." *Ibid.*, p. 278. Thus, Nature poses the major intellectual or epistemological challenge to all the human beings of all times.

¹³⁸ Suzuki, *ibid.*, p. 277.

¹³⁹ Suzuki, *ibid.*, p. 278. This Western attitude towards Nature is summarized as follows by Suzuki: "1. Nature is something hostile to Man and drags him down when he is struggling to reach God. [...] 2. While Nature and God are warring against each other, Nature and Man are also at war, or rather, as commanded by God, Man is always striving to exercise his dominating power over Nature. 3. There is no way for Man to approach Nature in a conciliatory, friendly spirit: one works to destroy the other. There is nothing in Nature that will help Man in his spiritual advancement. 4. Nature is a material world and the material world is meant for exploration and exploitation. 5. In another sense the material world is brute fact. [...] Intellect cannot do anything with it, but has to take it as it is and make the best of it. 6. The dichotomy of Nature-and-Man implies hostility, even an utter irreconcilability, and is, therefore, mutually destructive. 7. No idea seems to be present here which indicates or even suggests human participation in, or identification with, Nature. To the Western mind Nature and Man are separate." *Ibid.*, pp. 279-280.

¹⁴⁰ Suzuki, *ibid.*, p. 283.

does not manage to subdue this vast unknown quantity which is the objective world. This, of course, generates feelings of anxiety, fear and insecurity in the face of what looks like an alien world. Now, for Zen Buddhism humans must be insiders, not outsiders. As Suzuki puts it:

Nature produces Man out of itself, Man cannot be outside of Nature, he still has his being rooted in Nature. Therefore, there cannot be any hostility between them. On the contrary, there must always be a friendly understanding between Man and Nature. Man came from Nature in order to see Nature in himself; that is, Nature came to itself in order to see itself in Man.¹⁴¹

Zen embraces the fundamental idea that humans are in Nature and that Nature is in humans. It is not a question of mere participation in each other, but a fundamental identity between the two that is posited vehemently instead. But identity does not entail the annihilation of one at the cost of the other. “The whole universe which means Nature ceases to be “hostile” to us as we had hitherto regarded it from our selfish point of view. Nature, indeed, is no more something to be conquered and subdued. It is the bosom whence we come and whither we go.”¹⁴² Thus, Nature becomes part of our being as soon as we recognize it as Nature and an essential unity or identity of man and Nature is acknowledged. In its urge to reach the ultimate core of meaning, humans come to face this elemental truth. Man and Nature are not separate; they belong together and are thoroughly merged into one another even if their identities remain clearly distinguishable.¹⁴³ Nature is not a hostile place either, and so the poetic voice in “Yunmen Wenyan” celebrates the fact that it is a benevolent whole, beneficial to humans: “*Everything that has ever existed is medicine.*” This is an essential intuition that occurs in timeless time, in an absolute present where time seems to be cancelled out or suspended for a while. All planes of time are present here and now, as it were, as the radiance of the truth pervading the whole of existence is celebrated in exultant words that speak of “*bright emptiness*” and “*flames in the stove*” in the familiar realm of domestic life. Buddha-nature is present in all beings regardless of their sentience or consciousness, and ordinary things are surrounded by a mysterious halo that betrays the existence of the non-visible, of the transcendental conjunction of light and air and music on the texture of things, all of which reminds us that Nature is in us and that we are in Nature. The law that the flames recite is possibly the omnipresence of something grander than humans themselves that unite all beings, animate and inanimate alike. Every being is in possession of the Buddha-nature:

Bright emptiness burns in the doorway.
In the cupboard it fills up the dishes and bowls.
The flames in the stove are reciting the law.
Past, present and future have come here to listen.

¹⁴¹ Suzuki, *ibid.*, pp. 283-284. Suzuki dwells on this notion in detail: “This is objective thinking, to say that Man comes from Nature and that Man sees himself through Nature, or that Nature sees itself through Man. [...] To turn to subjectivity means to turn from Nature to Man himself. Instead of considering Man objectively in opposition to Nature, our task is now to make Man retreat, as it were, into himself and see what he finds in the depths of his being. The problem of Nature thus becomes the problem of Man: Who or what is Man?” *Ibid.*, p. 284.

¹⁴² Suzuki, *ibid.*, p. 308.

¹⁴³ By the end of his essay, Suzuki claims that Zen is no form of escapism and that it acknowledges a perfect union with Nature, while all around us becoming is going on in all its infinitely varied forms: “Zen, therefore, does not try to disengage us from the world, to make us mere spectators of the hurly-burly which we see around us. Zen is not mysticism, if the latter is to be understood in the sense of escapism. Zen is right in the midst of the ocean of becoming. It shows no desire to escape from its tossing waves. It does not antagonize Nature; it does not treat Nature as if it were an enemy to be conquered, nor does it stand away from Nature. It is indeed Nature itself.” *Ibid.*, p. 307.

XVIII · FAYAN WENYI

“Fayan Wenyi”¹⁴⁴ captures the essence of the thinking of another eminent ancestor and sage. From a brief entry included in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), we learn who this Oriental sage was: “Fayan Wenyi (Fa-yen Wen-i, 885–958) Founder of the short-lived Fāyān school of Zen. He was born in Hangzhou and taught in Nanjing.” And in the 2001 edition of *The Book of Silences*, Bringhurst provides us with another luminous piece of information: “Fayan Wenyi (Fa-yen Wen-i) 885-958 Nanjing, northern China.” Bringhurst’s poem has undergone significant textual modifications¹⁴⁵ with the passing of time until it has reached what might be its definitive incarnation. His poetic corpus is truly alive and so poems are revised time and again, polished and improved upon: certain lines are added, other lines are omitted or rearranged differently, and even some words are replaced with others. Normally textual changes are for the better: the changes incorporated improve the musicality of the poem or makes a particular point clearer for the reader. After all, Bringhurst is a poet who aims at being clear and transparent for the reader, which does not mean necessarily that his poetry is not intellectually challenging and exacting.

No distinct parts appear to be discernible in “Fayan Wenyi”, which is a river-poem, one where stanzas flow naturally and smoothly into one another to form a perfect *Gestalt* in which all words fall exactly into place. It opens with an enigmatic conversation reminiscent of the philosophical conversations between master and student so typical of Zen koan practice. The master asks a simple question: “*Where are you going?*”, and the disciple answers “*I don’t know.*” “*Not knowing is close*”: this is the master’s reply. Sometimes we move and we pretend we are going somewhere and yet we ignore what our destination is. A critique of purposeless action is what the master might intend to convey to the truth-seeker with his enigmatic words. Or rather, not knowing, not making any effort to know anything at all, to penetrate the ultimate essence of things, might be the best path leading towards self-enlightenment. Therefore, the student decides to “*stay in one place for a while*” and seek inside himself, we presume, in search of his true being and the truth of reality. This is what Zen encourages its adepts to do: searching outside oneself is nonsense as the answer is close at hand from the very start since all humans are endowed with the Buddha-nature. When enlightenment is attained, the truth-seeker realizes that reality is an indestructible unity where it does not make sense to draw distinctions between “*waking and dreaming, / arriving and leaving*” for they are “*flower and stem.*” They are the sides to one and the same coin. Once again, Bringhurst makes use of tautological statements to try to convey the inexpressible: “*we are where we are, / eating the answer each day, and excreting the question.*” The key to the answer is deep inside ourselves and we do not seem to notice it. We eat the answer every day

¹⁴⁴ “Fayan Wenyi” was originally published in C.62 [Four poems], *Windhorse Review* (Yarmouth, Nova Scotia) 11/12 (Summer 1993): [6-7]. Contents: • “Lotus Flower Mountain”; • “Rújīng” (rpt. as “Tiantong Rujing” in A.47, A.53, A.53a, A.65, A.92); • “Yúnmén Wényan” (rev. in A.47, rpt. from A.47 in A.65, B.69, A.92); • “Fayan Wényi” (rev. in A.47, A.65, A.92). [There are misspellings in the titles of the latter two poems.] Afterwards, it was revised in A.47 *The Calling* (1995), further revised in A.65 *The Book of Silences* (2001) and reprinted from A.47 again in A.92 *Selected Poems* (2009).

¹⁴⁵ The original text as published in C.62 consists of four instead of five stanzas. Stanzas 1 and 2 are exactly the same, but an extra stanza (the third one) is added in the definitive textual incarnation of the poem. Stanzas 4 and 5 read slightly differently in C.62: “*The whole is the truth, which like us has arrived / at this place, and like us is departing. / The truth, like the rest of us, dies and is born / and goes on with the business of living. // What should one do with the night and the day? / Every step, every breath / should roll like an egg / to the edge of this question.*” In the 2001 version of the poem the last line is also different: “to the edge of *the* question”, and not “*this* question”, as in *The Calling* version.

because it is visible and palpable in reality, and we excrete the question in return so as to start the whole questioning all over again:

giving back shit, which the flowers and fireflies
eat, or hiding the shit, or feeding
the shit to our friends and our children,
and giving back nothing.

In the meantime, “*the whole is the truth*” and it is right in front of us, before our eyes, “*tying its shoe, with its coat on one shoulder.*” Which means that it is ready to go away, that we should seize the opportunity to catch it unless it slips away or vanishes into nothingness. The truth might be eel-slippery, elusive, because it loves to hide from humans’ inquisitive gaze. Like human beings themselves, the truth is engaged in the art of living too: “*The truth, like the rest of us, dies and is born / and goes on with the business of living.*” And in the closing stanza, the reader gets to hear the soliloquizing of the monk or student presented in the first stanza of the poem:

What shall I do with the night and the day,
with this life and this death? Every step, every
breath rolls like an egg
to the edge of this question.

In lines reminiscent of Eliot’s Prufrock’s uncertainty, the pupil or disciple wonders what he should do about time passing by. Time goes by inevitably and inexorably, and there is nothing the monk can do about it. All the steps he is taking along the path of life, every breath he is taking at every moment in his lifetime, is drawing him closer and closer to the end, but also to this inevitable question: How to make the most of time? How to make of one’s stay on earth a genuine life? All the actions taken in one’s life and all the words uttered on time, and all the paths not taken determine the course of one’s journey. The only problem is that there is no return point, no turning back time, and the painful doubt remains whether one is making the right decisions along the way.

XIX · LIANHUA FENGXIAN

“Lianhua Fengxian”¹⁴⁶ was originally published under the title “Lotus Flower Mountain” in a literary magazine entitled *Windhorse Review* in 1993. Since then, the original four-stanza poem¹⁴⁷ has undergone important modifications till it has reached its final textual

¹⁴⁶ “Lianhua Fengxian” was originally published under the title “Lotus Flower Mountain” in C.62 [Four poems], *Windhorse Review* (Yarmouth, Nova Scotia) 11/12 (Summer 1993): [6-7]. Contents: • “Lotus Flower Mountain”; • “Rújìng” (rpt. as “Tiantong Rujing” in A.47, A.53, A.53a, A.65, A.92); • “Yúnmén Wényan” (rev. in A.47, rpt. from A.47 in A.65, B.69, A.92); • “Fayan Wényi” (rev. in A.47, A.65, A.92). [There are misspellings in the titles of the latter two poems.] Afterwards, it was published under the title “Lianhua Xiang” with some textual variants in C.74 [Two Poems]. *Canadian Literature* 155 (Winter 1997): 15, 179. Contents: • “Lianhua Xiang”; • “Keizan”. Here it was published as “Lianhua Xiang”, not as “Lianhua Fengxian”. Finally, it was included as part of the Oriental sages sequence in A.92 *Selected Poems* (2009), where it was reprinted from C.74. It was never published as part of the sequence as published in A.65 *The Book of Silences* (2001).

¹⁴⁷ This is the original text of the poem as published in C.62: “Stop writing the guidebook. / Our ancestors reached here as well. / They tasted this wind, and they left us this cache / of old footsteps. They left us // these splinters and flakes of ideas, / the husks of their thought, / where they sat, night after night, by the fire / and sharpened their questions. // This is no first ascent, and no summit. / They also were here. They left

incarnation in *Selected Poems* (2009). It concerns the thinking of another Oriental sage essential to Bringhurst's search after moveable and flexible structures of knowledge that are urgently necessary to humankind nowadays. Lianhua Fengxian belongs among those ancestors whose company the poet has sought time and again in search of some form of enlightenment, possibly both intellectual and spiritual. In the short poetic prose piece accompanying the 28 poems that make up the Oriental sages sequence as published in *The Book of Silences* in 2001, Bringhurst gives us these luminescent words as a gift in what looks like an autobiographical text that is worth quoting in full:

My father was born in the village of Garland, Wyoming, in 1915. After Pearl Harbor, close to Garland, the Heart Mountain prison camp was built and filled with Japanese Americans, jailed because of their race. Among the prisoners was the Buddhist teacher Senzaki Nyogen. I was born the year he was released.

Not many years later, in Utah, then California, I was reading Buddhist books that many kids in North America were reading in those days: books by Senzaki's friend Suzuki Daisetsu, and translations – usually poor ones – of older Pali and Chinese and Sanskrit texts. Why did we read them? We didn't know. We knew they told us something other books quite frequently forgot.

A few years after that, I began what has become a lifelong practice: rooting through the library, digging up the dead, holding their bones to my ears like shells, and pulling their skulls down over my head. There may be reasons for such deviant behavior. I was born in the year of the dog. I also spent my early days in houses with no books. The library and bookstore, when I discovered them, seemed to me the finest candy stores on earth. And I come from a long line of refugees and orphans. In the tradition I was born to, birth is not what counts. Progenitors are chosen instead of imposed, and ancestors are earned instead of inherited.

In my twenties, I started to read, then to translate, the philosopher-poets of early Greece, and to go on little joy-rides with their ghosts. In my thirties, I started thinking back to all those Asian poet-monks I'd read of but had never really read. I wanted to go walking with them too.

I never got very far in studying Chinese or Japanese, so the walks were always short, but over twenty years we walked a little way. These poems are the result.¹⁴⁸

There is something moving about the words Bringhurst deploys to refer back to these Oriental sages, whom he considers his ancestors: "In the tradition I was born to, birth is not what counts. Progenitors are chosen instead of imposed, and ancestors are earned instead of inherited." Literary tradition is not something one inherits spontaneously, but something one must earn through personal effort and deliberate study of the achievements of the old masters. In this, Bringhurst is following closely in the steps of Ezra Pound, who was convinced that there was no use in trying to accomplish, literarily speaking, what had already been accomplished with undeniable excellence by someone else. It was, however, a test of an author's sincerity that he approached his craft with rigorous knowledge of the technical elements involved in it. This partly accounts for the fact that, from the very beginning of his literary career forty years ago, Bringhurst applied himself with great diligence to the study of the masters of a number of literary traditions in search

us / their spent breath / and the touch of their hands on the stones. // If they came all this way, / why didn't they stay here? / Eh? Could it be because this / was the start of their path?" What might be the definitive textual incarnation of this poem consists of five stanzas instead of four and has been significantly perfected in many ways with the respect to the original text. This is common practice with Bringhurst: the poems that make up his corpus are a work in progress that is revised and polished time and again. Nevertheless, the *Ur-text* is here quoted in full just to give an idea of the way it has metamorphosed into a unique piece of utter perfection and beauty.

¹⁴⁸ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the "Prospectus" at the end (unpaged).

of inspiration for his own poetic enterprise. If nothing else, Bringhurst is diligent and hard-working, and he has seized every opportunity to improve his craft as a poet. But poetry is a life-long vocation in his case, a genuine calling, not a pastime or part-time activity. Assiduous translation practice from a number of modern and classical languages, the conscientious study of prosody, and the meditation on crucial aspects related to poetry, language and tradition in his brilliant essays are certainly a part of this self-imposed Spartan discipline that has occupied him for decades now. In this self-willed determination to earn a place among the best of the ancestors of Western and Eastern traditions, he resembles certain Buddhist monks who would endure all kinds of physical and mental hardships so long as they could attain the enlightenment *satori* brought about.

To his mind, literature is *Weltliteratur* and nothing of value or relevance can be accomplished unless one knows firsthand the best that has already been thought or done in the past. Thinking and singing are the two sides of the same coin: what we find in the extant fragments of the poet-philosophers known as the Presocratics and what we read in the Zen Buddhist texts of the Oriental sages is philosophical poetry or poetic philosophy in which ideas sing and dance with perfect naturalness. This is the kind of poetry that interests Bringhurst: one that brings ideas and music together; one that fuses profundity of thought, feeling and clarity of speech. And this is the kind of poetry he himself is interested in producing. The words are so clear that they are almost invisible, and yet they are a pleasure to listen to, for they are imbued with a precious musicality that is expressive of careful devotion to a craft that seeks to communicate important ideas in memorable forms. There is then nothing devious about his behaviour as he digs up the bones of his ancestors, metaphorically speaking, in those libraries where he hears the echoes of his predecessors speaking loud and clear to him. In this respect, “Lianhua Fengxian” is a well-wrought composition in honour of the Buddhist monks and philosophers that dared think with astonishing profundity about fundamental questions – i.e., those questions that have been asked time and again by humans over the centuries. The poem consists of two parts: whereas the first part (stanzas 1 to 3) offers an exhaustive catalogue of the legacy our ancestors have left us, the second (stanzas 4 and 5) dwells on the universal things that pertain to humankind despite the passing of time.

Bringhurst’s poem opens with a verb in the imperative form: “*Stop writing the guidebook.*” With these words the poetic persona of Lianhua Fengxian the poet is impersonating here might be addressing a disciple, the modern reader or himself. Whichever the case, the meaning is crystal-clear: knowledge, even less wisdom, is not to be found in books. One must look somewhere else for illumination. Zen Buddhism dismisses intellectualization and encourages its adepts to find enlightenment within themselves. There is no need to search outside oneself, for the nature of the mind is radiant light and each human being is already an enlightened Buddha from the very beginning. And yet one needs to acknowledge that one’s ancestors accomplished much that needs to be borne in mind when trying to penetrate the ultimate essence of things: “*Our ancestors reached here as well,*” which is to say *nihil novum sub sole*. There is a purely physical and subtle substratum uniting us human beings of the present with these ancestors who lived in the past: our breathing the same air, our tasting the same wind on our tongues. But the legacy we should be grateful heirs to includes something else, the catalogue of which unfolds in the three opening stanzas of Bringhurst’s poem. “*They left us / this cache of old footsteps,*” and so their traces are discernible on the ground, and also:

They left us these splinters and flakes
of ideas: the inedible bits of their thought
that fell where they sat, night after night

by the fire, to sharpen their questions.

This is no first ascent and no record-book summit.
They also were here, and they left us
their spent breath
and the touch of their hands on the stones.

That Zen goes in fear of abstractions is made clear from the two stanzas just quoted above. As in the case of the extant fragments that have been preserved of the Pre-Socratics' thinking¹⁴⁹ in ancient Greece, at the very cradle of Western philosophy, these Oriental sages have also left us "*splinters and flakes of ideas*", "*inedible bits of their thought*", and tiny packages of precious insights into the nature of reality. These would come into the light of day as these thinkers sat by the fireside asking the same questions tirelessly, sharpening them in the process, in their search after the right answers – which is also an implicit reference to koan practice in among Buddhists. Remnants of visions or tattered fragments of wisdom: this is what the Pre-Socratics and the Oriental sages have left us as their irreplaceable legacy. It cannot be seen or touched, but only celebrated with a profound sense of gratitude for their having thought these intuitive insights for our own benefit. Furthermore, these Buddhist sages have left us "*their spent breath*" and "*the touch of their hands on the stones.*" For instance, Han Shan at Cold Mountain comes immediately up to one's mind – the wandering poet who lived as a hermit in a cave deep in the mountains and devoted his time to composing poems on stones, bamboo, trees, and rocks of what he deemed to be his natural home. Their breath has not extinguished altogether; there are still traces of their hands on the stones that the stones have not quite forgotten yet. We have only to listen and to look with fresh eyes and open ears to see that these ancestors are not quite dead. Something of them has survived the passage of time. Now, mountains were of paramount importance for Buddhist monks. As Bringhurst himself explains in the untitled headnote preceding the section of "The Book of Silences" as published in *Pieces of Map, Pieces of Music* (1986):

Most of them were wanderers, and most of them resettled, taking new names from the neighboring mountains. They are not just people who were places; they are people who *became* places – when everything encouraged them instead to become consumers and provisioners: bureaucrats or managers; trapped, coopted laborers or lords.¹⁵⁰

Hence "*this is no first ascent and no record-book summit,*" for these sages have been there already before we even started climbing the mountain. In the secular adventure of humankind's search after the truth, our predecessors did much of value for us. Humans from all times and places on earth have been tackling the same fundamental questions after all. We share much more than we might think at first. Upon closer inspection, it seems that the Pre-Socratics and the Oriental sages were asking the same questions with their sharpened minds after all. *Where is truth to be found? Is knowledge of reality a possibility? How do humans come to know anything at all? What is the world (and the things in it) made of? Are words reliable in our representation of the world? Does language manage to somehow capture the essence of things?* They sought hard to reach to the very roots of *being*. These are the fundamental questions that poetry, science and philosophy ask tirelessly and look for satisfactory answers to. In the second

¹⁴⁹ Bringhurst's words on the ancestors and the tattered fragments of their visions in this poem are strongly reminiscent of those he uses to refer to the Pre-Socratics in *The Old in Their Knowing*. Thus, the closing line of "Herakleitos" is "*Wind stirs his ashes*", and in "Pythagoras" Bringhurst speaks of "*remnants*", of "*rubble of picked-over thought*", of the mind of Pythagoras standing "*on two columns of words*" amid so much havoc and destruction.

¹⁵⁰ *Pieces of Map, Pieces of Music*, p. 10.

part of the poem, Bringhurst emphasizes precisely the sense of kinship (both human and intellectual) that unites all men and women with their ancestors. On their ascent to the summit of the mountain (which is a splendid or eloquent metaphor to signify the conquest of knowledge and truth), our ancestors “*inhaled the same light with their own eyes / and exhaled their shadows the same.*” Not only did they breathe in the same air, but also breathed in the same light emanating from the sun and breathed out their own shadows onto the ground. *Ubi sunt?*, asks the poetic voice. “*Why didn’t they stay if they came here? / And where are they now?*” Why did they have to die after so much effort to attain enlightenment, to touch the truth with their finger tips? The answer is found in the closing stanza:

Every day is the first day. Every day
is the second, the third and the last.
Every step is the centre, the edge,
the beginning and end of the path.

The poetic persona manages to convey with utter simplicity and elegance such profundity of thought that these lines keep on resonating in the echo-chamber of one’s mind long after one has finished reading this poem. The metaphor used by the poet is twofold: it is temporal, for each day is the first and also the last; but it is also spatial, for every step we take is ubiquitous and reaches in all directions to the beginning and end of the path, to the centre and to the peripheral areas. The ultimate message is crystal-clear again: we humans must start anew, from scratch every day, because the conquest of knowledge, the search after the truth, is bound to begin every new day with renewed energies.

XX · XUEDOU ZHONGXIAN

“Xuedou Zhongxian”¹⁵¹ is an absolutely accomplished poem in *The Book of Silences* and another remarkable example of Bringhurst’s attempts to express the inexpressible. Most of the compositions in the Oriental sages sequence are pieces of meditation that are variations on *being*. And this poem proves to be no exception. It concerns the thinking and singing of another ancient Chinese monk who lived a long time ago. In the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst gives us the essentials concerning this sage: “Xuedou Zhongxian (Hsueh-tou Cheng-hsien, 980–1052) ‘Snowcave’. A Zen monk and poet in the tradition of Yúnmén. He compiled an anthology of koans, writing a short poem to accompany each. A century later a Rinzaï monk named Yuánwǔ Kèqín – the teacher of Dàhuí Zonggō – edited the collection, adding a commentary and notes, to produce what is known as the *Bìyán Lù* or *Blue Cliff Record*.” And in the 2001 Ninja Press edition of *The Book of Silences*, he gives us only elementary details: “Xuedou Zhongxian (Hsueh-tou Ch’ung-hsien) “Snowcave” 980-1052 Southern China.”

Bringhurst’s poem consists of seven stanzas, which can be divided into three distinct parts that convey a sort of epiphany to the reader. As the poem’s meaning unfolds

¹⁵¹ “Xuedou Zhongxian” was originally published in C.63 [Four Poems], *Canadian Literature* 140 (Spring 1994): 79-85. Contents: • “Dongshan Liangjie” (rpt. in A.47, A.65, A.92); • “Xuedou Zhongxian” (rpt. in B.58); • “Yongjia Xuanjue”; • “Dogen” (excerpt rev. in B.72, C.71). It was revised in A.47 *The Calling* (1995), and then reprinted from A.47 in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009). It was also reprinted somewhere else: (i) in B.58 *Windhorse Reader*, 2nd edition, edited by John Castlebury, Yarmouth, Nova Scotia: Samurai Press, 1995: pp 38–39. Contribution: “Xuedou Zhongxian” (rpt. from C.63); and (ii) in C.75 “Xuedou Zhongxian”, *London Free Press* (London, Ontario), 10 January 1999: D1 (rpt. from A.47).

into full bloom, we realize that a moment of revelation with the texture of transcendence is at stake here. The first part of the poem (stanzas 1 to 3) communicates this sense of ineffability inherent in that moment out of time at which the self confronts the depths of its being and finds out the ultimate essence of reality within itself. Koan practice among Buddhists resonates powerfully beneath the verse lines of the first stanza, surrounded as they are by a gnomic halo. Throughout the whole composition the poet relies on the use of paradoxical language to try to capture what is otherwise simply incommunicable or inexpressible. Nonetheless, the sage's dramatic impersonation in Bringhurst's poem evokes a moment of utter transcendence with astonishing mastery:

There is no person. There are no words.
There is this moment, silent and speaking.
What seem to be beings are facets of time
permitted to dance in the light or to listen.

Xuedou Zhongxian's persona speaks with moving confidence and serenity. The statement that "*there is no person*" is meant as a reference to the vanishing of egoic personality during this moment of insight into the nature of things, whereas the statement that "*there are no words*" suggests that language proves to be an inadequate tool to convey the insights gained to others, even to oneself. Words are also altogether dispensable at the very moment of encounter between the self and pure being. They are unreliable, inefficient and unnecessary. What transcends the limits of verbal expression is the unspoken or the unspeakable, and it is this precisely what the sage is handling with his beautiful mind. The only thing that appears to truly exist is *this moment* isolated in time (or out of time), which is paradoxically *silent* and *speaking* at the same time. Silence is pregnant with meaning as it points all the way straight into the heart of *being* as it were. Against the backdrop of an ultimate substratum underlying all the transient things in this world, what the truth-seeker understands all of a sudden is that the multiplicity of *beings* are nothing but incarnations, expressions or "*facets of time / permitted to dance in the light or to listen.*" *What is* exists somehow in the flux of time, dancing in the light and listening to itself as part of the grander scheme of *being*. Needless to say, words will not do when it comes to capture or to grasp this intense penetration into the real.

At this moment of enlightenment, the self attains other meaningful insights into reality though: "*All eyes shine toward / one another; all eyes shine away,*" as if to acknowledge that they share in the same experience of transcendence. In addition, speech is not altogether abandoned or left behind, for body, speech and mind go hand in hand in Bringhurst's poetry: "*What will your first words be, now that your last / have already been spoken?*" This rhetorical question might sound paradoxical, but it does make perfect sense: what the Buddhist sage is asking is precisely how is one to start speaking again after going through such an intense experience of self-illumination. Once one has entered the realm of silence and the unspeakable, how is one to make words effective again? Which words is one to choose to communicate the insights gained into the essence of things? There is something irreverent about using words to say nothing at all, about handling words as if they were vacuous tools that have nothing to say. This is something one must avoid at all costs. Hence the first part of Bringhurst's poem closes with a reflection on expression through verbal means among humans and through means other than verbal among animals: "*Self-expression is easy. Expressing what is / is a little more difficult.*" These two simple sentences encapsulate Bringhurst's poetics with astonishing linguistic economy: the poet is after a poetry that is based on profundity of thought and universals, and not on narcissistic experience and mere opinion. It does not take much effort to express what one feels deep inside, to give voice to the private cartographies of the self, but it is difficult to find the

right way to grasp and convey *what is* to others with clarity, objectivity and relevance. It seems that animals are specially good at expressing *what is*, even if they do not use recognizably human speech to fulfil this purpose: birds sing and fly, and they express *what is* through their singing and their flying with the utmost natural spontaneity. Hence “*Orioles sing. The kingfisher chortles / and falls like an axe through a hole in the rain.*” There is nothing else for them to do; it is more than enough for them to do what they know how to do best of all, because it is in their nature.

The second part of “Xuedou Zhongxian” concerns a journey to visit “*the one with the answers.*” Now, the Zen sage is addressing directly a *you* that might or might not be the reader, invited to cross the threshold and take an active part in the spiritual quest the sage is trying to convey to us. It remains unclear where exactly this strange woman lives who is in possession of all the answers to our questions. She is a supernatural being, a goddess, or Mother Earth herself, as “*each step is exactly halfway to her home,*” which suggests that she is closer at hand than we might think at first. There is no need for those who set out on this journey to take any special tools with them: the knife and the hammer mentioned in the poem prove useless as they have not even the indispensable parts that constitute them naturally. What is the sense in taking “*a knife*” with “*no tang or handle*”, or “*a hammer*” with “*no socket or shaft*”? That “*the one with the answers*” is a pervasive presence in the world is made clear in the fifth stanza, where we learn that she uses neither silence or words to answer the questions posed to her. The parallelism and the beauty of these lines make them truly memorable:

Standing invisibly in the hills,
walking inaudibly on the seafloor,
the one you can talk to will use
neither silence nor speech to reply.

The third and last part of “Xuedou Zhongxian” (stanzas 6 and 7) tessellates spatial and geometrical imagery into a unique tapestry to evoke the ultimate unity of all reality, while at the same time it dwells on the notion of the body as microcosm that contains the whole world in its entirety within itself. Contradiction is at the heart of certain statements. For instance, that “*There is only one way. It goes every direction.*” points to the ubiquity of *being*, to the universality of a substratum uniting all things into one. Regardless of the way one chooses to approach *being*, all paths will take one there, for it is ubiquitous. “*The circle is square, / and its corners are everywhere.*” is another variation on this same notion of the ubiquity of *what is*. Of greater interest is the idea of the body as microcosm at the heart of the sixth stanza:

The seventy joints of the body are knotholes
through which the turtles peer out of the river,
through which the sea-turtles enter the sea.

Mapping the geography of the human body, the poetic voice comes to discover that it is filled with *knotholes* (resembling those on the wood of the trunk or branches of a tree) through which different manifestations of *being* find their way in or out into a different world. Inner is outer, and the other way around: the human body contains the world inside its boundaries, which are not strictly speaking limits. This is the reason why it is possible to affirm that, at the elemental joints of the human body, turtles find their way out of the river and into the sea. Now, Bringhurst’s poem closes with an enigmatic order for the *you* being addressed throughout the poem to “*Carry your nostrils out into the woods with you, / one in each hand.*” How is it possible to take nostrils in one’s hands?, one may ask. Of course, this is

figurative language. What the poetic voice of this Oriental ancestor is telling us is that we should breathe through our hands in much the same way we breathe through our feet when we walk. Or, to put it differently, he is urging us to listen, to pay attention to *what is* with due reverence and gratitude and respect. In the woods we will find ourselves more truly if we just care to *breathe in* the world in its manysided subtlety and we let it breathe us in.

XXI · DANXIA ZICHUN

“Danxia Zichun”¹⁵² is a dramatic impersonation of the thinking of another Oriental sage who lived in the early second millennium CE. It seems that not much is known of this Chinese Zen monk, apart from some basic details preserved in *Denkoroku* (*Transmission of Light*) by master Keizan.¹⁵³ In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst informs us that Danxia Zichun (Tanhsia Tzu-ch’un, c. 1065 - c. 1135) was “a Zen monk whose poems are gathered in the Xutáng Jí – a book whose title might be translated either as *Gathering in the Empty Room* or *The Vacant Hall Collection*. His chosen name, Danxiá, means Redcloud.” Furthermore, in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst gives us only essential pieces of information concerning this Oriental sage: “Danxia Zichun (c. 1065 – c. 1119) ‘Redcloud.’ A Zen monk whose poems are collected in the *Xutáng Jí* or *Gathering in the Empty Room*.” Even briefer is the information provided by Bringhurst in the 2001 edition of *The Book of Silences*: “Danxia Zichun (Tan-hsia Tzu-ch’un) ‘Redcloud’ c. 1065 – c. 1119 Southern China.”¹⁵⁴ Reading this miniature biographies of Danxia, one is reminded that one’s lifetime on earth is reducible to just a handful of elemental data: the date of birth and death, the name of the place where one has spent their days, and one’s calling or vocation. Not much needs to be added to this short catalogue. What remains of Danxia’s thinking is valuable enough even a thousand years later, and so Bringhurst chose to devote time to this unique sage.

Bringhurst’s poem consists of five short stanzas of three verse lines each, but two movements for the reader’s soul are easily discernible: the one concerned with a personification of the earth as a whole that is truly alive and the other concerned with the

¹⁵² “Danxia Zichun” was originally published as C.50 [Eleven poems], *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. It was then reprinted in A.32 *Pieces of Map, Pieces of Music*, slightly revised in A.47 *The Calling*, and reprinted in its definitive incarnation in A.65 *The Book of Silences* and in A.92 *Selected Poems*. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: zu táng jí = *empty hall assemble*.

¹⁵³ See *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, translated and with an introduction by Thomas Cleary. San Francisco: North Point Press, 1990, p. 200: “Danxia left home to become a monk at an early age. He became enlightened under the tutelage of Zen master Daokai. In his first inquiry he asked, “What is the one statement that all the sages since antiquity have handed on?” Although the successive enlightened ones have changed in appearance, there is always that which is handed on, which has no front or back, no above or below, no boundaries, no self or other. This is called the nonempty void. This is the true ultimate for all people; it is inherently complete in everyone.

Yet many students think erroneously of it as original nothingness, declaring that there is nothing to say and nothing to know. The ancients called such people outsiders fallen into empty nothingness. They never become really free.

So you must be thoroughgoing and continue until all is exhausted and even emptiness is empty; yet there is still something that cannot be emptied. Investigating thoroughly, once you manage to see it, you will be able to make a statement. Therefore Danxia called it the statement that has been handed down.”

¹⁵⁴ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

hill waking up to the glory of a new day. That this man's name should mean "Redcloud" comes as no surprise: it makes perfect sense when one reads a poem like this, meant to capture somehow the essence of this thinking and this sage's conception of nature. The language used by Bringhurst in the making of his composition is elegantly simple and understandable, but the thought displays a profound subtlety and complexity that is moving: here is the monk's spirit seizing upon the living, pulsating fact that the earth is truly alive, and the encounter takes place with no intervening agents or intermediaries. In fact, Zen encourages its adepts to grasp reality with their own naked hands before it slips away. Intellect is not altogether reliable in experiences like this where the soul awakens to a sharpened state of awareness and gains an insight into the essence of reality. Normally, we are made to live on the superficiality of things, but a closer look at the world reveals transcendental nuances hitherto unnoticed:

The whole earth closes
like a fist and touches,
once, the rimless drum,

and opens
slowly as a rose¹⁵⁵
while no one listens.

Bringhurst is at his best handling luminescent metaphors in the weaving of his poems, and metaphor is the very foundation of these two short stanzas. The earth is personified and conceived of as being a living creature in its entirety. It closes like a fist that touches "*a rimless drum*" making it sound and it opens like a rose into the daylight of a new day. Maybe a reference is implicit here to the natural succession of night and day: at night the earth closes upon itself like a fist that resonates against the infinite (*rimless*) drum of the dark skies, and at daytime it opens like a rose to the warmth and protection of the benevolent sunlight. It all happens "*while no one listens,*" for the earth loves hiding from humans' inquisitive gaze, possibly because humans in general are too busy doing other things to have any spare time to pay attention to the genuine miracle and mystery of *what is*. This idea is recurrent in Bringhurst's poetry: for instance, it is also found most eloquently in *New World Suite No. 3* (2005): "*And the hills dance, / but only when no one / is looking*" (staves 126-128 of movement I), "*The eye of the earth is open / but it is hidden*" (staves 25-26 of movement II), and "*What is / is not hidden, although it is hiding*" (staves 2-3 of movement III). Earth dances to the inaudible rhythm of a drum of gigantic proportions that we do not seem able to perceive in any straightway fashion unless we get rid of wearisome intellectualizing burdens and learn to look at the world from a fresh standpoint.

The second part of Bringhurst's composition focuses on the hill upon which the sunlight shines announcing the coming of a new day. Needless to say, hills and mountains figure prominently in the lives of these Oriental sages, who spent much of their lifetime as wandering or itinerant monks travelling from one temple to another in search of instruction from the best masters of their time, or lived close to trees and mountains after which they themselves were named. To an attentive observer of the natural world, the summit of the hill could be said to resemble a human skull in its round-shaped outline against the horizon. The hill is also alive in its own way, and so it "*wakes from its dream / before morning,*" earlier than humans themselves wake up to resume their daily routines. At first sight, it may seem that the hill is completely naked and exposed to the pitiless effects

¹⁵⁵ In *Pieces of Map, Pieces of Music*, these two lines read slightly different: "and slowly opens / like a rose".

of elements, but it is not, since it is covered with moss and with benign moonlight at night (notice the alliteration of /m/ in *moonlight* and *moss*). The thought occurs that hills lead a simple life of asceticism that must have been appealing to Zen monks. They do not need much to feel satisfied: “*impeccably dressed*” in moonlight and moss, hills are also “*well fed*” and “*well rested*,” and they give “*not a thought to returning*.” Where to?, one may ask. They do not give a thought to returning to the realm of darkness and dreams that night-time brings with it. They are happy to dance to the rhythm of singing earth; they are happy to feel that they fit in the grander scheme of things and so the arrival of a new day is a good reason to celebrate the constant feast that existence is. Danxia Zichun is Redcloud: it occupies an even humbler place within this subtle mesh of living things: he is the cloud coloured or tinged red by the sun rays, hovering or wandering freely above the tranquil hills covered with moss. The overall impression is one of serenity and gratitude in the end.

XXII · DAHUI ZONGGAO

“Dahui Zonggao”¹⁵⁶ embodies the thinking of another essential twelfth-century Chinese Zen master who advocated the use of koans as the most effective path leading towards self-enlightenment. From an entry included in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), we learn that Dahui Zonggao (Ta-hui Tsung-kaio, 1089-1163) was “A Zen monk of the Rinzai school. His teacher was Yuánwǔ Kèqín, who edited the poems of Xūdòu to produce the *Blue Cliff Record*.” And in the separately bound section entitled “Contents & Notes” of the 2001 edition of *The Book of Silences*, Bringhurst gives us only essential information on this Oriental sage: “Dahui Zonggao (Ta-hui Tsung-kaio) 1089-1163 Southern China.” Robert Bringhurst’s piece is a most accomplished poem in honour of this great thinker. In one sense, it is a miniature treatise on the nature of the truth as conceptualized by this sage; in another sense, it is a profound meditation on learning as the ultimate vocation of all human beings of all times, which is an idea central to Bringhurst’s own thinking as it unfolds in his own poetry and in his own delightful essays, where the line separating poetry and prose is altogether irrelevant. What is simply astonishing about this composition is that Dahui Zonggao’s and Bringhurst’s thinking fuse together into a harmonious whole, so that one is no longer in a position to say where the one’s thought ends and the other’s begins. It is necessary to have the penetrating mind of a Dahui Zonggao to be able to produce a memorable poem of everlasting beauty like this one.

Born in Zuancheng (Anhui Province, in southern China), Dahui Zonggao left his home at the age of 16 to become a Buddhist monk at 17. As the common practice of the day prescribed, he wandered from one Zen community to another seeking the instruction of the most lucid minds of his time. He mastered almost all the valuable Zen writings there were to master at that time, particularly the records of the *Five Houses of Chan* by Yunmen Wenyan and the old sayings of the masters collected and commented on by Xuèdòu Chongxian which formed the basis for the *Blue Cliff Record*. However, disappointed with intellectual study and incapable of achieving enlightenment, he made up his mind to move somewhere else and study under the guidance of Zhan Tangzhou. This master quickly recognized the intellectual potential of his student and made him his personal attendant. After his master fell ill, Dahui Zonggao asked him to recommend him a new master to

¹⁵⁶ “Dahui Zonggao” was first published in A.47 *The Calling* and then it was reprinted with a minor change in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009).

whom he could turn to so as to continue his studies. Yuánwǔ Kèqín became his new teacher and gave him a difficult koan to struggle with: “East Mountain walks on the water.” After repeated failure to give the teacher the right answer, he attained his great breakthrough or *satori* on 13 May 1125. The disturbance of his mind ceased, time stopped and he remained in a state of utter calmness. From that point onwards, the great doubt necessary to have the determination to break through became central to Dahui’s own teaching. At the age of 49 he was appointed as abbot of Ching-shan monastery in Lin-an (in Hangzhou), where he gathered many followers, including high ranking officials. But soon he fell out of favour with the imperial government because of his association with a high official who fell out of favour himself and was exiled to a hostile place where he nonetheless kept on teaching. Eventually he was pardoned and allowed to return to his monastery, where he died on 10 August 1163.

Only a collection of koans entitled *The Storehouse of the True Dharma Eye* can be attributed to Dahui Zonggao with certainty. In collaboration with Ta-kuei, he also compiled the *Treasured Teachings of the Ch’an Monastic Tradition*, a set of instructions governing monastic life devised by older Chan abbots. Dahui was a vigorous critic of what he called the heretical Zen of silent illumination (i.e., the practice of just sitting in meditation in tranquillity and quietness), which led to a sort of vacuous drowsiness rather than to genuine enlightenment, and he advocated the Zen of koan introspection instead. Koans had to be truly penetrated, not intellectualized. It was precisely this intellectualization of koan practice that prompted him to destroy all the copies of his own master’s book. Though he was a firm believer in koan practice as the most effective method to achieve enlightenment, Dahui Zonggao was aware that this practice had become superfluous literary study in his own time and he decided to burn all the available copies (and the wooden blocks to print them) of his own teacher’s koan collection, the so-called *Blue Cliff Record*, one of the most venerated texts at that time. To him, working with determination on just a handful of koans was enough for any individual determined to attain enlightenment through daily meditation practice. *Satori* was available to all humans provided that they set about achieving enlightenment with strong determination. It was of the essence for truth-seeking individuals not to be fooled by words, for them to doubt even their own existence. Five centuries later, the great Japanese Rinzai master Hakuin Ekaku would also champion koan practice and great doubt as the best way to awaken to a new awareness.

Now, Bringham’s poem on this remarkable sage displays a clearly tripartite structure. Stanzas 1 and 2 embody in a nutshell Dahui Zonggao’s thinking on the ultimate nature of truth. We humans cannot put a stop to our inquiries into an ultimate truth any more than to our own breathing. This could be said to be an anthropological universal, and a recurrent preoccupation in Bringham’s poetry. How humans come to terms with the world through the prism of their senses and their mind is a theme central to his own poetics. Here is a poet concerned to ask his own questions and find his own answers to the problem of human knowledge. To what extent is it possible to know the essence of reality? What have the great minds of all times and traditions thought about this primordial encounter between humans and the world of which they are a part? In trying to find his own answers, he has turned for enlightenment to the insights of the best ancestors, western and eastern alike. The old in their knowing – the Presocratic philosophers and the Buddhist monks from India, China and Japan, but also the Haida mythtellers whose works he has translated into English – had much of transcendental value to teach him. Sārāha, Nāgārjuna, Dōgen, Hakuin, Pythagoras, Herakleitos, Empedokles, Parmenides, Demokritos, Ghandl and Skaay are all talisman names with him. To all of these poet-philosophers, the oral takes precedence over the written, poetry and philosophy walk along

the same path towards the same destination, and speech is sometimes a form of struggling with silence in their attempt to speak the unspeakable. What Bringhurst has learnt from all of them in the form of jewel-like conclusions is to be found scattered in his poetic corpus and prose pieces. What still astonishes one is the precious and rare coherence of his findings and of the lessons he has captured in his writing.

“The truth is not for contemplation,” says the poetic persona twice at strategic points in “Dahui Zonggao”. The path leading towards the truth entails getting at the facts at first hand, by personal experience, and not through any intermediary agent. Spiritual awakening is only possible by absorbing the flowing of the life-stream itself, by inhaling and eating the whole world in its entirety. *Breathe in and swallow the whole world on your own if you are seeking enlightenment,* these are Dahui’s elemental instructions for the Zen initiate. To gain an insight into the life-principle from which the universe takes rise, including one’s own humble existence, one needs not study the classics, but simply deeply delve into the mysteries of their own being and the world. But, at the same time, one must let the world inhale and swallow oneself. Bringhurst conveys all this with astonishing beauty, through verse lines marked by parallelism used to eloquent effect:

The truth is not for contemplation.
Just to know the odors of the truth
you must inhale the whole world
and be inhaled by the world in your turn.

To learn the flavors and the textures of the truth,
you must bite, chew and swallow the whole world –
every answer, every question – and be bitten,
chewed and swallowed in your turn.

D.T. Suzuki quotes four elemental statements attributed to Bodhidharma that are the core principles of Zen teaching: *“A special transmission outside the Scriptures; / No dependence upon words and letters; / Direct pointing to the soul of man; / Seeing into one’s nature and the attainment of Buddhahood.”*¹⁵⁷ These principles encourage the Zen practitioner to give up philosophizing and vacuous contemplation, and to see straightway into the truth of enlightenment in order to attain Buddhahood. For Zen does not rely on the intellect for the solution of its deepest problems. *“The real character of Zen is independent of learning and intellectuality,”*¹⁵⁸ Suzuki tells us. We need to see into our own nature through our own efforts, for the Buddha-nature of which we are all in possession. Thus, the real gist of Zen is *“seeing into one’s own Nature.”* Around this principle the whole of Zen is crystallized.¹⁵⁹ The fundamental truth of things is perceived through a literal physical process of making internal what is seemingly external: the mind absorbs or swallows the world outside, while the world, as if were a gigantic lung or mouth, also inhales and eats the perceiving subject. The world is really the world when it is assimilated into our own being and we are absorbed in it. However, dualism is not real either, for *“to see dualism in life is due to confusion of thought; the wise, the enlightened, see into the reality of things unhampered by erroneous ideas.”*¹⁶⁰

¹⁵⁹ D.T. Suzuki, pp. 87-88.

¹⁶⁰ D.T. Suzuki, p. 86.

Dahui Zonggao is absolutely explicit in saying that wisdom is not to be found in books. That he despised books is demonstrated by the fact that he gave precise instructions to burn all copies of the *Blue Cliff Record*, the venerated collection of koans. “*I have burned my teacher’s books,*” says the poetic persona twice in the last stanza. Dahui advocates the pre-eminence of the personal experience of truth over book-knowledge. By integrating into their living bone and flesh the infinity and mystery of things that make up the world in its entirety, humans are in a position to touch the truth with their own hands. Thus, intuitive understanding and seeing into self-nature is upheld against intellectual learning and philosophizing. In this context, enlightenment is much more than quietly contemplating the truth. It entails letting oneself plunge into the flowing stream of the mind and self-nature to apprehend our true nature.¹⁶¹ “The essence of Zen consists in acquiring a new viewpoint on life and things generally,”¹⁶² which is called *satori*. Reality is an indivisible organic whole and *satori* allows the Zen practitioner to grasp the entirety of life. The experience is at once purifying, enhancing and exacting, for it demands great stamina on the part of the truth-seeker. It shakes profoundly the moral and spiritual foundations of the self. Now, Suzuki reminds us that the general tendency of Buddhism is more intellectual than emotional. *Satori* is above all *noetic* and Zen is a form of *transcendental intellectualism*.¹⁶³ To see into one’s original nature: this is Zen according to Suzuki.

And yet, reality is always vaster than what we might come to learn, perceive or know of it. It is filled with wonders, mysteries, and unfathomabilities that defy our discursive understanding. Bringhurst’s poem closes with what, judged by the ordinary rules of logic, would not make much sense: “*I have burned my teacher’s books, / and now, together, we will read them.*” How is it possible to read from the books you have just burned?, one may ask. Dahui Zonggao’s gnomic, paradoxical language is intended to shake the Zen truth-seeker convictions, to make him doubt profoundly so that he/she might start anew from more solid ground. “*The truth is not for contemplation*” means at this point that Dahui is against quietist practices of meditation that lead to mental drowsiness, unproductive emptiness or useless blankness. What he advocates instead is the systematic practice of koans to attain genuine enlightenment for oneself, without any intervening agents whatsoever.

XXIII · Tiantong Rujing

“*Tiāntóng Rújìng*”¹⁶⁴ is Bringhurst’s accomplished poem in honour of another immortal Zen monk who lived in the twelfth and thirteenth centuries CE. In an entry included in the

¹⁶¹ D.T. Suzuki, p. 89.

¹⁶² D.T. Suzuki, p. 97. This is Suzuki’s definition of *satori*: “*Satori* may be defined as an intuitive looking into the nature of things in contradistinction to the analytical or logical understanding of it. Practically, it means the unfolding of a new world hitherto unperceived in the confusion of a dualistically-trained mind. [...] All its opposites and contradictions are united and harmonized into a consistent organic whole. This is a mystery and a miracle, but according to the Zen masters such is being performed every day. *Satori* can thus be had only through our once personally experiencing it.” *Ibid.*, pp. 98-99.

¹⁶³ Daisetz T. Suzuki, *ibid.*, p. 100.

¹⁶⁴ “*Tiantong Rujing*” was originally published in C.62 [Four poems], *Windhorse Review* (Yarmouth, Nova Scotia) 11/12 (Summer 1993): [6-7]. Contents: • “*Lotus Flower Mountain*”; • “*Rújìng*” (rpt. as “*Tiantong Rujing*” in A.47, A.53, A.53a, A.65, A.92); • “*Yúnmén Wényan*” (rev. in A.47, A.65, B.69, A.92); • “*Fayan Wényi*” (rev. in A.47, A.65, A.92). [There are misspellings in the titles of the latter two poems.] Afterwards, it was reprinted as “*Tiantong Rujing*” elsewhere: (i) In A.47, *The Calling: Selected Poems 1970-1995* (1995); (ii) as A.53, *Tiantong Rujing*. [Vancouver: University of British Columbia. 1996.] Broadside, 21.5 × 28 cm. Contents: A poem (rpt. from A.47), with announcement of a reading by Bringhurst, 9 October 1996; (iii) as A.53a,

“Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us very briefly that Tiāntóng Rújǐng (T’ien-t’ung Ju-ching, 1163–1228) was “a Zen monk of the Soto school who taught in Jiangsu and Zhejiang. Teacher of Dōgen.” And in the limited 2001 Ninja Press edition of *The Book of Silences* (in the separately bound section entitled “Contents & Notes”), Bringhurst provides us with just elementary information: “Tiantong Rujing (T’ien-t’ung Ju-ching) 1163-1228 Zhejiang Province, eastern China.” Again, spatio-temporal coordinates will suffice to contextualize the thinking of this Oriental sage within the larger framework of Zen Buddhism. Tiāntóng Rújǐng was one of the eminent Zen monks of the Soto school. He lived in Qingdé Temple on Tiāntóng Mountain in Yinzhou District, Ningbo. Master Keizan tells us that “Rujing gave up doctrinal studies and went into Zen when he was nineteen years old. He joined the community of Zen master Zhijian and spent a year there constantly sitting in meditation, which he did more than the others.”¹⁶⁵ His teacher was Xuedou Zhijian (1105-1192), the 16th-generation dharma descendant of Huineng. Afterwards, he himself became the teacher of the great Dōgen, to whom he gave dharma transmission. Tradition has it that he is the originator of the notion of “the casting off of body and mind”, which is central to Bringhurst’s piece, as we shall see below in due time. He was a model of exacting self-discipline and commitment to Zen as a genuine way of life.¹⁶⁶ To be disciplined in Zen is no easy task. Great stamina and a very long and exacting constant vigilance are required of the truth-seeking monk. One must be ready to give in body and mind for the truth after sustained struggle with oneself. In this respect, D.T. Suzuki gives us a most illuminating definition of Zen:

Zen in its essence is the art of seeing into the nature of one’s own being, and it points the way from bondage to freedom. By making us drink right from the fountain of life, it liberates us from all the yokes under which we finite beings are usually suffering in this world. We can say that Zen liberates all the energies properly and naturally stored in each of us, which are in ordinary circumstances cramped and distorted so that they find no adequate channel for activity.¹⁶⁷

Bringhurst’s poem consists of three stanzas and three clearly distinguishable parts. The first stanza (and part) conveys the sense of self-discipline characteristic of Rujing’s practice of Zen. Renouncing all family affiliations and the steadfast safety of the teachings of his own masters, Tiāntóng Rújǐng embarks on the difficult task of *unknowing what he knows* so as to be in a position to better understand the ultimate nature of reality. No conscious effort is required on the part of the monk to know; *knowing* occurs when he least expects it to happen, when he reaches the moment of no-mind or no-thought, which refuses to be expressed in words of the mouth:

Tiantong Rujing. Flyer, 11 × 14 cm. (same as A.53 but in a reduced size); (iv) in A.65, *The Book of Silences* (2001); and (v) in A.92, *Selected Poems* (2009).

¹⁶⁵ See *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, translated and with an introduction by Thomas Cleary. San Francisco: North Point Press, 1990, p. 214. Keizan also informs us that “After he made his determination at the age of nineteen, Rujing stayed in monasteries, never returning to his native place. Not only that, he didn’t even talk to people from his homeland.” *Ibid.*, p. 215.

¹⁶⁶ Again, Master Keizan tells us that “Throughout his papacy at several public monasteries, Rujing’s self-discipline was different from others, in that he was committed to being the same as the monks. [...] Furthermore, he kept his succession a secret, not revealing it all his life; only at the end did he formally acknowledge the teacher from whom he had inherited the teaching. This was not only to put off worldly craving for fame, but also out of deference for the good name of Zen. Truly his virtue was unequalled in his time, his discipline peerless in ancient or modern times.” *Ibid.*, p. 215.

¹⁶⁷ See Daisetz T. Suzuki, *Zen Buddhism: Selected Writings of D. T. Suzuki*, ed. By William Barrett, Westminster, MD, USA: Doubleday Publishing, 1996, p. 3.

The names of my parents and teachers
are silences, zeroes. I learned what I know
by not knowing. I passed my exams
and presented my thesis by cleaning latrines.

In these accomplished lines, we see the truth-seeking monk in search of alternative paths leading to enlightenment other than the intellectualizing one: he is ready to give up his own family and his own teachers in his attempt to face the ultimate truth without any intermediaries or intervening agents. His parents and teachers are nothing but *silences, zeros*, that will not avail him of the kind of intense enlightenment he is looking for. Sudden insight into the essence of reality occurs by personal effort and when least expected, amid far from sublime daily routine activities such as latrine cleaning. This was his own way of passing exams and completing a doctoral thesis almost nine centuries ago. Beneath this first stanza there is also a discernible spark of biographical substratum: “At one point, when he [Tiāntóng Rújǐng] asked to be put in charge of cleaning the latrines, Zhijian [his teacher] asked him, “How can you clean what has never been dirty? If you can tell me, I’ll put you in charge of cleaning.” Tiāntóng Rújǐng was at a loss; even after two or three months had passed he still didn’t know what to say.”¹⁶⁸ Tiāntóng Rújǐng is convinced that knowledge is to be gained not by analysis or comparison, but through personal, unmediated experience. Therefore, one must be ready to remain alert all the time and see into things with the third eye. But attaining satori is no easy task either. According to Suzuki, a monkish life requires the austere practice of asceticism and “it implies the elevation of one’s spiritual powers to their highest notch. All the utterances and activities of the great Zen masters have come from this elevation. They are not intended to be enigmatic or driving us to confusion. They are the overflowing of a soul filled with deep experiences.”¹⁶⁹

The second stanza of “Tiāntóng Rújǐng” dwells on the sage’s process of *knowing by not knowing*. Two related statements are tessellated into the making of this stanza, which has an appealing gnomic aura about it. On the one hand, the first enigmatic statement concerns the all-important voice vs. silence dichotomy. Bringhurst’s book is entitled *The Book of Silences* after all. It is through silence that these Oriental sages focus their minds in their relentless search after enlightenment. Silence is a precious thing, especially when there is so much noise overwhelming the truth-seeking individual from every single direction. And noise is certainly a source of inattention or distraction that prevents the reflecting subject from achieving the peace of mind required to gain lasting insights into reality. Speech might be dispensable, especially if what the human voice has to unveil is not more beautiful or relevant than perfect silence already is. Hence “*A man raising his voice to silence an echo / has nothing to say but has not learned to say it.*” This looks like a paradoxical statement that defies the rules of ordinary logic. An echo is possibly the resonance of *what is*, and so we have no right to try to silence it in any way. Being humble in the face of *what is* is tantamount to learning to say nothing at all. Or, to put it differently, the enlightened Zen monk knows when to keep silent and say nothing at all, for what he might say could possibly defile the utter perfection of silence itself. But, of course, it takes practice and time for the initiate to perfect his own technique of keeping quiet. On the other hand, the second statement at the heart of the second stanza deals with the notion of creation. “*Creation is set to begin at this moment. / The time before anything was is right now.*” Every single individual has the opportunity to find enlightenment by his or her own personal efforts, and there is no need to turn to others’ intervention. Tiāntóng Rújǐng would always exhort people just to sit in meditation and to develop their mind fully, concentrating only on truth, not following the fashions of

¹⁶⁸ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. 214.

¹⁶⁹ Daisetz T. Suzuki, *ibid.*, p. 20.

the time, but emulating the Way of time immemorial instead.¹⁷⁰ In this context, creation means the chance to start anew for yourself, to seek the truth right now, regardless of others' attempts at self-enlightenment. Needless to say, the experience of *satori* or sudden enlightenment is central to Zen experience. By concentrating on their minds alone, humans might gain valuable insights into the nature of their own being – insights that will shake the very foundations of their selves.

Now, the third stanza of Bringhurst's poem explores the notion of "the casting off of body and mind". In progressing towards the light, the truth-seeking monk is to abandon his body and his mind behind, as it were. The poetic persona in the composition says: "*Shedding body and mind is like lifting your foot. / Setting it down is like shedding the shedding.*" We humans are too ego-centred and the ego-shell in which we live is the hardest thing to outgrow. To live a life of truth and enlightenment, it is essential for the individual to set his or her mind free of the oppression and tyranny of intellectual accumulations, a wearisome burden. But getting rid of the manacles and fetters of our ignorance that prevent us from understanding the true condition of existence is no easy task at all. Escaping the bondage in which all finite beings find themselves means breaking free from the chain of ignorance, which is wrought of nothing else but the intellect and sensuous infatuation.¹⁷¹ Thus, Zen masters help inquiring souls to get back to the original state of freedom that was inside every single human being from the very beginning. Freedom is never truly realized until we once personally experience it through our own efforts,¹⁷² and this is why Tiāntóng Rújìng champions the shedding of body and mind, even "*the shedding of the shedding.*" Shedding one's body and mind should be a natural process, as natural as breathing itself, or as lifting or setting one's own foot when walking. Tiāntóng Rújìng himself attained enlightenment only after he shed his own body and mind. After struggling with master Zhijian's enigma for more than a year, Tiāntóng Rújìng found the light at last:

... once he got so that there was no skin to strip off, no body or mind to shed, he said he had hit upon what has never been defiled. Yet even so, already he had a spot on him – that is why it says his teacher hit him even before he had finished speaking. At that point his whole body broke out in sweat – having let go of his body, he attained power. So we know that original purity has never been subject to defilement at all. Therefore Rujing always used to say, "Zen study is the shedding of body and mind."

Now tell me, what is the undefiled?

The breeze of the Way, blowing far,
Is harder than diamond;
The whole earth is supported by it.¹⁷³

Bringhurst's poem closes with what looks like an exultant affirmation of universal motion or flux. The bridge crossing a stream is flowing in much the same way the stream flows naturally into the sea. What crosses the bridge are snowmelt and rain, not just human steps or footprints. Bringhurst's lines are another perfect example of haiku-like precision and imagery; they evoke through simple means a complex cluster of ideas: "*The bridge you are*

¹⁷⁰ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. 217.

¹⁷¹ Daisetz T. Suzuki, *ibid.*, p. 15.

¹⁷² Suzuki explains this in further detail: "The ultimate standpoint of Zen, therefore, is that we have been led astray through ignorance to find a split in our own being, that there was from the very beginning no need for a struggle between the finite and the infinite, that the peace we are seeking so eagerly after has been there all the time." *Ibid.*, p. 16.

¹⁷³ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, pp. 217-218.

guarding crosses the stream / as fast as it can. The bridge I am walking / is flowing. Its footings are snowmelt and rain.”

XXIV · DOGEN KIGEN

“Dōgen”¹⁷⁴ concerns one of the major Buddhist masters of all times and the founder of the Sōtō school of Zen in Japan. Bringhurst’s poem was originally published in seven sections in the journal *Canadian Literature* 140 (Spring 1994) alongside other poems in the Oriental sages sequence. Afterwards, it was revised into further textual incarnations until it reached what might be its definitive state – a six-part poem of utter beauty and technical perfection that testifies to Bringhurst’s mastery of the English language. Possibly it remains one of the most accomplished pieces in the sequence, along with “Sāraha” and “Nāgārjuna”. From an entry devoted to this eminent sage in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), we learn that Dōgen (1200–1253) was “A Zen teacher born in Kyoto. He studied in China with Tiāntóng Rújìng, then returned to Japan to found the monastery of Eihei-ji on the northwest coast of Honshu.” And a brief entry at the end of *The Book of Silences* (2001) informs us of this sage in these terms: “Dogen Kigen 1200-1253 Traveled from Kyoto to Zhejiang Province, China, then back to Honshu, Japan.” Bringhurst strives after clarity and wants his poems to be understood, so this kind of textual aids are scattered in most of his poetry books. But who exactly was this sage who is he dramatic persona behind one of the most impressive pieces in the sustained meditation on being, mind and speech enacted in *The Book of Silences*? It might be wise to start from the very beginning.

Dōgen¹⁷⁵, also called Jōyō Daishi or Kigen Dōgen (b. Jan. 19, 1200, Kyōto, Japan – d. Sept. 22, 1253, Kyōto) was a Japanese Buddhist who introduced Zen to Japan in the form of the Sōtō school. Probably Dōgen was born into a noble family, though he was the illegitimate child of a man who served in the imperial court as councilor of state. His father died when he was a child and his mother also died shortly afterwards, when Dōgen was only seven years old. Ordained a monk at 13, Dōgen studied the holy scriptures of Buddhism on Mount Hiei, the centre of Tendai (T’ien-t’ai) Buddhism, without, however, fully satisfying his spiritual aspirations. One single question seemed to obsess him: the Tendai concept of ‘original enlightenment’ claims that all human beings are enlightened by nature and so the notion of achieving enlightenment through spiritual practice is flawed from the outset. In search of a satisfactory answer to this pressing concern, he travelled from one temple to another to ask other Buddhist masters. One of them, Kōin, the Tendai abbot of Onjōji Temple, suggested that he should travel to China to study Chan under the most prominent masters of the time. After spending some time in Kennin-ji Temple under Myōzen, in 1223 he and Myōzen undertook the dangerous passage across the sea to China.

¹⁷⁴ “Dōgen” was originally published in C.63 [Four Poems], *Canadian Literature* 140 (Spring 1994): 79-85. Contents: • “Dongshan Liangjie” (rpt. in A.47, A.65, A.92); • “Xuedou Zhongxian” (rpt. in B.58; rev. in A.47 and rpt. from A.47 in A.65, A.92, C.75); • “Yongjia Xuanjue” (rev. in A.47 and rpt. from A.47 in A.65 and A.92); • “Dogen” (excerpt rev. in B.72, C.71; revised in A.47 and further revised in A.65; rpt. from A.65 in A.92). Later it was revised in A.47 *The Calling* (1995) and reprinted in (i) C.71 “From Dogen.” *The Amicus Journal* (New York) 19.1 (Spring 1997): 44. “Dogen”, part 3, rpt. from A.47, and in (ii) B.72 *Poetry Comes Up Where It Can*, edited by Brian Swann, Salt Lake City: University of Utah Press, 2000: pp. 27-28. Contributions: Excerpts from “Conversations with a Toad” (rpt. from C.72) and from “Dogen” (rpt. from C.71). Afterwards, it was slightly revised in A.65 *The Book of Silences* (2001) and reprinted from A.65 in A.92 *Selected Poems* (2009).

¹⁷⁵ See the entry on ‘Dōgen’ in *Encyclopaedia Britannica*, vol. 8, p. 4737. See also *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, edited by Kazuaki Tanahashi, Boston & London: Shambhala, 1999, particularly pp. xiv-xxvii.

Between 1223 and 1227 Dōgen studied meditation in China. First, he visited the masters of the leading monasteries in Zhejiang province and found that training was based on koan practice, whereas sutras were not studied any more. Dissatisfied with the heavy emphasis laid on koans, he visited Zen master Tiāntóng Rújìng, who reputedly had a different method of teaching Zen to his students. In 1227 Dōgen gained enlightenment under Tiāntóng Rújìng, who taught him the importance of casting off body and mind, a notion central to his own writings.¹⁷⁶ Back in Japan again in 1227, he lived at various temples and worked for the spread of Zen practice. His first literary work, *Fukan zazen gi* (1227; *General Teachings for the Promotion of Zazen*), is a short text containing a brief introduction to the Zen practice of *zazen* or sitting meditation. He spent his last years teaching and writing at Eihei-ji Temple, a temple which he founded and which became one of the two head temples of Sōtō Zen in Japan even to this day. In the autumn of 1252, Dōgen fell ill and showed no signs of recovering. Before travelling to Kyōto in search of a remedy for his illness, he made his disciple Ejō his dharma heir, making him the abbot of Eihei-ji. In 1253 he died soon after arriving in Kyōto.

Like Bringham, Dōgen himself was a prolific author of philosophical essays and poems, and he would revise his own writings over time to perfect them. He was also an accomplished stylist writing in both Chinese and Japanese. His style was concise, compelling and inspiring, and his use of language was completely unconventional. His works seek to express the inexpressible by means of a creative use of the potential inherent in language, which he takes to extreme positions. His chief work, *Shōbōgenzō* (1231-53; *Treasury of the True Dharma Eye*), containing 95 chapters concerning Buddhist practice and enlightenment, was written over a period of more than 20 years. It consists of his elaboration of Buddhist principles in the form of talks and various writings on topics ranging from monastic practice to the philosophy of language, being and time. Dōgen also compiled over three hundred koans in Chinese without commentaries added in a book entitled *Shinji Shōbōgenzō* or *Shōbōgenzō Sanbyakusoku* (*The Three Hundred Verse Shōbōgenzō*), which he might have started compiling from different sources even prior to his trip to China. Furthermore, the lectures he delivered to his monks at Eihei-ji were collected under the title *Eihei Kōroku* or *Dōgen Oshō Kōroku* (*The Extensive Record of Teacher Dōgen's Sayings*) in ten volumes. His sermons, lectures, sayings and poems were compiled shortly after his death by his main disciples – Ejō, Senne and Gien. Another collection of talks that Dōgen gave to his leading disciple was recorded and edited by Koun Ejō himself in the work entitled *Shōbōgenzō Zuimonki* (*Gleanings from Master Dōgen's Sayings*) in six volumes. *Hōkyōjōki* (*Memoirs of the Hōkyō Period*) is a one-volume work, his earliest, which records the questions and answers between Dōgen and Tiāntóng Rújìng. It was discovered by Ejō shortly after the master's death.

In Dōgen's Zen there are several fundamental concepts that are recurrent throughout his prolific work. The primary concept underlying Dōgen's Zen is the inseparability of practice and enlightenment (*oneness of practice and enlightenment*): to practice the Way single-heartedly is in itself enlightenment. Thus, Dōgen considers *zazen* or meditation in a sitting posture as being identical to Zen. It is a kind of meditation in which the truth-seeker's mind remains alert though free of objects and directed to no specific object or particular content. Just sitting, with complete non-attachment to the goal of

¹⁷⁶ Thus, in his *Genjōkōan*, Dōgen says: "To study the Way is to study the self. To study the self is to forget the self. To forget the self is to be enlightened by all things of the universe. To be enlightened by all things of the universe is to cast off the body and mind of the self as well as those of others. Even the traces of enlightenment are wiped out, and life with traceless enlightenment goes on forever and ever." See Hee-Jin Kim, *Eihei Dogen, Mystical Realist*, Somerville, MA (USA): Wisdom Publications, 1987, p. 125.

attainment was the key to the practice of *zazen*. The practice of *zazen* and the experience of enlightenment are one and the same thing for Dōgen, for all understanding derives from *zazen*. This is the heart of his teaching in fact. As Kazuaki Tanahashi puts it summarily, in the process of spiritual pursuit the seeker is bound to overcome a number of obstacles along a hard path before attaining the final goal or destination, which is enlightenment and becoming a fully awakened one or a buddha. Now,

Dōgen accepts this image of a linear process of seeking. But he also talks about the way as a circle. For him, each moment of practice encompasses enlightenment, and each moment of enlightenment encompasses practice. In other words, practice and enlightenment – process and goal – are inseparable. The circle of practice is complete even at the beginning. This circle of practice-enlightenment is renewed moment after moment.

At the moment you begin taking a step you have arrived, and you keep arriving each moment thereafter. In this view you don't journey toward enlightenment, but you let enlightenment unfold. In Dōgen's words, "You experience immeasurable hundreds of eons in one day." The "circle of the way" [...] may be taken to represent the heart of his teaching.¹⁷⁷

Thus, enlightenment as a breakthrough experience through which the truth-seeker attains the wondrous heart of nirvana was the core of Dōgen's Zen. And nirvana is regarded as the realm of nonduality, "where there is no distinction between large and small, long and short, right and wrong, appearing and disappearing, self and other. It may be called reality itself, or the absolute place beyond time and space. This is a realm that cannot be grasped objectively. The intuitive awareness or transcendental wisdom that goes beyond dualistic, analytical thinking and leads us into this realm is called *prajñā* in Sanskrit."¹⁷⁸ This awakening is beyond thought and also beyond words.

I

"Dōgen" consists of six sections that capture the essence of this Zen master's thinking and singing. Throughout the whole composition, the emphasis is laid on Nature as the true home of the human soul. All six parts are variations on the fundamental idea that humans find themselves more truly in the natural world as soon as they transcend the distinction between self and other (between apprehender and apprehended) and reach the realm of non-dualism. Thus, part 1 of "Dōgen" offers a technically perfect and profound meditation on the nature of the mind and gives advice as to how to live to the fullest of human capacity in perfect harmony with Nature. The piece opens with three simple statements that aim at defining the essence of the mind:

¹⁷⁷ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, edited by Kazuaki Tanahashi, Boston & London: Shambhala, 1999, p. xxviii.

¹⁷⁸ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. xxxi. "Dōgen calls this place of inner freedom the Buddha realm. It is where one is many, part is whole, a moment is timeless, and mortality is immortality. To experience this beyondness in the midst of the passage of time, change, and decay is a miracle. For Dōgen, this miracle can happen each moment, as each moment of duality is inseparable from a moment of nonduality. Duality and nonduality, change and no-change, relative and absolute, coexist and interact with each other. Dōgen calls the experience of this dynamic "actualizing the fundamental point." It is an immediate but subtle and mysterious unfolding of nirvāna within a life of change and decay. Dōgen suggests that we can realize this dynamic of "not one, not two" by going into and maintaining the deep consciousness that is experienced both in *zazen* and in daily activities conducted in a meditative state of body and mind." *Ibid.*, pp. xxxi-xxxii.

The mind is old snow, new snow, brooding rain.
The mind is lichen crust and stone.
Pebbles and sticks are the fountains of wisdom.

All three metaphors at the heart of this stanza equate the mind with the world of Nature: the mind is everything that it apprehends, everything that exists in this world. Though only non-sentient things are mentioned in these lines, they are nonetheless living creatures that form part of the very palpitating fabric of *being*. Wisdom, if it exists at all, is to be found not in books or in the teachings of the old masters, but in simple “*pebbles and sticks*.” But wisdom is not the same as knowledge, for one strives to gain knowledge whereas wisdom is something that comes to the truth-seeker uninvited as it were. Wisdom is effortless, and it has to do also with a clarity, tranquillity and serenity of mind that is rare to find among humans. Possibly stones and trees are wiser in their way than humans; they do not seek egoistically to understand or to have dominion over the rest of creation as humans do. In this context, only metaphor seems to be the only effective way to apprehend a kind of truth that is latent beyond the surface of things, because it uncovers subtle connections where there is apparently nothing to see.

The three stanzas that follow evoke the sacred communion that unites self and Nature. Dōgen’s voice encourages truth-seekers to spend their lifetime in the mountains, close to the trees and streams that might teach them an elementary lesson of what it means to *be in peace* with and in the world. Needless to say, Bringhurst embraces the conviction that the hills are home to humankind and the ultimate source of a precious wisdom. Nature is seen as being truly alive in every single element it is made of. Thus, a snowflake, though transient and ephemeral, has a graceful wisdom of its own that humans should emulate, and an ancient stone has still the lustre of youth in its prime and it is wiser because it has lived longer than humans will ever live. Trees and streams have also something of fundamental value to teach humans. Hence, the speaking voice in the poem encourages the listener to let trees and gutters act out their gestures and prayers, for trees have got branches or arms that can make humans’ gestures and flowing gutters have got a voice that can speak humans’ prayers. The strong lyricism of Bringhurst’s words makes these verse lines truly memorable:

Go into the hills and remain there forever.
Wise as a snowflake that lives
for ten minutes, wise as a stone

that is young at three million years,¹⁷⁹
let the trees make your gestures,
the gutters your prayers.

Bringhurst’s poetry explores the issue of speech, of a sort of *universal speech* to be more precise: every single thing in the world wants to *mean* something and so it speaks a language of its own. Human languages are just one more instance of this universal compulsion of *being* to signify, but humans have no monopoly on language, though we, egoistic beings, might think we do. Not only can Nature speak; it can also read the language that humans are written in. The river speaking its own language can read humans’ note of themselves to the hills. Also, the wind and the trees’ leaves have the power to give voice to humans’ thoughts. Hence, Dōgen’s dramatic persona in the poem says: “*Pass the note of yourself to the river / to read to the hills. Let the wind and the leaves / speak your thoughts in their*

¹⁷⁹ In the textual incarnation of the poem in C.63, this line reads as follows: “that is young at 3,000,000 years”.

language.” The stream of consciousness of the human mind might well find an echo in the subtle movements and sounds of the wind and the whispering leaves of trees. What is simply astonishing about Bringhurst’s statement is that the speaking of the wind and of the leaves reveals human identity: that is the essence or the gist of what they are saying. In delivering their messages, they are somehow uncovering our own very nature for ourselves. This is why it is necessary to spend time in the solitude of the hills; Nature has much to teach us about the human condition if we only pay attention with open eyes and alert ears. The speaking persona in the poem urges listeners to let their thoughts be spoken by wise Nature in its own language. It does not matter much whether one has many or few thoughts – “*any number will do.*”

The potent equation Bringhurst seeks to explore in section 1 of “Dōgen” is precisely that set up between human beings and the world through the mind and through the senses. In this respect, in the two closing stanzas of “Dōgen”, self and Nature are brought together into a unity by means of a handful of metaphors that proclaim the sameness of the world and one’s eyes, of the world’s face and one’s face, and of one’s eyes and others’ eyes seeing one. The world is made of the thoughts of humans, it is made of what we think of it. Now, that the world should be conceptualized as being “*one – either one – / and neither and both of your eyes*” only highlights the simple fact that eyes are the windows open onto the world through which humans absorb reality and through which they should let themselves be absorbed by the world. A human face contemplating the world is the face’s world when true communion happens between inner and outer, self and other, observer and apprehended. But above all things, “*the eyes in your face / are the eyes you have seen, / seeing you, in the faces of others.*” Eyes become the link between humans; vision affords an opportunity to delve into the other’s private soul or intimate self as it were. As Dōgen himself puts it in his illuminating essay entitled “Actualizing the Fundamental Point”,

To study the buddha way is to study the self. To study the self if to forget the self. To forget the self is to be actualized by myriad things. When actualized by myriad things, your body and mind as well as the bodies and minds of others drop away. No trace of enlightenment remains, and this no-trace continues endlessly.¹⁸⁰

In the realm of non-dualism there is no point in distinguishing between apprehender and apprehended, between inner and outer, between self and other. One touches enlightenment the very moment one transcends all distinctions and comes to realize that reality is one, that the mind is one and the same with the world and all the elements in it. The complex and subtle organic *Gestalt* the world is speaks a language of its own and finds its perfected expressions in the majestic-looking mountains, whispering trees’ leaves, flowing streams, ephemeral snowflakes and millennial stones.

II

The second section of “Dōgen” is a perfect short jewel-like lyric poem consisting of only seven verse lines. The language is kept simple and elegant, and the profundity of thought is astonishing; it is a miracle that Bringhurst should manage to say so much with so few words. Also, this poem is punctuated by enjambment at crucial points where the sense of the words tessellated into the composition flows uninterruptedly from one line into the next. Once again, this little poem dwells on the equation of humankind and Nature. It

¹⁸⁰ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, edited by Kazuaki Tanahashi, Boston & London: Shambhala, 1999, p. 36.

explores the vastness of a drop of blood (standing for humans) and of a drop of rain (standing for Nature), thought to contain the whole world in its myriad manifestations and creatures. But the world is also in a state of permanent flux, as Herakleitos affirmed so long ago, for nothing at all has unchanging self, and the world itself as a whole is no exception at all. Blood and rain have something elemental in common – their being liquids, their being the living substance of the human body and of the Earth as a living organism as well. What a blood drop and a rain drop contain is enumerated in four pairs of contraries or opposites that constitute the beating heart or irreducible core of this short poem, which has the simplicity of a rain drop itself:

One drop of blood, one drop
of falling rain contains
the final truth, the temporary
lie, the day, the night,
the earth, the sky,
the light, the dark, the still
unfurling world.

That the vast world is reflected in the tiny elements it is made of is a recurrent notion in Dōgen's writings. Thus, at some point of his essay "Actualizing the Fundamental Point", the Japanese sage says: "Enlightenment is like the moon reflected on the water. The moon does not get wet, nor is the water broken. Although its light is wide and great, the moon is reflected even in a puddle an inch wide. The whole moon and the entire sky are reflected in dewdrops on the grass, or even in one drop of water."¹⁸¹ "Without contraries there is no progression," said the Romantic poet William Blake some centuries later. The dichotomies or contraries enumerated here are no random choice, of course: *truth* and *lie* are categories related to epistemology (notice that the truth is *final*, whereas the lie is only *temporary*), *day* and *night* are time-related concepts, the *earth* and the *sky* are the two fundamental elements of Nature present in all cosmogonies in almost all human civilizations around the world, and the *light* and the *dark* are associated to the knowledge and ignorance (but also to warmth/safety and to hostility/danger), respectively. But, at the heart of all these pairs of contraries, the joyfully seeking mind finds out that reality is characterized by utter impermanence. The unfurling world we humans live in is one that is "*still unfurling*," coming into full bloom all the time. Of course, this is also associated to the passing of swift time. Once again, in an essay entitled "Informal Talks" (recorded by his disciple Ejō, attendant monk, ca. 1237), Dōgen says that nothing is for certain in this world:

Impermanence is the truth that is right in front of you. You need not study other people's words or textual evidence on this matter. To be born in the morning and to die in the evening, not to see someone today whom you saw yesterday – the impermanence of life is in your eyes and ears. You should not see or hear it only in terms of others but apply it to your own self.¹⁸²

III

Section 3 of "Dōgen" is a moving homage to mountains, which figure so prominently in Bringham's literary career from the very start. Mountains were of the essence to the Oriental sages as well, for often they were named after them or after the monasteries they lived in, and most of the time these Buddhist sage-monks did not lose

¹⁸¹ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 37.

¹⁸² *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 53.

sight of their sharpened outline on the horizon. Their sheer size and vastness in space must have been awe-inspiring to them, but also a source of inspiration and a reminder that Nature is the embodiment of sublime beauty. Mountains appear to be walking on the surface water of the lakes where they look at their own reflection. This seems to be the starting point for the meditation on mountains and water at the heart of the third part of Bringhurst's poem. The subterranean equation running through the whole composition is that of the human body and the Earth, of self and other. Or, to put it differently, the body is a microcosm, a reflection of the whole world at large (or macrocosm): a single tiny thing contains the universe in its entirety. The poet manages to express the inexpressible by means of simple and transparent words that sound euphonicly owing to the use of alliteration (notice, for instance, the repetition of the /w/ sound in *walking, water* and *world*) and lexical repetition. The sentences woven into the living fabric of this piece are all in the present continuous tense, which lays the emphasis on the fact that the world is "*still unfurling*." The resonant tapestry of words woven by Bringhurst reads as follows:

Under the sunrise the mountains
are walking on water.
This is the skin.
The mountains are dancing.
They are walking on their toes
on all the water in the world.
This is the blood.
And all the water in the world –
oceans, raindrops, runoff dipped
in cupped hands, moistened lips and tears –
is holding up the mountains.
This is the ligament. This is the bone.

Back in an elemental world of stone, air and light, Bringhurst reminds us in this long stanza that reality consists of such non-human things as mountains, water, earth and sky. Similarly, the human body consists of nothing else than skin, blood, ligament, bone and marrow. In a sense, the mountains are the skin of the world, all the water of the world (arranged *in crescendo* according to sheer size in the enumeration that ranges from the immense *oceans* to the tiny *tears*, thus uniting world and body) is the blood, and the water sustaining the pillars of the world are the ligament and the bone. What is being celebrated here with utter enthusiasm is the sheer physicality of both the world and the body. The human mind is a beautiful organ of knowledge and perception of reality, but it is not disembodied: it finds its physical home inside a body which is made of exactly the same substance as the rest of the world. Hence, the Earth and the human body are one and the same thing. Furthermore, the relationship holding between mountains and all the water in the world is one of mutual dependence. Whereas mountains dance joyfully or walk on their toes on the shiny mirror-like surface of the oceans, rivers and lakes, all the water of the world holds up the mountains as though it were a solid foundation for the gigantic masses of earth.

When enlightenment is attained, the truth-seeker transcends all distinctions and contradistinctions the very moment of casting off the body. At the heart of the universe he/she discovers an elemental kinship uniting all things, human and non-human alike. In this respect, the fundamental identity between the world and the human body is emphasized again in the second stanza of this technically perfect poem. The Oriental sage's voice explicitly claims that "*The bones are flowing water.*" Inner and outer are one and the same: the bones of the human body within and the oceans of the world without are flowing water. What is more: "*There is marrow in the bone*" and "*In the marrow is blood,*" and so water

and blood are also one and the same thing. The entire world is not unchangeable, not immovable. It flows. And flowing is the perfect action “*the still unfurling world*” does. What follows is a command addressed to the listener – “*Never judge by just one world*”¹⁸³ – which remains truly enigmatic in this context. Is this statement intended to evoke the existence of a plurality of worlds within and without? We do not know for sure. What we do know for certain is that the poem closes with a vehement statement that keeps on resonating in the echo-chamber of one’s mind long after one has finished reading it: “*If the mountains stop walking, the world / will stop being born.*” In an essay entitled “The Time-Being” (1240, Fukakusa), Dōgen says that “time itself is being, and all being is time”¹⁸⁴ in terms that are reminiscent of the words uttered by Heidegger seven centuries later. And he adds:

Mountains are time. Oceans are time. If they were not time, there would be no mountains or oceans. Do not think that mountains and oceans here and now are not time. If time is annihilated, mountains and oceans are annihilated. As time is not annihilated, mountains and oceans are not annihilated.¹⁸⁵

These words of Dōgen might have well served as the textual source for Bringhamst’s own meditation on mountains and all the water in the world. That mountains keep on walking (i.e., keep on reflecting their image on the surface water of streams, lakes and oceans under the sunlight) guarantees that the world keeps on existing and being born time and again. In this sense, the mountains are like the sun, which provides humans with light, warmth and protection. Mountains are literally the link that brings the sky and the earth together; midway between both sky and earth is the water covering the skin of Mother Earth on which mountains walk and dance to the rhythm of universal *being*, which is time to Dōgen. *All things are moments in time*, claims the sage, and they are linked to one another in a subtle manner in much the same way seconds flow into further seconds. But to *being* and *time* we shall turn presently below.

IV

Section 4 of “Dōgen”¹⁸⁶ is a short piece of meditation on *what is* and on *time-being* in two little movements for the soul. In the first one, *what is* is seen as “*the foundation of the mind*”: all the things in this world are the mind itself, or the mind is everything it apprehends. In incantatory lines marked by alliteration that brings about a subtle musicality, the sage’s voice affirms that there is a simultaneity inherent in the being of *what is*: “*Everything that is is root and stem / and fruit and flower, / head and tail, back and belly, belly and bum.*” There is no way of drawing a distinction between what seems to be successive stages in the *unfurling* nature of all things that populate this world: what exists is root and stem at the same time (and not just literally in the vegetable realm), head and tail (in the animal realm), or back and belly (among humans). Opposites or contraries are two sides to the same coin, in much the same way sound and silence, earth and sky, light and dark, day and night are also contraries that are reconciled into an organic synthesis where all things are subtly connected to everything else. In the essay mentioned above, “The Time-Being”, Dōgen claims that “In essence, all things in the entire world are linked with one another as

¹⁸³ This verse line reads differently in *The Calling* version: “Never judge by just one word. / Never judge by just one world.”

¹⁸⁴ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 69.

¹⁸⁵ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 74.

¹⁸⁶ Section 4 of “Dōgen” was originally section VI in C.63. Section IV in this early textual incarnation of the poem reads as follows: “Water knows what to do / as the temperature rises and drops. / Water knows what to do / as it flies through the air / or touches the ground. / Water knows what to do / as it touches the water.”

moments. Because all moments are the time-being, they are your time-being.”¹⁸⁷ And he also affirms this:

The way the self arrays itself is the form of the entire world. See each thing in this entire world as a moment of time.

Things do not hinder one another, just as moments do not hinder one another. The way-seeking mind arises in this moment. A way-seeking moment arises in this mind. It is the same with the practice and with attaining the way. Thus the self setting itself out in array sees itself. This is the understanding that the self is time.

Know that in this way there are myriads of forms and hundreds of grasses [all things] throughout the entire earth. The study of this is the beginning of practice. When you are at this place, there is just one grass, there is just one form; there is understanding of grass and non-understanding of grass. Since there is nothing but just this moment, the time-being is all the time there is. Grass-being and form-being are both time.

Each moment is all being, is the entire world. Reflect now whether any being or any world is left out of the present moment.¹⁸⁸

The words just quoted may shed some light on the second movement for the soul in section 4 of Bringhurst’s poem. *Being* is time and all things that *are* are moments in time; self and other are also time. Any living thing is an uninterrupted succession of moments in time that keep it identical to itself as it were. Though nothing stays the same and everything is in a state of permanent flux, it is yet possible to penetrate the unchanging substratum or immortal ground of existence, for, though time-being has the quality of flowing, there must be an irreducible core of being at the heart of the world. But time-being is fluid and ever-flowing, changing all the time. Flowing is the elemental quality of time, and moments past and present do not overlap chaotically. As Dōgen puts it, “So-called today flows into tomorrow, today flows into yesterday, yesterday flows into today. And today flows into today, tomorrow flows into tomorrow.”¹⁸⁹ In Bringhurst’s hands these words become an accomplished stanza of utter technical perfection:

Everything that is is every
time that ever was
or is or will be and is
passing through the heart between your hands.

This is not an unintelligible message at all. It does make perfect sense. These words affirm the equation of *being* and time, and these words remind us that the body, the self and the other are also time. Time is fluid and spills in all directions through one’s fingers without the self being able to prevent its scattering everywhere. Every single thing that exists is, has been and will be uninterruptedly itself in spite of the constant change the world is subject to.

V

Section 5 of “Dōgen” proclaims the equation of world and self once more. It consists of two clearly distinct parts: whereas the first part appears to suggest that the world is a painting of a gigantic size, the second suggests that the self is the world itself in miniature. That a painting is made of colours, lines and planes beautifully arranged in space

¹⁸⁷ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 71.

¹⁸⁸ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 70.

¹⁸⁹ *Enlightenment Unfolds. The Essential Teachings of Zen Master Dōgen*, p. 71.

seems to be a truism. That a painting is meant to be a stylization or a slice of the living world (or a fragment lifted up from reality) seems to be another truism. Now, the *raison d'être* of a painting is precisely the existence of an observer, who looks at it in depth in search of some form of beauty and truth. At the exact intersection of the painting and the observer's eye the meaning of the former comes into relief, to the surface as it were. Seeing a painting is indeed the first elemental gesture towards exegesis or interpretation of the same. The mind apprehends whatever lies on the canvas through the eyes and seeks to understand it. However, Bringhurst's poem opens with a handful of verse lines that conceptualize the world as being a huge canvas where the common ingredients to be found in a painting are missing. What is more, the creative hand that brings the painting into existence is nowhere to be seen and the observer's eye has none of its morphological constituents. It is as though these lines emphasized emptiness or nothingness as the essential prerequisite for attaining genuine enlightenment. Bringhurst relies on parallelism and alliteration (notice the repetition of /p/ in *pigment* and *paint*, of /b/ in *bristles* and *brush*, and of /l/ in *lid* and *lens*), as well as on simple declarative sentences to convey such profundity of thought with total linguistic transparency:

There is no pigment in the paint.
 There are no bristles in the brush.
 There is no hand.

There is no lid or lens
 or retina in the eye.

The second part of section V of "Dōgen" makes explicit the equation of *world* and *self* with crystal-clear clarity. Though the observer's eye cannot penetrate the essence of the painting that the vast world is, the world can see "*the forms and colours / that you are, which are / the world's forms and colours / in your size.*" This is just to say that the macrocosm that the world is finds an echo or reflection in the microcosm that a human being is. The self is nothing more than the very world in miniature, or, to put it differently, a duplicate of the beauty and grandeur of *what is* on a smaller scale. Not only are humans made of the same substance as the rest of creation, but also they show the same forms and colours one finds in the world at large. That the world should see into humans while humans seem to be unable to see the world for what it is remains puzzling and intriguing, and, in fact, the closing lines of section 5 of "Dōgen" dwell on this mystery somehow. Also, the senses are mixed up and so the silence of the world can see humans breathe, whereas the breath humans breathe can hear them. It is as though Bringhurst's poem became metapoetic or self-reflexive for a while: the breath one breathes might well refer to the reader's voice reading "Dōgen" aloud, or the painted man speaking in the poem might also be the dramatic impersonation of Dōgen himself, the sage speaking to us from beyond time to enlighten us on the ultimate nature of reality:

The silence
 you have come to see

 can see you breathe; the breath you breathe
 can hear the painted man in whom
 this painted voice is speaking.

VI

The last section of “Dōgen” was section VII of the poem as originally published in C.63. Like the previous section, it consists of two parts as well. The whole of “Dōgen” is like a perfect circle that achieves its own completion at this point, where the mountains at the centre of the meditation in the first section are again brought to the foreground. The poet makes use of tautology to convey a difficult message that might sound paradoxical or unintelligible at first. However, upon closer inspection, it turns out to be perfectly understandable. Dōgen’s voice reminds us that one has to go to the mountains to heal oneself, to find oneself more truly in solitude: *“Everyone goes to the mountains, / yet no one is there.”* How is it logically possible to say that everyone goes there and yet nobody is to be found there? This paradox is meant to suggest that going to the mountains is no guarantee that enlightenment will be attained for sure. The tautology that follows these verse lines is puzzling too: *“we are who we are / and mountains are mountains.”* The Japanese sage appears to suggest that there is no easy way of reconciling mountains and human beings, that it is difficult to achieve a true communion between both. *“The mountains are coming to us, / and no one is here.”* Once again, these lines suggest that a gap impossible to bridge separates humans from mountains; one has to shed off the body to go beyond appearance and reach the realm of non-dualism, where apprehender and apprehended are one and the same.

As claimed in section 1 of “Dōgen”, the mountains are dancing and walking on their toes on all the water of the world. They are flowing then, for the entire world is flowing too. The second stanza of section 6 is a perfect haiku-like lyric in itself, reminiscent of the simplicity of much Japanese poetry. At the heart of these lines is the dichotomy between motion and stillness: contrary to one’s expectations, it is the mountains that are flowing and the water that is still. Dōgen is sitting quietly meanwhile, possibly practising *zazen* (seated meditation) to attain enlightenment or nirvana. He touches serenity with his own mind, which becomes a sky reflected on the still surface water of a lake. The sky and the lake are looking into each other’s eyes, in much the same way Dōgen’s mind is looking into his own self and into the world simultaneously to grasp the ultimate essence of things. Bringhurst manages to convey all this wealth of meaning in simple words that are almost invisible to the reader and yet of a breathtaking beauty:

The mountains are flowing,
the water is still,
Dōgen is sitting.
His mind is a lake looking upward,
a sky looking down.

A sense of gloom reminiscent of William Butler Yeats’s “The Second Coming” or “Sailing to Byzantium” pervades the second part of section 6 of “Dōgen”. It speaks of the dead and of the living, of the way they interact with one another in this world. The opening statement is not gloomy at first: *“Inside the dead man’s breath, the living breathe.”* This might be interpreted as meaning that we living humans of today owe much to our ancestors, and so we might be said to breathe inside their own breath. The insights into reality of such a beautiful mind as Dōgen’s are still a nourishing source of inspiration for us, an invaluable aid for us to understand the world we live in. However, the verse lines that follow this initial reflection depict a hellish scenario of pain, violence and horror. They convey none of the serenity inherent in the idyllic setting where Dōgen sits in contemplation in the face of the whole universe as embodied by the majestic mountains. Now, the picture offered by these lines might have well been lifted from Dante’s *Inferno*, where humans are subject to the most awful torments conceivable. A woman in labour is populated by the dead or hungry ghosts with cruel intentions striving hard to be born back into life. This is unnatural of course. That the dead should disguise as living beings, that they should crawl back into

the mother's womb as if to reverse time's arrow, and that they should be plotting to do something ominous against humankind is simply scary. These are Bringhurst's words on this peculiar hell:

Inside the living woman's pain,
the dead, pretending to be soldiers,
hunt for sons and enemies and joy.
The hungry ghosts, disguised as living beings,
are sucking their own bones.

The hungry ghosts grow younger,
crawling backward through the womb.
They swarm like angry hornets through the loins.

The poem closes with one more reference to the mountains, but this time the sense of the sublime that surrounded them like a halo in all previous sections of "Dōgen" is missing altogether: "*Dancing, broken / arm in arm with mountains, / is not a children's game.*" It is hard to leave the world of humans behind and to live in retreat in the company of huge mountains. It is a demanding and exacting enterprise, both physically and spiritually, for the truth-seeker who is determined to penetrate the heart of things. Like many other Buddhist sages, Dōgen was such a man, endowed with impressive stamina and determination to succeed in his spiritual quest. But what he did, following the mind as far into the realm of non-dualism as it would take him, is not "*a children's game.*" It takes time, constancy and single-mindedness to accomplish this.

XXV · KEIZAN JOKIN

"Keizan Jokin"¹⁹⁰ is possibly one of the most accomplished short pieces in *The Book of Silences* sequence. It is a succinct and eloquent impersonation of the thinking of another essential Japanese Zen master who lived in the Middle Ages. Bringhurst provides us with only elementary information regarding this sage's life: "Keizan Jokin (1268-1325) Eiheiiji, north of Kyoto. Traveled Japan widely."¹⁹¹ These are only elemental spatio-temporal coordinates, but the entry the *Encyclopaedia Britannica* devotes to this unique monk unveils important details about his life and his work. Keizan Jōkin¹⁹² (b. 13 Nov. 1268, Echizen province [now in Fukui prefecture], Japan – d. 22 Sept. 1325, Noto province [now in Ishikawa prefecture] was an important priest of the Sōtō sect of Zen Buddhism, who founded the Sōji Temple (now rebuilt in Yokohama), one of the two head temples of the sect. At the age of 8, Keizan became a novice under the tutelage of Gikai at the Eiheiiji Temple, the headquarters of the sect. He was formally ordained at the age of 13 and received dharma transmission from Tettsū Gikai at the age of 32. After studying at the Daijō Temple, he became a teacher there, where he propagated the teachings of the Sōtō sect for 10 years. He then became the head priest of the Shogaku Temple. Keizan gave the temple a new name, Shogaky-zan Sōji Temple, and affiliated it with the Sōtō sect in 1321.

¹⁹⁰ "Keizan Jokin" was first published as C.74 [Two Poems]. *Canadian Literature* 155 (Winter 1997): 15, 179. Contents: • "Lianhua Xiang" and • "Keizan". Then it was published as a part of the Oriental sages sequence in A.65 *The Book of Silences* (2001) and also reprinted in A.92 *Selected Poems* (2009).

¹⁹¹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled "Contents & Notes" at the end (unpaged).

¹⁹² See the entry on 'Keizan' in the *Encyclopaedia Britannica*, vol. 16, p. 9130.

Later, when he preached to the emperor Go-Daigo on the Ten Questions on Buddhism, Sōji Temple became an imperial temple.

Indeed, Keizan is known as the second of the great founders of the Sōtō Zen sect in Japan. Whereas Dōgen is credited with being the founder of Japanese Sōtō and so is acknowledged as “Highest Patriarch”, Keizan is known as Taiso (or “Greatest Patriarch”) and is said to have spread Sōtō Zen throughout Japan with the help of his disciples. In fact, he established several temples throughout his lifetime, renewing the religious traditions of its founder, Dōgen, and extending the appeal of Sōtō Zen to the rural population. Under him the Sōtō sect developed rapidly. Furthermore, he did much to encourage the training of women in Buddhism, possibly because of the decisive influence of his own grandmother and mother on Keizan as a young boy, during his formative years. Among his works (including an autobiography, as he was the first Japanese Zen monk to detail his own life) figures prominently *Denkōroku* (literally, *Transmission of Light*), which consists of 53 sermons that trace the linear evolution of Sōtō Zen lineage from Shakyamuni Buddha to his immediate predecessor in Eiheiji, Ejō. Throughout his life, Keizan embraced the bliss that comes from the practice of meditation and the joy that comes from the knowledge of the Dharma. In this respect, *Denkōroku* or *Transmission of Light* is “one of the major classics of Japanese Zen Buddhism. Ostensibly a collection of stories about fifty-three Buddhist illuminates from India, China, and Japan, in reality it is a book of instruction in the art of satori – Zen enlightenment.”¹⁹³ And satori is an essential initiatory experience in Zen Buddhism, as it represents the beginning of true Zen realization. Consisting of tales about the awakenings of 53 successive generations of masters, Keizan’s book is the most thorough guide to satori in the entire Japanese Zen canon, as it offers quintessential techniques for realization of satori, “showing how this experience transcends time, history, culture, race, gender, personality, and social status.”¹⁹⁴

Zen teaches that the potential to achieve enlightenment is inherent in everyone but lies dormant because of ignorance, because of the heavy load culture puts on our shoulders and the constraints imposed upon our perceiving mind and senses. It is best awakened not by the study of scriptures, the practice of good deeds, rites and ceremonies, or worship of images but by a sudden breaking through of the boundaries of common, everyday, logical thought.¹⁹⁵ This is what is found in the experience of satori, which cleanses our mind and makes it ready for a fuller apprehension of reality. Now, the thought occurs that satori is possibly the underlying key concept beneath Bringham’s personal homage to this Oriental sage in his poem “Keizan Jokin”. Satori is thought to be the true beginning, not the end, of Zen, as it is “the key to inner freedom and independence, the door to higher knowledge” and it entails a “radical liberation from needless constraints of inculcated worldviews.”¹⁹⁶

¹⁹³ *Transmission of Light [Denkōroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, translated and with an introduction by Thomas Cleary, San Francisco: North Point Press, 1990, Introduction, p. vii.

¹⁹⁴ *Transmission of Light [Denkōroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. vii.

¹⁹⁵ See the entry on ‘Zen’ in *Encyclopaedia Britannica*, vol. 30, p. 18177. The path towards enlightenment differs from one Zen sect to another: “The differing sects have various methods of achieving this enlightenment. The Rinzai sect emphasizes sudden shock and meditation on the paradoxical statements called koan. The Sōtō sect prefers the method of sitting meditation (*zazen*). A third sect, the Ōbaku, employs the methods of Rinzai and also practices *nembutsu*, the continual invocation of Amida (the Japanese name for the Buddha Amitābha), with the devotional formula *namu Amida Butsu* (Japanese: “homage to Amida Buddha).”

¹⁹⁶ *Transmission of Light [Denkōroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, pp. vii-viii. As Thomas Cleary puts it in his enlightening Introduction, satori is the “realization of the “original mind” as it is in itself, the universal ground of consciousness, concealed beneath the temporal conditioning that forces people to experience life through outlooks arbitrarily limited by their cultural, social, and personal histories. [...] It allows the individual access to a range of mental potential beyond the limitations of outlook defined by ordinary processes of acculturation, socialization, and education.” *Ibid.*, p. vii.

By letting go of “circumstantially ingrained attachments, biases, and blind spots that close minds into tunnel visions of life,”¹⁹⁷ the stream of consciousness is cleaned out, the individual is freed from the identification of personality with self, and so access to a higher form of knowledge is possible. Thus, Bringham’s poem opens with a four-fold order for the individual to give up writing, several art forms and even thinking in search of emptiness and a subsequent Zen realization, a fuller life and a greater completeness:

Give up writing, he wrote.
Give up music and singing, he sang.
Give up poetry, painting, calligraphy,
dancing and miming, he mimed.
Give up thinking, he thought.

In these parallelistic verse lines, the initiate is advised to get rid of the huge burden that culture and education have put upon his shoulders. What is truly essential in one’s confrontation with one’s original mind? In one’s thorough search for emptiness that seeks to clean out the mind completely to make it more receptive and attentive, one must stop cultivating *writing*, which is a shadowy replacement of living speech emanating from one’s lungs; *music and singing*, which are a form of sublime entertainment for the human soul; *poetry, painting and calligraphy* (inextricably linked to one another in Oriental cultures), art forms that seek beauty, eternity and truth through indirect means; *dancing and miming*, or the love of sheer motion in time and space; and even *thinking*, for rational thought is no infallible path or tool to achieve enlightenment. What is paradoxical about all four orders is that *he* (a third person personal pronoun possibly designating Keizan himself) forbids himself and other Zen initiates the practice of all these arts through exactly the same means he is condemning. In a nutshell, the speaking voice beneath the four commands encourages the initiate to start anew, to turn the mind into a sort of *tabula rasa* upon which to build a new awareness from scratch. Writing, music, poetry, painting, dancing and thinking might well be no more than useful intermediary tools in our confrontation with reality, means that might lead the way towards enlightenment, but they are nonetheless instruments, aids, tools.¹⁹⁸

To overcome the duality of self and other, to go beyond the narcissistic identification of self with personality, it is necessary for the individual to give up everything he/she knows of. Only emptiness is the proper beginning in the search after the light central to Zen Buddhism. And reality is larger than our limited and unreliable perception of it. Therefore, from the words tessellated into the second stanza we gather that song, dance and thought have an independent existence of their own, away from the narcissistic self: “*But the song kept on singing, / the dance kept on dancing, / thought kept on thinking*”. Now, singing, dancing and thinking are recognizably human activities or actions. However, they are a tiny part of the grander scheme of things too, and so the poetic voice also invokes such natural elements as the breezes and the sun: “*the breezes kept on blowing, the sun / continued to shine*.” Zen appears to dismiss the egoistical anthropocentrism that Western culture embraces. Humans are not at the very centre of the universe, and so it is of the essence for us to learn to be humble and grateful in the face of *what is*. Emptying one’s mind of all superfluous cultural accretions is just the beginning for a fuller realization of the ultimate nature of reality and of our place in it.

¹⁹⁷ *Transmission of Light [Denkoroku]. Zen in the Art of Enlightenment by Zen Master Keizan*, p. vii.

¹⁹⁸ And yet, despite Keizan’s dismissal of writing and art forms, we know that “During the 16th-century period of political unrest, Zen priests not only contributed their talents as diplomats and administrators but also preserved the cultural life; it was under their inspiration that art, literature, the tea cult, and the *nō* theatre, for example, developed and prospered.” Entry on ‘Zen’ in *Encyclopaedia Britannica*, vol. 30, p. 18177.

XXVI · JAKUSHITSU GENKO

“Jakushitsu Genko”¹⁹⁹ explores the thinking and the singing of another essential sage from the Far East. According to Bringhurst, Jakushitsu Genko (23 June, 1290 – 25 September, 1367) was “from Japan, traveled to China, then back to Okayama & Kyoto, Japan.”²⁰⁰ And from an entry devoted to this sage in the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music*, we learn that he was “A Zen monk trained under Issan. He studied in China from 1320 to 1326 and lived as a hermit in Okayama, in southwestern Honshu, on his return to Japan.” And in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us very briefly that he was “A Zen monk, poet and hermit living in Okayama.” Born into an aristocratic family at a time of social unrest and political turmoil in Japan, Jakushitsu was sent to a monastery in Kyoto at the age of 12. Though he did not seem to have a strong religious vocation as a young boy, a meeting with a visiting Zen monk made a deep impression on him. The monk’s wisdom, peace and meditation practices convinced him of the path his own life should take from then onwards. After spending the years 1320 to 1326 in China, where he studied Zen with well-respected masters of the Linji school, he returned to his homeland, where he lived as a wandering hermit for a long time, seeking the quiet and solitude of remote locations away from the cities. He was reputed for his flute-playing and his poetry, as well as for his ascetic way of life, one that embraced Zen ideals and practices. Towards the end of his life, he was coaxed by a local lord to settle down and teach Zen to those who might be eager to listen to what he had to say. Thus, he became the first abbot of Eigen-ji, a temple erected expressly for him to teach Zen to others as a spiritual guide and teacher.

It seems that many of these Oriental sages Bringhurst is interested in were wanderers concerned with asking fundamental questions, with thinking with intensity and depth in search of their own answers. These were monks, priests, thinkers, hermits, philosophers, musicians and poets for whom the universe was still a *whole* of subtle interconnections; for whom body, speech and mind were one and the same thing in our emotional and intellectual confrontation with the world. Jakushitsu Genko was one of such rare specimens: a Japanese Rinzai master, an excellent flute-player and an accomplished poet, even though he questioned at times the value of writing poetry. What was the point of devoting one’s energies to words when silence was preferable? And yet his poems have been handed down to 21st-centuries readers as some of the finest examples of Zen poetry. Now, “Jakutshitsu Genko”, Bringhurst’s poem, is nothing more and nothing less than a masterly and moving homage in honour of a great poet and thinker who was capable of producing poems where ideas had plenty of room to sing and dance in. As in all great poetry, thinking and singing go hand in hand in this short composition that is worth analyzing in detail.

Bringhurst’s piece on Jakushitsu is a perfect example of the jewel-like short lyrics that punctuate the author’s poetic output from time to time. The poet manages to say much with few words, as if in an attempt to say the most with the fewest words possible. And Bringhurst is precisely at his best in poems like this which try to convey profundity of thought with ascetic linguistic means. Incidentally, this poetic economy might be a hint of

¹⁹⁹ “Jakushitsu Genko” was originally published as C.43, “Jakushitsu”, in *Whetstone* (Lethbridge, Alberta) Fall 1984: 31. It was then reprinted in A.32 *Pieces of Map, Pieces of Music*, in A.47 *The Calling*, in A.65 *The Book of Silences*, and in A.92 *Selected Poems*. In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: wú xīn sì qiū yuè = *own mindbeart similar autumn moon*.

²⁰⁰ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

Jakushitsu's own despising of words and of poetry as an ultimately futile enterprise when one should be seeking silence instead. Thus, the composition consists of only two four-line stanzas of utter linguistic precision and evocative musicality. The first stanza offers a glimpse of the physical setting in words that are reminiscent of the Japanese haiku:

Wind through the warp
of the waterfall, talking.
Moon above the hill across the harbor,
climbing and gleaming.

With only a few brushstrokes, the landscape is depicted with astonishing economy as a place of essential elements – the basic ingredients of the scenery are wind, water, moon, sky and hills. The alliteration of /w/ in such key words as *wind*, *warp* and *waterfall* subtly points to the fundamental interconnectedness inherent in the living mesh of things. Thus, the wind speaks and sings its own song as it passes through “*the warp of the waterfall*.” No human voices are heard amid this quiet landscape of silence. The moon is a mute witness up above in the sky, over the hills on the other side of the harbour. It follows its own path with utter serenity as well. In the face of the sublime of this scene, the mind is closely connected to the moon. In fact, the ideographic form accompanying this poem in *Pieces of Map, Pieces of Music* reads wú xīn sì qiū yuè = *own mind/heart similar autumn moon*. Hence the mind resembles an autumn moon gleaming calmly in the heavens. The whole picture is then one of peacefulness and quietude. It is only natural that such a calm landscape should prompt the poetic persona of Jakushitsu to meditate on death in these terms:

When I am dead and my bones lie
mindlessly in the dirt,
they will be
as transparent as ever.

Bones are a recurrent lexical item in Bringhurst's poetry; it occurs time and again in many of his compositions with powerful resonances. Bones remind us humans that we are ultimately simple matter of stubborn physicality, that we are made of exactly the same constituents as the rest of reality, and that we fit in into the grander scheme of things, both living and non-living alike. To Jakushitsu's mind, dying is tantamount to self-annihilation and extinction into the very dirt out of which we came into being. There is no reason why death should be feared, no reason to lose one's peace of mind in the face of physical dissolution. In his infinite wisdom and serenity, the sage knows that his bones will be “*as transparent as ever*,” that is to say, his bones will fall exactly into place next to the whispering wind, the singing waterfall and the gleaming moon. Nothing will have been lost or left behind *en route*, for the whole of existence is just sheer metamorphosis – everything is in a state of perpetual flux. This is possibly a rudimentary form of epiphany, an experience of enlightenment that the perceiving consciousness has undergone all of a sudden. An intimation of one's mortal nature might turn out to be a painful experience, but it is not such thing to Jakushitsu, for whom death means re-union with *what is*, blissful communion with the surrounding world, so that the dual existence of subject and object, self and other, conscience and world, is annihilated for good. The final lesson is then one of humility and gratitude; we humans must learn to see ourselves for what we are: perishable flesh and bones that are seeking their way back home since the very moment we are born.

XXVII · BANKEI YOTAKU

“Bankei Yōtaku”²⁰¹ concerns one of the major Zen masters ever born in Japan and the author of the so-called “Unborn Zen”, which, according to Daisetz T. Suzuki is “one of the most original developments in the entire history of Zen thought”²⁰². In its genius and utter simplicity and wholeness, his teaching of the Unborn is reminiscent of the great Chinese masters of the golden age of Zen in the period of the T’ang dynasty.²⁰³ Bringhurst pays homage to this lucid thinker in the form of a poem published for the first time in 1994 to honour the prestigious Canadian poet Leonard Cohen. In an entry in the “Cast of Suspicious Characters” at the end of *The Calling: Selected Poems 1970-1995* (1995), Bringhurst tells us that Bankei Yōtaku (1622-1693) was “A Zen monk and Confucian scholar, born near Himeji, in southern Honshu.” And in the 2001 edition of *The Book of Silences*, he summarizes the intense life led by this Zen monk in just one line: “Bankei Yotaku 1622-1693 Himeji, Ako & Nagasaki, Japan.” These two entries hardly convey the intensity of the life of a remarkable man rich in experiences, widely travelled, who found it extremely hard to attain final enlightenment. Since early in his life, Bankei was determined to penetrate the ultimate essence of things, and so he wandered from one place to another, seeking instruction from all the masters he stumbled upon along his way, practising sitting meditation in complete solitude during days on end, away from human intercourse and with total disregard for his own health.

Bankei Yōtaku²⁰⁴ was born at Hamada, a small village in the province of Harima, to a physician of samurai rank in the service of the ruling Awa clan who, for unknown reasons, resigned his post, married a woman and made a living through the practice of medicine. When his father died, Bankei was only ten years old and his eldest son and his mother would raise him and his other brothers and sisters. The records of his life reveal that he was an intelligent, sensitive, rebellious and stubborn child. At the age of eleven, he was sent to the village school, where he was eagerly interested in the pursuit of his studies, which entailed the recitation of the Confucian texts, the *Great Learning* among them. One day, the teacher recited the key verse line “The way of great learning lies in clarifying bright virtue.” Bankei wanted to know immediately what “bright virtue” meant and interrupted his teacher in search of illumination. None of the answers he gave the child were satisfactory to his taste. This experience was a turning point in his life, inasmuch as it marked the beginning of his own personal spiritual quest after enlightenment. This questioning became an all-consuming passion that would determine the course of his future life for the next 14 years. From that moment onwards, Bankei seized every opportunity to ask other masters for help, but none would give him what he was after. None of his inquiries brought him a glimpse of understanding. Wandering aimlessly alone, he would lose all interest in schoolwork and so his brother banished him from the family home. Thus, Bankei started his own wanderings, even if one friend of the family allowed him to stay in a small hut of their possession up in the hills behind his house. His sole task was to clarify the meaning of “bright virtue”, away from all outside distraction.

²⁰¹ “Bankei Yōtaku” was originally published in B.48, *Take this Waltz: A Celebration of Leonard Cohen*, edited by Michael Fournier and Ken Norris, Ste Anne de Belleville, Québec: The Muses’ Company / La Compagnie des Muses, 1994: pp. 20-21. Contribution: • “Bankei Yōtaku in Los Angeles” (here dedicated to Leonard Cohen). Then, it was reprinted as “Bankei”, minus the dedication, in A.47 *The Calling* (1995), and as “Bankei Yōtaku” in A.65 *The Book of Silences* (2001) and in A.92 *Selected Poems* (2009).

²⁰² See *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, translated and with an introduction by Norman Waddell, New York: North Point Press, 1984 (rev. ed. 2000), p. vii. Suzuki is the most lucid interpreter of Bankei’s “Unborn Zen”; in the forties he rescued this Zen thinker “from the obscurity of two and a half centuries of near-total neglect.” *Ibid.*, p. ix.

²⁰³ *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, p. ix.

²⁰⁴ The biographical information that follows has been lifted from Norman Waddell’s excellent introduction to *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, pp. 3-38.

Afterwards, Bankei spent several years at a temple of the Shin sect near his home village. At the age of 16, he visited the Zuiō-ji, a temple in the city of Akō, under the guidance of the Rinzai abbot Umpo Zenjō, a stern master who demanded complete dedication from his disciples. Bankei asked the abbot for advice to find the right answer to the consuming question of “bright virtue” and the master recommended the practice of seated meditation (*zazen*). Immediately, Bankei asked to be ordained as a Buddhist monk and stayed at the Zuiō-ji. Umpo changed his name to Yōtaku, which literally means “Long Polishing of the Mind Gem”. Subjected to an exacting training program under Umpo’s guidance, Bankei spent three years at his temple practicing seated meditation and possibly doing some work on koans. At the age of 19, Bankei was ready to depart. He started a new phase of wandering in his life: he moved from one temple to another, and more often he lived in solitary huts he himself built with meager materials, or slept in the open. This was an ascetic life of serious privations – years of hunger, physical and mental extenuation, even spent in the company of beggars – in which Bankei pushed himself past the bounds of physical endurance with the complete lack of regard for his health.²⁰⁵ After a wandering that lasted four years, Bankei went back to Umpo, but unfortunately he had not attained enlightenment yet. He had been unable to find a single person to help him solve his pressing doubts. At that point, Umpo told him that he would never attain enlightenment unless he looked deep inside himself. The answer he was looking for was not to be sought and found outside himself. Bankei left the temple once more and built himself a tiny hut where he was resolved to practice seated meditation till he broke through. Sitting for days on end, his body started to fester; he would give up eating for a long time to the detriment of his own health. He contracted tuberculosis eventually. Resigned to dying, Bankei attained sudden enlightenment during his near-death experience:

I felt a strange sensation in my throat. I spat against a wall. A mass of black phlegm large as soapberry rolled down the side. It seemed to relieve the discomfort in my chest. Suddenly, just at that moment, it came to me. I realized what it was that had escaped me until now: All things are perfectly resolved in the Unborn.²⁰⁶

The doubts that had been plaguing him ceased to exist. As he was strong enough to travel again, he visited Umpo to tell him of his experience. The abbot confirmed his understanding and advised him to seek confirmation from other masters. He recommended that he should visit Gudō Tōshoku, a prestigious Rinzai Zen master teaching at the Daisen-ji, a temple in the province of Mino. The Zen master was away visiting other temples under his supervision, and so Bankei decided to visit some other Zen teachers in the vicinity. He spent another year in the forested hills, working on his post-enlightenment phase. In the autumn of 1651 Bankei had the chance to meet with Dōsha Chōgan, a Chinese priest residing in a temple near Nagasaki. Eager to obtain verification from him, he had an interview with the master, who confirmed his enlightenment and also told him that his enlightenment was incomplete. He would not accept the master’s evaluation, and yet he decided to stay in his temple, Sōfuku-ji, under his guidance. In 1652 he would have another enlightenment experience while sitting in the darkness of meditation with his fellow monks. Later, Bankei returned to his native province of Harima, where he spent more time in solitary meditation and silent retreat, composing Buddhist chants pertaining to the Unborn. In 1672, at the age of 50, he was appointed abbot of the

²⁰⁵ In one of the records preserved, he says: “I pressed myself without mercy, draining myself mentally and physically; at times, I practiced deep in the mountains, in places completely cut off from human contact. [...] Whenever I heard of some teacher whom I thought might be able to give me advice, I went immediately to visit him. I lived that way for several years. There were few places in the country I did not set foot.” *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, pp. 8-9.

²⁰⁶ *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, p. 51.

Myōshin-ji in Kyoto. From then on he devoted his time to teach his “Unborn Zen” to others, priests and lay men and women.

Bringhurst’s poem consists of ten short stanzas of three verse lines each, marked by utter simplicity of language and imagery. The whole piece is an extended meditation on the Unborn, which to Bankei is the Buddha-mind that pervades all existence. As he himself says: “What I call the “Unborn” is the Buddha-mind. This Buddha-mind is unborn, with a marvellous virtue of illuminative wisdom. In the Unborn, all things fall right into place and remain in perfect harmony. When everything you do is done according to the Unborn, the eye that sees others as they are opens in you, and you know in your own mind that everyone you see is a living Buddha.”²⁰⁷ As in many other poems in the Oriental sages sequence, the mind occupies a central place in this meditation on the nature of *what is*. The radiance of truth is found everywhere one turns to look in the form of light emanating from *what is* in a spontaneous manner. There is no conscious effort made on the part of this light that is at the core of all things endowed with Buddha-nature, and hence the two opening stanzas emphasize this very notion of spontaneity and naturalness:

Light leaks from the mind like
tears from the eye,
blood from the body.

It flows from what-is like
sap from the tree. That is the only
reliable language.

As if it were a strange kind of liquid matter, the light that “leaks from the mind” to illuminate the world of things and phenomena seems to be “the only reliable language.” Zen despises words to a certain extent, for they do not express the truth of things with accuracy or precision. In dealing directly with the pulsating facts of reality, the mind needs no intermediaries in its confrontation with *what is*, and words are totally dispensable. Similarly, a sense of elemental kinship with the rest of bodily parts as well as with the natural world is highlighted in these verse lines. In much the same way the eye secretes tears and the body secretes blood, the mind secretes light. This light is the utter incarnation of *what is*, or the palpable manifestation of *what is*, and it flows in all directions from all things just like the life-giving sap flows from the tree. In this respect, in the “Ryūmon-ji Sermons” translated by Waddell in his edition of the priest’s records, Bankei deploys a language that is evocatively reminiscent of Bringhurst’s: “because of the unbornness and marvelous illuminative power inherent in the Buddha-mind, it readily reflects all things that come along and transforms itself into them, thus turning the Buddha-mind into thought” and “the Unborn is the Buddha-mind” and it is always “marvelously bright and illuminating.”²⁰⁸ The rest of Bringhurst’s stanzas go deeper into the notion of the Unborn. “*What is is unborn*” is the central statement, repeated with a number of variations in the rest of the poem. That was after all the core of the epiphany moment of revelation Bankei went through during his experience of near-death due to the tuberculosis he had contracted. Paradoxical language is pervasive, since what the poetic voice is trying to convey seems to be beyond verbalism, beyond the possibilities of discursive thinking. Suddenly we are plunged in the realm of the unspeakable and the unspoken, there where words do not reach. These are only instances:

²⁰⁷ *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, p. 59.

²⁰⁸ *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, pp. 39-40 and p. 42.

- (1) “*The source of what was / is what is, and the source of what is / must be what will be.*” This statement seems to cancel the serialism of time sequence: the present precedes the past and the future precedes the past. How is that logically possible unless we are installed in an absolute present or in timelessness, in a realm where time itself is transcended?
- (2) “*What is is unborn. / What is born is a gesture / towards or away.*” Only the unborn is and it is a strange kind of gesture whose sense or destination remains unclear. What is born is moving towards some new form of existence, or away from the pristine Buddha-nature present in all things and creatures in this world.
- (3) “*What is is unborn. / Nevertheless, / it is already bearing.*” and “*Being is bearing.*” *What is* is not yet born but is in the process of becoming. This is a state of perpetual metamorphosis that affects the whole of creation, and so it affects the human body (“*At the ends of the nerves, / what will be is breeding*”), but it also involves all the elements in Nature:

In bones and in river silt,
chromosomes, leaf-shapes,
in starlight and synapse and stone,

what no longer exists
is just shaving its face
and choosing its clothes.

These two stanzas just quoted seem to point to the very idea of reincarnation or transmigration, or simply they convey the sense that everything in Nature is subtly connected to everything else. What is not yet is getting ready in the most elemental of particles (bones, silt, chromosomes, leaf-shapes, starlight, synapse and stone is no random enumeration, as it comprises the human and non-human realms of existence, while not forgetting the shining stars of the night sky, or the cosmos in its entirety) for life again. There is no birth and there is no dying, or, as Bankei himself puts it, “There can be no death for what was never born, so if it is unborn, it is obviously undying.”²⁰⁹

Poetry is often the language of paradox, especially when such complex philosophical notions as those of Bankei’s Unborn Zen are being discussed in a poem. More often than not, we feel words fall short of what we intend them to communicate. And this is precisely what happens in “Bankei Yōtaku”, a poem of considerable conceptual difficulty that demands close attention on the part of the reader if he/she is to grasp its fundamental meaning. There is something of a circle-like perfection to the poem, on the other hand. If the opening stanzas announced that only the light emanating from *what is* was a truly reliable language, now the poem closes with a reference to words that “*are listening / for all you have to say,*” as if to capture the singing of *being* in the world. It remains unclear whom this *you* is meant to signify. Is it directly addressed to *what is*, to the unborn, to the Buddha-nature that is the underlying principle of all things? Possibly.

XXVIII · HAKUIN EKAKU

“Hakuin Ekaku”²¹⁰ concerns one of the major Japanese Zen masters who played a decisive role in the revivification of the Rinzai school. In *The Book of Silences* (2001), Bringhurst

²⁰⁹ *The Unborn. The Life and Teachings of Zen Master Bankei 1622-1693*, p. 41.

²¹⁰ “Hakuin Ekaku” was originally published as “Hakuin” in A.32 *Pieces of Map, Pieces of Music* (1986). It was then revised in A.65 *The Book of Silences* (2011), where the poem attained its definitive textual incarnation, later reprinted in A.92 *Selected Poems* (2009). Curiously enough, this poem was not included in A.47 *The Calling*. In

speaks of this Oriental sage in almost telegraphic form: “Hakuin Ekaku 1685-1768 Haramachi, Japan.”²¹¹ But the entry devoted to this sage in the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* is a bit more informative: “Hakuin (1685-1768) A Rinzai master, born at Haramachi, near Mt Fuji. In 1716 he settled in to teach at Shoinji, not far from his birthplace.” But who exactly was this influential and remarkable Buddhist monk? It might be worthwhile to look into the details of his lifetime. Hakuin Ekaku²¹² (b. 19 Jan. 1686, Hara, Suruga province, Japan – d. 18 Jan. 1769, Hara) was an influential priest, a writer, and an artist who helped revive the Rinzai sect of Zen Buddhism in Japan. Born to a commoner family of low status in the small village of Hara, located at the foot of Mount Fuji, Hakuin possibly made his decision to become a Buddhist monk under the influence of his mother, a devout Nichiren Buddhist. At the age of 15, he was granted permission by his parents to join the monastic life and was formally ordained at the Zen temple of Shoin-ji. After the head monk of the temple took ill, Hakuin was sent to yet another neighbouring temple, Daisho-ji, where he served as a novice for three or four years. It was at this temple that he first read the Lotus Sutra and found it disappointing. At the age of 19, he went through a kind of faith crisis and made up his mind to abandon monasticism. He lost faith in the efficacy of Buddhism and travelled around studying secular literature, until he realized once more that he should resume monastic life and Zen practice.

Hakuin joined the Rinzai Zen sect about 1700. He subsequently became an itinerant monk, during which time he experienced what he considered to be enlightenment. Thus, he settled down at the Eigan-ji temple, where he had his first experience of enlightenment while locked away in a shrine of the temple for a whole week. It seems his master refused to acknowledge this enlightenment, whereby Hakuin came to the conclusion that there is no cycle of rebirth, and so he left once more. Afterwards, towards the end of his twenty-fourth year, he spent eight months of study under the spiritual guidance of the demanding teacher Shojū Ronin, who would remain his most influential master. Following several experiences of enlightenment, he left Shojū and travelled for several more years, wandering from temple to temple, perfecting his Zen. When he was 32, he returned to Shoin-ji, in his native town of Hara, and he became the abbot of the temple, where he served as spiritual master for fifty years. Hakuin experienced total enlightenment at the age of 41, as he was rereading the Lotus Sutra. From then on, he would spend his time teaching others to achieve enlightenment, writing and giving lectures to all those who would listen to him. Hundreds of students would come from all over the country looking for Hakuin’s guidance and teachings. As a result, Shoin-ji became a true centre of Zen teaching. In fact, after a period of moribund stagnation, Hakuin managed to refocus the Rinzai school on its traditional training methods, which integrated meditation and koan practice for initiates. Buddhism in Japan had been largely coopted by the Tokugawa shogunate, but while many priests sought personal advancement, Hakuin lived in great poverty among his peasant parishioners. He turned down offers to serve in the great monasteries in Kyoto, preferring to stay at Shoin-ji. He was a firm believer in bringing the wisdom of Zen to all people, and so he taught that direct knowledge of the truth is available to all, even the lowliest, and that a moral life must accompany religious practice. Hakuin was convinced that it was indeed possible for man to gain enlightenment by his own efforts. Leading a morally virtuous life was the fundamental lesson he taught humble

Pieces of Map, Pieces of Music, the calligraphy accompanying this piece reads: zhin qiaò = *mind/heart pierce*. In A.65 there is one extra verse line at the end that reads as follows: “*Still less is there none. / Still less is there neither.*”

²¹¹ Robert Bringhurst, *The Book of Silences*, Los Angeles: Ninja Press, 2001. See the separately bound section entitled “Contents & Notes” at the end (unpaged).

²¹² See entry on ‘Hakuin’ in the *Encyclopaedia Britannica*, vol. 12, p. 7181.

people. Thus, he attracted a large following that became a new foundation for Rinzai Zen in Japan.

The most important contribution of Hakuin to the Rinzai school was his systematization of koan practice in Zen teaching, which he utilized to aid meditation, as well as his emphasis on lifelong devotion to Zen practice. Hakuin returned to strict koan study and began to organize his materials into a course of study.²¹³ Koans were the best way to help students to achieve insight or attain enlightenment through intensive meditation and great doubt. As one struggles with a koan, psychological pressure and tension might smooth the path towards true awakening. In this training method students are assigned koans by their teacher and they must meditate on them. Once they attain enlightenment, they have a private interview with their master to demonstrate their insight. If satisfactory insights are attained, then the student is assigned a new koan to meditate upon. In this respect, Hakuin used classic koan collections inherited from China, but also invented his own koans, among them the well-known paradox of contemplating the sound of one hand clapping. He insisted on the need for never-ending and strict training to deepen the insight of enlightenment. Once the initial awakening is attained, the Zen practitioner must adhere to unremitting practice of the koan system. In this respect, he criticized quietist Zen practices that sought to simply empty the mind after a minor experience of enlightenment had been attained.²¹⁴ On the other hand, he was an active lecturer, touring all around Japan to talk about Zen, and he produced a prolific output, especially in the last 15 years of his life, to leave a record of his experiences and teachings for posterity. His writings²¹⁵ include *Orategama*, *Orategma zokushū*, *Yasen kanna*, and *Keisō dokuzui* (*Poisonous Stamens and Pistils of Thorns*), intended for advanced students of Zen. Hakuin is also known as a painter and calligrapher: his was the work of a simple and virtually untrained artist, but he wrote out poems, Zen sayings and mottoes, he drew caricatures and delightful pictures. All this was the by-product of his activity as a Zen teacher and preacher, not the conscious work of a practicing artist.

What is so moving about Zen practice is that initiates are able to cast aside the myriad circumstances to investigate their own selves alone. A sense of this self-introspection is conveyed by “Hakuin Ekaku”, Bringham’s moving homage to this Rinzai master who lived so long ago. The piece consists of a single stanza of only nine verse lines. “Mindheart pierce”: this is what the ideographic form accompanying this poem in its early textual incarnation in *Pieces of Map, Pieces of Music* says. It certainly gives an essential clue as

²¹³ *The Zen Master Hakuin: Selected Writings*, translated by Philip B. Yampolsky, New York / London: Columbia University Press, 1971, pp. 11-12. “Hakuin insisted that, for Zen meditation practice, the practitioner must have three basic qualities: an overriding faith, a great doubt when facing the koans, and a strong aspiration and perseverance. The student’s first task was to see into his own true nature (*kenshō*). To this end Hakuin championed the *Mu* koan and later in his life the *Sekishū no onjō*, the “Sound of the Single Hand,” a koan which he himself devised. The method by which koans are to be solved is, of course, by disciplined *zazen*, or meditation sitting, accompanied by private interviews with the teacher (*sanzen*), in which the Master gives guidance and eventually sanction to the student’s understanding of a particular koan.” *Ibid.*, pp. 13-14.

²¹⁴ Philip B. Yampolsky quotes Hakuin’s words in his *Orategama* insisting on the need for meditation practice in the midst of activity, no matter whether in the common tasks Buddhist monks were expected to accomplish in their everyday life (caring for temple buildings and ground, growing vegetables, etc.) or in the bustle of the lay world: “I am not trying to tell you to discard completely quietistic meditation and to seek specifically for a place of activity to carry on your practice. What is most worthy of respect is a pure koan meditation that neither knows nor is conscious of the two aspects, the quiet and the active. This is why it has been said that the true practicing monk walks but does not know he is walking, sits but does not know he is sitting. For penetrating to the depths of one’s own true self-nature and for attaining a vitality valid on all occasions, nothing can surpass meditation in the midst of activity.” *Ibid.*, pp. 15-16.

²¹⁵ For a detailed discussion of the works of Haikun see the Appendix in Philip B. Yampolsky’s *The Zen Master Hakuin: Selected Writings*, pp. 223-233.

to the subject matter of this short meditation, which concerns the stillness of the mind and the ultimate nature of *being*. Written in simple declarative sentences where the verb *to be* predominates, “Hakuin Ekaku” consists of four statements of utter linguistic transparency, which is a recurrent stylistic feature of Bringham’s poetry. The semantic density and the profundity of thought are astonishing though, and also they are reminiscent of the gnomic dimension inherent in the koans Hakuin himself championed as a most useful aid to Zen practitioners’ meditation. These are the four statements Hakuin’s persona speaks in these lines with what looks like total serenity:

- (1) “*All beings are gods. Gods / are all beings.*” The same statement is repeated twice, though the order has been reversed. The essence of this statement is possibly the Buddhist belief that all sentient beings are endowed with Buddha-nature, that is, that every single creature in this world holds a sparkle of the divine and so is in a position to attain enlightenment. In another sense, these two simple sentences celebrate a sort of pantheism or even animism: by insisting on the fact that all beings are gods (by equating both beings and gods in both directions), the meaning conveyed is that of the ultimate unity of existence, whereby there is a divine substratum uniting all things in this universe. This insight into the One demands that the mind be liberated of ingrained prejudices and be alert to the breaking through that comes with profound meditation on *what is*.
- (2) “*The ice on the river / is time in the grip of your mind / in the grip of the water.*” This aptly intricate metaphor is possibly meant to elucidate or capture the ultimate nature of such a complex concept as time. But, in what way does ice on the surface of the river resemble time as apprehended by the mind? Reality is in a state of permanent flux whereby all things are in a state of becoming something else. Somewhere on the coast of Asia Minor, Herakleitos embraced this flux doctrine about 2,500 years ago. Given the perennial metamorphosis of everything in the world, phenomena are neither truly existent or absolutely non-existent, but are characterized by impermanence and insubstantiality. This is the kind of truth Hakuin might be giving voice to with these words. Now, ice resembles time in that it is frozen water, in much the same way time is a stylized abstraction that stands in sharp contrast to the incessant flux of things. However, the mind is said to be “*in the grip of the water,*” and water stands for sheer motion and change. Water is thus the perfect embodiment of change, in much the same way Herakleitos’ river was the perfect metaphor for his flux doctrine. If the mind is in the grip of the water, then it might be said to resemble the river itself in that it holds the so-called stream of consciousness – i.e., an inexorable current of thoughts and ideas flowing non-stop across one’s mind that the Zen practitioner must come to terms with during meditation.
- (3) “*What is / has no future, no present, no past, / no place and no nature.*”²¹⁶ These words affirm the non-existence of time, of space and of nature. We humans perceive phenomena flowing along the incessant current of the real within the ordering coordinates of time and space. But, if time and space are abolished, not much is left to sustain humans’ epistemological certainty. The very possibility of knowledge is at stake here. Hakuin seems to be saying that *what is* is atemporal and resides somewhere outside the province of time; it occupies no space and it has no definitive nature either. *What is* might be ineffable, and so no words will do to capture its ultimate essence. *What is* has a perfection and a purity of its own regardless of humans’ attempt to comprehend it. Only metaphor may prove a useful tool to aid humans in their intellectual confrontation with *what is*. Hakuin is practicing here the “great doubt” associated to the koan system he championed, so that the mind might start from scratch, precisely after questioning all those elemental things that are usually taken for granted as unmovable truth. The Rinzai master was convinced that, by their own efforts,

²¹⁶ The *Pieces of Map, Pieces of Music* textual incarnation of this poem has an extra verse line at this point: “The knowledge of this / has likewise no nature.”

humans could achieve enlightenment, though. This is then no nihilistic or pessimistic view on the possibility of gaining insight into reality.

- (4) “Cause and effect are the same: / there is not even one. / Still less is there neither.” This looks like a *reductio ad absurdum* or logical cancellation that leads to utter emptiness. The human mind explains reality in terms of causes and effects deriving from those causes. Now, if both cause and effect are one and the same thing, what are we left with? We are left with the unity of existence, with the unbreakable unity of reality, which is simply *one*, non-divisible into recognizable causes and effects, or discrete entities. Maybe all phenomena are phenomena of the mind, which is not altogether reliable either, for it is also in the grip of water, which is to say in the grip of unstoppable motion and change. Of course, this is only a tentative interpretation of these difficult and yet transparent words, which deal with a profundity of thought we are not accustomed to finding in the kind of poetry being produced nowadays. After all, Bringhurst’s poetry is philosophical poetry, or poetic philosophy – one where singing and thinking dance happily together.

As in many of his other short lyrics, Bringhurst manages to say so much so quietly that one reaches the end of “Hakuin Ekaku” with a true sense of catharsis or liberation. The effect of reading a poem like this is therapeutic in a way. One cannot but feel that we owe an immense gratitude to Bringhurst for having salvaged from the past such invaluable insights of a remarkable man like Hakuin for us readers. There was once a seventeenth-century Buddhist monk who believed in the power of the mind to set itself free of all constraints and start knowing everything anew from the very beginning. His belief in humans’ potential is still a moving source of inspiration for us.

XXIX · WÁNG BÌ

“Wáng Bì”²¹⁷ concerns the thinking of a precocious Chinese thinker who died at the age of 23, not without having completed a number of outstanding commentaries on the Daoist canonical text entitled *Daodejing*²¹⁸ (or *Laozi*), and the Confucian mantic classic the *Yijing* (*Classic of Changes*). His commentaries helped introduce metaphysics into Chinese thought, anticipating the work of the later neo-Confucians. It comes as a surprise that Bringhurst should have not included such an accomplished poem as “Wáng Bì” in the Oriental sages sequence as published in *The Calling* (1995) and in *Selected Poems* (2009). In any case, in the

²¹⁷ “Wáng Bì” was originally published as C.50 [Eleven poems], *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. Afterwards, it was reprinted in A.32 *Pieces of Map, Pieces of Music* (1986); it was also reprinted in B.44, *Literature in English: Writers and Styles from Anglo-Saxon Times to the Present*, edited by W.H. New & W.E. Messenger, Scarborough, Ontario: Prentice-Hall Canada, 1993: pp. 1401-3, 1529-30. Contributions: “The Raven Steals the Light” (rpt. from A.22); “Some Ciphers”; “Essay on Adam” (both rpt. from A.14); “Wáng Bì” (rpt. from A.32). Later, it was revised in A.65, *The Book of Silences* (2001). “Wáng Bì” is not included in the Oriental sages sequence as published in *The Calling* (1995) or *Selected Poems* (2009). In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: *tian di zhin xin = sky earth their mind/heart*.

²¹⁸ The *Daodejing* or *Laozi* is “one of the two foundation texts of Daoist philosophy in China, the other being the *Zhuangzi* (Sayings of Master Zhuang), which preserves the tradition of thought associated with Zhuang Zhou (369-286 BCE). [...] Whereas the *Laozi* is primarily addressed to the ruler who would be a sage-king and is mainly concerned with achieving the good society through harmony with nature, the *Zhuangzi* is contemptuous of rulership [...] and indifferent to social life in general and instead focuses almost exclusively on personal self-realization and the quest for happiness through the individual’s integration with nature.” See *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, translated by Richard John Lynn, New York: Columbia University Press, 1999, pp. 3-4. Thus, whereas the former concerns “how the sage rules the world in accordance with the spontaneous way of the natural”, the latter is “an explicit philosophical guide to personal understanding and self-cultivation.” *Ibid.*, pp. 3-4.

“Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringham gives us essential information regarding this sage: “Wáng Bì (226-249) Precocious author of a commentary on the works of Lao Tzu. He was a native of Shandong, employed at Luoyang, the capital of Wei, in what is now northern Henan.” And in the separately bound section entitled “Contents & Notes” at the end of the 2001 Ninja Press edition of *The Book of Silences*, Bringham gives us only brief spatio-temporal clues as to the identity of this important ancestor: “Wang Bi (Wang Pi) 226-249 Luoyang, northern China.” Bringham’s composition, “Wáng Bì”, captures the essence of his thinking, one that embraces that nothingness is the very basis of everything that exists in this world. *What is* and *what isn’t* have their innermost roots deep inside this *nothing* that is the mother and origin of everything. It is astonishing to see how fortunate humankind is to have had such a lucid mind that thought for us so many centuries ago. And it is a pity that he should have left the realm of the living at such an early age. Had he lived longer, he might have produced even greater works of sharp thinking and beauty.

Wáng Bì²¹⁹ (b. 226 CE, China – d. 249, China) was then one of the most brilliant and precocious²²⁰ Chinese philosophers of his day, so much so that his best known, brilliant commentaries on the *Daodejing* and the *Yijing* were strongly influential for centuries on end. He also wrote a commentary on the Confucian *Analects*, of which some fragments have survived till the present. And yet Wáng lived at a time of great political and social turmoil²²¹ in China, during the period of the collapse of the Han dynasty in 220 CE. He lived in dangerous times of political upheaval, but he was also at the very centre of major intellectual trends that had been developing for some time. At that moment in history, the elite’s interest shifted away from Confucianism towards Daoism, and Wáng saw it as his mission to create an understanding of Daoism that was consistent with Confucianism and yet did not fall into the errors of contemporary popular Daoist sectarian groups. This was consistent with his desire to restore order and a sense of direction to Chinese society after the turbulent final years of the Han dynasty. Wáng Bì belonged to a prestigious family that was actively involved in the government and politics of the late Han and early Wei period.²²² Thus, his father, Wang Hong, spent his life in the pursuit of an official career and ended up as a secretarial court gentleman whose job it was to draft edicts and other court documents. And his brother, Wang Hong, was appointed metropolitan commandant with the duty of supervising the entire officialdom of the capital. Wáng was unconventional and brilliant and did not concern himself with high office and reputation, though he became a court gentleman.

In his brilliant commentaries, Wáng Bì emphasizes the limited capacity of language to define complex concepts, for instance the very nature of the sage. The sage remains in the midst of human affairs and yet he accomplishes things by taking no unnatural action,

²¹⁹ See the entry on “Wang Bi” in the *Encyclopaedia Britannica*, vol. 29, p. 17621.

²²⁰ That Wáng Bì was a precocious child is clear from the information gathered in one of the primary sources for information on his life: a biographical notice by He Shao, a prolific essayist on the people and events of his times, preserved in Pei Songzhi’s commentary to the *Weizhi* (Chronicles of the Wei). Of Wáng He Shao says: “Wang Bi revealed his intelligence and wisdom even when still a child. By the time he was only about ten years of age, he had already developed a liking for the *Laozi*, which he understood thoroughly and could discuss with ease.” *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 11.

²²¹ “Wang Bi lived at a time of great social and political uncertainty and military strife, marked by rebellion, usurpation, civil war, invasion, and desperate economic conditions. It was the beginning of that time of disunity in China between the great Han (206 BCE-220 CE) and Tang (618-906) dynasties, [...] a disunity that lasted nearly four centuries.” See *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 5.

²²² *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 9.

for his conduct is an example of “effortless action”, that is to say, one in accord with the nature of things. The sage rises above all distinctions and contradictions, and he manages to put aside desires because they are corrupting and destructive.²²³ The unreliability or inefficacy of language²²⁴ is one of the philosophical notions central to his thinking, and it is consistent with the view of language propounded in the *Daodejing*. Words are inadequate for the expression of truth, and the *Dao* lies beyond language or verbalism. “Not only is language limited to naming specific things, it consists of names that at best only approximate the real nature of specific things and, as such, are inevitably false or counterfeit.”²²⁵ Therefore, words are to be distinguished from their underlying meaning, and so they must be somehow forgotten if the world of deep meaning is to be penetrated at all. Another central idea to Wáng’s thought is that of nothing²²⁶ or non-being as that out of which all the myriad things and phenomena arise. This nothing is the *Dao* itself: it has no form and no shadow, it is invisible, it is the supreme being or the mysterious centre of all things. Thus, Wáng’s theory of ontology (his study of *being*) rests on the concept of nothingness. While everything is governed by its own principle, there is one ultimate principle that underlies and unites all things – the *Dao*. Wáng interprets it as nothingness, but he does not see this nothingness as essentially in conflict with *being*. On the contrary, it is the ultimate source of all things; it is pure *being*. Thus, *being* comes from non-being, and non-being is the ultimate substance of *being*.

Although *The Book of Silences* consists of up to 32 different dramatic impersonations of Oriental sages, there is a single unity that runs through all of them. Although the ideas in it range across a vast perspective, together they are all of the same kind somehow and constitute a precious organic *Gestalt*. The mind is one of those recurrent themes throughout the entire sequence. Bringham’s “Wáng Bì” is no exception in this sense. It consists of three movements for the soul. The first part (stanza 1) looks like an epitaph composed in honour of the eminent Chinese philosopher, who died as a young man. It opens thus: “Wáng Bì of Wei / lies dead in his hut / at age 24.” What is so moving about this first stanza, marked by strong enjambment uniting short verse lines, is the simplicity of the language, as well as the notion that Wáng’s mind and body have returned to the natural world where they belong. Mountains figure prominently in Oriental philosophy, and, in fact, many

²²³ Though we will focus on Wáng’s ontology, it might be interesting to consider what this sage thinks of human emotions: “In his theory of emotions, Wang was concerned with the need for human beings to control their emotions. At one time he had a low opinion of Confucius because the famous sage was capable of expressing great joy and sorrow. Later, however, Wang decided that emotion belongs to human nature and that even a sage, as a person, can react only like a person. The difference between a sage and a normal person is that a sage will not be ensnared by emotion.” See entry on “Wang Bi” in the *Encyclopaedia Britannica*, vol. 29, p. 17621.

²²⁴ In his “Outline Introduction to the *Laozi*”, Wáng says: “Names do not arise without reason, and designations do not emerge without cause, so any name will always greatly fail to capture what it really is, and no designation will ever exhaust everything it really means.” *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 36.

²²⁵ *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 53.

²²⁶ ““Nothing” or “nothingness” [...] is a key concept in the thought of Wang Bi. By it, he seems to mean the perfect absence of conscious design, deliberate effort, prejudice, or predilection. The presence, on the other hand, of conscious design, deliberate effort, prejudice, or predilection is signified by *you*, which literally means “something” but also can mean “being,” in the abstract sense of the word, as well as the phenomenal existence of creatures, including humankind, everything in the plant world, physical phenomena in general, and events both natural and human. Wang identifies nothingness with the action or function (*yong*) of the *Dao* or the Natural (*ziran*). The *Dao* always “acts out of nothing... [...] Wang reads all the sections of the *Laozi* in terms of this basic truth: Nothingness is the principal attribute of all that is natural. To act out of nothing and thus in accord with the *Dao* inevitably results in success, safety, contentment, and happiness.” See *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, pp. 17-18.

Buddhist monks and poets were named after the mountains they had nearby, close at hand. For instance, the well-known poet Han Shan was named after Cold Mountain, where he lived as a hermit for a long time, composing poems on bamboo, stones, trees, cliffs and rocks of the mountains where he felt at home. Similarly, Wáng Bì's mind is "*now one with the mountain*" and his flesh becomes "*grass, / voles, owls, / owl pellets, grass.*" Nothing is left behind *en route*, everything is preserved in the grander scheme of things of which humans are just a tiny part alongside non-human creatures, no matter whether animate or inanimate.

But the pulsating heart of the poem, the sharp thinking of Wáng Bì, is stored in the second (longer) stanza, the second movement for the reader's soul. It dwells on Wáng's ontology; it deals with his view on *non-being* as the source of everything in this world. The starting point is a simple statement that goes straight to the point: "*The use of the is / is to point to the isn't.*" All creatures and phenomena of this world point to or denote the existence of *the isn't*, which is to say nothingness or non-being, the central concept in Wáng's interpretation of the *Daodejing*. From this fundamental statement follow three essential implications punctuated by the repetition of "*Go back, look again,*" which is repeated three times. The three implications are formulated in paradoxical language that defy our understanding but do make perfect sense upon careful scrutiny:

- (1) Upon closer inspection, it turns out that *non-being or nothingness is pervasive in reality*. Hence, the poetic voice in Bringhurst's piece directs the reader's attention to "*the mind / of the sky and the heart / of the mountain*" just to learn that "*The mind is unbeing.*" By 'mind' the dramatic persona beneath these lines means not just the human mind, but the larger mind underlying and uniting all things in this world. This is the *Dao*, which is invisible, unformed, untouchable, out of which all things arise into existence. From the very outset, the sky and the mountain are brought together as if to symbolize a primordial act of creation, a *sui generis* cosmogony, not altogether dissimilar to or reminiscent of that recounted by Hesiod in his *Theogony*, where Gea and Ouranos are the protagonists of a cosmic marriage. But here there are no immortals uniting to bring about all that exists; *unbeing*, the *Dao*, is the sole progenitor of the universe as it were. And yet the sky and the mountain are perceived as being sentient, capable of holding a mind and a heart deep inside themselves. Humans have no monopoly on mind or heart, after all.
- (2) *What is exists* (or being exists). The canonical text of the *Daodejing* opens with these enlightening words: "The Dao that can be described in language is not the constant Dao; the name that can be given it is not its constant name. Nameless, it is the origin of the myriad things; named, it is the mother of the myriad things. Therefore, always be without desire so as to see their subtlety. And always have desire so as to see their ends."²²⁷ In Bringhurst's hands, this becomes gnomic lines pregnant with ontological meaning: "What is, / is. It consists / of what isn't. *Are* / is the plural of *is*; *is* / is the plural of *isn't*." What is in undeniably real, and it stems from what isn't, or, to put it differently, being comes from non-being. *Is* comes from *isn't* and *are* is the plural of *is*, just because what exists comes from non-being and it becomes the myriad forms of creatures and phenomena of this world.
- (3) But *what isn't also exists* (or non-being exists too). Hence, "*What isn't, / is. This / is the fusion of substance / and function, the heart of the sky / and the mind of the mountain.*" That these lines should look impenetrable, hard to decode, is consistent with the view propounded in the

²²⁷ *The Classic of the Way and Virtue. A New Translation of the Tao-te ching of Laozi as Interpreted by Wang Bi*, p. 51. On these words, Wáng says: "Anything that exists originates in nothingness [wu], thus, before it has forms and when it is still nameless, it serves as the origin of the myriad things, and, once it has forms and is named, it grows them, rears them, ensures them their proper shapes, and matures them as their mother. In other words, the Dao, by being itself formless and nameless, originates and brings the myriad things to completion. They are originated and completed in this way yet do not know how it happens. This is the mystery beyond mystery." *Ibid.*, p. 51.

Daodejing that language is not altogether reliable or inefficient when it comes to expressing the truth of things, the ultimate essence of reality. The *Dao* is ineffable, hard to pin down. The poetic persona resorts to using gnomic language, as well metaphor, to try to convey the sense that non-being (identified with the *Dao*) is the ultimate life-principle underlying all things. That it constitutes a perfect unity is made clear by the references to the fusion of substance and function, as well as to the complementariness of “*the sky’s heart*” and “*the mountain’s mind*” (notice that the order has been reversed now with respect to the first implication above, where the poetic voice spoke of “*the mind of the sky*” and “*the heart of the mountain*”). Earth (the mountain stands for the whole earth in a sort of *pars pro toto* metonymy) and sky are united into one perfect whole, in much the same way being and non-being are not antagonistic at all and fuse together into the real.

Bringham’s poem closes with a stanza that was slightly changed in the final incarnation of this poem in the 2001 Ninja Press edition of *The Book of Silences*. In essence, the meaning at the heart of this stanza comes down to this: the path leading towards a virtuous life is to be found in the sage’s transcending all distinctions and contradictions, in acting in accord with the nature of things, in acknowledging non-being as the ultimate principle of reality, in letting things go their own way unimpeded, in naturalness and effortless action, in not being overcome by desire or violent emotions. From the realm of pure ontology, the poetic persona has now taken the path that lead to ethics:

To be, said Wang Bi,
without being; to think
without thinking; to open the hand,
and to stand on what isn’t.
We sink, said Wang Bi,
when we set out to stand on what is.²²⁸

XXX · JÍZÀNG

“Jízàng”²²⁹ is a short lyric poem on the metaphysics of another Chinese sage who lived in the sixth and seventh centuries CE. In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringham tells us that Jízàng (Chi-tsang, 549-623) was “A metaphysician in the tradition of Nagarjuna and Kumarajiva, born in Nanjing. His mother was Chinese, his father Parthian, from what is now northern Afghanistan.” And in the 2001 textual incarnation of the Oriental sages sequence, the poet provides us with just elemental pieces of information in a brief entry: “Jizang (Chi-tsang) 549-623? Nanjing, eastern China.” Thus, Jízàng²³⁰ was an eminent Chinese Buddhist monk and scholar, often regarded as the founder of the so-called San-lu (Three Treatises or Middle Doctrine) school of Māhāyāna Buddhism in China. Born in Nanjing, in eastern China, Jízàng was truly precocious in spiritual matters. At the age of seven he became a monk and he studied the Madhyamaka treatises under the guidance of Falang at the

²²⁸ In its original textual incarnation in C.50 and in A.32 (*Pieces of Map, Pieces of Music*), this stanza reads as follows: “To be, said Wáng Bi, / without being: this / is the way to have virtue. / Don’t fondle it, stand / on what isn’t. We sink, said Wáng Bi, / when we set out to stand on what is.”

²²⁹ “Jízàng” was originally published as C.50 [Eleven poems], *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. Afterwards, it was reprinted in A.32 *Pieces of Map, Pieces of Music* (1986) and A.65 *The Book of Silences* (2001). “Jízàng” is not included in the Oriental sages sequence as published in *The Calling* (1995) or *Selected Poems* (2009). In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: èr dì = double truth.

²³⁰ See the entry on ‘Jizang’ (or Chi-tsang) in the *Encyclopaedia Britannica*, 15th edition, 2003, vol. 3 of the Microapedia, pp. 188-189.

Zinghuang Temple in Nanjing. Upon Falang's death in 581, Jízàng became the head monk of the temple. Since the age of 42, he travelled through China giving lectures, till he settled at Jiazang Temple, in Shaoxing, in the province of Zhejiang. Later in his life he was appointed head abbot of four temples by the emperor Gaozu, of the Tang Dynasty. Jízàng was a prolific author and wrote about fifty books in his lifetime, specializing in commentaries on the treatises he had studied early in his life and on texts from other Buddhist traditions. The San-lu school's basic doctrine is that, while the things of the material world may possess a temporary reality or existence, on the level of absolute truth there is no production or extinction, no permanence or annihilation, no unity or diversity, no coming or departure. Although the school did not survive past the 9th century CE, many Buddhists continue to study Jízàng's teachings, which strongly influenced the Neo-Confucian philosophy of the Sung dynasty.

Jízàng was convinced that all forms of attachments to anything brought about suffering. The attachment to a viewpoint from a purely logical perspective was no exception to this rule. Jízàng developed his "four levels of the two kinds of discourse": (i) The assumption of existence is conventional, and the idea of nonexistence is authentic. (ii) The commitment to a distinction being drawn between existence and nonexistence is conventional, and the denial of this duality is authentic. (iii) The distinction between committing to a distinction between existence and nonexistence is conventional, and the denial of the difference between duality and non-duality is authentic. (iv) All of these distinctions are conventional, and the authentic discourse regards that any point of view cannot be said to be ultimately true, and is useful only so far as it is corrective in the above sense. Now, this poses a form of radical epistemological indeterminacy or uncertainty. Language turns out to be not a reliable tool in the hands of logic and truth values when statements are made about the states of affairs in the world. Bringham's short poem, consisting of only 11 short verse lines, conveys this sense of radical uncertainty or nihilism:

I can affirm
that there is nothing to affirm
and there is nothing to deny.
What neither is nor isn't is
what is. It is
unthinkable, unspoken. So
we speak of it as ultimate
and ordinary, absolute,
routine. And this
two-sidedness
is its function.

Three little movements are discernible in the pattern of this short lyric of a gnomic nature. They flow into one another with the same naturalness with which a syllogism deduces a conclusion from two premises. First of all, the poetic persona of Jízàng affirms that there is no possibility of affirming or denying anything at all, for everything seems to be susceptible of being affirmed and denied, depending on the standpoint adopted. This might sound like a paradoxical statement devoid of logical meaning, but, upon close inspection, we realize that reality is complex and that language is not altogether reliable when we come to terms with that moment in time in which we are to communicate our insights into the ultimate nature of the real. Secondly, Jízàng's voice claims that *what is* is and isn't (what neither is nor isn't) simultaneously, and so it is unthinkable, unspoken, ineffable, beyond communication, beyond the power of common words to capture the essence of things. Any words will do then: this elusive *what is* can be *ultimate* and *absolute*, but also *ordinary* and

routine. These adjectives do not exhaust or capture with precision the essence of *what is*. And finally, this dual mode of thinking (which installs us in the realm of what looks like irreconcilable dichotomies) prevents us from truly understanding that *what is* has a sort of *two-sidedness* as its own function.

XXXI · NANYANG HUIZHONG

“Nanyang Huizhong”²³¹ is a unique poem in Robert Bringhurst’s sequence on Zen monks. It has got the compelling perfection and beauty of a snowflake. A part of this beauty stems from the very sublime confidence with which the sage’s voice communicates the certitude of something vastly greater than the world offers in its manysided multiplicity. *What is* is conceived in this poem as the irreducible ground of existence, the essence of everything, the ultimate reality beyond the purely visible. From this pure being or undifferentiated unity emerge created things, acquiring their names and distinct forms. From a brief entry included in the separately bound section of “Contents & Notes” at the end of *The Book of Silences* (2001), we learn only the essentials regarding this sage: “Nanyang Huizhong (Nanyang Hui-chung) 690-775? Baiya (White Cliff) Mountain, Hunan, central China.”

Like other Buddhist sages, this nine-century man was concerned to find out the ultimate nature of reality. In this sense, as pointed out above, Bringhurst’s poem is an accomplished meditation on *being* as the ultimate substratum of everything in this world. Once again, the language is kept simple and the poet resorts to the use of paradoxical and gnomic expression so as to give voice to the unspeakable. The four-stanza poem consists of two parts: whereas the first part focuses on a catalogue of the “perfected expressions” of *what is*, the second part constitutes an ambitious attempt on the part of Nanyang’s poetic persona to define *what is* directly. Hence, the piece opens with four simple verse lines that sing of the ubiquity of *being* anywhere one might turn to look, not just in simple natural (world-made) elements, but also in man-made things, imperfect though they may be:

Snowflakes, stones and clouds expound it.
Broken windows, spattered mortar, corpses,
squeaking hinges, slug tracks, stagnant pools
are among its perfected expressions.

The first stanza of the poem reveals an intimate, almost mystical bond between the perceiver and the perceived environment. It is as though a simultaneous sense of awe and kinship with the spirit that dwells in all things were being conveyed in a most subtle way. Thus, the sage’s voice worships natural forces and the elemental powers of life, and so we find no random choice of natural elements: *snowflakes* and *clouds* stand for the sky, *stones* stand for earth, and *pools* stand for water. Of the four classical elements only fire is missing here. To these must be added *slug tracks*, which evokes the realm of all animals, and *corpses*, standing for organic matter gone back to the bosom of Mother Earth out of which all living things come. All of them “expound it”, *it* being *what is*. What follows these world-made things is a catalogue of man-made things that have something wrong about them and yet are said to be “perfected expressions” of *what is* as well. What many of them (*broken windows, spattered mortar, squeaking hinges*) have in common is that they are constituent elements of humans’ homes within their larger home which is Earth.

²³¹ “Nanyang Huizhong” was originally published as part of the Oriental sages sequence in A.65 *The Book of Silences* (2001). It was not reprinted as part of the sequence as published in A.92 *Selected Poems* (2009).

Human beings have always wanted to penetrate the ultimate essence of reality. Their fervent desire to know has pushed men and women of all ages to ask fundamental questions throughout the history of humankind. The second part of “Nanyang Huizhong” relies on the use of paradoxical statements to try to clarify the nature of *what is*. At this point, the sage aims at penetrating the heart of *being* straightaway. As in the first part, *being* is approached with loving reverence and awe. The starting point consists of two elemental statements that are simple and straightforward: “*What is is all false. / What is is all true.*” In terms of falsehood and truth, it turns out that *being* is both false and true, however paradoxical this may seem to be. *What is* is not easily reducible to one or the other. From these two statements follow a string of sentences in the present continuous that explore the nature of *what is*:

- (1) *What is* has the capacity to speak. Humans have no monopoly on speech and everything in the universe wants to *mean*. Hence, “*What is is admitting it is, / and what is is recanting.*” In Bringhurst’s poetry speech always takes precedence over writing, the spoken is prior to the written, silence precedes meaning as it were.
- (2) *What is* has also the capacity to write and to provide humans with reading matter. Hence, “*What is is now writing / the word you are reading.*” At this point, the poem turns self-reflexive, inasmuch as *being* is producing Bringhurst’s poem for us readers to read. Everywhere *being* is singing and dancing, and it finds a way to express itself through words to humans.
- (3) *What is* provides us humans with the necessary sustenance to keep us alive. It is thus “*donating and eating the food you are eating, / and keeping your fast*”, but it is also *being* that gives us breath and thought and is beneath our action or non-action:

It is giving and taking the breath
 you are taking, thinking the thought
 you are thinking, not doing what you
 are not doing. Eat it, breathe it, think it too.

The poem closes with a three-fold order for us to eat, breathe and think *what is* – i.e., to assimilate or absorb everything out there into the living fabric within ourselves. Outer is inner, and the other way around too.

XXXII · ZHAOZHOU CONGSHEN

“Zhàozhou Congshen”²³², later re-titled “Children of the Old Horse”, is closely connected to “Demons and Men”, another poem in “The Physics of Light” section in *Selected Poems* (2009), in its concern with Herakleitos’ flux-doctrine. What is striking about this short poem, written in spontaneous conversational English, is that Bringhurst manages to bring together into a brief composition of six three-line stanzas the thinking of two eminent philosophers: Herakleitos, the pre-Socratic philosopher who lived in Asia Minor in the sixth century BCE, and Zhàozhōu Cōngshěn (778 -897),²³³ a Zen Buddhist master who

²³² “Zhàozhou Congshen” was originally published in C.73 [Two Poems], *Canadian Literature* 154 (Autumn 1997): 8, 110. Contents: • “Zhàozhou Congshen” (rev. in A.65, A.85); • “The Living Must Never Outnumber the Dead”. It was then revised in A.65 *The Book of Silences* (2001), and reprinted from A.65 as A.85 *Zhàozhōu Cōngshēn*. Sherman Oaks, California: Ninja Press, 2007 (a broadside, 43 × 28 cm, 75 copies on Nideggen paper). Recently it has been reprinted from C.73 as “Children of the Old Horse” under the section heading “The Physics of Light” in *Selected Poems* (2009).

²³³ In *The Book of Silences*, Los Angeles: Ninja Press, 2001, Bringhurst gives us only essential information concerning this sage’s life: “Zhàozhōu Cōngshēn (Chao-chou Ts’ung-shen) 778-897? Traveled most of his

lived in Tang Dynasty China and was particularly known for his paradoxical statements and strange deeds. Paradox and obscurity seem to be two aspects both sages, Western and Eastern, had in common. At an early age, Zhàozhou became ordained as a monk and then, at the age of 18, he met Nánquán Pǔyuàn (Nan-ch'uan P'u-yuan, 738-834), “a Zen monk trained, like Bǎzhàng²³⁴, under ‘The Old Horse,’ MǎDào'yì, in Jiangxi. His own hermitage was farther north, in the oak forests of Anhui”, as Bringhurst himself tells us in the glossary at the end of *Pieces of Map, Pieces of Music* (1986). Zhàozhou²³⁵ received the Dharma from Nánquán Pǔyuàn through a dialogue in which the master asked the young monk the koan “What is the Way?”. Zhàozhou attained enlightenment at the height of that intense conversation and continued to practice under the master’s guidance till he died. Afterwards, he wandered from one place to another, travelling throughout China, visiting the prominent Zen masters of the time before finally, at the age of eighty, he settled in Guānyīnyuàn, a ruined temple in northern China, where he taught a small group of monks for another 40 years till the very moment of his death. He became one of the great masters of Tang Dynasty China during a decadence time when the imperial hegemony was disintegrating due to the emergence of more and more regional military governors asserting their power. Many koans in the Buddhist classics *Blue Cliff Record* and *The Gateless Gate* concern Zhàozhou.

The later title of Bringhurst’s poem, “Children of the Old Horse”, makes sense as soon as we learn that ‘The Old Horse’, Mǎzǔ Dào'yì, was a Zen master, under whose guidance many prestigious Zen monks were trained, Nánquán Pǔyuàn among them. Both Herakleitos and Zhàozhou are considered to be children of the Old Horse, heirs to the same ancestral legacy and form of wisdom. And both sages are put in the improbable anachronistic situation of a modern classroom. Herakleitos is a visiting professor in some kind of university, giving a lecture to avid learners, and Zhàozhou is one of the students in the room. The Greek philosopher is expounding his flux doctrine, i.e. the notion that all sensible things in this world are in a state of permanent flux: “*Can’t step twice / into the same river, Visiting / Professor Herakleitos said.*” These simple words embody the Heraclitean view of the world as all flow and movement. One of Herakleitos’ most famous sayings is: ‘One cannot step twice into the same river, for the water into which you first stepped has flowed on.’ (fr. 21, Davenport’s translation). He also said: ‘Everything flows; nothing remains. [Everything moves; nothing is still. Everything passes away; nothing lasts.]’ (fr. 20, Davenport), and ‘The river we stepped into is not the river in which we stand.’ (fr. 110, Davenport). W.K.C. Guthrie tells us that “the statement of the flux-doctrine which has

life, setting in Hebei, northeastern China.” See the separately bound section entitled “Contents & Notes” at the end (unpaged).

²³⁴ In the glossary at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst tells us who this sage was: “BǎIZHÀNG HUAIHAI (Pai-chang Huai-hai, 720-814) Reputedly the author of the first set of Zen monastic rules, including the famous formulation ‘One day no work, one day no eat.’ Born in Fujian, he succeeded Mǎzǔ Dào'yì (Ma-tsu Tao-i) as Abbot at Nanking in Jiangxi, then moved to Xinwu, also in Jiangxi, under Baizhang Mountain.”

²³⁵ See Andrew E. Ferguson, *Zen’s Chinese Heritage: The Masters and their Teachings*, p. 136: “Zhaozhou Congshen (778-897) was a disciple of Nanquan. He came from ancient Caozhou (near the modern city of Heze in Shandong Province). Zhaozhou’s first great awakening was at the age of eighteen. After receiving ordination on Mt. Song as a young man, he found guidance for several decades under Nanquan, until that teacher’s death. At that time, while already in his fifties, Zhaozhou set out travelling to further cultivate his practice. During this period he met several illustrious teachers such as Huangbo, Jiashan, Yanguan, and others. Eventually, Zhaozhou was invited to settle and teach at the Kwan Yin Monastery located in Zhaozhou (now the Bailin Monastery in Zhaoxian City, Hebei Province). Zhaozhou’s fame spread throughout China. Although he had thirteen Dharma heirs, his lineage soon died out. Among the many stories and kōans concerning Zhaozhou, it is “Zhaozhou’s Wu!” that is the most famous. This story is the first great kōan gate through which countless Zen students have passed. A monk asked Zhaozhou, “Does a dog have Buddha nature?” Zhaozhou answered “Wu! [in Japanese, *Mu!*]”

become almost canonical in later ages, πάντα ῥεῖ, occurs in the ancient authorities only in Simplicius (*Phys.* 1313-11), and is unlikely to have been a saying of Heraclitus.”²³⁶ In *The Presocratic Philosophers*, Kirk, Raven and Schofield claim that “the river-image illustrates the kind of unity that depends on the preservation of measure and balance in change,” and that the river-statement is found in at least two relevant fragments:

214 Fr. 12, Arius Didymus *ap.* Eusebium *P.E.* XV, 20, + fr. 91, Plutarch *de E* 18, 392B. [...] Upon those that step into the same rivers different and different waters flow... They scatter and... gather... come together and flow away... approach and depart. [...] According to the Platonic interpretation, accepted and expanded by Aristotle, Theophrastus and the doxographers, this river-image was cited by Heraclitus to emphasize the absolute continuity of change in every single thing: everything is in perpetual flux like a river. So **215** Plato *Cratylus* 402A... [...] *Heraclitus somewhere says that all things are in process and nothing stays still, and likening existing things to the stream of a river he says that you would not step twice into the same river.*²³⁷

So the river is the embodiment of the perpetual change inherent in reality. Everything is pure metamorphosis, nothing stays the same, and ‘Change alone is unchanging’ (fr. 23, Davenport). Once Herakleitos has propounded his flux-doctrine with such concision, Zhàozhou gives voice to what looks like common sense and says something to this effect:

Zhàozhou rose. Sir, he said, far
over your head there,
treading flowing water,

or standing in the middle
of your one-inch square
of dry rock,

five thousand miles from the closest
shore, where else
do you expect to step?²³⁸

If Herakleitos happens to be somewhere in the heart of continental China, with his feet pressing firmly on the ground, it is certain that the sea is far away from the exact location where he stands now. And if he is actually “*treading flowing water*,” then there is no way of stepping twice into the same river, because the river and the man are different from one moment to another. What is the point in reminding a classroom full of avid students like Zhàozhou that you can’t step twice into the same river? They already know. They have known it all the time. The Zen monk’s words are enigmatic, though, and still more enigmatic are the closing words of the poems: “*Quite, said Herakleitos, / and how often / can you step there?*” Zhàozhou leaves the classroom and marches away while singing “*left, right, left,*” which is a most curious reaction to the question asked by the visiting professor. His answer does not assume the expected form of words, but of an action instead. But, how are we to interpret this action? Possibly it is meant as a reminder that we humans flow in much the same way this incessantly changing river of reality flows. Actually, we are somewhere in

²³⁶ W.K.C. Guthrie, *ibid.*, p. 450, footnote 1. Footnote 3 informs us that Aristotle, in *Metaphysics* 987a32, explains how Cratylus “carried the views of Heraclitus to their logical extreme by correcting the sentence ‘You can’t step into the same river twice’ to ‘You can’t step into it once’. Between the instant when your foot touched the surface and the instant when it reached the bottom the river at that point had already changed.”

²³⁷ G.S. Kirk, J.E. Raven and M. Schofield, *The Presocratic Philosophers*, Cambridge: Cambridge University Press, 2nd edition, 1983, pp. 194-195.

²³⁸ This stanza reads differently in its A.65 textual incarnation: “five thousand miles / from the nearest shore, where / else will you step?”

the middle of the river of changing life, bathed by the flowing waters in all directions. Therefore, we can step into the river any moment we choose to do so, or cannot avoid doing it, because motion is the very essence of the real.

XXXIII · HÓNG ZÌCHÉNG

“Hóng Zichéng”²³⁹ is a complex twelve-stanza poem that captures the thinking of another important Oriental sage. To grasp what this sage is saying, all one needs are eyes that will see and ears that will hear. Here Bringhurst “moves with authority beyond the margins of the anthropocentric and reaches for the real, which is, he posits, “for the most part non-human”.”²⁴⁰ In the “Cast of Buddhas, Ghosts and Other Creatures” at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst gives us essential information regarding this sage: “Hóng Zichéng (Hung Tzu-ch’eng, c. 1550-1620) Also called Hóng Yingmíng (Hung Ying-ming), author of the *Caigen Tán* or *Conversations with Vegetable Roots*.” This poem was never again included in the sequence of *The Book of Silences* as a work in progress for a long time. Why Bringhurst decided to leave this poem out remains a mystery. An historically enigmatic figure, this Chinese philosopher lived during the end of the Ming Dynasty. Not much is known about him. What we do know for certain is that about four hundred years ago, Hóng Zichéng²⁴¹ took some time to write down his thoughts and sharpened perceptions for the sake of posterity. The resulting book was his major work, the *Caigen Tán* (*Vegetable Roots Discourses*), a compilation of philosophical aphorisms combining elements from Confucianism, Taoism and Chan Buddhism. The title makes reference to a comparison of the cultivation of human morality with that of plants, for ethics is one of the main concerns of this work indeed. A reading of the *Caigen Tán* discloses three important aspects about this sage. First, he drew for inspiration from Confucianism, Taoism and Zen Buddhism. Secondly, he must have been a well-educated or learned man on the ground of the references to passages of Chinese literature spanning a period of over two millennia. And thirdly, he was likely a consummate literati, absolutely convinced of the mystical value of literature.²⁴² He also wrote *Hsien-fo ch’i-tsung* (*Marvelous Deeds of the Immortals and Buddhas*), completed around 1602. It contains the legends of the deeds and sayings of Taoist

²³⁹ “Hóng Zichéng” was originally published in A.32 *Pieces of Map, Pieces of Music* (1986) and then it was reprinted in (i) C.55 “Hóng Zichéng”, *Rambling Jack* (Auckland, New Zealand) 3 (November 1986): 14-16. Rpt. from A.32; and (ii) C.57 [Four poems]. *Rubicon* (Montreal) 8 (Spring 1987): 103-107. Contents: “Hóng Zichéng”, “Bodhidharma”, “Sengzhào”, “from *The Lyell Island Variations*: V. The Starlight is Getting Steadily Dimmer,” all rpt. from A.32, but with two stanzas missing from the first poem. It was never reprinted in A.47 *The Calling* (1995), A.65 *The Book of Silences* (2001) or A.92 *Selected Poems* (2009). In *Pieces of Map, Pieces of Music*, the calligraphy accompanying this piece reads: zīn dì gān jìng fāng kǎ / dú shū xué gǔ = *mind/heart place dry clear before can study book, understand ancients*.

²⁴⁰ See Ron Clark’s review of *Pieces of Map, Pieces of Music*, in *Wascana Review* (Regina) 22.1 (Spring 1987), p. 93.

²⁴¹ See *The Roots of Wisdom. Saikontan*, translated by William Scott Wilson, Tokyo, New York & San Francisco: Kodansha International, 1985. Much of this bio-bibliographical information is lifted from the Preface and Introduction to this translation of Hóng Zichéng’s masterwork.

²⁴² William Scott Wilson reminds us that “concern with literature and what it means is nearly as old as Chinese civilization itself” and that “According to these men, the Tao that is behind all natural principles and phenomena manifests itself by patterns... [...] Thus, the waves and ripples of all bodies of water, the blooming and falling of flowers, the sounds of the wind, or the flight of birds each is a manifestation of the Eternal Principle for our contemplation. Man, too, has his patterns, which are filtered through his mind and are best expressed in literature [...] If he will sit quietly and meditatively, they will naturally become manifest. [...] Such ideas, although never explained directly by Hung, run implicitly throughout his work in both content and style. We can see in him the literary man of the Tao: a happy contemplative with his books and brushes and musical instruments, never far from nature nor opposed to its pleasures.” *The Roots of Wisdom. Saikontan*, pp. 15-16.

immortals, Indian Buddhist patriarchs, and the Chinese patriarchs of Ch'an Buddhism, as well as comments on immortality and the mysteries of eternity.

The *Caigen Tán* was written toward the end of one of the most intellectually and spiritually stimulating periods in Chinese history, at a time where social stability brought about a remarkable growth in economics, amazing advancements in education, printing and the availability of books. It was also a time of syncretic thought characterized by a vivid cross-fertilization of views and, as a result, the widespread tendency was towards the unity of the three religions, though the predominant social thought was still the philosophy of Confucianism. The fundamental concept at the heart of all three religions (Confucianism, Taoism and Chan Buddhism) was “the natural equality of all men and all things in nature and their interaction and relationship with each other”.²⁴³ Whereas the Confucians emphasized the social and moral metaphor, the Buddhists chose to focus on the cultivation and meditation of one's original nature, and the Taoists dwelled on the great flow of life. All three, however, seemed to share the fundamental notion of “man's oneness with nature, and the resulting mysticism permeated the thought of each.”²⁴⁴ Sagehood was no longer an unattainable ideal belonging to just a few great men of the past: it was possible to learn to live to the fullest of human capacity and in harmony with the world. Therefore, in his book *Hóng Zichéng* urged humans to embrace simplicity, patience and lack of greed. Not only did he have a profound understanding of the world, but also he was endowed with an amazing capacity to express his insights into reality in a well-wrought poetic prose that still talks to us nowadays. Thus, his keen observations of the natural world and of human affairs are conveyed in a remarkable style that betrays a perfect command of the potential inherent in his language. In 357 verses, he managed to gather themes from all three philosophical traditions as well as from historians and poets of the history of China. The work is divided into two parts: whereas the former dwells on the art of living in society, the latter deals with man's solitude and his contemplation of nature. This lucid sage celebrates simplicity and urges readers to embrace artlessness, controlled moderation, self-tempering. The art of the simple in daily life is thus central to this work. His friend Yü K'ung-chien, The Master of Three Cliffs, wrote the Prefatory Verse to the *Caigen Tán*. It sheds light on the attitude and certain biographical details of this sage's life:

At one point my friend, Hung Ying-ming,
Brought his book, *Vegetable Root Discourses*, to show me,
And even asked me to write a preface.
At first I only looked at it in a desultory way;
Finally I straightened up the old books on my desk,
Swept away the worldly thoughts from my breast,
Took it in hand, and understood:
When he discusses Original Character,
I enter directly into its essence,
When he speaks of human nature,
I exhaust its inner workings in every way.
By his actions between Heaven and Earth,
I see the gentle waves within his breast.
Achievement and fame he regards as dust and waste,
And I know the loftiness of his insights.
The accomplishment of his brush
Is never far from green trees and blue mountains;
And the craft of his words

²⁴³ *The Roots of Wisdom. Saikontan*, p. 13.

²⁴⁴ *The Roots of Wisdom. Saikontan*, p. 13.

In the same Prefatory Verse, he imagines the sage going through considerable hardships: “He has tumbled and fallen in the wind and waves, harassed / and harried along steep cliffs.” And though he is not yet able to say “to what extent this man is enlightened”, he celebrates the *Caigen Tán* with these simple words: “One should know that true taste is within the vegetable root.” Which is to say that it is necessary to contemplate things over a period of time so as to be able to gain a true understanding of them, and that the image of the vegetable root is one of simplicity: “if we are truly to live, it is the simple things in life that will give us life’s true savor.”²⁴⁶ Thus, this superior man who lived so long ago peers deeply into transcendent reality and this work, the *Caigen Tán*, is what he comes up with as an imperishable gift to humankind in its entirety.

Bringhurst’s poem tessellates resonant and luminescent words into a complex tapestry of mastery design. Five movements for the soul are discerned in this pattern made of musical words. In the first part of the poem (stanzas 1 and 2), Hóng Zichéng’s voice urges us to simplicity and patience, but it also suggests that humans should sharpen their perceptions by simply paying attention to what is going on around them in the natural world. Artlessness or utter simplicity is what Nature teaches us, and it manages to accomplish this through simple means: “Stone under plum and bamboo, / their conjunction. Like them / to be artless, not thoughtless, / all the way through.” The picture of a stone lying quietly under a plum or bamboo conveys the sense of serenity and peace of mind one should ideally find in the natural world, the true home to the spiritual or truth-seeker. That a stone teaches us how to be artless and yet alert to the real comes as no surprise in the context of Bringhurst’s poetics, for whom the whole world is alive and pervaded by the halo of what could be called *universal being*. Now, it is a common place among these Oriental sages to insist that true wisdom is to be found not in books but elsewhere; the path to invaluable insights into the ultimate nature of reality lies in the direct confrontation between self and Nature, with no intermediaries in between. Hence, Hóng Zichéng’s dramatic persona in this poem says: “I have read / many books, and now / cannot write one.” Reading other sages’ words and illuminating intuitions into the world might prove an effective way of getting to penetrate reality, but it is not an infallible panacea after all. All the time spent reading others’ thoughts might well be useless, almost a waste of time, when one sets about writing down what one has learnt about the mystery inherent in life. In the face of words’ inability to capture *what is*, the only option left is *longheartedness*, this Oriental sage says. The key to the question is to have a big heart the size of the world. This might also be called generosity or, simply, virtue. *What is* is simply immeasurable though, owing to its varied richness or diversity, to its ineffable beauty and grandeur:

Longheartedness, that
is the answer. The wind
is a short flute, but the heart
is long. Longheartedness, yes,
but what is has no size. As its measure,
which flute shall we use?

The second part of Bringhurst’s poem (stanzas 3 and 4) affirms the need for an intimate communion between humans and Nature once again. Hence, “*When the face of a man is as thin / as a pine, his joy and his grief do not leak / through his eyebrows.*” As soon as

²⁴⁵ *The Roots of Wisdom. Saikontan*, p. 20.

²⁴⁶ *The Roots of Wisdom. Saikontan*, p. 9.

humans manage to become one with the world, there is reason to believe that they are on the path towards true wisdom, virtue and serenity. Joy and grief are emotions that the sage knows how to keep under control without letting them disturb his peace of mind. If a man can be sincere in his heart, harmonious in spirit, joyful in countenance and pleasant in his words, he will have accomplished much. Furthermore, Nature knows nothing of good or evil, of wrong or right either, as can be seen from “*Where is the right, / where is the wrong in the slow / wooden fountain we know as bamboo*” (notice the impressive metaphor here): in its simplicity or artlessness, bamboo teaches humans to stand on their feet pressing firmly on the ground and to elevate themselves upwards into the realm of pure air. In the face of bamboo, man perceives the original nature of his mind and the true form of human life, the true self of the universe. And the lines that follow are a meditation on what the species that populate this world. At this point, the sage’s voice essays several definitions of what a species is: “*Is a species / a law enforced by the court, or is it an idea?*”. It could be something else instead, and so the poetic voice explores other alternative definitions:

Or is it unbeing folded through being, a sudden
reflection, an image, a vision
through which other images, other visions
are tumbling and spilling? A vision
to which other visions are constantly
fed, and on which they are feeding?

The third part of Bringhurst’s composition (stanzas 5 and 6) celebrates the myriad forms of life (or species) that populate the world, while the emphasis is laid on birds: craneflies, finches and thrushes find room for themselves in these verse lines. Whereas birds simply “*cherish their natures*” and know how to live just the way they are, humans seek desperately to penetrate the world by means of a dichotomizing mind that divides the continuum of existence into pairs of contraries or opposites that are nothing but an oversimplification of the real: “*A waste of the mind to parcel what is / into ugly and beautiful. Useless / to fall for the habit of happy and sad.*” It is possible for humans to try to cling to time and hold it in their hands “*like two frightened thrushes*” or to hold nothing at all. Sooner or later, Hóng Zìchéng reminds us, “*each must release what he has*” and let it go. Similarly, in the fourth part (stanzas 7 and 8) of “Hóng Zìchéng”, Nature is depicted as being the true home of the self, the inspiration for virtuous action: “*Water and rock / are the roots of right action.*” (notice the alliteration of /r/ in these two memorable verse lines). The sage’s voice urges the truth-seeker to “*Bathe in the spaces*” instead of “*merely sweeping the stream*”²⁴⁷, to absorb *what is* into the living fabric of his being, and to let the world absorb his self too. Afterwards, Hóng Zìchéng’s poetic persona dwells on the relationship holding between mind and body, and between mind and reality. It wonders “*How much of the mind is confined to the body*” and also “*how much of the mind / [rests] in what the mind touches.*” What the mind touches after all is the world in its entirety, represented here by what looks like the random enumeration of “*the stars and clouds, / the color and shape of the woodpecker’s / crest, and the web of his motion?*” Stars and clouds are found in the sky, and the woodpecker is still a creature that lives and thrives in the air. The motion of his flight tells us that this bird is alive and is a tiny part of universal *being*, which sings through its manifold manifestations.

²⁴⁷ These words are reminiscent of a short poem by Hóng Zìchéng himself included in the *Caigen Tán*: “The chanting of the birds, the voices of the insects – / All are secrets in the communication of the mind. / The brilliance of the flowers, the color of the grasses – / These are nothing other than literary patterns of the manifest Way. / The man who studies such things must purify his natural capabilities, / Give his heart the timber of the sound of jewels, / And come to understand this truth in everything he touches.” See *The Roots of Wisdom. Saikontan*, p. 101.

The fifth movement of the poem (stanzas 9 to 12) is the most complex of all five parts “Hóng Zìchéng” consists of. A verse from the *Caigen Tán* might well have been the source of inspiration for Bringhurst’s words:

Men understand how to read books that have words,
But do not understand how to read those that lack them.
They know how to pluck the lute that has strings,
But do not know how to pluck the one that has none.
Caught by the form
But untouched by the spirit:
How will they get at the substance of either music or literature?²⁴⁸

In Bringhurst’s hands, these words become a simple six-line stanza of great beauty and perfection. The poetic voice meditates on literature and on music, as embodied by a book made of words and by a lute consisting of strings. Reading a book written in recognizably human words is no difficult task at all, in much the same way bringing music out of a tuned lute is not difficult either. What is truly difficult is reading a book without words or playing a lute without strings. But what is the intended meaning of these words after all? Getting at the substance of literature or music entails going beyond the words or the literal strings, beyond the purely material part a literary work of art or a musical instrument consists of. On a different plane, the book without words could be reality itself, a vast book of gigantic dimensions which is right in front of our eyes to read, and music might be what *being* sings uninterruptedly from the beginning of time. As is common practice with Bringhurst’s, such profundity of thought is conveyed through elegantly simple words that cling to one’s mind owing to their appealing musicality:

So you can read
a book full of words.
Can you read one without words?
You can bring music
out of that lute after tuning
the strings. Can you play one without strings?

The two stanzas that follow (stanzas 10 and 11) dwell on music and painting as man-made objects of inspiration for humankind’s enlightenment, on the one hand, and on mountains and clouds as nature-made things that remind human beings that they belong among a grander scheme of things. In both cases, humans might approach these art forms or natural elements in two different ways: either they penetrate the ultimate essence of reality to draw spiritual nourishment for their soul from music and painting or mountains and clouds as being a genuine inspiration for their own enlightenment, or they simply take with them all they can draw from them without truly getting at their substance, remaining on the surface of things as it were. Hence, the poetic voice claims that it is possible for humans to listen to music or look at a painting to nurture their mind with them, or simply to get “*their physical energy*.” Similarly, one might go to the mountains and study the clouds “*to draw wisdom / and strength from them*” or simply to see them as being “*loud noises / in visible terms*.” Humans do not learn much of value if they choose to remain on the surface, if they do not go beyond mere appearance to penetrate the essence of things, no matter whether they are man-made or nature-made objects. In the midst of mountains one can see the true form of human life, and by observing the fleeting or evanescent clouds in the sky, one might learn an elementary lesson of humility and gratitude. For as Hóng Zìchéng himself puts it in another verse in the *Caigen Tán*,

²⁴⁸ *The Roots of Wisdom. Saikontan*, p. 101.

The chatting of the birds, the voices of the insects –
All are secrets in the communication of the mind.
The brilliance of the flowers, the color of the grasses –
These are nothing other than literary patterns of the manifest Way.
The man who studies such things must purify his natural capabilities,
Give his heart the timber of the sound of jewels,
And come to understand this truth in everything he touches.²⁴⁹

The closing stanza of the poem is a twofold injunction for the truth-seeker to attain a true sense of communion with Nature, to become one with the world. Fused with the unity of what is, humans will find themselves more truly:

Taste the still air,
hear the still water: new leaves
will spring from the doorpost.
Plum and bamboo will rise through you.
Snowflakes and stones will set roots
through your shoulders and hands.

²⁴⁹ *The Roots of Wisdom. Saikontan*, p. 101.

PART IV

Polyphony and Prosodic Experimentation Poems for Several Voices

The Blue Roofs of Japan

The Quiet Wisdom of Japan: A Duet for Two Interpenetrating Voices

I · INTRODUCTION

Like other Bringham poems, *The Blue Roofs of Japan* is a work that has been a long time in the making. Actually it has spent 24 years looking for its right incarnation in the human voice and on the page, as a poem born of breath meant to be performed by two interpenetrating voices (male and female), with an undeniable well-wrought typographical realization as well that appears to have been fulfilled in its more recent version as published in *Selected Poems* (2009) by Gaspereau Press. It saw the light of day in July 1985, though it got to be published only in January 1986, in the literary magazine *Lines Review*. From its very genesis, it was accompanied by Program Notes which, like the poem itself, have evolved over time. In this, Bringham was closely following the example of such Modernist masters as T. S. Eliot, who also accompanied *The Waste Land* (1922) with erudite notes at the end. But Bringham's notes are of an altogether different nature, maybe even more pragmatic in a way: though the original 1985 "program notes" fulfilled a twofold purpose by insisting on the polyphonic nature of the poem and by shedding light on some oddities and Japanese references, later versions of the same "program notes" shifted the emphasis toward instructions on the actual performance of the poem or, to put it differently, on at least two ways of approaching the poem – either silently, by reading the words on the page aloud in one's mind, or through the actual sound of a performance, which requires two voices for actually speaking the poem aloud. The challenge was there from the start: for the first time in his literary career, Bringham was essaying something completely new, trying to compose a true oral poem to be interpreted by two voices which merged or coalesced at several points, thus building on a new density of meaning. In addition, this posed a typographical challenge: how to graphically represent the superimposition of two voices, speaking at the same time to produce a unitary *Gestalt* of sound and sense.

The editorial history of the poem itself testifies to its complex evolution. What follows is a detailed chronology of the various textual incarnations of the poem over time:

- (1) "The Blue Roofs of Japan", published in *Lines Review* (Edinburgh) 95 (January 1986): 65-69. It includes, at end of text, "Program Notes" dated Vancouver Harbour, July 1985. It is dedicated to American novelist Audrey Thomas, with whom Bringham had shared a two-week reading and lecture tour in the spring of 1985. It was in her voice that the poem seemed to be born, as the dedication in subsequent editions makes clear: "for Audrey Thomas, in whose voice it all began." While still in Japan, the poem seemed to be taking shape in Bringham's mind. In this first appearance, the text does not look like a poem for two voices. In sections I and II the opening stanza in each case is in italics, which suggests that it is meant to be read aloud by another voice; sections III and IV are for one voice only; and section V is *for two voices*, as the poet himself makes explicit in brackets. But here there is no real temporal synchronicity or interpenetration of the two voices, or, at any rate, the typographical realization of the poem on the page does not succeed in conveying the sense that the words are to be read or spoken aloud simultaneously. The poem and the "Program Notes" were further revised in the subsequent versions published in 1986.
- (2) *The Blue Roofs of Japan: A Score for Interpenetrating Voices*. Mission, British Columbia: Barbarian Press, 1986. [28] p. Paper, sidelaced, 19.5 × 28.5 cm. "100 copies, hand-numbered in

Roman numerals & signed....” ISBN 0-920971-05-9. Contents: a poem (revised from the original *Review Lines* text), with untitled headnote and, at end of text, “Program Notes” (also revised from the *Review Lines* text). The score was published in 1986 by Jan & Crispin Elsted at Barbarian Press and in a separate edition issued by William Hoffer. Afterwards, it was collected in *Pieces of Map, Pieces of Music* in 1986. It had its first performance at the University of Montana, Missoula, on October 16, 1985, and was later broadcast on CBC Radio in a version produced by Don Mowatt. There is cassette tape containing an acoustic version of the Barbarian Press edition of *The Blue Roofs of Japan*, Vancouver, B.C.: privately published, 1986. It was performed by the voices of Robert Bringhurst and Donna White, and produced for the CBC by Don Mowatt. It was pirated from the 1985 CBC Radio studio tape.

- (3) *The Blue Roofs of Japan*. Vancouver: William Hoffer, 1986. [28] p. Paper, sidelaced, 19.5 × 28.5 cm. “150 copies, hand-numbered in Arabic numerals & signed....” Same as the Barbarian Press edition, except for cover, copyright page, title page, paper, and details of artwork and design. ISBN 0-919758-17-7.
- (4) *Pieces of Map, Pieces of Music*. Toronto: McClelland and Stewart, 1986. With calligraphy by Yim Tse. 128 p. Paper, 14 × 21.5 cm. ISBN 0-7710-1661-1. This new book consists of six distinct sections – *The Book of Silences*, *The Lyell Island Variations*, *Gifts & Presences*, *Tending the Fire*, *The Blue Roofs of Japan: A Score for Interpenetrating Voices*, and *Thinking & Talking: A Prose Caboose* (an autobiographical essay and an interview) –, plus a glossary entitled “Cast of Buddhas, Ghosts & Other Creatures”, a key to the calligraphy, and an acknowledgements section. *The Blue Roofs of Japan* is the fifth section in the book. Both the text of the poem and the Program Notes (an untitled headnote¹) are further revised. Typographically, the text is printed in two colours, in black and blue ink.
- (5) *Pieces of Map, Pieces of Music*. Port Townsend, Washington: Copper Canyon Press. 1987. First US edition. 128 p. Paper. Same as the Canadian edition, except for the title page, copyright page, acknowledgements, cover, and occasional minor typographic changes. ISBN 0-55659-003-2. Once again, *The Blue Roofs of Japan* is published here as a distinct section of the book.
- (6) *The Calling: Selected Poems 1970–1995*. Toronto: McClelland & Stewart, 1995. 256 p. Paper. 14 × 22 cm. ISBN 0-7710-1651-4. Contents: foreword, thirteen distinct sections – *Conversations with a Toad*, *Hunters & Pilgrims*, *Deuteronomy*, *The Old in Their Knowing*, *Hachadura*, *The Stonecutter’s Horses*, *Bone Flute Breathing*, *Tzubalet’s Mountain*, *The Book of Silences*, *Lyell Island Variations*, *Their Names*, *The Blue Roofs of Japan*, and *New World Suite N° 3* –, plus a “Cast of Suspicious Characters”, an index of titles and first lines, and acknowledgments. The text of the poem and the program notes are further revised here, and the subtitle is changed to *A Duet for Interpenetrating Voices*. The typographical realization of *The Blue Roofs of Japan* is completely different: the male voice is in roman and the female voice is in indented italics, as explained in the untitled headnote containing the program notes².

¹ This is the full text of this untitled headnote in *Pieces of Map, Pieces of Music*: “This is a score for jazz duet, which I hope will function also as a reading text. The full text of the poem is carried on both the righthand and lefthand pages of the book, but since the two voices frequently overlap, the two parts are not always legible on any one page. The lefthand pages give prominence to the male voice, the righthand pages to the female voice. Facing pages should be read not in sequence but together.

If the score is used as a performance text, the male performer should read from the lefthand pages while the female performer reads from the right. By looking through his or her own lines, each may see the other’s voice lurking in blue ink underneath. The male voice sets the timing, as it is the more verbose. (This is not a paradigm, but here it is the case.) The female voice cuts lyrically across. Sweetly, I suppose, but deeply enough to draw the necessary blood.” See *Pieces of Map, Pieces of Music*, 186, p. 81.

² This is the full text of this untitled headnote in *The Calling*: “This is a poem for male and female speaking voice. The woman’s voice, which starts the poem and steers it, is set in indented italics. For the sake of legibility, the voices appear to alternate on the page. In fact, they must speak together:

- (7) *Selected Poems*. Kentville, Nova Scotia: Gaspereau Press. 2009. 272 p. 14 × 21.5 cm. ISBN 978-1-55447-068-6. Contents: untitled headnote, five distinct sections – *The Beauty of the Weapons*, *Deuteronomy*, *The Old in Their Knowing*, *Hachadura*, *The Stonecutter’s Horses*, *Bone Flute Breathing*, *Tzubahalem’s Mountain*, *The Book of Silences*, *Ljell Island Variations*, *The Physics of Light*, *The Blue Roofs of Japan*, *Conversations with a Toad*, *New World Suite No. 3*, *Ursa Minor*, *The Living* –, plus Index of Titles and First Lines, and Acknowledgments. Here *The Blue Roofs of Japan* subtitled, *Duet for Interpenetrating Voices*, is printed in two colours, in black and blue ink, on facing pages that the reader is expected to read simultaneously, as the untitled headnote³ containing the program notes makes clear. Typographically, the text is beautifully displayed on the page, in what Bringhurst deems a *legible and affordable* version at last. The poem appears in the last third of the book, which is devoted almost completely to Bringhurst’s polyphonic poems, i.e. his poems for multiple voices. *The Blue Roofs of Japan* is the first in the sequence. Subsequent many-voiced poems like *Conversations with a Toad* (1987), *New World Suite No. 3* (1995/2005) and *Ursa Major* (2003/2009) [*Ursa Minor* contains only the monologues and choruses of *Ursa Major*] would evolve into forms of increasing complexity.

To sum up, *The Blue Roofs of Japan* was first published in *Lines Review* in January 1986. It was then published as a separate publication in a special limited edition by Barbarian Press and William Hoffer in 1986, where both the text and the program notes were revised. Later it was collected in *Pieces of Map*, *Pieces of Music* (1986 & 1987), where the poem and the program notes were further revised. Much later, it was published in *The Calling* (1995) and *Selected Poems* (2009), where the poem and the notes were further revised.

The Blue Roofs of Japan is not an isolated work within the wider context of Bringhurst’s evolving corpus or oeuvre. Polyphonic poems were not born out of the blue, as it seems there is a natural progression or evolution towards these poems for multiple voices. The origins could be traced back to the poems of the 1970s, and the spirit can be seen stemming from such early dramatic monologues as *Deuteronomy* (1974), *Jacob Singing* (1977) and *The Stonecutter’s Horses* (1979). The origins could even be traced back to an early poem like “Hachadura” (1975), a long meditative piece described as *a chaconne for solo intelligence*, and to the sonata in three movements entitled *Tzubahalem’s Mountain* (1982). It is

Woman’s voice alone.

Man’s voice speaking *And the woman’s voice speaking*
while the woman speaks too. *at the same time.*

Man’s voice alone.

A performance score, with the two voices superimposed, printed in two colours, appears in *Pieces of Map*, *Pieces of Music* (McClelland & Stewart, 1986; Copper Canyon Press, 1987).³

³ This is the headnote in full: “*The Blue Roofs of Japan* is a poem for two voices – in principle little different from a sonata for cello and piano, except that here the instruments speak; they don’t quite sing. The full text of the poem is printed on both the righthand and lefthand pages of the book, but since the two voices frequently overlap, the two parts are not always legible on any one page. The lefthand pages give prominence to one voice, the righthand pages to the other. Facing pages should be read not in sequence but together.

Reading the poem aloud requires two people. When I was writing the piece, I thought of these two as a man and a woman. I still tend to think of the lefthand voice as male, the righthand as female, but I have also learned that, given the right voices, these roles can be reversed, or that both readers can be either women or men.

One reader, in any case, reads the black ink on the lefthand page while the other reads the black ink on the right. Under his or her own lines, each reader can see the other’s voice in blue. Enough blue ink is visible on every page to allow both readers to keep pace with one another. There isn’t, and in my view mustn’t be, a metronome. The only thing the readers have to pace themselves against is one another.” *Selected Poems*, p. 175.

also reminiscent of the “dramatic impersonations” of Oriental sages and philosophers included in *The Book of Silences* section in *Pieces of Map, Pieces of Music* (1986), which were composed more or less at the same point in time in his literary career. In another respect, *The Blue Roofs of Japan* anticipates or prefigures the subsequent polyphonic poems, characterized by an increasing degree of complexity. A powerful meditation on human beings’ relation with the non-human, *Conversations with a Toad* brings together polyphony and an increasing ecological awareness in a long sequence consisting of ten sections; *New World Suite no. 3* dwells on ecology and language in four movement for three voices, thus increasing the number of voices involved in the making of the poem; and *Ursa Major* moves towards the realm of mythical thinking and a many-tongued world that unites Greek, Latin and Cree stories into a unique polyglot and polyphonic poem for several voices. Thus, experimenting with multiple voices is a new path Bringham started exploring at least 25 years ago. If Bringham conceives of his own poems as being the fruits of oral composition more than of writing, and if he is such an exacting self-editor, then it is only natural that the next step should be to think that not only do poems live in the voice, off the page, as works perpetually in the making, polishing themselves over time, but in the many voices that reality is full with or rich in, for the world is a polyphonic place in itself, and Nature (and music) is a genuine model for the kind of polyphony he is after. *Being* is plural and polyphonic, he says, and so it cannot dwell in a monolithic, homophonic poetry then, at least not exclusively. Only by having many voices in the making of a poem, is it possible to touch the plurality of *being* he sees and hears in the world. In this way, the many-voiced poem enacts a profound meditation and emulates the polyphony of the real world.

Beauty has always been an attribute of Bringham’s publications. Thus, *The Blue Roofs of Japan* is a perfect example of the book as a perfect artifact,⁴ a beautiful *made thing*. Bringham’s work won the 1986 Literary Prize for Poetry of the Canadian Broadcasting Corporation. Indeed it meant a typographical challenge for the poet and his editors from the very outset, as it is a poem for two voices speaking simultaneously at times. Different ink colours had to be used then to represent the male and female voices speaking the poem. The lessons Bringham had learnt from music were present throughout; this poem in five parts was meant as a score for a “jazz duet”, but here there was no room for improvisation at all. For a proper understanding of the ambitious task the poet set for himself with this new work, it should be borne in mind that he produced a number of prose statements where he put forward his ideas concerning polyphony. The Program Notes preceding the poem in each textual incarnation, his ground-breaking essay “Singing with the Frogs” published in *Canadian Literature* (and Jan Zwicky’s relevant distinctions and valuable differentiations in response to his essay as well as the critical essay of Sean Kane, who dwells on polyphonic myth), “Licking the Tongue with a Forked Tongue” (the afterword to *New World Suite No. 3*), and Dennis Lee’s different conception of polyphony as enacting meditation (and the Trent Colloquium on polyphony held in 1996, of which we have Robyn Sarah’s testimony) are all crucial for an adequate understanding of *The Blue Roofs of Japan*. In all these prose statements dwelling on the concept of polyphony, language, nature and ecology are constellated into a beautiful meditation that illuminates the interstices of Bringham’s polyphonic poems. From the start, he is concerned to use the

⁴ William Bright, in a review of *The Blue Roofs of Japan* in *Fine Print* 13.3 (July 1987): 127-128, claims that the book is indeed a typographical achievement and that the book is an unusual book: “The book is, then, decidedly unusual in its concept. The poetic text itself, however, is clear, musical, and evocative. [...] Similarly, the design of the book – apart from the matter of the two voices – is effective in very straightforward ways. The Japanese calligraphic version of the title, stamped in blind on the cover as well as printed in black on the title page, combines with the oriental folding and binding to support the geographical localization of the text.” See p. 127.

term ‘polyphony’ with as much intellectual precision and rigour as possible. He had the literary precedents of Pound, Zukofsky and Basil Bunting, who searched for a verbal analogue for the fuge. But they produced *homophonic* poems in the end. A polyphonic poem is something much more complex. Polyphony in the natural world is the starting point for *literary polyphony* in Bringham’s train of thought. Humans happen to live in a many-voiced world where human languages are placed side by side with the languages of the nonhuman, since *homo sapiens* has no monopoly on language or meaning. Literary polyphony is a way of emulating natural polyphony, hence the title of his ground-breaking essay “Singing with the Frogs”. What is a polyphonic poem? It is a many-voiced poem – one in which several voices speak simultaneously to produce a multilayered message rich in environmental awareness. Though each voice has its separate agenda, none cancels what the other has to say. The result is much more enriching, much more real, closer to the world as it is.

The Blue Roofs of Japan. Duet for Interpenetrating Voices – that is the definitive title of this polyphonic poem included in the recent *Selected Poems* (2009) which saw the light of day in 1985, after Robert Bringham had completed a tour of readings and lectures in Japan with colleague and novelist Audrey Thomas, *in whose voice it all began*, as the dedication of the poem reads.⁵ The first appearance of the text was in *Lines Review* (Edinburgh) 95 (January 1986): 65-69, and it included “Program Notes” dated Vancouver Harbour, July 1985. As pointed out above in the detailed editorial history of the poem, the notes or program notes accompanying the poem and the poem itself were revised over time – in the first edition, *The Blue Roofs of Japan. A Score for Interpenetrating Voices*, published by Barbarian Press and William Hoffer in 1986, then in *Pieces of Map, Pieces of Music* (1986 & 1987), in *The Calling*:

⁵ In “Licking the Lips with a Forked Tongue”, the afterword to *New World Suite Number Three* (2005) and a lucid meditation on the concept of polyphony, Bringham gives a detailed account of the genesis of the *The Blue Roofs of Japan*: “Twenty years ago, more or less, I was travelling by train in Honshu with the novelist Audrey Thomas. Audrey, looking out the window at the blue roofs, said, “If you lived in a house with such a blue roof, you’d wake up happy every morning.” Over the next few days, in the back of my head, these became the opening words of a poem. But the poem appeared to have a problem. It was jumping back and forth between Audrey’s voice, in which it had begun, and mine, in which I thought it might continue. I wanted to take full advantage of this problem, so I made no attempt to shut out either of these two voices. They would alternate, I thought. But they refused. They kept trying to talk at the same time – and kept succeeding. So the poem passed its problem on to me, in the form of a text I didn’t know how to print or perform.

Performing it turned out not to be so hard. It simply needed two speakers, a man and a woman, who enjoyed contradicting one another but didn’t want to drown each out. I discovered, though, that professional actors – who were recommended to me repeatedly for the job – often found it unusually difficult. Whether their normal turf is the stage, the radio studio or the camera lens, actors are trained to take control when it is their turn to talk, and to avoid upstaging others where the script says someone else should speak a line. The ideal co-performers, I discovered, were not actors but classical musicians. Whether they’ve ever read a poem aloud or not, chamber musicians know how polyphony works. They know that two or four or forty voices and ideas and personalities can occupy the same space at the same time, and can keep their own identities – even sharpen their identities – without endangering anyone else’s. They know that when two voices intertwine, the space they occupy gets larger, and the mind gets larger with it. It’s a lot like making love. It’s also like another bird arriving in the spring. When a new voice enters the ecology, if it isn’t unsustainably destructive, the universe inhales and makes room.

Soon I found myself attempting to explain to a publisher in Toronto why one section of my next book of poems had to be printed in two colors, with two texts superimposed. To my considerable amazement, the publisher went along, and the poem was printed as I had designed it: male voice in black over the female voice in blue on the verso pages, and the same texts reversed, female voice in black over the male voice in blue, on the recto of each spread. Two old friends, Jan and Crispin Elsted, proprietors of a letterpress operation called Barbarian Press, took the same text at the same time and approached it differently, setting it by hand in metal and printing the two voices blue and blind.

The Blue Roofs of Japan, published in those two incarnations in 1986, seems now like a very simple experiment and a very elementary and tentative attempt at a polyphonic poem. Still I learned enough from it to know that I had ventured into interesting terrain.” See pp. 3-4.

Selected Poems 1970-1995 (1995), and lately in *Selected Poems* (2009). The poem has been then a long time in the making, looking for the right typographical presentation or layout that Gaspereau Press seems to have found at last for this poem which is only truly alive in the voices of two performers. In this sense, *The Blue Roofs of Japan* marks something of a turning point in Bringhurst's unfolding literary career. It is the beginning of a path that the author has been exploring for so many years now: the path towards polyphonic poems, that is, poems for two or more simultaneous voices, speaking at the same time. Of course, this entails a considerable typographical challenge of sorts, and also a poetic and intellectual challenge for the author himself and the audience. Reading or listening to the performance of a polyphonic poem is an aesthetically gratifying experience, but it is also a strenuous experience, for it is a complex, demanding task to try to read the texts of two superimposed voices at the same time. This is why Bringhurst recommends that the poem be read aloud with the help of a friend; silent reading of a poem like this is a somewhat incomplete experience, not so rewarding after all. Or maybe the poet is right when he says that the right audience for any work of art is the gods, who are omnipotent after all.

Most critical essays and reviews devoted to an analysis of *The Blue Roofs of Japan* up to the present do not do justice to the complexity and beauty of this magnificent work, characterized by an intense lyricism, clarity of language, and profundity of thought – it is a breathtaking accomplishment and a poem about water, after all. Most reviews restrict themselves to a purely objective description of the way the book has been made in typographical terms or to stating that this is a poem for two voices, but not much is said towards the elucidation of the way it is constructed, of the way motifs unfold in the superimposed and interactive texts, of the ultimate meaning of this complex work. Indeed, it is no easy task to embark on a detailed analysis of a poem for two voices, especially if we bear in mind that this is a *sui generis* or extraordinary *genus of lyric*, as Jan Zwicky says in “Being, Polyphony, Lyric: An Open Letter to Robert Bringhurst”, *Canadian Literature* 156 (Spring 1998): 181–184, her response (and probably the most illuminating essay devoted to the author's concept of polyphony) to “Singing with the Frogs”, Bringhurst's seminal essay on polyphony, first published in *Canadian Literature* 155 and then reprinted with revisions in *Everywhere Being Is Dancing. Twenty Pieces of Thinking*. It is also more than a poem for two voices speaking contrapuntal texts at the same time – the *Gestalt* of the work of art is more than the simple sum of the parts. Something of great import, with the texture of transcendence, is being communicated to the listener or the reader. The poem is a quiet meditation on the four basic elements the whole world is made of (water, earth, air, fire); on the poet's role and on the nature of poetry as a way of touching or knowing being; on the need to open one's ears and eyes to the beauty of the Earth; on breath, speech and the origins of writing in Neolithic times; and on the *logos* governing the order and beauty of the world. It closes on an optimistic and quiet invitation for the listener or the reader to confront the world as it is and do justice to it by coming into close union with a grander scheme of things where everything fits in.

To return to the genesis of the poem, it might be wise to begin at the beginning. As pointed out above, in January 1986 *Lines Review* published the text of *The Blue Roofs of Japan* for the first time. The abyss between this original text and the 2009 version that we find (and will quote from in our critical analysis) in *Selected Poems* is simply astonishing. The fact that the 1986 poem was intended to be performed by two voices simultaneously was typographically signaled through a simple procedure: the female voice, which steers the poem, was in italics, while the male voice was in roman type. What is even more interesting is that, even if the poem is meant for two voices, they do not speak simultaneously except at one single point, in the closing lines of section V. One brief note by Bringhurst says so:

“If the word *Four* is sounded by the second voice, it falls in time with the word *earth* in the second-last line. This is the only occasion on which the voices coincide.” The rest of the poem was meant to be read by the voices in sequence, *not* simultaneously. Further revisions of the poem would make it into a truly polyphonic poem, as the Barbarian Press and William Hoffer editions and the version in *Pieces of Map, Pieces of Music* make clear from the start: the words of the two voices are literally superimposed on one another to suggest the simultaneity of the speaking. Black and blue ink (as well as blind printing in the separate edition) are used to typographically convey the sense of polyphony. The poem becomes thus a true *score for a jazz duet*. It seems to us that the text is typographically impoverished in the material incarnation we find in *The Calling*, where the simple procedure of indented italics is used to represent the female voice. Fortunately, Gaspereau Press has made at last an excellent typographical job in *Selected Poems*, where we find *a true garden of colours* in the last third of the book, which is completely devoted to Bringham’s polyphonic poems. In the poet’s view, it is *legible and affordable*⁶, which is what really matters when it comes to a poem that is meant to come truly alive in performance. However, to lovers of well-made books, it seems to us that the 1986 Barbarian Press edition remains the most accomplished and beautiful. For practical reasons, we will have to resort to a typographically schematized layout of the text on the page: the steering female voice is in indented italics and smaller size than the male voice, in larger size and in roman type.

The “Program Notes” that accompanied the first appearance of the text in 1986 have never been reprinted again in exactly the same terms. They are a useful explanation of the experience in the poet’s life that gave birth to the poem, while at the same time providing a brief glossary of oddities (Japanese words) that are found in the text. The notes remain illuminating in a number of ways and so they are worth quoting in full:

In the spring of 1985, the novelist Audrey Thomas and I made a two-week lecture tour of Japan. This piece began to fashion itself in my mind while we were still in that country, living at unusually close quarters to one another and in (for us) unusually populous and exposed conditions. From the first, I intended the piece to function as a gift for Audrey – and this is so notwithstanding the poem’s assertion (with which I agree, if that matters) that the right audience for any work is not one’s colleagues but the gods. If that priority is clear, perhaps the work is free, like rice, to be useful also on a human plane.

I suspect a few of the Japanese references may need elucidation.

I mistranslate slightly the name of Ryoanji, the Peaceful Dragon Temple, in Kyoto – site of the most famous *karesansui* meditation garden in Japan. *Karesansui* means “withered hills and water.” The garden consists of rocks and raked gravel, not of what we call as a general rule living things.

The *shakuhachi* is an endblown bamboo flute. It is one of the principal instruments of *bogaku*, traditional Japanese music (as distinguished from *yogaku*, “sea music” – i.e., music of foreign origin).

Karamatsu, literally “Chinese pine,” is really the Japanese larch, *Larix leptolepis*, and *sugi* is the Japanese redwood, *Cryptomeria japonica*.

A *roshi* is a Zen priest; the title means simply “old teacher.”

I may say also, for the benefit of a European audience, that both Audrey and I were born in the United States. I was brought to Canada as a child; she came here under her

⁶ In the final acknowledgments section at the end of *Selected Poems*, Bringham devotes a short paragraph to the polyphonic poems in the volume: “Only a few of the poems in this book are polyphonic in the technical sense of the word, but they (and I) have been trying the patience of publishers and printers, and sometimes the patience of readers, since I first began to write them, twenty-five years ago. I’m grateful to Andrew Steeves and Gary Dunfield for making it possible to publish them in a form that is both legible and affordable, at last.” (p. 265)

own steam as an adult. This may have something to do with the brief quotation from *The Star-Spangled Banner* in Section III.⁷

These notes are reminiscent of the glossary of oddities found at the end of *Tzubahalem's Mountain* (1982) or *The Beauty of the Weapons* (1982). The common impulse beneath all of them is, again, Bringhurst's love of intellectual precision. He wants to keep the concepts clear and distinct, which testifies to the seriousness with which he experiences his own vocation as a poet, committed to a millennial art in which the achievements of the past masters are the nutriment of the present. Indeed, Pound said that technique is a test of a poet's sincerity. We would add that it is also a rest of his intellectual honesty and an undeniable or tangible proof of his intense love of his calling.

II · CRITICAL ANALYSIS OF THE POEM

SECTION I

The Blue Roofs of Japan consists of five untitled sections or movements for two voices, reminiscent no doubt of the *sonata in three movements* that *Tzubahalem's Mountain* (1982) is, even if this was a *monophonic poem* in 21 sections where we got to hear a number of modulated voices – Tzubahalem's persona, the lover's, even the poet's. It is also reminiscent of the "dramatic impersonations" of *The Book of Silences* sequence, first published as the first section in *Pieces of Map, Pieces of Music* (1986), which also found its source of inspiration in the Orient – in the wisdom of Japanese, Chinese and Indian sages. But in these dramatic *impersonations* the reader gets to listen to only one voice at a time, to one single *Weltaanschauung* as it were, to one single idiosyncratic way of perceiving the world through the prism of one single penetrating mind. In any case, we should be familiar by now with Bringhurst's way of constructing his own poems. The *total* poem entitled *The Blue Roofs of Japan* is much more than the mere sum of its constituent parts, but he focuses his attention first on small building blocks that, when brought together into a coherent whole, make perfect sense. Thus, the pattern is not clearly discernible in each tiny part; it makes itself clearer as the poem unfolds in time. At that point, recurrent motifs and themes become crystal-clear all of a sudden, and the ultimate message understandable. Though this is a demanding poem, that requires an active role in the decoding process on the part of the reader, the aesthetic pleasure derived from the whole experience by the attentive listener/reader is out of the question.

Let us begin at the beginning. Section I of *The Blue Roofs of Japan* sets the geographical and imaginative setting for the whole poem. It is also the longest of all five sections, and also the section of the poem where the two voices coincide in time much oftener than in the remaining sections. An attentive reading of this first part must take into account the two superimposed texts, their actual interaction at relevant points in the unfolding of ideas and emotions in the total text, and their distinct contribution to the cumulative building of meaning throughout the whole section. These are the opening lines of the poem:

In a house with

⁷ See "The Blue Roofs of Japan", published in *Lines Review* (Edinburgh) 95 (January 1986): 65-69. The "Program Notes" appear on p. 69.

From Bringhurst's words in this brief note, we gather that there are two possible ways of approaching this poem. Either you read it silently as it stands frozen on paper, keeping an eye on both pages at the same time, which is no easy task at all, or you speak it aloud with the help of a friend. In a meditation on voice, poetry and polyphony, poet Robyn Sarah, who also has a musical training, dwells on the possibility of actually reading two superimposed texts at the same time. First, she wonders whether there is such a thing "as a verbal or poetic equivalent to polyphony in music" and then she comes to the realization that

One can in various ways (spatially and/or using different typefaces) visually approximate the effect of two "voices" or "texts" meant to be read simultaneously rather than consecutively... [...] Inevitably they [such experiments] must be constructed, contrived... [...] it is not really possible to read and grasp two lines simultaneously: one is aware that one is only approximating the act – reading them consecutively and trying to imagine them superimposed. It is a rather strenuous mental exercise...⁹

This confirms our suspicion that the experience of silently reading a polyphonic poem is no impossible task, but it certainly falls short of the real thing, which is listening to its actual performance by two distinct voices speaking the texts aloud simultaneously. Silent reading is a form of precarious experience, incomplete, in a sense. The experience of listening to a polyphonic poem, come truly alive in the voices of the performers, must be something completely different. Needless to say, the very physicality of the human voice has a beauty about it that is lost on the silent page, where words are but a pale shadow of their acoustic realization. As Mark Dickinson puts it, Bringhurst's "polyphonic poetry, or poems for two or more voices that speak together at the same time, as in chamber music, challenges us to rethink the very way we read poetry."¹⁰ In this respect, polyphonic poetry remains a true intellectual and aesthetic challenge for attentive readers.

As pointed out above, the opening lines of *The Blue Roofs of Japan* set the tone for the rest of the poem. Once the setting has been so masterfully evoked, the poetic voices move on to a detailed unfolding of what it is one wakes up every morning *to* in this quiet place. At least seven more distinct parts or little movements are identifiable in section I. One of the most important recurrent motifs at the core of the poem is that of water, that most primordial of elements out of which the Earth is made. Thales, one of the pre-Socratic poet-philosophers Bringhurst pays due attention to in *The Old in Their Knowing* (2005), knew it for sure about 25 centuries ago. In a house with such a blue roof, one wakes up first of all to the singing of water. Thus, in the second movement of section I, we are directly plunged into a world of pleasing sounds, and subtly encouraged, urged or invited to embrace what could be called *a poetics of hearing* – i.e., a respectful attitude towards *reality as it is* which entails opening one's mind and senses to the beauty of the world:

To the talking mirror
To the talking mirror
of water.
of water. To the broken panes

⁹ See Robyn Sarah, *Little Eureka: A Decade's Thoughts on Poetry*. [Emeryville, Ontario]: Biblioasis, 2007: 205-226, which includes two letters by Bringhurst to Robyn Sarah, incorporated (along with letters from Dennis Lee) in Sarah's "A Dangling Conversation (for multiple voices)", a discussion of literary polyphony. See pages 206 and 209 in particular.

¹⁰ See Mark Dickinson's review of *Selected Poems*, entitled "In the Wake of Our Ancestors", published in *The Times* (London), August 8, 2009: *Weekend Review* 12.

To the talking mirror
of water, laid in the earth like leaded glass.
of water,

SP, pp. 176-177.

At the core of these verse lines are two essential metaphors: (1) “*the talking mirror of water*”, possibly a reference to the untroubled surface of a lake, where water is capable of a speech of its own while reflecting the world of appearances as if it were a faithful polished mirror, and (2) “*the broken panes / of water, laid in the earth like leaded glass,*” which evokes the metamorphic existence water leads in the form of streams, rivers, seas and oceans on the vast surface of the Earth in its entirety. Water and earth are one of those elemental pairs of contraries or opposites that occur time and again in *The Blue Roofs of Japan*, for they are indeed two of the basic ingredients the world is made of. The point is that *water speaks* (and this is personification too), and what it has to say is of the essence to human beings if we dare to listen to whatever lesson it has for all creatures on Earth. It is no wonder that the female voice should insist on this idea of *water speaking* by repeating exactly the same words of the first metaphor twice in a such a short space.

The irreducible core of meaning in section I is found exactly in the very heart of the composition. A cup of tea encompasses the Earth in its entirety; like the Earth itself, a cup of tea contains water too. Resemblances go even further than that: the shape of the cup is reminiscent of the curved contours of the Earth. Hence, holding a cup of tea in one’s hands is tantamount to holding the Earth in one’s hands as well. Whereas sight clearly predominated in the first movement and hearing in the second one, now touch is of the essence. All the senses must be involved in one way or another in this elemental confrontation of self with Nature. Indeed, this (cup = Earth) is the potent equation at the heart of this third movement for the soul, even if it is punctuated by two more fundamental dichotomies: order vs. disorder and empty vs. full hands. The hands, like the cup of tea, may be full or empty. They also remain a powerful symbol, for they are the expression of humans’ humility and generosity. That hands are empty means that they are ready to receive the gifts Earth gives them; that hands are full means that they are ready to offer whatever they may hold to the Earth. Possibly. Earth is *the cup containing everything*. That such a simple and humble item as a tea cup should contain the whole world is no small miracle:

To the cup containing
to
everything,
the cup containing
to warm it with the tea.
everything – the hands

To hold in the hands like a cup of tea,
always full and always empty,
always empty, always full –
the earthy asymmetry of the world.

To the rich, disordered earth,
and to the order of the earth.
to the sound of mountain water,
to the boundless

To the boundless –
truth of the ground.
not infinite, boundless –
truth of the ground.

To the world with its welcome
imperfections.
Violence hides in fastidious order.
Violence hides
under the lid of fastidious order.

SP, pp. 176-177.

In a contrapuntal way, the female voice utters the opposite words of what words the male voice utters. Where he speaks of hands holding “*the earthy asymmetry of the world*”, “*the rich, disordered earth*”, and “*the world with its welcome imperfections*”, she sings of “*the order of the earth.*” Interestingly enough, both voices converge into a realization that breathing through one’s own body in its entirety awakens up to “*the boundless / truth of the ground.*” The Earth is then a place of order and disorder: while order is associated to Apollonian reason and a rationalistic mode of thinking that hides violence (“*Violence hides in fastidious order*”), disorder sides with the beautiful imperfections, irregularities and asymmetry of the world, or, in other words, with a Dionysian spontaneous, elementary force of life. What the poet is after is *a truth of a polyphonic and lyric nature*: one that embraces the *plurality of being* and has room for the many-voiced creatures dwelling on Earth, each singing their own song and contributing to a boundless singing. This is the truth of a breathing Earth, one that is truly alive, one which is not misperceived by our greedy management of its limited resources, one which is truly alert to the beauty of *here* and *now*. Upon closer inspection, an attentive reader will notice that, in the lexical realm, the poet moves from the *world*, down to the *earth* and to the *ground*, thus conveying a stronger sense of physical immediacy. In fact, he speaks of “*the boundless truth of the ground*”, which is a reminder that one needs to keep one’s feet pressing firmly upon the ground and keep an eye on the actual, the real.

In *The Blue Roofs of Japan* we are constantly reminded that we are amid an exotic setting. The references to the *blue roof* and the *cup of tea* of the first and third movements respectively gave us significant clues about the exact geographical setting of the poem. In the fourth through eighth movements, we are plunged in the middle of Japan as perceived by the poet’s sensibility. Thus, the fourth movement evokes the time of the year, the actual temporal framework: it is June (it was in the spring of 1985 that Bringhurst and Audrey Thomas spent two weeks in Japan) in a Japanese city called Gifu, and the world is alive with fish and birds.¹¹ On the other hand, the moon is reminiscent of much classical Japanese and Chinese poetry, where the moon figures prominently as part of a quiet landscape, in the traditional haiku, for instance. Bringhurst’s imagistic verse lines resemble the cadences and minimalism of haiku, indeed: “*the moon / is choking on its own light; the river / fish are running; at Gifu the leashed / cormorants dive.*”

Water is a pervasive element in *The Blue Roofs of Japan*. Thus, in the fifth movement it comes up again to the polished surface of the poem in the form of a river. We say *polished* because so far we have paid attention foremost to *the density of meaning* this complex poem for two voices treasures beneath the transparency of the words with which it is woven. The

¹¹ By the way, fish and birds are recurrent motifs in Bringhurst’s poems: consider, for instance, an early poem like “The Fish Who Lived to Tell All About It”, or the poems “Waterbirds” and “Finch” included in the section entitled “The Living” in *Selected Poems*, or the birds in some of the 21 sections making up the sonata *Tzubalet’s Mountain*.

language sings, and musicality is to be heard in the alliteration of lines like these, for instance: “To the *water* that *walks* over stones / through the long *wooden* town / like a *roshi* on *wide wooden* slippers.” As the poet himself makes clear in the “Program Notes” of the 1986 text as published in *Lines Review*, a *roshi* is a Zen priest and the title means simply “old teacher”. The image in this simile is rare and beautiful: water walks elegantly on stone as it flows through the city, in much the same way a *roshi* walks on wooden shoes conveying his deep reverence for the wooden town and the ground he treads upon. The repetition of /w/ reminds us of the sound of flowing water in evocative ways. In this respect, it might be illuminating to remember Robyn Sarah’s train of thought on the kind of polyphony that is already implicit in any well-wrought poem. She claims that the interplay of sound and sense in poetry is already a form of polyphony. It is not certainly polyphony in Bringhurst’s strict usage of the term (he is exploring the possibilities of *a close literary analogue to musical polyphony*), but it does make sense to wonder whether this is not a rudimentary (and hence essential) form of achieving some kind of polyphony as a precondition for real polyphony. Good poets always pay attention to the sheer physicality of their *materia prima* (i.e., the sounds of words) and, as a matter of fact, Bringhurst followed Pound’s advice to study prosodic systems to learn the essentials of the poetic technique. That sound is of the essence in the making of a poem seems a truism by now, but sometimes we need to be reminded that this is the case:

If we accept that poetry, as an art, is based on a balance of sound and sense, [...] this interplay between words as soundscape and words as signifiers is an enormously complex kind of resonance in itself, and may be as close to musical polyphony as we can get in poetry, short of embarking on the kind of aural/oral experimentation that Bringhurst has undertaken [in his polyphonic poems].¹²

Water is not just a primordial element, it also brings together places far apart. The river flowing in what we presume to be Gifu takes us to “*the Chinese grid of the city*” and even further away into “*the Saskatchewan prairie*” in Canada. Water brings all places on Earth together in a way, for it is the fluid running through its veins, as it were. Of course, the motion in space is only imaginary. The geographical references are only meant as points of comparison in the metaphor and simile the poet makes use of to evoke the irregular flowing of the river – this is, after all, one of those *welcome imperfections* of the world announced earlier in the section. But the thought occurs that water is the universal matter uniting all places in the world, and that it is sharp as a knife blade, which is also a recurrent motif in Bringhurst’s poetry. Also, the allusion to the *Saskatchewan prairie* is a subtle

¹² See Robyn Sarah, “A Dangling Conversation (for multiple voices)”, *ibid.*, p. 212. In the same essay, she points out: “The idea that there must be some way to write a verbal fugue, some poem-equivalent to a musical fugue, tantalized me long before I’d heard of [Glenn] Gould’s “contrapuntal radio” and long before I knew that Pound, Bunting and others had obsessed over it.” (p. 213) And also: “I do think of sound and sense in poetry as interactive, already a kind of two-voiced counterpoint.” (p. 214) In a letter, dated 20 October 1996, addressed to Robyn Sarah in response to the essay on poetry and polyphony she sent to the participants in the colloquium on polyphony held at Trent University in 1996, Dennis Lee says that he agrees with the principle of “sound-and-sense being the matrix of polyphony” (p. 216). But again, Lee holds a very different view of polyphony too. In that same letter, he writes: “... the kind of poem that draws me particularly is one that enacts a trajectory of meditation by moving from one embodied voice to another, and then to another. And within the experiential terms that make sense to me, that enactment is simply impossible so long as a poem stays within a single voice. Lots of *other* kinds of poetic excellence are possible; but enacting a meditation is not – unless & until the poem finds a way to claim, embody, incarnate, each stage on its meditative quest by moving through an (unprogrammed) vocal trajectory. [...] That central intuition – that voice embodies, polyphony enacts – is what gives point to everything else I say. [...] Robert [...] wanted to reserve the term “polyphony” for work in which two or more independent voices are counterpointed.” (pp. 215-216) And Robyn Sarah adds: “Perhaps Bringhurst is right to want to reserve the term “polyphony” for the strict musical sense of simultaneously heard, separate voices.” (p. 218)

anticipatory echo of *New World Suite No. 3*, which is even more complex in its design as a polyphonic poem than *The Blue Roofs of Japan* is.

The whole picture of Japan is brought to a full circle with the references to the Sleeping Dragon Garden, the *shakuhachi*, the trees endemic to the land, and the Emperor in the following three movements. In the 1986 “Program Notes” mentioned above, Bringhurst gives us the necessary clues to understand the oddities in these verse lines. First, the *Sleeping Dragon Garden* is a slight mistranslation of *Ryoanji* (the “Peaceful Dragon Temple”) in Kyoto, which is “the most famous *karesansui* meditation garden in Japan”. “*Karesansui*, Bringhurst goes on, means “withered hills and water.” The garden consists of rocks and raked gravel, not of what we call as a general rule living things.” Japanese gardens have nothing to do with prototypical Western gardens, where flowers and trees are to be found in every single corner. The garden¹³ the poet alludes to is made simply of water and stone, so that we are back in an elemental world where silence reigns. Solitude, the silence of stones and the quiet murmur of water are all one requires for a proper meditation. Water keeps on speaking, even if in *wordless speech*, while stones remain mute surrounded by the irresistible halo of their silence and yet contributing to the music water makes as it touches them in its flowing. Once again, the female voice keeps echoing the key words uttered by the male voice: “*to the water, to the stone.*”

In the seventh movement we are truly plunged into a universe of sound, amid a breathing Earth which is singing a song of clarity and beauty:

To the spoken
shakuhachi, its calligraphy
of sound.

To the trees –
karamatsu, ginkgo, sugi, bamboo –
 to the speaking *to the trees;*
who speak for themselves; to the Emperor’s

¹³ In *Writing North: An Anthology of Contemporary Yukon Writers*, ed. Erling Friis-Baastad & Patricia Robertson, Whitehorse: Beluga Books, 1992: 158-160, Anne Tayler contributed two short prose pieces entitled “Largo” and “The Garden”. The first of these short prose pieces is a portrait of the author in relation to Bringhurst, the second a portrait of Bringhurst in relation to the author. The garden in question is one Bringhurst built – quite successfully by other accounts – in the late 1980s and early 1990s in front of his cabin on Bowen Island. This is an excerpt from the second prose piece:

“He is making himself a garden, at the front of the house that in local folklore has crept steadily down the hill, and even now is creeping further down the slope and working its way slowly through the foundations toward the still rocks of the hillside. He is making for himself a low maintenance Japanese garden.

A thin man with glacial eyes is washing his hands and writing the scenario of his garden as he would write the scenarios of women, with feeling orchestrated in the hands and the heart withheld from the eyes.

This man full of knowledge has turned old sod upside down, thinking to fool the grass, thinking the new tender shoots will be easy to pull, ignoring the matted rootedness of grass and sheep sorrel that has struggled there since the building was way, way up the hill where it could never really have been. He has spread carefully a layer of cedar bark chips on top of the upside down secretly fierce sod, as carefully as he would a layer of fine poems across the pillow of a new lover.

Of all, Japanese gardens are the most demanding. The spirit laid out demands the care of the hands that shaped it. And to begin, the gardener must rip off the skin of the earth, and throw it far away, then give the garden a new underskin. Only then can the surface flesh of the garden go down. Otherwise, the garden invites the invasion of other spirits, grass, sorrel, and other herbs. Only when a new underskin is down, can the garden begin. And once it is in place, the cycle of water and root and branch needs regular and careful attention. Even twenty years after the ripping of the old skin, the gardener will be tending the new flesh.

Only the stones can or will remain low maintenance.

The man with the colours of Glacier Bay in his eyes is making for himself a garden that he envisions will tend its own self. And when the garden cries out for something else, he’ll dispassionately remove those parts calling for his hand and discard them. Perhaps at the end of the pulling and replacing there will be nothing but stone to care for. That at last would be low maintenance, except of course for the ghosts of the sorrel.” *Ibid.*, pp. 159-160.

karamatsu
bound and housebroken pines.
gingko sugi bamboo –

SP, pp. 178-179.

Here is the *shakuhachi*, “an endblown bamboo flute”¹⁴ typical of Japan, singing, and also the vernacular trees singing in a language of their own. The calligraphy of sound of the bamboo flute anticipates in a way the essay on the origins of writing in miniature which section III of the poem is. The word *calligraphy*, of course, has rich resonances about it in the context of Japanese culture, where it is a millennial complex form of art. “*Karamatsu*, literally “Chinese pine,” is really the Japanese larch, *Larix leptolepis*, and *sugi* is the Japanese redwood, *Cryptomeria japonica*.” Gingko is a Chinese tree with yellow flowers, and bamboo we all know. We are inevitably reminded of Bringhurst’s magnificent essay “Everywhere Being Is Dancing, Knowing Is Known”. What we witness in the penultimate movement of section I of *The Blue Roofs of Japan* is precisely *being* singing and dancing: water, stone, the *shakuhachi*, and diverse trees as *karamatsu*, *gingko*, *sugi* and *bamboo* are singing each their own song and contributing to the global song. The female voice repeats their names as if they were sacred, savouring their very texture on her tongue. And the poet himself is joining this harmonious song with his own, which is a melodious celebration of the *singing* of the Earth itself. His song is *The Blue Roofs of Japan*, of course. In the Western canon trees have got leaves that inevitably fall onto the ground with the arrival of autumn, and the leaves are a powerful metaphor for human lives since Homer’s and Dante’s time, but in the Orient, trees are singing creatures, truly alive, and they pluck the strings of their leaves to produce a fascinating kind of music.

Trees figure prominently in Bringhurst’s work, in his poetry and his essays alike. It is no accident that one of his two prose collections is precisely entitled *The Tree of Meaning* (subtitled *Thirteen Talks* in the 2006 Gaspereau Press edition and *Language, Mind and Ecology* in the 2008 Counterpoint Edition). Time and again, it has been claimed in previous chapters of our dissertation that there is a tremendous coherence to be found in Bringhurst’s thinking as it unfolds over time in both his poetry and his prose. The mind beneath his poems and his essays is exactly the same, after all. And sometimes it does not make much sense to draw a clear-cut line between these two realms of his work, nor does it make any sense at all to compartmentalize his facets as poet, linguist, typographer or cultural historian. The person remains whole and his vocation is the same: learning and sharing what he has learnt with his fellow human beings. Learning is the ultimate vocation of human beings, he says in his essay “The Vocation of Being, the Text of the Whole”. Bringhurst’s love of the woods and trees is something worth remembering precisely in this particular context, in which trees growing in Japan are such an essential part of the texture of section I of *The Blue Roofs of Japan*. In one unforgettable essay entitled “The Persistence of Poetry and the Destruction of the World”, only six pages long, he speaks with awesome reverence of a particular species of pine trees which are thought to be the oldest beings on Earth. A scientist identifies one such bristlecone pine he deems to be the oldest of them all and cuts it to count its rings and write a scientific report about it. The whole enterprise is demented; the loss is irreparable:

¹⁴ Bringhurst adds something else about this bamboo flute: “It is one of the principal instruments of *hogaku*, traditional Japanese music (as distinguished from *yogaku*, “sea music” – i.e., music of foreign origin)”, but this extra piece of information does make sense when we get to section V.

that is mysteriously *one* with the ideas and images – some fusion of form and content. There has to be more to compression in language than writing in short lines. I want *density*. And at the same time, I want something that levitates...¹⁷

It seems to us that this is precisely what Robert Bringhurst is doing in his polyphonic poems. Section I of *The Blue Roofs of Japan* offers a perfect balance of music and sense, the sound enacts the meaning as it were. There is density of meaning, profundity of thought, and also a kind of levity that makes this an enduring, valuable poem, not just for what it says, but also for the way in which it says what it has to say and unveil about the Earth. The lesson is elementary, though. To borrow Bringhurst's resonant words, the lesson can be best summarized in these terms:

I have been listening to the world for barely half a century. I do not have the wisdom even of a young tree of an ordinary kind. Nevertheless, I have been listening – with eyes, ears, mind, feet, fingertips – and what I hear is poetry.

What does this poetry say? It says that what-is is: that the real is real, and that it is alive. It speaks the grammar of being. It sings the polyphonic structure of meaning itself.¹⁸

SECTION II

Being and singing – this is what section II of *The Blue Roofs of Japan* is all about, which may sound simple enough, but is not. At the same time, we will posit the idea that this particular section is also *metapoetic* – i.e., it concerns the very nature and purpose of poetry. Tightly-woven though it is, this poem unfolds through three easily identifiable movements. It opens with water and it closes with singing. This is no accident indeed. As it is a relatively short poem, it might be illuminating for the purposes of our critical analysis to quote it in full from the very beginning. Once again, the indented italics verse lines are those spoken by the female voice:

This music is all about water,
This music is water, this water
she said. How the hollowed wood
is music:
redistributes water and air:
the hollow bamboo
ruffled or clear, how the breath
redistributes the water.
descends: how it pools and pours
The air, like the water, descends.

through the holes in the voice,
through the joints in the body, the stem
of bamboo, through the discontinuities
in the skeleton, knots in the plank
In the unbroken muscle of water,
at the annual branching, nodes
the wholeness of bone,
of nonbeing: not breath but the silences

¹⁷ See Robyn Sarah, "A Dangling Conversation (for multiple voices)", *ibid.*, pp. 218-219.

is the sudden completeness

between breathing: these

of being,

are the song; the rest

is mere singing.

the singing

SP, pp. 180-181.

First thing is facts. “*This music is all about water*”, affirm the opening words of the poem. Now, *this music* is a self-reflexive reference to the poem itself – to *The Blue Roofs of Japan* as a work of art –, but it could also be meant as a reference to *the music of being* (which is plural and polyphonic) that the poem is urging us readers to listen to from the very beginning. Both, this particular poem and *the music of being*, are one and the same thing, in the end. This constitutes a powerful statement on the very nature of poetry Bringhamst is after: “I want a poetry of knowledge and thought, not of opinion – and not of belief, which is merely dead thought, severed from the thinking. Poetry is the musical density of being, but sometimes it is silent, and sometimes that silence is musically still.”¹⁹ It is also a poetry firmly grounded in the essentials of reality, in the real, in *what-is*. While the male voice is saying “*This music is all about water*” in the opening line, the female voice is saying “*This music is water, this water is music*” exactly at the same time, thus emphasizing the potent equation at the heart of this poem: music is water and water is music. The implications are complex: (1) that music is water means that it is necessary and primordial sustenance for us human beings, and also that it is changeable, fluid, ever-flowing; (2) that water is music means that it is capable of singing, and that singing is not the sole prerogative of humans, for the singing is to be heard everywhere we turn to if we dare listen with our whole body. Bringhamst puts it very simply: “Poetry is the language of being: the breath, the voice, the song, the speech of being. It does not need us. We are the ones on need of it. If we haven’t learned to hear it, we will also never speak it.”²⁰

To return to this fundamental *music-water equation* again, there is another important fact that should not be overlooked at all. From the very opening first line, both voices are speaking simultaneously, underlying the importance of the equation being formulated through those words. If we interpret *music* as standing for *poetry* and *water* as standing for *earth*, metonymically as it were, then the fusion of the poetry Bringhamst is after with the world he celebrates in his poems is crystal-clear. His metaphysics is physics; his poems are rooted in the actual, in the real, in the overall orchestration of being he can hear everywhere he turns to look and listen. This fusion is also enacted by the actual merging of the speaking voices in this section. If we think of section I of *The Blue Roofs of Japan*, where the female voice somehow punctuated or echoed what the male voice said with almost the same words, we come to the realization that the true coalescence of the two voices from the start of section II is completely new. Now it is the male voice that steers and the female voice that superimposes its words on the ones uttered by the other voice at certain points. What could be called the *semantic coalescence* of the two texts is simply astonishing: each text makes sense on its own as an independent entity, while at the same time both texts merge into a single unity of meaning. It is as though the parallel texts were two streams of words that merge into one another at certain points to produce a new density of meaning. In other words, in section II of *The Blue Roofs of Japan*, voices are so deeply enmeshed in the fabric of the meaning of the poem that all separation is an illusion or a violence we exert on

¹⁹ See Bringhamst’s prefatory note to “The Book of Silences” in *Pieces of Map, Pieces of Music* (1986), p. 10.

²⁰ See Bringhamst’s essay “The Persistence of Poetry and the Destruction of the World”, *ibid.*, p. 44.

the poem. This is no wonder, since great poetry has to be shaped or orchestrated in forms suitable to its magnitude, and the well-chosen words of this poem form a musical whole in their interpenetration with an impressive naturalness that achieves something of a climax in this particular section.

The true core of the poem is in the second movement though. Now *breath* enters the scene. Breathing is a recurrent motif and concept in Bringhurst's poetry, and this is no accident either. He conceives of his poems as being the fruits of oral composition rather than writing, and he embraces the conviction that all good writing is oral at its root and that poems come truly alive in the voice. Poems are handled by the voice, and the voice is made of breath, air coming out of our lungs with which we handle poems. Voice has its own anatomy. Bringhurst dwells on this idea in this magnificent passage from another brilliant essay:

Texts are things I make and things I read, digest, metabolize. They're also things I frequently interpret, in the very specific sense of giving them their typographic form. But most of all, texts are things I listen to. There are some very real and significant differences between oral and written literature, but I believe that all good writing has an oral root. All writing that is good to read sounds good when read aloud, because its goodness lies in part in its *humanity*. The humanity of a piece of writing is partly intellectual, of course, but it is also partly physical, like the humanity of a shoe or shirt or a shovel. It fits the human body. A good shovel fits the hand and foot, and a good sentence fits the voice, because that is the part of the body we normally use to handle sentences.

The voice has an anatomy, like the arm, the heart, the foot. The voice is made of breath. A sentence or a paragraph that pays no attention to the reach and rhythm of the voice is uncomfortable or painful, like a shoe that doesn't fit the human foot or a glove on the wrong hand. But a sentence that *does* fit the anatomy of voice and breath will touch, through them, some other rhythms of the body: those of the heart and hands and feet, and of the memory and mind. The limbs – the arms and legs – in Greek, are μέλοι [*mélōi*]. That is the root of the word melody in English.²¹

Breath is universal. In Bringhurst's conception of poetry, human beings are not alone in breathing; nonhuman creatures also breathe, and the Earth in its entirety is a gigantic breathing organism. Air breathing is what binds us together then. In strongly parallelistic verse lines, the poet brings the point home: breath *pools* and *pours* "through the holes in the voice, / through the joints in the body, the stem / of bamboo, through the discontinuities / in the skeleton, knots in the plank / at the annual branching, nodes / of nonbeing." Enjambment is crucial here, as some sense units flow nonstop into the following verse line with astonishing naturalness, and repetition through parallelism brings about an incantatory rhythmical effect. Here the reader is back in familiar territory; this is the geography of the human body (of bone, muscle, blood, vein, and voice). The novelty is that the human body is now reunited with the bodies of trees (notice the references to *bamboo* and the *knots in the plank*) and with nonliving creatures (which is what *nodes of nonbeing* probably refer to, though they might as well be meant as a reference to interstices of nonbeing in living beings). In other words, breath is descending through the bodies of every single creature on Earth, so that every single thing is truly alive, as the same universal current is running through their veins.

²¹ See Bringhurst's essay "The Vocation of Being, the Text of the Whole", included in *The Tree of Meaning, Language, Mind and Ecology*, p. 47.

In the closing lines of this poem comes a sort of afterthought. It is not the breath that is descending upon all creatures that is the song; it is “*the silences / between breathing*” that are *the song*. “*The rest is just singing.*” (By the way, in “These Poems, She Said”, the prologue poem in *The Beauty of the Weapons*, the poetic voice says: “Love is love of the thing sung, not of the song or the singing”.) This is the final revelation we have been waiting for, even if it was already announced by the music-water equation at the beginning of the poem. At this point, both voices converge into the final message: *the singing* are the last words uttered by the female voice alone, as if echoing the *mere singing* uttered by the male voice. A closer look at the words or text uttered by the female voice from beginning to end reveals something of essence: it claims that music is water, and the other way around; it reminds us of the hollow bamboo (possibly a reference to the *shakubachi*, or endblown bamboo flute mentioned in section I); it relates water to the human body by giving it muscle and bone, or so it seems; and it comes to the realization that in the muscle of the water and the wholeness of bone is “*the sudden completeness of being, the singing.*” *Being* and *singing* are brought together at last, by the two voices, in the closing of the poem. *Everywhere being is dancing*, and singing, and *knowing is known*. This music of Bringhurst is water, and the water is the music he listens to to make his own poems. In this *aesthetics of hearing or listening* to the world with one’s whole body, one listens attentively to what-is has to say and then sings in perfect harmony with the universal singing that is already going on. Silence, however, is also crucial. In *The Book of Silences* Bringhurst impersonates a number of Oriental sages in short lyric poems he calls “dramatic impersonations”; in his poems he gives voice to the thinking and singing of these ancient poet-philosophers, akin to the Pre-Socratics, who were the true beginning of Western philosophy. It is no accident that he should have made up his mind to entitle his book exactly like that. Silence, like sound, is an essential element of *what-is*. For Jan Zwicky, “being is the marriage of music and silence”. In her brief response to Bringhurst’s essay “Singing with the Frogs”, apropos being’s multiplicity or plurality and the importance of listening and singing, she says:

What your account also gets absolutely right, though, is the need some of us feel to make stuff out of words (and/or sound) that affirms our intuition of being’s multiplicity, and our sense of the primacy of aural experience for ontological insight. Being is the marriage of music and silence – by which I mean it’s an ecology. We *are*, anything *is*, when it listens and sings, not when it looks and says. And it listens and sings when it joins the chorus, not when it yells, wheezes, or melodifies its piece without paying attention to how that expression might pleasingly *fit* with-&-against what it’s hearing. Ecologies are elastic, reactive; they are metaphorically spatial; they are coherent. That is: they are lyric structures, as *Lyric Philosophy* (Toronto: U of Toronto P, 1992) explicates this concept. This is why I think it’s important for philosophers to re-learn to think lyrically: they will never recapture the ability to perceive the world if they don’t. And to the extent that they misperceive it, and champion techniques that foster misperception, they are complicit in the destruction of beauty that exists here and now.²²

In an important recent essay entitled “Canadian Primal: Five poet-Thinkers Redefine our Relationship to Nature”, critic Mark Dickinson dwells on the common ground trodden by a group of five poets (Dennis Lee, Don McKay, Tim Lilburn, Jan Zwicky and Robert Bringhurst), all of whom appear in Tim Lilburn’s anthologies *Poetry and Knowing* (1995) and *Thinking and Singing* (2002). This essay is important for it tackles the fact that Bringhurst belongs among a group of other four poets that are also concerned with thinking and singing through poetry as a way of accessing a more organic form of truth. Most of them

²² See Jan Zwicky’s essay “Being, Polyphony, Lyric: An Open Letter to Robert Bringhurst”, published in *Canadian Literature* 156 (Spring 1998): 182-183.

were present at the colloquium on polyphony held at Trent University in the autumn of 1996. They are no recognizable poetic school, with identifiable program, and yet they constitute Bringhurst's literary generation. Mark Dickinson wonders what might bring them together though. He comes to the conclusion that they are poet-thinkers, or thinking and singing poets:

What brings them together? Consider the titles of Lilburn's two anthologies, which introduce them as a group, *Poetry and Knowing* (1995) and *Thinking and Singing* (2002), or Zwicky's 2003 book *Wisdom and Metaphor*, titles that suggest that these poets are really "poet-thinkers." While they are all university educated and philosophically engaged, this doesn't mean that they simply cut and paste complex ideas from discursive prose into verse. Each of them has stumbled onto *a way of writing that can be said to think poetically through a dance of ideas, images, sounds, and feelings that enact connectedness*; each, according to critic Stan Dragland, "would say that *their thinking is purest when it takes the form of poetry*."

This is a major undertaking. They have broken through a rigid division in Western thought that has effectively kept thinking and singing separate from each other for hundreds of years. We've come to associate thinking, for example, with such legitimate, muscular vocations as mathematics and scientific investigation. Singing, on the other hand, has been shackled to all that is considered secondary to the ascent of the rational mind: values, emotions, ethics, beliefs. The thinking and singing poets, as we might call them, have orchestrated something of a family reunion between literature siblings separated for centuries.²³

SECTION III

Littera scripta manet, said Horace almost twenty centuries ago. That is: *the written letter remains*, it sees the light of day with the vocation of being durable. Great or immortal poetry is that which also seeks to stand the test of time and usually succeeds in fulfilling its vocation. There are several ways of reaching a good understanding of the structure and meaning of the third section, or geometrical centre, of *The Blue Roofs of Japan*. One logical and rewarding way is to think of section III as being *an essay in miniature on the origins of writing*. Whereas section II was concerned with breath, speech and singing, this particular poem now under scrutiny dwells on the nature of writing and the singing that poetry is in Bringhurst's view. It comes as no surprise that this should be the natural progression from one section to another, for speech comes before writing: speech existed long before it was discovered that the human voice could be represented by symbols called *letters*. Elsewhere, Bringhurst has attempted a similar undertaking in prose: *The Solid Form of Language. An Essay on Writing and Meaning* (2004), that jewel of a book-length essay contained in a beautifully designed book made by the author himself and Andrew Steeves at Gaspereau Press, is a brief history of writing and script systems that begins with the interpretation of animal tracks on the ground. In Bringhurst's view, humans have no monopoly in meaning, and hence no monopoly in reading or writing either. From a purely anthropocentric view, it seems that language is an exclusively human phenomenon, but every single creature, living and non-living, on this earth speaks their own language. Language itself is but one more thread in that complex mesh of living things and meaning. Thus, Bringhurst is well aware that the whole world is alive with nuances of meaning as if it were a book of gigantic proportions in a state of permanent flux or perpetual change. Human language is but a tiny thread in the

²³ See Mark Dickinson's essay "Canadian Primal: Five Poet-Thinkers Redefine Our Relationship to Nature", published in *The Walrus* (Toronto) 6.5 (June 2009): 62-65.

living fabric of the whole. *The Solid Form of Language* opens precisely with these profound reflections on the nature of meaning, listening, reading, speech, writing and language:

Drop a word in the ocean of meaning and concentric ripples form. To define a single word means to try to catch those ripples. No one's hands are fast enough. Now drop two or three words in at once. Interference patterns form, reinforcing one another here and canceling each other there. To catch the meaning of the words is not to catch the ripples that they cause; it is to catch the interaction of those ripples. This is what it means to listen; this is what it means to read. It is incredibly complex, yet humans do it every day, and very often laugh and weep at the same time. Writing, by comparison, seems altogether simple, at least until you try.

Writing is the solid form of language, the precipitate. Speech comes out of our mouths, our hands, our eyes in something like a liquid form and then evaporates at once. It appears to me that this is part of a natural cycle: one of the ways the weather forms on the ocean of meaning. What else are the words we drop like pebbles in that ocean if not condensing droplets of evaporated speech, recycled bits of the ocean of meaning itself? Yet language can also solidify – into iridescent, sharp, symmetrical crystals, or into structures more like hailstones or shale beds or mud. In solid as in liquid form, the intersecting meanings may reinforce each other or rub each other out.

To bring the metaphor ashore, writing is language *displaced* from the mode of immediate gesture or speech to the mode of the memento – something like the seashells and the driftwood and the footprints on the beach. Writing is leftovers – but of a kind some people prize as highly as they do the original meal or parent organism itself.

And what is language? Language is what speaks us as well as what we speak. Through our neurons, genes and gestures, shared assumptions and personal quirks, we are spoken by and speak many languages each day, interacting with ourselves, with one another, other species, and the objects – natural and man-made – that populate our world. Even in silence, there is no complete escape from the world of symbols, grammars and signs.²⁴

Convinced that human language itself is part of the living mesh of things, Bringhurst explores the way humans have no monopoly on meaning, or reading and writing for that matter. Plants and animals have also their own way of leaving palpable signs in the earth, the home all beings share. What lies beneath all attempts at communication is an immense reservoir of meaning we all draw on in search of the ultimate sense of *being*. Whereas languages are a *natural* or spontaneous secretion emerging from the human body and mind, most prominently through breath, forming families in much the same way animals and plants do, scripts are *invented* highly organized and abstract systems conceived as ways of reducing the manifold nuances of the languages they serve to a manageable repertoire of symbols with which to convey meanings to others. Needless to say, scripts do not exhaust the immense possibilities or richness inherent in languages, which are complex living organisms. Like languages, humans, plants or animals, scripts are also grouped under different categories or species, and are also prone to change, evolve or even become extinct with the passage of time. At this point, it might be no exaggeration to affirm that section III of *The Blue Roofs of Japan* is the perfect companion poem to *The Solid Form of Language*, since both of them dwell on the nature of writing with astonishing economy and intense lyricism. Here it does not make sense at all to draw a clear-cut boundary between his poetry and his prose, for both works testify to Bringhurst's masterly command of the English

²⁴ See Robert Bringhurst, *The Solid Form of Language. An Essay on Writing and Meaning*, Gaspereau Press, 2004, pp. 9-10.

language, to his legitimate ambition to try to understand what language is from different standpoints, and to the absolute coherence implicit in the development of his thinking over time.

As pointed out above, section III of *The Blue Roofs of Japan* is an essay in miniature on writing. Now, there are at least two clearly identifiable parts in this poem. The first part concerns the birth of writing at the time of the Neolithic Agricultural Revolution, which brought about or coincided with the shift of hunter-gatherer societies to ones where farmers and herders prevailed. The domestication of plants and animals was parallel in time to the domestication of language through writing:

Writing is planting.
Writing is born in the lands of wet-farming.
The field prefigures the table and page.
The garden prefigures the table and page.

Is a woman's body

Writing derives
from the domestication of water.
Rain and the sea
are the mothers of letters.

the garden? Writing descends.

Rain and the sea,

rain and the sea

The mind of the scribe
moves like a long-legged waterbird,
stoops like a rice-farmer, steps like a crane.

are the mothers of letters.

Rain and the sea are the mothers of letters.

SP, pp. 182-183.

If the point of departure in section II was the equation *music is water*, here Bringhurst stumbles upon the intuition that “*writing is planting*”, and then he goes on from this potent equation and builds on the implications of this simple metaphor. Hence, with an astonishing linguistic economy, the opening four verse lines of this poem encapsulate a succinct account of the origins of writing. That it is “*born in the lands of wet-farming*” is only a reminder that writing was born in the late Neolithic, at a time when the Agricultural Revolution created the necessary preconditions for the birth of writing as a useful tool in the management of the earth’s resources. A huge degree of sophistication in the realms of political and social organization was required as an essential prerequisite for the emergence and sustaining of writing as such. In that context, the fields and gardens cultivated by those early farmers who had stopped wandering from one place to another were the perfect physical incarnation of two basic tools associated to writing and literacy: the table and the page. The thought occurs that the resemblance is quintessentially of a geometrical nature. Thus, both the field and the page are square- or rectangle-shaped figures, but also both of them bring some sort of order to plants and to letters: the rows of plants resemble the neat arrangement of letters and words on the page. What is interesting in Bringhurst’s statement, though, is that writing is born out of the ground itself, it is a natural secretion coming out from something so real and tangible as “*the lands of wet-farming.*” In other words, the act of writing on a page is not dissimilar from that of planting plants in a field or a garden, which is expressive of Bringhurst’s embracing an organic or telluric view of writing (and of language). The female voice suggests yet another possibility when asking “*Is a*

woman's body the garden?" This question has powerful resonances when placed side by side with the notion of Mother Earth, the Greek *Gea*, and the female creative force associated to the earth's fertility in a number of myths from different ancient civilizations. "Writing descends", like "breath or water descends" in section II, says also the female voice. The subtle echoes of intertextuality that bring all five sections of *The Blue Roofs of Japan* together are inescapably present. In addition, the *field* or the *garden* is the opposite of the *wild*, in much the same way *farmers and herders* are the opposite of *gatherers and hunters*. Order intervenes and asserts itself. Nevertheless, speech always precedes writing and script, and Bringhurst embraces no doubt the preeminence of speech over writing:

A script in itself is not a language; it is a system of representation, sufficient to catch some (but never all) of a language in its net. Human language, for its own sake, has no need of being written so long as it is spoken. Languages can and do attain at least as much sophistication, and as great a pitch of eloquence, in oral cultures as in cultures rich in printed books. And for ninety-five per cent of their time on earth, members of the species *Homo sapiens* evidently felt no need for the managerial control over language that a writing system permits. Still, language can and does adapt to writing. Just as plants and animals adapt to farming and ranching.²⁵

Thus viewed, it may seem that writing brought about only a deadening effect on humankind's sensibility and on their way of interacting with the world, which is obviously not the case. Writing certainly entailed a domestication of language, which was somehow in a state of absolute wildness, inasmuch as it reduced its manifold nuances to a manageable repertoire so as to codify, stabilize and record the eel-slippery nature of meaning, which is flowing from all directions in the world of the real. Even if writing is said to have been born to serve the pragmatic purposes of an agrarian society which was in desperate need of setting things clear and in order through the durable record writing provided, at some point *literary writing*, as Bringhurst himself points out, emerged with a subversive spirit that had nothing to do with the control and managerial purposes of writing as such, even if literacy creates the isolated self who writes. Again, in *The Solid Form of Language*, Bringhurst says something to this effect:

Reading comes first. The reading of tracks and weather signs is a fundamental mammalian occupation, practised before primates started walking on their hind legs, much less using hands to write. And writing, in a sense, is always on the verge of being born. All of us who speak by means of gesture, or who gesture as we talk, are gesturing toward writing. But it is a rare event for instincts such as these to crystallize into a system that can capture and preserve the subtleties of speech in graphic form. Such a system can only mature within a culture prepared to sustain it. Starting from scratch, with no imported models, people have made the shift from oral to literate culture at least three times but perhaps not many more than that. In Mesopotamia about 5,000 years ago, in northern China about 4,500 years ago, and in Guatemala and southern Mexico perhaps 3,500 years ago, humans created a script and a scribal culture, apparently without imported models of any kind.

In each case, the writing began with pictures – which, as they came to stand for words and then for syllables, grew increasingly abstract. In each case, the originating society was already highly organized, with a heavy investment in agriculture, architecture, social institutions and political centralization. And in each case, so far as we can tell, writing was first used in the work of political, economic or religious administration. Its use for literary purposes came later.

²⁵ See Robert Bringhurst, *The Solid Form of Language. An Essay on Writing and Meaning*, pp. 12-13.

Writing *in the literary sense* is one of the world's most solitary crafts, but it is only pursued on the margins of highly organized and centralized societies.

Literature – meaning storytelling and poetry – involves the use of language more for purposes of discovery than for purposes of control. It is a part of language itself: present, like language, in every human community. There are no natural languages without stories, just as there are none without sentences. Yet literature is not the cause of writing. Literature in the written sense represents the triumph of language over writing: the subversion of writing for purposes that have little to do with social and economic control.²⁶

And in another memorable response to Bringhurst's essay "Singing with the Frogs" (the other response was Jan Zwicky's essay, from which we have already quoted above), Sean Kane reflects on polyphony, on the management by man of the earth's resources, on the notion of man as *measurer of all things*, stemming clearly from the philosophy of Plato and Aristotle in his view, as well as on the profound implications of the Agricultural Revolution of the late Neolithic and the domestication of Nature. In Kane's view, prior to this revolution the world was a naturally polyphonic and plural place, a sacred space where the interaction between the realms of humans and of gods was still possible. The domestication in several realms that agriculture, farming and writing brought about seemed to have a deadening effect on humans' way of relating to the world. It meant an impoverishment for humankind:

That critique extends beyond Plato and literacy's reduction of plurality to essences – back even to the Agricultural Revolution of the late Neolithic which sponsored the idea that the natural world was something to be managed by man the farmer according to inventories of hoarding, scheduling and control. [...] Man becomes the measurer of all things. [...] Before *the Agricultural Revolution and its domestication of plants, animals, minerals*, and, arguably, *the domestication of language through writing*, nature was accepted as polyphonic, emergent, the place of the Gift. For hunter-gatherer civilizations, reality is plural and at minimum two.²⁷ [Italics mine.]

Turning back to Bringhurst's poem, writing is born of the domestication of water precisely because water is used to make the fields fertile and produce good crops. Water is then the primordial element out of which everything comes, including *a man-made thing* like writing, which belongs among the realm of what the Greeks called *techné*. The elemental units or atoms of writing are letters; their mothers are *rain and the sea*. This sounds like an example of mythical thinking: vertically-flowing rain falls down into the horizontally still sea and out of their union emerge the letters of writing as a result. Which is tantamount to saying that water is also the mother of letters, for rain and the sea are ultimately made of water. Any typographer would define the word *letter* in altogether different terms. This is Frederic Goudy's objective technical or scientific definition of 'letters' in Chapter I, "What Letters Are", in his book entitled *The Alphabet*, p. 9:

A LETTER is a symbol, with a definite shape & significance, indicating a single sound or combination of sounds, and providing a means, through grouping, for the *visible* expression of words – that is, of thoughts.

Originally, letters were adaptations of natural forms employed in picture-writing, but by a process of evolution, [actually degradation,] they have become arbitrary signs with little resemblance to the symbols from which they are derived. These arbitrary shapes have passed through their periods of uncertainty and

²⁶ See Robert Bringhurst, *The Solid Form of Language. An Essay on Writing and Meaning*, pp. 14-15.

²⁷ See Sean Kane's essay "Polyphonic Myth: A Reply to Robert Bringhurst", published in *Canadian Literature* 156 (Spring 1998): 184-192. See, in particular, p. 186.

change; they have a long history and manifold associations; they are classics, and should not be tampered with, except within limits that just discretion may allow.

An ornamental form once found is repeated, the eye grows accustomed to it and expects its recurrence; it becomes established by use; it may be associated with fundamental ideas of life and nature and is handed on and on, until finally its origin and meaning are, perhaps, lost.²⁸

What about the human factor? *“The mind of the scribe / moves like a long-legged waterbird, / stoops like a rice-farmer, steps like a crane.”* Calligraphy (i.e., the art of beautiful, stylized or elegant handwriting or lettering with pen or brush and ink) has always been highly revered in the Far East, for it involves the correct formation of characters, the ordering of the various parts, and the harmony of proportions. This is no minor undertaking. And the scribe works not just with his mind but also with his hand, which holds the brush or the pen, which makes the invisible thoughts simply and elegantly visible on the page. He serves his vocation with the methodical concentration with which farmers plant their rows of rice on *the page of the field* and with the same elegance and naturalness with which birds walk and leave their own footprints on the ground, because, according to Bringhurst, “Writing begins with the making of footprints, the leaving of signs. Like speaking, it is a perfectly natural act which humans have carried to complex extremes.”²⁹

Languages are natural organisms that survive in a healthy state as long as they are spoken by humans. In other words, speech is the natural state of human languages. They do not need writing, which is a form of human technology born in evolved societies for pragmatic, managerial and control purposes. This inevitably reminds us of Ezra Pound’s famous words that *technique is the test of a poet’s sincerity and honesty*, though in this particular context *technique* means something else. At some point in his life, the Modernist master also took an interest in the technology of writing; he devoted much time, energy and attention to the late Fenollosa’s papers on the ideographic nature of Chinese characters. The pictorial nature of those characters reminded him of a simple thing: maybe they were not that removed from the things they represented, maybe they were not completely arbitrary stylizations of the objects they named. This was crucial for the basic tenets of Imagism which he propounded in the first decade of the twentieth century; Chinese characters were poems in themselves, as it were, for their pictorial quality was a direct evocation of the thing named.

Bringhurst might have also found nourishment for his own interest in typography in the example set by Pound. This comes as no surprise in the case of a passionate lover of books, libraries, and, above all, languages. One feels tempted to affirm that language is what defines *Homo sapiens* as quintessentially human, and that it is language that keeps us

²⁸ See Frederic W. Goudy, *The Alphabet and Elements of Lettering*, New York: Dover Publications, 1963, p. 9. Similarly, in *A Short History of the Printed Word*, 1999 (2nd ed.), pp. 22-23, Warren Chappell and Robert Bringhurst define the concept in these terms: “The symbols that compose an alphabet are phonograms. This means they stand for speech sounds, not for objects or ideas. As writing systems go, they embody a extreme and convenient state of simplification, evidently first achieved by the Phoenicians and the Greeks. Other kinds of writing include syllabic scripts, such as those in use for Sanskrit, Hindi and Cree; consonantal scripts, including those of Arabic and Hebrew; and logographic scripts, such as those used for Chinese, classical Mayan and early Egyptian. In reality, all the systems humans use are impure and imperfectly consistent.” And in *The Solid Form of Language*, Bringhurst himself says “Writing, as Leonard Bloomfield wisely observed, is “an outgrowth of drawing.” [...] *Writing is abstract*. Pictures can be made by playing games with writing, but in writing itself no important pictorial content remains. In Eric Gill’s famous phrase, “letters are things, not pictures of things.” Some very eminent non-readers of Chinese have wanted to think otherwise, but this is true for Chinese characters as well as for Latin, Cyrillic and Arabic script.” (p. 16)

²⁹ See Robert Bringhurst, *The Elements of Typographical Style*, chapter I, “The Grand Design”, p. 18.

humans apart from the rest of creation, as it were. Of course, this is only an egoistic, anthropocentric and grossly simplified view of the matter. Indeed, Bringhurst has spent a lifetime studying language as being something much larger than this: “language is actually part of the fibre of which life itself is spun”³⁰, he says. And in the preface to *The Calling: Selected Poems 1970-1995* (1995), Bringhurst claims that he would like to learn “*all the words and grammars in the world.*” If he works with words by the way of speech and writing, with mouthfuls of live air and handfuls of frozen symbols, then it is only natural that he would feel the need to explore language in its manifold manifestations, from as many different points of view as possible. Convinced though he is of the precedence of speech over writing, that oral literature is as rich and nourishing as the literature of literate cultures, Bringhurst is also an untiring life-long student of languages, a skillful translator from a number of modern and classical languages, and an expert typographer on the international scene. The poet, the linguist and the typographer are one and the same person, though, one that has spent a whole lifetime among spoken and written words. Thus, in the foreword to his impressive *The Elements of Typographic Style*, the author expresses his love of and passion for typography in the following enthusiastic terms, suitable to the voice of a humanist:

Typography is the craft of endowing human language with a durable visual form, and thus with an independent existence. Its heartwood is calligraphy – the dance, on a tiny stage, of the living, speaking hand – and its roots reach into living soil, though its branches may be hung each year with new machines. So long as the root lives, typography remains a source of true delight, true knowledge, true surprise.³¹

In the second part of section III, we encounter a powerful statement on both the nature of poetry and on Bringhurst’s own poetics. Two elegant movements for the mind are distinguishable though. In the first one, the poetic voice evokes not without a certain degree of nostalgia the way things went with hunters-and-gatherers civilizations. There was a time when there was room only for speech, when humans did not know that there was such a thing as writing to domesticate both water and language. Humans were nomads and so they could only take with them light luggage – air in their lungs for live speech which did not need to be recorded on stone, bamboo, papyrus or paper. With the emergence of fixed dwellings, there was an urgent need to set things in order and writing proved a most useful tool in the domestication of the earth. In the way plants and animals were already treated, farming and ranching had already prefigured this domestication. Hands are dangerous in a way feet are not, says Bringhurst in his essay “Wild Language”. Hands make tools and tools may prove to be dangerous in our interaction with the earth. One needs only to breathe through their feet to realize “*we don’t own what we know,*” in Don McKay’s words, which give voice to a committed form of ecological awareness. With the Agricultural Revolution of the late Neolithic, writing took control over the state of affairs. The millennial war being waged between those who think that they have a right to exploit the earth’s resources because the world belongs to them and those who think that they belong to the world had just possibly

³⁰ In *The Solid Form of Language. An Essay on Writing and Meaning* (2004), pp. 10-11, Bringhurst says: “Like other creatures, humans are heavily self-absorbed. We frequently pretend (or self-righteously insist) that language belongs to humans alone. And many of us claim that the only kind of human language, or the only kind that matters, is the kind that is born in the mouth. The languages of music and mathematics, the gestural languages of the deaf, the calls of leopard frogs and whales, the rituals of mating sandhill cranes, and the chemical messages coming and going day and night within the brain itself are a few of the many reminders that *language is actually part of the fibre of which life itself is spun.* We are able to think about language at all only because a license to do so is chemically written into our genes. The languages we are spoken in are those for which we speak.” [Italics are mine.] Martin Heidegger’s notion that *die Sprache spricht* (*languages speaks*, through our lips and through our hands) resonates powerfully beneath Bringhurst’s words in this quotation.

³¹ See Robert Bringhurst, *The Elements of Typographic Style*, 1999 (2nd expanded and revised edition), Foreword, p. 11.

begun. Greedy humankind would know no limits in its management of what magnanimous earth had to offer humans for their comfortable sustenance and survival. However, hunters and gatherers still breathed through their feet; they did not rewrite or erase the earth under their hands:

When you next see the hunters,
say to the hunters:
O say can you see
how the earth is rewritten
under our hands
until it says nothing?

Can you see?
Can you see how the earth is re-
written?

SP, pp. 182-183.

This resonant constellation of words resonates even further into the recesses of meaning of *The Blue Roofs of Japan* when placed against the words of one of the two quotes or linguistic thresholds with which Bringhurst prefaces *The Elements of Typographic Style*. The words are lifted from Kimura Kyūo's *Kenjutsu Fushigi Hen* [*On the Mysteries of Swordmanship*], a work composed in 1768:

— Everything written symbols can say has already passed by. They are like tracks left by animals. That is why the masters of meditation refuse to accept that writings are final. The aim is to reach true being by means of those tracks, those letters, those signs – but reality itself is not a sign, and it leaves no tracks. It doesn't come to us by way of letters or words. We can go toward it, by following those words and letters back to what they came from. But so long as we are preoccupied with symbols, theories and opinions, we will fail to reach the principle.
— But when we give up symbols and opinions, aren't we left in the utter nothingness of being?
— Yes.

The interaction between the ripples formed by the words of both Bringhurst's poem and Kimura Kyūo's quote is fruitful and enlightening. Both texts converge into *nothingness*. Language is not an end in itself, reminds us the Japanese sage, but a protective film that may help humans access the essence of things, of *what-is*. It is woven with signs, but signs are nothing more than signs, a replacement of the real. When all signs and symbols are left behind, the self enters the realm of pure being, *the utter nothingness of being*. Silence is preferable to language then; we only need to listen to the world with open eyes and ears. The *nothing* Bringhurst's poem tackles is of a very different nature, though. That "*the earth is being rewritten / under our hands / until it says nothing*" means that the way we relate with and exploit the resources of the world is not morally or ethically the right path to follow. The earth is being silenced, deprived of her own voice, because of our greedy and egoistical view that it belongs to man, *the measurer of all things*. Somehow, the poet is asking his fellow humans to stop for a while and think about the way they relate to the world to which we belong, to the mesh of living things of which we are but a tiny part, no more than that.

In the second movement the herders are acknowledged as having provided humans with the *metres* of poetry, but humans seem to quite have forgotten them. Then, the speaking voice encourages the person it is addressing to ask the hunters to teach us humans the same old song again:

Say to the hunters: The herders
 have taught us the meters, but we
 The herders have taught us
 have forgotten. Say to the hunters:
 the meters, but we have forgotten.

Teach us a song
 Say to the hunters:
 as subtle as speaking, teach us
 The mothers of rhythms
 a song as lean and as changeable
 are rain and the sea.
 as the world.

SP, pp. 182-183.

These words lay themselves as a bridge between section III and section IV, which is a meditation on the poet's function or role in human societies and on his potential immortality. They constitute a crystal-clear and powerful statement on Bringham's poetics – i.e., his view of the ultimate nature of poetry, or the kind of poetry he is after. The poetic message is emphasized through a simple device – repetition by the way of alliteration and parallelism. The song the speaking voice is asking to be taught is (1) “*as subtle as speaking*,” that is to say a poetry characterized by the naturalness or spontaneity of speech, and also more the product of orality than of written composition, and (2) “*as lean and changeable as the world*,” i.e. a poetry born out of the living and actual world, mobile and fluid, capable of changing with the world, a poetry with no superfluous ornament and marked by simplicity, clarity and elegance. This is the new song Bringham wants to learn to sing and the one he is singing right now in *The Blue Roofs of Japan*. Once again, the poem turns self-reflexive for a while; it turns *metapoetic*. Nature is the ultimate source both of writing and poetry; the only source of inspiration is *what-is*. Or maybe *the world itself is poetry*, for poetry is everywhere to be found, and *everywhere being is singing* and dancing to *the rhythms of the rain and the sea*. The female voice reinforces here and there throughout the poem what the male voice says. Precisely at this point, it insists on the fact that water (rain and the sea) are not only the mothers of letters, but also the mothers of rhythms. That is: the rhythm of poetry is based on the rhythms of the natural world.

In his essay “Canadian Primal: Five Poet-Thinkers Redefine Our Relationship to Nature”, from which we have already quoted above, Mark Dickinson explores the way the group of five poets included in Tim Lilburn's anthology *Thinking and Singing* are actually propounding a sort of *fluid mode of thinking* in their poetry. To these *singing and thinking poets*, metaphor is of the essence in their writing because it emphasizes the fact that words are multilayered repositories of complex meaning and also a way of gaining knowledge of the world. Metaphor also points to the interconnectedness of reality as a continuum which is emulated by the musical arrangement of well-chosen singing words on the page:

What they do with this speculative mode of thought distinguishes them from other philosophical poets, and qualifies their efforts as uniquely Canadian. They use poetry to think, along with the textures and rhythms, complicated histories, and subterranean energies of particular places: the family farm Zwicky grew up on in northwestern Alberta; Lee and Toronto; McKay and the west coast of Vancouver Island and the Avalon Peninsula. Working with the multiple resonances of words, the binding properties of metaphor, and other resources available to poets but off limits to prose writers, they emulate the nature of interconnectedness on the page.

If the earth is undergoing constant change and transformation, moving like a river through time, then the poet-thinker needs to build what Robert Bringhurst calls “kayaks” of thought to keep up with it; some “lithe, open, agile, portable structures,” not bulky “steamships and apartment blocks of belief.” Following this hunch has led the thinking and singing poets to a number of radical innovations in poetry.³² [Italics are ours.]

Kayaks of thought to move with the earth in its constant flux – this is the kind of poetry Bringhurst is after. One that is flexible, supple, open-minded, agile, rigorous, elegant, transparent, and polyphonic. Indeed, in his impressive essay “Everywhere Being Is Dancing, Knowing Is Known”, Bringhurst claims that verse is rooted in human physiology, poetry is rooted in the body. Then he celebrates the connection between the rhythms of poetry, the rhythms of the body and the rhythms of the Earth: “Linguistic rhythms are rooted in physiological rhythms – in muscle, blood, and breath – which are rooted in the air and in the ground. They answer to the rhythms of the world we inhabit: night and day, darkness and moonlight, summer and winter, wet season and dry. And where are those rhythms rooted? A durable subject for meditation.”³³

SECTION IV

The Blue Roofs of Japan turns *meta-poetic* at some points, and section IV is also *meta-poetic* in the sense that it is explicitly concerned with exploring the nature of the artist’s role in human societies and, in passing, the nature of poetry, which has been the fundamental thematic preoccupation in the previous section. It is possible to identify three distinct parts throughout this short poem for two voices. On this occasion, the female voice punctuates what the male voice says at five clearly identifiable points throughout the poem, by repeating echo-like words already uttered by the other voice. The first part concerns the artist’s function or role in society, the second deals with the nature of poetry, and the third tackles the issue of poetic immortality and the right audience for an artist’s works of art. *Nilhil novum sub sole* – these are not new questions. For centuries on end, the questions *What is poetry?* and *What is a poet?* have been asked time and again by poets, practitioners of this art, and by literary theorists alike. But there are no simple answers to these perennial questions. Most of the time, the emphasis is laid on the fact that poetry has quintessentially

³² See Mark Dickinson’s essay “Canadian Primal: Five Poet-Thinkers Redefine Our Relationship to Nature”, published in *The Walrus* (Toronto) 6.5 (June 2009): 62-65.

³³ Bringhurst, “Everywhere Being Is Dancing, Knowing Is Known”, in *Everywhere Being Is Dancing: Twenty Pieces of Thinking*, p. 28. Bringhurst dwells further on this all-important issue: “Verse in the sense of a measured, repetitive pattern of syllables is scarcely to be found among Paleolithic cultures, though poetry there is usually abundant. Peoples who choose not to domesticate plants and animals typically choose not to domesticate language either. The real hunter-gatherers I have known use language with great attentiveness and care, and they craft it with skill and dexterity – but in their oral literature, they typically accept its evolving structures and textures as part of the terrain, like the ways of animals, the growth habits of plants, and the grain of stone and wood. Sentences move like living creatures through the forest of the body and the mountains of the mind. They are snared when the time is ripe, and may be shared whenever the need or excuse arises. A song or story truly heard is a feast enjoyed, a meal consumed, a strength acquired. Language is not a beast to be yoked and harnessed but an independent being whose powers may contradict or amplify one’s own. // In neolithic cultures, plants and animals are herded more than hunted, and implements are typically of polished stone. More wild creatures are feared, but fewer are seen and fewer are eaten. Peoples who plant crops in orderly rows and put animals into pens, generally speaking, make a garden of language too. Their poets and storytellers domesticate the rhythms and patterns of speech into the forms we know as verse. When cultures begin to *take dominion* over the animal, vegetable, and mineral realms, they ordinarily seek dominion over the fourth kingdom, the realm of language too. Versification becomes, like history, a method of terracing, planting, and harvesting *time*. It becomes idealized language: something not at all synonymous with poetry but not infrequently given poetry’s name.” *Ibid.*, pp. 29-30.

to do with the art of beautifully arranging well-chosen words so as to produce memorable messages that tackle fundamental questions and that seek to survive the test of time. That great poetry is born into this world with this vocation of beauty, truth and eternity seems already to be a truism nobody would hesitate to back up. However, this concept of poetry rests firmly on the Indo-European root of the words *poet*, *poem* and *poetry*, the etymology of which highlights the fact that poetry is essentially made out of words. Bringhurst himself has paid attention to the etymology of the words *poet*, *poem* and *poetry* in languages other than those of the Indo-European family, and has found out interesting things:

The Greek verb ποιέω means to make or to do. The noun of agent descended from this verb, ποιητής [*poiētēs*], means a maker or doer. In the Greek of Aristotle or Plato, it is used to mean poet: someone who makes things out of words. In the *Iliad* and the *Odyssey*, the same word is often used, but never to mean poet. It is used instead to speak of other kinds of craftsmen – metalworkers and carpenters especially – and these are usually described as artisans whose work is graced or guided by the gods. That’s a way of saying that humans can reach out, by making and doing, to realms beyond the human, and that the things humans make or do can have a presence and a value that might also reach beyond the human realm.

The Arabic word for poetry [...] means to know, to realize, to intuit; or to sense, to feel, to perceive. A poet [...] is not a maker but a perceiver: one whose eye or heart or mind is sharp. The Hebrew term for poetry [...] means to sing. [...] so a poet in Hebrew is [...] a singer, not a knower. Anglo-Saxon in this respect is closer to Arabic. There a poet is a *scop*, which means a sentry or a seer... [...] in German he is a *Dichter*: one who sorts and packs or weaves things into order, or caulks the leaks and cracks.³⁴

The poet is *someone who makes things out of words*, but he is also *a perceiver, a knower* and *a singer* when the etymology of the word is explored in depth in other human languages. Poetry is then also a form of knowledge, a way to come to terms with the real in search of insights into *what-is*. But Robert Bringhurst embraces a concept of poetry characterized by a most generous ecological *largesse*. Poetry, he says, is “a property of reality itself”³⁵ and it has nothing quintessentially to do with words. Poetry is part of the living mesh of things, of which language itself is also a tiny part, and so humans have no monopoly on poetry either:

If poetry is in fact a human invention, or a social construct, or a linguistic epiphenomenon only found in certain ritualized or aberrant and unpractical types of human speech, then poetry can tell us nothing much about [...] life and death, and probably nothing much about anything else of serious interest. And if poetry were that, I’d be ashamed and disappointed to be known as a poet and ashamed to have spent my adult life exploring the ways in which poetry works.³⁶

In 1957 or 1958, quite by accident, Bringhurst stumbles upon a classic book by the Spanish philosopher José Ortega y Gasset entitled *La deshumanización del arte* (1925). There he comes across the following definition of poetry: “La poesía es hoy el álgebra superior de las metáforas: “Poetry today is the higher algebra of metaphor.”³⁷ These words stay with him further into his adult life and he finds that this is an ambitious and all-encompassing definition of what poetry is. Bringhurst’s poetry is rich in metaphors, which is no

³⁴ See Robert Bringhurst’s essay “The Silence That Is Not Poetry – and the Silence That Is”, included in *The Tree of Meaning, Language, Mind and Ecology*, p. 305.

coincidence at all, for in his hands they become a potent tool of gaining access into the essence of the real, of *what-is*. As a literary device, metaphor allows the poet to shed light on apparently unconnected realms of reality. Metaphor in poetry is not a way of blurring distinctions between things, but rather a way of highlighting the interconnectedness of reality, while emphasizing the uniqueness of each single thing at the same time. *What-is* is a continuum and distinctions between things and categories are differences we make through language, as Ortega y Gasset himself would put it.³⁸ Canadian poet, philosopher and musician Jan Zwicky has devoted a marvellous essay to this issue entitled *Wisdom & Metaphor*, from which Bringhurst quotes at several points in his essay “The Silence That Is Not Poetry – and the Silence That Is”. According to Bringhurst, a metaphor “asserts the identity “*x* is *y*” in a way that clarifies the vivid singularity of *x* as well as *y*. It clarifies what Ortega could call their *ensimismamiento*, or *in-itself-ness*. The term that Jan [Zwicky] would use is “*thisness*.” “*Thisness*,” she says, “is the experience of a distinct thing in such a way that the resonant structure of the world sounds through it.” Zwicky also says that “A metaphor is an explicit refusal of the idea that the distinctness of things is their most fundamental ontological characteristic.”³⁹ Things are connected to one another in most subtle ways and it is poetry or philosophy that uncovers the intimate connection that binds all things together.

The first part of the poem dwells on the artist’s mundane ambitions – “*a house in the country, a house / in the town, an apartment in history*.” The poetic voice wonders where these ambitions might have possibly sprung from, for it appears that it does not make much sense to devote one’s attention, time and energies to achieving such futile goals, which Bringhurst summarizes with astonishing economy in just three words, *money and jobs*,⁴⁰ in his autobiographical essay “Breathing Through the Feet: An Autobiographical Meditation”, included in *Pieces of Map, Pieces of Music*, 1986. For a poet who is after *a poetry of knowledge and thought, not of opinion*, it is nonsense to pursue the comfortable ease of a house in the country and in the town, or even an apartment in history, which is possibly meant as a reference to poetic immortality. Time and again, Bringhurst has insisted on one simple fact: it is a test of a poet’s seriousness and commitment with his vocation that he should pay due homage to his ancestors, learn from the best that has been thought and said by the masters of different traditions, and try to produce, if he can, valuable works of art to make them stand next to the masterworks of the past. If a poet handles words through his voice, hands and mind, then he should start by paying attention to the achievements of his ancestors. In an article entitled “Fruits of the excavation...”, published in *The Vancouver Sun*, 16 March 1984:

³⁸ “Y es que el mundo que rodea al hombre no se presenta originariamente con articulaciones inequívocas. O dicho de modo más claro: el mundo, tal y como él se nos ofrece, no está compuesto de “cosas” radicalmente separadas y francamente distintas. Hallamos en él infinitas diferencias, pero estas diferencias no son absolutas. [...] Lo primero que el hombre ha hecho en su enfrente intelectual con el mundo es clasificar los fenómenos, dividir lo que ante sí halla, en clases. A cada una de estas clases se atribuye un signo de su voz, y esto es el lenguaje. Pero el mundo nos propone innumerables clasificaciones y no nos impone ninguna. De aquí que cada pueblo cortase el volátil del mundo de modo diferente, hiciese una obra cisoria distinta, y por eso hay idiomas tan diversos con distinta gramática y distinto vocabulario o semantismo. Esa clasificación primigenia es la primera suposición que se hizo sobre cuál es la verdad del mundo, es, por tanto, el primer conocimiento. He aquí por qué, en un principio, hablar fue conocer. [...] Las lenguas nos separan e incomunican, no porque sean, en cuanto lenguas, distintas, sino porque proceden de cuadros mentales diferentes, de sistemas intelectuales dispares –en última instancia–, de filosofías divergentes. No sólo hablamos en una lengua determinada, sino que pensamos deslizándonos intelectualmente por carriles preestablecidos a los cuales nos adscribe nuestro destino verbal.” Ortega y Gasset, “Miseria y esplendor de la traducción”, *Obras completas*, vol. V, Madrid, Revista de Occidente, 1964, pp. 446-447.

³⁹ Bringhurst, “The Silence That Is Not Poetry – and the Silence That Is”, *ibid.*, p. 310.

⁴⁰ Bringhurst writes of “an insatiable white society with the stupidest goals in the world: money and jobs. Not piety, grace, understanding, wisdom, intelligence, truth, beauty, virtue, compassion. None of these.” *Pieces of Map, Pieces of Music*, p. 109.

A5, Pete McMartin gives an interesting account of an interview with the poet. In illuminating words, Bringhurst dwells on the idea that poetry, like science, is a way of investigating what is real in the universe. This is what he admires foremost in the pre-Socratics, who were poets, philosophers and scientists all in one in their approach to *what-is*. Thus, the purity of Bringhurst's calling has a stubborn seriousness about it with which money or jobs cannot interfere at all:

“Poetry is not a very popular commodity in North America,” he says without resentment, “and I think it would be a mistake to assume that it should be. That would be the wrong way to go about it. If I believe, as I do, that poetry should be a way of investigating the scientific and tangible aspects of the universe, then poetry should be very much like the publication of scientific research papers, which usually never reach an audience of more than 200 or 300. I don't see why I should be famous. I don't expect it.”

Bringhurst's poems are infused with the tangible and scientific – biology, mathematics, physics, geology – and in that he feels close to the Greek poets. “I'm a student of the pre-Socratic philosophers because they understood that science and poetry are one thing. Those guys understood that their business was to understand the world. I believe it's my job to try and keep in touch with the past, the dead, to keep history from becoming an enormous burden we cannot lift.

“That's one of the reasons I like living here in this very place. I know that people have been living in this very spot 20,000 years, and they knew what they were doing. It's a good spot.”⁴¹

The second part of section IV tackles once again the nature of “hard” poetry that holds a true fascination for Bringhurst. Echoes from section II are again heard in these verse lines, where the equation *music-water* is invoked once more. The kind of poetry Bringhurst is interested in learning to make is one made of water and music – a poetry whose only source of inspiration is the tangible and real, and a poetry capable of truly singing the *song of the flesh* embodied by Earth itself. An elemental poetry like this emerges from the living soil, as it were, and so *the words are the earth* and the music is the rhythm of water. The fruit of this poetry is a song “*as subtle as speaking*” and “*as lean and changeable as the world*,” as the closing lines of section III intoned. Like a subterranean current water emerges and comes up to the surface as the recurring motif in most of the five sections that make up *The Blue Roofs of Japan*. Therefore, the words “*this music / is all about water*” are also meant as a self-reflexive reference to Bringhurst's poem itself:

Listen: this music
is all about water. The words
This music too
are the earth, and the music
this music too
is water.

SP, pp. 184-185.

The closing movement of section IV analyzes the role of the artist in depth – the question of literary immortality and the question of the right audience for an artist's works of art. To begin with, an artist is “*anyone / who remembers*.” But what exactly is it that he remembers?, we may ask. We take it that it is tradition – i.e., the best achievements by the

⁴¹ Pete McMartin, “Fruits of the excavation...”, *The Vancouver Sun*, 16 March 1984: A5.

masters of the past – that the artist remembers and tries to improve upon. It is against their ancestors that artists have to measure themselves. But, of course, this is but one possible interpretation. There are yet other possibilities. An artist could also be anyone who remembers the old song of the hunters-and-gatherers civilizations, for which the Earth was still a sacred, plural and polyphonic space to which due reverence, admiration and gratitude was paid in exchange for what she gave human beings for their comfort and survival. Whichever the case, in a recent article entitled “In the Wake of Our Ancestors”, a review of Bringhurst’s *Selected Poems* (2009) published in *The Times* (London), August 8, 2009: *Weekend Review* 12, Mark Dickinson describes Bringhurst’s vocation as salvaging “ancient forms of wisdom” that are still relevant in our ferocious consumer society, obsessed with “money and jobs”. The poet is much more interested in taking with him the invaluable insights into reality by ancestors from all times and traditions. In this context, the poet is he who listens to what the world has to teach him by way of lessons and then tries to produce a poetry as subtle, changeable and fluid as the world itself:

Once, while still in his thirties, the poet, translator and typographer Robert Bringhurst described his life’s work as packing out as much “salvageable wisdom” from ancient and indigenous, Western and Eastern traditions as he could carry, preserving it for a future far away from the “central insanities” of technological civilisation.⁴²

And which is the right audience for the artist’s achievements? The answer is simple and straightforward: the artist performs for the gods. *The others* are all negative references and happen to be there quite by accident. They are absolutely dispensable: *eavesdroppers* are not really able to listen to the earth singing, they just overhear reality singing; *boob-squeezers* are not capable of a sensible appraisal of the serious artist’s work; *thieves* are those who steal without acknowledging their sources, which is, of course, an undertaking of dubious morality; and *voyeurs* simply happen to be there looking shamelessly at what the serious artist is trying to do so conscientiously, with all the presence of mind and concentration he is capable of. In producing his art for the gods as the ultimate audience, the artist is looking beyond the short-term ephemeral success and into the realm of immortality, which is sanctioned with the passage of time by posterity, by the generations to come. The requirements that great serious art has to meet are those of excellence and universality. By writing a poetry capable of reaching beyond the realm of the immediate present, the poet is talking to coming generations while at the same time he is reaching beyond the realm of the purely human. Gods are immutable, unchangeable entities populating a realm apart where there are no calendars or ticking clocks. It is a realm of timelessness or of no time, unaffected by the ordinary passage of time. Great immortal poetry gets to be spoken by the gods themselves, in whose tongues there are “no dates and no names,” as if valuable poetry simply were absorbed into an indistinguishable canon of immortal works, a simultaneous constellation much like the one T. S. Eliot envisioned in “Tradition and the Individual Talent” (1919)⁴³. This is tantamount to achieving a form of immortality. The thought occurs

⁴² Mark Dickinson’s review of *Selected Poems*, “In the Wake of Our Ancestors”, *The Times* (London), August 8, 2009: *Weekend Review* 12.

⁴³ These are Eliot’s words on the concept of tradition in his groundbreaking essay: “what happens when a new work of art is created is something that happens simultaneously to all the works of art which preceded it. The existing monuments form an ideal order among themselves, which is modified by the introduction of the new (the really new) work of art among them. The existing order is complete before the new work arrives; for order to persist after the supervention of novelty, the *whole* existing order must be, if ever so slightly, altered; and so the relations, proportions, values of each work of art toward the whole are readjusted; and this is conformity between the old and the new.” T. S. Eliot, *Selected Essays*, London: Faber and Faber, 1986, p. 15.

that Pound insisted that the important thing was to get poetry to be written; it did not matter much who did the writing. In Bringhurst's words,

An artist is anyone
who remembers, it is not you nor me
anyone who
nor the boss but the gods who are watching.
anyone who
For these we perform. The others
are eavesdroppers, boob-squeezers, thieves
or voyeurs, or they work here.

The tongues of the gods include
no dates and no names.
This is the logos.

THIS
is the logos.

SP, pp. 184-185.

So the artist's role is, to put it very simply, to listen to reality and to remember what he has listened to so as to make his own works of art, which inevitably unveil the essence of *being* and participate in *being*. The closing verse lines of section IV speak of the λόγος (*logos*). *Logos*⁴⁴ is the Greek word for *word*, *reason* or *plan*. In Greek philosophy it meant *the reason implicit in the cosmos*, ordering it and giving it form and meaning. The Greek word κόσμος means, in fact, *order*. The idea of *logos* in Greek thought harks back at least to the 6th-century-BCE pre-Socratic philosopher Herakleitos, who discerned in the cosmic process a *logos* analogous to the reasoning power in man. Later, among the Stoic philosophers the *logos* was defined as an active rational and spiritual principle that permeated all reality. With the arrival of Christianity, the word took on new nuances of meaning. Thus, in the first chapter of *The Gospel According to John*, Jesus Christ is identified as "the Word" (Greek *logos*) incarnated, or made flesh. Now, what does the philosophical concept of λόγος have to do with *being* and *poetry*?, we may ask. Bringhurst's poetry aims to reach beyond the tangible and into the essence of things, into the λόγος as it were, that pervasive principle beneath the universe in its entirety. In this context, one is inevitably reminded of Robert Bringhurst's concept of *polyphonic poem* and of Jan Zwicky's response to "Singing with the Frogs":

You say in the first paragraph of § 2: a polyphonic poem is "[a] poem that ... *enacts* and *embodies* plurality and space as well as (or instead of) timelessness and unity." I don't think the parenthetical "or instead of" should be there. What allows *anything* to be genuinely polyphonic, in my view, is – as you say – the conversion of time to space; to the extent that the conversion is successful, the piece *exists as a synchronic unity*, even though it perforce elapses in time as it comes to be.⁴⁵

"*This is the logos*": the final words uttered by both the male and female voice in section IV point to a realm beyond the tangible which is possibly only reachable through polyphonic poetry like the one *The Blue Roofs of Japan* is enacting through the interpenetration of two voices that aim to reach a core of irreducible meaning. Far from contradicting each other, both voices are complementing what each has to say and enhancing the semantic density of

⁴⁴ For more detailed information, see the entry on 'logos' in *Encyclopaedia Britannica*, volume 17, p. 10062.

⁴⁵ Jan Zwicky, "Being, Polyphony, Lyric: An Open Letter to Robert Bringhurst", *Canadian Literature* 156 (Spring 1998): 181.

the poem's statements about the world. The world Bringham envisions is simple and clear as water, and that water is precisely incorporated into the living fabric of his poem. This is possibly the ultimate elegance the poet is looking for when making well-wrought poems that bring *melopoeia*, *phanopoeia* and *logopoeia* together.

SECTION V

With section V of *The Blue Roofs of Japan* we are back to the complexity of the opening piece of the poem. The interplay between the male and female voice is remarkably complex: apart from the mere interpenetration or merging of voices at certain points, there are moments when the fusion yields an altogether new meaning, regardless of what each voice is saying through its text in that precise instant, and there are also moments when each voice speaks alone, in absolute isolation. As a result, the female voice is not just punctuating or echoing what the male voice says, but also giving a fresh point of view on the issue under scrutiny. The overall impression is then one of profundity and density of meaning. Reminiscent in many ways of the *dramatic impersonations* of the Oriental sages essayed by the poet in *The Book of Silences* (originally published as an independent section in *Pieces of Map, Pieces of Music* in 1986, alongside *The Blue Roofs of Japan* itself), as well as of the poems in the sequence devoted to the Pre-Socratics, the closing composition of this polyphonic poem rings with philosophical echoes in its exultant celebration of the unity of all things in the universe. And this fifth piece is indeed a masterwork in miniature, a technical accomplishment, and also the true climax of *The Blue Roofs of Japan* in that it is an invitation for the listener/reader to become one with the world of beauty and perfection – a continuum of distinct things and yet connected entities made out of the basic ingredients or the four elements (earth, water, air, fire) identified such a long time ago by the sharp minds of attentive *perceivers* and *knowers* and *singers* from a number of traditions. Again, metaphor plays a decisive role in conveying what non-figurative language would fall short of conveying: by finding out potent equations beneath the world of appearances, the poet is uncovering subtle connections uniting or tying all things together, and he is also reaching beyond the realm of the human to speak for an audience of immortal, immutable gods. All textual threads and lexical nodes scattered in the previous sections of the poem are now brought together into a perfect circle, a *Gestalt* of dense meaning: water and music, earth and the sky, mountains and the sea, song and singing, and the *logos* are constellated into a perfect picture of calm and stasis which celebrates the endless motion and change of *what-iz*. It all unfolds throughout five simple movements which are analyzed in detail in the following paragraphs.

The circle is a perfect geometrical figure, highly revered as the embodiment of perfection itself since antiquity by astronomers, mathematicians and philosophers alike. The closing piece in *The Blue Roofs of Japan* draws the circle begun in the opening piece into completion: whereas section I celebrated the birth of a new day with the sunrise in the early morning, section V celebrates the unfolding of the afternoon gesturing towards the coming night. Now the circle is complete. Two equations are then celebrated in the simple, transparent, straightforward language of parallelism:

All afternoon, the slow
celebration of these

This music is water,

two equations:

utter exactly the same words, but this time their order is reversed. Whereas the male voice's final words evoke the notion of reality as a set of things marked by separation or distinctness, the female voice's final words stress the concept of reality as a unity or continuum. *There is no progression without contraries*, said the Romantic visionary William Blake in *The Marriage of Heaven and Hell*. It is a truism to say that human and nonhuman beings live in a world of opposites or contraries – light and darkness, sound and silence, day and night, life and death, love and hate. Water and earth are identified as being elements that tie us together while holding us apart at the same time. If they tie us together, it is because they are basic elements out of which everything is made. If they hold us apart, it is because they also embody the geographical distances of continents and oceans which, if vast enough, keep us apart because of the sheer immensity of space. What does space have to do with water or earth?, we may ask. Time and space are also basic elements or threads woven into the living mesh of things in the universe. Throughout history, humans have made their best to try to understand exactly what they are and have produced measurement instruments to ascertain and account for their real nature. Like time, space is also inescapable and real. Space could be said to be even more real than time, for beings (humans, animals and plants) move *in* or *through* space, which has got a sort of tangible texture. By contrast, time is of a different nature, more fugitive, eel-slippery and unreal, and it moves *through* us, in much the same way language moves through us and speaks through our breath and lips. Again, this is only one possible interpretation. There are others, for sure. That earth and water keep us apart might also suggest that the exact combination of these elements in the bodies of *what-is* gives as a result distinct or unique creatures (living and nonliving) on Earth. The proportions of water and earth vary considerably from one mountain, say, to a tree or a river. Their very physical constitution or texture keeps them distinct or apart along the boundless (not infinite) continuum which reality is.

At the heart of this second movement, essentially concerned with the *logos*, is what looks like an enigmatic reference: “*Earthsong and seasong, they say: / the native and foreign.*” The meaning becomes clear when these lines are placed against the “Program Notes” accompanying *The Blue Roofs of Japan* as it was first published in *Lines Review* in January 1986: “The *shakuhachi* is an endblown bamboo flute. It is one of the principal instruments of *hogaku*, traditional Japanese music (as distinguished from *yogaku*, “sea music” – i.e., music of foreign origin).” The enigmatic references to *earthsong* and *seasong* are now crystal-clear: the *earthsong* refers to traditional Japanese music (i.e., one stemming from the living soil or *genius loci* of the place), whereas *seasong* refers to *foreign music* (i.e., music coming from beyond the sea). Let us remember that Japan is an island full of mountains and separated from the Asian mainland by water. But of course, this interpretation does not exhaust the rich resonances *earthsong* and *seasong* treasure within themselves. They are reminders that the earth and the sea are the ultimate source of inspiration of the poetry Bringham is after, reminders that the earth taught us its metres when it started being cultivated in the Neolithic by the earlier farmers, and that the sea, with the regular motion of its waves, had also much to teach us about the rhythm of poetry. Once again, the old song that the earth and the sea teach us is “*as subtle as speaking*” and “*as lean and changeable as the world*” itself.

Ties are not forgotten at all in the third movement of this final poem. As a matter of fact, this third movement is closely linked to the second one. “*What ties us to time and the world / beside us is fire,*” says the male voice. In the female voice's rendering it reads like this: “*What ties us to time and the world / beside us is INSIDE us.*” The word *fire* uttered by the male voice coincides in time with the word *INSIDE* uttered by the female voice. Like water and earth, fire is another fundamental constituent element of reality. The pre-Socratics knew it perfectly well 25 centuries ago. Time is also invoked here; time and space are the essential

matrices inside which human experience takes place and unfolds. Fire is revealed as the element that ties us (this *us*, by the way, we interpret as meaning *human and non-human beings in this world*) to the world and to time as well. In this context, it is also possible to interpret ‘fire’ as pointing to something beyond itself and its physical being: it could well be a symbol for the driving force or passion beneath all things to be what they are supposed or expected to be – i.e., to fulfil their primordial vocation. If the vocation of, say, a tree is to be a tree, the vocation of a human being is to be a human being – or something to this effect says Bringham in one of his illuminating essays, “The Vocation of Being – the Whole of the Text”. Fire is the living sparkle propelling us forward in this *unending process of becoming* or perpetual metamorphosis which life is. Fire also pushes us forward to achieve our dreams and our authentic being, in Heideggerian terms. This is inextricably linked to the idea of humility, of calling, and of gratitude – the reverence and gratitude we owe to show in the face of universal *being*. In any case, what is genuinely new in this third movement of section V of *The Blue Roofs of Japan* is encapsulated in just a handful of resonant verse lines:

The mountains are younger than birds.
The sea when we lived in the sea
was made of fresh water.
No man is not one of these islands.

SP, pp. 186-187.

This is *a history of the world* in almost no time, or in just a few seconds – in the time it takes the male voice to sing these words aloud on its own, while the female voice remains dumb and attentive to what it has to say. The four key words constellated into this illuminating fragment are *mountains*, *birds*, *sea* and *man*, all of which evoke the four elements which the ancients identified as being constitutive of *what-is*. Mountains are made of earth and fire sometimes (in the case of volcanoes); birds are creatures of air; the sea is the embodiment of wild water; and man is a combination of all four elements. Upon closer inspection, this might be a brief account of the geological/biological history of Japan itself: birds existed before the mountains emerged to the surface of land through seismic movements; the sea was the main source of sustenance (a source of *fresh water*) for the people’s survival in traditional societies; and man is conceived as sprouting from the living soil of the islands that make up Japan. Again, this is only one possible reading of these words, and possibly it is not as far-fetched as it seems, particularly when these words are set against the incantatory ones that the female voice has been intoning for a while so as to punctuate this message:

Not counting, nor naming.
Naming, not counting.
Counting, not naming.
Naming and counting.

These words are not superimposed on the male voice’s, but uttered in isolation by the female voice instead. They look like variations on the same theme, which they might be after all, an exemplification of what could be called *a combinatory logic* like the one we analyzed in “Tzuhalem’s Song” (section XI in *Tzuhalem’s Mountain*), where a handful of words appeared in a number of different combinations that were no random arrangement at all. If we posit that *a* = *counting* and *b* = *naming*, this is the overall resulting pattern: (1) not *a*, nor *b*; (2) *b*, not *a*; (3) *a*, not *b*; and (4) *a* and *b*. The implications are profound and worth analysing:

- (1) *Not counting, nor naming.* This is a celebration of utter silence as the best attitude possible towards reality. At a pre-verbal stage in the history of humankind, there was no need for speech or writing either. There was no need to count possessions and no need to name the things humans found in their surrounding world either. There was only room for amazement in the face of the awe-inspiring beauty of the universe.
- (2) *Naming, not counting.* This is a celebration of language as a means of uncovering essences. Language is a word that we will use in selfishly human terms here, even if we are well aware of and share Bringham's intimation that there are forms of language (mathematical or gestural language, for instance) which are non-verbal, as well as forms of language that are not the prerogative of humans. In other words, humans have no monopoly on language either. Communication is a universal right shared by all beings – and by *being*. However, we cannot avoid thinking in human terms. One is inevitably reminded of Walter Benjamin's philosophical meditation on three kinds of language: (a) *divine language*, which is the demiurgus' word – that of God in the biblical Book of Genesis, where naming is tantamount to creating things by uttering words, so that naming *is* creating things *ex nihilo*; (b) *Adamic language*, or language in a state of purity: though not capable of creating things out of the blue, Adamic words are still close to the things they name and are able to unveil their true essence; (c) *post-Adamic language*, or language fallen from its pristine state, in which words no longer unveil the true essence of things and float as if aimlessly amid in the realm of appearances.
- (3) *Counting, not naming.* This is a celebration of arithmetic as a management and control tool. With the Agricultural Revolution of the late Neolithic man becomes the measurer of all things and the Earth becomes a place whose resources he has an inalienable right to exploit and manage as if they actually belonged to him (those were, after all, God's words in his injunction on the sixth day of creation: replenish the earth and govern the fish of the sea, the fowl of the air and all animals on earth). The management of and greedy control over the resources of the earth by means of farming and ranching ran parallel to the domestication of language through language. Thus, naming is not important anymore; what matters is counting. There seemed to be no need to reach beyond the surface of things into their irreducible core of meaning. In a way, the earth was no longer a sacred place where the realms of the human and the divine were close to one another. Benefit was the last goal: the highest priority was counting one's own benefits derived from generous Earth, even if this entailed a rape of our home.
- (4) *Naming and counting.* This is a celebration of the synthesis of idealism and pragmatism, or, to put it differently, a celebration of the reconciliation or fusion of giving things their right names to uncover their essence, on the one hand, and of counting things to set some kind of order upon the seeming chaos of the world. What is the sense in naming and counting after all?, we may ask. Naming is a way of knowing, of reaching into an irreducible core of meaning at the heart of things (essence), whereas counting gives the impression that it is but the expression of man's obsession with owning, with the management of properties and resources on Earth, which we take to be ours by right. Naming vs. counting, or knowing vs. owning. To borrow once again Don McKay's words, "you don't own what you know", which is a form of saying that we need to feel gratitude and respect for everything the Earth gives us.

The fourth and fifth movements of section V are intensely lyrical and beautiful. In the fourth movement, water and earth are celebrated in simple and moving language. *The book of the world* is written in water and earth, not ink, but water has no words, utters no recognizably human sounds. Earth, by contrast, is words and so can be decoded and interpreted by the inquisitive gaze of human beings:

Water is wordless. Earth
is information. Earth is words.
This too is the logos. A journey on foot
cannot be repeated, just as a story
cannot be recited, only retold.

Naming and counting.

SP, pp. 188-189.

Beneath these words, Herakleitos' words πάντα ῥεῖ can be heard – everything changes, everything is flowing all the time. This is a simple affirmation of the perpetual metamorphosis implicit in what is real. The fluidity of reality is something the old pre-Socratic philosopher took for granted many centuries ago.⁴⁶ Feet are the link uniting the human body to the Earth, and so treading on the ground is tantamount to deciphering the characters written on the surface of the Earth, which is information. Of course, feet are not so dangerous as hands are, or so tells us Bringhurst again. Journeys on foot cannot be repeated in exactly the same conditions, for the feet and the Earth change from one minute to the next. The same applies to oral literatures and stories: every single performance or retelling of a story is unique and irreplaceable. Stories, like the feet or the Earth, are also subject to perennial change, which is part of their charm and complexity as well.

The closing fifth movement is a quiet celebration of the four elements and an invitation for the self to become *one with the world*. The four-point constellation of equations is as follows: water-music, fire-laughter, earth-darkness, sky-quiet/wide/blue. What all four equations underline is the idea of union or communion of the self with the world, as well as the interconnectedness of everything in reality. The basis of all four equations is the four basic elements out of which reality is made – water, earth, air, fire. The second term is always a noun, except for the sky, which is qualified by three adjectives. What the final lesson comes down to is that it is necessary to re-learn the essentials of an attitude of reverence, gratitude and humility towards *what-is*:

Facing the water, be music.
Be still facing fire.
Be laughter!
Be laughter.
One. Two. Three.
Facing the earth, be darkness.
Four. Five.
Facing the sky, be quiet, wide, and blue.

SP, pp. 188-189.

The closing verse lines of *The Blue Roofs of Japan* already prefigure a later complex work by Robert Bringhurst, *Elements*, a long poem in seven sections with drawings by Ulf Nilsen, designed and printed by Russell Maret at Kuboaa Press in 1995. In this case, Bringhurst's

⁴⁶ To Herakleitos, fire is the essential material uniting all things and forms the material principle of an orderly universe, the *logos* through all things are interrelated and all natural events occur. The underlying connection between opposites is precisely a significant manifestation of this *logos*: he asserted that the world exists as a coherent system in which a change in one direction is ultimately balanced by a corresponding change in another. Between all things there is a hidden connection, which is tantamount to positing the persistence of unity despite change, illustrated by Herakleitos' famous analogy of life to a river. So all things are in constant flux, regardless of how they appear to the senses.

words are accompanied by four suites of five drawings by Ulf Nilsen realized in paper (through watermarking, wet-pulp embossing, branding, and letterpress printing) by Russell Maret at the Center for Book Arts in New York during August and September of 1995. Section IV of the poem consists of four smaller sections, each devoted to one single element: air, earth, fire and water. Nilsen's drawings somehow emphasize this very notion of elements by being made through a number of different techniques that are inextricably linked to the same elements being celebrated in the sequence (watermarking and wet-pulp embossing are clearly linked to water, in much the same way branding is made possible by fire). At any rate, this only testifies to the coherence of Bringhurst's thinking and singing. Though far apart from one another by almost a decade, *The Blue Roofs of Japan* and *Elements* seem to be imbued with the same spirit, regardless of whether the former is a complex polyphonic poem for two voices in five sections and the latter is a homophonic poem for one voice in seven sections of no less demanding complexity.

Conversations with a Toad

*A Dialogue for a Toad and Human Beings, or
A Meditation on Being, Time & Ecology*

I · INTRODUCTION

Conversations with a Toad (1987) is the second polyphonic poem, or poem for multiple voices, in Robert Bringhurst's literary career. It remains one of the essential poems in the author's living repertory, as its inclusion in his selected poems of 1995 and 2009 makes explicit. Originally available in a special *livre d'artiste* issued in an edition limited to only 55 copies by Lucie Lambert Editions, it was then made more accessible in two subsequent books – *The Calling: Selected Poems 1970-1995* (1995) and *Selected Poems* (2009), which gave the poem the circulation it merits. Of course, this gave a wider audience an opportunity to enjoy this little masterpiece, a long meditative poem in ten parts which explores a fundamental question for the poet – what it means to be alive in a world where the human and the nonhuman are inextricably fused in the living mesh of things. The text remains a true challenge for the reader or hearer, who must pay attention to the subtle nuances of meaning of the words as the poem unfolds in space and in time. As a matter of fact, there is profundity of thought in this complex poem, but there is also simple and elegant language, a terse musicality being spoken through the words with which the poem is woven, and the ancestral voice of a versatile poet exploring a new path – that of polyphony. And there are also the illustrations made by Lucie Lambert: a suite of 11 images that present the toad as if in a state of true metamorphosis, evolving from the realism of the first drawings towards calligraphic brushes that convey the idea of a toad with astonishing economy and elegance. The work is then memorable and inexhaustible at the same time.

Upon a closer inspection of the editorial history of the poem, we learn that *Conversations with a Toad* has known different (three or four) written incarnations over time with the corresponding textual variants. It has been *a work in progress*, a work in the making for a long time. A simple chronological outline of its evolution would look like this:

- (1) “Conversations with a Toad: Excerpts from a Work in Progress”, published in *Border Crossings* (Winnipeg) 6.2 (March 1987): 32. This is the first appearance of the text: three sections (sections III, V and VI) of what the author terms *a work in progress* are published here for the first time. Sections III and VI are revised and section V reprinted in the Lucie Lambert edition that saw the light of day in July of the same year. [See entry C.56 in the bibliography.]
- (2) *Conversations with a Toad*. Vancouver, B.C. and Shawinigan, Québec: Éditions Lucie Lambert, 1987. [25] p. Accordion-fold codex in cloth-covered boards, 26.5 × 34.5 cm. According to the colophon, the edition consists of 55 numbered copies, including the eleven deluxe copies, numbered 1–11. Evidently, fewer than forty copies were bound, including the eleven deluxe. Thus, the regular edition consists of no more than 29 bound copies with the remainder in sheets. All copies are signed by author and artist. The papers were advertised as *bankusa* for the deluxe edition and *kizuki bosho* for the remainder, but in some copies the papers (not easily distinguished) were evidently mixed. Contents: A poem in ten numbered sections, accompanied by eleven woodcuts by Masato Arikushi, from

drawings by Lucie Lambert. [See entries A.33 & A.33a in the bibliography.] Sections III, IX and X (reprinted from the Lucie Lambert edition) were much later published in *Ellipse* (Sherbrooke, Québec) 48 (1992): 113-121, accompanied by French translations by Jacques Brault. [See entry C.61 in the bibliography.]

- (3) “Conversations with a Toad” was again published in a different version in *Descant* (Toronto) 59 (Winter 1987 [published 1988]): 7-14. The whole text was revised from the Lucie Lambert edition. [See entry C.59 in the bibliography.]
- (4) “Conversations with a Toad” was further revised from the Lucie Lambert edition (A.33) – and possibly from C.59 too – in A.47 *The Calling: Selected Poems 1970-1995* (1995), where it was the opening poem of the collection, and then it was reprinted with minor textual variants at all in A.92 *Selected Poems* (2009). Section III of the poem was published in C.72, *The Amicus Journal* 19.3 (Fall 1997): 42, reprinted from A.47. Three years later, some excerpts from the poem were published alongside other excerpts from “Dogen” in B.72, *Poetry Comes Up Where It Can*, edited by Brian Swann. Salt Lake City: University of Utah Press, 2000: pp. 27-28. Finally, the entire poem was reprinted from A.92 in B.114, *An Anthology of Canadian Literature in English*, 3rd ed., ed. by Donna Bennett & Russell Brown. Don Mills, Ontario: Oxford University Press, 2010: pp. 989-1005, alongside “Essay on Adam”, “Leda and the Swan”, “These Poems, She Said”, “The Reader” and “Bone Flute Breathing”, all reprinted from A.92.

As a complete work of art, *Conversations with a Toad* has then gone through three different states, even if three sections of the poem were already published as an anticipation of the entire work in *Border Crossings* in March 1987. Therefore, from now on, we will be referring to only three written incarnations or versions of the text: (1) the 1987 Lucie Lambert edition text, (2) the 1987 *Descant* version, and (3) the *The Calling* (1995) and *Selected Poems* (2009) versions, which are identical. The actual incorporation of three voices takes place only in the third state of the text. It seems to us that the toad’s voice was taken for granted in the first two incarnations of the poem, where the toad is the silent interlocutor (or rather hearer or addressee) of the man’s musings or soliloquies. Thus, in *The Calling*, two voices are present in sections I and IX of the poem: one of them is in roman and the other is in indented italics. Both voices are supposed or expected to speak at the same time. The typographical realization of the Gaspereau edition of *Selected Poems* (2009) is much more agreeable to the eye: one voice is printed in black ink and the other in blue ink. But it seems there is one more invisible voice, speaking its own text, even if it has not been printed on the page. In a short note preceding the text of the poem, the author gives us an important clue for a proper understanding of the work. He says that *Conversations with a Toad* is a polyphonic poem for three voices: *homo sapiens* (black ink), *homo narrans* (blue ink), *bufo boreas* (silent throughout). Whereas *The Blue Roofs of Japan* was a jazz duet or a score for two *interpenetrating voices* in five sections, Bringhamst’s new incursion into polyphony takes on the form of a long ten-part poem for three voices, even if the third, which is the voice of the toad, remains silent throughout the whole poem.

The structure of *Conversations with a Toad* is crystal-clear. If section I is conceived as being a prologue spoken by two voices (both belonging to human beings) and addressed to humans, sections II through X are addressed directly to the toad, who may or may not listen. But this does not seem to matter much; it is not the man or the toad’s concern, for the important thing is that the meditation be spoken aloud for the rest of humankind to listen to the ancestral lessons the toad has to teach solely through its dumb presence. When placed against *The Blue Roofs of Japan*, the new ingredient in *Conversations with a Toad* makes itself discernible: there is in this poem a more acute sense of environmental awareness, an explicit commitment with the idea that it is of the essence that humans learn how to

preserve this Earth. The whole sequence is, thus, an extended, quiet meditation on being and ecology, on time and space, on geological and biological evolution, and on the way humans relate to the nonhuman and the world at large. Relearning gratitude and how to breathe through one's feet, paying attention and due respect to the Earth – this is the primordial lesson the speaking *homo sapiens* and *homo narrans* are trying to deliver through the presence of the silent *bufo boreas* to all those who might be willing to listen.

At this point, it might be wise to go back to the beginning and ask a handful of simple, elementary questions. How did *Conversations with a Toad* come to be produced in the first place? And, for those uninitiated in the world of *livres d'artiste*, who is Lucie Lambert, the final artificer of what remains the most beautiful material incarnation of this poem? In what way do the images produced by the artist and the words uttered by the poet enhance one another? Quebec-born Lucie Lambert is an artist who has been working on the making of *livres d'artiste* since the 1970s. The fruit of a joint-project in which several talented artists were involved, *Conversations with a Toad* was the fifth artbook in her artistic career. In two of her previous art projects she had already produced other remarkable works in collaboration with Governor General's award-winning poets. With prices ranging from \$700 to \$1,700, the market for her work has always been more public than private – it is universities, public art collections and libraries that mostly acquire her unique works, all of them published in very limited editions. All previous works were written in French, so *Conversations with a Toad*¹ was his first English publication, which certainly expanded her audience:

The first artbook was *Frayère* (“Spawning Space”), a limited edition of 35, released in 1976. It contains a series of nine prints presented in a portfolio style with a text by Yvon Rivard. *Le Prince et La Tenebre*, seven etchings in an edition of 48 copies and complemented with a story by François Ricard, followed in 1980; and *Alea*, 10 etchings with poems by Rejean Beaudoin in an edition of 92, was released in 1982. *La Naissance des Nuages* (“The Birth of the Clouds”), another small portfolio of etchings combined with poetry by Jacques Brault, was created in 1984.²

Since the very beginning of her artistic life, Lucie Lambert was determined to present her work in book form, because it gave her images a new dimension and a coherent, compact logic. She usually works on the prints and book design in the first place and then she tries to look for the right text to accompany his images:

Lambert's books are rare because the prints and design of the book come first, then the text is created by talented writers to complement, enhance and expand the artist's vision. The design is coordinated by Lambert and she works with the writers, printmakers and book creators to develop a finished piece of fine art under the editions Lucie Lambert imprint.

She says she chose the *book* as the form for presentation of her work early on in her career because she wanted “a unity, a logic, an integration” of images. She felt that a “bound” collection would show a “rhythm of development ... a sequence that ties together time and space.” The collaboration with poets came about

¹ *Conversations with a Toad* was also a rare, expensive *livre d'artiste*: “Eleven deluxe copies, with a silver miniature sculpture on the cover, top quality paper, and an original drawing cost \$2,000. Forty-four copies without the deluxe accoutrements cost \$1,000.” See Mia Stainsby's review entitled “Humble toad the inspiration for a princely work of art”, published in *The Vancouver Sun*, 6 June 1987: G3.

² See Glennis Zilm's review of *Conversations with a Toad*, published in *Amphora* 73 (September 1988): unpagged “special insert” between pp. 10 & 11.

because she wanted to provide another dimension to her images – a creative vision in a word form inspired by the drawings.³

Needless to say, Lucie Lambert's work is not static at all; it has evolved into the exploration of new paths with the passage of time. Two major influences on the evolution of her work have been the art of Chinese and Arabic calligraphy, which she studied during a three-year stay in Paris in the early 1980s, and the Haida sculpture of the Northwest Coast of British Columbia, to which she was introduced shortly afterwards by Haida artist Bill Reid – a friend and influential man in the life of Robert Bringhurst himself too. From a technical point of view, her work has also evolved towards new forms of expression:

Deux influences déterminantes ont marqué l'art de Lucie Lambert: les calligraphies chinoise et arabe, qu'elle a étudiées entre 1980 et 1983; et la sculpture haïda, avec laquelle elle s'est familiarisée auprès de Bill Reid, à Vancouver, en 1983-1984. On note également une double évolution dans sa pratique de la gravure: après *Frayère* (1976, poems d'Yvon Rivard), où elle avait produit des dessins sur acétate imprimés ensuite à la sérigraphie, elle exécutait pour les trois ouvrages suivants des suites d'eaux-fortes, tandis que les deux derniers titres l'ont amenée au bois grave. Dans le même temps, elle est passée d'un certain paysagisme abstrait (à défaut d'un terme plus juste) à un bestiaire dans le sillage de l'art japonais et de l'art amérindien de la côte ouest du Canada, en particulier pour ses deux derniers livres: *Conversations with a Toad* (avec Robert Bringhurst, en 1987), et *A Thousand Hooded Eyes* (en collaboration avec D. G. Jones, 1991).⁴

Bill Reid, the Haida artist to whom *Conversations with a Toad* is dedicated, is then the personal link that united Bringhurst and Lucie Lambert in the early 1980s. Bringhurst himself had already experience in artistic joint-projects: in 1984 he coauthored *The Raven Steals the Light*, a collection of myths inspired in the trickster figure of Haida mythology, with Bill Reid, who produced magnificent illustrations to accompany the text. That was just the beginning of a long, fruitful friendship: 1992 saw the publication of *The Black Canoe*, an essay on the well-known masterwork by the Haida sculptor which has become a classic in its field; 2001 and 2009 saw the publication of *Solitary Raven*, two different editions of the writings of Bill Reid, accompanied by an introduction and extensive notes on the part of Bringhurst. After Bill Reid and Lucie Lambert, there have been other artists with whom the poet has fruitfully collaborated on new artistic projects. Thus, in 1996 he produced another art book entitled *Elements*, a poem in seven sections accompanied by illustrations by Ulf Nilsen that were printed by Russell Maret at Kubooa Press; and in 2003 he worked with Peter Koch and other typographers, illustrators and printers to produce the monumental book of translations entitled *Parmenides. The Fragments*. To turn to the genesis of *Conversations with a Toad*, the book was somehow made possible by Bill Reid, a friend both the poet and

³ Glennis Zilm's review of *Conversations with a Toad*, *ibid.*, unpagéd insert.

⁴ See Jean-Pierre Duquette, "Écrire l'image", an illuminating essay on *Conversation with a Toad*, published in *Ellipse* 48 (1992): 15-21. The essay focuses on the *livres d'artiste* of Lucie Lambert, including *Conversations with a Toad*. See, in particular, p. 16. The essay is translated into English by Hugh Hazelton under the title "Writing Images", pp. 22-28. This is the English translation of the original French passage quoted above: "Two determining influences that have marked the art of Lucie Lambert are Chinese and Arabic calligraphy, which she studied from 1980 to 1983, and Haida sculpture, to which she was introduced by Bill Reid in Vancouver, in 1983-1984. A double evolution can also be observed in her print-making: in *Frayère*, published in 1976, with poems by Yvon Rivard, she drew directly on transparencies which were then printed on silkscreen; for her next three works, however, she chose to produce a series of etchings; then, in her latest two books, she turned to woodcuts. At the same time, she has moved from a type of *abstract landscape* (for want of a more appropriate term) to a bestiary touched by both Japanese and West-Coast Indian art; this new direction is most evident in her two most recent books, *Conversations with a Toad* (1987), in collaboration with Robert Bringhurst, and *A Thousand Hooded Eyes* (1991), a joint project with D. G. Jones." *Ibid.*, p. 23.

the artist shared at a crucial moment in their lives. It was only fair that the poem, born as a result of Reid's influences on their respective works, should be dedicated to him:

Both Bringhurst and Lambert were working in Vancouver with West Coast artist Bill Reid, to whom this book is dedicated. Lambert came to Vancouver to work in 1983 and, partly because of his influence, was inspired to create the toad images and to work in three dimensional images. [...] Bringhurst was working with Reid on *The Raven* [*The Raven Steals the Light*] when the two began to discuss the collaboration that led to *Conversations with a Toad*.⁵

Lucie Lambert's relation with toads began in 1983, when Bill Reid gave her a piece of wood and asked her "to find the toad in that piece of wood."⁶ That was the true inception point of *Conversations with a Toad*. The book was on display at the Butler Gallery, in Vancouver, from June 11 to 13 in 1987.⁷ That was its official presentation to the world. The book folds out, accordion-style, for a panoramic view, with the illustrations and the text of Bringhurst's poem on facing pages. The technical description is provided by the colophon of the limited edition of Lucie Lambert Editions:

The eleven images were drawn in ink by Lucie Lambert, then cut in wood and printed on *kizuki hosho* by Masato Arikushi in the Sawai Atelier, Vancouver. Thirty-three blocks and forty-three impressions were required to produce the eleven prints.

The typographical design is by Crispin Elsted, who handset Robert Bringhurst's text in Jan van Krimpen's Romulus roman and sloped roman. The text was printed on *kizuki hosho* by Jan Elsted, using an 1850 Super Royal Albion handpress, at Barbarian Press, Mission, British Columbia.

The binding was designed and executed by Pierre Ouvrard at Saint-Paul de l'Île-aux-Noix, Quebec.

There are fifty-five numbered copies, each signed by the author and the artist. Numbers 1 to 11 comprise a deluxe edition, printed on *bankusa* and accompanied by one of the original drawings; the upper cover of this deluxe state is decorated with an inset sculpture cast in sterling silver.⁸

The book was enthusiastically reviewed at the time of its publication as a unique work of art. The only problem was that it was an expensive, limited edition, which dramatically restricted access to the work to just the initiated:

Conversations with a Toad, an Editions Lucie Lambert presentation, is a rare and exciting combination of book-as-art and art-as-book. This limited edition of 11 deluxe copies and 44 "regular" copies is the creation of Quebec-born artist Lucie Lambert, who did the eleven drawings that form the basis of *Conversations with a Toad*. Combine her art with poetry by Robert Bringhurst, winner of the prestigious 1987-88 Guggenheim award for poetry, woodcuts by Japanese artisan Masato Arikushi, typography and printing by Crispin and Jan Elsted of Barbarian Press,

⁶ See Mia Stainsby, "Humble toad the inspiration for a princely work of art", *The Vancouver Sun*, 6 June 1987: G3: "Lambert, 40, started her relationship with toads about four years ago, when she worked under Haida sculptor Bill Reid for nine months in his studio. "He gave me some boxwood and told me to carve a toad, to find the toad in that piece of wood," she says."

⁷ Mia Stainsby, "Humble toad the inspiration for a princely work of art", *The Vancouver Sun*, 6 June 1987: G3.

⁸ The colophon is lifted from copy number 32/55 of the first edition of *Conversations with a Toad*, consulted at the Rare Books & Special Collections at the University of British Columbia University in the summer of 2010.

and binding by Quebec artisan Pierre Ouvrard and the result is an exciting opportunity for collectors because of the unique combination of quality artists.

Each book contains 11 prints from images originally drawn in ink by Lucie Lambert, then cut in wood and hand-printed on kizuki hosho paper by Masato Arikushi of the Sawai Atelier in Vancouver. The 11 images form a related sequence, ranging from a “realistic” toad through increasingly abstract images to a final form that seems to represent a freed toad spirit. These are complemented by the “conversations” of poet Bringhurst”.⁹

What remains an impressive accomplishment is the juxtaposition, or better fusion, of Lambert’s images and Bringhurst’s words. The interplay of both discourses gives a new dimension to the work as it unfolds: “Les deux discours n’en forment qu’un, en vérité, comme une oeuvre à deux voix où les intonations se fondent en transparence, en jeux d’expression assumant tour à tour la ligne mélodique qui se déploie sans effort, dans une évolution parfaitement accordée.”¹⁰ Jean-Pierre Duquette dwells on the way the drawings evolve from *a stark realism* towards *an abstract stylization* which seems to be ultimately inspired by Lambert’s love and practice of calligraphy: the toad drawn with almost photographic precision in the first pages evolves into a few calligraphic brush strokes that give the *idea* of a toad. Simultaneously, Bringhurst’s text seems to adhere to the hard facts of the real all the time, while travelling back in space and time to the biological and geological origins of the Earth. Or as Glennis Zilm puts it, “While Lambert’s images seem concerned with materialization of spirits as she moves from near realism to potentially abstract, Bringhurst evokes spiritualization of matter...”¹¹. As Jean-Pierre Duquette points out,

Les deux dernières oeuvres parues à ce jour (*Conversations with a Toad* (1987) et *A Thousand Hooded Eyes* (1990)) ont en commun, d’une part, la technique utilisée (dans une certaine mesure), et la thématique. En effet Lucie Lambert travaille ici sur bois. Dans *Conversations...*, nous avons onze gravures à partir de dessins à l’encre, tirées en noir et blanc (noirs, gris d’estompe, lavis) selon la méthode japonaise, et qui ont nécessité la préparation de trente-trois blocs, le résultat final étant le fruit de quarante-trois passages. L’ouvrage se déploie comme les livres japonais (“kizuki hosho”). Une évolution très nette apparaît de la première à la dernière planche, de la grenouille immédiatement reconnaissable dans l’essentiel de ses formes à la tache abstraite qui offre l’idée de la grenouille, presque signe calligraphique. Ce processus de stylisation nous entraîne vers une simplification extrême du dessin, dans un

⁹ Glennis Zilm’s review of *Conversations with a Toad*, *ibid.*, unpagé insert. She adds: “This new book is a folio-size, concertina-fold presentation of 26 pages with board covers overlaid with fine mossy-green cloth and decorated with a Korean hankusa paper label. The deluxe edition contains a small silver toad boss (sculpted by Lambert in boxwood, then molded and cast in silver by Harry Sarber of Vancouver) set into a corner of the cover. Binding was done by Pierre Ouvrard of Saint-Paul de l’Île-aux-Noix, Québec. The 8 ½ × 11 prints are done on Japanese kizuki hosho papers and tipped-in by hand onto the accordion folds; the 10-stanza poetry text, hand-printed on the same papers, is tipped-in on facing pages.” And also: “The prints are the work of Japanese-born woodcut artist Masato Arikushi, under the supervision of Noboru Sawai. Thirty-three woodblocks and 43 impressions were required to produce the 11 prints in *Conversations with a Toad*. The classical Ukiyo-e technique allows a delightful subtlety in shading. Only black ink is used, but by brushing the inks onto the wood with a baren (a shaved bamboo reed), the artisan can exploit the surface of the wood and the qualities of the paper. Arikushi achieved gradations in the tones that give depth and boldness despite the simplicity and ruggedness of line in some of the images.” From these quotations, we gather that Zilm focuses on a detailed description of the book as a work of art or *livre d’artiste*.

¹⁰ Jean-Pierre Duquette, “Écrire l’image”, *Ellipse* 48 (1992): 15. This is the English translation: “The two discourses in effect merge into one, like a piece for two voices in which each intonation melts transparently into the other in artistic interplay, each in turn taking up the melodic line that unfolds effortlessly in perfectly harmonized evolution.” *Ibid.*, p. 22.

¹¹ Glennis Zilm’s review of *Conversations with a Toad*, *ibid.*, unpagé insert.

either. I am convinced, though,
Two. Near water, a rock. Where a toad
 that the silences of the toad
had been sitting, an old woman sits.
 are the most important – I mean
She is deaf, dumb and blind. But she hears
 the most meaningful – parts of the poem,
through the soles of her feet, speaks
 filling the dark shells
from under her skirt, and sees
 of the man’s ears and the spaces
through the holes in the palms of her hands.
 between his sentences,

SP, p. 193.

In the context of written poems and stories, a prologue serves a clear purpose: to give the reader/hearer a framework or relevant clues for the right interpretation of what comes afterwards in a particular literary work. Therefore, the speaking voice provides the audience here with some elemental pieces of information concerning the legends on which the subsequent sections of *Conversations with a Toad* are based. Two different and yet related legends are being juxtaposed in section I. In the one, a vermilion-feathered and three-legged crow is said to nest in the sun, whereas the moon is thought to be dwelt by a rabbit, a willow and a toad. This is the kind of mythical account of the coexistence of the sun and the moon up in the sky that one might expect to find in an ancient oral culture, no matter whether on European, Asian or American soil. In the other legend, there are two fundamental ingredients – water and a rock – and, all of a sudden, an old woman is sitting exactly where there had been a toad before, which suggests the kind of metamorphosis present in so many legends around the world. In any case, the old woman is no ordinary woman: she is deaf, dumb and blind, and yet she seems to be alert to everything that is going on around her, and to be responding to the inexhaustible richness of the world with a maximum of intensity – hearing “*through the soles of her feet*”, speaking “*from under her skirt*”, and seeing “*through the holes¹³ in the palms of her hands.*” Possibly she is not exactly human; she might be a goddess or a shaman. Whichever the case, the images that have been constellated in these two legends already evoke tattered visions or fragments from the oral literatures of the native First Nations of North America, and more specifically from the rich cultures of the Northwest Coast in what is nowadays British Columbia. As a matter of fact, the raven and the toad are recurrent totemic animals among the Haida or the Tsimshian, and so they figure prominently in their myths and in their visual art. In addition, the old woman is almost a household name in the poetry of Bringhurst – there is already an old woman in the long poem “Bone Flute Breathing” (first published in *The Beauty of the Weapons*, 1982), in some of the central sections of the third movement in *Tzūbalem’s Mountain* (1982), and in *Tending the Fire* (1985), the exquisite creation myth where the dog’s generosity plays such a crucial role in endowing human beings with all their best attributes. In the early 1980s Bringhurst had already started studying the cultures of the First Nations, whom he considered to be his true ancestors on American ground. *Conversations with a Toad*

¹³ In the Lucie Lambert edition and the *Descant* version, the text says *eyes* instead of *holes*. In addition, the lines of stanzas 2 and 3 are arranged in a slightly different way in these two early incarnations of the poem. In our critical analysis all quotes are lifted from the third state of the text in *The Calling* and *Selected Poems*, where the poem appears in what looks like its final, definitive form. Throughout our essay, textual variants will be noted where relevant in customary form. Of course, in these two earlier states of the poem, the second voice, that of *homo narrans*, is missing.

is therefore rich in subtle allusions to the world of the native people of the land where Bringhurst could at last say he had found a home for himself.

In the second and third movements of section I, light is shed on the possible sources of what the speaking voice calls “these images”. The speaking *homo sapiens* (with clearly autobiographical echoes) has learnt and rescued these fragments or remnants of strange visions from a number of ancestors: “among the Tsimshian and the immigrants – Celts and Chinese.” The subtlety and meaning of these words should not be overlooked. North American Indians of the Northwest Coast, the Tsimshian traditionally lived on the mainland and islands around the Skeena and Nass rivers and Milbanke Sound in what is now British Columbia and in Alaska. Tsimshian is classified as a Penutian language, and the people speak any of three dialects: Niska, spoken along the Nass River; coastal Tsimshian, along the lower Skeena and the coast; and Kitksan (or Gitksan), along the upper Skeena. The traditional economy of the Tsimshian was based on fishing (although they also hunted animals in winter), and the social organization was based on clans and lineages, with each extended family being an autonomous or independent social entity. In this particular context, the Tsimshian are intended to metonymically stand for all the native cultures of North America, whereas *the others* were all immigrants, people coming from afar to invade their pristine land afterwards. This is but one possible interpretation. It could also be that the speaking *homo sapiens* has travelled extensively around the world and learnt stories and legends like the ones evoked in the first movement which contain an irreducible core of truth. What all these myth-making people share is an elemental kind of knowledge: “they don’t know / anything anymore except whatever it is / that everybody knows, and how / to keep silent.” All humans should be endowed with this luggage of elementary knowledge, but people living in industrial societies seem to have forgotten it and no longer know how to keep silent, that is to say, how to listen to the world “through the soles of their feet.” Silence and attention are of the essence if we are to experience what it means to be alive amid so much beauty. The Tsimshian, the Celts and the Chinese – on American, European and Asian ground – have something truly elemental in common: they “carry their other knowledge / shrivelled into undeciphered images, / symbols, souvenirs.” The gradation of these words is no random choice. This other knowledge is the wisdom of their elders in a pre-literate and pre-industrial society, where knowledge of the world was of a very different nature. It was not scientific in the modern sense of the term, but it was not inaccurate either. Arranged into complex and coherent constellations, myths embodied a complex view of the world where there was still room for gods and goddesses and a conception of humans’ relations with the nonhuman characterized by respect, gratitude and common sense. Those myths or images are *undeciphered* for us because we no longer understand the code to interpret them straightaway; they have become *symbols* or stylized simplifications of what used to be a complex mythical ecosystem, or, what is worse, exotic *souvenirs* for the occasional tourist.

At first, the speaking *homo sapiens* intends to speak to other human beings, but then he changes his mind and decides to address the silent toad instead – a much better interlocutor for the *true stories* of his meditations. The “silences of the toad / are the most [...] meaningful parts of the poem”, precisely because they punctuate what *homo sapiens* says throughout this sustained meditation in ten parts, or, as *homo narrans* puts it:

filling the dark shells
of the man’s ears and spaces
between his sentences,
filling his syllables, filling the wrinkled,
stretched and invisible skins of his words,
filling his eyes wherever he looks

and his lungs whenever he breathes.
So the silences of the toad would appear
to be nothing but empty space
if the poem were printed, but
the man in the poem would not know
how to speak it without them.

SP, pp. 193-194.

It is as though the toad were speaking through the lips of *homo sapiens*, pervading every single corner of his whole body (ears, eyes and lungs) and his whole language with a fresh look upon the real world, illuminating his senses, his mind and his heart to utter the words he does utter when faced with the awe-inspiring grandeur of the natural world. Words themselves are conceptualized as being living organisms, covered with wrinkled, invisible skins that are reminiscent of the “*shrivelled and undeciphered images*” which myths have become in industrial societies. As printed on the page, the poem shows two voices in sections I and IX and only one voice in the remaining sections, so that it is necessary to speak it aloud to feel the presence and hear the voice of the toad. Without its presence, the man would not know how to utter the words of this poem, how to deliver an elemental lesson to the rest of humankind.

II

The second poem in *Conversations with a Toad* is a lesson in anatomy in miniature. Strongly reminiscent of an earlier poem like “A Lesson in Botany” (*Bergschrund*, 1975), the speaking *homo sapiens* is looking at the world as territorial recorder and transcribing what he sees in an objective, detached way. The anatomy under scrutiny is that of the toad. First thing is facts, indeed. Throughout three quite symmetrical stanzas, the speaking voice dwells on every single detail of the body of the toad. The resulting portrait or depiction is much more complex than that, though: if the first stanza is a description of the toad’s body, its vital attitude to the world is at the core of the second stanza (the geometrical centre of the poem), and its biological evolution in time is subtly evoked in the third stanza, where the depiction of the toad is brought into completion. The complex textual transformations of this particular poem over time testify not only to Bringhurst’s practice as an exacting self-editor, but also to the fact that this is one of the cornerstones upon which the rest of the sequence is built. Let us have a look at the way the first stanza has changed from one written incarnation to another:

You with so few bones, toad, you must know
what it is to count and bequeath them.
To swallow your own skin. To fetch dinner,
down out of the air and to gobble it,
throbbing. To let in the weather,
taking your temperature from the world.

Lucie Lambert edition, June 1987.

*

You with so few bones, toad, know
what it is to count and bequeath them.
To swallow your own skin. To fetch dinner
down out of the air and to gobble it, throbbing.

To let in the weather, taking
your temperature from the world.

Descant edition, winter 1987.

*

So few bones, toad, you must know
how to count them and give them away.
You can swallow your own skin, and pluck dinner,
still living, out of the air without lifting a hand.
And you let in the weather, taking
your temperature from the world.

Selected Poems, 2009, p. 194.

The differences between the two first states of the text are minor changes related to line arrangement, but the third version varies considerably from the previous ones. The shift is towards a simplification of the language and towards smoothly-flowing verse lines. Three aspects of the toad's body are highlighted in succession: its bones, its tongue and its skin. The austerity of the toad is to be found in its own skeleton, which is almost non-existent because it has very few bones. The speaking voice emphasizes the fact that the toad is ready to give them away generously when the moment comes for the little animal to get rid of its own body. For hunting and feeding purposes, the toad uses a sticky tongue to catch the little insects or animals on which it feeds for its sustenance. These seems to be an efficient elegance in the hunting method of the toad, for it has only to unfold its tongue to catch its prey still alive and flying in mid-air. And, lastly, its rough skin is porous and adapts the bodily temperature of this amphibian to that of the environment, which is expressive of a total communion with the ecosystem where it has got its dwelling place. Thus, the simple toad feels at home wherever it happens to find itself.

If we look up the word 'toad' in the *Encyclopaedia Britannica*, this is what we learn about this most curious of animals:

Toad, any squat, rough-skinned, tailless amphibian of the order Anura, and especially a member of the family Bufonidae. The true toads (*Bufo*), with more than 300 species, are found worldwide except in Australia, Madagascar, polar regions, and Polynesia, though *Bufo marinus* has been introduced into Australia and some South Pacific islands. Besides *Bufo*, the family includes 30 genera, one of which (*Nectophrynoidea*) contains one of the few anuran genera to bear live young. [...] True toads, of which the American toad (*Bufo americanus*) and the European toad (*B. bufo*) are representative, are stout-bodied with short legs that limit them to the characteristic walking or hopping gait. Their size ranges from about 2 to 25 cm (1 to 10 inches). The thick, dry, often warty skin on the back is generally mottled brown. Poison-secreting glands are located on the back and in the warts but are most concentrated in two prominent raised areas behind the eyes, the parotid glands. The poison, which is secreted when the toad is molested, irritates the eyes and mucous membranes of many, though not all, predators. [...] True toads are mainly terrestrial and nocturnal. They frequently remain in fairly small areas, feeding on whatever insects or small animals they can catch with their sticky tongues. Most remain in their burrows in winter and during drought. They breed in water and may migrate 1.5 km (1 mile) or more to a suitable breeding pond. The eggs (600 to over 30,000, depending on species) are laid in two long jelly tubes.

The tadpoles hatch in a few days and transform into adults in one to three months.¹⁴

When Bringhurst's poem is placed against this illuminating entry, it makes perfect sense. Indeed, it is an accurate poetic rendering of the scientific discourse we find in this encyclopedia entry. Toads are austere amphibians: they live in a small territory, feed on little insects or animals they catch with their sticky tongues, have no physical beauty about them (their warty, dry, brown-mottled skin does not make them agreeable to look at), and spend their terrestrial and nocturnal life in quiet solitude (in their burrows in winter and in drought periods). This asceticism is already a lesson *per se*. Toads do not ask much of the world; they need little to lead a decent life and survive. They breathe through their whole bodies, which remain alert to the changes in temperature in their environment, and, unlike humans, they hunt only for their survival, not to impose their control or dominion over their surrounding world. This vital attitude of moral asceticism and almost serene contemplation is explored at the heart of the poem:

Toothless carnivore, unarmed hunter. Tongue
hinged at the lip like a swallowed reflection.
Like one who in preference to speaking
is spoken. Like one who *uneats*
bits of the world – or the whole world: whatever
is already eaten. Who unthinks what others have thought,
unread what is read, unwrites what is written.¹⁵

SP, p. 195.

The stanza opens with a reflection on the hunting method of the toad. A careful look at the textual variants of the two opening lines over time (see footnote) shows Bringhurst struggling with words, looking for *le most juste*. This is the core of the poem, in fact. In its quiet contemplation, this *toothless carnivore* is ready to give itself over to the world generously, and not to exert any violence upon the surrounding ecosystem where it dwells. Speaking, eating, thinking, reading and writing are recognizably human activities, but the toad seems to *undo* all of them with its vital attitude of *non-interference* with the world. The toad would rather be spoken than speak itself; it *uneats* the world that humans and nonhuman creatures alike devour; and *unthinks*, *unread*s and *unwrites* whatever interpretations *others* (i.e., humans) have imposed upon the world over time, thus obscuring its pristine, crystal-clear meaning. In its unmediated relation with the real, the toad reminds us that it is still possible to learn to listen to *being* with open ears and open eyes, and that there is no need to secrete artificial theories, ideas or any kind of intellectual constructs to try to make sense of the world. If the toad can be said to dwell somewhere else apart from its shrinking territory, then it would live in a pre-literate society, where there is no need for writing or reading, where speech is what really matters, and where silence is even better than or preferable to speech.

¹⁴ See entry on 'toad' in *Encyclopaedia Britannica*, volume 28, pp. 16630-16631.

¹⁵ The second stanza reads as follows in the Lucie Lambert edition: "Toothless, a hunter. Clawless, a carnivore. / Tongue hinged at the lip like a swallowed / reflection. Like one who in preference to speaking / is spoken. Like one who *uneats* / bits of the world – or all of the world. / Whatever is already eaten." It was expanded in the *Descant* version: "Clawless, a hunter. Toothless, a carnivore. / Tongue hinged at the lip like a swallowed / reflection. Like one who in preference to speaking / is spoken. Like one who *uneats* / bits of the world – or all of the world: whatever / is already eaten. Like one who unthinks / what others have thought, who unspeaks what is spoken." And it was further revised and expanded in the third version, which is the one quoted above.

The closing stanza looks for similarities between toads and humans, even if the only similarities found are of a morphological nature. Like human beings, toads have no tail but stout limbs, as suggested by the enumeration in “elbows and pelvis and fingers / and toes”. Their mouth is angular just to meet the needs of a toothless carnivore, and they have renounced water (“*the bug of the water*”) to live on earth, for they are mainly terrestrial (and nocturnal) animals. In celebrating “*the abstemious, / pontifical kiss of the air,*” the speaking *homo sapiens* is somehow drawing our attention to the fact that humans and toads alike are land and air creatures, and that we all are a part of a fluid continuum of life. In the short space of just one stanza, the whole biological evolution of both toads and humans is evoked with the maximum of linguistic economy. Time is also fluid: we move in space and in time, but time also moves through us. Time is cancelled; centuries and millennia are nothing when *being*, no matter whether human or nonhuman, is considered *sub specie aeternitatis* through a completely different prism.

III

Part II of *Conversations with a Toad* concerns the toad as microcosm, the inner geography of its body as well as its projection outwards into the world as it hunts for sustenance; part III, by contrast, explores the larger ecosystem or natural world where the amphibian lives or thrives. In that larger world, populated by an immense richness of nonhuman creatures, the toad is but one tiny part within a grander scheme. “Polyphony is the sound of the coexistence of species, which is what every ecology, global or local, is all about”¹⁶, says Bringhurst in “Licking the Lips with a Forked Tongue”, the afterword to *New World Suite No. 3* (2005). The poem consisted of only two stanzas in the Lucie Lambert edition, but in all subsequent incarnations an extra stanza was added to the original composition, whereas the other two stanzas were further revised into their present textual state. As it stands, the poem unfolds throughout three stanzas, the first one being a celebratory catalogue of the birds that share the toad’s terrestrial and airy universe; the second stanza being a meditation on beauty and truth as embodied in the natural world; and the third one being a conclusion on humans’ greedy ways of relating to the nonhuman world. In any case, the poem places the toad within a larger context and dwells on the way it fits in naturally in a world where eating and being eaten are morally acceptable actions that guarantee animals’ survival and the perfect equilibrium of ecosystems.

Paying attention to the world or breathing through the feet – this is what the *homo sapiens* speaking in the poem does in the first stanza. This generic *everyone* or *everyman* is looking at the world as if for the first time, as if he were present at the day of creation, and recording what he sees in a seemingly dispassionate manner. Apart from their being-birds and their attempt at trying to fulfil their vocations of birds, what the owl, the raven, dippers, the ruffed grouse, the heron and kingfisher have in common is a deep sense of belonging and fitting in the world they populate. As the human poetic voice claims afterwards, it is good news that “*no one is able to list everything that exists in the world,*” for instance to record all birds species in a catalogue closed for good. There is a moving naturalness and a spontaneity in everything they do, regardless of any moral connotations, that is simply beautiful and admirable. Bringhurst’s poems are rich in birds; he is an outdoors man and a lover of birds. He loves walking in the woods in solitude and listening to whatever it is that the trees and the birds might have to tell him. What is more, he is always ready to listen with open ears.

¹⁶ See Bringhurst’s essay “Licking the Lips with a Forked Tongue”, the afterword to *New World Suite No. 3* (2005), p. 8.

Once again, as in many others of his poems, the author draws on musical analogies to convey the sheer exuberance one feels when confronting the singing of birds as various as the ones celebrated in the first stanza. There is symmetry and there is harmony in the way they fly and in the way they speak their own language. There is also a polyphonic singing. What we might possibly be witnessing in this opening stanza is *an attempt at echolocation* on the part of the poet: giving voice to the variety and richness of *being* as it manifests itself in the amazing diversity of birds. These birds are one with the world surrounding them, of which they are but a tiny part. Thus, their voices mimic nature itself: the ubiquitous raven of the First Nations has “*voices like musselshell, wellwater, wood*” (notice the alliteration here), whereas the dippers have “*voices like water on water.*” Or their silent flight resembles or evokes musical notes: “*the heron flying in whole notes and the kingfisher crossing in dotted eighths / and in quarters.*” If there is any dissonance at all, it is metamorphosed into a beauty of sorts. The singing and flying of birds are expressive of the Heraklitean change inherent in reality, of the non-stop flux of things in the world. Like Herakleitos’ river, they change and yet they remain the same in their *unstoppable quietude*. The reconciliation of *motion and stasis* might be another suitable name for this.

The second stanza is of a more meditative texture or nature. Beneath the words spoken by *homo sapiens*, there are subtle reminiscences of John Keats’ well-known words *truth is beauty, beauty is truth*, lifted from one of his immortal odes – “Ode on a Grecian Urn”. It might sound paradoxical, but beauty inspires awe and terror at the same time. Humans love the harmony implicit in beauty for its own sake; much of what we would call *aesthetic experience* is based precisely on this perception (or apprehension) of harmony, symmetry and elegance inherent in a thing that turns that particular object into something unique. But in this particular context beauty is seen not just as a source of sensorial pleasure and delight, but rather as a means of accessing the truth:

Their beauty bites into the truth.
 One way to fail to be is to be merely
 pretty. But that beauty: it feeds on you; we
 feed on it...

SP, p. 195.

In three verse lines and a half there is such a density of meaning that the poem becomes simply overwhelming at this point, at this semantic hinge located exactly at the heart of the piece. That birds offer glimpses of the truth through their simple exposure to humans’ eyes is a possible interpretation. “*Their beauty bites* (notice the alliteration again) *into the truth,*” as if it were just an incursion into unknown territory, but does not exhaust it completely. Which means that there are other ways or means of touching the truth implicit in what we term *reality*. Birds might be beautiful creatures indeed, because of the seduction of their flight or their singing, but toads are not precisely beautiful animals, if one just thinks for a while of their warty, rough skin, their poisonous glands, or their sticky fatal tongue. However, *homo sapiens* is prompt to remind us that “*one way to fail is to be merely / pretty*” (notice the calculated enjambment here). So the toad might not be the epitome of beauty in the natural world, as birds might be, but possibly they do not fail to *be*, for they are ascetic creatures living in harmony with the world that gives them their home. Whichever the case, universal beauty (*that beauty*) feeds on all living creatures that make up the world and we (human and nonhuman beings) feed on it on our turn. There is no better eulogy one could possibly address to reality other than to affirm that there is an unacknowledged beauty implicit in the world, of gigantic proportions, to which all creatures make a tiny contribution, regardless of how tiny that contribution might be.

Then, the second stanza unfolds towards a moment of revelation, a moment that has got the texture of transcendence. We might feed on beauty, but the toad needs to feed on actual moths if it is to survive at all. The moth that is the toad's dinner is described in detail, in words of intense lyricism. Consider, for instance, this line and a half: "*Nerves spring from his forehead like fernfronds, / like feathers.*" What happens to the moth eaten by the toad is but a natural process within the larger scheme of the natural world, where eating and being eaten are spontaneous gestures made by humans and nonhumans to ensure their survival. Thus, by eating the moth, the toad is actually participating in a larger process of perpetual metamorphosis, whereby the moth's meat is absorbed into the toad itself. This is a form of immortality, or a way of perpetuating the moth's existence under a different guise. In a world of eating creatures that will be eaten sooner or later, no one dies for good then. Everyone is changing into something else, being born into one more resurrection. Life and death are the two sides to the simple coin of life. Therefore, these words come as a revelation, as an elemental lesson that the toad is teaching the speaking *homo sapiens* through its dumb presence:

... He too is transformed.
This is the last life, toad.
 Those who eat will be eaten. That
 is the one resurrection.

SP, p. 196.

In an essay entitled "The Silence That Is Not Poetry and the Silence That Is", collected in his volume *The Tree of Meaning*, Robert Bringhurst thinks about this natural phenomenon quite in depth. Encountering the body of a dead deer on the road prompts the poet to muse on the sacredness of life, on the kind of immortality achieved by the young deer that has been run over and then eaten by birds, and on the meaning of life and death:

In terms of meat, there is not much to a young fawn, but the eagles had opened her up, and the ravens had joined them. I reminded myself that *being buried bit by bit in the guts of birds* is at least as good as going into a hole in the ground, and that *fueling an eagle's flight or the voice of a raven is as fine a resurrection as anyone, human or deer, could hope for.* [...]

What I thought about all the rest of the day, and the day after that, was the gulf of self-regard that we – not genetically, as a species, but by choice, as a society – have erected between ourselves and everyone else, including the deer. I mean the barriers of law and of social convention which assign the lives of human beings a theoretically infinite value while they treat the lives of wild creatures as theoretically zilch.¹⁷ [*Italics mine.*]

In the closing stanza, nonexistent in the 1987 Lucie Lambert edition, the speaking *homo sapiens* dwells on the greedy attitude of human beings towards the world in their management and overexploitation of the earth's resources:

We who kill not to eat but to mark
 our domain – to build and breed, in place
 of what is, what we choose to create –
 have reduced by that much the population of heaven.

SP, p. 196.

¹⁷ See Robert Bringhurst, "The Silence That Is Not Poetry and the Silence That Is", in *The Tree of Meaning, Language, Mind and Ecology*, p. 300.

The subterranean dichotomy is that between killing other animals for survival (which is what the toad does) and killing other animals to affirm one's superiority over the rest of creation (which is what man does). And there is yet another potent dichotomy between the lines: an opposition between artificial *man-made* and spontaneous *nature-made* things. The population of heaven has been reduced as a result of this aggressive assault on Nature on the part of man: too many animal and plant species have died because of our greedy way of relating to the non-human. This is the reason why Bringhurst, upon encountering the corpse of the young deer, has no option left but to meditate on the "gulf of self-regard [...] erected between ourselves and everyone else", including all animals, all nonhuman beings that populate the earth. If life is sacred, how is it possible to pretend that "the value of the deer's life is zero and that of a human life is infinite?"¹⁸ Or, as he puts it elsewhere:

Death is the price of life. It is a fair price, evidently, and if so, we should charge it when we must and pay it in our turn without complaint. But a society happy to kill a billion birds or a hundred thousand cattle in the vague hope of saving a single unspecified human life, or to mow down a whole forest to make one day's worth of newsprint, or to sterilize a river in exchange for some ounces of gold, is a society that, I suspect, has lost its sense of what life and death are for: a society that has lost its admiration and its gratitude for life and death alike.¹⁹

IV

Section IV of *Conversations with a Toad* looks like a philosophical interlude amid the ten-part sequence which Bringhurst's work is. In its concision and precision, it is a jewel-like lyric poem of crystal-clear clarity and utter simplicity. At the same time, it is a short meditation on the nature of the human mind. Bringhurst has always been concerned with exploring the mystery of the mind approaching the raw data the world is sending from all directions all the time. It all comes down to an epistemological problem. Knowledge of the world always begins with an act of paying attention and of perception. It is no wonder that his poems are presided by a perceiving consciousness coming to terms with what we call *reality* and trying to make sense of it. This is one of the fundamental questions that philosophy has asked time and again; no matter whether in the Orient or in the East, 5th century BCE pre-Socratic philosophers and Oriental sages from different historical periods have dwelled on the issue of the human mind. In much the same way they are genetically pre-programmed to speak natural languages, humans as a species are genetically pre-programmed to ask themselves this kind of questions: *What is reality? What is the mind? How do we come to terms with the universe? How do we come to know anything at all? What is the truth?* Paradoxically enough, Bringhurst says that language itself never expected to be asked these questions. Nevertheless, we are prepared to ask them time and again tirelessly in search of the truth. Indeed, the whole history of science and philosophy and poetry is nothing more than a series of attempts at touching the truth in tackling these fundamental questions. For this is precisely what distinguishes poetry from, say history, as Aristotle pointed out in his groundbreaking *Poetics* so many centuries ago. Poetry is concerned with universals, with things that remain the same despite the passage of time, for humans are the same after all in spite of the changes in outward appearance.

Thus, poem IV is essentially concerned with exploring humans' epistemological confrontation with reality, with the role of the perceiving mind in the interpretation of

¹⁸ See Robert Bringhurst, "The Silence That Is Not Poetry and the Silence That Is", *ibid.*, p. 302.

¹⁹ See Robert Bringhurst, "The Silence That Is Not Poetry and the Silence That Is", *ibid.*, p. 302.

what we call *reality*. In the context of the 10-part poem of *Conversations with a Toad*, it is a philosophical interlude. It consists of only two perfectly symmetrical stanzas of six verse lines each. The first stanza strives to achieve a definition of what the mind is through four simple declarative sentences:

The mind is the other. The mind
is a long complication of water. The mind
is time, space and all creatures. The mind
is the world. What we keep in the head,
with its dark facets, this jewel,
is a small, disproportional model.

SP, p. 196.

Let us now analyze every single statement in detail:

- (1) *The mind is the other.* Far from defining the mind as one's own inalienable property, the speaking *homo sapiens* in the poem tries to capture its essence in terms of what it is not. That is the reason why the mind is conceived as being *the other*, i.e. other human beings, other minds, other nonhuman beings, other non-living things in the world where we dwell. This is exactly the opposite of solipsism, i.e. the notion that one lives in his or her own mind and that nothing is real except what one perceives through one's own mind; or, in other words, the dangerous idea that one exists in a sort of isolated sphere, closed on the outside, far apart from all other perceiving consciousnesses. To acknowledge that the mind is the other is a statement of humanity, to begin with: it means to acknowledge that there are creatures other than ourselves out there that deserve respect and attention.
- (2) *The mind is a long complication of water.* We are instantly reminded of *The Blue Roofs of Japan*, where the words "*this music is all about water*" were repeated time and again as an incantation. One of the primordial elements out of which the whole of reality is made, water figures prominently in Bringham's poetry as a symbol of everything that is elemental, primordial, ancestral, and pure. In this declarative sentence the mind is equated to water, but, to our surprise, we learn that it is *a long complication of water*, not just simple water, full stop, which possibly means that the human mind tends to make things complicated. Perceiving reality already entails some process of falsification of the raw data provided by the senses, for humans cannot avoid bringing to this act of interpreting the world a complex baggage of prior experiences, cultural presuppositions, and expectations. Water is simple enough; it does not think. It is transparent, fresh or salt water, it does not lie. If the mind is a long complication of water, then there might be something wrong about it and about the way it interprets the world.
- (3) *The mind is time, space and all creatures.* This all-encompassing view of the mind is ambitious and tantalizing. The mind contains the whole universe in its entirety, including those basic Kantian coordinates that organize all human experience, i.e. time and space. Human experience takes place within time and space; it is unconceivable that any experience could happen outside time or space. Gigantic as it is, the mind contains even these fundamental axes, and also all creatures. The mind is a microcosm then, a miniature replica of the world at large. This makes perfect sense if one thinks about one's own mind: one treasures memories, sensations, emotions, ideas, thoughts, findings, and insights of a whole lifetime in one's own boundless mind. A human being is everything he/she has lived, seen, heard, read, experienced, learnt, loved, or forgotten, and all this is stored in the mind in one way or another.
- (4) *The mind is the world.* This is the logical deduction that stems from a sort of Aristotelian syllogism. If the mind contains all creatures, as well as time and space, if it is *the other* and *a long complication of water*, then the mind is the world in its entirety. It is not simply a

container, it is the world. The equation is now perfect. However, Bringhurst had already essayed similar equations. In *The Blue Roofs of Japan*, a poem rich in metaphors which are equations, the world was a bowl full of tea, a cup of tea one holds in one's hands, for instance.

- (5) *What we keep in the head, / with its dark faces, this jewel, / is a small, disproportionate model.* The mind does not replace or exhaust the many-sidedness, diversity and richness of the world, or of our experience of reality. It is but a small model, a reproduction of the world in miniature. Thus, there are as many such disproportional models in miniature as humans beings have been, are or will be. Experience is always larger than what we might think or say about it. Perception and language are simplifying tools of sorts in our approach to the world. They turn into a manageable form what was mere chaos. And yet the mind is a true jewel.

The second stanza gives the impression of a riddle. "*What we are not is all we can think with*" is repeated twice, which means that it is an essential part of the message the speaking *homo sapiens* is trying to put across to his audience. We are back to the idea of the mind being the other: it is not possible to *think* the world if it is not through the *not-self* and the *non-human*. In other words, it is necessary to forget about oneself and one's own subjectivity to be able to think about the world as such:

What we are not is all we can think with.
In the leaking cup of the skull
we dip up the other. Daily we trade it
for money, for comfort, for power. But what we are not
is all we can think with. To hold and let go
is all we can do with whatever we are.

SP, p. 196.

The metaphor at the core of this stanza equates the *skull* with a *leaking cup*. This is probably intended to suggest that the mind is not omnipotent, not perfect, not 100% reliable. In this cup we *dip the other*. It is possible to say that the mind is a leaking cup and that we dip the others in it because *the mind is water*, as pointed out in the first stanza. It remains unclear whether what we trade daily is one's leaking cup of a skull, our mind, for such banal things as *money, comfort or power*. In "Breathing Through the Feet", the impressive autobiographical essay in *Pieces of Map, Pieces of Music* (1986), Bringhurst claims that we live a society where we lose our peace of mind for such absurd things as money and jobs. This is a society which, we suspect, has lost all sense of reality and of what the essential priorities should be. Possibly the toad has an important lesson to teach us humans in its asceticism and austere lifestyle: "*to hold and let go / is all we can do with whatever we are.*" In other words, to be acutely aware of what we are while, at the same time, not forgetting that it might be wise to forget about who we are from time to time to penetrate the essence of the real, uncontaminated by our subjectivity.

V

In Robert Bringhurst's view, a meditation is *a piece of thinking*, or, in German, *ein Denkenstück*; this is what the human mind can do best of all, we suspect. This is especially the case with attentive minds that remain alert to the subtle nuances of the world and are propelled forward to asking fundamental questions about the ultimate nature of reality. And yet, the human mind thinking about the mind, in a narcissistic or self-reflexive act of introspection, is a wonderfully uncanny thing. This was the flesh or meat of the

philosophical interlude on the nature of the mind begun in poem IV, which is resumed and further explored in poem V. But this time the meditation is on the way humans come to terms with the reading and interpreting of *the book of the universe*, and also on such essentials as light, time and space. The whole poem could be said to be concerned with *reading what is* – by the way, this is the title of an illuminating prose meditation by Bringhurst. The world is a place rich in signs and symbols for humans to decipher. What science, philosophy and art have been doing for centuries on end is precisely *reading what is*, i.e. trying to approach the mystery at the core of reality and to render it in recognizably human terms, that is to say in terms understandable to the human mind, through means as diverse as words (both poetic and prosaic), mathematical formulae, musical notation, the dancing of the intellect among words which philosophy is, lines and colours, wood carved or stone sculpted with grace and shapeliness, taxonomies and classifications, topographical maps, time lines, etc. Of course, these are only man-made constructions, tools to render the real more manageable and comprehensible to our minds, but they do not replace or exhaust the real thing. Humankind has spent its whole existence on earth throughout innumerable civilizations reading and interpreting signs; however, not all signs found in the world are of a verbal nature. To borrow Bringhurst's words,

READING IS DIFFERENT FROM LOOKING OR WATCHING. It is listening with the eyes, evaluating signs against a lexicon of memories. We were reading waves and rivers, winds and clouds, the tracks of moose and grouse and hare, long before we started reading words. We were also reading stories with our ears a hundred thousand years before there were any writers writing. The reading we do now – novels, poems, the daily paper– owes its life to that apprenticeship in *paying ecological attention*.²⁰ [*Italics mine.*]

Reading the myriad of signs scattered in reality is a way of listening or *paying ecological attention*. It is an act of humility whereby we acknowledge that we fit in and that we belong among the human and non-human, living and non-living things that populate this world. *Paying attention means that we care*. By contrast, indifference to the world is a form of cruelty, expressive of a cynical view of life; it disregards the infinite value and sacredness implicit in what is real. Poem V of *Conversations with a Toad* opens precisely with an important reminder: the talking *homo sapiens* reminds us that humans living in industrial societies are not able to pay ecological attention any more, for they seem to have forgotten to listen to the world with both their eyes and ears:

My people no longer stare into water
and fire for clues to the future. We no longer
read even the signs in our faces and hands.
Instead we grind lenses and mirrors
to sop up the spilled light of the stars. We decipher
the rocks that we walk on, too, while we loot them.

Toad, as we level the future we make
topographical maps of the past.

SP, p. 196.

Dehumanization is the word that first comes up to one's mind as one reads these words deeply. In a society where the priority is money and jobs, comfort and power, humans

²⁰ See Robert Bringhurst, "Reading What Is", a short prose meditation published in *Reading Writers Reading: Canadian Authors' Reflections*, edited by Danielle Schaub, Edmonton: University of Alberta Press / Jerusalem: Hebrew University Magnes Press, 2006: 195.

appear to have forgotten how to read the book of the world, even if its pages remain wide open for us to look into whatever there is to be looked into. No longer do humans look into water or fire in search of potential clues about what the future might bring; and no longer do they even seem to know how to interpret the signs in other fellow human beings' bodies and gestures (faces and hands). All we care about is exploring far-away places through the potent lenses of telescopes that "*sop up the spilled light of the stars,*" while not forgetting the deciphering of rocks while we loot them. Deciphering the meaning of rocks as we tread upon them or the meaning of star light as we observe it through a telescope is not an inherently evil undertaking. It testifies to humans' noble ambitions. Bringhurst himself reminds us that the ultimate vocation of human beings is to learn; to learn means to fulfil one's vocation as human being. It is as simple as this: humans cannot fight the compulsion to understand reality, any more than they can overlook the compulsion to try to be happy in their lives. The pursuit of knowledge and truth is akin to the pursuit of happiness. Everybody wants *to live, to know* and *to mean*. There is nothing wrong about astronomy or geology, so long as the world is given due respect and it is not looted, overexploited, undervalued, misused or abused just for the sake of material benefit. The deadening effect of intellectual enterprises like those of astronomy or geology is that, in their compulsion to know, humans run the risk of forgetting the pre-eminence of the real: looking into the past, analyzing rocks or the human events woven into History, and producing topographical maps do not exhaust the multiplicity, plurality and diversity of the real thing. If the earth is damaged in the process, then what started as a noble enterprise has turned into something of dubious morality. Knowledge and ethics go hand in hand.

In the second part of poem V we are suddenly plunged into a meditation on star light. Light is central to Bringhurst's poetics, and a recurrent motif that he also borrowed from the Modernist master, Ezra Pound, who produced a moving celebration of light in *The Pisan Cantos*. Telescopes serve a very practical purpose for astronomers: they reach where the human eye cannot reach in their observation of stars and planets floating amid space at such immense distances away from the Earth. The telescope is a prolongation of the eye, in much the same way a book is the prolongation of past humans' breathing minds, or the ploughshare is a prolongation of the human arm. However, there is something else to telescopes and what they can accomplish. What the mirrors of telescopes reveal to us is that light is not quite what it seems. It has travelled a long way to reach the Earth, and it is much older than we think. What we see might be but a pale shadow of the pristine, original light that abandoned its home stars long ago. The same applies to the things on Earth: "*things are leaving / and taking their light with them*", which has ominous connotations, for the loss seems to be irreversible. The speed of light is simply amazing, and light moves through time and space with a complete naturalness. Billions of years is what it might take light to reach our amazed eyes when we look up at the sky above us at night, which is a long time on a human scale if we bear in mind that life expectancy is of about 75 years of age. On a different scale, say that of rocks or toads, billions of years are not that much:

Ten billion years seems
long to us, toad, though to you
it is little: a few dozen times
the age of your ancestors' graves
in these rocks. Only two or three times
the age of the oldest rocks we have found.

SP, p. 197.

Biological and geological time do not coincide exactly when we fold them one upon the other. The origins of toads can be traced back in biological time to their *ancestors' graves* in Precambrian time, just as rocks are known to have existed for a longer time, even before human and non-human beings started breathing and walking on Earth. Toads and rocks are therefore ancestral forms of existence, and so they may have much to teach us humans, even if only because they have lived longer than we have. Paying attention to them is then no waste of time; learning to look at them and listen to them with open eyes and ears might be a rewarding intellectual and aesthetic experience. It is no wonder that Bringham has spent so much time in the mountains, in the company of the nonhuman, trying to understand the place humans occupy in the grander scheme of things, where they are certainly not the main characters. As a species, *homo sapiens* is a self-absorbed species that is convinced that man is the measure of all things, though. A look at geological and biological time proves that this is not the case. If life is sacred, then all creatures, living and nonliving alike, have a contribution to make to the harmony and beauty of the world. None is dispensable; none is essential either. And the sum of the parts is always lesser than the perfect *Gestalt* of the whole.

The closing movement and stanza of poem V is a perfect synthesis of light, space and time. The meditation at the heart of the poem has been unfolding towards this point which has got the texture of transcendence too:

What is too quick for our fingers
and tongues to keep up with. The light
outmanoeuvres us. Time and space close over us, toad.
The lock of the sky will turn but not open.
We are where we are and have been here
forever. Longer, that is, than we can remember.

SP, p. 197.

In spite of being endowed with this jewel of a mind, we humans are not able to capture *what-is* once and for all, for good. Reality is always vaster and richer than what we might manage to understand and convey through scientific discovery. Light is faster than our minds; it moves at speedlight, which is faster than the speed of sound. It is also faster than our speech capacity, our faculty to verbalize what we appear to find out about the ultimate essence of things before it vanishes into airy nothingness. The sky (i.e., the universe) will not yield its final mystery: the lock turns but it will not open so easily. On the other hand, time and space remain a true mystery, so that the only thing left for us to say is tautological redundancy: "*we are where we are and have been here / forever.*" We are somewhere in the middle of what is called *space* and also in the middle of a different kind of substance called *time* right now. What came before now and what will come after now is a mystery, for time is not completely apprehensible or understandable by the jewel of our mind. This is the reason why the talking *homo sapiens* in the poem chooses these closing words as an afterthought: "*longer, that is, than we can remember.*" Like toads, we also have ancestors who lived a long time ago, but the memory of a time gone so long ago has somehow abandoned us. It is these ancestors that link us to the past, in much the same way it is our offspring that links us to the future, as Bringham puts it. The poet dwells on time and space as a true mystery in his magnificent "First Meditation on Time", which is quoted in full below as the best possible meditation to place against the meditation enacted in poem V:

As animals, we think we know what space is. We don't just occupy it; we move through it, back and forth and around, and we stake it out as territory and

memorize and defend it. Konrad Lorenz, you remember, says that the experience of navigating space is the biological origin of mind. If he is right, then there's a reason we should think we know what space is. It is our first and maybe only metaphysics.

The birds and bats and dragonflies and fish who fly and swim through space appear to understand it better still. We just walk and crawl and climb around the surfaces of things. Yet we can watch, and even sometimes catch, those flying, swimming creatures, and that has helped us learn to think about spaces we ourselves can only navigate by artificial means.

So we move through space as best we can, and we dream about doing it better, by dancing or flying. But time appears to *move through us* and not the other way around. If time isn't something we can navigate, how could it be something we can really understand?

Perhaps we are actually rooted in time, as plants are rooted in space. If so, we may never know more about time than a spear of asparagus knows about space. And yet we try. We try to move around in time by telling stories, writing histories and novels, composing sonatas and fugues and motets. But how far do we get? All we really seem able to do is grow through a little time the way a stalk of grass or sedge grows through its own height and depth and breadth. We're connected to the past through our grandparents and parents – intellectual and physical – and to the future through our offspring, and that's the way a sedge or a redcedar is connected to different locations in space. If meaning is coming up to someone, thinking is strolling around. And in time, it seems, we can only pretend to go strolling.

Space, the astronomers say, is growing at breakneck speed and has been doing so since the beginning of space and time. Time, it seems, is growing too. But we experience space as something we are somewhere in the middle of. Our relationship to time appears quite different, as if we (and everything else) could never be anywhere except on its frontier, the advancing edge, the crest of the wave. In space you can go home again, and back again; in time it seems you can't. That makes *timelessness* a value, where *spacelessness* is not.

Musicians and mythtellers can, in their way, make spaces from pieces of time, and choreographers and playwrights can also make time out of pieces of space. The results are sometimes rich and lovely works – the motets of Josquin, or Shakespeare's plays – but surely these are maps, portraits, models, not the real thing. And it is precisely because they are models that we can replay them, which we cannot do with history itself. Space is a seemingly endless succession of places which we can in fact revisit, while time is a sequence of places we have lost or not yet found, separated by the one and only, always changing, place where we seem to exist.

In other words, it seems to be like this: space is the unfolding of Being out of itself, while time is the slippage of Being along itself.²¹

VI

A meditation is *a piece of thinking*, and a perfect piece of thinking is usually free of cultural accretions: it is the fruit of a mind thinking deeply about one particular object, emotion or idea, or about a constellation of these, as if for the first time and with a maximum of

²¹ See Robert Bringhurst, *First Meditation on Time*, Vernon, British Columbia: Greenboathouse Press, 2008. Broadside, 25.5 × 53 cm, 76 copies on Zerkall Wove paper. The colophon reads as follows: "Designed and hand set in Monotype Centaur & Arrighi and pressed into Zerkall Book Wove at the GREENBOATHOUSE PRESS in Vernon, BC, early fall, 2008. Limited to 76 copies: 50 numbered copies available for sale, and 26 lettered copies for private distribution, all signed by the author."

intensity. It takes much intellectual stamina to meditate profoundly and well, no doubt, but sometimes the result is as astonishing as poem VI of *Conversations with a Toad*. This time the meditation is on the inexhaustible biological diversity and richness of the world – of the biosphere, to be more precise, that realm of existence where so many teeming forms of life coexist with one another. Thus, the composition opens with a quick look at ancient biological history encapsulated in just two verse lines – “*Your ancestors, toad, were kings / in a world of trilobites, fish, bryozoans.*” – and then it moves forward to an eloquent juxtaposition of the realms of the human and the non-human. The implications are of profound transcendence, inasmuch as the talking *homo sapiens* addressing the toad in the poem finds out an inevitably destructive attitude inherent in the way humans relate to the world. As a result, the tone of the whole piece from beginning to end is overly pessimistic, or simply realistic: as a species, man is mindlessly determined to destroy the only home we have available, on the wrong assumption that he has got an inalienable right to do so as king of creation. Destroying the world is tantamount to *ceasing to have meaning*. If the Earth is destroyed, then one cannot avoid asking questions like these: Where is the human species to find itself a new home? Where else is humankind to breathe, feed and breed? No other species in the world seems to behave in this absurd self-destroying way, trying to disconnect itself from all links to universal *being*, walking with firm step towards the precipice of self-annihilation. In what looks like a state of mind of anguish and desperation, the speaking *homo sapiens* asks the toad these rhetorical questions:

Do you know any stories, toad, of a species
determined, as mine is, to cease to have meaning?
Is it really so onerous, toad, to live
and to die at less distance from being?

SP, p. 197.

Fortunately enough, the world is made up of creatures other than human beings. The biological diversity of this shared home of ours is simply amazing; there is no exhaustive catalogue capable of perpetually updating the record of all the different species of insects that exist or have existed on Earth, for instance. Millions of insects remain *unnamed*, un-catalogued, unclassified, which is a true miracle if we bear in mind that man’s dominion over animals begins with the foundational act of naming them. In our relentless search of order, in our desire to impose order upon the seemingly chaotic richness of the world, naming things or species is an important primordial gesture. Attaching a label to an animal is already a way of accounting for its existence, putting it in the right category, and achieving some sort of temporary peace of mind. Humankind’s obsession with taxonomies and classifications does not exhaust or minimize the huge diversity of living creatures on Earth, though, which is a good reason to be happy:

It is good news, toad: that no one can list
what exists in the world. But not good enough.
Named or unnamed, if it lives, we can kill it.
We owe to the stones
that many chances and that many means
to kill us.

SP, p. 198.

“*If it lives, we can kill it.*” The statement is simple, straightforward and cruel. It seems that nothing will stop man from overexploiting (actually, *raping*) the earth’s resources in his search of money, comfort, power – those banal goals humans set themselves to achieve in

their lives. Bringhurst's message is not just a desperate warning, drawing the reader's attention to a cruel act, it is also a call for us to take up a different attitude, to envision a different way of relating to the world which is respectful and guarantees a sustainable future for all species on planet earth. Thus, in a fundamental essay entitled "Wild Language", included in *The Tree of Meaning*, Bringhurst meditates precisely on this predatory way of ours of relating to the world and suggests other ethically viable ways of participating in the biosphere:

Those who grow up, as most of us have, in industrialized economies and colonial regimes, are encouraged to think there is no other choice than to take control and manage the planet. But there *is* another choice. That choice is to participate in the biosphere, learning enough about it to recognize and accept that we can never be anything more than junior partners: a few million or billion human cells in a brain the size of the planet. Right now those human cells are acting like a cancer, a tumor in the wise, old brain of planet earth.²²

Somewhere else, in an essay entitled "The Silence That Is Not Poetry, and the Silence That Is", also included in *The Tree of Meaning*, Bringhurst reflects on biological diversity as well as on the sacredness of all forms of life, not just human life:

Genetics, molecular biology, comparative anatomy, European cave art, Buddhist tradition, shamanic tradition, the theology of St Francis of Assisi and a thousand other mystics (pagan and Jewish, Christian and Muslim), and a hundred different traditions of Native American narrative cosmology all agree that we and the deer have a lot in common. European and colonial civil law, canon law and the sharia [...] seem to agree with the Book of Genesis that whatever we have in common with the deer just doesn't matter. In ecclesiastical law, at least this has a rationale: the relationship we are supposed to have with God takes precedence over our relationships with other earthly creatures like ourselves. In statutory law, it is not for any apparent reason except that setting ourselves apart, and taking dominion over all the other creatures, is supposed to make us rich in the short term. That it can only leave us destitute in the long term is something we seem oddly determined to forget.²³

The juxtaposition of these two handfuls of live words, originally delivered as part of spoken lectures before an audience, is at least illuminating. In Bringhurst's poetry and prose there is beauty and music, but there is also profundity of thought and ethical commitment to the reality of a world that is changing too fast for the worse nowadays. We mindless humans are determined to destroy our only home and, with it, all forms of life in our desperate race towards self-annihilation. It does not make sense at all, and so the moral duty of the poet is at least to say the words of his insights and meditations loud and clear so that everybody can hear and act accordingly following the dictates of their conscience.

²² See R. Bringhurst, "Wild Language", *The Tree of Meaning*, p. 269. In the same essay, the author dwells on the concept of *the wild* and says: "The wild isn't something to conquer or subdue; it's something to try to live up to: a standard better than gold. Humans are part of it, and in the long run have no choice but to be so." Ibid., p. 268. He defines the biosphere in these moving terms: "The wild is the biosphere: this tiny hollow ball which is the only place in the universe where you or I are free to be what we are." (p. 269) And, finally, he reminds us of this basic principle of bioethics: "... coming back to a basic fact of bioethics: a principle my friend Don McKay has stated very nimbly and simply in six syllables: *We don't own what we know.*" (p. 270) All these statements written in elegantly poetic prose testify, once again, to the absolute coherence of Bringhurst's thinking about being and ecology, about the way humans should start relating to the world if they just realized that there is no other morally acceptable way to behave if we are to preserve life as we know it on Earth.

²³ See R. Bringhurst, "The Silence That Is Not Poetry, and the Silence That Is", *The Tree of Meaning*, p. 302.

Most of us appear to spend our lives in a state of self-absorbed narcissism and egotism; we seem unable to think critically for ourselves; we do not seem to be able either to see what is best for us as a species, for the common good of all creatures on Earth. Thinking is a hard, tiring job, but that is what this jewel of our human mind is primarily intended to do. It is high time that it remained still for a while and thought a way out of what looks like a desperate situation. Nobody seems to care, though; we are that egoistical and greedy.

Bringhurst's poem closes with a short meditation on the different kinds of records, testament or legacy that the earliest (or oldest) living creatures of the world and human beings will leave at the end of time. In beautifully modulated words, the speaking *homo sapiens* speaks of the subtle, modest signs the earliest living forms left on the ground just to say they lived once upon a time, millions of years ago. There is a simple and moving delicacy in the natural *signatures* they have left as proofs of their ephemeral existence upon Earth. Humans are determined to leave a more ambitious legacy and more durable proofs that they have trodden upon Earth: the stone constructions of prehistoric times, the Egyptian pyramids, the Greek and Roman temples and statues, the manuscripts of Tang China or of Renaissance Italy, the poems and novels of all times and human languages, the paintings, sculptures and musical pieces, were all meant to become memorable and testify to humans' grandeur and *achievements* over time. But the talking *homo sapiens* in the poem does not forget humans' *griefs* either: the pain inflicted on other creatures, including the Earth itself; the nonsense of innumerable wars that have "*reduced the population of heaven*"; our greedy little acts of everyday life that make things more complicated for other fellow human beings. The chronicles other humans will read in the future will be full of all this, but it is sad, the thought occurs, that the poem should close with a pessimistic note on the grief we inflict upon one another. There is something ominous about the closing verse line: locusts are a destructive insect, after all, and a poetry spoken by descending locusts ready to destroy whatever they may find in their way does not augur anything good at all. At least we have the music, the parallelism and the quiet meditation of Bringhurst's words:

In the blank rock of Precambrian time
the earliest creatures, too soft to leave fossils,
too light to leave footprints, have left us
old proteins and sugars as signatures. We will leave
chronicles filled with our griefs and achievements,
a poetry spoken by locusts as they descend.

SP, p. 198.

VII

A meditation on *the indestructible sacredness & immortality of being*, on *the precedence of meaning* and on *the existence of truth regardless of humans' actions* – this is what poem VII of *Conversations with a Toad* is all about. That such an intense meditation should be contained in four four-line stanzas is a poetical miracle, a technical accomplishment and a delightful surprise. This kind of composition belongs among the short jewel-like lyrics in Bringhurst's poetic corpus. There is linguistic economy, but there is also intellectual precision, perceptual accuracy, and density of meaning – these are, by the way, all attributes of great poetry, which is meant to be durable, like the sugar and protein signatures left by primitive life forms on Precambrian rocks. Every musical word falls exactly into place; upon encountering every single word on the page, one is under the impression that it is precisely *le mot juste*. There is objective

evidence that this is the case with this particular poem: if we look at the way the text has evolved throughout its three successive states, we learn that (1) in the first stanza the verb *breed* in the final version replaces the verb *feed* of preceding versions of the poem and that (2) the third stanza has changed at several points, and only slightly, as we shall see below. The textual metamorphosis has been kept to a minimum. In any case, the poem remains a concise and resonant statement on the destruction of the world and the persistence of *being* in spite of all obstacles and adversities.

Stanza number one dwells on mortality and immortality as the two sides to the same coin. Death is the price we must pay for life, Bringham says, and it is a fair price we must be ready to charge when the moment comes for us to leave this world. The last life and the one resurrection the poet discovers in the natural world comes down to perpetual metamorphosis: the toad eats the moth and the moth becomes an indistinguishable part of its body; the eagle eats from the overrun body of the deer lying inert on the road, and the deer fuels its flight. Instead of being buried in a hole in the ground, many animals experience this kind of death and this kind of resurrection. Much the same happens in the world of trees: "*Woodlice breed in the fallen alder.*" A dead alder becomes food for woodlice, which feed and breed on it and metamorphose the dead wood into something new in their living cells. The thrush is simply beautiful in a natural way, and *red-shafted flickers* feed on the fallen alder too. "*Uses will form for us too in the end,*" concludes the first stanza. This is possibly meant as a reminder of humans' mortality: when we die, our bodies will be nourishing food for other microscopic creatures and we will dissolve into that gigantic continuum of life, which is indestructible, in which every single thing is connected to everything else. Distinctions between things and creatures are something we make and also pure delusion.

The core of the poem is precisely its geometrical centre. The second stanza is woven with five simple declarative sentences – two of them written in the present tense and three written in the future tense. Truth, meaning and being are the three words constellated into the heart of the poem:

What is is the truth. What precedes it
is meaning. We will not destroy
being, toad. We will not. But I think
we will overreligiously clean it.

SP, p. 198.

What is (i.e., reality or the real or *being*) is the truth, which does not need humans to be able to keep on existing. Before truth, there is only meaning. And meaning is made up of all the things and creatures that are woven into the body of *being*. Time and again, the human mind has directed its own attention to *being*, the heart of metaphysics. The pre-Socratics, Plato, Aristotle, so many thinkers in the tradition of Western philosophy, and Oriental sages of different historical periods have asked the same questions time and again, their insights into *being* are still valuable, a moveable luggage that Bringham has tried to rescue from oblivion and taken with himself wherever he goes. These remnants of visions and tattered fragments of wisdom spoken and thought in exotic languages are a talisman, a personal pharmacopoeia the poet wishes to preserve at all costs. They still remind us of the fundamental questions we should be asking right now, instead of insisting on our determination to destroy the world. But, what are the characteristics of *being*?, we may ask. *Being* is plural, manifold, varied, many-voiced, fluid. Though its outward appearance may be changing all the time, *being* remains serenely the same – it is immutable, eternal, immortal. Therefore, hard as they may try, humans cannot destroy *being*; they are a part of *being* itself,

but not the only ones. In Bringhurst's work, metaphysics is pure physics: *what is* is *what is*, in almost tautological terms. Poetry itself is a property intrinsic in *being*, and humans have no monopoly on *being*, truth, meaning or poetry.

The third and closing stanza dwells on ancestral voices coming from afar. It remains unclear whether these voices are those of the ancient sages (and the First Nations), who knew how to listen to the world with attentive ears and, as a result, how to penetrate into the essence of *being*. Those ancient voices still conceived of the world as a sacred space populated by gods and goddesses. Or these might be the voices of *being* itself, singing and dancing in the world to make itself visible to us, trying to catch our distracted attention. In the Foreword to *The Calling: Selected Poems 1970-1995* (1995), Bringhurst says that "in the world of bats and birds and human beings, sometimes there is silence, and sometimes there is being calling out to itself in the hope that being is listening". This is what the voices mentioned in the last stanza of poem VII are doing: they are the voices of being calling our attention. On the other hand, the textual variants undergone by this stanza are minimal, and yet they are significant. In the Lucie Lambert edition, the opening line reads: "The voices do seep through us too"; in the text of the *Descant* edition, it reads: "*Yet the voices do seep through us too. Even...*"; in the third, definitive state of the text, the whole stanza reads like this:

Yet the voices still seep through us too. Even
through us, who have long since forgotten:
to pray does not mean to send messages
to the gods; to pray means to listen.

SP, p. 198.

The opening verse line now reads "still seep", which is eloquent enough. We humans living in industrial societies have forgotten to listen to the real, we no longer believe that the world is a place rich in gods and goddesses, and yet the voices *still seep* through us. In the same Foreword to *The Calling*, Bringhurst also speaks of "a lot of homeless gods – who dream of alpine meadows, rivers, rocks and trees and coral reefs and coves – forced to make do for a time with a diet that might consist of little more than sterile earth and poisoned air and water." These are the gods our ancestors believed in, the gods of ancient Greece and Rome, the gods of the Oriental sages, the gods of the First Nations. They all had sharp minds and true stories to tell about what they found out about the ultimate essence of things; their voices are still speaking loud and clear, and the only thing we have to do is listen to what they might have to tell us.

VIII

Poem VIII of *Conversations with a Toad* tessellates three miniature meditations on hands and feet, dreams and rocks, and the mind as a tangible or palpable entity endowed with a peculiar physical texture. But What do these discrete and diverse elements have in common?, one may ask. Upon encountering and reading the poem for the first time, the initial impression is one of seeming heterogeneity, but, upon closer inspection, all three thematic nodes seem to cohere into a perfect, meaningful whole. Thus, the poem consists of three little movements for the mind, and Bringhurst, in fact, seems to be very fond of using this kind of tripartite structure in many of his poems. The first stanza dwells on the difference between hands and feet, which is a recurrent motif in the poet's work. In the author's view, hands are more dangerous than feet, which are inoffensive and much more

respectful towards the world. In treading upon the earth, one's feet become the literal link between our bodies and the world, which is a sort of miracle we tend to overlook. Similarly, in speech and in breathing, the air leaving and entering our lungs in the form of meaningful sound strings or breath is also a link with the air that surrounds the earth. In any case, the equation at the heart of the stanza aligns hands with eyes and feet with ears, and the poet seems to stress the pre-eminence of listening over seeing.

Bringhurst's is a *poetics of hearing what-is* rather than a *poetics of seeing what-is*. For him, *being* is singing and dancing and the best way of approaching its mystery is through one's ears and through one's feet. The notion of *breathing through one's own feet* translates into something like *paying ecological attention to what-is*. This is one of those elementary truths we need to be reminded of from time to time, because, in the industrial and solipsistic society where we happen to live, we humans seem to have forgotten how to pay attention at all. We live in a time when not paying attention is the norm, indeed – we do not have time or patience to listen to our fellow human beings or to the real any more. However, this is not the only wrong thing about our society. The talking *homo sapiens* of the poem claims that nowadays we live in a world where “*we have barely stopped binding the feet / of the women.*” Binding someone's feet, particularly those of women, is an expression of slavery or cruel dominion over *the weaker sex*, so that this could be interpreted as being a call for gender equality, for respect among the sexes. This is one of the reasons why the poetic voice considers, from an ironic standpoint, the possibility of binding men's hands so as to prevent them from binding women's feet. The best option, it concludes, is trying to weight “*them (both men and women) back into frequent touch with the ground,*” so that they will learn to breathe through their feet again. The two closing lines of the first stanza are a celebration of this concept of paying ecological attention:

Like eyes, the hands open and close, squeeze and release.
The feet, like the ears, are always wide open.²⁴

SP, p. 199.

The second stanza is a true enigma; it concerns dreams after all. The whole picture gives the overall impression of surrealistic unreality. Near an enigmatic stream, the

²⁴ Though poem VIII of *Conversations with a Toad* consisted originally of only two stanzas, it was further revised and expanded by one more stanza in the two subsequent versions of the poem. The second stanza remained exactly the same from the beginning, while the first stanza was slightly modified in later versions. In the first Lucie Lambert edition, the first stanza reads as follows: “Toad, instead of binding the feet / of women, shall we muffle the hands / of men? Or weight them / back into frequent touch with the ground? / Like eyes, the hands open and close. / The feet, like the ears, are always wide open.” In the *Descant* version of the text, the vocative addressed to the toad is missing and the stanza reads as follows: “Instead of binding the feet / of our women, shall we bandage / the hands of our men? Or weight them / back into frequent touch with the ground? / Like eyes, the hands open and close. / The feet, like the ears, are always wide open.” In the third version of the text, the opening lines read as follows: “We have barely stopped binding the feet / of the women, toad. Is it true we ought to be binding / the hands of the men? Or weighting them / back into frequent touch with the ground? / Like eyes, the hands open and close, squeeze and release. / The feet, like the ears, are always wide open.” The adverb *barely* in the first line is eloquent enough, for it highlights the fact that women have started only very recently achieving some of their vindications in their search for a genuine emancipation from the yoke of patriarchy. In addition, the two closing lines have been significantly expanded to enhance the opposition between hands and feet. Nevertheless, this is not a feminist, but a humanist reading of these lines; this, we suspect, is the interpretation that Bringhurst wishes himself. Like the author, we believe in humanism, in the sacredness of the dignity and equality of both men and women, regardless of their sex, which is one more physical attribute. What really matters is their being *irreplaceable* humans endowed with dreams and illusions in search of their own true vocation throughout a whole lifetime, and, of course, their uniqueness.

embodiment of the perpetual metamorphosis implicit in reality, are pictures of dreamers who possibly stand for all the visionaries that have existed upon earth. Having cleansed their senses, visionaries are capable of seeing beyond the polished surfaces of objects and reaching into an invisible core of meaning at the heart of things, and they perceive what the others do not even notice. But history teaches that visionaries are only madmen or madwomen, social misfits to the minds of their fellow human beings, and that sometimes they end up being ostracised by society. Those who cannot see with open eyes and ears do not seem to understand visionaries' dreams, even if they are closer to the truth than the majority of ordinary mortals. Seeing ahead of their time, they have learnt something whose existence we do not even suspect. However, this is only one possible interpretation, and it may sound far-fetched or inaccurate. One is inevitably reminded of the cave paintings of prehistoric times, with their stylized representations of humans hunting big mammals, frozen in mid-motion for eternity. The hands that painted those paintings were those of visionaries – ones who still breathed through their feet and touched the texture of the world with non-aggressive, careful hands. The history of humankind is, after all, rich in anonymous visionaries that have not filled chronicles with griefs but with true achievements instead. The closing lines of the stanza appear to shed some more light on the preceding ones:

... Close your eyes, say the rocks,
and dream of things seen in the darkness.
Open your eyes and dream of the sun.

SP, p. 199.

Ancestral rocks, which shared the same Precambrian time with toads, bryozoans and trilobites, hide a primordial wisdom within themselves. The rocks speak a language of their own; humans have no monopoly on meaning or language, according to Bringhurst. Much can be learnt by just looking at rocks deeply, for they are a meaningful part of *the book of the world*. Geologists know how to interpret them, how to decipher the messages imprinted on them by the hand of time. To the uninitiated, rocks might be simply that, dumb rocks that sit in silent self-complacency. In this poem, Bringhurst personifies them and makes them speak to humans though. It comes as a delightful surprise that rocks, of a hard, tangible and stubborn nature, should speak about something so truly volatile and eel-slippery as dreams. They teach humans an elementary lesson: if asleep, they are to pay attention to what they dream of amid the darkness of sleep; if awake, they are to pay attention to what their eyes see and daydream of the sun. In other words, the speaking rocks urge humans to remain alert to reality with a maximum of concentration and attention, for much of the ultimate essence of things is revealed in dreams and wakefulness alike. What humans listen to the rocks saying is that everything is connected to everything else and that *being* is an unstoppable continuum in perpetual flux. The mind, the jewel we treasure in our skull, is a miniature model of the world at large out there. And to the mind turns precisely the speaking *homo sapiens* in the last stanza.

The third stanza was first added to the poem in the *Descant* version of the text, and it was further revised in *The Calling* and *Selected Poems* version. It could stand alone as a separate short lyric, but it does make sense that it should come as the closing stanza of poem VIII, especially after a stanza concerned with rocks and dreams:

The mind is a body, with shinbones and wrists
and roots, milkteeth and wings,
ankles and petals, fins,

feathers and dewclaws, leafstalks and lungs.
It is larva, pupa, imago, sea urchin,
tree. Ripening ideas drop from its limbs.²⁵

SP, p. 199.

The stanza opens with a simple declarative sentence – *The mind is a body* – and then it is followed by a long enumeration of seemingly disparate elements that constitute an exhaustive catalogue of the world. The mind is thus a physical entity, firmly rooted in the real, and so its peculiar anatomy consists of parts of the human body (shinbones, wrists, milkteeth, ankles, lungs, limbs), parts of animals (wings, fins, feathers, dewclaws) and parts of plants (roots, petals, leafstalks). This apparently chaotic enumeration constitutes an accurate catalogue of the world-within-the-human-mind in the end. When this catalogue is placed against poem IV of *Conversations with a Toad*, which is also a meditation on the nature of the mind, we stumble upon this truth: *the mind is the world*, a miniature model or microcosm of the macrocosm – the big world out there. There is room for everything in the mind, for animals and plants alike, as the *in crescendo* enumeration in the penultimate sentence makes clear: “*It is larva, pupa, imago, sea urchin, / tree.*” The enumeration is not random at all: *larva*, *pupa* and *imago* are all stages in the life of an insect, especially one with wings (*imago* is the final and fully developed adult stage, in fact). These are the stages the moth that the toad feeds on goes through, for instance. They are also expressive of the incessant metamorphosis inherent in all living creatures. Apart from the insect in its different incarnations, there is place in the mind for the sea urchin (the small sea creature with a round shell covered with spikes), probably of similar anatomical complexity, and also for a tree. From the tree of the mind drop “*ripening ideas.*” Ideas are the fruits of the mind, which is a tree. The twofold metaphor is beautiful and moving. Once again, it reminds us of the *interconnectedness* of everything in reality. The mind is an all-embracing reality capable of containing the whole of reality within itself.

IX

Poem IX of *Conversations with a Toad* is a complex meditation on the non-human as a prerequisite for communication among human beings. It is a truism to say the humans are social animals, that isolation is unnatural. About 23 centuries ago, in the world of classical Greece, one of the high points of human civilization, Aristotle was convinced that this was the case: *man is a political animal*, he said. Being a social animal means that we humans live in a community with other fellow human beings, and that, inevitably, we need the presence of others to make sense of ourselves and our place in the world. We are in need of bonds – physical, intellectual, emotional – to feel alive and embrace the sense that we fit in a particular scheme of things, that we belong among beings who are not completely dissimilar to us. Speech, the mind and the heart play a crucial role here, in the construction of one’s own human and social identity. Of course, this is a logocentric and anthropocentric interpretation of humans’ social nature, built upon the very foundations of a long tradition of Western thought. What Bringham’s meditation brings to our attention is precisely the importance of the non-human in the interpretation of the human. *We do*

²⁵ In the *Descant* version of the poem, this stanza is slightly different: “The mind is a body, with shinbones and wrists / and roots, milkteeth and wings. The mind / is a body with ankles and petals, with fins, / feathers and dewclaws, petioles, lungs.” In the final version of the text, the enumeration is much more fluid and effective. *Petioles* has been replaced with a much commoner word – *leafstalks*.

need to acknowledge the existence and presence of animals to be able to make coherent sense of ourselves. Only by walking the road of the nonhuman will we be able to make ourselves whole again. This is the fundamental lesson at the heart of this brave piece of meditation for two voices.

Originally conceived for one voice only in the first two textual incarnations of the poem, since the publication of *The Calling* in 1995 this has been a composition for two voices – those of *homo sapiens* and *homo narrans*. The former leads the meditation towards an illuminating conclusion, whereas the latter punctuates the thoughts and words of the other by speaking aloud almost exactly the same words uttered in poem I of *Conversations with a Toad*. These are the opening lines of the poem:

Toad, all the roads from a man to a woman,
a man to a man, woman to man, woman to woman
lead through the nonhuman. This
is the reason, toad, for musicians.²⁶

SP, p. 199.

To put it very simply, there is no way of reaching to the other but by walking the road of the nonhuman. It is no shortcut; it resembles more strolling, going for a quiet walk in the solitude of the woods or the mountains. “The eyes are to the mind what love is to reason”, says Bringhurst. Like speech or the capacity for thought, human love is what makes us genuinely human. It is out of love that the grander achievements of humankind have been born. It is love which makes us empathetically care about the others, their material well-being and their emotional harmony. Love makes things cohere, and this is not utopian or idealistic thinking. This is simply acknowledging or ascertaining what is. Musicians are prototypical in their literal way of coming to terms with the nonhuman through their playing of musical instruments, originally made out of parts of animals:

In this poem a man talks
We speak to each other by means
to a toad. The toad may listen
of the bones and the horns and the bodies
or he may not. That
and bowels of dead animals, plucking
is not the man's concern.
their gutstrings, thumping their bellies, plinking
I suppose it is not the toad's concern
their evened teeth laid out in a row.
either. I believe,

²⁶ In the Lucie Lambert edition, poem IX reads like this: “So it is, toad, that the road / from one man to another lies through / the nonhuman. This is the reason, / toad, for musicians, who speak / through the bones and the horns and the bodies / and bowels of dead animals, plucking / their gutstrings, thumping their bellies, plinking / their evened teeth laid out in a row. // The animals give them their speech and the means / of their thinking, just as the dreamers’ / masks open the doors of their dreams. / The voice is a face. The face is a vision.” There is only one voice speaking in this version and, what is even more significant, it is the musicians, not human beings in general, that are made the protagonists of this journey through the nonhuman toward the genuinely human. In the *Descant* version, the poem opens like this: “So it is, toad, that the road / from one man to another lies through / the nonhuman. This is the reason, toad...”. The rest of the text is exactly the same as that of *The Calling*, but, of course, the second voice, that of *homo narrans*, is also missing here. In the definitive state of the text, the poet elaborates the ways leading from the human to the human through the nonhuman, by considering all possible relationships between men and women.

X

If we look up the word *meditation* in the dictionary, we learn that it is a formal word and that it means at least two different things: (1) the practice of thinking deeply in silence, especially for religious reasons or in order to make your mind calm, and (2) serious thoughts on a particular subject that somebody writes down or speaks. And if we look up the word *thought*, this is what the dictionary, among other things, says: (1) something that you think or remember, (2) a person's mind and all the ideas that they have in it when they are thinking, (3) the power or process of thinking, (4) the act of thinking seriously and carefully about something, (5) ideas in politics, science, etc. connected with a particular person, group or period of history. *Meditation* and *thought* are closely related words; at some point their meanings intersect, especially if we juxtapose sense (2) of *meditation* and senses (2) and (3) of *thought*. Poem X of *Conversations with a Toad* could be said to be a self-reflexive point in the sequence, for it is a meditation on thought. Thought stops for a while, looks deep inside the mind or itself, and this is what it comes up back again to the world with: a handful of words which are attempts at self-definition. No other poem in Bringhurst's ten-part sequence has so stubbornly remained the same since it saw the light of day: only stanza one is slightly changed and one word replaced with another; the rest remains immutable, unchanged.

The poem has got a clearly tripartite structure: the mind moves along three steps in its investigation into the nature of *thought*. The first stanza opens with two enigmatic statements about mountain goats, and these are followed by two possible definitions of *thought*:

In winter the mountain goats think.
In summer they gather. Thought
equals solitude. Toad, is there no other
answer? Thought is the mind walking
the ridges and edges of being, not
the tuned instruments crooning their perfect routines.²⁷

SP, p. 200.

Humans have no monopoly on thought either, no more than on meaning, language or poetry. If it is the animals that “*give us our speech and the means of our thinking*” (see poem IX), then it is only natural that they should speak a language of their own and think in their own way too. The opposition is seasonal: in winter taciturn mountain goats choose to think in solitude, and in summer they gather to celebrate their being alive with their fellows. Two interpretations are close at hand: solitude (and also silence) is the essential prerequisite for deep thinking, or, maybe, one is plunged directly into solitude, even in the middle of a crowd, when one gives oneself over to thinking seriously and intensely about something. Thought is solitude, that is the first equation we find in the unfolding of the poem. The second follows immediately: thought is “*the mind walking the ridges and edges of being*.” The mind is a body and so it has got feet with which to walk. *Being* is the unknown territory explored conscientiously by thought in its excursions towards the peripheral zones that are far away from its very centre. It is summits, high points, and edges that the thought prefers going into. Beauty is difficult and complex, and this is what thought is after. Unlike music,

²⁷ In the Lucie Lambert edition, the line arrangement is slightly different at this point: “... Thought / equals solitude, toad. There is no other / answer. Thought is the mind walking the ridges and edges of being, not / the tuned instruments doing their perfect routines.” And, originally, the word *crooning* read *doing*.

thought does not seek to comprehend *being* through “*tuned instruments crooning their perfect routines.*” Thought takes its chances and runs risks in going into unknown territory of *being*. There might be several possible names for this: pure speculation for its own sake, the pleasure of dialectics, the dance of the intellect among words and ideas, “*ripening ideas dropping from the tree of the mind,*” the task of philosophy in asking fundamental questions. Smoothness, the absence of complexity, is blasphemy, we learn in the first line of the second stanza. The symmetrical and geometrical centre of the poem is precisely the most complex and elaborate of all three definitions of *thought*:

... Thought
is the mute breaking through in the voice.
Like ice going out in the spring,
the voice giving way.
The language dug up by the roots
where thought has been speaking.

SP, p. 200.

There is an amazing density of meaning in this stanza. Thought is trying to find words to convey what is otherwise ineffable, going back in time to a pre-verbal stage of humankind in search of elemental pieces of truth that have not been uttered yet, but are visible out there if we only pay attention. Giving voice to those insights, intuitions, revelation bites is something thought strives hard to do. The mute, the ineffable, the *unsayable* finds its way through the voice (the pre-eminence of speech over writing is taken for granted here again), with a naturalness that resembles such natural phenomena as the ice melting in springtime. At the edges of *being* quotidian language will not do; it must return to a more pristine state as it were. Language is dug up by the roots from the living soil so that thought can make itself discernible in verbal disguise to other minds. This is thought on the edge, on the crest of the wave, making the most of language to communicate its findings or the fruits of its investigations into reality. Pure being always defies verbal definition.

The poem closes with a warning addressed to the toad: humans are determined to cease to have meaning and, in the process, they are about to destroy everything they find on their way. The talking *homo sapiens* warns the toad of the imminence of destruction of the world, while, somewhere between the lines, there is the optimistic message that the persistence of poetry and being is a reality too. Humans’ greed is insatiable and invincible; their hunger and thirst for money, power and comfort is unappeasable, so there is only one thing left for the toad to do: to go away. What is round the corner is a silence that is not poetry, a dead form of silence that breeds no thinking or singing:

Leap, toad. Our invincible
greed, a dead silence, an absolute
absence of meaning, is closing.

SP, p. 200.

New World Suite Number Three

Four Movements for Three Voices

A Garden of Colours: A Meditation on Being, Time & Ecology

I · INTRODUCTION

New World Suite Number Three. Four Movements for Three Voices (2005) is possibly Bringham's most complex polyphonic poem to date.¹ In the new realm of polyphonic poetics, he had the previous experience of *The Blue Roofs of Japan* (1986) and *Conversations with a Toad* (1987), which were conceived as poems for two voices only. Now, the *Suite* incorporated a third voice, a much more complex interpenetration of all three voices, and a lengthy text arranged into four distinct movements, to say nothing of the philosophical and ecological ideas at the heart of the poem. In the essay entitled "Licking the Lips with a Forked Tongue", written as an afterword to the definitive text published in a special limited edition of 75 copies by the Center for Book Arts, the author explains the genesis of the poem in detail. He wrote the *Suite* as early as 1990, but it had to wait for a long time, exactly 15 years, to find its perfect typographical realization. Before 2005, Bringham's complex poem had known a previous incarnation in *The Calling: Selected Poems 1970-1995* (1995), which the author did not find typographically satisfying. Much earlier, in 1993, Crispin and Jan Elsted, at Barbarian Press in Mission, B.C., had produced a trial design proof for a projected edition of the same poem which never saw the light of day; and much later, in 2009, Gaspereau Press would publish a more accessible and affordable edition of the text in several colours in the author's new *Selected Poems*, the final third of which is almost completely devoted to Bringham's polyphonic poems. Needless to say, this book gave Bringham's polyphonic poems a wider circulation, for *Conversations with a Toad* and *New World Suite No. 3* had been originally published in limited deluxe editions.

Once again, as in the case of many other Bringham poems, the editorial history of *New World Suite No. 3* is complex. Though, as Bringham says, poetry lives and thrives ultimately in the human voice, this particular poem has known three different printed incarnations over time, apart from an early trial proof. This is the succinct chronology of the *Suite*:

- (1) *Trial design proof for a projected edition of 'New World Suite N° 3'* (A.45). Mission, British Columbia: Barbarian Press, 1993. Broadside, 31.5 × 41 cm. One-page excerpt from the second movement of *New World Suite N° 3*. One copy was printed for exhibit at the Clark Library, Los Angeles, in the fall of 1993. A small number of additional copies are known to exist. The book itself was never printed. A.79, the Center for Book Arts edition, was issued in its stead. In Crispin & Jan Elsted's *Hoi Barbaroi. A Quarter Century at Barbarian Press* (2004), under the heading "The Bibliography Continued: 1988-2004" and the category "B. Pamphlets and Ephemera", there is precisely an entry (B.18) on the TRIAL PROOF FOR 'NEW WORLD SUITE' (1993). It reads as follows: "Robert Bringham. Excerpt from

¹ Mark Dickinson, in a review of *Selected Poems* (2009) entitled "In the Wake of Our Ancestors", published in *The Times* (London), 8 August 2009: *Weekend Review* 12, claims that "Bringham's polyphonic poetry, introduced in the last third of the book, marks another attempt to emulate the world as we experience it, as a bandwidth full of sound and song. In *New World Suite No. 3*, a poem for three speakers set in four movements, he gets around the technical challenge of writing for three voices who speak as a simultaneity by printing their lines in ochre, blue and black, and stacking them into musical staves. One of the most innovative experiments in all of English-speaking poetry, the *Suite* springs off the page in a garden of colour."

New World Suite. 16 by 12 ½ inches. Joanna, printed in blue & black as a broadsheet showing one page, the ‘gutter’ marked by a rule, and a colophon note in red to its left. A few copies printed as a trial proof. The text is printed as a reading ‘score’, the lines set in groups of three (one for each of the voices for which the poem is written), separated by rules. The book itself has not yet been published, but it will appear in the near future. It is planned to have a CD accompanying the book containing a performance of the poem, with readings of other of his work.”² The trial design proof was published in August 1993. The text shows staves 38-45 from the second movement, “Who Is the Fluteplayer?”, of *New World Suite No. 3*. A few years later, in November 1998, the Barbarian Press still announced in quite enthusiastic terms the publication of Bringhurst’s poem on page 15 of the *Barbarian Press Catalogue 1998-99*, included as a portfolio in *Hoi Barbaroi*. The book was said to be still *in preparation*, but it never got published by Barbarian Press:

NEW WORLD SUITE NO. 3: 4 Movements for 3 Voices. Robert Bringhurst.

Our first multimedia production! This continues the experimentation with polyphonic poetics Bringhurst began with *The Blue Roofs of Japan*, which we published in 1986. *New World Suite* adds one more voice, & will be printed in ‘score’ form, with the voices printed on a 3-line ‘staff’ so that it can be read by three speakers. (We are also experimenting with a second printing of the text on facing pages using varied colours and typefaces to suggest dynamics and tempi, but this is not yet certain.) Bringhurst has also provided a substantial prose essay to introduce some of the concepts behind the construction of the work. The book will be presented with a CD of a performance of the piece by Robert Bringhurst and two other speakers; the recording will also include a performance of *The Blue Roofs of Japan* and readings by the poet of some of his earlier work.

- (2) *The Calling: Selected Poems 1970–1995* (A.47). Toronto: McClelland & Stewart, 1995. 256 p. Paper. 14 × 22 cm. ISBN 0-7710-1651-4. Among the contents of these new selected poems is the complete text of *New World Suite N° 3*, which consists of four movements: I: All the Desanctified Places (revised from C.60), II: Who is the Fluteplayer?, III: The Children of Zhuang Zi Confront the Frozen Saskatchewan River, IV: Winter Solstice, Cariboo Mountains (revised from B.37). The text of the poem is published in staves of three lines for the three voices of the poem. In fact, the poem is preceded by brief instructions as to the way the poem is to be approached: the first voice (male) is in bold, the second voice (female) in italic, and the third voice (male) in roman. The lines in each stave are spoken simultaneously, but sometimes the three voices speak in sequence. This is the reason why the spatial arrangement within each stave is also meaningful, for it makes explicit the points at which voices are to measure themselves against the other voices. The full suite was then revised in A.79, the 2005 Center for the Book Arts edition. Some fragments or excerpts from the whole *Suite* had been published earlier in periodicals or magazines: (A) Movement I, “All the Desanctified Places”, had been first published in C.60, *Margin* 10 (1989): 89-92. Later it was revised in A.47 (*The Calling*, 1995), in A.79 (*New World Suite No. 3*, 2005), in B.37 and in C.69. (B) Movement IV, originally entitled “Winter Solstice: Clearwater River”, was published in B.37, *Towards 2000*, edited by Ron Clark & Martha Gould. Saskatoon: Fifth House, 1991: pp 52–55, 73. “Winter Solstice: Clearwater River” was later revised as “Winter Solstice, Cariboo Mountains” in A.47 and A.79. In addition, movement IV was published alongside movement I, “All the Desanctified Places” (revised from C.60). (C) Movement I, “All the Desanctified Places” was also published as “From *New World Suite n° 3*” in C.69, *Poetry Canada* (Kingston, Ontario) 15.2 (1995): 14-15, where it was reprinted from A.47, with a new Preface.

² See Crispin & Jan Elsted, *Hoi Barbaroi. A Quarter Century at Barbarian Press, with Essays by Invitation & a Photographic Essay by David Evans. Bibliography Compiled by Crispin Elsted*, 2004, p. 128. Consulted at the Rare Books and Special Collections at the Library of the University of British Columbia (Vancouver), call number Z232 B197 H64 2004, in the summer of 2010. Among the essays announced in the title are pieces by Simon Brett, Jan Elsted, Sjaak Hubregtse and Robert Bringhurst himself, who contributed the essay “Shouldering Civilization: The Private Search for Public Good”.

- (3) *New World Suite N° 3* (A.79). New York: Center for Book Arts. 2005 [actually 2006]. 4 vols., 28 + 28 + 28 + 20 p. Each volume 21.5 × 31 cm, mounted on (and detachable from) a lectern base 41.5 × 41.5 × 8 cm, opening to 95 × 95 cm. “This edition ... consists of four parts, designed by Robert Bringhurst, housed in a structure designed by Hedi Kyle.... This is the Center for Book Arts 30th Anniversary Publication.... There are 75 copies ... including five artists’ proofs, produced in 2004–2005.”³ [Printed in 2005, bound in 2006.] The contents of the volumes are these: the poem for three voices, reprinted with minor revisions from *The Calling* version (A.47) but redesigned by Bringhurst, in a binding designed by Hedi Kyle – volume 1 (black covers): “First Voice (Viola)”; volume 2 (ochre covers): “Second Voice (Violin)”; volume 3 (blue covers): “Third Voice (Cello)”; volume 4 (black covers) contains an afterword: “Afterword: Licking the Lips with a Forked Tongue”, an essay on the creation of the poem as well as a profound meditation on the nature of polyphony, in music and in nature alike [the essay was reprinted in D.128, *Event* (New Westminster, BC) 36.1 (2007): 7-16, and later revised in *Everywhere Being Is Dancing, Twenty Pieces of Thinking* (A.83 & A.90)], Subscribers to the Edition, Center for Book Arts Directors & Staff, and Colophon. Now there are no male or female voices but string instruments instead (viola, violin and cello), standing for the three voices, which are superimposed upon one another and printed in three different colours (black, blue & ochre). The first voice in each case is printed in black at the mid-centre of the line, whereas the second and third voices are printed in blue (raised) and in ochre (lowered) to indicate simultaneity. Not all three voices coincide all the time or exactly at the same time, and so spatial arrangement on the page is also of the essence.⁴

³ The Rare Books & Special Collections of the Library of the University of British Columbia (Vancouver), holds copy no. 30 of *New World Suite No.3*, which we consulted in the summer of 2010. The text of the colophon gives a detailed technical description of the work as book art: “This edition of *New World Suite Number Three* consists of four parts, designed by Robert Bringhurst, housed in a structure designed by Hedi Kyle. // Michael and Winifred Bixler set the text in Monotype at their foundry in Skaneateles, New York. This edition was printed by Barbara Henry on a Vandercook SP-20 proof press (serial 26880) at the Center for Book Arts in New York City. Mirah von Wicht, with the assistance of Jennifer Bantz Biddle, Ana Cordeiro, Nancy Loeber, and Linda Trimbath, constructed the cases and bound the books at Michael Roger Press in Middlesex, New Jersey, at the Center for Book Arts in New York City. // The type is Monotype Dante, designed in Verona in the early 1950s by Giovanni Mardersteig, based on Mardersteig’s detailed study of the work of Francesco Griffo. The initial version of the type was cut by hand in the rue de la Glacière, Paris, in 1954 by Charles Malin. // The paper is Frankfurt Cream, mould made at the Zerkall Mill in the Kall Valley, southwest of Köln, Germany. // This is the Center for Book Arts 30th Anniversary Publication, organized by the Center’s founder, Richard Minsky, with leadership support of David S. Rose, Chairman of the Publications Committee, and executed under the supervision of Alexander Campos, Executive Director. // There are 75 copies of this book, including five artists’ proofs, produced in 2004-2005. // This is copy number 30.”

⁴ In “Licking the Lips with a Forked Tongue”, the afterword to *New World Suite Number Three* (2005) and a lucid meditation on the concept of polyphony, Bringhurst explains in detail how the poem has typographically evolved over time in search of a more perfect material incarnation: “*New World Suite No. Three*, which I wrote in 1990, was published in 1995 in the simplest form I could devise. The three simultaneous voices were printed black on white, one beneath the other, in roman, italic and bold: rows of words in three-line staves. The result looked less like a score for strings than like a score for pure percussion. It was easy to see all the words at once but not so easy (even for musicians) to see how the piece might sound. I have waited ten years for this chance to print it differently, believing that with adequate resources I could make the *texture* of the poem more palpable and easier to see without making the text any more difficult to read.

Musicians know the score is not what matters; it’s the music recreated from the score. So they print their scores in parts, to make them easier to use. I wanted to do that with the *Suite*. But in chamber music for *speaking* voices, the parts can’t quite be freed from one another. They depend on one another to keep time.

It seems to me that the heart of this particular poem naturally beats a little faster in some sections than in others. That intuition is all that underlies the tempo markings: *moderato*, *adagio*, and so on. But each of the three voices is timed against the other two and not against anything else. Because there is no metronome, and no fixed unit of mensuration, all three voices must appear in all three parts. The score shows where every phrase *begins* in relation to the phrases that are spoken by the other two voices – but as soon as it begins, the speed of the phrase is up to the speaker. In the rests between the phrases, the speakers wait for and catch up to one another, as people do in conversation. If the interaction of the voices were more precisely controlled

- (4) *Selected Poems* (A.92). Kentville, Nova Scotia: Gaspereau Press. 2009. 272 p. 14 × 21.5 cm. ISBN 978-1-55447-068-6. Among the contents of these new selected poems is the complete text of *New World Suite N° 3*, with some minor textual variants with respect to A.79, the 2005 Center for Book Arts edition. Once more, three colours are used to represent the violin, viola and cello of the three voices. Lines are centred, raised or lowered as in the 2005 edition of the text; clusters of three lines are numbered within each single movement of the poem. Aesthetically and typographically, this new Gaspereau edition is *legible and affordable*, in Bringhurst's view. If the 2005 edition presented separate scores for all the three voices (three separate volumes), now it is a pleasure to see all three voices superimposed within the boundaries of a single page. The overall impression is one of a garden of colours and a genuine homage to the human voice.

Robert Bringhurst found the inspiration he needed for *New World Suite No. 3*, his complex polyphonic poem for three voices in four movements, in the natural polyphony of the earth and in the vast world of polyphonic music. In the realm of music, polyphony is *a formalization or humanization of something that has been invented*, but the source of the invention is ultimately to be found in the real world. In the singing of frogs and birds, in monolingual or multilingual daily conversations eavesdropped in the street where several human voices interact with absolute naturalness, Bringhurst finds the perfectly natural source for his polyphonic poems. Musicians do have much to teach him as well. In the afterword to the 2005 edition of the poem, the author explains in detail how Glenn Gould's *Solitude Trilogy* (1967-1977),⁵ a peculiar documentary as well as a literary landmark in the whole corpus of works made in North America, and the example of musicians as various as Josquin, Bach or Stravinsky provided him with enough knowledge and skill to produce his own poems for several voices. In this respect, he was an autodidact: he went through his own crash course on music and explored Gould's experiment with passion in search for nourishing food for his own poems.⁶ But now he was treading on familiar ground: *The Blue Roofs of*

than that, the voices would grow stilted. Then they would have to rescue themselves from stiltedness by turning into song." (pp. 5-6)

⁵ In "Licking the Lips with a Forked Tongue", Bringhurst dwells on the importance of Glenn Gould's example for his own polyphonic poems: "In 1967, the Canadian pianist Glenn Gould created a work for CBC Radio called *The Idea of North*. In Canada, this is by far the best-known work of polyphonic literature. The strange thing is, it is almost completely unknown as a work of polyphonic literature. It was commissioned as a radio documentary, and superficially it is a documentary: ambient sounds and background music play while people talk. What sets it fundamentally apart it is thoroughgoing polyphonic texture and subtlety of form.

The Idea of North doesn't exist as a written or printed text, nor did it ever exist, like an ordinary work of oral literature, in the form of a live performance. It was stitched together in a studio by overdubbing and splicing miles of tape. For twenty-five years it circulated only in the form of *samizdat* audio cassettes, illegally made from the radio broadcasts. Now that its author is safely dead, it is sold on CD as an eccentric work of music. That may be one of the things it is, but it is something else as well: a literary landmark. *The Idea of North* is the first of three compositions in this genre that Gould created over a ten-year period. The others are *The Latecomers* (1969) and *The Quiet in the Land* (1977); the three together have come to be called *The Solitude Trilogy*. None of these has ever been included in a literary anthology, nor substantively addressed in a work of literary history. Yet to me this trilogy is one of the most accomplished and important works of literature ever produced in North America, in any medium or language. [...] Gould's work, when I finally encountered it, taught me an immense amount about writing for multiple voices. But again, it did not answer any questions about how to put spoken polyphony on the page, where I habitually work. As far as I can tell, Gould never gave that issue any thought." *Ibid.*, pp. 10-12.

⁶ In "Licking the Lips with a Forked Tongue", he writes: "I had been listening for years, with rising envy, to forms employed by jazz and classical musicians. I'd read a bit of Schönberg and Stravinsky and published a few poems that I described, rather facetiously, as sonatas and chaconnes. But after writing *The Blue Roofs* I began to listen to music, and to read it, more attentively than I ever had before. Performers from Bill Evans to John Lewis to Glenn Gould, and composers from Steve Reich to J.S. Bach, began to teach me how to deal with divergent, interpenetrating voices. I also read the scores of a lot of string quartets, from early Haydn to

Japan and *Conversations with a Toad* had already given him the opportunity to enter an unknown but promising territory. When set side by side with the *Suite*, they are simple polyphonic experiments by comparison. The suite⁷ as a genre provides the poet now with the model: four movements going each at a different pace or speed (*moderato*, *andante*, *adagio* and *lento*), in which the musical instruments have been replaced by three human voices (two male and one female in *The Calling* version; violin, viola and cello in the 2005 incarnation of the text). The four-part structure makes this a lengthy literary work of art full of allusions and cross-references and echoes from Bringham's previous polyphonic poems. The overall impression is that of a beautifully woven tapestry where the three voices coalesce into perfect harmony in whatever they have to say. Each voice goes its own way, but they intertwine and interpenetrate at points where the sum of the parts transcends the meaning of each individual utterance. The final result is one of not just complexity, density of meaning and profundity of thought, but also of moving music in this most astonishing homage to the human voice.⁸

At least three threads are woven into the heart of *New World Suite No. 3*: (1) polyphony, which is the outward structural device whereby the interpenetration of human voices becomes an imitation of the natural polyphony found in the world, where human and nonhuman voices coexist in space and in time on democratic terms; (2) ecology, i.e. a more acute awareness that the earth is almost on the brink of environmental apocalypse because of human beings' greedy management of the earth's resources in search of money, power and comfort; and (3) philosophy, for a profound meditation on the nature of being, poetry, time, history and human's relations with the world pervades the poem from beginning to end. As a result, all times and places seem to be co-present here and now (hence the geographical references to modern metropolis and ancient sites on the American continent). The title itself makes sense as long as we juxtapose both the term *suite* (the musical genre used as structural model for the poem's composition) and *New World*, which stands for America as a whole. In bringing into a perfect *Gestalt* such disparate elements as a sustained philosophical meditation on time and being, fragments from the history of humankind such as the arrival of European settlers in the New World and the beginning of the scientific revolution with Copernicus or Galileo Galilei, tattered visions of urbanscapes and ancient sites of the First Nations of America, mythical accounts of constellations shining up above in the sky, or a vindication of the ecological integrity of breathing Earth, Bringham is offering us a vibrant and tantalizing depiction of the world he lives in, our world, which is one and manifold, unity and plurality at the same time. This is one of the reasons why polyphony seems to be the only appropriate means of catching the many-sidedness and interconnectedness of this subtle and beautiful world of ours. Of

late Shostakovich. This crash course taught me plenty about structure. It did not, however, answer the question of how to print a polyphonic poem." *Ibid.*, pp. 4-5.

⁷ For the essential characteristics of this musical genre, see the entry on 'suite' in the *Encyclopaedia Britannica*, volume 27, pp. 15968-15969: "Suite, in music, a group of self-contained instrumental movements of varying character, usually in the same key. During the 17th and 18th centuries, the period of its greatest importance, the suite consisted principally of dance movements. In the 19th and 20th centuries the term also referred more generally to a variety of sets of instrumental pieces, mainly in forms smaller than those of the sonata, and included selections for concert performance of incidental music to plays [...] and ballet music."

⁸ In this respect, Bringham claims that even if our eyes are not trained to read several texts at once, our ears are better schooled in the polyphony found in the world of human voices. The world is after all a polyphonic (and polyglot) place: "Which of us hasn't sat in a café listening to two or three adjacent conversations – four or six voices minimum, with others passing through? Which of us hasn't walked a city street and heard a hundred different voices, speaking a dozen different languages, spilling through and over one another? Which of us hasn't wakened in the spring to the interwoven singing of eight or a dozens species of birds? [...] In normal conditions, humans all inherit what it takes to learn multiple languages, catch multiple voices, and hear through the biological fence." (pp. 9-10)

course, a poem does not exhaust or replace reality and experience, which is always larger and grander than whatever might be said about it. However, only a mind like Bringhurst's, so deeply in love with this Earth and *being* and poetry, was capable of paying this moving homage to this tiny planet floating amid the immensity of the universe. And, though Bringhurst has accomplished much in the short lyric poem, in the dramatic monologue, in the sequence of dramatic impersonations devoted to the Oriental sages and the sequence devoted to the pre-Socratics, in long narrative poems of a mythic quality, it is no exaggeration to say that the *Suite* represents one of the pinnacles or summits in his entire poetic corpus – one work of mythic and gigantic proportions, as the very typographical realization and material incarnation of the poem in a book as an art object in the 2005 Center for the Book Arts edition makes self-evident. In a short note on Bringhurst's poem, Yvonne Korshak and Robert J. Rubin give a detailed description of the 2005 edition, which they describe as *an extraordinary tribute to the human voice*.

In an extraordinary tribute to the human voice, Robert Bringhurst wrote his long poem, *New World Suite Number Three*, for three voices, each corresponding to a musical instrument – viola, violin and cello. The poem is in four movements: I *moderato*, “All the Desanctified Places,” II *andante*, “Who is the Flute Player?,” III *adagio*, “The Children of Zhang [*sic*] Zi Confront the Frozen Saskatchewan River,” and IV *lento* “Winter Solstice, Caribou [*sic*] Mountains.” As in a polyphonic oratorio, the voices move from solo to singing in combinations with other voices, and so the book holds a score for each voice, the reader's lines in black and those of the other two voices in ochre and blue. When singers perform together, the black overlaps the other color or colors: thus one can listen to the three voices together visually as well as aurally.

With its four parts fully opened, *World Suite Number Three* creates four podia holding the scores for a performance, one for each reader, and one which holds Bringhurst's essay about the creation of the poem and his esthetic purposes.⁹

Music, human voices and maps are all important in the making of the *Suite*, for cultural and historical syncretism – or *cultural layering and folding*, as Bringhurst calls it – is another remarkable feature of this complex poem. As in his earlier book *Pieces of Map, Pieces of Music*, disparate elements from all around the world are brought into a coherent whole. This four-part poem is rich in geographical references to places as diverse as ancient sites on the American continent, modern metropolis and names of pitmines. In the afterword essay “Licking the Lips with a Forked Tongue”, Bringhurst himself explains which is the exact geographical setting for each of the four movements in the poem:

Maps as well as voices are braided together in the *Suite*. The names of Aztec, Mayan and Inca sites (Tenochtitlan, Tikal, Cuzco, Písaq) turn up side by side with the names of ancient North American settlements – some in British Columbia (Ttanuu, Kitwancool) and others in New Mexico (Chaco Canyon, Acoma, Gila, Frijoles). Threaded in with these are the names of some pitmines and cities. The

⁹ See Yvonne Korshak & Robert J. Rubin, “Robert Bringhurst (1946–): New World Suite Number Three”, in *Beyond the Text: Artists' Books from the Collection of Robert J. Rubin*. Exhibition Catalog, New York: Grolier Club, 2010: 72. In the same short note on Bringhurst's poem, the authors give a detailed technical description of the book, largely based on the information found in the colophon of the book itself: “*New World Suite Number Three: a poem in four movements for three voices*. New York: Center for Book Arts, 2004-2005, 40/75, designed by Heidi Kyle, set by hand in Monotype Dante by Michael and Winifred Bixler, Skaneateles, NY, Frankfurt Cream mould made paper from Zer Kell Mill in Kell Valley, Germany, printed by Barbara Henry on a Vandercook SP-20 proof press at the Center for Books Arts, NY, construction of cases and binding by Mirah von Wicht, bound at Michael Roger Press, Middlesex, NY and Center for Book Arts, NY, signed by Robert Bringhurst, Barbara Henry, Heidi Kyle, Richard Minsky, 17" × 17" × 3", maximum open length 66”.”

first movement includes some recollections of a desecrated landscape in the Amazonian Basin, side by side with memories of a village in northern Manitoba. The second movement is set in the Hopi country. The third adopts the voices of Chinese immigrants to Saskatchewan. The fourth, based on a mid-winter walk in central British Columbia, superimposes the figures of two hunters, Orion and Prajapati, who are two interpretations of the same constellation: one inherited from Greece, the other from northern India.

Surely this is more cultural layering and folding than a poem and its listeners should ever have to suffer? Possibly so. Yet it is a grossly simplified portrait of the land in which I live. A grossly simplified set of allusions to the damage that has been done here and to the piecemeal richness of memory and tradition that still somehow survives.¹⁰

For Bringham, *New World Suite No. 3* is a grossly simplified portrait of the land in which he lives, but also a grossly simplified set of allusions to the damage done in the New World since the time of the earlier settlers, as well as a gesture of humility and gratitude in the face of the piecemeal richness of memory and tradition that still somehow survives on the living American soil. It does perfect sense that, in the long and incantatory litany of names he makes the voices speak aloud throughout the poem, the poet should invoke the names of modern cities and ancient sites that stand on exactly the same ground as if in an attempt to salvage whatever fragments of wisdom might help heal the wounds of the whimpering Earth, being raped by the greed of conquerors, not wholly aware of the sacredness of the ground they tread upon nor of the damage and pain inflicted on our only home and *the others* – beings like animals and trees that also have an inalienable right to live peacefully on Earth.

II · THE SUITE

MOVEMENT I · All the Desanctified Places

The first movement of *New World Suite No. 3*, “All the Desanctified Places”¹¹, can be best characterized as being a catalogue of the world in miniature. How is it possible to put the whole world into the space of a just a few pages, even if they are meant to be spoken aloud by three voices uttering their own messages simultaneously? In its overall conception, the *Suite* is subtly reminiscent of Pound’s *The Cantos*, which also brought disparate elements into a many-sided poem that purported to embrace or embody the whole world – all times and all spaces– into a complex, heterogeneous work in progress of a very different texture. Once, Pound dreamed a dream of the total book – one that replaced not the world, but rather one that had plenty of room for the myriad subtleties reality is woven with. As reality is fragmentary and heterogeneous by nature, his *Cantos* were made out of valuable fragments, from whatever tattered pieces of wisdom he could salvage from remote times and spaces. Even if the result was a *homophonic*, not a *polyphonic* poem, he succeeded in conveying a kaleidoscopic view of the world in its many-fold cultural and historical layering. Bringham could be said to be following in his footsteps. *What is is an idea recurrent time* – these are words that are repeated time and again in Bringham’s *Suite*. The message amounts to nothing more than time changes human beings and the Earth itself, and yet there is something that remains the same – humans’ greedy way of relating to the world in

¹⁰ See Robert Bringham’s “Afterword: Licking the Lips with a Forked Tongue”, *New World Suite Number Three. Four Movements of Three Voices* (2005), pp. 13-14.

¹¹ Movement I, “All the Desanctified Places”, had been first published in C.60, *Margin 10* (1989): 89-92. Later it was revised in A.47 (*The Calling*, 1995), in A.79 (*New World Suite No. 3*, 2005), in B.37 and in C.69.

their management of resources is one of those recurrent motifs in the whole history of humankind. And also, we are being reminded of this primordial lesson: *being* is one and plural, every single object is the world is distinctly unique and yet is connected to everything else along a boundless continuum of existence. A *monolithic* view of the world is what we would get to hear if Bringhurst's poem were spoken by just one single voice, but there are three interpenetrating voices from the start, offering a *multilayered* view of the world instead. Thus, the whole world (all spaces) and the whole history of humankind (all times) are brought into one single point of maximum density. What all the spaces seem to have in common is that they are *desanctified places*, as the title of the movement itself suggests. *Desanctified* is the opposite of sanctified ('made holy') and so it means that all the places named in the poem are not considered holy anymore, or, in other words, that the living, invisible presence of gods and goddesses is *not felt* by humans anymore. This looks like a world devoid of the presence of the divine, impoverished to some extent, because humans do not manage to see truly what they have before their eyes unless it is something that can be exploited and exchanged for money, power or comfort.

"All the Desanctified Places", movement I of the *Suite*, consists of six clearly identifiable parts which are masterly brought into a coherent whole. The pauses between them are demarcated typographically by Bringhurst himself: (1) staves 1-17, a meditation on being, history, and time; (2) staves 18-41, an invocation of all the desanctified places on Earth; (3) staves 42-60, on the systematic and unethical rape of the Earth in the hands of greedy humans; (4) staves 61-99, a meditation on the plurality of worlds and of being, and on the destruction of the world and the persistence of being and beauty; (5) staves 100-116, on the pleasure of being physically alive in a world which is a perpetual feast and on the return to mother Earth's lap upon one's death; and (6) staves 117-128, on singing being back into visibility. The themes threaded into the heart of the poem are various and complex, and so our interpretation does not exhaust the richness of Bringhurst's work at all. Thus, this is just a gross simplification of the gist at the core of the longest of all four movements in the suite. At least, we hope it gives an idea of the thematic unfolding of this first *moderato* part of the suite. In what follows, a detailed analysis of each of these six parts within the first movement of the *Suite* aims at elucidating the structure and meaning of each single cluster of staves spoken by the three voices in the poem. This is a suite for string instruments, and so each voice stands for a viola, a violin or a cello, respectively; the notes they play and the words they utter are not dissonant at all. They are rich in denotations and connotations that testify to the absolute coherence of Bringhurst's poetic thinking. Here and there echoes can be heard from *The Blue Roofs of Japan* and *Conversations with a Toad*, the two polyphonic poems that augured the arrival of this new poem into tradition. To borrow the author's own words, when a new work sees the light of day and is ecologically salutary, then the canon inhales and makes welcome room for the newly-arrived poem.

1 · Staves 1-17

"All the Desanctified Places" opens with a brief but intense meditation on *what is* and on time in the first three staves. The underlying thinking beneath or between the lines is closely related to Hegel's philosophy of history. Each voice propounds a different definition of *what is*; they might seem contradictory, but, in essence, they share the same Hegelian spirit. These are the three voices speaking simultaneously:

1 **What is is what has happened, Hegel says,**

Who cares

2 **and what has happened is what is**

what Hegel says? What happens is what is.

3 **spread out through time.**

What is is what is timeless caught in time.

The three definitions of *what is* juxtaposed in these opening lines are these: (1) *What is is what has happened / and what has happened is what is / spread out through time*; (2) *What happens is what is*; and (3) *What is is what is timeless caught in time*. Now, Hegel had a sharp mind and he knew how to pay attention to fundamental questions to which Western philosophy has turned time and again. What did German philosopher Hegel thought about time and History? In the context of his philosophy of history¹², Hegel presupposed that the whole of human history is a process through which humankind has been making spiritual and moral progress and advancing to self-knowledge. History is not chaotic, but has a plot instead. Every single event falls into place; nothing happens by chance or out of the blue. The philosopher's task is then to discern what this plot is exactly like. Some historians have found its key in the operation of natural laws of various kinds, but Hegel's attitude rested on the faith that history is the enactment of God's purpose and that human beings had now advanced far enough to descry what that purpose is: it is the gradual realization of human freedom. Time, and History with capital letters, is then the relentless unfolding of the human spirit in its unimpeded march towards freedom, following God's blueprint, as it were. To turn to the three definitions of *what is* quoted above, it does make perfect sense to affirm that (1) what has happened belongs to the realm of the past and the past is real because it is complete, finite and finished in itself; that (2) what happens in the present is what is real, unfolding itself in a perpetual present that knows no limits and no precedents and no consequences; and (3) that *what is* is that which is eternal, immutable, the core of unchangeable meaning at the heart of what does change from one minute to the next. The third is then the more perfect of all three definitions, for it brings change and immutability together into one simple definition spoken by a female sensibility.

¹² For more basic details concerning Hegel's thought on the philosophy of history, see the entry devoted to the philosopher in *Encyclopaedia Britannica*, volume 13, p. 7407 in particular. "The first step was to make the transition from a natural life of savagery to a state of order and law. States had to be founded by force and violence; there is no other way to make men law-abiding before they have advanced far enough mentally to accept the rationality of an ordered life. There will be a stage at which some men have accepted the law and become free, while others remain slaves. In the modern world man has come to appreciate that all men, as minds, are free in essence, and his task is thus to frame institutions under which they will be free in fact."

“All the Desanctified Places” explores then the arrival of the earlier settlers in the New World. *“They were coming / like sprung prisoners, / beating their own ears / into ploughshares.”* The ambiguous personal pronoun *they* becomes clear-crystal as soon as we keep on reading forwards. One thinks of the pilgrims, the founding fathers, Christopher Columbus and all the early settlers that emigrated from Europe to America in search of better life conditions. With them they also brought much havoc and destruction to the New World and its dwellers. That is what the first voice speaks aloud, as if *in medias res*, whereas the second and third voices are more specific about the human types or specimens that set foot on the American continent: farmers, shopkeepers, slavers and Quakers strongly opposed to violence and war, workers, freeloaders, thieves, policemen and women. The whole social spectrum seems to be represented in the long enumeration. They came and keep coming, because America is the Promised Land where all dreams may come true; it is the New World, as opposed to the Old World of Europe. The heart of this second part is, however, a new attempt at defining what history is: *“The rhythms / of history are the rhythms / of buying and selling, obeying / and forcing, instead of the rhythms / of giving and bearing”*, says the violin, the female voice. This female sensibility looks reality in the eye and this is the stark truth it confronts: history is not what Hegel, safe in the idealism he embraced, said it was; the pure facts of history are precisely governed by oppression of the weak in the hands of the stronger, by money and purely material transactions, by the brute force of rule and slavery, not by a compassionate understanding of what it means to be human and humane towards one’s fellow human beings. That is what the truth is and so *“which rhythms should we humans listen to,”* asks the female voice. Maybe it is high time that we started being good to one another, being empathetic toward other people’s dreams and illusions. Our fellow human beings’ happiness increases our own happiness; nothing is left *en route*, nothing is wasted, no time is lost. The common good, the well-being of most human beings – this is what we all should be striving for. There is a sensible ethical dimension inherent in this proposal. It is possibly related to the feminine compulsion to take care, to look after, to protect, to give warmth and protection. By contrast, the third (male) voice affirms that *“history / is the savior of nature, time / the savior of space.”* These are nihilistic words: history is what saves man from the savage state of nature and plunges him into a social life governed according to institution-made rules by which everyone is expected to abide.

This first cluster of staves (1-17) closes with a reflection on what the pilgrims or settlers left behind in the Old World. Many of them chose to think of themselves as being the chosen people to start a New Eden or Jerusalem in America. Whether they believed themselves to be chosen by God to found a new more democratic or just society or not, the point is that when they set foot on the new continent, they were unable to see what this pristine world had to offer them. To begin with, it was already populated, by human and nonhumans alike, but these immigrants of European descent, who were not native to this living soil, only saw how much profit they could take from the vast expanses of land, rivers, lakes and woods they found there. They were *“fleeing Copernicus, fleeing from Galileo,”* says the first voice. Why these two astronomers and men of science committed to unveiling the truth inherent in reality? Basically, they were visionary men, endowed with sharp minds, well aware that there was a true plurality of worlds, which is what Bringhurst’s polyphonic poem celebrates. It might be illuminating to remember the essentials of their contributions to the scientific revolution that took place at the beginning of the Modern era.

Nicolaus Copernicus (b. Feb. 19, 1473, Torún, Pol. – d. May 24, 1543, Frauenburg, East Prussia [now Frombork, Pol.]), is the Polish astronomer who proposed

a heliocentric (or sun-centred) model of the universe¹³. After long hours of passionate study devoted to a detailed study of the arrangement of heavens, he claimed that the planets have the Sun as the fixed point to which their motions are to be referred; that the Earth is a planet which, besides orbiting the Sun annually, also turns once daily on its own axis; and that very slow, long-term changes in the direction of this axis account for the precession of equinoxes. He propounded his definitive theory¹⁴ in *De revolutionibus orbium coelestium libri vi* (“Six Books Governing the Revolutions of the Heavenly Orbs”), published in 1543, the year of his death. The Church declared these findings anathema and heresy, because there was no way of explaining how a transient body like the Earth, filled with meteorological phenomena, pestilence, and wars, could be part of a perfect and imperishable heaven like the one postulated by Aristotle. It was not until Kepler that Copernicus’s cluster of predictive mechanisms would be fully transformed into a new philosophy about the fundamental structure of the universe.

For his part, Galileo Galilei (b. Feb. 15, 1564, Pisa [Italy] – d. Jan. 8, 1642, Arcetri, near Florence), the well-known Italian natural philosopher, astronomer, and mathematician, made fundamental contributions to the sciences of motion, astronomy, and strength of materials and to the development of the scientific method. His formulation of (circular) inertia, the law of falling bodies, and parabolic trajectories marked the beginning of a fundamental change in the study of motion. His insistence that the book of nature was written in the language of mathematics¹⁵ changed natural philosophy from a verbal, qualitative account to a mathematical one in which experimentation became a recognized method for discovering the facts of nature. Finally, his discoveries with the telescope revolutionized astronomy and paved the way for the acceptance of the Copernican heliocentric system. As for his decisive telescopic discoveries, Galileo taught himself the art of lens grinding¹⁶, and produced increasingly powerful telescopes. With the help of these telescopes of his own devising, he drew the Moon’s phases as seen through the telescope, showing that the Moon’s surface is not smooth, but rough and uneven instead. He also hit on what now looks like a truism: the telescope showed many more stars than were visible to humans’ naked eye. These discoveries, which Galileo explained in *Sidereus Nuncius* (*The Sidereal Messenger*), were earthshaking, because they undermined Aristotelian cosmology: the absolute difference between the corrupt earthly region and the perfect and unchanging heavens was proved wrong by the mountainous surface of the Moon, for instance.

Galileo was confirmed in his belief that the Sun is the centre of the universe and that the Earth is a planet, as Copernicus had argued. Galileo’s conversion to

¹³ For more details on Copernicus’s discoveries, see the entry on ‘Copernicus’ in *Encyclopaedia Britannica*, volume 7, pp. 3912-3916. See, in particular pages 3912-3913 on the heliocentric hypothesis.

¹⁴ Before propounding the definitive version of his heliocentric model, Copernicus published *Narratio prima* (1540 and 1541, “First Narration”) in collaboration with the 25-year-old Georg Rheticus. Copernicus’s theory provided a singular method for ordering the planets and for calculating the relative distances of the planets from the Sun. Rheticus compared this new universe to a well-tuned musical instrument and to the interlocking wheel-mechanisms of a clock. *Encyclopaedia Britannica*, p. 3915.

¹⁵ In a work entitled *Il saggiaiore* (*The Assayer*), published in 1623, a brilliant polemic on physical reality and an exposition of the new scientific method, Galileo discussed the method of the newly emerging science, arguing: “Philosophy is written in this grand book, the universe, which stands continually open to our gaze. But the book cannot be understood unless one first learns to comprehend the language and read the letters in which it is composed. It is written in the language of mathematics, and its characters are triangles, circles, and other geometric figures without which it is humanly impossible to understand a single word of it.” See the entry on Galileo in *Encyclopaedia Britannica*, volume 11, pp. 6266-6269. See, in particular, p. 6268.

¹⁶ In section V of *Conversations with a Toad*, Bringhamurst dwells precisely on humankind’s millennial impulse to explore the universe beyond the Earth’s boundaries. “We no longer / read even the signs in our faces and hands. / Instead we grind lenses and mirrors / to sop up the spilled light of the stars.”

Copernicanism would be a key turning point in the scientific revolution. However, the Church would not tolerate such a heresy. The Inquisition banned technical and theological works that it considered to be heretical, among them Johannes Kepler's *Epitome of Copernican Astronomy*, and Copernicus's own 1543 book, *De revolutionibus orbium coelestium libri vi*, was suspended until corrected. Galileo was admonished "not to hold, teach, or defend" the Copernican theory "in any way whatever, either orally or in writing." Though he then published an important book, *Dialogo sopra i due massimi sistemi del mondo, tolemaico e copernicano* (*Dialogue Concerning the Two Chief World Systems, Ptolemaic & Copernican*), finished in 1630 and published in Florence after going through censorship in 1632, he was pronounced to be vehemently suspect of heresy, was condemned to life imprisonment and made to abjure formally by the Inquisition. But he spent the rest of his life in solitude, doing research on the sciences of motion and strength of materials. As opposed to Aristotle's, Galileo's approach to cosmology is fundamentally spatial and geometric. Furthermore, he saw there was no point in interpreting biblical passage as if they were scientific statements of any kind.

In any case, settlers who left Europe and headed towards the New World were fleeing Copernicus's and Galileo's findings, which is to say that many of them were narrow-minded, conservative, incapable of seeing beyond the surface of things. They refused the idea that *what is (being)* is bigger than history, for *being* is indestructible, invincible, immutable:

14 refusing the news that what is

refusing, not choosing, they came –

came with them.

15 is bigger than history. Time

though some of them chose, and still choose

And when they arrived,

16 is the earth and the sky turning imperfect circles,

to believe they are chosen.

they kept running.

17 not God on his tall parade to the end of the line.

Time is the sky and the earth, dancing.

History is no more than a mechanical succession of events linked by a cause-effect relationship, whereas time is more mysterious at heart. Two new definitions of time are formulated at the end of the first part of Movement I of the *Suite*, by the first and second voices in the poem respectively. According to the first definition, history is no master plan designed or governed by God, and time is the imperfect circles implicit in the dance of the earth and the sky, which is a subtle reference to Copernicus's and Galileo's astronomical findings. The second definition embraces directly a mythical explanation: "*Time is the sky and the earth, dancing.*" There are echoes here from *The Blue Roofs of Japan*: "*the earthy asymmetry of the world*" and "*the world with its welcome imperfections,*" we read in section I. Fear is the only piece of luggage emigrants took with them into the New World. Once there, they kept fleeing, but their fear was with them all the time.

2 · Staves 18-41

The second part of Movement I opens with a long incantatory litany of names of places – Cuzco, Technotitlan, Acoma, Kitwancool, Písac, Tikal, Chaco Canyon, Ttanuu, Frijoles, Gila. What all these geographical spaces have in common is that they are ancient Aztec, Mayan, Inca, and North American sites or settlements – places once populated by the people native to the land. They were not coming from beyond the sea, fleeing from the beginning of the modern era of scientific discoveries; they had lived in the New World long before the immigrants set foot on their continent. Furthermore, they had something else in common: the same spiritual sense of belonging to the earth and among the other living and non-living creatures that lived in it; the same ability to see the world as a sacred place where gods and goddesses and spirit beings lived in the mountains, in the trees and rivers, in the animals and in the sun itself; and a similar sense of reverence and gratitude for everything the earth gave them for their sustenance and survival. In other words, they all could breathe through their feet and pay the world the ecological attention it deserved from them in exchange for what they received in abundance. Whatever fruits they collected or whatever animals they killed, they did so just for survival in a world where eating and being eaten was part of a natural cycle. They did not destroy, however, just for the sake of destruction, or to replace natural things by man-made artificial things that deteriorated the ecological equilibrium of the world.

The relentless passage of time and the devastating effects of colonization erased much of the pristine legacy of all these aboriginal peoples. What the speaking voices of the poem now record as they listen to the desolate landscape is the result of the devastation: "*the churches squat on the ruins*" (stave 19), a most subtle reference to the impact of Christianization and the civilizing mission the white man saw it was his duty to fulfill in the New World; and "*visitors gnawing at the moth-eaten light / with mechanical eyes*" (staves 21-22), mere tourists unable to really hear, see and understand what these ancient sites represent. "*Whole towns are trussed up in the webs / of our fences and parking lots, / guardrails, turnstiles, interpretive signs.*" (staves 23-25), which suggests the artificiality of modern cityscapes and of man-made interpretive labels imposed on these ancient sites. Because so many layers of artificial signs have been superimposed on the original sites, there is now no way of reaching to the pristine truth these people were able to touch and breathe: "*The truth predigested in place, like a caught / moth, through the alchemical weight of our hands*", says the second voice, and "*The truth is broken like bread / in our hands*", says the third voice. Modern man is further removed from this form of organic truth old people could experience firsthand on this same ground called the New World. Hence, in his vindication of the immense value of the oral literatures of North America, Bringhurst has complained time and again that most

Americans are tourists in what has been their homeland for centuries. They are not aware that the ancestral legacy of their world is older and richer than they think, including an amazing range of oral literatures composed in many different languages that seem to be overlooked by university curricula, literary histories and so-called official institutions.

Set side by side with the names of these ancient sites, located along the American continent, are the names of modern cities or metropolis – Denver, Los Angeles, Vancouver, Toronto, Boston. Though far apart in time and in space, all these places constellated by the poet into his *Suite* become one and the same: all places are one, co-present or simultaneous in time and space in a polyphonic literary work that sings of *what is* as being “*what is timeless caught in time.*” Bringham is here following admiringly in the footsteps of another Modernist master, T. S. Eliot, who, in section V, “What the Thunder Said”, of *The Waste Land* (1922), said: “What is the city over the mountains / Cracks and reforms and bursts in the violet air / Falling towers / Jerusalem Athens Alexandria / Vienna London / Unreal.”¹⁷ The same sense of unreality pervades the staves where the three speaking voices visit the desanctified places of the modern urban spaces. What they record is the negative effects of pollution in modern cities and the deadening effects for the soul of humans. Echoes from the theme of life-in-death and death-in-life, which is pervasive in Eliot’s literary landmark, are also heard between the lines. In this respect, staves 28-36 bring to the reader’s/hearer’s attention at least three fundamental issues: (1) the advance of pollution in modern cities is now unstoppable and fatal: “*the motorized spirochetes*¹⁸ *move on their cancerous business, / the tumors of asphalt and neon enlarge*” (first voice), illuminating words from which we deduce that humans are the cancer or tumour damaging the Earth itself; (2) the urban scenery is a space dominated by death: “*the living are dead and the dead pretend / to be living*”, says the (female) second voice in the form of an epiphany-like moment of revelation, having spoken aloud a long litany of names of different places; and (3) there is a certain kind of beauty in cities when seen from the distance, from an aircraft, for instance: “*Hour by hour the tumors enlarge, / and their beauty is visible from the aircraft*¹⁹, / *like that of bacilli seen through the microscope in the lab*”, claims the third voice, which reminds us of humans’ desire to see into things far away in the distance (macroscopic realities) through

¹⁷ See T.S. Eliot, *Selected Poems*, London: Faber and Faber, 1982, p. 65.

¹⁸ ‘Spirochete’ is the name of a group of bacteria that are damaging to humans. See the entry on ‘spirochete’ in *Encyclopaedia Britannica*, volume 26, p. 159691: “Spirochete, also spelled spirochaete, any of a group of spiral-shaped bacteria, some of which are serious pathogens for humans, causing such diseases as syphilis, yaws, Lyme disease, and relapsing fever. [...] Spirochetes are characteristically found in a liquid environment (e.g., mud and water, blood and lymph).”

¹⁹ These words on the beauty of the Earth as seen from the distance inevitably remind us of the opening words of the first (female) voice, Schroeder’s, in Glenn Gould’s *The Idea of North* (1967), the first part of the *Solitude Trilogy*: “I was fascinated by the country as such. I flew north from Churchill to Coral Harbour on Southampton Island at the end of September. Snow had begun to fall and the country was partially covered by it. Some of the lakes were frozen around the edges but toward the centre of the lakes you could still see the clear, clear water. And flying over this country, you could look down and see various shades of green in the water and you could see the bottom of the lakes, and it was a most fascinating experience. I remember I was up in the cockpit with the pilot, and I was forever looking out, left and right, and I could see ice floes over the Hudson’s [*sic*] Bay and I was always looking for a polar bear or some seals that I could spot but, unfortunately, there were none. And as we flew along the East coast of Hudson’s [*sic*] Bay, this flat, flat country frightened me a little, because it seemed endless. We seemed to be going into nowhere, and the further north we went the more monotonous it became. There was nothing but snow and, to our right, the waters of Hudson’s [*sic*] Bay. Now this was my impression during the winter, but I also flew over the country during the spring and the summer, and this I found intriguing, because, then I could see the outline of the lakes and the rivers and, on the tundra, huge spots of moss or rock – there is hardly any vegetation that one can spot from the air... (*fade*) It is most difficult to describe. It was complete isolation, this is very true...” As in Bringham’s *Suite*, there are several interpenetrated voices, speaking simultaneously, in Gould’s polyphonic work and so the words quoted above have been excerpted from what looks like a nonstop flow of human voice, for Gould’s work is also a moving tribute to the human voice.

telescopes, or deep inside the material texture of things (microscopic particles) through microscopes. “*The distance that brings / what we do into focus / shrinks and increases...*”, says the first voice eloquently. In any case, quoting isolated clusters of words or sentences from Bringham’s poem does not do justice at all to the complexity of the work as a whole. It is indeed very difficult to quote isolated fragments from the *Suite* because the voices are inextricably linked to one another in what they say. All three voices have their separate agendas, as it were, but they have got a contribution to make to the global message that progressively unfolds throughout the poem.

This second part closes with a new juxtaposition between the ancient sites on American ground and the modern metropolis of asphalt and neon. Some odd words may need elucidation, in fact. “*The path / from the kiva²⁰ is empty*” says the first voice; “*The roads between city and country are filled. / The way out and back from the vision / is empty.*”, says the second voice. Among the Pueblo Indians, the kiva is a sacred space for rituals; at its very heart resides the tribe’s connection with the Earth in the form of a simple hole excavated in the ground, symbolic of the people’s origin. Visions of things unseen were possible in the kiva as the male members of the tribe gathered for their rituals, but nowadays those visions have vanished for good and the path leading to the kiva is not trodden by humans anymore. By contrast, the asphalt roads linking little villages and towns with the big cities are filled with cars taking people from one place to another. The conceptualization of space is completely different now: the Pueblo Indians needed only to be reminded that they belonged to the Earth in that simple hole in the centre of the rounded kiva, a representation of the earth itself in miniature. Modern humans spend their time running from one place to another (and they keep running), though they do not know exactly where they are heading towards any longer. Urbanscapes are dehumanized spaces to which even animals do not dare come close: “*Four-wheeled kachinas²¹ live year around in the town. / Therefore the deer remain dead, / and the pronghorn are spooked by fences.*” Kachinas were ancestral fertility spirits among the Pueblo Indians. They acted as intermediaries between the realms of the human and the divine, and they made themselves visible in the traditional rituals where the men of the tribe would wear their masks and be temporarily transformed under their influence. In the modern urban world, there seems to be no rooms for kachinas (they are motorized as well) and the American antelope found from Alberta to northern Mexico, the pronghorn, is scared to death by the fences humans build to protect themselves from the

²⁰ See the entry on ‘kiva’ in *Encyclopaedia Britannica*, volume 16, p. 9278: “Kiva, subterranean ceremonial and social chamber built by the Pueblo Indians of the southwestern United States, particularly notable for the colourful mural paintings decorating the walls. The traditional round shape of the earliest kivas contrasts with square and rectangular forms common in residential Pueblo architecture. [...] A small hole in the floor of the kiva (sometimes carved through a plank of wood, sometimes dug into the earth) served as the symbolic place of origin of the tribe; the Hopi word for this element is *sipapu*. Although a kiva’s most important purpose is as a venue for rituals, kivas can also be used for political meeting and casual gatherings of the men of the village. Women perform their rituals in other venues and rarely enter kivas. Kiva murals depict sacred figures or scenes from the daily life of the tribe. The style of these paintings tends to be geometric, with an emphasis on straight rather than curved lines and with the entire mural laid out in a linear pattern around the walls. The murals are painted on adobe plaster with warm, colourful pigments made from the rich mineral deposits of the area. Old murals are frequently plastered over in order to paint new designs on top...”

²¹ See the entry on ‘kachina’ in *Encyclopaedia Britannica*, volume 15, p. 9005: “Kachina, Hopi *qacina*, in Pueblo Indian religious practice, any of more than 500 ancestral spirits often associated with fertility who act as intermediaries between the human and the divine. Kachinas reside with the tribe for half of each year and allow themselves to be seen by the community of the men who perform a traditional ritual while wearing kachina masks. The being depicted on the mask is thought to be present with the performer, temporarily transforming him. Kachinas are also depicted in small, carved-wood dolls, which are presented to children both as playthings and as devices to teach the identities of the kachinas and the symbolism of their costumes. The identity of the spirit is depicted primarily by the applied color and elaborate feather, leather, and, occasionally, fabric ornamentation of its mask.”

wild. Humans feel no longer at home, or so it seems. The natural world has to be subdued, dominated, controlled, domesticated, reduced to comprehensible human terms, even if this implies destroying it in the process. And history is now defined as “*a clock ticking, a blade / sliding between the earth and our shoes*” (staves 40-41) – i.e., history is the progressive alienation of humankind with respect to the world of the non-human. That blade prevents humans from breathing through their feet, from feeling their ancestral link to the Earth. Since the time of the late Neolithic in Mesopotamia, man’s odyssey on earth has been one of relentless conquest and egoistic management of the planet’s resources. The shift from a society of hunters and gatherers to one of herders and farmers had profound implications in our way of relating to the world. The domestication of animals through ranching, of plants through farming, and of language through writing was the expression of the conviction that man had an inalienable right to stand on the summit or pinnacle of creation and to dominate over all other creatures. Progressively, over the centuries, the world ceased to be a sacred place where humans and gods could live side by side in acceptable harmony. *The other* (the wild) became a menace, something to be subdued and exploited. The story of this overexploitation of the earth’s resources is precisely the concern of the third part of Movement I of the *Suite*.

3 · Staves 42-60

In the third part of Movement I of the *Suite*, readers/hearers are plunged into the middle of the Amazonian Basin, with its gigantic rain-forest and immense river. “The first movement includes some recollections of a desecrated landscape in the Amazonian Basin, side by side with memories of a village in northern Manitoba,”²² says Bringhurst in the afterword essay to *New World Suite No. 3*. The Amazon is thought to be the lung of the entire world, because there are still enough trees there, untouched by humans’ greedy hands, giving us the oxygen we need. But the thematic concern of staves 42 through 60 is precisely the systematic rape of the earth’s resources in the hands of man. The male first and third voices stress the fact that the planet is almost on the brink of environmental apocalypse, precisely because of humans’ mismanagement and abuse of the earth’s richness: “*All over the world, the earth / is tortured for money.*” Widespread deforestation (the systematic cutting of trees for the making of paper and other related products) and mineral extraction in pitmines (the systematic rape of the earth’s entrails in search of metal and mineral till they are empty) are only two instances of man’s abuse of the earth’s generosity. Thus, the first voice speaks of “*the ashes still warm and the blood still fresh / in the logging slash, and the featureless mud / of the goldfields pulped with a high-pressure hose*” (staves 43-45), while the third voice speaks of “*rivers going bankrupt*” in the Amazon because so much unbearable pollution. This spot on earth is no longer the pristine place it used to be; man’s greed is invincible, his advance unstoppable.

With the realistic statements of the male voices contrasts vividly the intense lyricism of the female voice. First, it speaks of the mother of rivers (the Amazon) as having “*thousands of rivers for mothers,*” and then it dwells on the different ways of torturing the earth and everything in it that humans have devised over time: *homicide* (the killing of humans by humans), *genocide* (the killing of whole human communities by humans), *fluvicide* (the killing of rivers by humans), *terricide* (the killing of the earth by humans), *matricide* (the killing of the mother by a son or a daughter), *parricide* (the killing of the father by a son or a

²² See Robert Bringhurst’s “Afterword: Licking the Lips with a Forked Tongue”, *New World Suite Number Three. Four Movements of Three Voices* (2005), pp. 13-14.

daughter). They are all variations on the same theme: they are all forms of killing. The invention of words like *fluvicide* and *terricide* is based on a relationship of analogy with the others. All of them are of Latin origin; all of them have something in common: the agent of the act of killing is always a human being. It is very sad, but it is nonetheless the truth. The female voice is puzzled by these euphonic words and wonders what they mean “*when we say them,*” as if to suggest that we humans are not well aware what they mean, as if we were absolutely carelessly in our handling of words in our voice. “*This is not history,*” proclaims the first male voice, as if he were to abjure its own humanity (as if thinking to himself “I do not want to be human anymore if this is what it means to be human”); “*This is the whipped / earth ceasing to whimper, / closing her mask.*”, says the third male voice without hesitating for a microsecond.

The real, *what is*, is visible most of the time if we dare open our eyes and ears, but “*In our presence / the real is frequently speechless.*” *Being* speaks its own language, for humans have no monopoly on meaning or language even they pretend they do. Meaning is prior to language and to speech, for *every single thing in the world wants to mean something* – otherwise, it would be a blank space, devoid of sense, floating aimlessly amid the world. Language allows humans to communicate with one another (that is what it is essentially meant for), but also it allows them to verbalize their own findings and insights into the ultimate nature of reality. This is one of the reasons why language is most quintessentially itself in poetry or in philosophy or in science, because there we see language in a state of purity and precision, striving hard to be itself and to capture the essence of what we see, what we touch and what we hear in the world. However, *being* turns speechless in our presence, especially if we bear in mind that humans tend lately to come close only to those things from which they can draw a material benefit. The real becomes opaque, dumb, speechless in the presence of humans, which is uncomfortable to it. However, the real (*being*) is one, indestructible and immutable, but also plural and mortal at the same time, even if this may sound paradoxical:

52

What is is an idea

What is is an idea recurrent in time

53 **recurrent in time, not**

and there is no end to it:

What is keeps repeating. What is

54 **your apocalypse, not your jihad,**

not your apocalypse, not your jihad,

is an idea recurrent in time.

55 not Armaggedon. What is is mortal

and not Armaggedon.

56 but plural.

What does that mean, Armaggedon?

The death of what is is the wet dream

It is no random choice or happy coincidence at all that the words *apocalypse*, *jihad* and *Armaggedon* should be tessellated here into a meaningful whole. *Apocalypse* and *Armaggedon* are both words used in the Bible (the holy book for Christians and, in part, for Jews), whereas *jihad* comes from Islam. All three have something fundamental in common, apart from their being lifted from the discourse of religion: they are words that evoke catastrophic or extreme situations that involve some kind of violence. Thus, *apocalypse* is *the end of the world* as described in the book of Apocalypse in the Bible (though it also means, more neutrally, “a situation causing very serious damage and destruction”), and *Armaggedon* refers in the Bible to *a battle between good and evil at the end of the world* (or, in general, “a terrible war that could destroy the world”). By contrast, *jihad* in Islam means *a spiritual struggle within yourself to stop yourself breaking religious or moral laws*, and it also denotes *a holy war fought by Muslims to defend Islam*. This is what the dictionary teaches us about the precise meaning of these words. (One has to be careful and precise when handling words, either orally or in writing. *Littera scripta manet*, said Horace some 20 centuries ago, but *spoken words also remain*.) Now, *what is* has nothing to do with war, struggle or violence. “*What is is an idea recurrent in time*,” even if it is mortal and plural. Regardless of humans’ wars and attempts at imposing their own religious creeds on one another throughout history, *being* keeps on existing in unity and diversity. That *being* is plural means that it takes on or assumes different guises: all things, living and non-living, in this world are distinctly unique, and yet they are a constituent part of a boundless continuum of existence. The pre-Socratics knew this elemental truth. However, *being*, in the perishable forms of existence it leads, is mortal too. Deep at its irreducible core, *being* survives in spite of the passage of time, though. “*The death of what is is the wet dream / of impotent men and of overdosed children, / starved for the sight of the bright knife of the world...*”, says the third voice in the poem. The knife stands for money, power and comfort for greedy human beings. Sensible and sensitive members of the species *homo sapiens* that are aware that they belong among a larger scheme of things (that has been unfolding over time and that will keep being recurrent over time) understand that being is invincible and that we are an indistinguishable part of it.

4 · Staves 61-99

The fourth part of Movement I of the *Suite* concerns memories of a village in northern Manitoba (staves 61-75) and dwells on the concept of the plurality of *being* and the plurality of worlds (staves 76-99). The little village in northern Manitoba is the setting of what begins as a meditation on the perpetual torture of the earth everywhere. The long litany of

geographical places begun in part 3, where names of ancient sites on the American continent turned up side by side with names of modern big cities and names of pitmines, still goes on to encompass the world in its entirety: *“In Brazil... Indonesia... in the Philippines... / Chile... Ontario... Manitoba... / the limbs and the stumps / of people and trees,”* says the third voice. Rape of the earth is universal. To make this even more explicit, in a place called “God’s Narrows” children are seen playing tag in ditches, amid heterogeneous masses of rubbish, *“dodging the corpses / of dogs and the used plastic diapers / and Kleenex and kotex and broken machines.”* The contrast is dramatic enough, for children pursue their innocent games amid the debris of a civilization that knows of nothing but systematic mismanagement of the planet’s resources. The material misery in which these children (and their parents, we presume) live is further enhanced by the simple fact that for their basic necessities they depend on food that *“has come 2000 miles in bottles and cans”*, on bread, *“the colour / and odour of old snow,”* brought to them in cellophane, on music coming from Tennessee, and on stories that emanate not from the living soil of their own land but are collected instead in a book *“from a place without caribou, moose, wolf, lynx”* or *“without a whiskeyjack, black spruce, beaver or bear”* (the Holy Book or Bible), which urges them to believe in another world, in an afterlife. The second (female) voice summarizes the ineffable misery in these moving words:

*Weaned from the earth, we are fed
on the eggwhite and sugar of visions
of life after death in a different world,
not on the meat of the knowledge that this
is that different world.*

“*Dead words*”, says the third voice. This is what these people are being fed on. Instead of being taught how to enjoy this life on earth, they are made to believe in the delusion of an afterlife in an afterworld, when we all know there is no world other than this one. That is nourishing food, the meat of true knowledge, not the sugar of unreal visions. However, the true heart of the fourth part of the first movement is found in staves 76-99, which contain a profound meditation on the plurality and indestructibility of being. In the service of clarity in our critical analysis, we will divide the meditation into five fundamental and inextricably linked ideas which are all expressed by the three speaking voices simultaneously:

- (1) The plurality of worlds looks like an indisputable truth, but each speaking voice offers a different point of view. Thus, the first (male) voice affirms with (self-)confidence and absolute conviction: *“I do not know how many / worlds, past, present and future, exist. / I know there are many.”* This means that the world is plural, not monolithic, and that there are innumerable worlds because the same world we live in is changing all the time, has not ceased changing since the beginning of time. The second (female) voice is more tentative in the way it tackles the matter and so asks several rhetorical questions (*“How many worlds? / With how many faces? / And how many trees, / full of how many voices?”*), which are an expression of gratitude and humility in the face of the awe-inspiring grandeur of the world. Finally, the third voice goes straight to the heart of the matter by vehemently affirming that there is no other world than this Earth of ours: *“Are there many worlds? / I know, / nevertheless there is no other world / than this, with its different faces, its trees / full of voices, its eyes like trap doors. / There is no other world.”*
- (2) Humankind’s capacity for destruction is invincible and its hunger unappeasable. *“What is it not what we have built; / it is what we have not yet found time / to destroy”*, says the first voice in words that are strongly reminiscent of section VI of *Conversations with a Toad*: *“It is good news, toad: that no one can list / what exists in the world. But not good enough. / Named*

or unnamed, if it lives, we can kill it.” The dichotomy at the heart of the *Suite*’s words is between man-made things and natural things, but also between humankind’s amazing capacity for creation and destruction alike. Creating is always a passionate act that involves attention, care and love, and it takes time to accomplish great deeds; destroying, by contrast, is the result of an irrational impulse and the expression of hate. Humans’ desire for power, money and comfort makes them forget that they are inflicting an unbearable pain on many others – on the living creatures with which we share the earth: “*This hunger for life / everlasting will kill us. And kill / many others. Trout, mountain hemlock, / deer, mice, deer.*”, says the first voice again.

- (3) *Being* is indestructible, though, and beauty will manage to survive somehow, in spite of humankind’s attempts at destroying the world. Again, the first voice argues: “*Being will be here. / But this beauty that visits us now will be gone.*” These words recall these other words from section VII of *Conversations with a Toad*: “We will not destroy / being, toad. We will not. But I think / we will overreligiously clean it.” And yet, with vital optimism, the second (female) voice is convinced that “*This beauty, like all beauty, / is mortal, but beauty will be here.*” We cannot kill beauty any more than we can kill being. Even if it is ephemeral, the idea of beauty, the original and the real, will always survive in one way or another. Bringhurst’s words are then a hymn to the persistence of *being* in spite of the destruction of the world and a moving celebration of the mortal beauty that pervades the whole earth, with its *welcome imperfections* and *earthly asymmetry*.
- (4) *What is* is one and many at the same time, i.e. *being* is plural. “*We are one, even though / we are many. / The size of the heart / is the number of creatures.*”, says the second (female) voice. Everything (every single creature on earth) is connected to everything else along a continuum of existence. The first voice essays another variation on the same idea: “*The number of ideas of being / is many, though not beyond counting. / The size of the mind / is the number of species of creatures.*” The size of the heart and of the mind is boundless, immense, for it must encompass all living creatures, the others, for life is sacred, and that is out of the question. Again, the third voice affirms the same: “*The size of the mind is the number / of species of creatures.*” It is good news that no one can list what exists in the world, said the voice of *homo sapiens* in section VI of *Conversations with a Toad*. And the first voice now affirms: “*And I do not know how to measure / the depth and extent of what is in the world.*” The richness of the world is inexhaustible, almost beyond counting, and words fall short of accomplishing an exhaustive taxonomy or classification of everything that exists.
- (5) The real is also invisible and is populated by gods. “*What we cannot see must be / equally many. Zero and one are two instants, two gifts, not two answers.*”, says the second voice. And the first voice claims: “*I think that when counting the gods, zero and one / are two answers equally useless.*” And the third: “*How many gods can you name? That is the size / of your view of the world.*” Not everything that truly matters is visible. *L’essentiel est invisible aux yeux*, says Antoine de Saint-Exupéry in his classic *The Little Prince*. That the world is a sacred space was a truism for ancient peoples who still breathed through their feet, and also for visionaries and mystics of all times. Bringhurst says that gods are homeless nowadays, wandering without home or destination in our world. We humans choose not to see their presence in all natural elements (mountains, trees, rocks, rivers, oceans, animals, the sun, the sky) any more, and we are impoverished as a result. But our incapacity to see them does not preclude or cancel their existence. The realm of the invisible is full of gods and goddesses that want to be seen or felt by us humans. Maybe if we cleanse our senses and our will, we might be able to *see*. How many gods are there?, we may ask. To say that there is none (zero) is to deny the existence of what we cannot see, which is logically or rationally indefensible. To say that there is only one god is probably the result of our cultural upbringing in a community of monotheistic religions like Christianity, Islam or Judaism. To say that there are innumerable gods and goddesses wherever you turn to look is the expression of polytheistic belief found among ancient civilizations that were truly prepared to acknowledge the sacredness of the real and to believe in what their eyes could not see in the realm of the visible. The size of

our view of the world depends then on the degree to which we are prepared to see the divine in the minutest details of this rich and inexhaustible world of ours – a miracle of beauty and perfection.

5 · Staves 100-116

In its conciseness and lyricism, the fifth part (staves 100-116) constitutes a tribute to the beauty implicit in life and in death too. First, the emphasis is laid on the fact that we humans live in an irreplaceable world. The first voice insists that “*What is is an idea recurrent in time*”, which is a way of acknowledging once again the persistence of *being* in a world systematically under attack or in peril. “*What is is the timeless caught in time*,” the female voice said in previous parts. Now, the speaking voices hit on the insight that the world is unique and beautiful in every single way: “*There are no blueprints / or duplicates elsewhere*” and that “*Descriptions / and photographs will not do for rebuilding the world.*” The experience of *what is* cannot even be fully grasped or captured through the medium of songs or stories. Precisely at this point the poem turns *meta-poetic* for a while: it becomes a probing reflection on the nature of poetry. All three interpenetrating voices speak aloud almost exactly the same words, and thus they converge into one meditation which consists of three little steps for the mind:

- (1) The nature of stories. “*The stories are maps*”, say both the second and third voices. Maps are a formalization or humanization of something which is real – the world with its earthy asymmetry, with its manifold imperfections, with its subtle geographical accidents, and with its mountains, valleys, rivers, lakes, seas and oceans. Maps do not exhaust or replace reality, they put it into a manageable piece of paper and make it understandable or comprehensible in purely human terms. Being a gross simplification or a stylization of the world, maps are not completely reliable, and yet in Bringhurst’s words in the *Suite*, maps hide a wealth of meaning. If stories are conceived as being maps, then they are maps of the real and shed light on it. Mythmaking is a universal compulsion, found in oral literatures all around the world, but myths are not naïve stories dealing with relations and interactions between creatures – living and non-living, or human and non-human – sharing the same world. Like science or philosophy, mythology is a complex ecology of thought that penetrates the essence of reality, that seeks to understand and account for what humans find in the grandeur of a world which is a true mystery. If by *stories* the speaking voices of the *Suite* mean *myths*, for instance the myths told by the Haida mythtellers Ghandl or Skaay and transcribed by the linguist John Swanton in Haida Gwaii more than a century ago and translated into English by Bringhurst in his trilogy on Haida oral literature almost one century later, then it does make perfect sense to claim that stories are maps that help us navigate through and across and into the real. In their concern with universals, myths are accurate, coherent and musical renderings of *what is*.
- (2) The nature of songs. According to the first voice, “*Songs are not maps, / they are caches and trails.*”, and “*Song is edible / thought but not seedgrain,*” according to the second voice. Songs are a pleasure to eat, they taste good on one’s own tongue, but they are not maps of the real. What they offer us instead is *caches and trails*, ways of finding alternative ways of reaching into the real or ways of touching *what is*. If stories are myths tessellated into a coherent *Gestalt* called mythology, then songs are poems, things made by the heart and the mind of humans too, but of a very different nature. There is edible thought that you can suck out of a poem, which is made of words and something else. Poems give us useful partial clues and intuitive insights into reality, but *not a total map of what is*. That is something that only myths seem to be able to accomplish. But we humans do need the music and the nourishing pleasure than song, like dance, can and does give us.

- (3) The role of singers. “*The singers / bring in the hands of their voices / thought like dried meat / and thought like the light it is given / by water and oil.*” Poems are more the product of oral composition than of writing – that is an essential conviction of Bringhurst’s. Poems are born in the human voice and truly themselves when spoken aloud by a single voice in monophonic poems or, even better, by several voices in polyphonic poems like the *Suite*. Singers or poets are visionary humans, i.e. they can see into recesses of reality that most people would simply not notice or pay attention to. Poetry begins in an act of humble attention and wonder in the face of the mystery of *what is*. If there is no curiosity, no act of primordial attention, then poems do not have a true chance to be born. Therefore, poets are singers who handle thought with their own voices, and it is in the hands of their voices that they bring with themselves the gift of what they have found. Bringhurst himself spend a period of his life near Tzuhalem’s Mountain and what he could salvage from his firsthand experience of solitude amid the mountains was, among other things, *Tzuhalem’s Mountain*, a sonata in three movements and a present for his readers. Poems are his gift to the world, he says in one of the prose statements accompanying one of his poetry books. The thought he brings in his poems does not replace real experience (for life is most itself when lived in the first person); it is dried meat, still nourishing to our exhausted bodies, though. But he also brings “*thought like the light it is given by water and oil*” – sharp ideas about the real, rendered into naked words, unadorned, with the simplicity of water or oil.

The closing staves (110-116) of the fifth part celebrate the pleasure of being physically alive in a world humans can see, hear, touch and enjoy in its inexhaustible richness. When death comes, humans dissolve into mother earth with the perfect naturalness with which one must approach death, the fair price one must pay for having lived on earth. The first (male) voice speaks in these terms:

I return to the earth’s lap
all that remains of all she has given me: meals
for the eye, the belly, the hand – and what held them:
ruined meat,
the crazy panpipes of the bones
that sang when certain women touched me
and when I touched the world.

With moving humility, the male voice speaking here gives everything back to the earth, for nothing truly belongs to him, not even the meals that have nourished him throughout his life – the nourishing food for his senses – and not even whatever is left of the *ruined meat* of his old body and of the bones that sang when he was being loved by women or when he was loving the world through touch. The bones are an important recurrent motif in Bringhurst’s poetry, and so is the metaphor by which he equates them to musical instruments (*panpipes* in this case). They are the innermost solid part of humans, or, in other words, bones are to the human body what stones or rocks are to the earth. If you are able to feel the presence of the world from deep inside your bones, then you are truly responding to the real with an astonishing maximum of intensity. The same sense of humble gratitude echoes in the words of the second (female) voice: “*I too must return to the earth’s lap, with all / she has given me. Even my children are hers.*” Even her most precious belongings, her children, belong to the earth and so she is ready to give them back. And the third (male) voice says: “*The mind like a mildew jewel, / muscles and bones / crazy for women, crazy for sunlight, / and eyes crazy for water, trees and stones.*” He too must return to the earth’s lap all that is left of him: the jewel-like mind with which he loved the world, the muscles and bones of his tired body, a body that loved women and all the elemental delights in the world – light, water, trees and stones. These are the simple ingredients out of which Bringhurst makes his own poems – “*this music is all about water,*” said one of the voices in *The Blue Roofs of Japan* – and the ones he celebrates with gratitude too.

6 · Staves 117-128

If the fifth part concerns the distinction between songs and stories as well as humans' return to the earth's lap upon death, then the sixth part dwells on a mysterious song that is hidden somewhere – under the sea, under the seacliffs, under the mountain – and that has to be sung back again into visibility or audibility. What this song might be is a mystery at first, but then it makes itself discernible and understandable. It is the song of *being* singing itself audibly for all humans to hear. Now the three voices speak aloud exactly the same words, but the words are arranged differently in their score for a live performance. A subtle reference to the descendants of the early settlers who set foot on the New World is found in the opening clusters of lines: "*The children of those who cross over / the water must wander.*" and "*Their children's children / must swim through the ground.*" Which possibly means that they are still wanderers in what has been their homeland for centuries now and that they are forced to swim unnaturally through the ground, and not in water, because they are still unable to see and understand the mystery implicit in this vast land which America is.

Then the core of this little piece of music is a lyrical tribute to the song of *being*. There is a song that is elusive and tries to evade humans' presence, probably because they do not longer know how to listen to it with due respect and gratitude. It seeks to hide itself wherever it might not be found by the inquisitive and destructive hands of men. With the passage of time it has receded into the corners of the world; each of three speaking voices provides a different location – under the seacliffs, under the sea, under the mountain, back into the hills. Now this song is to be found only in those remote hills, and when the song sings, the hills dance. This happens only when no one is looking, but humans do still have a chance to join the hills in their dancing, if the hills are happy and they dance too. Curiously enough, it is the female voice that unveils the existence of this song, and of "*the story that tells where to find it,*" for songs are caches and trails and stories are maps of the world. "*But there is a song I thought you should hear,*" says the female voice, and then she goes on:

122

and a story that tells where to find it.

I thought I remembered a song and a story.

123 Year after year the song sinks deeper

I thought you should hear it.

124 under the seacliffs. Year after year

The song has gone under the seacliffs.

The song has gone under the sea. [sinks in in SP]

125 **it sings itself farther back into the hills.**

Year after year it sings itself farther

And year after year

126 **And the hills dance,**

under the mountain. And year after year

it sings itself farther back into the hills.

127 **but only when no one**

we dance it back out again.

The hills dance **[And the hills dance in *SP*]**

128 **is looking.**

If the hills dance, we dance too.

only so long as no one is watching.

There is a redeeming sense of hope in the closing staves of Movement I, in spite of the title, “All the Desanctified Places”. It might seem that the Earth is on the brink of ecological apocalypse, that humans do not care about the well-being of earth itself any more, but there is still a chance to redeem ourselves by preserving our only home, by relearning to listen to the inaudible song of *being*, which wants to be heard amid so much dissonant noise.

MOVEMENT II · Who Is the Fluteplayer?

The second movement of *New World Suite No. 3* is set in the Hopi country. Counted among the Pueblo Indians, the Hopi have lived for centuries in northeastern Arizona in what looks like a hostile environment. Since 1882 they have lived in what is called the Hopi Indian Reservation, which is included within the greater Navajo Reservation. The word *hopi* means ‘peaceful, mannered, civilized, polite people’, and, unlike the Navajo, the Hopi are indeed a peaceful, sedentary people that adapted to the harsh, dry environment of their land in relative seclusion for a long time, in spite of the Spanish explorers’ first skirmishes into their territory. They learnt to live from whatever the earth had to give them in the form of corn (the bread of life to the Hopi) for farming and animals for ranching and hunting. Life was always a hardy struggle for existence, with water as a scarce and precious essential, and so rain-making rituals were fundamental to the Hopi’s survival. Given the richness of Hopi culture in general, it is no wonder that Benjamin Lee Whorf, the famous linguist, should have paid attention to their language. In the 1930s Whorf seized the

characteristics of the verbs of the Hopi language to illustrate the so-called “Whorfian hypothesis”: language closely governs our experience of reality. The Hopi language frames the way in which the Hopi talk about their universe. The same holds true, in Whorf’s view, for all individual languages and people around the world. Spanish philosopher José Ortega y Gasset was also convinced that this was the case: our mind perceives the world through the unique prism of our language, which strongly conditions the way we perceive reality. Strong roots have ensured that the tree of human language be able to grow innumerable branches over time. The roots of the tree is the universal faculty genetically ingrained in human beings to learn to communicate through one or several human languages, and the branches are the languages spoken by all humans throughout the history of all the different civilizations that have existed and will exist upon Earth. Robert Bringhurst himself would speak of *the tree of meaning* instead, not of *the tree of language*, because meaning is larger than language, and communication is not the sole prerogative of humans. Everything in this universe *means* – i.e., participates in the gigantic reservoir of meaning and wants to make itself discernible to the others in one way or another.

In their intellectual and emotional confrontation with the world, the Hopi resorted to mythology to impose some kind of order on the universe. Like science or philosophy, mythology constitutes another invaluable tool when it comes to tackling and making sense of the complexities of reality. Subject to surface changes and stable as to the irreducible core of meaning at its heart, the living mythology of the Hopi is deeply ingrained in the fabric of their everyday life. The foundations of their mythology are simple enough: everything has a being or spirit of its own, every form of life is sacred, and everything is connected to everything else in the indestructible spiritual unity of all animate life. As we shall see below, echoes from the Hopi’s mythology are heard between the lines in the second, *andante* movement of Bringhurst’s *Suite*. Consisting of two distinct parts, the overall plan of the whole movement is crystal-clear from the start. On the one hand, the first part (staves 1-20) resonates with powerful echoes from the Hopi’s worldview – a universe made of such elemental things as mountains, people, animals, trees, birds and gods – and recreates a mythical account of the origins of humankind (a creation myth or cosmogony) in which the earth marries first the sky and then the sea, which is strongly reminiscent, for instance, of other such cosmogonies as the one related by Hesiod in his *Theogony* in ancient Greece. On the other hand, the second part (staves 21-52) is more complex in that it juxtaposes three closely connected stories that tell of a constellation in the sky, of a primordial darkness somewhere in the underworld dreaming or thinking of all the creatures on Earth, and of the marriage of the sun and the moon. In the end, we learn that the flute player is no other than the trickster Coyote, one of the sons to the sun and the moon along with the twins (the little war gods). Throughout the whole movement, the language is kept simple, musical and lyrical; the thought is profound, and the commitment to giving voice to a necessary ecological awareness that finds its ancestral roots in the way the Hopi related to Mother Earth is plain. That is but one of the many lessons the Hopi can teach us if we dare listen, if we have got the time and the inclination to cleanse our senses and our will.

1 · Staves 1-20

In the opening staves of “Who Is the Fluteplayer?” we are plunged in the middle of a recognizable landscape, that of the country of the Hopi, located in northeastern Arizona. In the framework of the mythical worldview embraced by the Hopi, the whole universe is teeming with spirits and beings that participate in the unbroken unity of all life. As in the case of so many native American people, mythology is crucial for the Hopi and storytelling

is a precious and rare gift found only among talented individuals in a society organized in matrilineal clans. A mythology is a complex constellations of myths, rich in symbolical meaning and sharp as a knife in their capacity to penetrate the essence of the world. Thus, mythology is the carrier and preserver of the most immaterial part of tribal culture, an ecology of living thought and a complex prism through which the people sees into the real, which is both visible and invisible. To the Hopi, everything in the world is alive: to them the unseen world is peopled with a host of beings and everything in nature has its being or spirit. Their belief in the unity of all life and in an animate universe is simply astonishing and admirable. Communion with nature has brought the Hopi to an absolute reverence for the wisdom of the past as preserved in their legends and myths, to a reverent attitude concerning the sacredness and wisdom of trees, clouds, sunlight, and starlight, as well as to a vibrant faith in the subtle order pervading the whole world. These firm beliefs keep the Hopi in harmony with the universe. However, this invaluable body of unwritten literature, born out of oral roots, remains largely unexplored or unknown to academia. It constitutes the very ancestral and pristine precedents of all literature produced on the continent, even if the literatures of European descent written in America since the times of the white man's colonization of the New World have ignored them for a long time as extravagant outpourings of primitive people amazed at the mystery and grandeur of natural phenomena.

In this respect, Robert Bringhurst has vindicated the irreplaceable value of the oral literatures of North America, not just in such seminal essays as *Native American Oral Literatures and the Unity of the Humanities* (1998) or *Prosodies of Meaning: Literary Form in Native North America* (2004), but also in his own work as a translator of Haida oral literature. Bringhurst's interest in Haida culture dates back to his arrival in Vancouver and he has been studying the Haida language on his own since about 1980. In his monumental trilogy devoted to the art of the Haida mythtellers, he produced an in-depth study of Haida literature in *A Story as Sharp as a Knife: The Classical Haida Mythtellers and Their World* (1999) and he translated the work of Ghandl (*Nine Visits to the Mythworld. Ghandl of the Qayabl Llaanas*, 2000) and Skaay (*Being in Being. The Collected Works of a Master Haida Mythteller. Skaay of the Qquuna Qiighawaay*, 2001). For this purpose, he used the Haida stories collected by American linguist John Swanton during a ten-month visit to Haida Gwaii in 1900. In any case, he needed to gain a firsthand knowledge of the primeval native literatures that had emerged from the living soil where he lived. It could have been any other native language of the many spoken in British Columbia, any other body of oral literature, but in Haida Bringhurst found an invaluable corpus of work that had been ignored for almost a century as well as a rigorous and respectful transcription on the part of Swanton:

“When I found myself living in Vancouver, I wanted to learn more about the native cultures that own this country,” says Bringhurst, who describes the new translations as a more responsible follow-up to *Raven Steals the Light*, a collection of adaptations of Haida stories he co-wrote with Bill Reid in 1984. “I live in this country and I need a tradition to live in. The imported tradition is all very nice, but it's not enough. It doesn't connect me with this place.

“I stayed with Haida largely because of Swanton. He was very respectful and he got a whole literary culture written down on pieces of paper at a time when people thought native Americans didn't have anything to say. And he got names. There's no pretense that these are anonymous folk tales; they're only anonymous if some ass didn't write down the names of the storytellers and Swanton wasn't that kind of guy.” [...]

“I know it sounds suspect whatever way I describe it: If we’re trying to do it for their sake, we’re terrible do-gooders and should get the hell out. If we do it for our sake, we’re in danger of being thieves. But this is the real Canadian literature. It’s oral and belongs to people who don’t speak English or French and who aren’t represented in the libraries and the university curricula. Restoring it is an important task. It has to be done and I’m just trying to do my bit.”²³

If the size of the mind and the heart is the number of species of creatures, then the mind and the heart of the Hopi is truly great. If the size of their view of the world is measured in terms of the gods and goddesses they can number, then theirs is a huge world populated by spirit beings like the Spider Woman or Earth Goddess (Mother Nature), spouse of the Sun and mother of the twin war gods, the figure of the trickster Coyote, or the *kachinas* (supernatural beings in charge over aspects of the natural world, representing anything from rain, animals, stars to the spirits of dead ancestors, and acting as intermediaries between the divine and human realms), all prominent in Hopi mythology. Earth Goddess is particularly relevant in Hopi mythology; she is represented by the *sipapu*, i.e., the literal opening dug in the floor at the centre of the *kiva* (the round ceremonial chamber) standing symbolically for the womb of Mother Earth and representing the hole through which humankind originally emerged from the underworld. The origin or emergence myth of the Hopi claims a common origin for all humans in the interior of the earth, out of a region of darkness and moisture. Fleeing a world of misery and pain where some individuals became disobedient, these early obedient humans managed to escape to a higher plane by climbing a hollow reed or cane that Spider Grandmother caused to grow into the sky, emerging in the fourth world at the *sipapu*. This is then the fourth plane or world on which humankind has existed; all previous three worlds were either destroyed with their wicked people in them or left behind in total chaos. It is said that the emergence was accompanied by singing, possibly by the magic twins, the two little war gods, or by the mocking bird. The hole was never closed and all the germs of living things kept coming out of it into the world aided by some spirit being.

Bringhurst’s evocation of Hopi mythology is done with astonishing linguistic economy in just a few staves (1-10). Thus, to the Hopi there is room in this world for the peaceful coexistence of such elemental things as mountains, sheep, deer, pronghorn, birds, trees, humans and gods. When living creatures die, they are thought to dance “*in their white masks on the polished floors / of the western lakes*”, whereas “*the lords of the mountains*” go to die to the eastern mountains, where the healers, probably the medicine men or shamans of the tribe, dream in solitude. The *white masks* are reminiscent of those much more colourful masks worn by priests in ritual dances where they metamorphose themselves into any of the *kachinas* or spirit beings that populate the world. “*It is silent, except for the bluegreen songs of the birds*”, says the second (female) voice. Like many primitive people, the Hopi believe that when a bird sings, he is weaving a magical spell, and so they have their own songs for grinding the corn, for weaving their blankets and baskets, for planting, for hunting and even for war. The spatial arrangement of the birds and the roots of trees in the world is no random choice: “*Four storeys up are the homes of the birds. / Four storeys down / are the trees’ roots*”, says the second voice, while the third voice insists on the same idea by simply reversing word order. “*In the four directions are oceans*”, says the first voice. The choice of the number four is no happy coincidence either; it is possibly meant as a subtle reference to the fact that this is the fourth world or plane on which the Hopi have lived according to their

²³ See Chris Dafoe’s article entitled “Robert Bringhurst: in ink and paper”, published in *Toronto Globe and Mail*, 24 June 1995: C1–2. The article is based on an interview conducted in Vancouver in April 1995, with reference to the publication of *The Calling: Selected Poems 1970-1995* (1995).

creation myth. What is truly dissonant and unexpected in this idyllic picture of the world is the presence of pollution ruining the roots of trees: "*Poisons / percolate into them all.*" Nowadays, the Hopi make a living from the natural resources of their environment, but certain companies are granted permission to drill their land in search of oil or gas, or even coal, in exchange for money. We might think that the respectful, ecologically friendly way of relating to their world in the old days has now been replaced by the greedy exploitation of machines and pollution. In the Hopi country, as in the pitmines and deforested Amazon Basin, humans' greed is invincible. It is on its way to becoming one more desanctified place like the ancient sites and modern metropolis mentioned in the first movement of the *Suite*.

In staves 11-20 a mythical account of the origins of humans and animals and plants is given in intensely lyrical language. We are back in the realm of beginnings, for this is a creation myth in miniature, a cosmogony reminiscent of many other cosmogonies found in different cultures around the world. In Christianity this account is found in the Book of Genesis, where God creates the whole universe and everything in it in only six days. The first and second voice are now in charge of pushing this narrative forwards, whereas the third voice keeps on repeating the words of the first and second voice in staves 1-8 almost literally or *verbatim*. The interpenetration of the words of the second (female) and first (male) voice brings a perfectly musical account of the origins of humankind:

Second voice:

The earth was married to the sky,
but he was cold, and so she left him.
She lives now with the sea.
Her sons and her daughters, by both these fathers,
are persons.
Daylight cooks us,
little by little, day by day.
You are cooked, but deer, bear
douglas-fir, the earth, the sun
and snowstorms all stay raw.

*

First voice:

The earth was married to the sky,
but he was cold.
Persons are cooked, and persons are raw.
Cooked persons keep their forms
and uncooked persons change them.
Deer, bear, douglas-fir, the earth, the sun
and snowstorms, for example, all have roots
in the cool darkness. They stay raw.

18 verse lines are sufficient to recreate the essentials of a cosmogony. The earth marries the sky and bears children, but then she leaves the sky because it is cold and bears new children with the sea. Interestingly enough, the sons and daughters of the earth by both the sky and the sea are all called *persons*. Upon closer inspection, one finds that these persons are meant to include both humans and non-humans, which does make sense in the Hopi's view of the world as the expression of an animate unity of life. Therefore, there are two kinds of persons: *cooked persons*, whom daylight cooks progressively through exposure to the sun, and *uncooked or raw persons*, among whom are animals, trees and even snowstorms having their

roots deep inside the cool darkness of the underworld. Furthermore, cooked persons are said to keep their forms stable, whereas uncooked ones are endowed with an astonishing capacity for metamorphosis. In any case, Earth is seen as the mother and origin of all things and creatures, human and non-human alike. An indestructible bond between all creatures and their Mother Earth is acknowledged from the start. As in Hesiod's *Theogony*, Mother Earth is thought to be the feminine principle out of which life springs into existence through her union to the masculine principle embodied first by the sky and then by the sea. *Terra matrix* is reminiscent of Gea, whereas the sky is reminiscent of Uranus, whose genitals Cronos castrates and throws into the sea. The Hopi's is a society of matrilineal clans where women play a crucial role, and so the feminine is prominent in their own myths.

2 · Staves 21-52

The second part of "Who Is the Fluteplayer?" is a bit more complex in the way it tessellates three mythical accounts: the existence of what looks like a knife-shaped constellation up in the sky (staves 21-26), a catalogue of all the creatures on Earth born out of darkness' thinking (staves 27-37), and the story of the marriage of the sun and the moon (staves 38-52). All three stories are subtly interconnected to one another and also to the preceding staves in the first part of "Who Is the Fluteplayer?", as we shall try to demonstrate. To begin with, they are meant to evoke the complex mythological substratum upon which the Hopi built or based their everyday life and conception of the world – a view of the world in which everything is sacred and is charged with the utmost significance. The attitude of the Hopi towards the world is one of utter respect, reverence and gratitude, all of which are values that seem to have been forgotten in *the desanctified places* listed in the first movement of the *New World Suite No. 3*. In addition, the myth of creation told in the immediately preceding staves is somehow resumed firstly in the story of a constellation that is prominent in the sky (the first husband of Mother Earth), and secondly in the way all creatures emerge out of the wet moisture of the underworld, from the womb of the earth. The story of the marriage of the sun and the moon brings the circle to completion and perfection, as it reminds us of the annual calendar by which the Hopi organized their propitiatory rituals and celebrations at decisive moments of the year to ensure rain-making and the fertility of the land from which they made a living.

A number of clues scattered in the opening staves (21-26) lead us to think that the first verse lines concern a mythical account of a constellation whose shape resembles that of a knife. Among the clues are the fact that the knife itself is placed in the sky and that its heart and its eye are stars. But this is only one possible interpretation. Once again all three voices are torn apart from one another for the sake of a practical critical analysis:

First voice:

In the sky is a knife made of stone with no handle.
The morning star is its eye.
The heart of the earth is not in the sky.
The eye of the earth is open,
but it is hidden.

*

Second voice:

It flies
 like a bird.
 The earth's heart beats
 in the motionless stone.
 Thought is light.
 The world's thought is called the sun.

*

Third voice:

The heart of the knife
 is the evening star.

The language used by Bringhurst in this passage is simple and lyrical, and yet the meaning is difficult to pin down. This is gnomic poetry. Both the sky and the earth are somehow endowed with a heart and an eye. The eye of the stone knife of the sky is the morning star; its heart is the evening star. The handle is missing, and yet “*it flies like a bird.*” By contrast, the earth’s heart is not in the sky, but somewhere underground, beating “in the motionless stone”, and the earth’s eye is open, but hidden, so that we humans cannot see it. This eye that remains open recalls the *sipapu*, the hole on the floor at the centre of the *kiva* that symbolizes the womb of the earth, out of which all creatures emerged and keep on emerging into life. But acknowledging that the earth has its own eye is possibly only a way of personifying it so as to remind us humans that breathing earth is also a living creature in its entirety and so we should not be torturing it for money. Two metaphors at the heart of what the second (female) voice says highlight the importance of the sun among the Hopi: as a giver of warmth and light, the sun is revered as the king in the sky, as the world’s thought, for thought is light. As opposed to the darkness of the womb of the earth underground, the sun could be conceived as being the true eye of the sky, and its light, essential for all living creatures on Earth, as the earth’s darkness’ dreams come true or materialized in the realm of the living. Staves 27-37 concern precisely the catalogue of living creatures that are born out of the thinking of darkness underground, in the womb of the earth. “*The darkness is thinking. / Behind the earth’s back, hiding from thought / under rocks, in the roots and leaves / of trees is thinking.*”, says the first voice. What darkness is thinking is the inexhaustible repertoire of living things in the world. In this context *thinking (of) creatures is tantamount to creating them out of the blue* as it were, in much the same way God’s utterance of names in the Book of Genesis entailed the creation of the things named. At this point of the II movement of the *Suite* all three voices join and the coalescence of ideas, sound and rhythm is perfect, particularly in staves 33-37, where the names of species of creatures living on Earth are spoken in sequence, not simultaneously as in preceding or subsequent staves:

33 **Magpie.**

Wolf.

Whitetail.

Cottonwood.

34

Mule deer.

In summer at sunset:

Oriole.

	Ponderosa.	Cougar.
35	Pronghorn.	Aspen.
	<i>In winter at sunrise:</i>	
	Bobcat.	And macaw.
36	Douglas-fir?	The mountain
	<i>In winter at sunset:</i>	
	Stellar's jay. [<i>Stellar's</i> in SP]	
37	sheep?	
	<i>The world's thought is called</i>	
	<u>Ha!</u> Coyote. [<i>no italics</i> in SP]	

The size of the mind and of the heart is the number of creatures or species of creatures in the world, said all three voices in the first movement of the *Suite*. This fundamental idea is resumed in these staves, which embrace all creatures on earth – trees, mammals, birds. The size of the Hopi mind and heart is astonishing, for it acknowledges the existence of the others (animals and plants that share the world, the only world that there is) with humans. These are the thoughts of darkness' thinking, and the words have a definite order and rhythm that makes this a memorable enumeration within the poem. The catalogue goes on and on with pleasing variation, as it were, emphasizing the vast diversity of life forms on earth. Also, the second (female) voice is in charge of punctuating the whole catalogue with temporal references – summer or winter at sunrise and at sunset – which somehow prefigure the myth of the marriage of the sun and the moon in subsequent staves.

Staves 38-52 tell the story of the marriage of the sun and the moon. Their marriage recalls that of the sky and the earth, because "*The sun is married to the moon. He doesn't touch her.*" Similarly, the earth was married to the sky, but she left him because he was cold. However, the sun cannot touch her, not because he does not want to, but rather because he cannot touch her. They are not able to share the same sky at the same time because of the succession of day and night, or as the third voice puts it: "*These are the chief equations describing the motions / linking the heart and thought of the world.*" The heart is in the motionless stone, or somewhere underground, in the bosom or womb of the earth (symbolizing the darkness of night), whereas the world's thought is the sun up there in the sky (symbolizing the benign warmth and protection of daylight). Thus, earth and sky are reunited in the daily rotation of the Earth upon its own axis, which brings about the alternation of day and night and governs the motions of the sun and moon across the sky. Upon closer inspection, this mythical story of the marriage of the sun (masculine) and the moon

(feminine) accounts for a natural phenomenon that was awe-inspiring for the Hopi, who would always pay attention to the sky, with the sun, the moon, the stars and the clouds. Rain-making rituals were of the essence to ensure good crops and the survival of the community. The myth is a living reality to the Hopi, after all. And what about the sea, the second husband of the earth? Well, salt is thought to be the sun's elder sister, probably because the sun sinks into the sea waters on the horizon when it sets, and "*His grandmother lives / in a blue house near a dark beach littered with shells. / He visits her there in midsummer at dawn.*", right at sunset, when the moon is about to go up in the night sky.

The sun and the moon have their own children: the clown, who is the trickster Coyote, who comes in summer, and the twins, who are the two little war gods ("gamblers and soldiers") and come in winter. These are the words spoken by the second voice:

The clown of summer discovered the flute,
and he is the raw person whose picture you see
on the face of the motionless stone
where the heart of the earth beats.
There he is playing his flute, and here we are dancing.

So the flute-player is Coyote, a raw person, capable of changing his form and appearing to humans under a number of guises. Coyote, the trickster of Native American tales from California, Southwest, and the plateau region, is perhaps the most widely known of the trickster figures. In the Pacific Northwest the trickster is the Raven, Mink, or Blue Jay – each of whom is also viewed as a transformer figure, responsible for bringing the ordered world out of Chaos, and a cultural hero, credited with transmitting the skills of survival, such as fire making, from the gods to humans. Wisakedjak, anglicized to *Whiskey Jack*, is a cultural hero trickster of the Eastern Woodlands. Another is Nanabozho (the Hare), who in the Southeast is called Rabbit and who became identified with African Hare trickster as Brer Rabbit.²⁴ In any case, like the first movement, the second movement of the *Suite* also ends with dancing: whereas in the former it was the hills that danced alone when nobody was looking, or humans that danced with the hills, here humans dance to the rhythm of Coyote's flute-playing.

MOVEMENT III · The Children of Zhuang Zi Confront the Frozen Saskatchewan River

Movement III of *New World Suite No. 3* "adopts the voices of Chinese immigrants to Saskatchewan", Bringham claims in his own Afterword to the poem. "*Snowcloud, darkness, snow*" – these are the three linguistic strokes with which the poet describes the setting. "*The truth is, there is no horizon.*" From the Hopi country of Arizona we move upwards into the north, for geographically speaking the reader/hearer is now plunged into the middle of a different space – that of Saskatchewan covered in snow with the river frozen – and a different moment in history – the moment when Chinese immigrants are heading towards Saskatchewan in the very heart of Canada. The children of Zhuang Zi are the Chinese immigrants themselves, and the poet has chosen to call them by the name of one of the greatest poet-philosophers China has known over the centuries. The choice is no random, of course, because much of the meditation enacted at the heart of this part of the *Suite* owes much to the Chinese sage's insights into reality and to his concept of the so-called

²⁴ See the entry on 'trickster tale' in *Encyclopaedia Britannica*, volume 28, p. 16787.

dao. Like the Pre-Socratics or the mythtellers of the native oral literatures of America, Zhuang Zi belongs among the great ancestors whose wisdom is still relevant today, whose lessons must still be attentively listened to with open ears. Thus, this third movement is an *adagio*, which means that the heart of the *Suite* is beating more slowly somehow, as if to evoke the heavy steps of the immigrants making their way through the vast expanses of the Saskatchewan prairie covered in snow. Also, the predominant tone from beginning to end is purely meditative, which might well account for the choice of a slower pace. The three voices speaking in this part of the poem are dramatic impersonations of those of the Chinese immigrants themselves – the first voice speaking in the first person, and the second and third voices giving voice to reported speech, as it were.

Bringhurst's entire oeuvre is marked by the serious and ambitious aim of getting at a profounder apprehension of *being*. The essence of *being* is something that can be approached from many different directions, but science, philosophy and poetry probably remain the three sharpest tools in the hands of humans in their intellectual confrontation with reality. Now, writing poems on the nature of *being* is no common practice nowadays. The result is complex, demanding and intellectually satisfying poems, especially for those concerned with finding poems which are not mere subjective or narcissistic outpourings of the private or solipsistic self. Reality is always much more complex and interesting than humans – this seems to be one of the elemental convictions with Bringhurst. Hence, the whole movement entitled "The Children of Zhuang Zi Confront the Frozen Saskatchewan River" sets out to explore the elemental concepts of *being* and *truth*. Written with astonishing craftsmanship, this *adagio* is a profound meditation on *what is* and *what is not*, on the objective nature of reality, on the epistemological possibility of ever reaching a core of irreducible meaning at the heart of the world, and on the ethical implications or corollaries implicit in acknowledging that *being* is an unbroken unity that comprises a continuum of existence ranging from the humble grass on the ground to the ever-shining stars up above in the sky. Three elemental clusters of ideas or threads are woven into the polished verbal structure of this investigation into the nature of *being*:

- (1) The nature of *what is* and *what is not*. The exploration of *being* begins with two complementary statements, spoken by the first and second voices in the poem: (a) "*What is not is not hidden*" and (b) "*What is / is not hidden, although it is hiding*." It is significant that the statements are not spoken simultaneously, but in sequence, which highlights the specific epistemological weight of each statement. *What is* and *what is not* are the two inseparable sides to the same coin; they are aspects of *being* and *non-being*. *What is not* is the invisible, or that which is not easily or explicitly seen, but it is not hidden. We humans do not seem to be able to see *what is not* any longer; our inquisitive gaze stops at the surface of things, does not dare cross the threshold that leads into the core of the real. Similarly, *what is* is not hidden either, though it is hiding, i.e. it is elusive, it tries to flee humans' perception. In the closing staves of the first movement of the *Suite*, the three voices spoke of a song which was perpetually singing itself further back into the hills, under the seacliffs, under the sea, away from humans. That was the song of being. *Everywhere being is singing* (the title of one of Bringhurst's two prose collections), but we have fallen from a pristine state in which communion with the world was still possible. As a result, we feel that *being* is mute to our ears and invisible to our eyes. "*Truth is one thing*", says the second voice, and "*The sky / and the earth, like the truth, are one thing*," says the third voice. Truth means that humans are able to *get closer to the innermost recesses of being*. However, if *being* is dumb and invisible to us, then the truth is unapproachable or unattainable for us too. Truth is not many-sided but one single entity, a perfect circle, according to the second voice, but it is also the marriage of the earth to the sky (even if the sky is cold and so the earth decides to leave him and marry the sea, as the account of the myth in the II Movement of the *Suite* reads), a reconciliation of opposites into a single unbreakable entity. "*Add us also, the sum is still smaller than two*,"

adds the second voice, which means that if humans are added to the sky and the earth (and all the creatures, living and non-living, on Earth) reality is still one, the truth is one thing, *being* is one. This is pure metaphysics grounded in the real, physical world. That this is the case is further enhanced by staves 7 to 9, a special interlude where the focus is on a pun, a word-game: “*Watch your step. / And I did so and tripped, and he laughed. / Not your foot, but your step, he said.*” An idiom is interpreted on a literal basis, which leads to misunderstanding.

- (2) The interconnectedness of all things in the universe & the inescapable path or Dao. “*Nothing can stray. There is / no way of leaving the path. / What you are is what is. It runs / all the way through. The grass / and the stars are your innermost nature.*”, says the first voice with great enthusiasm. And the third voice adds: “*The snow underfoot and the stars / in the sky are your nature.*” The statements spoken aloud by the two voices emphasize the unity of *what is*, the unbreakable continuum of existence that embraces the grass on the earth and the stars in the sky, thus bringing about the true marriage of both spaces. Nothing can stray because everything fits and falls into place in the grander scheme of things that governs the universe. This is good news and it resonates with echoes from Zhuangzi’s teachings. Who exactly was this Chinese sage? Zhuangzi or Chuang-Tzu’s original name was Zhuang Zhou (b. c. 369, Meng [now Shangqiu, Henan province], China – d. 286 BCE). Not much is known about the details of his life²⁵. He is said to be one of the earliest interpreters of China’s early Daoism and his work (*Zhuangzi*²⁶) is considered as one of the fundamental texts of Daoism, even more comprehensive than the *Daodejing*, wrongly attributed to Laozi²⁷ (the first philosopher of Daoism) for a long time. Laozi, however, is better known as the reputed founder of a way of life that became known as Daoism. Zhuangzi’s teachings had a decisive impact on the development of Chinese Buddhism as well as on landscape painting and poetry. The core of his teachings is that insight into reality comes with the realization that everything in life is both dynamic and continuous; this is what he called the Dao²⁸ – the unity of all things, the ultimate substratum that is found beneath all

²⁵ For further details on his life and character, see the entry on ‘Zhuangzi’ in the *Encyclopaedia Britannica*, volume 30, pp. 18193-18194: “In spite of his importance, details of Zhuangzi’s life are unknown. The “Grand Historian” of the Han dynasty, Sima Qian (died c. 87 BCE), incorporated in his biographical sketch of Zhuangzi only the most meager information. He was a native of the state of Meng, his personal name was Zhou, he was a minor official at Qiyuan in his home state. He lived during the reign of Prince Wei of Chu and was therefore a contemporary of Mencius, an eminent Confucian scholar known as China’s “Second Sage.” And: “Zhuangzi appears as an unpredictable and eccentric sage who seems careless about personal comforts or public esteem. His clothing is shoddy and patched, and his shoes have to be tied to his feet with string in order to keep them from falling apart. Nevertheless, he does not consider himself to be miserable, only poor.” (p. 18194).

²⁶ “Zhuangzi is best known through the book that bears his name, the *Zhuangzi*, also known as *Nanhua zhenjing* (“The Pure Classic of Nanhua”). At about the turn of the 4th century BCE, Guo Xiang, the first and perhaps the best commentator on the *Zhuangzi*, established the work as a primary source for Daoist thought. It is composed of 33 chapters, and evidence suggests that there may have been as many as 53 chapters in copies of the book circulated in the 4th century. It is generally agreed that the first seven chapters, the “inner books”, are for the most part from the hand of Zhuangzi himself, whereas the “outer books” (chapters 8-22) and the miscellany (chapters 23-33) are largely the product of his later followers. A vivid description of Zhuangzi’s character comes from the anecdotes about him in the book’s later chapters.” See entry on ‘Zhuangzi’, *Encyclopaedia Britannica*, vol. 30, p. 18194.

²⁷ See entry on ‘Laozi’ in *Encyclopaedia Britannica*, volume 16, pp. 9569-9570: “Laozi (fl. c. 6th century BCE?, China), legendary first philosopher of Chinese Taoism and alleged author of the *Tao-te ching* (*Lao-tzu*), wrote a book in two sections of 5,000 characters, in which he set down his ideas about the *tao* (literally “Way”, the Supreme Principle) and the *te* (its “virtue” or “power”): the *Tao-te ching*. The *Tao-te ching*, however, cannot be the work of a single man; some of its sayings may date from the time of Confucius; others are certainly later; and the book as a whole dates from about 300 BCE. The name Lao-tzu seems originally to have designated a type of sage rather than an individual.”

²⁸ The concept of dao is truly complex. For further details, see the entry on the ‘dao’ in *Encyclopaedia Britannica*, volume 8, pp. 4322-4323: “Dao, in Chinese philosophy, a fundamental concept signifying “the proper way” or “heaven’s way”. In the Confucian tradition, *dao* signifies a morally proper path of human conduct and is thus limited to behavior. In the rival school of Daoism, the concept takes on a metaphysical sense transcending the human realm.[...] One aspect of the Dao, however, can be perceived by man, namely,

things, circulating through the whole universe. Whatever we say about the Dao is not the Dao, which has no beginning and no end, no true demarcations, limitations or boundaries. The Absolute Dao thus defies verbal definition, but language can make suggestions that may lead to an intuitive understanding of this fundamental reality. Life itself is conceived as being the perpetual metamorphosis or transformation of the Dao, in which there is no good or evil, no better or worse. Everything changes and yet everything remains the same somehow. Virtuous humans are free from the bondage of circumstance, personal attachments, tradition and the need to change this world. They allow things alone to follow their own natural course and do not value one situation over another. The wise man is an unattached man and knows of no bonds of any kind whatsoever²⁹. When placed against Zhuangzi's concept of the Dao, Bringham's words that "nothing can stray" make perfect sense: everything falls into place in a process of perennial metamorphosis in a world whose ultimate *being* remains the same though. This is a world in which the invisible exists, including a host of gods and goddesses, even if humans cannot see them: "The gods come, unseen, to drink / at the thought's edge.", says the second voice. The world is still a sacred place where there is room for the realm of the divine alongside with the realm of the human. Gods thrive on humans' mildewed jewel of a mind, at whose edge they drink directly from the water of our thinking.

- (3) Education of humans' emotions. The closing staves of the third movement of the *Suite* speak of emotions and of what surrounds them. The elemental lesson concerning emotions seems to be spoken by the Chinese grandfather mentioned in previous staves, possibly a new incarnation of the old Zhuangzi. It is possible to entertain several emotions at once, "each in due measure," and yet it is necessary not to lose sight of one simple fact: that emotions are surrounded by the stark boundless reality of an objective world, also called "an empty space or a boundless space," which is nonetheless the core, the important thing, for all three voices. The stars in the sky and the snow underfoot remain tangible things of this world, whereas emotions are not tangible, palpable, or straightaway visible. This does not mean, of course, that they are not essential in human communities. The capacity for empathy – the insight into the simple truth that our self does not end exactly where our skin ends – is what makes us truly human and humane, but a wise or virtuous human being knows how to control those emotions while keeping an eye on something larger than

the visible process of nature by which all things change. From an observation of the visible manifestation of the absolute Dao, it is possible to intuit the existence of an ultimate substratum that is the source of all things. Awareness of this process then leads toward an understanding of the Absolute Dao. Daoists view life and death as simply different stages, or manifestations, of the Absolute Dao and consequently advocate a life in accord with nature. The serenity of such a life stands in sharp contrast to the life of public service advocated by Confucius." See also the entry on 'Daodejing' in *Encyclopaedia Britannica*, volume 8, p. 4323: "The dao consists, in essence, of "nonaction", understood as no unnatural action rather than complete passivity. It implies spontaneity, non-interference, letting things take their natural course: "Do nothing and everything is done". Chaos ceases, quarrels end, and self-righteous feuding disappears because the Dao is allowed to flow unchallenged and unchallenging. Everything that is comes from the inexhaustible, effortless, invisible, and inaudible Way, which existed before heaven and earth."

²⁹ "The complete relativity of his perspective is forcefully expressed in one of the better-known passages of the *Zhuangzi*: "Once, I, Zhuang Zhou, dreamed that I was a butterfly and was happy as a butterfly. I was conscious that I was quite pleased with myself, but I did not know that I was Zhou. Suddenly, I awoke, and there I was, visibly Zhou. I do not know whether it was Zhou dreaming that he was a butterfly or the butterfly dreaming that it was Zhou. Between Zhou and the butterfly there must be some distinction. This is called the transformation of things." The relativity of all experience is in constant tension in the *Zhuangzi* with the unity of all things. When asked where the Dao was, Zhuangzi replied that it was everywhere. When pushed to be more specific, he declared that it was in ants and, still lower, in weeds and potsherds; furthermore, it was also in excrement and urine. This forceful statement of the omnipresence of the Dao had its parallels in later Chinese Buddhism, in which a similar figure of speech was used to describe the ever-present Buddha (Buddhist scholars, especially those of the Chan [Zen] school, also drew heavily on Zhuangzi's works). Zhuangzi was par excellence the philosopher of the unattached man who is at one with the Dao." See the entry on 'Zhuangzi', *Encyclopaedia Britannica*, vol. 30, p. 18194.

his/her own subjectivity. The real exists in an objective manner; it is out there, and we are part of it.

17 **Two emotions at once,**

where, and from whom could one hide?

can stray.

18 **three, even four -**

The stars in the sky

Two emotions at once, three, even four,

19 **each in due measure.**

and the snow underfoot

but each in proportion inside you, he said. [*in due measure within* in SP]

20 **That is good order, of course,**

are the facts of the matter.

That is good order, my grandfather said.

21 **but a space without boundaries**

But the empty space

22 **surrounds them.**

What surrounds us is boundless, he said.

that surrounds those emotions

23 **And that space**

It is empty,

is it, he said.

24 is the core.

and that is the core.

That is the core.

MOVEMENT IV · Winter Solstice, Cariboo Mountains

Movement IV of *New World Suite No. 3* is *lento*, which means that the heart at the core of the poem is beating more slowly now. In the afterword to the 2005 edition of the poem, Bringham tells us that this movement is “based on a mid-winter walk in central British Columbia” and that it “superimposes the figures of two hunters, Orion and Prajapati, who are two interpretations of the same constellation: one inherited from Greece, the other from northern India.”³⁰ The spatial setting or location of the poem is British Columbia, home to the poet, with its mountains rich in caribou lying naked before the immensity of the Pacific Ocean. And the temporal framework is winter solstice, a magic moment of the calendar when daylight is scarce and humans get to know the longest night of the year. Bringham is an avid outdoor man, who feels at home amid the mountains that have given him spiritual nourishment and literary inspiration time and again throughout his life. Having been raised in a number of different places and having travelled widely as an adult, the mountains seem to be always there in the background. It is in the mountains where some of his most memorable characters (Moses and Jacob) find a space for spiritual self-confrontation; it was the solitude of the mountains that gave him the gift of *Tzubahalem’s Mountain* in 1982; and it is mountains that figure prominently in such fundamental pieces of the Bringham corpus as the early “Song of the Summit”. But the poet is not just someone alert to nuances of meaning found in the book of nature – to *being* dancing in daylight or in the night sky –, he is also aware of the cultural layering surrounding those pictures in the sky, posing a truly fascinating scientific puzzle. He mentions Orion and Prajapati, but there are other constellations at the heart of this movement, associated to at least two clearly identifiable stories lifted from Greek mythology. What both seem to have in common is humans’ fascination with the stars in the sky, which is ubiquitous in all civilizations since antiquity. In this respect there is an astonishing density of meaning between the lines, which are otherwise marked by utter simplicity and lyrical elegance.

The three speaking voices are perfectly interwoven into the fabric of this part of the poem, so that the same cluster of messages is being repeated over and over again, thus creating an incantatory tapestry of musicality and ideas. The movement opens with a brief meditation on the mystery implicit in the sun’s motion across the sky, as well as on the profound implications thereof: “*The sun burns to the ground and is kindled again, / teaching the one lesson deeper than hunger.*”, say the first voice and third voices. What “*the one lesson deeper than*

³⁰ See Robert Bringham’s “Afterword: Licking the Lips with a Forked Tongue”, *New World Suite Number Three. Four Movements of Three Voices* (2005), pp. 13-14.

hunger” might be is easy to discern if one pays attention to what happens to the sun as it crosses the sky from sunrise to sunset. It seems as if it were to die for good, and yet it rises up over the horizon once again every morning, giving us their warmth and light. The central death and life dichotomy is at the core of the meditation: the desire to live, which is greater than mere survival, is always deeper than hunger. What follows this elemental truth the poetic voices have stumbled upon is the tessellation of two constellations and two myths lifted from Greek and Indian mythology. Constellations are made of stars, like the sun itself. Even if they are light years away from the Earth, they still hold an irresistible fascination for human beings. In staves 3 to 6 the Orion and Ursa Major myths are juxtaposed with impressive linguistic economy; both share striking parallelisms, for, to begin with, a hunter is stalking preys that are not quite what they seem:

3 **In the night sky, Orion,**

Orion, the old god, disguised as a deer, is out

deeper than hunger.

4 **disguised as a deer, is out stalking Aldebaran,**

stalking Aldebaran, the doe, his daughter, forever.

5 **the doe, his daughter, forever.**

Arcturus is spearing the Great Bear

Arcturus, spearing the Great Bear of heaven, sees

6

of heaven. He sees in her eyes, now and always,

in her eyes, now and always, the eyes of his mother.

What are Orion, Aldebaran, Arcturus and the Great Bear? The simple, straightforward answer is that they are constellations or stars within constellations. But they hide a wealth of meaning in the semantic layers deep inside. The first cluster of stars brings together Orion, Aldebaran and, indirectly, the Pleiades; the second cluster of stars reunites mother and son, Ursa Major (the Great Bear) and Arcturus (the bear-guard). But it might be advisable to start at the beginning. Let us focus on Orion and Aldebaran in the first place. A prominent constellation located on the celestial equator and visible throughout the world, Orion³¹ is also referred to as “The Hunter” and is one of the most conspicuous and

³¹ See the entry on ‘Orion’ in *Encyclopaedia Britannica*, volume 21, p. 12477: “Orion, in astronomy, major constellation lying at about 5 hours 30 minutes right ascension (the coordinate on the celestial sphere

recognizable constellations in the night sky. It is named after Orion, the hunter in Greek mythology. The outline of the silhouette is discernible to the naked eye: there are the three prominent, bright stars in a row known as the “Belt of Orion”; surrounding the belt at roughly similar distances are four bright stars that represent the outline of the hunter’s body; and descending from the belt is a smaller line of three stars known as the “Hunter’s Sword”. In the wider map of the sky, Orion is fighting Taurus (the bull), accompanied by two other major surrounding constellations, Canis Major and Canis Minor, his two hunting dogs. Orion can be easily seen in the night sky from November to February of each year (late fall to winter in the Northern Hemisphere, late spring to summer in the Southern Hemisphere), and so it is perfectly accurate that Bringhurst should have seen the constellation at some point near the winter solstice.

But, beneath the constellation, there is a mythological figure called Orion. In Greek mythology Orion (Ὠρίων) was a giant huntsman whom Zeus placed among the stars as a constellation after his death. Different stories about Orion are told by ancient sources, recording, among other incidents, slightly different versions of his birth somewhere in Boeotia, his visit to Chios where he met Merope and was blinded by his father (Oenopion), the recovery of sight at Lemnos, his hunting with Artemis on Crete, and his death either by the bow of Artemis or by the sting of the giant scorpion (which became the constellation Scorpio), and his subsequent elevation to the heavens. The earliest record of Orion in Greek literature is found in Homer’s *Iliad*, where he is described as a constellation (lines 486-489) and the star Sirius is mentioned as his dog (book X, 29), and in the *Odyssey* (Book V, line 283), where he appears as a great hunter whose shade Odysseus sees hunting in the underworld during his visit to the realm of the dead. In the *Odyssey* he is also mentioned as a constellation, as the most handsome of the earthborn, as the lover of the goddess Dawn, and as slain by Artemis. In Hesiod’s *Works and Days* (lines 598, 623), Orion is also mentioned as being a constellation, one whose rising and setting with the sun is used to reckon the year. The entry in Ovid’s *Fasts* for May 11 is a poem on Orion’s birth, but this is just a tiny part of the whole story of his life.

There is no extant literary version of his adventures comparable to that of Jason or Perseus or Heracles, for instance. Although a few lines are devoted to Orion in both Homeric poems and in the *Works and Days*, most of the stories about him are recorded in incidental allusions and in fairly obscure later writings. The surviving fragments telling of Orion are dispersed here and there. The legend of Orion was first told in full in a lost work by Hesiod, probably the *Astronomy*. This version is known through a work of an Hellenistic author entitled *Catasterismi*, on the constellations, which provides a long summary of Hesiod’s tale on Orion. According to this account, Orion is the son of Euryale, daughter of Minos, King of Crete, and Poseidon, the god-sea. He could walk on the waves because he learnt how to do it from his father. Thus, he walked to the island of Chios, where he got

analogous to longitude on the Earth) and zero declination (at the celestial equator), named for the Greek mythological hunter. Orion is one of the most conspicuous constellations and it contains many bright stars. One of these, Betelgeuse (Alpha Orionis), a variable star, is easily distinguished by its reddish colour. The total brightness of Rigel, in the hunter’s leg, when measured over all visible light, is greater than that of Betelgeuse. The third brightest star in the constellation is Bellatrix. Orion’s girdle, or belt – consisting of three bright stars – lies nearly on the celestial equator. His sword, south of the belt, contains the great Orion Nebula, visible to the unaided eye, an emission nebula containing hundreds of young stars. Faint extensions of this nebula fill almost the whole constellation.” Orion is mentioned in the Bible three times – Job 9:9 (“He is the maker of the Bear and Orion”), Job 38:31 (“Can you loosen Orion’s belt?”) and Amos 5:8 (“He who made the Pleiades and Orion”)–, which testifies to the fascination the constellation has held for humans’ imagination since antiquity. It is also mentioned in Horace’s *Odes*, in Homer’s *Odyssey* (Book 5, line 283) and *Iliad*, and in Virgil’s *Aeneid* (Book 1, line 535). The *Rig Veda* refers to the Orion constellation as Mriga (“The Deer”).

drunk and attacked Merope, daughter of Oenopion, the king of Chios. The father blinded Orion in vengeance for what he had done to his daughter and drove him away. Then Orion arrived in Lemnos, where the lame smith-god, Hephaestus, had his forge and decided to help him. He told his servant, Cedalion, to guide the blinded hunter to the uttermost East, where Helios, the sun, would heal him and restore his sight. Sitting on the giant's shoulders, Cedalion took Orion to his destination and he recovered his sight. Afterwards, Orion returned to Chios to take vengeance on Oenopion, but the ruler managed to hid underground and escape his wrath. The hunter then travelled to Crete, where he hunted with the sylvan goddess Artemis and her mother Leto. In the course of the hunt, Orion threatened to kill every beast on earth. It seems Mother Earth objected and sent a giant scorpion to kill him and punish his hybris.

Orion dies of the scorpion's sting. After his death, the goddesses asked Zeus to place Orion among the constellations in the sky, where he is seen being chased by Scorpio, the constellation representing the scorpion that killed him. In another version of Orion's death, Eos, the Dawn, falls in love with him and takes him to Delos where Artemis kills him with her arrows. In yet another version, Apollo objected to his sister Artemis' love for Orion, and, seeing him swimming with just his head visible, the god challenged his sister to shoot at that mark, which she hit, killing Orion. The goddess shoots Orion only after being tricked by Apollo into thinking him a sea monster – she then laments his death and searches for Orion in the underworld until he is elevated to the heavens. There are two different versions about the way Artemis killed Orion, either with her arrows or by producing the Scorpion. Artemis is given various motives. One is that Orion boasted of his beast-killing and challenged her to a contest with the discus. Another is that he assaulted either Artemis herself or the maiden Opis in her band of huntresses. Orion is connected to several constellations in the sky. In Hesiod's *Works and Days*, Orion chases the Pleiades themselves. It is said that the Pleiades met the hunter Orion in Boetia, and he fell in love with them. He chased them for five years until they were changed into doves. Zeus took pity on them and changed them into stars. They are a constellation up in the sky since then. In addition, Canis Minor and Canis Major are his dogs, and Orion pursues Taurus, the bull. The fruitless chase of Orion after the Pleiades takes place in the constellation called Taurus and is meant to represent the Pleiades' appearance over the horizon right before the reappearance of Orion.

What about Aldebaran? Aldebaran³², also called Alpha Tauri, is a reddish giant star in the constellation Taurus lying 65 light-years from Earth. With an apparent visual magnitude of 0.85, it is one of the 15 brightest stars, and a big one – its diameter is 44 times that of the Sun. It is accompanied by a very faint red companion star. The star was once thought to be a member of the Hyades cluster, but in fact Aldebaran is 85 light-years closer to Earth. The name *Aldebaran* is Arabic and translates literally as “the follower”, presumably because this bright star appears to follow the Pleiades or Seven Sisters in the night sky. Now, in Bringham's poetic rendering, Orion, disguised as a deer (The *Rig Veda* refers to the Orion constellation as Mriga, “The Deer”), is stalking Aldebaran (the doe, his daughter), which is precisely the brightest star in the constellation Taurus. Both Orion and Aldebaran are related to the Pleiades, for these two constellations appear to follow the Seven Sisters. The Pleiades are no ordinary stars and are among the nearest star clusters to Earth. They are the most obvious ones to the naked eye in the night sky, especially in winter in the Northern Hemisphere and in summer in the Southern Hemisphere. It is no wonder that they have been known since antiquity to cultures worldwide. In Greek

³² See the entry on ‘Aldebaran’ in *Encyclopaedia Britannica*, volume 1, p. 325.

mythology, the Pleiades (Πληιάδες)³³ are the seven daughters of the Titan Atlas and the Oceanid Pleione: Maia, Electra, Taygete, Celaeno, Alcyone, Sterope, and Merope. They all had children by gods (except Merope, who married Sisyphus), and they were companions of Artemis, the sylvan goddess. The Pleiades eventually formed a constellation. One myth recounts that they all killed themselves out of grief over the death of their sisters, the Hyades. Another explains that after seven years of being pursued by Orion, the Boeotian giant, they were turned first into doves and then into stars by Zeus. Orion became a constellation too, and continued to pursue the sisters across the night sky. They are mentioned by Hesiod in *Works and Days*, where Orion chases the Pleiades, and by Homer in the *Iliad* and the *Odyssey*.

What about the Great Bear and Arcturus? In astronomy, Ursa Major is Latin for “Greater Bear” and refers to the Great Bear, a constellation of the Northern Hemisphere, at about 10 hours 40 minutes right ascension (the coordinate on the celestial sphere analogous to longitude on the Earth) and 56° north declination (angular distance north of the celestial equator). It was one of the 48 constellations listed in *The Almagest* by the famous astronomer Ptolemy³⁴ in the 2nd century. It was referred to in the Old Testament (Job 9:9; 38:32) and mentioned by Homer in the *Iliad* (xviii, 487). The Greeks identified this constellation with the nymph Callisto, who was placed in the heavens by Zeus in the form of a bear together with her son Arcas as “bear keeper,” or Arcturus; the Greeks named the constellation Arctos, the she-bear, or Helice, from its turning around Polaris, the Pole Star. The Romans knew the constellation as Arctos or Ursa. In Greek mythology, the story of the nymph Callisto is a sad one. The longest extant account of the myth is found in Ovid’s *Metamorphoses*, Book II, lines 405-530. The story of Callisto (Καλλιστώ) is an Arcadian myth. According to some authors, Callisto was a nymph of the woods; according to other authors, she was king Lycaeon’s or Nictetus’ daughter. She had made up her mind to remain a virgin her whole life and spent her days hunting in the woods and hills in the company of Artemis’ maiden huntresses. Zeus falls in love with this young, beautiful nymph of Artemis. As a follower of the virgin goddess, Callisto had taken a vow to remain a virgin too, as did all the nymphs of Artemis. But to lure her into his embrace, Zeus cunningly approaches her under the disguise of the sylvan goddess while she was separated from the train of virgin nymphs. Her pregnant condition was discovered some months later while bathing with her fellow nymphs and the goddess, who, enraged, expels her immediately from the group. Then poor Callisto gives birth to Arcas, later called Arcturus. To avenge her wounded pride, Hera, Zeus’ jealous wife, transforms the nymph into a bear. While in bear form, and 16 years later, Callisto encounters her son Arcas hunting in the forest. Seeing her son after so long, she went forth to embrace him. However, not knowing that the bear was his mother, Arcas was about to shoot his bear-mother with a javelin, when, to avert the tragedy Zeus hurled them both into the sky and placed them among the stars as the constellations Ursa Major and Ursa Minor³⁵,

³³ See entry on ‘Pleiades’ in *Encyclopaedia Britannica*, volume 22, p. 13329.

³⁴ “Ptolemy cataloged eight of the constellation’s stars. Of these, the seven brightest constitute one of the most characteristic figures in the northern sky; the group has received various names – Septentriones, the Wagon, Plow, Big Dipper, and Charles’s Wain. For the Hindus these seven stars represented the seven Rishis (or Sages). Two of the constellation’s stars, Dubhe and Merak, are called the pointers because the line Merak-Dubhe points to the Pole Star.” See entry on ‘Ursa Major’ in *Encyclopaedia Britannica*, volume 29, pp. 17213-17214. The earliest descriptions of the Greek skies are found in Aratus’ poem entitled *The Phainomena* (275 BC), Hipparchus’s *The Commentary* (147 BC), which tells us that Aratus’s poem is for the most part a copy of work by the same title of Eudoxus (366 BC), and Ptolemy’s *The Almagest* (c. 150 AD).

³⁵ This is Ovid’s original account of the catasterism (the metamorphosis into stars) of both mother and son in *Metamorphoses*, Book II, lines 496-506: “Ecce Lycaoniae proles ignara parentis, / Arcas adest ter quinque fere natalibus actis; / dumque feras sequitur, dum saltus eligit aptos / nexilibusque plagis silvas Erymanthidas

respectively. And Arcturus³⁶, also called Alpha Bōotis, is the brightest star in the constellation Bōotes and one of the five brightest stars in the night sky. Arcturus is next to Ursa Major and Ursa Minor, for, to be more precise, it lies in an almost direct line with the tail of Ursa Major; hence its name, Ἀρκτοῦρος (“Guardian of the Bear”), derived from the Greek words ἄρκτος (bear) and οὔρος (“watcher or guardian”).

This is all the wealth of background information that has been condensed in staves 3 to 6 in Bringham’s “Winter Solstice, Cariboo Mountains”. By juxtaposing two constellations and two myths together (the Orion and Ursa Major myths), a rare and precious density of meaning is conveyed to the reader alert to the ripples of meaning emanating from words as if in concentric circles. Furthermore, movement IV of *New World Suite No. 3* also anticipates Bringham’s *Ursa Major. A Masquerade for Actors and Dancers* (2003 and 2009), which is a long poem in five acts that explores the story of the bear-woman in Greek and Cree mythology, as recorded by Ovid in his *Metamorphoses* and by Leonard Bloomfield in *Sacred Stories of the Sweet Grass Cree* (1930), respectively. Even if myth is at the core of movement IV of the *Suite*, there are at least three more threads of lyrical singing in the remaining staves:

- (1) “*The stars and the darkness glide at one speed, / going nowhere to everywhere, or the reverse, and returning.*” or, to put it differently, “*The stars and the darkness / glide at one speed, / going everywhere, nowhere, or both, / and returning.*” These two variations on the same theme are spoken by the first and third voices at different points in the poem, and they come right after each of the myths presented at the core of this fourth movement of the poem – after the Orion myth, in staves 7-8, and after the Ursa Major myth, in staves 20-23. Both variations are somewhat an expression of humans’ amazement at the grandeur of the universe one feels in the presence of the stars shining up in the sky. It is no wonder that Aretus, Ptolemy, Hipatia and so many ancient Greek philosophers, astronomers or thinkers should share this same sense of amazement in the face of the awe-inspiring beauty of the night sky. Stars still remain a scientific puzzle, and we humans are said to be dust fallen from stars, if we bear in mind what the Big Bang theory says about the primeval explosion out of which the whole universe was born so long ago. The truth is that humankind has not ceased raising its amazed eyes in the direction of the starlight, which looks young or fresh new, and is tremendously old for it has had to travel a long distance for a long time to reach our eyes. The fact that the distance of stars is measured in terms of light-years (i.e., the time it takes their light to traverse a certain distance) is itself a puzzle to the human mind. Light emanating from stars travels in all directions across the universe, *going everywhere and nowhere*, for eternity, because there might never be an end to its travelling. We wonder if starlight reaches a point in space or in time where it decides to come back to the celestial body from which it departed. It remains a genuine mystery to the layperson. Constellations,

ambit, / incidit in matrem, quae restitit Arcade viso / et cognoscenti similis fuit: ille refugit / inmotusque oculos in se sine fine tenentem / nescius extimuit propiusque accedere aventi / vulnifico fuerat fixurus pectora telo: / arcuit omnipotens pariterque ipsosque nefasque / sustulit et pariter raptos per inania vento / inposuit caelo vicinaque sidera fecit.” (p. 94) And this is the literal translation into English: “And now Arcas, Lycaon’s grandson, had reached his fifteenth year, ignorant of his mother’s plight. While he was hunting the wild beasts, seeking out their favourite haunts, hemming the Arcadian woods with his close-wrought nets, he chanced upon his mother, who stopped still at sight of Arcas, and seemed like one that recognized him. He shrank back at those unmoving eyes that were fixed for ever upon him, and feared he knew not what; and when she tried to come nearer, he was just in the act of piercing her breast with his wound-dealing spear. But the Omnipotent stayed his hand, and together he removed both themselves and the crime, and together caught up through the voice in a whirlwind, he set them in the heavens and made them neighbouring stars.” (p. 95) See Ovid in Six Volumes, vol. III – *Metamorphoses* in Two Volumes, I (Books I-VIII), translated by Frank Justus Miller, 1st edition 1916, 2nd ed. 1921, reprinted 1971. Cambridge, Massachusetts: Harvard University Press & London: William Heinemann Ltd.

³⁶ See entry on ‘Arcturus’ in *Encyclopaedia Britannica*, volume 2, p. 825.

those puzzling pictures in the night sky, have been a true source of inspiration for innumerable civilizations over time. Myths to account for their existence are the work ancient peoples produced to make sense of the universe for themselves, and they remain a gift to subsequent generations. Art (literary and pictorial works of art, in particular) has turned for inspiration time and again to this inexhaustible reservoir of knowledge that has been preserved in the form of jewel-like myths. Mythopoeic thinking is a respectful way of acknowledging the fact that humans fit in, that they belong into the grander scheme of things in the universe. It is also a gesture showing humankind's gratitude for existing amid such astonishing beauty.

- (2) *"The wolves speak / to the moon on behalf of the mountain."* Wolves are said to howl at the moon, especially when there is a full moon shining in the night sky. Here they are personified, as they are endowed with the speech capacity. The occurrence of this seemingly enigmatic statement makes sense in the wider context of the Orion and Ursa Major myths. Like the stars making up these constellations, the moon shares the night sky with them, even if it is only a satellite, a different kind of celestial body devoid of light of its own. The moon is important in ancient mythologies worldwide. In this particular context, it is closely connected to Artemis (or Diana in Roman mythology), the sylvan and virgin goddess with whom Callisto used to hunt in the woods before being cunningly seduced by Zeus. The wolves are reminiscent of Callisto's supposed father, king Lycaon, who was turned into a werewolf by Zeus. The story goes like this: once Arcas, Callisto's son, was born, Zeus decided to hide him in an area of Greece known as Arcadia, in his honour, just to prevent jealous Hera from taking revenge upon him. During one of the court feasts held by Lycaon, he decided to test Zeus' omnipotence and see if he could distinguish between animal and human meat. Thus, Arcas was placed upon the burning altar as a sacrifice to the gods and challenged Zeus to make him whole again. The king of the gods became enraged and made his son whole again, but in anger he changed Lycaon into a wolf, the first werewolf. But why should wolves speak to the moon on behalf of the mountain? Being inanimate, mountains cannot speak, they are absolutely mute stone, and so their dwellers, wolves, spend their nights howling at the shining moon for them.

"Year after year, we who have traded our voices / for words circle back to the pool / of alkaline silence to listen." This is a central statement in movement IV of the *Suite*; repeated twice at two different points in the poem (staves 11-13 and 23-26), these words are charged with an extra amount of meaning. It is also metapoetic in nature, for it seems that the *we* speaking these words is probably meant as a reference to the figure of the poet. Poets raise their eyes to the night sky (which is what the metaphor *"the pool / of alkaline silence"* stands for) and listen attentively to the stories and fundamental lessons the constellations in the sky have to teach them. The voices of ancient myth-tellers have now been replaced by words, those with which we try to touch the mystery implicit in the visible and invisible world. Constellations in the sky tell us humans something about our pristine origins – fallen stardust, that is what we are. They also remind us of the myths our ancestors used to make with their own minds and voices in their intellectual and emotional confrontation with the world and the mystery implicit in it. Human affairs have changed much down here, on Earth, but *"the pool of alkaline silence"* remains almost the same, a mute witness to all that has happened and keeps happening among mortals. It is no happy coincidence that all three speaking voices in Bringham's *New World Suite No. 3* should all conclude with the same words: *"... circle back to the pool of alkaline silence to listen."* Listening to *being* is a fundamental action going on in many Bringham poems, and *being* makes itself particularly felt or visible or audible in the night sky. The *Suite* comes to an end with a celebration of mystery, the mystery of *what is*.

New World Suite No. 3 is possibly the most complex of all of Bringham's polyphonic poems. Structured around four movements for three voices, it is a probing

meditation on being, History, myth and ecology. It is also a most accomplished vindication of the need for humans to take care of and preserve the irreplaceable, fragile beauty of this Earth, our only home and our only world. That the *Suite* is an anticipation of *Ursa Major* (2003 & 2009), Bringhurst's latest polyphonic poem, is already palpable in the closing movement of this poem, a complex tapestry concerned with exploring the myth associated to Callisto and Arcturus. For Bringhurst's poetry has got the simplicity and perfection of a circle. It has got a precious coherence that gives the impression that his oeuvre is just one single poem of gigantic proportions and inexhaustible beauty. And yet, the most impressive thing about Bringhurst's ambitious polyphonic poems is that they can stand next to the beauty of the world, from which they ultimately stem to honour the intricacy, delicacy and harmony of the living mesh of things. As Bringhurst himself puts it in his afterword to the *Suite*,

Polyphony in the strict musical sense is an invention, just as optical perspective is in painting, but like many inventions (or like all) it is really a formalization and humanization of something uninvented. It's an indoor version of something found outdoors, in the nonhuman world. That original and natural polyphony is something we take part in whether we're conscious of it or not.

The dawn chorus of songbirds and the evening chorus of frogs are instances of natural polyphony. And then there are those moments when the songbirds and the corvids and the leopard frogs and crickets coincide. Polyphony is the sound of the coexistence of species, which is what every ecology, global or local is all about. It is the music of separate but simultaneous voices in which every voice contributes but no voice is in charge. Is that a political metaphor? Maybe so. But it's a metaphor found in nature, not a fancy I invented. Take that metaphor away, and you will have no life, no world, no species left. No Athens, no Jerusalem, no Paris; no Sierra, no Yosemite, no Yukon.

To put it another way, polyphonic art is a kind of audible counterpart to the symbiotic interrelations of bumble-bees and roses, hummingbirds and honeysuckle, eagles and salmon and coastal redcedar, lichenized fungi and their algae, caribou and reindeer lichen, red squirrels and Douglas-fir: creatures who enlarge each other's lives by following agendas of their own.³⁷

Ursa Major

Towards the Polyglot Polyphonic Poem: Myth, Ovid and the Cree Elders

INTRODUCTION

It was out of sheer love of language and myth – of everything that is universal and human – that Robert Bringhurst composed the polyphonic poem entitled *Ursa Major. A Polyphonic Masque for Speakers & Dancers* in 2003. Bringhurst’s polyphonic adventure had started early in his literary career with the publication of *The Blue Roofs of Japan* (1986). Then *Conversations with a Toad* (1987) and *New World Suite No. 3* (1995) would naturally follow in the steps of that early polyphonic poem, seeking new paths for an audacious form of experimentation. With *Ursa Major* polyphony reached a climactic apex in the poet’s hands, for it did not only bring several voices together into the telling of a universal myth – that of Ursa Major, the constellation presiding the night sky in the northern hemisphere –, but also several cultural traditions and languages, both modern and classical. The overall impression is that of a palimpsest, the perfect embodiment of what intertextuality means, for *Ursa Major* is a brilliantly paratactic poem, bringing together living threads from several cultural traditions and mythologies – Graeco-Roman (Mediterranean) and Cree (Amerindian). *Ursa Major* is then a polylingual polyphonic poem of a tremendous energy, beauty and intricacy. Several voices speak at the same time, and they do so in several languages (Latin, Greek, Cree and English), so as to tell a collaborative version of a moving story that turns out to be universal, common to many cultures around the world. Originally published in 2003, *Ursa Major* was later republished in subsequent textual incarnations and revised in a new edition also by Gaspereau Press in 2009. Summarily, this is the editorial history of the poem:

- (1) A.69 *Ursa Major: A Polyphonic Masque for Speakers and Dancers*. Kentville, N.S.: Gaspereau Press, 2003. 96 p. 19 × 28 cm. ISBN 0-8032-1328-X. Contents: Script of a work commissioned by the choreographer Robin Poitras and first performed by her company New Dance Horizona, Regina, Saskatchewan, in March 2002. With an afterword by Peter Sanger. The poem was reprinted in part in B.100, *Gaspereau gloriatur: Liber beati anni decimi*, vol. 1: Poetry, edited by Michael deBeyer, Kate Kennedy & Andrew Steeves, Kentville, N.S.: Gaspereau, 2007: 23-35. Contribution: Scene 2 from *Ursa Major* (A.69).¹

¹ In “Licking the Lips with a Forked Tongue”, the afterword to *New World Suite No. 3* (2005), Bringhurst explains the genesis of *Ursa Major* in detail: “In 2001 a dance company in Saskatchewan commissioned me to write a spoken score on the theme of the Great Bear. The major indigenous language in Saskatchewan is Cree, and some compelling stories are told in Cree about the relations of humans and bears. I thought it would be interesting to set one of these against the story of Zeus and Callisto. So in *Ursa Major*, which I wrote in the winter of 2001 and 2002, there are six speakers speaking four languages: English, Greek, Latin and Cree. (I could have done without the Latin, except that no ancient Greek version of Callisto’s story survives. The only substantial classical version we have is the one in Ovid’s *Metamorphoses*.)

Only three or four of the six speakers speak at a given time in *Ursa Major*. One of these is usually the translator, whose task is to give an immediate English rendering – not always perfectly accurate – of everything said in Latin or Cree. This may sound needlessly complex, but transactions this elaborate occur on a daily basis – not just at the UN, but in hospitals, laboratories, clinics, refugee camps, and countless other places around the world where urgent stories mingle. When *Ursa Major* was first performed, in Regina in 2002, it did not seem to me to cause the audience undue strain.

When I published *Ursa*, in 2003, I had the benefit, once again, of an editor and publisher willing to break some ground. As with *The Blue Roofs of Japan*, we printed the full text twice, but not on facing pages. It appears first in a linear form, one voice at a time, like an ordinary stageplay. This is easy to read but disguises the texture completely. The second version is the voice map. It replicates the texture but is difficult, at least for

- (2) A.91 *Ursa Major: A Masque for Speakers and Dancers*. 2nd edition. Kentville, Nova Scotia: Gaspereau Press. 2009. 96 p. 12.5 × 20.5 cm. ISBN 978-1-55447-060-0. The poem is revised from A.69. The voicemap is printed in five colors. The afterword by Peter Sanger is omitted in this edition.
- (3) A.92 *Selected Poems*. Kentville, Nova Scotia: Gaspereau Press. 2009. 272 p. 14 × 21.5 cm. ISBN 978-1-55447-068-6. A section entitled “Ursa Minor” contains the monologues and choruses from *Ursa Major* (2009): I · Arcturus, II · Arcturus & Chorus, III · Chorus, IV · Arcturus, V · Split Chorus [revised from *Ursa Major*], VI · Chorus, VII · Split Chorus, VII · Chorus, IX · Chorus.

As published originally in 2003, *Ursa Major* consisted of a preface by Robert Bringhurst, a masque in five scenes telling the story of Ursa Major (the score is given in both linear form and as a voice map printed in different colours), a series of notes on the sources of the text, and a thoughtful afterword by poet and critic Peter Sanger. It is a pity that this afterword should have been omitted in the second 2009 edition. Any critical analysis of the poem must begin with a consideration of Bringhurst’s own reflections on his own work in his Preface. At least two essential aspects are worth considering: first, the actual oral genesis of *Ursa Major*, a piece commissioned by a choreographer for performance by her company², and second his brief but illuminating meditation on the polyphonic and polylingual nature of the poem:

Most of the text of *Ursa Major* is meant to be spoken rather than sung, but I am interested in the ways in which speech can be musical, and in the ways in which music can speak. The speaking voices here make use of several musical devices or techniques. One of these, employed by Hera (and realized superbly in the first performance by Davida Monk), is retrograde motion. Hera, that is, speaks some of her lines both forward and backward. A more essential tool, employed throughout the work, is polyphonic speech. By that I mean, two or more voices often speak at once, though they have different things to say. The voices intertwine with one another, but their separate agendas prevent them, on the whole, from falling into a reciprocating, linear exchange. There is as a consequence little or no conventional dialogue. Where the polyphony is *antiphonal*, the voices alternate, like traffic at a four-way stop. Where it is *sustained*, the voices do not pause for one other; their crossing is continuous, like traffic on a cloverleaf or overpass. The polyphony throughout *Ursa Major* is *sustained* unless specifically marked otherwise.

This is something Bringhurst had already accomplished in *New World Suite No. 3* with astonishing mastery. However, whereas the *Suite* braided three different voices at the same

the uninitiated, to read. In the map, all the voices are superimposed on the page as they would be in performance. Since no more than four voices speak at a given time, four colors are enough, and no one voice is given prominence, though the translator always stays in the background, as translators should. Three different writing systems are used. The English and Latin are set in the Latin alphabet – varying as need be between roman and italic – and the Greek is set in Greek. The Cree is set in two ways, in Latin letters and Cree syllabics, because both those systems have their devotees.” *New World Suite No. 3* (2005), pp. 12-13.

² “This text was commissioned by the choreographer Robin Poitras for performance by her company New Dance Horizons, based in Regina, Saskatchewan. Chiyoko Szlavnic joined us from Berlin to create the musical score, and the sculptor Jon Noestheden, who constructed the stage properties and crucial portions of the set, produced a kinetic work of visual art for the verbal score, the choreography and the soundwork to move through and to rest in. // Rehearsals began in Regina in March 2002, and the first performances took place at the end of that month, with Davida Monk in the role of Hera, Philip Warren Sarsons in the role of Arcturus, Seema Goel in the role of Ovid’s Daughter, Patricia Colbert-Houle in the role of the Translator, Floyd Favel Starr in the role of Kâ-kîsikâw-pîhtokêw’s Son, Robin Poitras in the silent role of Callisto, Krista Solheim in the silent role of Moon Woman, Chihiro Beppu in the silent role of the Star Bearer, and myself standing in for the Celestial Janitor. I’m grateful to all these colleagues – especially to Robin, Davida and Philip, who contributed in many ways to the refinement of the script, and to Floyd, who has more to teach me every time I see him.” See Bringhurst’s prologue to *Ursa Major*.

time, all of them speaking English simultaneously at some points, now Bringhurst manages to bring together up to four voices speaking different languages, for this is a polylingual poem. The beautiful musicality of *Ursa Major* is thus achieved via the simultaneous voicings of several languages: Greek, Latin, Cree and English words are juxtaposed side by side. To Iain Higgins' mind, *Ursa Major* is "a relational hymn in which the separate multilingual voices (Latin, English, Greek, Cree) disappear into the mostly sustained sonic "shoom" of vocal counterpoint." Of course, the text is given twice: first in "linear form" and then as "a voice map", which is "in its utter "illisibility" a post-structuralist's dream, and there is no little pleasure to be got pouring over its complex text with its several alphabets."³ With his characteristic wry humour, the author points out that polyphony should not be a problem or come as a surprise to the hearer, for we do live in a multilingual world after all and our ears are tuned to hearing many voices speaking simultaneously, overlapping, colliding into one another all the time:

The polyphony here is also very often polylingual. This is not, I think, a problem, despite the fact that theatre-goers and readers equally fluent in English, Latin, Greek and Cree appear to be in short supply. This is a masque, not an exam. What I ask of its audience, either in text or in performance, is merely a willingness to watch and think and listen. All of us are practised, after all, at living in a multivocal, multilingual world. We have no choice. No other sort of world exists.⁴

"A score and a performance are of course two different things, each ideally indebted to the other", says Bringhurst in his Preface. As a matter of fact, *Ursa Major* was originally conceived as being a multimedia work,⁵ combining words, dancing, singing and all the ingredients implicit in a choreography in time and in space. However, the only thing we have now left is words – the score of a performance⁶ that took place on two occasions in Saskatchewan in March 2002. We do not even have the ghostly traces of recorded form. "Unfortunately, it is almost impossible to know how such a polyglot polyphony might sound, and this beautiful book is limited by the lack of a CD recording of a performance", says critic Iain Higgins.⁷ *Ursa Major* remains a beautifully designed book,⁸ a handsome art object, a perfect artifact, and a typographical challenge for both Andrew Steeves of Gaspereau Press and Robert Bringhurst, an expert typographer himself:

³ See Iain Higgins' review of *Ursa Major*, entitled "Bear Bones", published in *Books in Canada* 33.2 (March 2004): 42.

⁴ See Bringhurst's prologue to *Ursa Major*.

⁵ George Elliott Clarke says that "the drama was and is multimedia, fusing words, music, dance, and a "kinetic" set." See his review entitled "Bringhurst's *Ursa Major* shines brilliantly", published in *The Chronicle Herald* (Halifax), August 10, 2003: C7.

⁶ In "Late at the Feast", his excellent and perceptive afterword to the 2003 edition, Peter Sanger says: "The best commentary upon Bringhurst's *Ursa Major* can only be its performance. Of the seven choreographies out of which it is made, only one can be offered by a printed text with some accuracy – the choreography of its words, of its Latin, Greek, English and Cree. The other six choreographies at work in the masque, and audience, can be registered only glancingly, if at all, on the page." (p. 77)

⁷ Iain Higgins insists on the fact that a *silent reading* of the score is not enough: "In fact, *Ursa Major* is limited by the lack of a DVD, since Bringhurst's book is more than a text; it is the verbal score for a symmetrically shaped five-act masque whose performance involves dance, costume, scenery, music, and song (the two main speakers are offstage). [...] For without experiencing a performance it is next to impossible to feel the work's effects or think seriously about the concerns it embodies or enacts, including those of selective cultural cross-breeding and appropriation, and myth as opposed to history." See Iain Higgins' review of *Ursa Major*, entitled "Bear Bones", published in *Books in Canada* 33.2 (March 2004): 42.

⁸ George Elliott Clarke points out: "Andrew Steeves runs two or three of four languages together in painstakingly exquisite passages, using various densities of ink, and the work is introduced by a dramatic woodcut illustration of a bear's heard by Wesley Bates." See George Elliott Clarke, "Bringhurst's *Ursa Major* shines brilliantly", *The Chronicle Herald* (Halifax), August 10, 2003: C7.

Part I displays the voices consecutively as a form of playscript for ease of reading, while Part II is a voice map [...] which braids the voices as they would intertwine with each other in the polyphony of performance. This is the core of the book and the most visually appealing: four languages, three alphabets, three typefaces (plus two screens of them) pattern the page. Interesting musical devices are also used such as retrograde recitation where words are spoken in reverse order from their first appearance.⁹

At the heart of Bringham's masque is the universal myth of Ursa Major, the familiar constellation also known as the Great Bear or the Big Dipper. One and the same myth unfolds into full bloom in the poem, though two stories from two different cultural traditions (Graeco-Roman and Cree) are being told by different voices.¹⁰ This is a recurrent characteristic of Bringham's poetics, which is fond of cultural syncretism. The poet is interested in salvaging valuable remnants of vision (tattered fragments of wisdom) from the past, from different cultures, traditions and languages. Time and again he assumes the persona of someone else, for instance in his Pre-Socratic sequence, or in the poems on the Oriental sages, or in his early biblical pieces, in search of an irreducible core of meaning that still makes sense today. Thus, Bringham has made use of two types of sources for his poem: (1) Greek and Latin sources, particularly Ovid's *Metamorphoses* (book II), the only surviving substantial source for the story of Callisto (a bear myth) in the western classical tradition according to Bringham himself, and (2) Cree sources, particularly the story entitled "The Bear-Woman", included in Leonard Bloomfield's classic *Sacred Stories of the Sweet Grass Cree* (1930).¹¹ What we get is a beautiful tessellation of stories which leaves no room for improvisation and nothing *en route*. As Peter Sanger puts it, "Bringham's masque is a performative act of re-collection and collaboration. Throughout its five scenes, it brings into collaboration and re-collection four languages, two traditions of myth (the Mediterranean and the Amerindian), and all the arts (poetry, music, sculpture, painting, and architecture)."¹² In fact, by bringing together the Cree, Roman and Greek mythologies into one beautiful *Gestalt*, Bringham is underlining the universality of stories about Ursa Major, the great bear constellation, while at the same time emphasizing the universality of certain human concerns. According to Peter Sanger, *Ursa Major* is a poem about human knowledge, about that which is worth knowing and preserving throughout time across human cultures, but it is also a poem about desire, that most elemental of human impulses:

⁹ See Brian Henderson's review of *Ursa Major*, entitled "Poet on Point", in *Canadian Literature* 186 (Autumn 2005): 117-118.

¹⁰ In a review of *Selected Poems* (2009) entitled "In the Wake of Our Ancestors", published in *The Times* (London), 8 August 2009; *Weekend Review* 12, Mark Dickinson writes: "Composed for six speakers working in four languages – Cree, Greek, Latin and English – *Ursa* brings two classic stories into the same orbit: Ovid's retelling of Arcturus and Callisto, the basis for the Great Bear constellation, and Bear Woman, a Cree story by the mythteller Kâ-kîsikâw-pîhtokêw about a hunter who falls in love with a woman who is not what she appears to be. [...] These gathered traditions, Bringham reminds us, are tools through which people millennia apart have tried to understand where they are and what they are doing."

¹¹ In note no. 2 on the sources of *Ursa Major*, Bringham points out that: "The story told by Kâ-kîsikâw-pîhtokêw's Son is one of many that Kâ-kîsikâw-pîhtokêw himself told to Leonard Bloomfield at Sweet Grass Reserve, Saskatchewan, in 1925. It is published as "The Bear-Woman" in Bloomfield's *Sacred Stories of the Sweet Grass Cree* (Ottawa, 1930). I have added a transcription into West Cree syllabics, updated Bloomfield's meticulous romanization, and corrected a couple of obvious minor errors but made no other changes to the Cree. While the English version spoken by the Translator owes much to Bloomfield's own translation – and much to the advice of another fine scholar, H.C. Wolfart – it should not be misconstrued as a precise and literal rendering."

¹² Peter Sanger's Afterword to *Ursa Major* (2003), p. 79. On the deliberate, careful selection of Graeco-Roman and Cree sources for the making of *Ursa Major* on the part of Bringham, Sanger says that "In *Ursa Major* the narrative structure – within which its lyrics are spoken, sung, chanted – is explicit. It is polyphonically composed within each scene and from scene to scene in sequences of very deliberately chosen narrative sources. There is nothing improvisational about the masque's schema." (p. 81)

“It’s also about the transformations of desire – betrayal, bitterness, loss, passion, yearning – so central to myths (transformations of gods and humans to animals and vice versa and living creatures to shiny bits of firmament).”¹³

Ursa Major is not just a complex tessellation of stories from different cultural traditions in several languages (in that it retells two myths of the bear constellation using a Cree story, as told by the blind, illiterate mythteller Kâ-kîsikâw-pîhtokêw to Leonard Bloomfield in the summer of 1925, and Ovid’s Callisto myth as recorded in Book II of his *Metamorphoses*), but also a rich tapestry braided with translations and original poems by Bringhurst. As George Elliott Clarke puts it, “This performance work – part original translations, part original poetry – merges Greek, Latin, Cree and English, literally, cascading and colliding together, voices and languages in a deft orchestration of polyphony.”¹⁴ In this respect, Bringhurst might be following once more in Ezra Pound’s steps:

Like Ezra Pound, the enraged inventor of modern poetry in English, who imported into our tongue the classic clarity and concision of Chinese ideograms, Egyptian hieroglyphics, Latin, Cree [*sic*], French, Italian and even old Anglo-Saxon, Bringhurst – much saner and more humane than Pound – has been busily remaking Canadian poetry for more than 30 years by borrowing forms and ideas from multiple language and cultural traditions, especially those of First Nations peoples.¹⁵

In *Ursa Major* Robert Bringhurst is poet, linguist, typographer, cultural historian, and translator all in one: a man seriously committed to his vocation as poet who relishes the very materiality and universality of the word, of language, and of myth. The simplicity, clarity and elegance of his language is what makes this poem in five scenes truly fascinating. George Elliott Clarke speaks of its “singing simplicity”: no matter whether in the Cree renderings, or in the Latin translation of Ovidian hexameters or in the translations from fragments originally composed in classical Greek, the clarity shines through Bringhurst’s words. His is a singing poetry, one that sings with simplicity, clarity and conviction. And this is a polyglot polyphonic poem, which is a huge accomplishment.¹⁶

SCENE I · Metamorphosis One

In *Ursa Major*, Robert Bringhurst tells the story of the Great Bear constellation in an astonishing original way. As pointed out above, *Ursa Major* is an intricate, beautiful polyphonic poem that was performed as a choreographed piece of drama by the New Dance Horizons company in Saskatchewan in March 2002. A gigantic tessellation of stories

¹³ Brian Henderson’s review of *Ursa Major*, “Poet on Point”, *Canadian Literature* 186 (Autumn 2005): p. 117.

¹⁵ George Elliott Clarke, *ibid.*, C7.

¹⁶ In “Licking the Lips with a Forked Tongue”, Bringhurst draws an interesting distinction between bilingual books and polyglot books: “Bilingual books, with one language on the recto and another on the verso, can be a joy to handle and read. Two is a number at home in the standard codex form of the book, just as it is in the eyes and ears of readers, and in their feet and shoes. Polyglot books, containing three texts or more, are a problem of a different order. People have tried for two thousand years to make them work in codex form – with sometimes interesting results – but in general polyglot texts are more at home in separate books or in the scroll, which can be opened as much or little as you please: to a spread of one page or of five. *The Blue Roofs* was easy to put in a book because the two voices really asked for nothing that the familiar bilateral book could not conveniently provide.” *Ibid.*, p. 5.

and songs and chants in several monumental tongues of epic proportions, the poem tells several versions of the Great Bear creation myth concurrently in Greek, Latin, Cree and English – i.e., two classical languages of prestige rescued from the very cradle of the Western civilization, one of the living languages of the First Nations of North America, and a modern *lingua franca*. There is no room for improvisation at all in this well-wrought complex, polyglot piece of choreography, or *radically ecological structure*, as Peter Sanger calls it in his Afterword to *Ursa Major*. The sources Bringhurst uses are mainly Graeco-Roman and Cree. From a number of heterogeneous sources emerges a rare, precious unity called *Ursa Major*, a long poem/play structured in five scenes. Translations (not always literal) from the Greek, Latin and Cree occur side by side with original poems by Bringhurst. The overall impression is one of absolute coherence: translation and original pieces merge into one another with total assurance and naturalness. Of course, this is not the first time Bringhurst handles mythological materials from Graeco-Roman provenance in his poetry. Such poems as “Death by Water” (on the death of Narcissus), “The Better Man” (on the sad story of Orpheus and Eurydice), or “Leda and the Swan” (on the rape of the young woman by Zeus again) are all good examples of what Bringhurst can accomplish when handling classical myths from antiquity.

Ursa Major consists of five scenes, at the beginning of which Bringhurst gives a detailed description of the speakers and dancers taking part in the action, as well as careful instructions as to the way voices are to interact with one another in their collaborative telling of the Ursa Major myth. Thus, in Scene I there are four speakers (Ovid’s Daughter, Translator, Hera and the Celestial Janitor) and four dancers (Star Bearer, Callisto, Hera and Moon Woman). Ovid’s Daughter’s and the Translator’s voices (in Latin and English, respectively) are simultaneous. “To these, the third voice (Hera’s) is soon added; then briefly, a fourth (the Celestial Janitor’s). Toward the end of the scene, Hera is speaking alone”. To sum up, three different languages concur in the telling of the Ursa Major myth – Latin, English and Greek – in Scene One; up to four voices speak simultaneously at some points in this scene. Typographically speaking, two different script systems are displayed in different colours on the page layout. Thematically, Scene One of *Ursa Major* explores the first, fundamental myth at the core of the poem: the myth of Callisto as retold by Ovid in his *Metamorphoses*, Book II, lines 401-541. As Bringhurst himself points out in note 1 at the end of his book, “The lines spoken by Ovid’s Daughter (and translated, not always reliably, by the Translator) come from book 2 of the *Metamorphoses* – the only surviving classical source of any substance for the story of Callisto.” Bringhurst is prompt to emphasize that his translation from the original Latin Ovidian text is not literal; in this he might be following the example set by Pound himself in his “Homage to Sextus Propertius”, which was no literal rendering at all in the eyes of some classicists of the time. In his Afterword to *Ursa Major*, Peter Sanger provides an excellent summary of the myth:

One version of the fuller story (there is another elsewhere in *Ursa Major*, as we shall hear) can be quickly told. According to Ovid, Callisto was one of a company of nymphs attending the goddess Diana (or Artemis, to use a Greek name), sister to Apollo, during Diana’s life as a huntress in Arcadia (translatable from the Greek as bear-country). Zeus, returning from extinguishing the fire caused by the fall of Phaeton, which almost consumed the universe, sees Callisto and falls in love or lust, with her. He changes himself into the form of Diana, embraces the unsuspecting Callisto, then changing back into his own form, rapes and renders her pregnant. Callisto tries to conceal her pregnancy from Diana, but her condition becomes public when Diana forces her to strip and bathe in a spring. Diana banishes Callisto for losing her virginity. Alone, in the woods of Arcadia, Callisto gives birth to a son, Arcturus. Hera, Zeus’ wife, takes revenge upon Callisto after

the birth by turning her into a she-bear. Lycaon, Callisto's father, raises Arcturus. As a she-bear, Callisto lives for fifteen years in solitude, afraid of humans, of gods, of her fellow beasts, until Arcturus accidentally discovers her while he is hunting. She recognizes him, pausing to gaze at him before fleeing. Arcturus construes her pause as aggression, not knowing it is love, and prepares to spear her. Zeus then intervenes to change both into stars. Hera's revenge is to secure from Neptune and Tethys, Neptune's wife and mother of the main rivers in the Universe, the promise that neither Arcturus in Boötes nor Callisto in Ursa Major will ever be able to conceal themselves below the levels of the waters of earth.¹⁷

What Bringhurst does not say about the way he handles the original Ovidian text is that he is tessellating illuminating fragments into the living fabric of his own poem, as if he had managed to salvage them from a badly damaged papyrus roll. Of the over one hundred verse lines Ovid devotes to the Callisto myth, Bringhurst quotes 28 lines or portions of lines lifted from the Latin text. The same Latin words from Book II of Ovid's *Metamorphoses* appear in scenes 1, 3 and 5 of *Ursa Major*, delivered by Ovid's Daughter and accompanied in scenes 1 and 5 by Bringhurst's translation into English, voiced in slightly delayed polyphonic overdraft by an actor-dancer designated the Translator. Peter Sanger meditates on the fragmentary nature of the Latin text as handled by Bringhurst in *Ursa Major* and comes to an astonishing conclusion:

Bringhurst's use of Ovid, therefore, offers the Callisto myth in a radically fragmentary form, characterized by abruptness, unassigned pronouns, and unexplained relationships. The effect is as if we were reading all that remains of a text recorded on a badly damaged papyrus roll. They are fragments of beauty, strangeness, bitterness, violence. They invest us with the sense of being part of a myth working at the limits of endurable human knowledge. But they are, nonetheless, fragments. They exist as such in *Ursa Major*, because Bringhurst wishes us to see and hear (who now can understand spoken Latin?) that the immediate, cultural tradition of which they are part exists only in the most damaged, intercepted form in the modern world.¹⁸

That all we find in opening section of Scene One is a handful of resonant Latin words accompanied by a magnificent translation into English does not necessarily mean that there is no logic to the way Bringhurst has arranged the Ovidian fragments to form a whole. At least five distinct parts are discernible in this pattern:

- (1) The first cluster of Latin words (lines 405-408 of Book II of Ovid's *Metamorphoses*) provides the physical setting where the story of Callisto takes place, a land in ancient Greece called Arcadia, literally "bear country". Etymologically speaking, 'Arcadia' comes from 'Arcas' (Ἄρκας), the name of Arcturus, Callisto's son, as a child, whereas 'Arcturus' (from *arktos* + *ouros*) means literally "guardian of the bear". The simplicity and elegance of Bringhurst's rendering of the original Latin shines through lines like these: "He gave the land back all its wild grasses, gave the tree limbs / to the trees. He gave the country life again..." Bringhurst uses repetition and parallelism to obvious effect here: they build on a moving musicality surrounding an idyllic setting where there appears to be no room for any form of violence, where nothing wrong might come to happen.
- (2) The second cluster of Latin words (*Metamorphoses*, Book II, lines 412-416) describes the nymph Callisto with an astonishing linguistic economy, in just a few brush strokes, as seen by the king of the Olympian gods and goddesses, omnipotent Zeus. It is only natural that the setting of the story should be Arcadia, for the story of Callisto (Καλλιστώ) is an

¹⁷ See Peter Sanger's Afterword at the end of *Ursa Major* (2003), pp. 84-85.

¹⁸ Peter Sanger's Afterword, pp. 83-84.

Arcadian myth. According to some authors, Callisto was a nymph of the woods; according to other authors, she was king Lycaon's or Nicteus' daughter. She had made up her mind to remain a virgin her whole life and spend her days hunting in the woods and hills in the company of Artemis' maiden huntresses. But one day, Zeus saw her and fell in love with her. Assuming Artemis' appearance to approach her cunningly, he was welcome by unsuspecting Callisto but then he revealed his true self, made love to her and rendered her pregnant. The poor nymph tried to conceal her secret and shame from Artemis and the accompanying virgin nymphs as long as she could. In Bringhurst's fragmentary but masterly rendering, the emphasis is laid on the spontaneous naturalness of her costume and hair-dressing ("her dress just wrapped around and pinned, / a white cord knotted in the hair she never combed") and on her virginity: Callisto is depicted as being a virgin huntress carrying "a spear or a bow in her hand: / one of Moon Woman's warriors". Of course, Moon Woman is Artemis (or Diana), daughter to Zeus and sister to Apollo, the sylvan virgin goddess among the Olympians. And Callisto is part of the goddess' retinue of virgin nymphs, roaming the woods and the hills, ignorant of men's company.

- (3) The third cluster (*Metamorphoses*, Book II, lines 438, 464) focuses, on the one hand, on the horrible shame Callisto must endure after having been raped by Zeus, while she cannot avoid loathing the woods that know her secret, and, on the other hand, on Artemis' anger at discovering Callisto's pregnancy (while all the nymphs are bathing together in a cool pool completely naked) and on the subsequent banishment of the ashamed nymph, away from their company, as a punishment for breaking her vow of chastity. What is left unsaid by the masque's words in their fragmentary, allusive ways is eloquent in itself. The rape has been omitted altogether, although Callisto's shame in the face of what has happened gives the reader an idea of the horror. The Latin verse line "huic odio nemus est et conscia silva" becomes "Then she hated the flowers and trees that had seen it and felt it" in Bringhurst's rendering. Reading these words, one is inevitably reminded of "Leda and the Swan", another of Bringhurst's poems dwelling on Zeus and his intercourse with simple mortals. The physical violence accompanying the rape by Zeus is not overtly stated but indirectly evoked via the reference to the psychological state of mind of poor Callisto. What is indeed explicit is the dialectic violence conveyed by the words ascribed to Artemis as she finds the truth about Callisto's pregnancy and banishes her away from her presence: "Get away from here," *Moon Woman* said. *Don't pollute the sacred pool!*" The words with which the goddess dismisses poor Callisto will give plenty of food for thought for Arcturus' moving meditations on the relationships between immortal gods and mortal humans in scenes 2 and 4 of *Ursa Major*. How is it possible for love to pollute the sacred waters of Artemis' pool when Callisto is only the victim of Zeus' sexual assault? What is left for simple humans to do in the face of the overwhelming presence of gods and goddesses that are immortal and powerful? In any case, what is simply astonishing about Bringhurst's achievement here is that he manages to juxtapose just two single Ovidian verse lines to convey Callisto's shame and Artemis' rage at discovering the loss of virginity on the part of the nymph, who had sworn a vow of chastity.
- (4) The fourth cluster of Latin words (*Metamorphoses*, Book II, lines 474, 477-480, 483-485) shows Hera, Zeus' wife, taking revenge on poor Callisto as she discovers that she has given birth to Arcas, an illegitimate son to her husband. Hera, who had not been slow to realize her husband's infidelity, is determined to take revenge on the nymph. This is exactly the point in the story of Callisto at which the jealous wife transforms the beautiful Callisto into a horrible she-bear. Hurling insults, she grabs Callisto by her hair and pulls her to the ground. As Callisto lies spreadeagled, dark hairs begin to sprout from her arms and legs, her hands and feet turn into horrible claws and her beautiful mouth which Zeus had kissed turns into gaping jaws that utter only ugly growls. In Bringhurst's rendering, the crucial moment of Callisto's metamorphosis into a growling bear is conveyed in such moving lines: "When she lifted up her arms / to beg for mercy, they were already dark and turning shaggy, / fingers shrinking into toe and growing long, sharp claws..." Deprived of human speech, she cannot but produce horrible meaningless noises: "What erupted from her throat / was just a rough noise, a

storm wind whipped in the pit of her belly.” However, her mind remained exactly the same (“mens antiqua manet”, says the Latin fragment), which means that the she-bear has still got a human mind and a human heart deep inside: “*Yet her mind stayed just the way it was...*”, says the Translator with perfect simplicity.

- (5) The fifth cluster of Latin words (*Metamorphoses*, Book II, lines 494-495, 500, 501, 502-504, 506-507) shows Callisto roaming the Arcadian woods as a she-bear, but still with a human mind, for fifteen years and encountering her son Arcturus quite by chance. Once a huntress herself, she was now pursued by hunters, she was now terrified of other bears and of wolves in the mountains, even if her own father, Lycaon, had been himself turned into a wolf by Zeus after he had dared to test and mock Zeus’ omnipotence by giving him cooked human flesh. One day she comes face to face with her son, Arcturus. *Incidet in matrem*, says the Latin with astonishing economy: “*by chance he met his mother*”, translates Bringhurst in to English. This is a truly climactic moment in the story of Callisto. The she-bear recognizes her son and tries to approach him, but he backs off in fear, not knowing “*what spooked him*” about those eyes “*that didn’t blink and never left him*”. He would have speared the bear, not knowing it was really his mother, had not Zeus intervened by sending a whirlwind that carried them up into heaven, where the omnipotent god transformed Callisto into the constellation Ursa Major and Arcas into the constellation Boötes and placed them side by side as shining bits of light on the firmament for eternity.¹⁹ So, fortunately, though Arcturus nearly kills his mother, Zeus intervenes on time and makes both mother and son constellations in the night sky: “*caught them up and spun them through the nothingness / and set them in the sky beside each other, made them into constellations.*” *Sidera fecit*, says the original Latin. That is the end of the metamorphosis as told by Ovid in Book II.

That this is the most familiar version of Callisto’s story is no doubt due to Ovid’s pre-eminence as a storyteller in his magnificent *Metamorphoses*, but there were other versions in antiquity, some of them older than Ovid, even if they have been preserved only in the form of tattered but resonant fragments. One of these fragments Bringhurst salvages from classical Greek in the second movement of Scene One, which juxtaposes Hera’s song, overlapping the Latin and its translation into English, and the Celestial Janitor’s words, “chanting polyphonically with Hera as he sings her into place”. Hera’s song goes like this: “*Καλλιστώ κατέπεφνεν ἀπ’ ἀργυρέοιο βιοιο... / ... ἀπ’ ἀργυρέοιο βιοῖο ... / Καλλιστώ, Καλλιστώ ...*” Bringhurst translates it in English as follows: “*Callisto killed with a silver bow / with a silver bow / Callisto, Callisto.*” In some accounts of Callisto’ story, she is said to have been killed by Artemis herself with a shot of her silver bow, perhaps urged by the wrath of jealous Hera, as a punishment for breaking her vow of chastity. And this is precisely what

¹⁹ In Ovid’s *Metamorphoses*, Book II, lines 496-506 is the original account of the catasterism (the metamorphosis into stars) of both mother and son: “*Ecce Lycaoniae proles ignara parentis, / Arcas adest ter quinque fere natalibus actis; / dumque feras sequitur, dum saltus eligit aptos / nexilibusque plagis silvas Erymanthidas ambit, / incidit in matrem, quae restitit Arcade viso / et cognoscenti similis fuit: ille refugit / inmotosque oculos in se sine fine tenentem / nescius extimuit propiusque accedere aventi / vulnifico fuerat fixurus pectora telo: / arcuit omnipotens pariterque ipsosque nefasque / sustulit et pariter raptos per inania vento / inposuit caelo vicinaque sidera fecit.*” (p. 94) And this is the literal translation into English: “*And now Arcas, Lycaon’s grandson, had reached his fifteenth year, ignorant of his mother’s plight. While he was hunting the wild beasts, seeking out their favourite haunts, hemming the Arcadian woods with his close-wrought nets, he chanced upon his mother, who stopped still at sight of Arcas, and seemed like one that recognized him. He shrank back at those unmoving eyes that were fixed for ever upon him, and feared he knew not what; and when she tried to come nearer, he was just in the act of piercing her breast with his wound-dealing spear. But the Omnipotent stayed his hand, and together he removed both themselves and the crime, and together caught up through the voice in a whirlwind, he set them in the heavens and made them neighbouring stars.*” (p. 95) See Ovid in Six Volumes, vol. III – *Metamorphoses* in Two Volumes, I (Books I-VIII), translated by Frank Justus Miller, 1st edition 1916, 2nd ed. 1921, reprinted 1971. Cambridge, Massachusetts: Harvard University Press & London: William Heinemann Ltd.

this constellation of ancient Greek words appear to evoke. In note 4 Bringhurst tells us about the source of these words:

Hera's song is the only line concerning Callisto in the surviving remnants of Greek epic. Though likely genuine in itself, it has been shorn of all context, preserved in isolation in a tongue-in-cheek assortment of quotations known as the *Certamen* or "Contest of Homer and Hesiod."

And in note 5, Bringhurst informs us that "The lines the Celestial Janitor chants in scene 1, as a summons and reply to Hera's song – and which Hera finally translates into English in scene 3 – are taken from the first book of the *Iliad*." This is Bringhurst's majestic rendering into English of the Greek lines: "*The god of light descended like the darkness, with a flock of arrows keening / at his shoulder. He was trembling with anger. / He kneeled far back from the ships and nocked an arrow and took aim, / and the silver bow started its heart-stopping scream...*" These lines show Apollo, Artemis' brother, shooting arrows at the Achaeans in anger, with consummate dexterity, in the Trojan war. For he is not just the rational god of science, music and poetry; his anger and fury are also proverbial.

The third movement of Scene One of *Ursa Major* shows Hera "speaking over the Latin and its translation, then singing in Greek, then speaking in retrograde motion, then singing again." She is addressing poor Callisto in anger just on the point where she is about to transform her into a bear:

You whore, you bore my husband's son
to spite me, didn't you? You'll pay me though.
You'll pay for that right now.

adimam tibi namque figuram ...

I'll pull your hair
and squeeze your eyes.
You'll be a bear.
You'll fraternize
with bugs and worms and prairie dogs.
You'll fart and stink
and poop your clothes
and spend the winter buried in the ground.

These are the words Bringhurst ascribes to the jealous wife as she takes revenge on poor Callisto, as soon as she learns of his husband's infidelity. What is so astonishing about these lines is the plain, colloquial language used by the goddess to speak to Callisto. The violence and aggressiveness implicit in the words come as a surprise, for one does not expect Olympian goddesses (their queen, for that matter) to speak like this. Hera is giving full vent to all the anger she holds in her chest, and poor Callisto is the inevitable target of her malicious words. The Latin words *adimam tibi namque figuram* have been earlier translated into English as "*I'll drive the beauty out of you.*" And this is precisely what Hera does by metamorphosing the nymph into a growling she-bear: she deprives her of all her mortal beauty, of human speech and of all other human attributes, while ostracizing her to the company of sylvan animals. Like all bears, she will have to spend the cold winter "*buried in ground.*" One thing remains intact though inside her: *antiqua mens manet*, said the original Latin text, which means that her mind is still that common to all human beings. On the other hand, musicality is achieved here through a very simple device: Bringhurst has Hera repeat exactly the same words quoted above in retrograde motion (i.e., in reversed order),

which at first may sound a bit awkward to the reader. The scene closes with Hera singing her Greek song, fading “to silence and darkness.”

SCENE II · Arcturus Awakens

Scene Two of *Ursa Major* is a complex scene. Now the speakers are Kâ-kîsikâw-pîhtokêw’s Son,²⁰ the Translator, Arcturus and the Celestial Janitor; the dancers are Callisto, Arcturus, Hera and Moon Woman. Once again, Bringhurst provides detailed instructions as for the way polyphony is to work in the scene: “The first three voices are simultaneous. Late in the scene, a fourth voice (the Celestial Janitor’s) is added. At the end of the scene, the first two voices cease, then the third, so the Janitor speaks his last lines alone.” Up to four voices will be speaking their messages simultaneously, each going separately on their own agenda while at the same time contributing to the collaborative undertaking of telling the Ursa Major myth. And two completely different languages are threaded into the living fabric of this amazing polyphonic, polylingual poem: Cree and English. Writing in Cree was also a typographical challenge in the making of *Ursa Major*: Bringhurst is using both the syllabic and romanized form of the language. Of course, nowadays there is a short supply of readers (or theatre-goers) equally practised in classical Greek, Latin and Cree, as the author humorously pointed out in his Preface to the poem. And yet the poet wants the reader to look at and listen to the original linguistic texture of an old story as it was told to Leonard Bloomfield in the summer of 1925 and included in *Sacred Stories of the Sweet Grass Cree* (1930). In note 2, Bringhurst gives the details concerning the source of the Cree story that is the beating heart of scenes 2 and 4 (about one half is told in each scene):

The story told by Kâ-kîsikâw-pîhtokêw’s Son is one of many that Kâ-kîsikâw-pîhtokêw himself told to Leonard Bloomfield at Sweet Grass Reserve, Saskatchewan, in 1925. It is published as “The Bear-Woman” in Bloomfield’s *Sacred Stories of the Sweet Grass Cree* (Ottawa, 1930). I have added a transcription into West Cree syllabics, updated Bloomfield’s meticulous romanization, and corrected a couple of obvious minor errors but made no other changes to the Cree. While the English version spoken by the Translator owes much to Bloomfield’s own

²⁰ Bringhurst contributed an entry on Kâ-kîsikâw-pîhtokêw to W.H. New’s *Encyclopaedia of Literature in Canada*: “Kâ-kîsikâw-pîhtokêw (Coming Day). Plains Cree mythteller; b in present day west-central SK, c 1850, d Sweet Grass Reserve, SK, Nov 1935; son of Capasîsis (Down Low) and her husband Napatê Kîsik (On One Side of the Sky). A more literal translation of his name (which is linked to that of his father) is ‘One Who [Kâ], Being the Sky (or Being Daylight) [kîsikâw], Comes Inside [pîhtokêw].’ In the summer of 1925, on the Sweet Grass Reserve, he dictated 33 stories or narrative poems and a few short songs to the linguist Leonard Bloomfield. These texts were published in Cree with Bloomfield’s English translations in 1930 and 1934. Eighteen of the tales are *âtayôhkêwin* (stories set in myth time); the others are *âcimôwin* (stories set in historical time). They range from very simple to marvelously intricate in structure, and when set out clause by clause, in the form now generally preferred for printing Native American oral literature, many run to 1,500 lines or more. [...] He learned the art of telling myths from older hunters, including his grandfather Kaskitêwimaskwa (Black Bear), his uncle Nîsotêw-mostos (Twin Buffalo), and also his father until the latter’s death, while fighting encroaching Europeans, in 1885. He lived a hunter’s life himself when he was young, and with others of his people, he endured the difficult shift to an agricultural and sedentary life that came with the establishment of the Treaty Six reserves in 1884. When he was blinded, probably by smallpox near the end of the 19th century, his memories of the older world flourished, and he stood back from the new. [...] Kâ-kîsikâw-pîhtokêw remains as inexhaustible on paper as Bloomfield said he was in person. In the now very large and rich published body of Cree literature, he is still the major author.” *Ibid.*, pp. 571-572. The entry is authored by Robert Bringhurst and Heather G. Hodgson.

translation – and much to the advice of another fine scholar, H. C. Wolfart – it should not be misconstrued as a precise and literal rendering.²¹

So Bringhurst has salvaged a precious text from a classic in its field, Bloomfield's compilation of Cree stories, corrected minor errors in the linguist's romanization, and translated directly from Cree – one of the vernacular languages spoken in North America that is now as a rule forgotten by academia as sustaining a living body of literature. All literature is oral at its roots, reminds us Bringhurst time and again in the many essays and meditations he has devoted to the native oral literatures of North America. There is an immense body of literary texts, mostly transcriptions recorded by linguists, anthropologists and ethnographers awaiting careful edition, translation and critical elucidation. They are buried, and almost completely forgotten, in archives in libraries across North America. Bringhurst has visited them time and again to make amazing discoveries: to his astonishment, he has found the welcome gift of literary texts of impressive quality. In an enlightening essay entitled "What Is Found in Translation" (included in his prose compilation *Everywhere Being Is Dancing*), Bringhurst reminds us that translation should serve three basic social functions: one is that of keeping our links with the past, so that we need to go back to such classics as Plato, for instance, to keep in our minds their useful insights into the essence of things; another is that of keeping cultures (and languages) in touch, informing people of their neighbour's achievements; and the third one, which is usually forgotten, is that of making discoveries – i.e., finding out texts that have not yet been given the attention they deserve and sharing the discovery with other fellow human beings as to enlarge their perception and size of the world.²² Bringhurst is well aware that any consideration of the literary legacy he has received from his ancestors must begin with an appreciation of the literary history of the land where he happens to live and which he calls *home*. He has been readjusting his mental map of the literary world where he lives for a long time, paying attention to the oral literatures of over a hundred languages of the First Nations of North America.

As in the case of the translation from Ovid's Latin, now Bringhurst is also prompt to point out that his version of "The Bear Woman" should not be "misconstrued as a precise and literal rendering" of the original Cree story. That it owes much to Bloomfield's

²¹ In note 3, Bringhurst adds: "John D. Nichols kindly proofread and corrected my syllabic version of the text – but as Cree readers will notice, the spelling in both syllabic and romanized form is still nonstandard and archaic [...] This is the dialect Bloomfield heard the Sweet Grass elders use for formal narrative in 1925." In the early 1920s Bloomfield began his classic work on North American Indian languages, contributing the first of many descriptive and comparative studies of the Algonquian family. For his part, Peter Sanger, in the Afterword to *Ursa Major* (2003), points out that "The second main source used in *Ursa Major* is, as Bringhurst acknowledges in his notes, Leonard Bloomfield's *Sacred Stories of the Sweet Grass Cree*, a substantial book of nearly 350 pages issued as Bulletin 60 in the Anthropological Memoirs Series of the National Museum of Canada. Scene 2 of the masque contains the first half and scene 4 the second half of a story told to Bloomfield while he was collecting linguistic material on the Sweet Grass Reserve near Battleford, Saskatchewan, in the summer of 1925. Kâ-kîsikâw-pîhtokêw (anglicized as Coming Day), "a blind old man" to use Bloomfield's words, reputed by other Sweet Grass Cree to know more traditional stories than any other member of the band, told Bloomfield the bear-woman story that Bringhurst quotes and translates. Kâ-kîsikâw-pîhtokêw was, in fact, the chief contributor to Bloomfield's collection. Fifteen of its thirty-six stories were of his telling. Each, incidentally, ends with the words (or a slight variation upon the words): "That is the end of the sacred story." (p. 85)

²² See "What Is Found in Translation" (included in his prose compilation *Everywhere Being Is Dancing. Twenty Pieces of Thinking*, p. 75. In the same essay he dwells on what could be termed *Weltliteratur*, his omnivorous literary canon: "What I need as a human being is a picture of the whole of human history. And what I need as a practicing writer is a picture of the whole of human *literary* history. I need a picture rich in local detail but also with a sense of shape. Like the globe beside my desk, it should give me a sense of how large and various, but also how finite and fragile, are the time and space of the species to which I belong." *Ibid.*, p. 87.

literal transcription of the story is evident when we place Bringhurst's poem against the linguist's rendering, which is worth quoting in full:

Once upon a time a man lived all alone and never saw any people, being all alone in that place. When he had slept at night, in the morning he went hunting. Whenever he saw buffalo, he killed them. He would take a tongue and a thigh-bone and go home, and when he reached his dwelling, he would prepare his meal, and when he had eaten, he would gather firewood. So night would come upon him. As he stayed thus by himself, at last he felt lonesome. When daylight came and he as usual went hunting, again he killed a buffalo. He went home; he took a little to eat.

When he was near his dwelling place, he saw a great pile of firewood by his tent. He wondered about it; "It must be that someone has come," he thought. He was glad. When he entered, he saw nobody, though it was plain that someone had swept the place. He was sorry that he saw no one. He stayed there. "How is it that there is no one here?" he thought. Lo, there where he sat, he found some moccasins. He was very glad, thinking, "A woman perhaps is the one who came here. In the morning I shall hunt; I shall try to come upon her when she is here, if she comes again," he thought.

At daybreak he quickly went off to hunt. Again he killed a buffalo. He took the tongue, the ribs, the kidneys, and a thigh-bone. Then he went home, thinking, "I shall come in time to find her there." He kept running.

When he got near his dwelling, he saw a little smoke, and a great pile of firewood. When he entered, eagerly he looked about: he saw no one. He was very sorry that no one was there. Then, as he went about his cooking, soon he found some moccasins. He picked them up and examined them; they were very pretty.

"Probably it is a woman has been coming here," he thought; "Now all the harder I shall try to find her here. Early in the morning I shall go," he thought.

After eating, he lay down to sleep. He got up early; without eating he went forth to hunt. In a short time he killed a buffalo; and when he cut it up, took the ribs and the kidneys and went home. He ran as he went. When he was close to his dwelling, he saw much smoke rising from his tent. He was very glad thinking, "Perhaps she is there."

When he got there and entered, lo and behold, there sat a very handsome woman on his settee. He sat down there, and she smiled at him as he looked at her. It appeared that she had already done the cooking. Without delay she took off his moccasins and put others on his feet, and she washed his hands and face. Thereupon she gave him to eat, and they took their meal. Oh he was very glad.

Thus spoke that woman: "Why do you bring so little meat?"

"Oh," said the man, "I did not think anyone was here; that is why I brought only a little," he said; "But whence do you come?" he asked.

"A long ways from here we dwell," she answered. "Please, when you hunt, bring much meat; they are in want of food," she said, "my father and his people."

"Very well," said he.

So he hunted every day. In time he killed many buffalo. The woman worked a great deal, preparing the food.

When they had a large amount of it, "Suppose we go to my father's place," said the woman; "They are very hungry."

"Very well," said the man.

"Tomorrow," she said.

"But what are we to use to carry things?"

"Oh, there will be some way we can manage," she answered.

Then, when they ate in the morning, "Go on ahead," she told her husband; "Then you will set up some sticks at the place where we are to camp; from that place you will go hunting," she said to her husband.

So, when they had eaten, the man set out. And the woman made ready, laying their belongings and their food supply in a row. Then, when she had got ready, she went along, stepping each time upon their bundles of food; and when in this wise she set out, not a trace was there of their supplies of food. So then she walked on. Toward nightfall she found the sticks that were set up in the ground; there she made camp. Then she kicked the ground, there lay their tent. Then she took the tent and set it up. When she had set it up, inside again she stamped the ground: on that spot fell their belongings and their supplies of food. Then she went inside and cooked their meal.

There, when the man came back and saw their dwelling, "How did she do it?" he thought concerning his wife. When he entered, there she was, smiling at him. He looked about and saw all their belongings and their supplies of food. He wondered greatly at what she had done.

Thus spoke she: "Tomorrow we shall come to where my father's people stay. They are in great want of food," she said.

So when day broke, early they arose. When they had eaten, they made ready.

"Help me," said the woman; "Since you have been thinking, 'How does she do it?' you shall know how I do," she said.

"Yes," answered the man.

Accordingly they made ready by laying in a row their possessions and their stored meats. When he watched his wife, as she went forth and stepped on one after another of their bundles, he saw nothing at all there.

So as they walked on, he marvelled greatly at what his wife had done. Then, as they walked on, towards evening they saw smoke rising from a wood ravine; when they came in sight of that place, the woman's younger sister came forth.

She cried: "Splendid!" My elder sister is bringing a great store of meat!"

So they went on and came to the house.

The old man called out: "Splendid!"

When the woman opened the door and, as she entered, stamped repeatedly, then into the lodge fell their stored meats and their belongings. Then when the old woman went on to pick them up, she greatly rejoiced, thinking, "So now I shall eat." The old man gave thanks: "Thus I had it in mind, daughter, when 'Go there,' I said to you, 'where my son-in-law dwells alone,'" said the old man.

There he stayed then. When he had been there a long time, and spring had come, then he knew that she, the woman, as it seemed to him, whom he had to wife, was a bear, and that also the old man and the old woman were bears. And he was sorry that he could not always be with them.

That is the end of this sacred story.²³

Though Bringhurst's version of "The Bear Woman" owes much to Bloomfield's, it is a completely different text. His is a poem of perfect beauty, rich in musicality and echoes from the original Cree, whose simplicity manages to shine through Bringhurst's English words. There is no room for ornament, for superfluous adjectives or convoluted structures. Simple literary devices such as repetition (of key words, phrases or sentences, and ideas) will do to keep the ancient flavour of the story originally told in a Cree reserve in 1925 by a blind, illiterate man to Leonard Bloomfield. Myths were of the essence to the Cree²⁴, one of the major Algonquian-speaking North American Indian tribes, whose domain included an immense area from east of the Hudson and James bays to as far west as Alberta and the Great Slave Lake in what is now Canada. Originally inhabiting a smaller nucleus of this area, they expanded rapidly in the 17th and 18th centuries after engaging in the fur trade

²⁴ See the entry on 'Cree' in the *Encyclopaedia Britannica*, volume 7, p. 4065, for basic information on this native people.

and acquiring firearms. Wars with the Dakota Sioux and the Blackfoot and severe smallpox epidemics, notably in 1784 and 1838, reduced their numbers significantly. For subsistence they relied basically on hunting, fowling, fishing and collecting wild plant foods. Though they frequently hunted hare, it seems that they preferred hunting larger game such as caribou, moose, bear, bison and beaver. This partly accounts for the presence, in “The Bear Woman”, of a hunter hunting buffalo and of a woman who turns out to be a bear herself.

The plot of the story is simple enough and can be easily summarised. A man lives alone by himself and spends his days hunting buffalo. From the hunted animals he takes only little meat to take home and eat. Suddenly, he starts feeling terribly lonely, but keeps going hunting though. One day he returns home from hunting only to find out that someone has been in his home, doing the household chores, sweeping the floor, piling a stack of firewood by the house. But he is sad as he sees there is no one inside. He finds only a pair of good moccasins and starts thinking that maybe there has been a woman. He is determined to find her, and so he leaves home early in the morning to go hunting and comes back home only to sadly find out once again that there is no one. However, one day he comes back and finds a beautiful woman sitting on his seat. She takes care of him, gives him food to eat and asks her to bring more meat next time he goes hunting, for her family is terribly hungry. From that point on, the man spends his days hunting all the time while the woman spends her days preparing the food they are to take to her family. Then, one day they set out on a journey to her land. The man is surprised to see how she manages to take all the bundles of gear and provisions with her without apparently making any effort at all. All she has to do is stepping on every bundle of food, and it all will come up exactly at the place where they camp for the night. Finally, they arrive to her parents’ home. Her sister, her father and her mother are all extremely happy to see that the woman has brought them food to eat. To the man’s surprise, what he thought was a woman turns out to be a bear, and so are all the members of her family. He is horribly sad because he cannot stay with them anymore.

The story is told in two halves, in scenes 2 and 4. The first half finishes exactly at the point where the man asks the unknown woman where she comes from. The second half concludes with the man leaving the bear family with a broken heart full of sadness. But what does this story have to do with the Ursa Major myth, or with Ovid’s account of Callisto in Book II of *Metamorphoses*?, we may ask. The counterpart of Callisto, the beautiful nymph transformed into a she-bear by jealous Hera upon the discovery of Zeus’ infidelity in the classical story as told by Ovid, is the bear woman in the Cree myth. But now the movement has been reversed as it were: the protagonist in the Cree story is a woman that turns out to be a bear, whereas in Ovid’s story an innocent woman falls prey to Zeus’ assault, is repudiated by the virgin goddess Artemis, and is eventually turned first into a horrible she-bear by his furious wife and then into a constellation (Ursa Major) by Zeus himself. What is common to both stories is that two worlds or realms – that of the immortal gods and that of mortal humans – interact with one another in astonishing ways, and it seems that it is always humans that take the worst part with them at the end of the story: Callisto is condemned to roam aimlessly the woods and mountains for 15 years till she finally meets her son Arcturus, whereas the man of the Cree story is forced to abandon hopelessly broken-hearted a world of bears (spirit beings) where he does not seem to fit in at all. Desire is also at the core of both stories: it is a savage form of desire that prompts Zeus to approach Callisto and rape her and render pregnant; it is, by contrast, a tender form of desire that prompts the hunter to help the stranger by hunting buffalo nonstop to get food for her hungry family. It is in the middle of nowhere, amid the solitude of the woods or the mountains, be it in ancient Arcadia or in the vast Canadian expanses of land,

that both stories have their setting. Both Callisto and the Cree hunter are ultimately outsiders, solitary hunters living on the fringe of society that come face to face with powerful beings, whose presence is too overwhelming for human standards. Both spend their time in the company of trees, rivers and mountains. Both suffer from unendurable pain in the end. However, there is a radical difference between Callisto's story and the bear woman story, as Peter Sanger explains in these words:

The narrator of the bear-woman story in *Ursa Major* is Kâ-kîsikâw-pîhtokêw's Son. His counterpart in scenes 1, 3 and 5 is Ovid's Daughter. Thus, both the Cree and Graeco-Roman myths are being transmitted within the masque as family property, in accordance with Amerindian practice. The masque honours that propriety. But there is a notable difference between the two bundles of transmitted materials. Ovid's Daughter speaks in fragments. Kâ-kîsikâw-pîhtokêw's Son transmits his myth in full. Paradoxically it is the Ovidian written version that breaks apart in performance, while the Cree myth, crucially transmitted at the juncture between the traditional and the modern by an illiterate storyteller as blind as Homer, endures as an integrity.²⁵

So Ovid's story is told by his Daughter in a fragmentary form, whereas the Cree story is being told by Kâ-kîsikâw-pîhtokêw's Son, the original storyteller's son, in full, as an integrity. The contrast is that between fragmentation and unity, even if both are transmitting their bundles of words as valuable family property. As suggested above, desire is at the centre of *Ursa Major*, and so is knowledge. Myth allows human beings to gain valuable knowledge of the world and the mystery implicit in *what is*. Myth is not science or philosophy, but it remains a potent tool of knowledge in our intellectual confrontation with the world. Peter Sanger claims that knowledge is of the essence in Bringhurst's poem, for Arcturus, like his grandfather Lycaon or like the hunter of the Cree story, wants to know, seeks to know an atom of irreducible truth:

... the presence of the Sweet Grass myth in *Ursa Major* implies that the tensions and releases inherent in the masque's polyphonic structures indicate that its prime subject is the nature of knowledge. The masque is about the ways in which human beings may come to know what is of most value for them to know.²⁶

If myths are *ecological structures of knowledge* as passed down from one generation to another, then it is only natural that Bringhurst, concerned with universals, should have tessellated here two stories concerned with a bear-woman and with the way mortal humans relate to immortal gods in Mediterranean and Amerindian mythologies. What humans learn from their first-hand experience and encounter with the gods and goddesses of another realm is that their presence is irresistible and overwhelming at the same time, and that the presence of gods and goddesses cannot be endured for long, for their power is simply consuming for mere mortals – “*You can have what you want, but you can't have it for long*”, and “*nulla potentia longa est*,” reads the text. And yet there is something moving about the closing lines of the Cree story in Scene Four:

... *kâ-kîskéyihthak wâkayôsh kâ-wîwit*
 ... he knew that he was married to a bear,
ôh îskêwah k-étéyihthak,
 who seemed to him to be a woman,
ôbi mînah kîsêyiniwah nôtokésîwan wâkayôsh ês ôbi.

²⁵ See Peter Sanger's Afterword to *Ursa Major* (2003), p. 86.

²⁶ Peter Sanger, *ibid.*, p. 86.

and the old man and old woman were both bears.
Ēkwab mihtátam êká tabkib ta-kib-wicéwât.
And he was sorry he could stay with them no longer.

The Sweet Grass myth ends with an epiphany or revelation with the texture of transcendence: it closes with its hunter-protagonist's discovery that his wife, her sister, and their parents are all bears. Peter Sanger suggests that "By transforming themselves into human beings they are giving the hunter care, honour, love; and by expecting him to trust and to follow his wife's instructions, they teach him to know the stricken nature of his former, aimless, egocentric solitude." If at the myth's end the hunter is "sorry that he could not always be with them" it is because he knows both that there is a more complex and finer state of existence than solitude, and that there are matters which exceed his ego's mastery."²⁷ Similarly, Arcturus is looking for an illuminating form of knowledge. It is no happy coincidence that Scene Two should be titled "Arcturus Awakens". In the second movement of scene 2, Arcturus is able to tell his own version of his own mother's story, his own bear-woman story. He speaks in sustained polyphony over the Cree and its translation into English. Curiously enough, he does not even use the proper names of the characters involved in the story – Zeus, Callisto, Artemis and Hera. According to Peter Sanger, Arcturus "speaks in the unexalted vernacular of Canadian prairie English. Arcturus literally (as the title of scene 2, "Arcturus Awakens," indicates) becomes conscious of the day-world of the present, carrying the past with him, across a divide."²⁸

Arcturus revisits the bear-story in four distinct parts throughout his monologue. What is so moving about his own version of the bear-story is that he speaks with perfect colloquial naturalness and spontaneity. It does come as a nice surprise that such a detached and yet moving account of the Ursa Major myth should be voiced in everyday language. Sometimes poetry is found where one least expects to find it. After all, for Bringhurst poetry is not restricted to words; there is nothing inherently poetic about words and poetry has nothing quintessentially to do with words. That is one of the elemental convictions of Bringhurst's. In any case, at the heart of Arcturus' own meditation on the way gods and goddesses relate to simple mortals is an awakening to a new form of consciousness. The four movements for the soul punctuating the unfolding of the poem focus on Zeus, Artemis, Hera and Callisto's catasterism (i.e., her metamorphosis into a constellation), respectively. Callisto, the innocent nymph, is somehow trapped in the middle of a dangerous triangle pervaded by love and hate so intensely that there seems to be only one way out. The monologue opens with the simple fact that gods always manage to have their own way, while the poetic voice draws an elemental distinction between "*the ones in the sky*" (immortal gods and goddesses) and "*the ones on the ground*" (mortal human beings), which is to say between the realm of *the atemporal or immutable* and the realm of *the temporal or changeable*. The two opening stanzas give voice to Arcturus' quiet resignation in the face of what has happened and cannot be changed in any way:

Perfectly simple. One of the ones in the sky
wanted one of the ones on the ground.
And got what he wanted, as usual. Then
couldn't keep it. If they can't, who can?

What a way to find yourself a mother.
But what other way is better?
You can have what you want but can't have it for long.

²⁷ Peter Sanger, *ibid.*, p. 87.

²⁸ Peter Sanger, *ibid.*, p. 87.

That's the rule.

There is something gnomic and portentous about the verse line “*You can have what you want but can't have it for long.*” It resonates with echoes from the Latin “*nulla potentia longa est*” (*no power lasts for long*), quoted in Scene One from Ovid’s Callisto story in Book II of *Metamorphoses*. Nothing is bound to last for long; everything is ephemeral and so it is bound to vanish into nothingness any moment in time. This is inevitably sad because we are well aware that what has happened once is irrevocably lost forever, because time does not go back, it flows forward inexorably, and nothing or no one can stop its flowing. Arcturus is painfully aware that he is the result of Callisto having been raped by the king of the Olympian gods. “*What a way to find yourself a mother,*” he says with an astonishing degree of emotional detachment. In between the lines the lingering message seems to be that not even gods can make love last forever, and if they cannot keep it, who can? Certainly, not humans, because, unlike gods, we are perishable and imperfect. Zeus fell in love (*in lust*, says Peter Sanger) with Callisto, but once he raped her and rendered her pregnant, he completely forgot about her – he directed his attention somewhere else.

In the second movement for the soul in Arcturus’ monologue, the focus is on Artemis. Ovid’s account of the story makes clear that Artemis banishes Callisto away from the company of her virgin huntresses as soon as her pregnancy is made public²⁹. They are bathing naked in a pool and Callisto’s secret is unveiled to the astonishment of everyone present. Arcturus emphasizes not just the violent reaction on the part of Artemis as she learns about Callisto’s secret (she has broken the vow of chastity sworn to the goddess), but the impurity implicit in the nymph’s pregnancy. Artemis chases her out because “*she was impure,*” says Arcturus. He further elaborates on this idea: “*Being a mother, you see, is impure. In some people’s / thinking. Love is pure but loving isn’t. Even thinking / about loving isn’t pure, in some people’s thinking.*” There is nothing pure about motherhood, about giving birth to another living human being; there is nothing pure about loving either, even if love as an abstract concept is thought to be pure. What a strange paradox, one might think.

The third part of the composition is devoted to the jealous wife, Hera, taking revenge on Arcturus’ mother after learning of Zeus’ infidelity. The target of her anger is poor Callisto again. She transforms her into a growling bear, depriving her of her beauty and of all human attributes (except for the human mind, “*antiqua mens manet*”). As a result of this pitiless attack, Callisto ends up spending her days inside the ground, “*and that was where / she really did become a mother. That was where / she bore her child.*” And in the closing, fourth part, an eloquent contrast is set up between Hera, “*who hated her so much / that she wanted to bury her in the ground*” and Zeus, who loved her enough and “*wanted her / up in the sky.*” Zeus intervenes to change Callisto into a constellation in the night sky, just in time to prevent Arcturus from spearing his own mother in the woods. Zeus “*lifted her into the sky*” and made her into a constellation discernible from the ground to mortal eyes surrounded

²⁹ See Ovid in Six Volumes, vol. III – *Metamorphoses* in Two Volumes, I (Books I-VIII), translated by Frank Justus Miller, 1st edition 1916, 2nd ed. 1921, reprinted 1971, Cambridge, Massachusetts: Harvard University Press & London: William Heinemann Ltd. See pages 91 and 93 for the detailed account of this scene: “Nine times since then the crescent moon had grown full orb’d, when the goddess, worn with the chase and overcome by the hot sun’s rays, came to a cool grove through which a gently murmuring stream flowed over its smooth sands. The place delighted her and she dipped her feet into the water. Delighted too with this, she said to her companions: “Come, no one is near to see; let us disrobe and bathe us in the brook.” The Arcadian blushed, and, while all the rest obeyed, she only sought excuses for delay. But her companions forced her to comply, and there her shame was openly confessed. As she stood terror-stricken, vainly striving to hide her state, Diana cried: “Begone! And pollute not our sacred pool”; and so expelled her from her company.”

by darkness. The closing lines of the monologue are indeed a meditation on the excess of light in modern cities, or on light pollution, which refers to any night-time artificial light shining where it is not actually needed. Though a mortal herself, Callisto managed to survive in the firmament in the form of shining bits of light called Ursa Major, but humans will not see her unless they are in a place dark enough. Arcturus appears to suggest that humans commit an act of *hybris* in wanting their mortal places on the ground to be as bright as those up above in the sky:

If you live on the ground
you can see her. Not from your cities, of course,
but from out on the prairie.
The ground is getting awfully bright these days.
In fact, it looks as though the people on the ground
want their places on the ground to be as bright
as anything in heaven.

In the third part of Scene Two, Arcturus continues his monologue without interruption and a new voice is added – that of the Celestial Janitor, “speaking in antiphonal polyphony with Arcturus”. Their voices are threaded harmoniously, in much the same way the sky and the earth are married to one another. We learn to look at the sky as if it were the earth, and the other way around, to look at the earth as if it were the sky itself. In other words, the sky is *earthed* and the earth is *skied*. Now Arcturus’ voice resembles that of a shaman treading on mythical ground:

Once upon a time, you know, the sky
was absolutely dark. Dark as the ground.
There were no stars.
Did you know that?
Did you know
that all those stars were people once?
People loved and hated by the ones who never die.
And on their way to turning into stars,
they turned into animals and plants.
Those stars are the plants and animals
of the sky.
They used to be people
who lived on the ground.
You know what else?
The plants and animals
of the ground used to be people who lived in the sky.

This is an extended meditation on the sky and its dwellers. Going back to a primordial darkness where there were no stars in the sky, Arcturus meditates on the simple fact that darkness is common to the sky and the earth, those universal elements present in so many cosmogonies around the world. The sky and the earth resemble one another much more than we will ever know; things are not quite what they seem to be. Stars were added much later, once gods and goddesses (“*the ones who never die*”) started to meddle in human affairs. Simple mortals were made into stars by loving and hating gods, and by becoming stars they became the plants and animals of the fields of the heavens. Ursa Major, Ursa Minor, Boötes or Orion are good instances of this. What comes as unexpected revelation is that the plants and animals on the ground are “*people who lived in the sky*”, that is to say gods and goddesses, immortal spirit beings *embodied* in recognizable forms to the human eye. Arcturus’ extended monologue ends with a reference to her mother, “*dancing on the yellow*

wall of heaven.” The immortals in the sky live only *in* and *through* the mortals on the ground: they eat what humans eat without eating anything at all, feel what humans feel without feeling. Curiously enough, humans think *them*, think “*everything that they think, / without thinking*”, which means that they do not make any effort at all to think the flesh song of the earth with all its teeming living forms (stones, water, mountains, trees, flowers...). The thoughts of the immortals are the things we know to exist in this world. But, paradoxically enough, gods and goddesses would no exist if humans did not eat or feel for them. Arcturus is proud to announce that Ursa Major / Callisto is “*a woman of both worlds, / with no escape from feeling or from thinking.*” Though transformed into a bear, she still preserved a human heart and a human mind; now that she is a constellation, eternal and immortal like the ones of the sky, she cannot avoid participating in both realms. In the face of it all, Arcturus awakens to a new form of consciousness. As Peter Sanger puts it, he is after a new form of knowledge:

That kind of knowledge is what the masque’s Arcturus looks for and finds. In *Ursa Major*, he inhabits all the times of his life and transformations; he is what he was, what he is as we listen to him speaking, and what he will become. He lives in Arcadia and on the Sweet Grass Reserve in Saskatchewan and in the constellation Boötes. The lights shining forth at night from the Cree communities spread from Alberta across Saskatchewan, to western Ontario, which Hera names in scene five (Star Blanket, Bearskin, Piapot, Calling Lake, Smallboy, Pakashan, and so on), are stars in the constellations of Arcturus’s present earth, an earth which he learns to see as sky, a sky he learns to see as earth. In the Ovidian myth, Arcturus, not knowing his own mother, prepares to kill her. Turned into a star, he can only follow her constellation in diurnal revolution around Polaris. In *Ursa Major*, while remaining a dancer in the round of celestial necessity (what has happened, happens), Arcturus is, nevertheless, apart from it, earthed in the possibilities of other myths, poetry, life.³⁰

In the meantime, the Celestial Janitor has been invoking the four classical elements: “*Grandmother earth, / grandfather fire, / grandmother water, / and grandfather air.*” Both he and Arcturus have taken the reader/hearer back to an elemental world of essentials, to a time where cosmogonies take place. The core of his message is found in these illuminating words, placed exactly at the geographical centre of this collaborative meditation:

*We are at home only so long
as we are inhabited,
alive only so long as we are lived in
by the places where we are.*

Being pervaded by the *genius loci*, breathing through our skin pores, we acknowledge that we humans fit in as a tiny part in a grander scheme of things of overwhelming beauty and delicacy: this is what it means to *be inhabited* by the places where we happen to live in any moment in time. Then, the Celestial Janitor proceeds on forward to chanting the incantatory litany of basic ingredients the earth is made of: *aluminum, calcium, iron, potassium, manganese, sodium, silicon, zinc*. One word per line, acquiring a specific weight of their own, while the Janitor appears to relish their very texture on his tongue, because “*earth at its purest / is crystal and metal.*” These words are lifted from “Earth”, one of the poems in the ambitious Bringhurst sequence entitled *Elements* (1995), a meditation on earth, air, fire and water, on the irreducible elements the whole cosmos is made of. The ingredients the earth is made of are nothing more (and nothing less) than the thoughts of the god:

³⁰ Peter Sanger, *ibid.*, p. 87.

*All those inorganic proteins:
the orthogonal, hexagonal,
simple, symmetrical,
latticed, rotational
thoughts of the gods,
that twist with their milk-smooth
faces and crystalline edges
in the breasts of human beings.*

SCENE III · Metamorphosis II

Scene Three of *Ursa Major* is a transition scene in the whole design of the poem. The speakers are Ovid's Daughter, the Translator, Hera and the Celestial Janitor; the dancers are Callisto, Hera, Moon Woman and the Star Bearer. Robert Bringhurst gives again detailed instructions as to the way polyphony works in this particular scene: "Three, then four simultaneous voices. At the end of the scene, Ovid's Daughter is the first to fall silent, then the Celestial Janitor and the Translator, leaving Hera the last word." Placed at the geographical centre of the Ursa Major story, the scene consists of three clearly distinguishable parts, even if up to four voices speak simultaneously. In the first part, we get to hear once again Ovid's account of Callisto's story as told in Book II of *Metamorphoses*. Ovid's Daughter speaks the Latin words and the Translator speaks over the Latin, with a slight delay, in English. What Bringhurst gives us is, however, a carefully fragmentary account of the story in which all the essentials are noted down though. The monumental lives of the epic tongues Bringhurst is dealing in make themselves felt in a peculiar way in the opening movements of scenes 1, 3 and 5, where Latin leads the way and the rest of languages follow, and in the opening movements of scenes 2 and 4, where it is the Cree language that gives voice to the moving bear woman story, one of the sacred myths of this important North American indigenous people. In the second part of Scene Three it is Hera, the jealous wife, that dances and sings in classical Greek, in sustained polyphony with Ovid's Daughter and the Translator, but "Three times she suddenly interrupts Ovid's Daughter, the Translator and herself to speak in piercing English". She sings two familiar handfuls of resonant Greek words: one lifted from the extant fragment preserved in isolation in *Certamen* or "Contest of Homer and Hesiod", telling of Callisto being killed with a silver bow (probably Artemis' bow), and another lifted from Book I of the *Iliad* which the Celestial Janitor chanted as summons and response to Hera's song in Scene One. And in the third part of Scene 3, which is new, it is the Celestial Janitor who speaks in Greek, "over Ovid's Daughter's continuing Latin and Hera's closing song". At this point the Translator stops translating from Ovid's Latin and turns to Greek. In note 5 at the end of *Ursa Major*, Bringhurst informs us that "The lines the Janitor speaks in Greek in scene 3 (which the Translator renders directly) are from two anonymous astronomical texts: the *Catasterisms* and a commentary on the *Phainomena* of Aratos."

If the opening movements of scenes 1 and 3 provide the reader with a fragmentary account of Ovid's Callisto story, now Bringhurst rescues two constellations of Greek words from two anonymous astronomical texts, the first one from *Catasterisms*, we presume, and the second one from a commentary on Aratos' *Phainomena*. Constellations, those curious pictures in the sky, have been a fascinating scientific puzzle to humans since antiquity. Written around 150 CE, Ptolemy's *The Almagest* described the traditions concerning constellations widespread among the Greeks. These traditions had been popularized in the famous poem *The Phainomena*, by Aratos (275 BCE). The great astronomer Hipparchus's sole surviving book, *The Commentary* (147 BCE), tells us that

Aratos's poem is for the most part a copy of a work with the same name by Eudoxus (366 BCE), which no longer survives. These books held the earliest descriptions of the Greek skies, and in them the constellations are already fully formed. Whereas in the case of Ovid's Latin and the blind storyteller's Cree bear-woman story Bringhurst does not give a precise or reliable translation (as he himself explains in the notes), now the poet offers a literal rendering of both fragments into English. They look at Callisto's story from a fresh perspective, as it were. This is the first fragment:

ταύτην Ἡσιόδός φησι Λυκάονος θυγατέρα
 Hesiod says she was the Wolf Man's daughter,
 ἐν Ἀρκαδίᾳ οἰκεῖν,
 living in Arcadia,
 ἐλέσθαι δὲ μετὰ Ἀρτέμιδος
 a member of Artemis' band,
 τὴν περὶ τὰς θήρας ἀγωγὴν
 travelling the game trails
 ἐν τοῖς ὄρεσι ποιεῖσθαι....
 out there in the mountains....

The *she* mentioned in these lines is of course Callisto. She is said to be the Wolf Man's daughter, that is to say Lycaon's daughter. Lycaon was King of Arcadia and he was transformed by Zeus into a wolf, thus becoming the first werewolf. He is Arcturus' grandfather, whom he celebrates in an accomplished monologue in Scene Four ("Arcturus Dreams"). A full account of Lycaon's story is found in Book I of Ovid's *Metamorphoses*.³¹ After Zeus seduced Callisto in the woods and rendered her pregnant, Lycaon, pretending not to know of the matter, decided to take revenge on the king of the gods and test his power. Lycaon wanted to know if Zeus was able to distinguish between animals and human meat. So, according to the Hesiodic *Astronomia* (Ἀστρονομία), he had the baby Arkas (Callisto's son by Zeus and his own grandson) cut up and served to him as food on the table. According to Ovid's account, it was a hostage's body that he had cut up and served as soup. Whichever the case, Zeus could smell the difference from afar and transformed the Arcadian king into a wolf as a punishment. In any case, in Scene 4 Arcturus gives a detailed account of the full story. The rest of the first Greek fragment gives us the essentials concerning the nymph Callisto: she lives in Arcadia, she is a virgin huntress in the retinue of Artemis (the Moon Woman, one of the sky who spends part of her time on the ground), and she spends her time hunting in the solitude of the mountains.

The second handful of Greek words identifies explicitly the constellation Boötes, placed next to Ursa Major in the night sky, as Arkas, Callisto's babe son, seen as the Bear-warden. Transformed into a bear and set among the stars, Callisto, the bear-mother of the Arcadians through her son Arcas, became Ursa Major. The other constellations appearing close together in the sky are Ursa Minor and Boötes. Significant to astronomical observers since antiquity, Arcturus, also called Alpha Boötis, is one of the five brightest stars in the night sky, and the brightest star in the northern constellation Boötes. It lies in an almost direct line with the tail of Ursa Major (the Great Bear), and next to both Ursa Major and Ursa Minor. Hence its name, derived from the Greek words for "bear guard" – from *arktos*

³¹ In his afterword to *Ursa Major* (2003), Peter Sanger says of Arcturus's grandfather, Callisto's father, Lycaon, King of Arcadia, that "Bringhurst's original source for his story is the first book of the *Metamorphoses*, where Lycaon, contemptuous of Zeus and confident he can show how limited Zeus's knowledge really is, kills a hostage, stews and roasts portions of the hostage's body, and serves that meat to Zeus. His plan is to reveal his trick and shame Zeus after Zeus has eaten. Zeus knows what Lycaon has done even before the meat is placed on the table. He turns Lycaon into a wolf." (p. 87)

(bear) + *ouros* (watcher, guardian). So the constellation lying next to Ursa Major is actually Arkas, “*the son of Callisto and Zeus, / who lived in the country of the Wolves*”, i.e. in Lycaon’s Arcadia. The whole fragment is worth quoting in full, because the simplicity of the original Greek shines through Bringham’s masterly rendering into English:

περὶ τοῦ Βοώτου τοῦ καὶ Ἀρκτοφύλακος ...
 As for the Cowherd or the Bearguard ...
 περὶ τούτου λέγεται, ὅτι Ἀρκάς ἐστιν
 they say that he is actually Arkas,
 ὁ Καλλιστοῦς καὶ Διὸς γεγονώς·
 the son of Callisto and Zeus,
 ὤκησε δὲ περὶ τὸ Λύκαιον.
 who lived in the country of the Wolves.

Scene Three closes with Hera’s ironical commentary. Breaking off her song, she says “with a knowing laugh” these words: “*That’s not the only thing they say.*” Indirectly she is suggesting that there is something else to Callisto’s story that is being left unsaid, particularly Zeus’ infidelity, which prompts her to take revenge on poor Callisto and turn her into a growling bear, ostracised and condemned to roaming the woods in solitude for 15 long years.

SCENE IV · Arcturus Dreams

A typically majestic and dedicated piece of work by Robert Bringham, *Ursa Major* is a poem of such ambitious magnitude and scope that one cannot but stand immobilized and awe-stricken in its very presence. Now it is the turn for three languages – Cree, Greek and English – to be woven into a complex tapestry that reminds us of Bringham’s fondness for cultural syncretism. There is no doubt that *Ursa Major* is an elaborate multicultural artefact that betrays the consummate mastery of the poet in handling literary materials and sources as diverse as a Cree story dictated to linguist Leonard Bloomfield in the summer of 1925 by a blind man called Kâ-kisikâw-pîhtokêw, and a handful of Greek words lifted from a work entitled *Certamen* or “Contest of Homer and Hesiod” that evoke the figure of Callisto in a beautiful though fragmentary way. Against these ancient words originally spoken in such epic languages as Cree and classical Greek, the poet juxtaposes his own consummate renderings into English as well as original poems voiced by Arcturus and the Celestial Janitor that are in themselves a moving meditation on the Ursa Major myth. Though not overtly political in its intent, *Ursa Major*, Noah Richler suggests, “is writing that quite defiantly denies our present, or at least (and subversively) implies that it is fleeting, and its principal languages are either “dead” or relegated to a political hinterland.”³² By placing Cree, one of the First Nations’ languages, at the very centre of Scene 4 Bringham is making a political as well as a literary statement having to do with the way the academia overlooks the vernacular languages and literary traditions that once sprang from the living soil of North America. But, by placing Cree next to classical Greek, the author seems to be implying that a poet with a sense of vocation and a serious commitment to poetry cannot but make an effort to know the literary history of human beings worldwide if he is to make a serious contribution to an ongoing tradition that leaves nothing *en route*. This demands of him that he make the necessary readjustments to his own mental literary map of the world,

³² See Noah Richler’s review of *Ursa Major*, “He Aims for the Stars”, published in *The National Post* (Toronto), July 10, 2003: B1-2.

that he pay attention to literary traditions that remain silenced and are still awaiting their turn to be made visible to the wide world of educated readers.

Scene Four, “Arcturus Dreams”, is no doubt a perfect jewel-like scene in itself. It appears to consist of three distinct parts, even though the voices merge into one another naturally to produce a coherent *whole* endowed with a complex, resonant polyphonic texture. The speakers are Kâ-kîsikâw-pîhtokêw’s Son, the Translator, Arcturus, the Celestial Janitor and Hera; the dancers are Callisto, Arcturus, Hera and Moon Woman. In the first part, Kâ-kîsikâw-pîhtokêw’s Son speaks in Cree while the Translator translates his words into English *sotto voce*, with a slight delay. The telling of the sacred bear woman story begun in Scene Two is now resumed, so that what the reader gets to hear now is the second half of the story. In the second part of Scene 4, Arcturus speaks a moving monologue on his grandfather, Lycaon, in sustained polyphony with Kâ-kîsikâw-pîhtokêw’s Son and the Translator. In the third part of the scene, the Celestial Janitor starts speaking his own meditation on the stars that make up Ursa Major “as soon as Arcturus has spoken, in sustained polyphony with Kâ-kîsikâw-pîhtokêw’s Son and the Translator.” This meditation is followed by Hera singing to herself her song in Greek (briefly joining the Celestial Janitor) and the closing lines of the Cree bear story. In what follows, we shall focus on the critical analysis of the second and third parts of Scene 4.

Arcturus’ monologue offers a new or fresh perspective on Callisto’s story. The whole composition consists of four movements for the soul, only the first of which concerns the nymph herself. In the opening lines, Arcturus gives voice to his own sense of astonishment with perfect naturalness: “*But what would a girl be doing out hunting?*” The mountains, the solitary woods, are not the right place for a young, beautiful woman, he seems to imply. In fact, the stanza depicts Callisto as a sylvan huntress, ease at home among the living creatures of the woods, while the poetic voice draws a distinction between “*earth women*” – i.e., mortal, perishable, vulnerable, bleeding women – and “*sky women*” – i.e., immortal, eternal, powerful, non-bleeding goddesses. Callisto has little in common with these supernatural creatures from the sky who live temporarily on the ground. Artemis herself is a clear illustration of what it means to be one of the sky: she is the Moon Woman, silently present throughout *Ursa Major*, a permanent presence in the night sky and an agile huntress on the ground. What is made perfectly clear is that goddesses are not restricted by the purely material demands of their bodily functions: they do not need to eat, they do not bleed, they do not suffer any form of pain, they do not die. Why, then, should Callisto spend her days in the company of Artemis’ retinue when not even their blood is the same? Humans have red blood, whereas those of the sky have got a vegetal kind of blood. The lines offer a perfect string of similes embedded in a parallelistic structure:

No, they say that their blood is like sap from a poplar,
white as snow, clear as water, and sweet,
like the annual blood of the maple....

Movements 2 and 3 of Arcturus’ monologue have as their subject matter the story of Lycaon, King of Arcadia and father to Callisto (hence grandfather to Arcturus). The literary source for Bringhurst’s account of Lycaon’s story is Book I of Ovid’s *Metamorphoses*. Already in Scene 3 the poet had anticipated the same subject in just a handful of Greek words he rendered literally into English. Here, the emphasis is first placed on Lycaon’s curiosity and hunger for knowledge. He is an avid man, “*riddled with questions*,” in search of answers to innumerable doubts, and so the second movement of Arcturus’ meditation opens with a seemingly endless string of questions regarding the distance separating the sun

from the earth, the flatness or roundness of the earth itself, the roundness of the sun, the changes of the moon phases, the very nature of the gods, and the place humans occupy in the grander scheme of things:

Are the gods
really gods? And are human beings special to the gods,
or like the gods? And are human beings special to the gods,
or like the gods in any way? He was riddled with questions.
He wanted most of all to know how earth people –
humans – fit together with the others.
If the gods are really gods, is the flesh of men and women
any different in their eyes than venison and berries?
He wanted an answer to that.

The tone of these verse lines is incantatory, an auditory effect certainly brought about by repetition itself. Lycaon was concerned to find out about the ultimate nature of the immortals, about the way they related to mere mortal human beings, but he wanted to test the limits of Zeus' knowledge above all, particularly after he learnt of what the king of the Olympian gods and goddesses had done to his daughter Callisto, whom he had rendered pregnant. Immortal gods and goddesses do not eat or drink. They are not constrained in any way by such genuinely human necessities. "*The aroma of the food / is all they're after. You eat it for them.*", says Arcturus. It is through humans that gods eat or feel or have a truly genuine existence, as it were. However, out of *hybris* Lycaon decided to mock Zeus by serving him human meat for food, just to see if he could tell animal from human meat. The story is well-known and rendered in astonishing colloquial terms in the third part of Bringhurst's piece:

Anyway, my grandfather thought it would be good
to test the father of the gods, to see if he would notice
any difference – or would care about the difference –
between goat soup and human soup. He chopped up
a Greek boy and put him in the kettle.

Of course, Zeus could smell the difference from afar ("*That's my dad!*", Arcturus celebrates enthusiastically) and would not forgive the king's daring action. Lycaon's challenge is truly an effrontery to Zeus, and so he transforms him into a wolf, the first werewolf. The tone of the language employed by Bringhurst is reminiscent of the language used in the English rendering of the Cree bear story: it is simple, of an almost gnomic quality, and imbued with almost mythic resonances. There are echoes here of Callisto's metamorphosis first into a growling bear by Hera and then into a constellation by Zeus, as recounted by Ovid and translated into English by Bringhurst in Scenes 1 and 3 of *Ursa Major*:

He gave my mother's father four long legs
and fangs and fur and a curly tail. He changed
his flesh and bones. From that day on,
my mother's father was a wolf.

The closing movement of Arcturus' meditation explores the way gods relate to human beings. The incantatory rhythms of this last stanza partly account for the title of Scene 4, "Arcturus Dreams". If in scene 2 Arcturus awakens to a new penetrating vision of the truth about Callisto's story (hence his personal version of the myth), in scene 4 the young man starts dreaming and speaking as if he were a shaman, endowed with an astonishing capacity to see into things transcendental. As Peter Sanger suggests, "By the

scene's end, he has freely entered a freshened, visionary cosmic world unlike the stagnant one in which the stuttering text of Ovid at the masque's beginning had left him stranded. Like a dreaming shaman, his eyes closed, Arcturus in flight has entered the palingenesis of a renewed cosmology."³³ This is the moment of revelation Arcturus the shaman experiences with rare and precious intensity: he comes to an awareness that humans can do familiar activities with the gods – they can eat or sleep with them, and even bear their children – but they are dangerously close to a point where they can be metamorphosed into sentient or non-sentient beings by the gods any time they want to. Notice, by the way, the gradation *in crescendo* employed to obvious effect by the poet: mere mortals are “*a breath away / from being rocks and trees and wolves and deer / and bears and stars and darkness.*” It all depends on the whimsical volubility of the omnipotent, immortal gods and goddesses of the sky: it is up to them to decide if they will turn humans into mute rocks, sentient trees, any mammal, constellations on the firmament, or simple darkness (which might well stand for oblivion). The tone is melancholy throughout these verse lines, as if the experience of getting to know the truth were painful in itself:

Humans can eat and sleep with gods,
and bear their children. Still, they can be just a breath away
from being rocks and trees and wolves and deer
and bears and stars and darkness. Just a breath away
from deathlessness, and just a breath away
from all that darkness in between the stars.

In the ancient Greeks' eyes, the human race was at the mercy of a set of capricious and man-like deities such as Greece had inherited from Homer, gods whose malice could continue to pursue its victims even beyond the grave. The ruling powers of the universe concern themselves intimately with human or mundane affairs; they cannot help it. The belief that humans are the playthings of powerful deities may seem to put them in a very humble and pitiable position indeed. Thus, humans might earn the favour or the enmity of gods with their acts. At the hands of gods and goddesses, Arcturus meditates, humans may become either immortal forever, even if they must pay a high price for it, or obscure figures interspersed in the “*darkness in between the stars,*” condemned to utter oblivion. Callisto becomes immortal in the form of a constellation up above in the sky the very moment Zeus transforms her into Ursa Major, visible to many human cultures since antiquity, and discernible to the naked human eye in the Northern Hemisphere. Close by lie Ursa Minor (the little cub or Arkas) and Boötes, where Alpha Boötis is Arcturus (the grown young son), the bear-guardian. These stars are the plants and animals of the sky, if we do look at it with open or alert eyes, as Arcturus did in Scene 2. In this respect, Peter Sangers says something really illuminating about the fact that Ursa Major is a complex ecological structure:

Ursa Major is a radically ecological structure. It proposes that the distinctions and dismissals which enable a technologically driven society to regard itself as having reached a state of infinite equilibrium are suicidally false. Such distinctions are predicated between humans and animals, between the temporal (or the temporary) and the eternal, between the profane and the sacred, between the animate and the inanimate, between an egocentricity conceived as normative and a state which, significantly, no language sharing roots forms with Latin has created from the plural form of *ego*: the word *nos*, or *we*. Call this state ‘noscentric,’ and consider it to include all things sentient and (perhaps) insentient. As for the dismissals that a technologically driven society requires, they involve what Hölderlin meant when he

³³ Peter Sanger's Afterword to *Ursa Major* (2003), p. 88.

spoke of the gods. In *Ursa Major*, earth is skied and sky is earthed. Bones and stars are nothing if not mineral. Terrene or stellar, we share a common feast of sand and stone, of gold and lead.³⁴

The third part of Scene Four closes with the Celestial Janitor's meditation on the stars that make up the constellation Ursa Major³⁵. Being the third-largest constellation, Ursa Major is undoubtedly one of the most familiar star patterns in the entire night sky. It is made up of seven stars that form the rump and tail of the bear, while the rest of the animal is comprised of fainter stars. The opening two stanzas have been lifted and revised from the piece IV.3 (a meditation on fire) in Bringhurst's *Elements* (1995; revised 2008). They draw an exhaustive anatomy of the constellation. Merak and Dubhe are called the "Pointers" because the line Merak-Dubhe points to the Pole Star, "*where the Cub is still sucking what once / was the nipple of heaven*" (meaning Arkas). Dubhe comes from the Arabic *al-dubb* ('the bear'), and Merak comes from the Arabic *al-maraq* ('flank or groin'). In addition, Alioth, Mizar and Alkaid are other stars in the Ursa Major constellation: they the Great Bear's "*throat, not her rump and her tail.*" Second in line along the tail is the wide double star Zeta Ursa Majoris, the two members of which are called Mizar and Alcor. The name Alioth is applied to the next star along the tail, Epsilon Ursae Majoris. Alkaid lies at the tip of the bear's tail.³⁶ On the other hand, Arcturus, namely Alpha Boötis, is the brightest star in the constellation Boötes. It lies in an almost direct line with the tail of Ursa Major (the Great Bear); hence its name, derived from the Greek words for "bear guard". Had not Zeus

³⁴ Peter Sanger's Afterword to *Ursa Major* (2003), p. 80.

³⁵ See the entry on 'Ursa Major' in the *Encyclopaedia Britannica*, vol. 29, pp. 17213-17214. "Ursa Major (Latin: "Greater Bear"), also called THE GREAT BEAR, in astronomy, a constellation of the Northern Hemisphere, at about 10 hours 40 minutes right ascension (the coordinate on the celestial sphere analogous to longitude on the Earth) and 56° north declination (angular distance north of the celestial equator). It was referred to in the Old Testament (Job 9:9; 38:32) and mentioned by Homer in the *Iliad* (xviii, 487). The Greeks identified this constellation with the nymph Callisto, who was placed in the heavens by Zeus in the form of a bear together with her son Arcas as "bear keeper," or Arcturus; the Greeks named the constellation Arctos, the she-bear, or Helice, from its turning around Polaris, the Pole Star. The Romans knew the constellation as Arctos or Ursa. Ptolemy cataloged eight of the constellation's stars. Of these, the seven brightest constitute one of the most characteristic figures in the northern sky; the group has received various names – Septentriones, the Wagon, Plow, Big Dipper, and Charles's Wain. For the Hindus these seven stars represented the seven Rishis (or Sages). Two of the constellation's stars, Dubhe and Merak, are called the pointers because the line Merak-Dubhe points to the Pole Star. Five stars of the constellation form an associated group with common proper motion, but Dubhe (the upper pointer) and Alkaid (the last star of the tail) have no connection with the others. Stars in other parts of the sky have been found to belong to the same cluster; Sirius, for example, is a stray member of it."

³⁶ "Two stars in the bowl of the Dipper called Dubhe and Merak (Alpha and Beta Ursae Majoris) are popularly termed the Pointers because a line drawn through them points to the north celestial pole. Dubhe's name comes from the Arabic *al-dubb*, 'the bear', while Merak comes from the Arabic word *al-maraq* meaning 'the flank' or 'groin'. At the tip of the bear's tail lies Eta Ursae Majoris, known both as Alkaid, from the Arabic *al-qa'id* meaning 'the leader', or as Benetnasch, from the Arabic *banat na'sh* meaning 'daughters of the bier' – for the Arabs regarded this figure not as a bear but as a bier or coffin. They saw the tail of the bear as a line of mourners (the 'daughters') leading the coffin. Second in line along the tail is the wide double star Zeta Ursae Majoris. The two members of the double, visible separately with keen eyesight, are called Mizar and Alcor. They were depicted as a horse and its rider on the 1524 star chart of Peter Apian, apparently following a popular German tradition. The name Mizar is a corruption of the Arabic *al-maraq*, the same origin as the name Merak. Its companion, Alcor, gets its name from a corruption of the Arabic *al-jaun*, meaning 'the black horse or bull'. This is the same origin as the name Alioth which is applied to the next star along the tail, Epsilon Ursae Majoris. The name the Arabs used for Alcor was *al-suba*, which Paul Kunitzsch translates as meaning either the 'forgotten' or 'neglected' one. Delta Ursae Majoris is named Megrez, from the Arabic meaning 'root of the tail'. Gamma Ursae Majoris is called Phad or Phecda, from the Arabic word meaning 'the thigh'. In addition to the famous seven stars of the Plough or Dipper there are three pairs of stars that mark the feet of the bear." See <http://www.ianridpath.com/startales/ursamajor.htm>, consulted on 20 September 2011.

intervened, he would have nearly killed his mother with a spear, unaware that the bear in front of him was actually his mother. Hence the reference in the poem to “*the point of a spear*” being bitten by the Cub, Arkas the babe. All in all, three constellations (Ursa Major, Ursa Minor and Boötes) are invoked in these lines:

She is stretching her neck and her tongue
to Arcturus, her son, who is clutching
the butt of the spear: Arcturus the man,
who is Arkas the cub, who is biting the spear
that is piercing the throat of his mother the Bear.

The closing stanza of this meditation on the stars that make up Ursa Major becomes a moving reflection on the nature of fire. After all, stars are shiny bits of fire on the dark firmament at night. At this point, the poem turns more philosophical, as Bringhurst applies the name ‘fire’ to very different kinds of realities:

- (1) “*Things that exist but do not have a substance –/ mind, for instance – are usually fire.*” The mind is conceived of as being fire, probably because it illuminates the dark recesses of reality in its relentless search after the truth. It was the so-called *αρχή* or ultimate principle of reality for Herakleitos. The mind is also intangible, invisible, unknowable; it remains a true mystery, like fire itself, which has always held an irresistible fascination for human beings of all places and all times.
- (2) “*As for history, that nightmare, / it is fire.*” Fire is associated here to History, the relentless and pitiless unfolding of events over time governed by the whims of tyrants and greedy men. Humankind’s history is marked by greediness, nonsense, violence, war and destruction, and so it is a form of self-consuming fire. However, “*What is bigger than history,*” said one of the three voices in *New World Suite No. 3* (Movement I, staves 14-15). *Being* is bigger than history, and it is indestructible.
- (3) “*As for what you call technology, / it offers you the wherewithal / to cook the feast, the guest, the host, / the dining hall, the whole shebang.*” Technological advance in the hands of man has contributed to increasing the torture and pain inflicted upon Mother Earth. In this context, Bringhurst’s words are a vindication of a new environmental awareness. The poem closes with an invocation to all four elements and to two well-known trickster figures (coyote and raven) to cleanse our senses, restore us our common sense, and save the world from our own greedy manners: “*Earth, water, air, fire, coyote, raven, bathe us. / Clean our bones.*”

Stars and constellations have exerted an appealing attraction among humans of all times and historical periods. Philosophy and science were born of the desire of knowledge in the face of the awe-inspiring grandeur and beauty of the universe. The word *κόσμος* meant ‘order’ and order is after all a beautiful thing to human eyes. The most notable thing about the universe is the order it displays in events on a cosmic level like the movements of sun, moon and stars. There is an inevitable aura of divinity still clinging to stars that the rationalistic or scientific outlook has not yet managed to dispel in people’s minds. That we should still raise our eyes and direct them towards the shiny bits and pieces of light shimmering in the night sky testifies to the endless fascination stars hold for us humans. It also accounts for the attention given to the heavens by the very first thinkers in the cradle of Western philosophy: Thales, Anaximander and Anaximenes, among others, would lift their eyes to the heavens and tried to produce a systematic and scientific account to explain what their eyes saw for them. That 2,500 years later Bringhurst should have decided to compose a literary work of art on the constellation of Ursa Major comes as no surprise; it is a palpable proof that humans have not changed as much as we might think at first sight.

SCENE V · Metamorphosis III

Latin, Greek and English are the languages that find a luminous and spacious room for themselves in Scene 5 of *Ursa Major*. The speakers are Ovid's Daughter, Hera, the Celestial Janitor and the Translator; the dancers are Callisto, Hera, Moon Woman and the Translator. As for the polyphony, "The first two voices are simultaneous. As Ovid's Daughter concludes, a third voice (the Celestial Janitor's) joins the conversation. The Translator joins them momentarily." In any case, six parts are discernible in Scene Five, "Metamorphosis III", the last scene in *Ursa Major*. It is a truly complex tessellation of fragments from a wide range of literary sources once again. First comes Ovid's account of Callisto's story in Latin, with no translation into English this time. It is followed in the second part by Hera's vengeful song. According to Peter Sanger, "In scene 5 of *Ursa Major*, the last scene, it is the manipulative, slightly spiteful, condescending, trans-Atlantic accented voice of vindictive Hera which, in concert with the voice of the Celestial Janitor, celebrates a cosmos in which the day-lit reality of earth and the night-lit mythology of sky are co-inherent."³⁷ In the third part, both Hera and the Celestial Janitor speak in sustained polyphony: Hera keeps on giving voice to her irrepressible anger, while the Janitor celebrates earth's composition in an exultant hymn of cosmic dimensions. In the fourth part, the Translator speaks in intermittent but not antiphonal polyphony with Hera and the Celestial Janitor, first in English and then in classical Greek, addressing the minimal elements out of which the whole universe is made. From this point onwards, the scene becomes more and more fragmentary as it were. The fifth part shows Hera and the Celestial Janitor, this time speaking in antiphonal polyphony: whereas Hera mentions an endless litany of names of places associated to the world of the Cree, the Janitor keeps on celebrating the basic constituents of which gods' and humans' bodies are made. The sixth, final part closes with the Celestial Janitor's last meditation on the elements and on *Ursa Major*, shining up there in the night sky.

The first part of Scene 5 concludes with Ovid's Daughter Latin words on the metamorphosis of Callisto and her son into shining constellations in the night sky by Zeus: "*sustulit et pariter raptos per inania uento / inposuit caelo uicinaque sidera fecit.*" Immediately afterwards come Hera's words, first singing her fragmentary song on Callisto being killed with a silver bow in classical Greek and then speaking aloud in English. The overlapping of Ovid's words and Hera's song and poem is eloquent in itself: whereas Ovid celebrates Zeus' intervention averting the tragedy on behalf of Callisto, nearly-killed by her own son Arcturus, Hera's spiteful words remind us of a different version of the story, according to which it was Artemis (probably urged by Hera's wrath) who killed the poor nymph upon learning of the shame she had brought on her own company of virgin huntresses by breaking her vow of chastity to the moon goddess. And then Hera addresses Zeus with ironical and irreverent words to remind him of Artemis' reaction as Callisto's pregnancy was made public: "*My darling Zeus, how sweet of you / to make them into stars. / But you remember what your daughter said.*" Then Hera switches back to Ovid's Latin: "*nec sacros pollue fonts.*" Bringhurst's instructions are precise at this point: "Hera's speech, again, is timed so that her speaking of this Latin line falls just after the same line spoken by Ovid's daughter." These are the Latin words spoken by Artemis when Callisto stands naked before her and her virgin huntresses and her shame is visible to everyone present. With those words Artemis expels poor Callisto from her company. Those Latin words in the imperative translate into English as "*She said, Don't pollute the sacred pool!*": as though motherhood or loving were

³⁷ Peter Sanger's Afterword to *Ursa Major* (2003), pp. 88-89.

impure, as Arcturus put it in Scene 2, whereas love in the abstract were not. Hera's spiteful poem goes on like this:

That sacred pool now
is the whole ocean, all the seven seas.
That chubby little sow
will never have another bath,
or ever bathe her baby either.
They can wash themselves in air
or lick each other silly
for all I care, but they won't pollute the water.
There he is, and there he has to stay,
his cub teeth fastened to the sky's breast,
fastened to the nipple of the world,
the star that never moves.

The literary source for Bringham's poem is again Book II of Ovid's *Metamorphoses*. Lines 508-530 tell of how Hera was now even more enraged to find her rival Callisto glorified among the stars.³⁸ In line 521 Hera complains overtly: "*esse hominem vetui: facta est dea!*" ('she whom I drove out of human form has now become a goddess'). Enraged that her attempt at revenge had been frustrated, she appealed to her foster parents Tethys and Oceanus, gods of the sea, and persuaded them never to let the bears in the sky bathe in the northern waters, thus providing a poetic explanation for their circumpolar positions. Hera asked Tethys to keep them in a certain place, so that the constellations would never sink below the horizon and receive water. Hence, as seen from mid-northern latitudes, the bear never sets below the horizon.³⁹ In Bringham's version of the end of Callisto's story, Hera uses spiteful words full of anger to refer to the bear mother and the bear child. Hera's language is colloquial, which again comes as a surprise when uttered by the queen of the Olympian gods and goddesses. Arkas' teeth must remain fastened to the sky's breast, to "*the nipple of the world,*" to "*the star that never moves*" (the Pole Star), for eternity, and neither mother or child will ever be granted permission to touch the sea waters. That is the punishment Hera asks of Oceanus and Tethys as a personal favour to avenge Zeus' infidelity and his intervention on behalf of Callisto and her son.

In the third part of Scene 5, Hera continues her poem without interruption and the Celestial Janitor starts speaking in sustained polyphony with her. Hera repeats exactly the

³⁸ These are lines 508-517 in Ovid's account: "Intumuit Iuno, postquam inter sidera paelix / fulsit, et ad canam descendit in aequora Tethyn / Oceanumque senem, quorum reverential movit / saepe deos, cusamque viae scitantibus inquit: / "quaeritis, aetheriis quare regina deorum / Sedibus huc adsim? pro me tenet altera caelum! / mentior, obscurum nisi nox cum fecerit orbem, / nuper honoratas summo, mea vulnera, caelo / videritis stellas illic, ubi circulus axem / ultimus extremum spatiumque brevissimus ambit." In English: "Then indeed Juno's wrath wax hotter still when she saw her rival shining in the sky, and straight went down to Tethys, venerable goddess of the sea, and to old Ocean, whom oft the gods hold in reverence. When they asked her the cause of her coming, she began: "Do you ask me why I, the queen of heaven, am here? Another queen has usurped by heaven. Count my word false if tonight, when darkness has obscured the sky, you see not new constellations fresh set, to outrage me, in the place of honour in highest heaven, where the last and shortest circle encompasses the utmost pole." See Ovid in Six Volumes, vol. III – *Metamorphoses* in Two Volumes, I (Books I-VIII), translated by Frank Justus Miller, 1st edition 1916, 2nd ed. 1921, reprinted 1971. Cambridge, Massachusetts: Harvard University Press & London: William Heinemann Ltd, pp. 94-97.

³⁹ This is the original Latin text (Book II, lines 527-530): "at vos si laesae tangit contemptus alumnae, / gurgite caeruleo septem prohibete triones / sideraque in caelo stupri mercede recepta / pellite, ne puro tinguatur in aequore paelix!" In English: "But do you if the insult to your foster-child moves you, debar these bears from your green pools, disown stars which have gained heaven at the price of shame, and let not that harlot bathe in your pure stream." Ibid., pp. 96-97.

same words of her poem (quoted above), but this time in retrograde motion, to achieve a rare form of musicality. For his part, the Celestial Janitor celebrates the very physicality of the earth, focusing on the bare essentials or elements that make up the earth: “*Earth / at its purest is crystal and metal.*” He uses exactly the same words spoken by him in the third part of Scene 2 of *Ursa Major*. What we get to listen to is a litany of incantatory elements that are conceptualized as being the “*thoughts of the gods*” that are to be found “*in the breasts of human beings.*” The world is thought into existence by the gods, but those thoughts are truly embodied in physical entities that do a find an echo in humans’ minds and hearts. The verse lines are short, marked by strong enjambment and an endless litany of adjectives that try to capture the nature of what is seemingly ineffable *per se* (gods’ thoughts):

*Aluminium, calcium, iron, potassium.
Inorganic proteins.
The orthogonal, hexagonal,
simple, symmetrical,
latticed, rotational
thoughts of the gods
that twist with their milk-smooth faces
and crystalline edges
in the breasts of human beings.*

In the fourth part of Scene 5, the Translator starts “speaking softly at first, but growing louder and shifting step by step toward incantation as she moves from English to Greek, in intermittent but not antiphonal polyphony with Hera and the Celestial Janitor”, as Bringhurst’s instructions make clear. Her words are fragmentary, as if they had been salvaged from a papyrus roll badly damaged by the passing of time. In note 3 at the end of *Ursa Major*, Bringhurst informs us that “Incidentally, the Greek forms used by the Translator in the final scene are vocatives. She is speaking *to*, not *of*, the classical four elements”.⁴⁰ This piece of information is relevant enough, for the poetic voice speaking these words enumerates basic constituents found in the world (they are the *alphabet* in which the book of the world is written, but also *dust* or nothingness in the end, for everything is subject to perpetual metamorphosis and perishable in one way or another) and then shifts to Greek to address air, earth, fire and water, which are thought to be the four classical elements in many cultures around the world since antiquity. These are bundles of medicinal words, crystal-clear constellations of words instead of stars that evoke the atemporal and immutable realm of essences that remains the same forever despite the flux of appearances:

Hydrogen ...
carbon ...
alphabet ...
dust ...

⁴⁰ Bringhurst’s love of linguistic precision (which betrays his serious sense of vocation for poetry) is also made manifest in note 3, where he provides essential bibliographical references related to the accurate pronunciation of the Greek and Latin words tessellated into the living texture of *Ursa Major*: “Those performing the text might strive (as we did in Regina in 2002) for equal historical authenticity in pronouncing the Greek and Latin. There is useful information to this end in W.S. Allen’s *Vox Latina* (Cambridge, 1965; 2nd ed. 1978) and *Vox Graeca* (Cambridge, 1968; 3rd ed. 1987) and in W. B. Stanford’s *The Sound of Greek* (Berkeley, 1967).”

ἄερ ...
 χθών ...
 πῦρ ...
 ὕδωρ ...

Spoken by the Translator, these two fragments resemble Sappho's poems as preserved in a fragmentary fashion over time. There is a form of elemental poetry implicit in them, even if they look like simple enumerations or catalogues. But they do embody valuable and indispensable information. If we had to do with just a handful of words, these would be probably the least dispensable of all. They remind us that the sky and the earth are one and the same thing for a very simple reason: the alphabet in which both are written is the same, one made of invisible particles that confirm our intimation that everything forms part of the complex, living mesh of things.

In the fifth part of Scene Five, Hera speaks "in phrase-to-phrase antiphonal polyphony with the Janitor". For his part, the Celestial Janitor speaks in antiphonal polyphony with the goddess. Visually displayed on the page, the words spoken alternately by Hera and the Janitor look also as luminescent jewel-like words rescued from oblivion, from an ancient time long past. The typographical layout on the printed page is appealing in itself to the reader's eye; as a score for performing voices, the pattern makes itself discernible in an astonishing way to the attentive hearer. Whereas Hera enumerates a list of what looks like proper names related to places of the Cree tribe living in the Saskatchewan prairie, the Janitor dwells on the differences that set the immortals (those in the sky) apart from the mortals (those on the ground):

Star Blanket,	Bearskin,	Piapot,
<i>The voices</i>	<i>of the gods</i>	<i>are water;</i>
Calling Lake,	Smallboy,	Pakashan,
<i>Ours</i>	<i>are air;</i>	<i>their bodies</i>
Sucker Creek,	Lucky Man,	Moosomin,
<i>fire;</i>	<i>ours</i>	<i>are water.</i>
Waterhen,	Little Pine,	Sweet Grass,
<i>Gods</i>	<i>have hearts</i>	<i>of air,</i>
Thunderchild,	Cumberland,	Onion Lake,
<i>but ours</i>	<i>are earth.</i>	<i>Their thought</i>
Potato River,	Day Star,	Pasqua,
<i>is earth,</i>	<i>and ours</i>	<i>is fire.</i>
Little Black Bear,	Sakimay,	
	White Bear....	

In these lines, the Celestial Janitor compares the voices, bodies, hearts and thought of gods and humans. Time and again throughout our thesis it has been claimed that Bringhurst's metaphysics is a physics firmly embedded in the real. The language sings with moving simplicity in the form of straightforward declarative sentences where the verbs *be* and *have* recur all the time. Whereas gods are said to be endowed with water voices, fire bodies, air hearts and earth thought, humans are seen as being equipped with air voices, water bodies, earth hearts and fire thought. Upon closer inspection, it turns out that all four classical

elements are present in the very composition of immortals and mortals alike. On the one hand, it does make sense to say that the gods' voices are made of water, for water is found in the rivers, seas and oceans of the world, through which gods speak their own presence. Or to say that their bodies resemble fire in their evanescent, immortal condition, that their hearts are air (voluble, whimsical, incapable of truly feeling human emotions), and that their thought is earth, for their thinking brings the things of this world into existence, as it were. On the other hand, it does make sense to give humans voices that are pure air emanating from their lungs and modulated by their speech apparatus, to say that their bodies are water (which is scientifically true, for water is the principal component in our bodies), to give them earth hearts (fond of earthly beauty and pleasures), and to affirm that their thought is fire, a flame seeking to illuminate the dark recesses of reality, because we humans need and want to know. "*Are gods any different from humans?*," Callisto's father (Lycaon) wanted to know, "*riddled with questions*" as he was. It seems that they have much more in common than it might appear at first sight. Gods need humans as much as humans need gods – that is the simple rule. Greek gods eat, feel and think though humans themselves. This partly accounts for their meddling or interfering with human affairs on earth.

Immediately after these verse lines spoken in antiphonal polyphony, both Hera and the Janitor return to sustained polyphony, as they move towards the closing of Scene 5:

All those fires on the coal black prairie,
In the aspens and the spruces,
 every night forever more, forever more, forever more.
the larches and birches,...

Hera directs the reader's / hearer's attention towards the shiny bits of fire on the firmament, i.e., the constellations made up of stars that were once mortals living on the ground and that have now turned into the plants and animals of the sky. The "*fires on the coal black prairie*" is a beautiful metaphor to refer to the enigmatic pictures formed by stars in the night sky, but they also remind us that the sky above is a replica of the earth below, or the other way around: that, like Arcturus awakening and dreaming, we should learn to look at the sky as if it were earthed, and to look at the earth as if it were skied. Hera's last words in *Ursa Major* are once again the handful of fragmentary Greek words that tell of Callisto being killed with a silver bow. It seems that the vengeful queen goddess is incapable of forgiving a sin that the poor girl did not commit alone. And in sustained polyphony with Hera, the Celestial Janitor gives voice to the closing lines of *Ursa Major*, which are lifted from IV.4, a meditation on water lifted from Bringhurst's *Elements* (1995, revised in 2008). The meditation consists of two perfect stanzas that testify to Bringhurst's perfect command of his *materia poetica* and over the English language. The first stanza dwells on the eternal metamorphosis that brings all four classical elements together: "*In the aspens and the spruces, / the larches and birches,...*"

... earth is climbing a ladder of water
 and water a ladder of air,
 and air is climbing a ladder of fire,
 and fire descending a stair
 of air and water into the earth
 that is reaching and climbing with tiny hands
 a ladder knotted of water, fire and air.

The idea occurs that the earth (with its nourishing minerals) is travelling together with water up the roots of the trees (aspens and spruces, larches and birches), that the water

travels up the limbs and into the upper leaves of the trees, that the air liberated from the leaves is travelling further upwards into the sky with its shiny bits of fire (stars). The whole process is repeated the other around: the nourishing light shed by the stars of the sky (including our Sun) travels downwards through the vast expanses of air till it reaches the water of the rivers, seas and oceans of the world, as well as the earth. All four elements are thus connected to one another for eternity. There is no way of interrupting the perpetual flux, the perennial metamorphosis.

The second stanza in the Celestial Janitor's meditation (and last verse lines of *Ursa Major*) focuses on the Ursa Major myth again. Callisto, the she-bear wounded by her own son Arcturus in the mountains, "climbers up the spear shaft, / shinnies up the tree, / transforming earth and water, fire and air, / to fire and air and earth and water." She who was a hunter in Artemis' retinue is now being hunted by Arcturus. As soon as Zeus transforms her into a constellation in the night sky to avert the tragedy, she becomes a part of the grander scheme of things on a cosmic level: she keeps a human mind and a human heart (*antiqua mens manet*, said Ovid in his Latin), and yet she who was a mere mortal is now turned somehow immortal and still belongs to both realms (the divine and the human). Her blood is turned into the water and snow of the gods and goddesses of the sky (the sap of poplars). She keeps on lighting the night sky to remind those on the ground that the gods are not far away, and that the whole world is in a state of perpetual flux:

air transforming into air and earth to earth
and fire to fire and water to water
and blood to water and blood to snow
and hunter to hunted and breath to air
all over and over and over again.

And this is the end of *Ursa Major*, an ambitious polyglot polyphonic poem for several voices, composed in several languages that collaborate to tell the universal myth of Ursa Major as embodied in the story of Callisto and of the Bear Woman. By juxtaposing different literary traditions (Greek, Latin, Cree), Bringham manages to create a magnificent tapestry that is a pleasure to read. Like *New World Suite No. 3*, this work is also a technical accomplishment on the part of the poet, a beautiful art book and a moving tribute to the human voice. However, a poem for several voices printed on a page contained in a book is half alive or half dead. As Bringham suggests, "a poem is most itself when it is spoken, as a life is most itself when it is lived and a piece of music most itself when it is played. The printed text should be as fine as it can be, but it should never be the final incarnation. A book must be a place where things begin."⁴¹

⁴¹ "Licking the Lips with a Forked Tongue", *ibid.*, pp. 15-16.

PART V

Mapping New Territory

Elements

Of Earth, Water, Air & Fire

INTRODUCTION

Elements is a quiet meditation in seven parts on the ultimate material nature of *being*, and a work rich in moments of singular linguistic energy and deep thinking. But *Elements* is also a very special art book, the fruit of a collaborative venue in which Robert Bringhurst worked with Norwegian artist Ulf Nilsen and printer Russell Maret to produce a unique artifact. As in the case of Bringhurst's collaborative project with Lucie Lambert on *Conversations with a Toad* (1987), the poet's words are accompanied by the artist's four suites of images illustrating the four classical elements – water, earth, air and fire – found in ancient civilizations worldwide. Both words and images are the jewel-like contents of a beautiful artifact designed and printed in a fine edition by Maret. First published in 1995 in a very limited edition of only 20 copies by Kuboaa Press, it was later revised in a new incarnation of the text in 2008. Some fragments or portions of the poem were published in the complex polyphonic and polyglot poem *Ursa Major* (1st ed. 2003 and 2nd ed. 2009) and also in *Selected Poems* (2009), in the section entitled “Ursa Minor”, which consists of the monologues and choruses lifted from *Ursa Major*. As is common practice with Bringhurst, the poem has inevitably changed over time. It does come, though, as a surprise that it should not have been included in *The Calling: Selected Poems 1970-1995* (1995) or in *Selected Poems* (2009) in full. The editorial history of the poem can be best summarized as follows:

- (1) First textual incarnation of the text. A.49 *Elements*. Text by Robert Bringhurst; drawings by Ulf Nilsen; designed and printed by Russell Maret. New York: Kuboaa Press. 1995. [17 + 21] p. 24.5 × 24.5 cm. Contents: poem in seven sections – I. One-Room School; II. Prayer; III. A Periodic Table; IV.1 [air]; IV.2 [earth]; IV.3 [fire]; IV.4 [water] – with four suites of five drawings by Ulf Nilsen realized in paper (through watermarking, wet-pulp embossing, branding, and letterpress printing) by Russell Maret. The text is printed letterpress on loose unnumbered sheets with title page and colophon page contained in a cloth-covered box. Each suite of illustrations is also contained in a box. The five component boxes and a loose title page are contained in a larger box “[D]esigned, printed and housed ... by Russell Maret in an edition of 20 signed & numbered copies, plus 5 artist's proofs.... All printing was done at the Center for Book Arts in New York City during August and September of 1995.” There was also a prospectus for this first edition: A.49a Prospectus for *Elements* (A.49). Riverside, Connecticut: Kuboaa Press. 1995. [8] p. 13.5 × 22 cm. Contents: §IV.1 [air] from A.49, with one drawing from the water suite by Ulf Nilsen.
- (2) § IV.1 [Air] was reprinted in A.69, *Ursa Major: A Polyphonic Masque for Speakers and Dancers*. Kentville, N.S.: Gaspereau Press, 2003. 96 p. 19 × 28 cm. ISBN 0-8032-1328-X. Contents: Script of a work commissioned by the choreographer Robin Poitras and first performed by her company New Dance Horizona, Regina, Saskatchewan, in March 2002. With an afterword by Peter Sanger. This work was reprinted in part in B.100 and revised as A.91: *Ursa Major: A Masque for Speakers and Dancers*. 2nd edition. Kentville, Nova Scotia: Gaspereau Press. 2009. 96 p. 12.5 × 20.5 cm. ISBN 978-1-55447-060-0. The voicemap is printed in five colors and the afterword by Peter Sanger is omitted from this edition.
- (3) Second textual incarnation: The whole work was revised as a poem in six sections in C.81 “Elements”, in *Review: Literature and Arts of the Americas* (New York / Abingdon,

Oxfordshire: Routledge) 76 (= 41.1, May 2008): 80–85. Section I of the original poem, entitled “One-Room School”, has been omitted here, and the remaining sections have been slightly revised, though section IV.3 seems to have been heavily revised. In our critical analysis below, all textual variants will be accounted for in customary form.

- (4) Some of the original poems from *Elements* were later published in A.92 *Selected Poems*. Kentville, Nova Scotia: Gaspereau Press. 2009. 272 p. 14 × 21.5 cm. ISBN 978-1-55447-068-6. Thus, the section entitled “Ursa Minor” consists of monologues and choruses lifted from *Ursa Major* (2nd edition, 2009) – I · Arcturus, II · Arcturus & Chorus, III · Chorus, IV · Arcturus, V · Split Chorus, VI · Chorus, VII · Split Chorus, VIII · Chorus, IX · Chorus.

It is no wonder that a poet like Bringham, concerned with fundamental questions and with exploring the ultimate nature or essence of things, should have produced a poem like *Elements*, about the basic constituent elements that make up the whole world. The title itself, reminiscent of Euclid’s classic on geometry *Elements*, points to this concern with essentials. If Bringham’s metaphysics is a form of physics with a firm grasp of the material world, then *Elements* is expressive of this subterranean conviction underlying his entire work. The *Elements* sequence belongs among the poet’s overtly philosophical poems – the Pre-Socratics (*The Old in Their Knowing*) and the Oriental sages (*The Book of Silences*) sequences. Like them, *Elements* concerns *being* and its constituent elements. Grinding down the world into its simplest essential parts, this is what the poet comes up with: a seven-part meditation on the basic elements out of which the whole world is made. The result is a collaborative meditation in which everything falls into place, as the description of the 1995 art book itself makes clear:

ELEMENTS has been designed, printed and housed in boxes by Russell Maret in an edition of 20 signed & numbered copies, plus 5 Artist’s Proofs. The contents are a collaborative meditation on the elements of air, earth, fire & water between Norwegian painter Ulf Nilsen, Canadian poet Robert Bringham and Maret. The papers are Abaca (text), Cotton (air), Silk (water), Abaca-Cotton (fire) and Belgian Linen-Cotton (earth), all of which were made especially for this edition at Dieu Donné Papermill in New York City. The techniques employed to achieve Nilsen’s images are watermaking, letterpress printing, branding and wet-pulp embossing. The text is printed letterpress from 12 point Gill Sans Medium, cast monotype by Michael & Winifred Bixler in Skaneateles, New York. All printing was done at the Center for Book Arts in New York City during August and September 1995. There are a total of six boxes in the portfolio: four are covered in Japanese book cloth, one is made of African and Honduran mahogany and one of burned and patinized copper. The printer was assisted by Nathan Johnson, Ida Lorentzen, Lou Hicks, Peter Haas, Sterling Roper, Barbara Mauriello, Paul Smotrysts, Mie Yim and Peter Koch.¹

The poet’s words and the artist’s images coalesce into a profound singing of those four elements that are ubiquitous in a number of cultural traditions. In the Western world, the concept itself of the existence of four classical elements stems from Babylonian mythology. In a text entitled *Enuma Elis*, composed between the 18th and 16th centuries BCE, the four cosmic elements described include sea, earth, sky and wind. In ancient Greek thought, the

¹ Description lifted from copy number A.P. 2 (artist’s proofs) consulted at the Rare Book & Special Collections of University of British Columbia Library in Vancouver on 23 July 2010. The loose unnumbered pages of Bringham’s text consist of cover (p. 1), description (p. 2), author’s name (p. 3), I: ONE-ROOM SCHOOL (pp. 4-8), II: PRAYER (p. 9), III: A PERIODIC TABLE (p. 10), IV.1 [air] (pp. 11-12), IV.2 [earth] (pp. 13-14), IV.3 [fire] (pp. 15-16), IV.4 [water] (pp. 17-18).

four classical elements (earth, water, air and fire) date from pre-Socratic times and occur along a fifth element or quintessence, called *aether*. It was Plato who, in his dialogue *Timaeus*, first identified these elements as being pre-Socratic in origin. In their concern with the so-called ἀρχή (the first principle or ultimate origin of all things), the pre-Socratics looked at the world with sharp eyes in their search for essential constituents. Thus, for Thales water was the first principle of reality, Demokritos spoke of *atoms*, Empedokles (ca. 450 BCE) called these basic constituent elements “the four roots” (ρίζωματα), and Plato used the term ‘element’ (στοιχείον) to refer to the smallest units or basic building blocks of matter. Later on, in his *Physics*, Aristotle claimed that four elements (earth, air, fire and water) make up everything under the moon (the terrestrial region) and he added *aether* as the quintessence (*fifth essence*), reasoning that whereas the four elements were earthly and hence corruptible, the heavenly or celestial sphere with its stars, which was immutable, must be made of a different unchangeable heavenly substance. Thus, in the realm of Earth, all bodies were made out of combinations of these four substances, whereas heavenly bodies beyond the Moon were made of a fifth substance, called *quintessence*. This conception of the four elements persisted well into the Middle Ages and the Renaissance, and it had a profound influence on European culture and thought.² Let us listen to Aristotle’s words in a handful of quotes lifted from his *Physics*:

- (1) *Physics*, Book I, chapter 1, 184a 10-16: “In all sciences that are concerned with principles or causes or elements, it is acquaintance with these that constitutes knowledge or understanding. For we conceive ourselves to know about a thing when we are acquainted with its ultimate causes and first principles, and have got down to its elements. Obviously, then, in the study of Nature too, our first object must be to establish principles.”³
- (2) *Physics*, Book I, chapter 1, 184b 15-26: “Well, then, there must be either one principle of Nature or more than one. And if only one, it must be either rigid, as Parmenides and Melissus say, or modifiable, as the Physicists say, some declaring air to be the first principle, and others water. If, on the other hand, there are more principles than one, they must be either limited or unlimited in number. And if limited, though more than one, they must be two or three or four, or some other definite number. And if they are unlimited, they must either be, as Democritus held, all the same kind generically, though differing in shape and sub-characteristics, or of contrasted nature as well. The thinkers who inquire into the number of ‘absolute entities,’ again, follow the same line. For the first question is whether the constituents of which things are composed are one or more than one; and, if more than one, are they limited or unlimited? So they, too, are inquiring whether there is one principle or ultimate constituent, or many.”⁴
- (3) *Physics*, Book I, chapter 1, 187a 12ff: “We turn now to the Physicists. There are two schools of them. Those of the one school reduce existence to unity by positing a single underlying substance – whether one of the familiar three, or a something that is denser than fire and rarer than air – and arrive at a plurality by conceiving all else to be generated from it by condensation and rarefaction. [...] The other school, to which Empedocles and Anaxagoras belong, start from the first with both unity and multiplicity; for they assume an

² In modern science there are *elementary particles*, which are not made of other particles, and *composite particles*, which are made of other smaller particles. In the framework of quantum mechanics there are three classes of elementary particles – quarks, leptons and gauge bosons –, which are subdivided into several categories or types for their part.

³ See Aristotle, *Physics* (in two volumes) translated by P. H. Wicksteed and F. M. Cornford, Cambridge, Massachusetts: Harvard University Press, London: William Heinemann Ltd., Loeb Classical Library, 1980, vol. I, p. 1.

⁴ Aristotle, *Physics*, *ibid.*, p. 15.

undistinguished *confusum*, from which the constituents of things are sifted out. But they differ in this, that Empedocles supposes the course of Nature to return upon itself, coming round again periodically to its starting-point; while Anaxagoras makes it move on continuously without repeating itself. Moreover, he assumes an unlimited number of distinguishable substances, from the first, as well as an unlimited number of uniform particles in each substance; whereas Empedocles has only his four so-called elements. Anaxagoras appears to have based his conviction that the primal substances are unlimited in number on his uncompromising acceptance of the dogma, common to all the Physicists, that ‘nothing can come out of what does not exist.’ This made him declare that originally ‘all things existed together’ and explain that genesis was nothing more than the modification induced by setting them in order; whereas the same dogma made the others attribute genesis to transforming combination and resolution.⁵

- (4) *Physics*, Book II, chapter 1, 192b 8-11: “Some things exist, or come into existence, by nature; and some otherwise. Animals and their organs, plants, and elementary substances – earth, fire, air, water – these and their likes we say exist by nature.”⁶

In *Elements*, Bringham revisits the classical model of Greek affiliation in the Western tradition, while not forgetting the contributions of modern scientific theories. In fact, he studied Physics at the Massachusetts Institute of Technology (MIT), so he has got an accurate firsthand knowledge of the matter. *Elements* is then a philosophical poem, a meditation on the four classical elements, on the purely material structure of *being*, or, in other words, on the nature of the world and its tiniest constituents. It consists of seven parts in the 1995 edition and of six parts in the 2008 revised edition, where the opening section has been omitted altogether. For our critical analysis, we will turn back to the original text, though the later version will also be invoked where textual variants are relevant. In the first edition of the poem, sections I, II and III are meant as a sort of extended prologue on the ultimate material nature of the world, whereas sections IV.1, IV.2, IV.3 and IV.4 are devoted to an in-depth meditation on each of the four classical elements – air, earth, fire and water, respectively. In any case, elements are a recurrent motif in Bringham’s entire poetic corpus. In his literary universe, the world is made of such simple things as light, stones, water, silence, air, mountains, breath, blood, and bones. These are only instances: “*In the high passes the stones turn, / tuning the air,*” says the speaking voice in section IV (“Body, Speech and Mind”) of *Tzūbalem’s Mountain* (1982); “*This music is all about water,*” says one of the speaking voices in section II of *The Blue Roofs of Japan* (1986); “*My people no longer stare into water / and fire for clues to the future,*” says *homo sapiens’* voice in section V of *Conversations with a Toad* (1987).

A MEDITATION ON ELEMENTS

I · ONE-ROOM SCHOOL

“One-Room School”, the opening section in *Elements*, anticipates some of the poems included under the heading “The Physics of Light” in *Selected Poems* (2009), particularly pieces like “Hick & Nillie” or “Demons and Men”. In that section there are poems that look like dialogues, strongly reminiscent of Socrates’ mayeutics as a way of gaining access to reliable knowledge of reality. “One-Room School” takes on the form of a dialogue

⁵ Aristotle, *Physics*, *ibid.*, p. 41 and p. 43.

⁶ Aristotle, *Physics*, *ibid.*, p. 107.

between a teacher and a student. What is peculiar about the setting is that it is a school with one room or class only, and that the whole curriculum is concerned with exploring the ultimate nature of reality or *being*. There is only one world and so there is only one school. Or maybe the whole world is a big one-room school where humankind must come to terms with reality in its intellectual confrontation with *what is*. The body and the senses (the organs of sensory experience) are of the essence in humans' primary epistemological encounter with the world, but at a higher level, the mind and speech turn out to be of paramount importance. In tackling the nature of the world, humans cannot do without words, the whole thinking process happens in the realm of language, which, like the world itself and our experience of it, is in a state of perpetual change. Words help us verbalize our insights into reality, our intuitive discoveries about any single thing in the world, and dialogue, in the broader sense of the word, remains a powerful tool in the construction of human knowledge over time. The history of humankind on earth is nothing but an inexorable search after knowledge and truth. Knowledge is a specifically human construct, whereas truth is something beyond ourselves that *appears* to us or that overwhelms us all of a sudden. There are several paths that might point the way to knowledge – art, science and philosophy among them.

In the very cradle of Western philosophy, Socrates and Plato knew that to philosophize was the art of dialectic – the art of using words that were sharp as knives to penetrate the essence of the real, to go beyond the polished surface of objects, and to reach a core of irreducible meaning at the heart of things. In his classic *After Babel. Aspects of Language & Translation*, George Steiner reflects on the Platonic dialogues and comes to the conclusion that “the use of the dialectic as a method of intellectual chase stems of the discovery that words, stringently tested, allowed to clash as in combat or manoeuvre as in dance, will produce new shapes of understanding.”⁷ Dialogue as a means of accessing the truth concerning the ultimate constituent elements of reality is the device Bringham makes use of in “One-Room School”. The poet is following closely in the steps of Socrates, who helped his students to give birth to his own ideas through the so-called mayeutic method. Socrates' mayeutics was a way of encouraging people to think for themselves, critically, with a lucid mind. The whole composition could be seen as consisting of several distinct parts. These are the opening lines of poem I:

- A simple question to begin the day.
What is? Suppose we take apart the world.
 Suppose we disassemble everything
 that is, down to invisible flakes and crumbs,
 and then we disassemble those, and then
 we catalogue the essences we find.
 Then, to test our findings, we can try
 to build the world again, just as it was.
 How many parts of being are there,
 and how many does it take to make a world?
 One? Two? Three? 2.8? 3.2? Four?
- One half should be enough.
- One half of what?
- Of anything. And everything that is
 can be remade by recombining
 that one half so it keeps on dreaming

⁷ George Steiner, *After Babel. Aspects of Language & Translation*, Oxford: Oxford University Press, 1975 (1st edition) and 1992 (2nd edition), p. 23.

of the other.
 — Which doesn't exist?
 — Which needn't exist.
 — But the dream of it does.
 — One half alone is one by another name,
 and one is not the answer. We need two.
 — What are they?
 — Positive and negative,
 male and female, being and nonbeing.

The teacher begins the lesson of the day with a simple question – *what is?* – and encourages the student to consider the possibility of grinding the world down into its tiniest constituent parts to see what the essences at the bottom of everything are. He is talking of simple elements or irreducible particles, of the fundamental *parts of being* necessary to make a whole world. How many primary constituents of things are there? A few elements, or an infinity of atoms? The answer is not simple at all. Four is probably the simplest answer to this question, for, since antiquity, reality is thought to consist of earth, water, fire and air (even if there was no consensus among the pre-Socratics as to what exactly were those parts of *being* and which was the most fundamental of them all). However, other possible answers are suggested from the start:

- (1) Maybe one half of anything should be enough to remake every single thing in the world. By rearranging its constituent elements, it is possible to make one half “*keep on dreaming / of the other.*” There are subtle Platonic echoes here: humans are said to be halves split from an original whole entity and so they spend their whole lives looking for their corresponding half to make themselves whole again.
- (2) Maybe one half is not enough and we actually need two: positive and negative, male and female, being and nonbeing. The whole world is structured around dichotomies like these, which could also be seen as pairs of Blakean contraries or opposites, and *without contraries there is no progression*, as the Romantic poet himself said. Yes and no are also among those fundamental dichotomies, but *yes* is strangely connected to *money*, which is a fiction we find convenient to use in human transactions.

But these two options do not exhaust the wide range of possibilities that are further explored in “One-Room School”:

- (3) There might be no final *Gestalt*, only fragments scattered everywhere. “*There are no elements. The world / is a burst of hurtled fragments / scattering, with no place left to land.*” This means that maybe there are no basic units or constituent parts of *being*, arranged according to some kind of logic into everything we know exists in the world to make a coherent whole. The universe is nothing more than fragments moving or flying in all directions at supersonic speed, into the boundless limits of the unknown. Or maybe these words are meant as a reference to the fact that everything is in a state of Heraclitean perpetual change and motion – protons and neutrons and electrons moving around a centre or nucleus at the heart of atoms.
- (4) *What is* consists of a combination of chemical elements from an accurately systematized taxonomy. “*Hydrogen, helium, lithium, sodium, / nitrogen, oxygen, chromium, zinc....*”: the world consists of a discrete catalogue of elements that are perfectly systematized in the so-called periodic table, an accurate, scientific rendering of the chemical components out of which all matter is made. Credited to the Russian chemist Dmitri Mendeleev, who developed a version of the now-familiar tabular presentation in 1869, the periodic table of elements provides a useful framework to classify, systematize, and compare many of the different

forms of chemical behavior. There is a total of 118 known chemical elements, organized by selected properties of their atomic structures and presented in increasing atomic number (i.e., the number of protons in an atom's atomic nucleus) under 18 groups and 7 periods. These elements are arranged into seven categories, hence the reference to seven suits of cards: "God's playing cards, laid out in seven suits: / $2 + 8 + 8 + 18 + 18 + 32 + 32 = 118$, / with only 12 or 13 left to find." The 12 or 13 left to find are the elements that the scientific community has not found yet. There is a subtle echo beneath Bringhurst's words here pointing to Einstein's notion that God is playing dice with the universe. *Un coup de dès*, said French poet Stéphane Mallarmé in a very different context. What uncanny feeling if God were playing cards with the world, if randomness or mere chance were central to the very conception of the cosmos, which humans think is order or harmony incarnate. "What is a deaf man playing solitaire, / unable to finish the game, because / the cards keep spilling off the table," says one of the two voices taking part in this philosophical dialogue. These words convey a sense of awkward impotence in the face of some deaf man playing cards all by himself, who does not know exactly how to manage the cards.

- (5) *Being* is like a tree, and it does make perfect sense to the human mind. "The ingredients of being form a tree / and not a pyramid – and not a house of cards." It is not inanimate stone blocks or cards that provide the best metaphor for the shape the ingredients of *being* assume. By claiming that "the ingredients of being form a tree," Bringhurst makes use of an organic metaphor in his attempt to grasp the nature of *being*. Everything in this tree-shaped being is endowed with a life of its own and is bound to perish sooner or later. A ticking clock is relentlessly going its own way beneath the universe, but here *being* is conceived of as "A glassless hourglass with leaves instead of sand." *Being* is life and death, presence and absence, growth and decay. Or *being* is a gigantic clock measuring not seconds or minutes, but the alternation of life and death, the succession of human lives on earth. There are profound and tantalizing literary echoes in these words that can be traced back to Homer's *Iliad* (Book VI, lines 144-149), where human lives are conceptualized as being leaves.⁸ If we place Bringhurst's reflection against this *topos*, then there is, of course, no definite number of leaves or human lives, which are in a state of perpetual renewal, "because the upper leaves keep falling / off the branches as soon as they are formed," through a natural process of growth and decay. Life and death are the two inseparable sides to the same coin. The second voice involved in this dialogue claims that leaves do not simply fall off, "they fall apart," which is only apparently meant as an allusion to the fact that everything turns back to mother earth's lap upon its extinction. If existence is a boundless continuum made of the same ingredients, then it is only natural that every single thing in the world should turn back to this primordial and indivisible matter. But, upon closer inspection, we learn that those leaves that fall apart (regardless of whether they are or not a perfect metaphor for all the human lives hanging from the tree of life) can also be deconstructed into "electrons, mesons, / muons, neutrons, pions, protons..." which are minute particles of particles, identified by modern science, units smaller even than Demokritos' atoms, which the Greek sage believed to be indivisible.

⁸ This is the original Greek text of the *Iliad* (Book VI, lines 144-149): "Τὸν δ' αὖθ' Ἱππολόχοιο προσηύδα φαιδίμος υἱός: / "Τυδεΐδη μεγάθυμε, τίη γενεὴν ἐρεεῖνεις; / οἷη περ φύλλωνή, τοίη δὲ καὶ ἀνδρῶν. / φύλλα τὰ μὲν τ' ἄνεμος χαμάδις χέει, ἄλλα δὲ θ' ὕλη / τηλεθόωσα φύει, ἔαρος δ' ἐπιγίγνεται ὄρη: / ὡς ἀνδρῶν γενεὴ ἡμῶν φύει ἢ δ' ἀπολήγει." And this is the translation into English: "Then spake to him the glorious son of Hippolochus: "Great-souled son of Tydeus, wherefore inquierest thou of my lineage? Even as are the generations of leaves, such are those also of men. As for the leaves, the wind scattereth some upon the earth, but the forest, as it bourgeons, putteth forth others when the season of spring is come; even so of men one generation springeth up and another passeth away." See the *Iliad* (in two volumes), with an English translation by A.T. Murray, Cambridge, Massachusetts: Harvard University Press; London: William Heinemann, Ltd., 1924 (rpt. 1978), p. 273. And in Nicolo Valla's Renaissance Latin translation: "Quasim gente rogas? Quibus et natalibus ortus? / Persimile est foliis hominum genus omne caducis / Quae nunc nata uides pulchrisque, uirescere ortus / Autumno teniente cadunt, simul illa perurens / Incubuit Boreas..." Quoted by Ezra Pound in his essay entitled "Early Translators of Homer", included in *The Literary Essays of Ezra Pound*, p. 257.

The meditation on the ingredients of *being* is ubiquitous in the history of humankind. And sure enough, Western philosophy has no monopoly on the question of *what is*. Born in a place named Kaundakunda in south India in the 2nd century CE, Kundakunda is a celebrated Jain scholar and the composer of spiritual classics. His proper name was Padmanandi and he was a sage who, like all sages, meditated about fundamental questions with a sharp mind. His own philosophizing about the elements of which *being* is made appears to be encapsulated with astonishing economy in just a few verse lines:

— Kundakunda says there are just six.
 The first is time, which takes up time
 instead of space. The other five are density
 and breath, unfixity and fixity,
 and space, which takes up space instead of time.
 There are six kinds of compounds too, he says.
 They are (1) water; (2) shadow; (3) earth;
 (4) all the sensible invisibles,
 like sound and smell and heat and light; (5) all
 matter that entraps a moral legacy;
 (6) the one kind of matter that does not.

The Greek model posits the existence of the four classical elements, but Kundakunda sets a model which embraces six different basic ingredients – time, space, density, breath, unfixity, fixity – and six types of compounds: water, shadow, earth, sensible invisibles, “*matter that entraps a moral legacy*” and matter that does not. This makes a total of 12 ingredients that are not, strictly speaking, small blocks of matter, but something else. In our Western frame of mind, *time* and *space* are those Kantian axes within which all human experience takes place and so they are elements of a kind. *Density* has purely material connotations, but *breath* points to the fact that there are both animate and inanimate (living and nonliving) creatures in the world. *Fixity* and *unfixity* suggest that there changeable and unchangeable things. As for the compounds, *water* and *earth* are familiar enough, but *shadow* takes into account the existence of light and its effects upon objects in the world. The so-called *sensible invisibles* denote things (sound, smell, heat, light) that can be perceived through senses other than sight, or not primarily through the eyes. Categories 5 and 6 are probably meant as a reference to the sphere of human values, though we are not sure of this. In any case, 12 ingredients seem to be too many for the other voice participating in this philosophical dialogue. Two is enough, 12 is spun from two, “*Yes and no say all that you can say / and all that anyone’s ever said,*” and “*all the things you say can still be said / by passing through a battery of switches / that only know two choices: on and off.*” Being and non-being, on and off, life and death, yes and no, light and darkness – we live in a world of elemental opposites. The whole lifetime of a person moves from darkness to light and back to darkness again.

From the speculation on the basic constituent elements of reality, Bringham’s meditation moves forward to a meditation on *what is* in itself. At this point in the poem, the thinking is profound and is given voice through gnomic poetry. Two threads of thinking are woven into the following verse lines. First of all, the two speaking voices in the poem consider the possibility that *what is* is “*just a system of representation.*” If it *is* a system of representation, then one might wonder what it represents. Well, the system represents itself: it is a mirror not held up to the world but to itself, so that what we get to see when we look into the nature of that mirror is *being* looking at itself, or, in other words, *being* in a state of purity. *Being* is self-contained, autonomous, unpolluted, narcissistic, as it were. It exists regardless of whatever might lie outside itself:

— And what does the system represent?

- *What is*. That is, itself and nothing more.
- *What is* is always looking in the mirror?
- *What is* is a mirror looking at itself.
- Or looking at us.

And yet, one of the voices acknowledges that the mirror that *being* is is also looking at us. The first person plural object pronoun *us* is possibly meant as a reference to all creatures (living and nonliving alike) that make up the world. This interpretation becomes more and more plausible as one moves forward in the unfolding of the mayeutic process at stake in the subsequent lines. *What is* is not just a self-reflective or self-referential mirror, but also a language spoken by all sentient and non-sentient beings. “*What is* is a language, not a message,” and it is spoken by everyone, everything, no one and nothing. In reflecting and speaking the world, *being* is the speaker and the spoken: it is the language as a tool of communication and the message uttered, it is the words and the spoken, but also the unspoken and the unspeakable – that which defies verbal definition. There is no way of keeping apart *what is* from who speaks *what is*. *Die Sprache spricht*, says Heidegger; *das Sein spricht auch*, says Bringham too:

- Everything that *is* speaks Being’s language,
and as soon as someone speaks it, what it says
is something more than what it is.

In the closing movement of “One-Room School”, the emphasis of the meditation is laid once again on the possibility of even taking the world apart into identifiable minimal units, constituent blocks or elements. If *what is* is a language (speaking itself), then the elements the world consists of must be the equivalent of words, or, to put it differently, the *lexicon* of a gigantic language that somehow manages to overcome the division among living and nonliving beings that the biblical Babel episode brought about so long ago. And the immense set of words of that language are combined with one another through the mechanisms of *syntax*, which establishes sense relations and produces larger sense units. If the lexicon is the elements themselves, then the syntax is the *interconnections* of those elements. If interconnections produce meaningful entities, then those entities must also be related to everything else through interconnections of a higher order (*interconnections of interconnections*):

- Can we or can we not identify
the elements...
- The lexicon and syntax?
- ... and interconnections of elements
that add up to the world?
- Don’t stop there.
- Interconnections of interconnections
of elements are necessary too.

In the end, everything in the universe is related to everything else. A long sequence of rhetorical questions dwells on the changeability of the world: maybe it adds up, it multiplies, subtracts, subdivides, or it is born and dies. Like language itself, the world is in a state of perpetual flux, but *being* remains the same, indestructible, forever. It just *persists*. The ultimate nature of elements remains an inscrutable mystery:

— These elements you speak of,
are they fragments? Are they wholes?
— And is there
anything except enlightened nature
in a stone, a stream, a candleflame, a breath?

— Or time and space?
— Or density
or emptiness?
— Or growth?
— Or death?

The constituent elements that are the lexicon of the world might be fragments or wholes. It does not matter much in the end. The poem closes with a long list of questions that do not await a simple answer. *Stone, stream, candleflame* and *breath* already evoke the four classical elements – earth, water, fire and air – that constitute the subject matter of sections IV.1, IV.2, IV.3 and IV.4. All these four entities populating the world are representative of the whole spectrum of existence and contain nothing more than “*enlightened nature*”, – i.e., mouthfuls or handfuls of *being* condensed into the unique things or objects there are in the world. They might contain nothing more than time, space, density, emptiness, growth or death. Maybe there is not much to existence on earth after all: there is life and there is death, and nothing in between. In this context, human life is a journey from darkness to light and back to darkness again, or a journey from darkness to darkness across vast expanses of light.

II · A PRAYER

The second poem in Bringhurst’s *Elements* is a moving prayer addressed to the four classical elements, which are the ancestral grandparents of everything that exists in this world. From a purely structural point of view, this short composition could be viewed as consisting of three distinct parts: the first one is a simple, straightforward invocation addressed to the elements, followed by a brief but intense meditation on the nature of the self; the second part, the semantic hinge located exactly at the geographical centre of the poem (in italics in the 1995 edition and in roman in the 2008 revised incarnation), dwells on the relationship between self and place; and the third part is a celebration of all four elements, our only home available to us humans, even if we are inevitably exposed to them. The rhythm throughout the whole composition is a kind of litany-like incantatory musicality. Linguistically, it is achieved through the use of subtle parallelism and simple declarative sentences where the verb *to be* is palpably predominant. This is, of course, no random choice. The resulting poem is reminiscent of the oral literatures of North America in many respects and it is amazingly rich in what looks like mythical echoes.

In the face of the beauty and grandeur of the world, the perceiving self goes back in time to the realm of pristine origins and what he/she finds there are earth, fire, water and air, seeking to combine with one another to bring about the whole world as we know it to be. This is a kind of pagan cosmogony, as there is no governing or omnipotent consciousness here presiding the whole act of creation, as is the case with the biblical book of Genesis. Thus, the poem opens with a simple vocative: “*Grandmother earth and grandfather fire / and grandmother water and grandfather air.*” Earth and water are feminine principles, whereas fire and air are masculine principles – by the way, this is reminiscent of the

marriage of Gea (earth) and Uranus (sky) in Greek mythology at the beginning of time. The reader or hearer of the poem is thus plunged back into an elemental world of basic ingredients, where the human is not necessarily at the centre of the universe. In fact, there are among the elements “no eyes, no mouths, no fingertips, no ears.” This is no anthropocentric cosmogony. In this particular context, the self is something else:

The self is neither element nor recipe.
The self is just *what is* as it splits and turns; [no italics in the 2008 text]

it is the face assumed by one
to face what seems to be another.

The concept of ‘self’ is a peculiarly egoistic human concept. We humans are quite self-absorbed in this respect. It is inextricably linked to one’s own personality, to the core of meaning inside oneself that is perpetually in Heraclitean flux. Nothing stays the same. Like the world or like language itself, humans also change from one second to another. Therefore, the self is defined as being “*what is* as it splits and turns.” However, it is also defined as being the face one takes on to face *the other* in our relation with the world, which includes our fellow human beings and non-human creatures as well. “*Toad, all the roads from a man to a woman, / a man to a man, woman to man, woman to woman / lead through the nonhuman,*” said the voice of *homo sapiens* in section IX of *Conversations with a Toad* (1987). And also: “*The animals give us our speech and the means / of our thinking.*” Placed amid a world of elemental constituents, human beings establish a set of complex relations with the others – animals, stones, trees, light, silence, air, place. If we allow all these elements to cleanse our senses and invade our mind and body, then we are in a position to say we fit in, we belong among the grander scheme of things, we feel we are at home at last:

*We are at home only so long
as we are inhabited,*

*alive only so long as we are lived in
by the places where we are.*

Place is of the essence. It is the *genius loci*, or the spirit of the place, that ultimately pervades the existence of human and nonhuman beings. When a perfect communion is set up between the perceiving and thinking human being and the surrounding place, we can be said to be alive, pervaded as we are by the place where we find ourselves at a particular moment in time. Furthermore, the speaking voice in the poem is subtly urging the reader to try and find this unmediated communion with the world in which we are truly alive. In much the same way the language of *being* speaks human and nonhuman beings, places inhabit human and nonhuman beings as well. The resulting feeling emanating from an awareness that we are being inhabited by the surrounding space brings about peace of mind and a precious serenity. We are at home.

In the closing four stanzas of “Prayer”, there is a moving celebration of all four classical elements as the *materia prima* or primordial matter out of which the whole fabric of life is woven:

Darkness of earth, light of the fire,
rise of the air, fall of the water. That is all.

The air and earth, water and fire
that scour and feed and bathe and reclaim us.

Our one and only refuge is the elements
to which we are exposed.

Air, earth, water, fire, be here
to rebuild what we destroy.

Earth is darkness, the darkness deep inside the earth thinking the thoughts of the world (thinking all the living and nonliving creatures on earth); fire is light, pure luminosity, incandescence; air rises up in the verticality of the sky; and water falls down from heaven in the form of rain, trying to find its way into the innumerable streams, rivers, lakes, seas and oceans of the world. Those are the basic ingredients. They surround us, cleanse us, remind us time and again that we belong to them. But, even if we are aware that they make up our only home and that there is no world other than this, we keep on stubbornly destroying what they so lovingly construct in such a spontaneous and natural manner. Like poetry, *being* persists, even if humans manage to destroy the outward appearance of the world in their systematic rape of the earth's resources. "*All over the world, the earth / is tortured for money*", said one of the three voices at some point in movement I of *New World Suite No. 3*. "We don't own what we know", or *knowing is not owning*, says Don McKay in relation to this respectful environmental ethics that Bringham shares in full. Hence, the poem closes with an invocation addressed to the elements and a moving plea for help to rebuild what we destroy so mindlessly.

III · A PERIODIC TABLE

The third poem in *Elements* is a short jewel-like lyric, and also a reinterpretation of what the periodic table of elements is. In its 2008 material incarnation, the text of the poem was slightly modified, though the revisions are minor ones: the names of the groups are not in italics and the opening two lines are arranged differently. In any case, the whole composition consists of only nine short verse lines and tessellates a handful or clusters of nouns around no verbs at all. This is a poem about essences, after all, about what one finds when one takes the world apart and sees what its constituents elements are, and so it consists of a simple enumeration. Whereas the familiar periodic table systematizes all the known 118 chemical elements found in the world, this new and ambitious periodic table reduces the whole universe, which is manifold and complex, to five simple groups and twelve categories. But, what is the logic beneath this new arrangement of the elements out of which the real is made?, we may ask. This is it:

First group:
is and isn't.
Second group:
animal; vegetable; mineral; bird.
Third group:
mountains; rivers; places; stars.
Fourth group, fifth group:
two transfinite series:
hungry ghosts and nonreactive gods.

The first, elemental group consists of *being* and *nonbeing*, or, in other words, *what is* and *what isn't*. Both are real, both exist, as if they were the two sides to the same coin. The second group comprises humans, animals, plants and minerals. Mineral is the odd one out, for, unlike the rest, it is not a living creature. The third group comprises geographical accidents on earth (mountains, rivers, and places in general) and the stars up above in the sky. All of

them are made of the four classical elements: mountains are earth; rivers are water; places are a combination of earth, water and air; and stars are light and fire. The fourth and fifth groups do come as a surprise to readers' expectations: they are transfinite series, which means that they are not infinite or boundless, but comprise entities that are beyond the purely material world. There is something uncanny about the *hungry ghosts* of the fourth group, possibly meant as a reference to the dead or to the spirits of the dead, experiencing a deep hunger for life. The fifth group is that of the gods and goddesses still populating *all the desanctified places* on earth. They are there, even if we no longer see them. Gods are *nonreactive* because they are made of a completely different substance that does not actually mix or combine with other known chemical elements on earth. To Aristotle's mind, they would be made of aether instead, and not of the four corruptible elements.

IV.1 · AIR

After the three opening sections in *Elements*, the reader crosses the real threshold into the heart of the poem. Once the elements have been addressed and invoked as a whole in the cosmic classroom and in the prayer, and noted down in the new periodic table in the three preceding sections, it is due time to concentrate on each of the elements. The author relies on the classical Greek model that propounds the existence of only earth, air, fire and water as the basic constituents of reality. Everything that exists in this world is the fruit of a combination of all these in different quantities and arrangements. The first meditation on the four classical elements focuses on air. Air is difficult, almost invisible, and also vital for living beings. We need air to breathe and to keep on living. It surrounds us all the time without our noticing it, for there is no way of directly seeing, touching or tasting air through one's eyes, hands or tongue. We can only indirectly hear it in the form of wind, and we can smell it in the form of scents, but it is otherwise untouchable and invisible in many respects. The whole composition consists of eight stanzas and possibly of five clearly identifiable parts. The following critical analysis focuses on each of these movements for the mind.

Breathing is a fundamental activity we humans perform we do not know how many times per minute. It is something we do unconsciously, automatically, naturally, but it keeps us alive in the realm of the living air. The inner lungs inhale air and get whatever nourishment they need for the human body in the form of oxygen, and then they expel the carbon dioxide generated in the whole process. The outer world is a gigantic lung, and so breathing is our most elemental link to the world outside and to the others, for all living creatures on earth share the same reservoir of air:

To breathe is to be breathed,
to give up the ghost and receive it again,
to belong to the shared and exterior lung,
rich with its livery of sunlight–
rose petals, icicles, willow leaves, waves–
or shrivelled and cringing.

If *speaking is to be spoken* by language itself, then *breathing is to be breathed* by the big lung of the world. That big lung is no extra or addition, it is a space shared with all the living and nonliving creatures of the world. As such, it is characterized by a rare exuberance and the manifold manifestations of earthly beauty. Hence the seemingly chaotic enumeration we find in the closing lines of the first stanza – rose petals, icicles, willow leaves, waves. What all these things seem to have in common is their joyful existence and motion surrounded

by air. It is air that touches the rose petals, that freezes water into icicles, that whispers through the willow trees, that pushes sea water into motion to form waves and spindrift. The same richness is palpable in the second stanza (and movement) of the poem, which is a celebration of the different living manifestations of air in the form of wind (blue, black, copper, striped, white and desert wind) and a moving celebration of air as “*emptiness, brightness, gull’s wing, darkness, / lark song, whisper, stillness, winter gale...*” Air is the realm of emptiness for it is untouchable, but it is also the realm through which light and darkness pervade the world, the invisible force that keeps the gull’s wing floating as if suspended on nothingness, and the medium through which birdsong, human whispers, silence and the fierce fury of a winter gale reach to our ears. These are all instances of what air can accomplish or make possible.

The third stanza deals with the chemical composition of air, with “*the sacred, simple alphabet of air.*” In this simple lesson in the anatomy of air, we learn that this element consists of other simpler chemical elements. The natural realm of air is the atmosphere itself, the layers of gases surrounding the planet, retained by Earth’s gravity. They make possible and protect life on Earth by warming its surface through heat retention and reducing temperature extremes between day and night. The atmosphere is called simply air when used to refer to breathing and photosynthesis, which is also a form of breathing. Air suitable for the survival of terrestrial animals and plants is nowadays known to exist only in Earth’s troposphere, and so it is a precious, vital element. Vast as the universe is, no suitable air is to be found anywhere else, and so this is the only livable world possible to date. The chemical elements that humans inhale are different from the ones they exhale after taking all the nutriment the air provides their bodies with:

The sacred, simple alphabet of air–
N₂, O₂, Ar, Ne, He, CO₂ & CH₄ . . . – [and in the 2008 text]
into which, moment by moment, we pour
the alphabet shit and the alphabet piss
that is left from cooking and eating
our alphabet steak, brewing and drinking
our alphabet beer – CO, SO₂, NO₂,
HCl, HF, H₂S, H₂SO₄. . . . [the blank space after this line is omitted in the 2008 text]

In this basic atmospheric chemistry lesson, Bringhurst uses the chemical notation or symbols so as to describe the gases we inhale and exhale while breathing. Basically, air is mainly composed of nitrogen (N₂), oxygen (O₂) and argon (Ar), which constitute the major gases of the atmosphere. But it also contains small quantities of the so-called *trace gases* such as neon (Ne), helium (He), carbon dioxide (CO₂) and methane (CH₄), as well as small amounts of other gases and a variable amount of water vapor (H₂O). What humans exhale in breathing – “*the alphabet shit and the alphabet piss / that is left from cooking and eating / our alphabet steak...*” – are such gases as monoxide (CO), sulfur dioxide (SO₂), nitrogen dioxide (NO₂), hydrochloric acid (HCl), hydrogen fluoride (HF), hydrogen sulfide (H₂S), and sulfuric acid (H₂SO₄). This is just to remind us that, in such a simple act as breathing, air gives us generously the gift we need to keep on living, and what we give air back is but the waste gases we no longer need in our bodies.

The fourth and longest movement of the poem is concerned with language, writing and speech. It seems to us that this is the true heart or core of this meditation on air. The air is rich in voices, probably those of our ancestors, but also of other living and speaking creatures in the world, for humans have no monopoly on meaning or language at all. That all (living and nonliving) creatures on Earth want to *mean* something seems to be a truism at this point of our critical analysis of *Elements*. “Everything that *is* speaks Being’s language,”

says the speaking voice in “One-Room School”. Ours is a polyphonic world in which every single thing speaks a language of its own, shared with the members of its own species. But there is a universal language, *Being’s language*, which is spoken by everyone and by everything. Communication is of the essence when we come to think of life on earth; if beings did not communicate with one another, they would be bound to wander perpetually as isolated spheres with no bonds or connections with their fellow creatures. A world of isolated monads is a disquieting idea. If everything is endowed with meaning, then everything is a sign in the complex mesh of living things or in the multilayered fabric of life, which is a web of subtle interconnections. However, *homo sapiens sapiens* tends to think of language in quite restrictive human terms, and this meditation is basically concerned with human language:

Language is shaped air, a sign
that cannot be seen. What you see on the page
is writing, not language:
the visible sign of a physical gesture,
the tangible sign in confined space
of a sign that cannot be captured—
though it can be tortured, like others.

According to George Steiner, “Language [...] is the most salient model of Heraclitean flux. It alters at every moment in perceived time.”⁹ But in his personal meditation on the nature of language, Bringham has chosen to focus on one simple physiological fact that is usually overlooked or taken for granted: language is air emanating from one’s lungs and finding its way back to air, which is the exterior lung of gigantic proportions. If language is *shaped air*, then the preeminence of speech over writing is out of the question. Writing is something else; strictly speaking, it is not natural or spontaneous, but a cultural artifact. Scripts have been devised over the centuries to try to capture what otherwise would vanish forever into nothingness. In this respect, in his beautiful essay *The Solid Form of Language. An Essay on Writing and Meaning* (2004), Bringham reminds us that writing is a technique, a tool humans use to preserve what is originally eel-slippery and evanescent sound into durable solid form. When spoken aloud, words are droplets of semantic air, or mouthfuls of air charged with meaning, and, when written down on a page, they are handfuls of letterforms that were born with the Neolithic agricultural revolution. The development of farming and ranching brought about a domestication of the land and of animals, in much the same way that writing brought about a domestication of language. Both processes were simultaneous or parallel in time. Cultivated land prefigures the written page, and the marks left by the ploughshare on the ground prefigure the letterforms beautifully arranged on the page. In our critical analysis of *The Blue Roofs of Japan* (1986), we dwelt on this issue in depth. May it suffice here just to remember that writing was born to fulfill very pragmatic purposes in the management of earth resources in the Neolithic and that it is subsidiary in relation to speech. It is the spoken word that comes first and then it is the turn for the written word to leave a more or less permanent or durable record of an idea, feeling, intuition, insight into the essence of things. In the beginning, language was wild and speech was the natural gesture of humankind. Writing entered the scene afterwards, as a visible, tangible and solid manifestation of what was volatile, invisible and fluid by nature. Like other signs in the world, spoken words are also susceptible of being tortured. Everywhere the earth is tortured for money, says one of the speaking voices in *New World Suite N° 3* (2005).

⁹ George Steiner, *After Babel. Aspects of Language & Translation*, Oxford: Oxford University Press, 1975 (1st edition) and 1992 (2nd edition), p. 18.

Once shaped air abandons one's own lungs, there is usually someone close at hand to capture the meaning embedded in that mouthful of air that has just come out from one's lips. With writing, the addressee is not present, words may lead to confusion and misinterpretation because they are divorced from the body that originally uttered them. This is one of the reasons why Plato was so reluctant to trust in written words: the genuine, pristine idea is in the living, spoken word; written words are half alive, or half dead. Bringham's meditation on speech dwells precisely on the purely physiological aspects surrounding the production of sounds:

The gestures of speech
are performed in the darkness
by heart and by throat,
palate and nostril and larynx and lung.
What you see are the ploughmarks
of carbon and lead and tin and antimony,
tilling the windowbox of the page.
What you hear, when you hear,
is the echo of air against air.

If the gestures of writing are performed by the pen-holding hand, then the gestures of speech are performed by the speech apparatus. It is in the darkness of the human chest that the air coming out of the lungs is modulated and shaped by the larynx, the vocal chords, the hard and soft palate (uvula), the tongue, the teeth and the lips. Meaningless air travels a long way to become shaped sound wholes charged with semantic meaning. In speech, air also travels from the realm of darkness of the human body out into the realm of light. In this sense, every time we open our mouths to utter a single word, the miracle happens: through a strange alchemy *homo loquens* metamorphoses what is shapeless air into the meaningful *Gestalt* of articulate sounds, capable of conveying messages to the hearer. It is good news to learn that all of us are genetically preprogrammed to learn to do so without much effort. What the reader sees in writing is rows of letterforms “*tilling the windowbox of the page*”; what the hearer hears when addressed orally is “*the echo of air against air*,” – i.e., lung air shaped into meaningful units to be deciphered by the attentive hearer. Like speaking, hearing should also be a gesture of gratitude and respect towards *what is*. Precisely, the meditation on air closes with a sort of mythical account in miniature. There is a sort of stubborn consistency inherent in the remaining elements, because earth, water and fire are visible, touchable, palpable in one way or another, but air seems to be invisible. At the beginning of the very life of Earth, our planet and our only home, earth was kidnapped forming a whole (Pangaea), water was imprisoned in seas and oceans and rivers, fire was “*cut and packaged*,” and air, “*the invisible element, / was the last one to be free*.” It took a long time for the earth to be able to produce its own atmosphere, a work in progress for eons of time. We should be grateful for all the trouble it took herself to give us breathable air.

IV.2 · EARTH

Unlike air, earth is a palpable, touchable, visible and solid element. It is also ubiquitous in civilizations worldwide as the ultimate mother of everything we know to exist. In a number of mythologies it is conceptualized as being a feminine principle, Mother Earth, from whose bosom all creatures are born into the realm of light. But in Bringham's seven-part poem *Elements*, earth is not meant exclusively as a reference to our planet, but also as one of the four basic constituent elements of reality. It is difficult, though, to keep both

concepts apart; at some points in the poem they seem to coalesce into one single thing. Hence, Bringhurst's meditation on the second element out of which everything in the world is made is an exhaustive catalogue of all the possible manifestations (or allomorphs) of earth. The opening stanza is precisely an enumeration of the tangible incarnations of earth:

To stand, to sit, to step is to be held.
To think is to behold
all the facets of the diamond, the allomorphs of earth:
pebble and boulder and bedrock,
podzol and hardpan, lava and sand,
hornblende, quartzite, feldspar, marble, coal,
basalt, granite, sandstone, shale,
clay, copper, potash, gabbro, loam,
obsidian, schist, dust . . .

If *to breathe is to be breathed*, then *to stand, sit or step is to be held* by Earth's gravity, which prevents us from floating aimlessly into outer space. To think is to behold the manifold variety and richness of earth itself as visible in all its allomorphs. The earth itself is conceived of as being a valuable diamond – our solid and irreplaceable home. *Allomorphs* is an interesting word at the heart of the first stanza, for it produces interesting concentric ripples of meaning. Literally, an allomorph is *one possible form of a particular morpheme*. Now, life is written in the alphabet of the four basic elements, which are words, and these elements consist of even smaller units or particles or manifestations, which are the equivalent of morphemes with all its variants (allomorphs). The message is crystal-clear: the book of nature is written in a language that can be deciphered and understood. What follows this reflection is a long enumeration of the different forms (allomorphs) that earth assumes or takes on – sand, lava, coal, obsidian, basalt, dust – throughout its chameleonic existence. "*Soils and rocks are earth with its cheeks / full of water and air,*"¹⁰ adds the speaking voice in the poem. This is a reminder that the abundance of water on Earth's surface is a unique feature that distinguishes the "Blue Planet" from others in the Solar System. Our planet combines earth, air and water in perfect harmony. The Earth's hydrosphere consists of all water surfaces in the world, including oceans, inland seas, lakes, rivers and underground waters. This water fills the cheeks of earth.

The second stanza dwells on the chemical composition of earth: "*Earth at its purest is crystal and metal, / the luminous shadow, in hiding but gleaming.*" The shining crystal and metal that earth is made of are a form of irresistible and beautiful luminosity found in the bosom of our home earth. By the way, these words recall those of an earlier poem in the Bringhurst corpus, "Poem about Crystal", which already showed the poet's fascination with the pure physicality of the world. The author is absolutely precise about the chemical elements earth consists of: earth is composed mostly of iron, oxygen, silicon, magnesium, sulfur, nickel, calcium and aluminum, as well as small trace amounts of other elements. What is simply astonishing and movingly poetic is that, to Bringhurst's mind, these are "*inorganic proteins, / the orthogonal, hexagonal, / simple, symmetrical, latticed, rotational / thoughts of the gods*". Everything we know exists upon earth is the product or fruit of the gods' thinking and their thoughts manage to find their way into "*the breasts of human beings*".

The third part of this meditation on earth explores the amazing abundance and rich diversity of the Earth's terrain, which varies greatly from place to place. It is known that

¹⁰ Three verse lines instead of two in the 2008 incarnation of the text: "Soils and rocks / are earth with its cheeks / full of water and air."

about 70% of the Earth's surface is covered by water, and much of the continental shelf is below sea level. This submerged surface has mountainous features, including a globe-spanning mid-ocean ridge system, as well as undersea volcanoes, oceanic trenches, submarine canyons, oceanic plateaus and abyssal plains. Bringhurst chooses to focus on the remaining 30%, which is not covered by water and consists of mountains, hills, deserts, plains, plateaus, valleys, and other geomorphologies (*allomorphs of earth*). The poet mentions some of them just to give an idea of the exuberance and richness of Earth: the anonymous, common names of “*drumlin, esker, moraine, coulee, / cwm, cliff, pingo, talus, cave,*” as well as “*the deserts and steppes, escarpments and valleys,*” and the proper names “*Chomolungma, Dibé Ntsaa, Denali, Tian Shan,*” mountains and hills scattered across the planetary geography. It is not only a matter of diversity; the planetary surface is in a state of perpetual change and undergoes reshaping over geological time periods because of tectonics and erosion. The surface features built up or deformed through plate tectonics are subject to steady weathering from precipitation, thermal cycles and chemical effects. Glaciations, coastal erosion, the build-up of coral reefs and large meteorite impacts also act to reshape the landscape. Hence the reference, for instance, to *moraine* (i.e., a mass of earth, stones, etc. carried along by a glacier and left when it melts), to *drumlin* (a very small hill formed by the movement of a glacier), to *esker* (a long narrow area of small stones and earth that has been left by a large mass of ice that has melted), or to *cwm* (a round hollow area in the side of a mountain). All of them are specific geological terms that add rigour and intellectual precision to Bringhurst's cataloguing of the earth's diversity.

The closing movement and stanza celebrates the existence of stones as a tangible piece of *being*. In words reminiscent of Gertrude Stein's well-known *a rose is a rose is a rose*, Bringhurst sings of stones as if they were fragile, delicate bites or bits of reality:

A stone is a stone is a stone
is a laundered and rock-hard and graspable
piece of what is. Beneath it, the bones
and petroleum – earth
turned into flesh turned into earth
turned into flesh turned into earth again –
are resting and waiting their turn.¹¹

What there is beneath visible rock is bones and petroleum, undergoing their slow metamorphosis, waiting their turn to come back to the earth surface in one way or another. Bringhurst's words have amazing telluric connotations about them: the flesh and bones of living creatures return to the earth's lap, spend eons of time down there in the bosom of Mother Earth, undergo a complex metamorphosis, and the whole cycle goes on forever and ever.

IV.3 · FIRE

Section IV.3 of *Elements* is an intensely lyrical meditation on fire. Of all the seven parts in this sequence, it is the poem that has undergone more profound changes in its subsequent 2008 incarnation. We all know that fire is the rapid oxidation of a material in the chemical process of combustion, releasing heat, light and various reaction products. The flame is the visible portion of the fire and consists of glowing hot gases. Depending on the substances alight, and any impurities outside, the colour of the flame and the fire's intensity will be

¹¹ The three closing verse lines are slightly different in the 2008 version of the poem: “turned into flesh and then back into earth / again and again –are just resting / and waiting their turn.”

different. But Bringhurst has chosen a completely different approach in this case: he has left aside the scientific path and related discourse that we find in the previous meditations on air and earth, and he has entered the road leading to mythological thinking. From beginning to end, the whole poem could be said to tessellate myths associated to several constellations in the night sky. Thus, fiery stars are conceptualized as being the pure embodiment of fire itself, and so the poetic voice firstly focuses on the Pleiades and the Ursa Major constellations and then moves on to other stars that hide a wealth of mythological layering or thinking beneath them. As a matter of fact, the myth of Ursa Major is a recurrent one in Bringhurst's literary corpus. It figures prominently alongside the Orion constellation myth in "Winter Solstice, Cariboo Mountains", the fourth movement in *New World Suite No. 3* (2005), and it is the fundamental myth at the heart of *Ursa Major* (2003 & 2009), another polyphonic and polyglot poem that explores the Greek and Latin myth (told in Book II of Ovid's *Metamorphoses*) as well as the Cree story of the bear-woman as recorded by Leopold Bloomfield in *Sacred Stories of the Sweet Grass Cree* (1930).

The first stanza, which is omitted altogether in the 2008 version of the poem, concerns the Pleiades constellation. In Greek mythology, the Pleiades (Πλειάδες) – Maia, Electra, Taygete, Alcyone, Celaeno, Sterope and Merope – were the seven daughters of the titan Atlas and the sea-nymph Pleione, and the sisters of the Hyades, the Hesperides, Calypso and Hyas. Also, they were companions of the sylvan goddess Artemis. The story of their catasterism (i.e., of the way they literally became stars) is a moving and memorable one. There are several versions of the myth. It is said that, after Atlas was forced to carry the burden of the heavens upon his shoulders, they were pursued by the giant hunter Orion. They were first transformed into doves by Zeus and then their images were thrust in the form of stars up above in the night sky, as they were being chased by Orion, whose constellation is said to still pursue the Pleiades across the night sky. In a different version of the story, all seven sisters took their lives because they were extremely sad due to the fate of their father or due to the loss of their siblings, the Hyades. Zeus decided then to immortalize them by placing them forming a constellation in the sky. However, in Bringhurst's mythological account of the existence of the Pleiades, the story goes like this:

The wind's daughter married the son
of the morning star, and she loved him
too much and praised him too highly.
Therefore he drowned and returned
as a seagull. She tried to drown herself too
and turned into a kingfisher. These
droplets of fire, the Pleiades:
these, it is said, are the kingfisher's splash.

The original violent chase of the Pleiades by Orion is now replaced by a love story in which two natural elements, the wind's daughter and the morning star, are ready to commit suicide to spend their lifetime together. Both lovers become sea birds that share the realms of sea and air for eternity. In this account, the Pleiades are the water drops left by the kingfisher emerging from the sea out into the living air. This is probably meant as a reference to the fact that, at some point, the Pleiades are seen far away in the distance, on the horizon, near the sea level.

Stanzas two and three are concerned with the Ursa Major constellation and the myth beneath it. In Greek mythology, the constellation is identified with the nymph Callisto, who was placed in the heavens by Zeus in the form of a bear together with her son Arcas as "bear keeper", or Arcturus. The Greeks named the constellation 'Arctos', the she-bear, or Helice, from its turning around Polaris, the Pole Star. The myth in full is found

in Book II of Ovid's *Metamorphoses*. Lycaon's daughter, the nymph Callisto joined the retinue of Artemis, the sylvan virgin goddess, and soon she became one of the favourite hunting partners of the goddess, to whom she had sworn a vow of chastity. On a hunting day, as Callisto was resting her limbs in a shady forest grove, Zeus saw her and fell passionately in love with her. He cunningly approached her assuming the appearance of Artemis, embracing her with amorous intensity. It was too late for the poor nymph to react. A few months later, her shame was made visible to her partners in the hunting party. They all came to a river and decided to bathe together. Artemis and the other virgins undressed, while she was reluctant to uncover the shame to the goddess' eyes. As she finally undressed, Callisto's advanced pregnancy was revealed to the whole party and the goddess, infuriated, banished her from her sight. Later on, Callisto gave birth to a son, Arcas. Zeus' wife, Hera, who knew of the god's infidelity, was determined to take revenge on the nymph. She grabbed her by her hair and pulled her violently to the ground. At that moment, she was transformed into a bear: dark hair covered her whole body, her hands and feet became claws, and her beautiful mouth became horrible jaws incapable of uttering a single word. For 15 years, poor Callisto wandered in the forests fleeing the presence of hunters, but she still had a human mind. One day she came across her son, Arcas, whom she had recognized and wanted to approach. Backing off in fear, Arcas clutched a spear and near killed his own mother, had Zeus not intervened out of pity transforming them into the constellations Ursa Major and Ursa Minor up in the heavens, respectively. Ursa Minor is the little bear, the Cub, sucking the nipple of heaven, whereas Arcturus is Alpha Boötis, the brightest star in the constellation Böötes, which lies in almost direct line with the tail of Ursa Major as the "bear guard".

In Bringhurst's condensed rendering of the myth, two stanzas draw an exhaustive anatomy of the constellation. Merak and Dubhe are called the "Pointers" because the line Merak-Dubhe points to the Pole Star. Dubhe comes from the Arabic *al-dubb* ('the bear'), and Merak comes from the Arabic *al-maraqq* ('flank or groin'). Alioth, Mizar and Alkaid are other stars in the Ursa Major constellation. Second in line along the tail is the wide double star Zeta Ursa Majoris, the two members of which are called Mizar and Alcor. The name Alioth is applied to the next star along the tail, Epsilon Ursae Majoris. Alkaid lies at the tip of the bear's tail. These are Bringhurst's words:

Merak and Dubhe, the lip of the dipper,
the dugs of the Bear, point to the pole star:
the mouth of the Cub, sucking what once
was the nipple of heaven. Sucking what then
was the mill and the churn. Sucking what then
was the point of a spear. Sucking what now
is the radar screen, bombsight and crosshair.

Alioth, Mizar, Alkaid: these are the throat,
not the rump and the tail, of the Great
Bear, who is stretching her tongue
to Arcturus, her son, who is clutching
the butt of a spear. He is biting the head of the spear
in his own teeth in his other form, the Cub.
And the spearshaft runs through the throat
of his mother the Bear.¹²

¹² In the 2008 version of this poem, this stanza reads quite differently: "Alioth, Mizar, Alkaid: these are the throat, / not the rump and the tail, of the Great / Bear, who is stretching her tongue / to Arcturus, her son,

“*Where there is fire, there is a story. / Where there is a story, there is a door.*” In the stanza that follows these verse lines, Bringhurst mentions other stars in the heavens associated to myths from antiquity. Stories are ubiquitous, says Bringhurst, and stories are a form of accounting for what might seem ineffable, inexpressible or unintelligible at first. Myths are stories at whose centre stand not humans, but the world itself in its myriad forms or incarnations instead. They are therefore more comprehensive in a way than, say, novels, which are primarily concerned with exploring human psychology or personality. The constellation (or ecology) of myths that make up a mythology embodies a hypothesis about the nature of reality, which is both human and nonhuman. Mythological accounts of the world are not to be dismissed as inaccurate explanations not on a par with philosophical or scientific accounts of reality. They simply offer a different, more humane, glimpse of *what is*. Among the “names of fire” mentioned by the poet are Regulus, Spica, Antares, Altair, Deneb, Cassiopeia, Capella and Vega.¹³ What all these stars have in common is that they are among the brightest in the night sky and that they are somehow associated to heroes and victims from ancient mythology. They still hold an irresistible fascination for all human beings who turn to look at them up there in the night sky, and they do hide an immense wealth of meaning which is hard for us to decipher, as we seem to have forgotten the code to interpret them correctly:

Regulus, Spica, Antares: the path
of the animals. Altair and Deneb
and Cassiopeia and Capella: the path
of the birds. Altair, the Eagle Star,
Vega the Hawk Star, Deneb the Swan Star,
silently watching the three-sided field.

The closing stanzas of this meditation on fire turn more philosophical. Now Bringhurst applies the name ‘fire’ to very different realities:

- (1) “*Things that exist but do not have a substance –/ mind, for instance – are usually fire.*” The mind is conceived of as being fire, probably because it illuminates the dark recesses of reality in its relentless search after the truth. It was the so-called *αρχή* or ultimate principle of reality for Herakleitos. The mind is also intangible, invisible, unknowable; it remains a true mystery, like fire itself, which has always held an irresistible fascination for human beings of all places and all times.
- (2) “*As for history, that nightmare, / it is fire.*” Fire is associated here to History, the relentless and pitiless unfolding of events over time governed by the whims of tyrants and greedy men. Humankind’s history is marked by greediness, nonsense, violence, war and destruction, and so it is a form of self-consuming fire. However, “*What is bigger than history,*” said one of the three voices in *New World Suite N° 3* (Movement I, staves 14-15). *Being* is bigger than history, and it is indestructible.

who is clutching / the butt of a spear. He is biting the head of the spear / in his own teeth in his other form, the Cub. / And the spearshaft runs through the throat / of his mother the Bear.”

¹³ For elemental information on all these stars see the entries in the *Encyclopaedia Britannica*: (1) Spica (Latin: “Head of Grain”), also called Alpha Virginis, is the brightest star in the zodiacal constellation Virgo and one of the 15 brightest in the entire sky. (Vol. 26, p. 15675.) (2) Antares is the brightest star in the zodiacal constellation Scorpius and one of the largest known stars, having several hundred times the diameter of the Sun and 10,000 times the Sun’s luminosity. The name comes from a Greek phrase meaning “rival of Ares” (i.e., rival of the planet Mars) and was probably given because of the star’s red colour and brightness. (Vol. 2, p. 681.) (3) Cassiopeia is a constellation of the northern sky, easily recognized by a group of five stars forming a slightly irregular W. (Vol. 5, p. 2951.) (4) Capella (Latin: “She-goat”), also called Alpha Aurigae, sixth brightest star in the night sky and the brightest in the constellation Auriga. (Vol. 5, p. 2811.) (5) Vega is the brightest star in the northern constellation Lyra and fifth brightest star in the night sky. (Vol. 29, p. 17317.)

- (3) “As for what you call technology, / it offers you the wherewithal / to cook the feast, the guest, the host, / the dining hall, the whole shebang.” Technological advance in the hands of man has contributed to increasing the torture and pain inflicted upon Mother Earth. In this context, Bringhurst’s words are a vindication of a new environmental awareness. The poem closes with an invocation to all four elements and to two well-known trickster figures (coyote and raven) to cleanse our senses, restore us our common sense, and save the world from our own greedy manners: “Earth, water, air, fire, coyote, raven, bathe us. / Clean our bones.”

Stars and constellations have held a lasting fascination for humans of all times and historical periods. Philosophy and science were born of the desire of knowledge in the face of the awe-inspiring grandeur and beauty of the universe. The word *κόσμος* meant ‘order’ and order is after all a beautiful thing to human eyes. The most notable thing about the universe is the order it displays in events on a cosmic level like the movements of sun, moon and stars. There is an inevitable aura of divinity still clinging to stars that the rationalistic or scientific outlook has not yet managed to dispel in people’s minds. That we should still raise our eyes and direct them towards the shiny bits and pieces of light shimmering in the night sky testifies to the endless fascination stars hold for us humans. It also accounts for the attention given to the heavens by the very first thinkers in the cradle of Western philosophy: Thales, Anaximander and Anaximenes, among others, would lift their eyes to the heavens and tried to produce a systematic and scientific account to explain what their eyes saw for them. That 2,500 years later Bringhurst should have decided to compose a literary work of art on the constellation of Ursa Major and some of the brightest stars in the night sky comes as no surprise; it is a palpable proof that humans have not changed as much as we might think at first sight.

IV.4 · WATER

The closing poem of *Elements* is an accomplished meditation on water, which was also the palpating heart of *The Blue Roofs of Japan* (1986) – “This music is all about water.” Water stands for all that is natural, spontaneous, nature-made (not man-made); it might also stand for the fluid nature of *being*, which is capable of assuming many forms or manifestations. In this context, water is now examined from a myriad standpoints as one of the basic constituents of reality, possibly the least dispensable of all. It comes as no surprise that Thales of Miletos, one of the eminent Presocratics and sages of ancient Greece, should have chosen it as the ultimate *arché* (i.e., principle and origin) of reality about 2,500 years ago. Water is the origin of life in a most elemental sense of the word: our bodies are made of water almost in their entirety, and we need water as a daily element in our diet if we are to lead a healthy life. But, in another sense, water is like crystal: it tells of nothing beyond its transparency and purity. Like light, it is the nutriment of all life on Earth, or, to put it differently, water is the fluid nourishment of *being*. From a purely structural point of view, Bringhurst’s composition consists of six stanzas and six movements for the reader’s soul as well. “Water” opens with an enumeration that, far from being chaotic, has a relentless logic about it. Nothing is random about this well-wrought poem, where we get to see Bringhurst at his best, fusing ideas and music into a unique tapestry of powerful resonances. As in the case of the meditation on earth (section IV.1 of *Elements*), the first stanza of this poem is indeed an exhaustive catalogue of the allomorphs or incarnations of water, ranging from the immensity of the oceans and the seas to the tiny dew drops:

Ocean, snowflake, frazil, raindrop,
tide-rip, sea-ice, icefloe, hoarfrost, hail,
geyser, graupel, spindrift, mist,
tidewater, pondwater, swampwater, dew . . .

Upon closer inspection, it seems that water is an omnipresent element: it is inevitable, pervasive, and necessary for life. That it is such an essential ingredient is out of the question; it is made explicit in the second stanza (and movement) of the poem, which claims that water is blood. But the world is inhabited by both immortals and mortals, and so the poetic voice affirms that (1) “*Snow is the blood of the dead*”, (2) “*Dew is the gods’ blood*” and (3) “*Creeks, rivers and seas / are the blood of the only one who is living.*” Snow, dew, streams, rivers and seas are all allomorphs of water, and they constitute the nourishing blood of both gods and humans, and also of “*the only one who is living,*” which is possibly meant as a reference to Earth itself in its entirety – or to *being*, which is indestructible. As is common practice with Bringham, the simplicity and transparency of the poet’s language is admirable and moving. That the poet should be able to speak of water with such profundity and clarity at the same time is truly a miracle. A sustained meditation on this most elemental of things requires of great stamina and intellectual precision, which is no minor accomplishment. Bringham makes use of simple declarative sentences following the basic pattern *A is B* at the heart of this string of metaphors. Now, the syntactic simplicity of the two opening stanzas stands in sharp contrast with the third stanza, which focuses on humans’ greedy exploitation of water resources to generate electricity or to amuse themselves. Curiously enough, it is “a rusting backhoe” that gives voice to the injunction (of strong biblical echoes reminiscent of the Ten Commandments given by Moses to the Israelites in the Book of Deuteronomy) for humans not to overexploit water mindlessly:

And at dark I heard a rusting backhoe say,
 Thou shalt not boil a kid in its mother’s milk
 nor bury the river under its own water
 for kilowatt hours and pleasureboats
 nor suck the river dry – unless, of course,
 you wish to; and in that case, please present
your passport and your credit card
to the desk clerk; leave
your culture and your language
and your children and your genome in the till.¹⁴

The Earth is a sacred place, and so is water as one of its basic constituent elements. We humans appear to forget this elemental truth. Our obsession with *money and jobs*, those absurd goals in life in the Western frame of mind that Bringham rightly criticizes in his impressive essay “Breathing Through the Feet: An Autobiographical Meditation”, prompts us to abuse the Earth’s generosity. Hence the references to the *passport* and the *credit card*, those superfluous tools that do not truly define a person. If one pays homage or gives in to these, one is mindlessly leaving *culture, language*, one’s *children* and the human *genome* behind, even though they are the things that truly matter. Humans belong to a given social community that speaks a particular language and treasures a culture that is being built over time as a collective *work in progress* of titanic dimensions. These are the genuinely human traits that define a person; money, passports and credit cards are dispensable accessories after all. They have nothing quintessentially to do with what we are. And yet they are the things that matter in a monstrous system where money takes precedence over the dignity and well-being of all humans. A system with no scruples like this one is absolutely corrupt at its roots. It is unhealthy, abnormal, bound to extinguish itself over time in one way or another, we like to think.

¹⁴ These verse lines read differently in the 2008 incarnation of the poem: “your credit card and passport to the desk clerk; / leave your culture and your language / and your children and your genome in the till.”

In the fourth stanza the poetic voice dwells on the nature of the voice, heart and thought of gods and humans. Whereas the gods have water voices, fire bodies, air hearts and earth thought, humans have air voices, water bodies, earth hearts and fire thought. Body, speech and mind – the potent triad recurrent in Bringham's poems – are made of all four classical elements in different measures and combinations though. That gods' voices are water makes sense as soon as we acknowledge that the gods are incarnate in streams and rivers, in every single natural element indeed. In pre-industrial societies humans could still sense the presence of gods and goddesses in mountains, trees, seas, stones and birds. By contrast, in industrial societies we are unable to notice them anymore. That gods' bodies should be fire accords with the Presocratics' intimation that all things in the perishable world were made of corruptible combinations of elements, whereas celestial beings were made of fire, which is more ethereal in a way. Similarly, gods' heart is air, for they are sometimes whimsical in the way they interfere with human affairs, and their thought is earth, which means that they think all things into being. Their thoughts are the trees, seas, mountains, stones, flowers, birds, etc. that populate the world. By contrast, humans have got voices of air that emanates directly from their lungs and is modulated by their speech apparatus; they have got bodies which are primarily made of water and earth hearts in love with the pleasures offered by this Earth. Their thought is fire and is capable of creating intellectual and imaginative constructs of amazing intricacy and perfection. Bringham embodies this wealth of meaning and profundity of thought in a short stanza of only five verse lines:

The voices of the gods
are water; ours are air;¹⁵
their bodies, fire; ours are water.
Gods have hearts of air, but ours are earth;
their thought is earth, and ours is fire.

An ode or a tribute to trees – this is what we find in the fifth stanza of “Water”. Trees are rightly a recurrent image in Bringham's work: they represent everything that is natural, simple, nature-made. At one level, this stanza concerns the nature of trees themselves, which draw their nourishment from the water and minerals their roots find underground, as well as from the carbon dioxide and light they seek with their leaves and branches. Trees grow then vertically, downwards into the hidden recesses of nourishing earth, and upwards into the blue expanses of light and air. Like feet, which link humans' body with the world, trees are the link that bring earth and sky together. But on another level, this stanza evokes a state of perennial metamorphosis or change whereby all elements are inextricably linked to one another. One is reminded of a fragment of Herakleitos like this: “The life of fire comes from the death of earth. The life of air comes from the death of fire. The life of water comes from the death of air. The life of earth comes from the death of water.”¹⁶ The mutual interdependence of elements is evoked in the incantatory lines that follow:

In the white pines and the aspens,
the larches and birches,
earth is climbing a ladder of water
and water a ladder of air,
and air is climbing a ladder of fire,
and fire descending a stair
of air and water into the earth

¹⁵ In the 2008 incarnation of this poem, this verse line reads as follows “are made of water; ours are air.”

¹⁶ See fragment 34 as translated by Guy Davenport, *ibid.*, p. 161.

that is reaching and climbing with tiny hands
a ladder knotted of water, fire and air.

And the closing stanza of “Water” is an indirect or subtle reference to the myth of Ursa Major once again. Callisto, metamorphosed into a bear, confronts her son Arcturus in the woods. He nearly kills her, unaware that the bear standing in front of him is truly his mother, but fortunately Zeus intervenes and turns them into immortal constellations. A mere mortal, Callisto becomes one of those who never die the very moment she becomes a constellation. The stars that make up her body in the night sky hide a moving story that Bringhurst recreates in full detail in his complex polyglot polyphonic poem *Ursa Major*. In this stanza only the elementary brushstrokes are provided to evoke the myth preserved by Ovid in Book II of his *Metamorphoses*, while, at the same time, the circularity of

It is the sounded mother
rising up the spear shaft,
shinnying up the tree.¹⁷
transforming earth and water, fire and air,
to fire and air and earth and water:
air transforming into air and earth to earth
and fire to fire and water to water
and blood to water and blood to snow
and hunter to hunted and breath to air
all over and over again.¹⁸

This is the end of *Elements*. Now the circle is brought to perfect completion. What started as a scientific or philosophical investigation into the ultimate constituents of matter has turned out to be a complex meditation on the way the human mind and heart approach reality in their attempt to make sense of it. The Presocratics, who were poets, philosophers, scientists and naturalists, were determined to reduce the world down to its most elemental principles. Thales posited water as the ultimate *arché*, Anaximander posited the *apeiron* as the indestructible origin of reality, and Anaximenes posited air as the fundamental principle beneath the world. Herakleitos was convinced that all things were in a state of perpetual metamorphosis and yet governed by the *logos*, which he associated to eternal fire. For his part, Empedokles said that all things were the result of a combination of all four elements in different measures, and Demokritos affirmed that reality was made of tiny, indivisible atoms clashing with one another to form sensible objects. Parmenides simply abolished the plurality or multiplicity of sensible things. Reality was the *One Being* – a continuous, indivisible, undifferentiated, motionless, eternal plenum. Bringhurst draws on the ideas of all of them to produce a durable meditation on the elements that bring humans and nonhumans into a unique *Gestalt* of meaning and perfection.

¹⁷ “The wounded mother / clammers up the spear shaft, / shinnies up the tree,” in the 2008 text.

¹⁸ In the 2008 version, this line reads thus: “all / over / and over / again.”

The Lyell Island Variations

On Strange Shores of Other Literary Traditions

INTRODUCTION

“The Lyell Island Variations” is one of the ambitious poem sequences in Robert Bringhurst’s entire literary corpus. Like many of his other sequences – for instance, the Presocratics sequence of “The Old in Their Knowing” and the Oriental sages sequence of “The Book of Silences” –, it has undergone important textual changes over time. In its late definitive incarnation, the one we find in Bringhurst’s recent *Selected Poems* (2009), the sequence consists of nine poems in total: “Larix lyallii”, “Thin Man Washing”, “Absence of the Heart”, “The Reader”, “The Starlight Is Getting Steadily Dimmer”, “The Long and Short of It”, “A River, a Runner”, “Riddle”, and “Day In, Day Out”. Originally, as it was first published in *Pieces of Map, Pieces of Music* (1986) and in *The Calling: Selected Poems 1970-1995* (1995), the sequence consisted of only seven poems – with “A River, a Runner” and “Day In, Day Out” missing altogether. These two pieces were then included for the first time in *Selected Poems*, where the sequence is expanded up to a total of nine compositions. In addition, the poems were preceded by an untitled headnote in the *Pieces of Map, Pieces of Music* version which was later omitted in all subsequent incarnations of the sequence. Some of the poems in “The Lyell Island Variations” were also published here and there in a number of literary magazines and periodicals. This is the detailed editorial history of the poems in the sequence:

- (1) The sequence was first published as a sequence in A.32, *Pieces of Map, Pieces of Music* (1986), and shortly afterwards in A.35, the first US edition of the same title. “The Lyell Island Variations” includes here an untitled headnote (cf. introduction to A.22) and seven poems: I: Larix lyallii (rpt. from C.42); II: Thin Man Washing (rpt. from A.14); III: Absence of the Heart (rpt. from A.14); IV: The Reader (rpt. from C.42); V: The Starlight is Getting Steadily Dimmer (rpt. in A.47, A.48, C.53, C.57); VI: The Long and the Short of It (rev. from C.33); VII: Riddle (rpt. from C.44). Most of these poems were published in book form for the first time in *Pieces of Map, Pieces of Music*, except for “Thin Man Washing” and “Absence of the Heart”, which had been already published in book form in *The Beauty of the Weapons* in 1982 under the title “Two Variations” with minor textual variants.
- (2) The sequence is reprinted in A.47, *The Calling: Selected Poems 1970-1995* (1995). The untitled headnote from *Pieces of Map, Pieces of Music* is missing here. All seven poems are reprinted from A.32, though poem VI, “The Long and Short of It”, is slightly revised.
- (3) The sequence is reprinted in a separate publication, A.48, *Lyell Island Variations* (1995), with calligraphy by Diane Amarotico; gouache, watercolor and torn paper illustrations by John Goodyear; oasis goatskin binding and box by Carol Joyce. 19 × 31 cm. This is a manuscript book produced in an edition of only four copies. It includes an untitled preface and a poem in seven sections, all reprinted from A.35.
- (4) The sequence is expanded into a sequence of nine poems in A.92, *Selected Poems* (2009): I: Larix lyallii; II: Thin Man Washing; III: Absence of the Heart; IV: The Reader; V: The Starlight is Getting Steadily Dimmer; VI: The Long and the Short of It; VII: A River, a Runner; VIII: Riddle; IX: Day In, Day Out.

- (5) Some of the poems in the sequence were published in scattered magazines and periodicals: (i) C.42 “Two Variations: I. The Reader; II. *Larix lyallii*”, first published in *Canadian Literature* 100 (Spring 1984): 48–49. (ii) C.44 “Riddle”, first published in *Canadian Literature* 105 (Summer 1985): 15. (iii) C.46 “Riddle”, published in *Ring of Bone Zendo Newsletter* (North San Juan, California; 15 October 1985): 1, as a partial reprint from C.44 which includes only the first four lines of the poem. (iv) C.53 “Three Poems from *The Lyell Island Variations*”, in *Landfall* (Christchurch, New Zealand) 159 (September 1986): 325–327. Contents: V: The Starlight is Getting Steadily Dimmer; VI: The Long and the Short of It; VII: Riddle (all reprinted from A.32). (v) C.57 [Four poems], in *Rubicon* (Montreal) 8 (Spring 1987): 103–107. Contents: “Hóng Zichéng”, “Bodhidharma”, “Sengzhào”; from *The Lyell Island Variations*: V. “The Starlight is Getting Steadily Dimmer”, all reprinted from A.32, but with two stanzas missing from the first poem.

What the nine poems in the sequence “The Lyell Island Variations” seem to have in common is that they are all *an exercise in intertextual gymnastics* on the part of the poet, or, to borrow Bringham’s words, “an album of mere mistranslations.” They do pay an astonishing homage to a number of prominent poets from different literary traditions, or, to be more precise, to giant poets on the horizon of 20th-century poetry, as the use of textual thresholds in different languages found in the epigraphs placed as brief quotations at the beginning of each single poem makes clear. Thus, these poems are seemingly written in response to the fragmentary epigraphs from various poets writing in different languages. In between the lines are heard the voices of Paul Celan, René Char, Paul Valéry, Rainer Maria Rilke, Jarosław Iwaszkiewicz, Jules Supervielle, Pindaros, Pablo Neruda and Michelangelo Buonarroti, in both modern languages (German, French, Polish, Spanish and Italian) and in classical Greek, in the case of Pindaros. That the poet is tessellating words from so many different languages only testifies to his profound love of language, of all human languages, dead or alive, classical or modern. As Bringham himself puts it in memorable words in his foreword to *The Calling*,

Years ago in a Bosnian town a woman tried repeatedly to speak to me, though the words she knew and trusted were words I did not understand. At length, in desperation, she gave me an egg. So I was present at the birth of language – as all of us are many times in our lives. I saw a gesture turn an egg, for just an instant and for eternity, into a noun, and the egg transform the gesture into a verb. I have known since that moment that *I wanted – no matter how preposterous and impossible it might be – to learn all the words and grammars in the world*, and that poetry nevertheless precedes them all and can make its way, if it must, with the help of none. The egg is gone now, and Bosnia, like Auschwitz, is a permanent cry of pain – far less a legacy from the past, it seems to me, than a curse on the future, delivered and witnessed by us. Yet the gift remains: a feast to last a lifetime, made from a single egg, which was not consumed.¹ [*Italics mine.*]

“The Lyell Island Variations” are brought together under the name of an island in Haida Gwaii (also known as the Queen Charlotte Islands), an archipelago off the coast of Alaska and British Columbia and home to the Haida, one of the native peoples of North America. Bringham defines it as “a forested, rain-drenched Cyclades in a corner of the North Pacific” that “holds somewhere within itself – as anyone can tell by simply listening – one centre of the world.” The island has been deforested by greedy humans in search of profit and money, but strange remnants coming from other worlds wash up on the beaches:

In the meantime, much washes up on the beaches, changed by the journey. Dislodged bits of the world wash up on the beaches, pickled and dead, or

¹ See Foreword to Bringham’s *The Calling: Selected Poems 1970-1995* (1995), p. 11.

seachanged into something rich yet skeletal, familiar and yet strange. Like these small offerings from elsewhere, gathered in the shadow of the island's momentary name.

In another time, stories and songs were transformed as they passed through the prism of languages on this coast. They rotated and changed as they moved through the Salishan into the Wakashan tongues, and from Tsimshian and Haida to Tlingit and Tahltan and back again. This is an album of mere mistranslations, or it is a cycle of songs which have altered, as might have seemed right to men and women whose flesh is now trees – and of whom we should think as the trees are falling.²

Similarly, in the nine compositions of “The Lyell Island Variations”, what Bringhurst is essaying is trying to rescue strange remnants of visions and tattered fragments of wisdom from voices speaking different human languages. Over time the tree of language has evolved innumerable branches around the world, which are the natural languages spoken by different human communities. These languages have become the vehicle of expression of amazing literary works of art in a number of different traditions. To a serious poet like Bringhurst, it is of the essence to make poems that are firmly grounded on what has already been accomplished by the masters in the past. Hence he writes with the whole burden of tradition in his bones, and he seeks to master as many languages as possible. Translation and his interest in the solid form of language are expressive of the fascination that words and grammars hold for him. The poems that comprise “The Lyell Island Variations” embody a wide spectrum of human languages and literary traditions, not just literary works that are written down in the form of books, but also those monumental oral literatures of the native people of North America, which is the immediate home to the poet. To place Pindar next to Michelangelo, Rilke, Valéry, Celan, Cher or Neruda is certainly an act of intellectual bravery, as well as a forceful statement on his own poetics. Though no fragments from the immense reservoir of the native oral literatures are incorporated into the living fabric of the sequence, they are somewhat invoked in the untitled statement preceding the sequence. Lyell Island is after all a tiny spot on the West Coast of British Columbia, once populated by humans and mythtellers who still sensed the presence of spirit beings in the natural world around them. To these dwellers of old, the Haida, Bringhurst would later devote a monumental trilogy that explores the world of the classical mythtellers and gathers the translations of the poems by Ghandl and Skaay.

I · LARIX LYALLII

The first poem in the sequence “The Lyell Island Variations” is curiously entitled “Larix lyallii”. Prefaced by a handful of resonant German words, it is a moving homage to the German poet Paul Celan. Born of a Jewish family in Czernowitz (now Chernovtsy), Bukovina (Romania) on 23 November 1920, Paul Celan³ (pseudonym of Paul Antschel) spent his formative years in a Jewish community that had recently ceased to be within the boundaries of the Austrian Empire. There he attended school until his first visit as a

² See untitled prefatory note to “The Lyell Island Variations” in *Pieces of Map, Pieces of Music* (1986), pp. 52-53. The short introduction to this sequence is a beautifully wrought piece of prose: it reminds us that any place in the world is susceptible of becoming a centre and that those ancestral people who inhabited Haida Gwaii have become the very trees that are now systematically falling. See Patricia Keeney Smith's review of *Pieces* in *The Star* (Toronto), 29 November 1986: M4.

³ For the essential bio-bibliographical information on the author, see the entry on ‘Paul Celan’ in *Encyclopaedia Britannica*, vol. 5, p. 3033, as well as the critical Introduction by Michael Hamburger to Paul Celan's *Selected Poems*, translated by Michael Hamburger and Christopher Middleton, London: Penguin, 1972.

medical student to Tours (France) in 1938. Shortly afterwards, he returned to his home town to study Romance Languages and Literatures. In 1940 his town was occupied by Russian troops, but he still continued to study there. However, in 1941 the German and Romanian forces took over and the Jews were confined into a ghetto. 1942 was an *annus horribilis* in Celan's life: his parents were deported to a concentration camp, where they eventually died. He managed to escape, but then he was sent to a forced-labour camp in Romania. After working from 1945 to 1947 as a translator and publisher's reader in Bucharest, Celan moved to Vienna, where he published his first collection of poems, *Der Sand aus der Urnen* (1948). From the outset, his poetry was marked by a phantasmagoric perception of the terrors and injuries of reality, as well as by an astonishing sureness of imagery and prosody. In July 1948 he finally settled in Paris, which became his home until the end of his life. There he spent his most productive years as a poet and translator, and he also lectured on German literature at the *École Normale*. His poetic affinities were French, Russian, English and German.

Placing Celan's work within the body of German literature after 1945, or against the larger background of international modernism, is, however, by no means an easy task. As Michael Hamburger points out, "all we can be certain of is that it occupies a prominent, isolated and anomalous position."⁴ His poetry betrays "an obvious preoccupation with the holocaust which he survived in body but not in spirit."⁵ Among his early poetry collections are *Mohn und Gedächtnis* (1952), which won him immediate recognition, and *Von Schwelle zu Schwelle*, which would follow in 1955. Two crucial collections, *Sprachgitter*⁶ (1959) and *Die Niemandrose* (1963), marked a shift towards a second phase in Celan's work. They were followed by *Atemwende* (1967), *Fadensonnen* (1968) and, posthumously, by *Lichtzwang* (1970), *Schneepart* (1971) and *Zeitgeböht* (1976). Celan was also an accomplished and prolific translator. His many translations into German included poems by such diverse poets as Charles Baudelaire, Arthur Rimbaud, Paul Valéry, Stéphane Mallarmé, Guillaume Apollinaire, Henri Michaux, André du Bouchet, René Char, Paul Éluard, Jules Supervielle, Shakespeare (a selection of his sonnets), John Donne, Emily Dickinson, Robert Frost, Marianne Moore, Blok, Mandelshtam and Yesenin, among others. "The loss of his parents and his early experience of persecution left indelible scars"⁷ on Celan's psyche, says Michael Hamburger. And yet Celan was not a confessional poet. In "Todesfuge", his most famous and anthologized poem, his personal anguish is transmuted into distancing imagery and musicality so that a sort of terrible beauty is born from the poem as a perfect artifact. However, the anguish, the darkness and the shadow of death are present in all his poems, even if only in a subtle way. In spite of the difficulty of his poetry, Celan always insisted that "he was not a hermetic poet but one out to communicate, describing his poems as 'ways of a voice to a receptive you', a 'desperate dialogue' and 'a sort of homecoming'.⁸ And yet, his was a poetry firmly rooted in experience, so that "the hiatuses, the silences, the dislocations of normal usage belong to what he had to say and to the effort of saying it."⁹ The essential difficulty and paradox of his poetry demand that readers pay special attention

⁴ See Michael Hamburger's Introduction to Paul Celan's *Selected Poems*, London: Penguin, 1972, p. 9.

⁵ Michael Hamburger, *ibid.*, p. 9.

⁶ According to M. Hamburger, this is the stylistic evolution of Celan's poetry: "From *Sprachgitter* onwards the images grow sparser and more idiosyncratic, the syntax more broken, the message at once more urgent and more reticent. The existing resources of language become inadequate. Celan begins to coin new words, especially compound words, and to divide other words into their component syllables, each of which acquires a new weight. The process of condensation and dislocation is carried further in the following collections. Both verse lines and whole poems tend to grow shorter and shorter." *Ibid.*, pp. 12-13.

⁷ Michael Hamburger, *ibid.*, pp. 11-12.

⁸ Michael Hamburger, *ibid.*, p. 13.

⁹ Michael Hamburger, *ibid.*, p. 13.

to every single word in his poems. Part of the authenticity and fascination surrounding Celan's poems stems precisely from the darkness, seemingly cryptic allusions and paradox inherent in his work. He decided to commit suicide on 1 May 1970, at the age of only 49, by drowning into the Seine.

"*Larix lyalii*" is a strange Latin title for an opening poem in a polyglot or multilingual sequence. From the "Cast of Buddhas, ghosts and other creatures" placed at the end of *Pieces of Map, Pieces of Music*, we learn that *larix lyalii* is "the alpine larch, a deciduous conifer found only in Northern Rockies and Cascades." The alpine larch is then a coniferous tree native to northwestern North America; it lives in very high altitudes in the Rocky Mountains of Idaho, Montana, British Columbia and Alberta. There is also a disjunct population in the Cascade Range of Washington. These are all places the poet is familiar with, and so the tree mentioned at the heart of the poem is probably a specimen of *larix lyalii*, for Bringhurst always strives to be as much scientifically accurate as possible. Precision is one of the highest tests of a poet's sincerity, said Ezra Pound, and also one of the marks of true vocation for a millennial craftsmanship. No doubt, trees are of the essence in Bringhurst's poetry and prose, where they are quintessentially the embodiment of what is worthwhile, spontaneous and beautiful in the natural world. But this composition is, above all, a moving tribute to Paul Celan, one of the most prominent German-language poets of the twentieth century. As Bringhurst puts in the foreword to *The Calling*, "In many of the poems, the voices of the dead are also quoted or evoked. The dead, in my experience, are indispensable too, especially when they are silent, watching and listening as they do in the land, the air and us." This partly accounts for the use of paratexts or linguistic thresholds in the form of brief quotations preceding the poems in "The Lyell Island Variations". As a matter of fact, in this particular poem the epigraph "... *es sind / noch Lieder zu singen jenseits / der Menschen*" is lifted from Celan's poem "Fadensonnen", a short jewel-like lyric poem of utter concision published in *Fadensonnen* (1968). This is the original German poem in full:

Fadensonnen
über der grauschwarzen Ödnis.
Ein baumhoher
Gedanke
greift sich den Lichtton: es sind
noch Lieder zu singen jenseits
der Menschen.

This short poem consisting of only seven short verse lines becomes the starting point for Bringhurst's first variation, consisting of three little movements for the soul, three perfectly symmetrical stanzas of five lines each. The overall impression is one of sensuous difficulty or complexity firmly grounded in reality. Thus, the first stanza tessellates air, leaves and light into a unique image: air whispers in the tree leaves and light passes through them generating a subtle interplay of light and shadow. However, this first stanza is no literal translation of the opening lines of the original German text, though there are traces of Celan's poem scattered in some key words. For instance, *Faddensonnen* (a German neologism typical of his poems meaning literally 'threadsuns') is subtly evoked through "threadbare air" and "the blue light", whereas *grauschwarzen Ödnis* is translated as "ash-black shadow":

In the threadbare
air, through the tattered
weave of leaves,

the blue light cools
into ash-black shadow.

SP, p. 143.

At the geometrical centre of the poem is the image of the tree. The original German short verse lines “*Ein baumbober / Gedanke / greift sich den Lichtton*” become a perfect five-line stanza marked by enjambment, which the poet uses to obvious effect:

Tree: the high
thought roots itself
in the luminous clay
of the caught light’s closeness
to audibility.

SP, p. 143.

The tree is the perfect embodiment of the mind, or the other way around. In much the same way the tree stretches its roots downward into the living soil, in search of water and nourishing minerals, the human mind (inhabited by thoughts) extends its tentacles as it were in all directions in search of air and light, in search of knowledge and truth. The texture of transparent light verges almost on audibility, and this mixing up of senses, or rather, this transposition from one sense realm to another is a recurrent device in many of Bringhurst’s poems. However, there is something truly elusive about this short composition of his: the more we try to concentrate on the poem itself, on its mode of utterance, which includes both theme and manner, the more clearly we see that difficulty and paradox are of its essence. In this respect, Bringhurst’s poem could be said to capture something of the difficulty and paradox inherent in Paul Celan’s original German text. “*Larix lyalli*” is then paradoxical, elliptic, obscure, difficult, ambiguous, a bit hermetic, and yet, at the same time, it has got the texture and clarity of a perfect crystal. There is a sense in which every word falls exactly into place, and that none can be removed without seriously damaging the whole.

The closing stanza brings the poem to completion and makes it reach a climactic moment. Celan’s German words, used as an epigraph to Bringhurst’s piece, are now translated into English and incorporated into the living fabric of the poem with astonishing naturalness. The ultimate message conveyed by these lines is tinged with optimism: there are songs to be uncovered or discovered that lie beyond humankind, and so poetry remains a constant groping forward as it were. This has something to do with what Michael Hamburger calls the *inwardness* of Paul Celan’s poetry:

Yet the ‘inwardness’ of his poetry places it in a line of descent that runs from Hölderlin through Rilke to Expressionism. [...] he wanted poetry to be open to the unexpected, the unpredictable, the unpredeterminable. His poems were ‘messages in a bottle’, as he said, which might or might not be picked up. That element of risk was as necessary to them as the need to communicate. On the few occasions when he spoke about poetry in public he spoke of it as a process, a groping forward, a search.¹⁰

Celan’s poetry is always *close to the unutterable*, as Michael Hamburger himself suggests. And Bringhurst manages somehow to convey this sense of the ineffable that is inherent in much

¹⁰ Michael Hamburger, *ibid.*, pp. 18-19.

of the real. Words cannot replace things, not even reach a core of irreducible meaning in them. This might well be a source of epistemological frustration, but acknowledging that words are only valuable tools in our epistemological approach to the world, that they do not replace the real thing in any way whatsoever, might also be a means of redemption. That there are still songs to be sung, even after Auschwitz and the horror of the Holocaust, is an optimistic statement after all. It signifies the redemptive power of words. The poet has still a hard work to do before him, or so seem to suggest the lines of the final stanza:

So we know that again
today, there are songs
still to be sung. They
exist. Just on the other
side of mankind.

SP, p. 143.

II · THIN MAN WASHING

“Thin Man Washing” and “Absence of the Heart” were originally published as “Two Variations” in *The Beauty of the Weapons* (1982). Thus, the sequence entitled “Two Variations” consists of two distinct poems that have been preserved in Bringham’s living corpus over time.¹¹ From a purely thematic and structural point of view, they are closely connected to one another in significant ways that shed light on the proper understanding of what looks like two musical variations on the same theme. What that theme at the core of both compositions is is something we must strive hard to find out, for these are by no means easy poems. Their complexity is part of their charm and part of the aesthetic pleasure derived from decoding them. That the prevailing tone is one of sadness or melancholy is already anticipated in the very titles of both poems and also in the epigraphs preceding them. As pure artefacts typographically made visible on the page, what first strikes one’s attention is the perfect symmetry of both compositions: both consist of four four-line stanzas; both are preceded by two brief quotations lifted from two contemporary French poets, Paul Valéry and René Char. As we have already seen elsewhere in our critical analysis of Bringham’s poems, the author is very fond of using textual thresholds that might shed some kind of light on his own pieces. Needless to say, these handful of resonant words are not chosen at random. When we look into the echoes of Valéry’s and Char’s words and place them next to Bringham’s, we learn that the voices of his literary ancestors are subtly connected to and illuminate in unexpected ways his own words. In the end, this is what tradition is all about: salvaging from oblivion the best that has been

¹¹ This is a short editorial history of “Two Variations”: I. “Absence of the Heart” and II. “Thin Man Washing”. Both were first published in *The Beauty of the Weapons* (1982) and then reprinted with some minor textual variations in A.32 *Pieces of Map and Pieces of Music* (1986); in A.47 *The Calling: Selected Poems 1970-1995* (1995); in A.48 *Lyell Island Variations* (1995), the manuscript book produced in an edition of four copies, with calligraphy by Diane Amarotico; gouache, watercolor and torn paper illustrations by John Goodyear; oasis goatskin binding and box by Carol Joyce, 19 × 31 cm. Contents: Untitled preface and poem in 7 sections: I: Larix Lyallii; II: Thin Man Washing; III: Absence of the Heart; IV: The Reader; V: The Starlight is Getting Steadily Dimmer; VI: The Long and the Short of It; VII: Riddle (all rpt. from A.35, the US edition of *Pieces of Map, Pieces of Music*, 1987); and in A.92 *Selected Poems* (2009). In addition, “Thin Man Washing” was also reprinted in B.69, *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58, alongside “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”, “Sunday Morning” and a short prose piece. The implication is crystal-clear: the poems in “Two Variations” remain important pieces in Bringham’s work in progress or *living repertory*.

thought, perceived, verbalized, and made into universal poetry, capable of moving humans coming from different cultural and historical backgrounds. The whole pattern of tradition is that of a tapestry of gigantic measurements or proportions. And there is never an ending to this infinite tapestry, which is always unfolding over time, perpetually in the making, no matter what languages it finds its voice or expression in to endlessly come alive out of the creative mind of humankind. Ezra Pound, with his proverbial wisdom and the immense generosity of his *bel esprit*, used to say that the important thing was to get poetry being written; it did not matter much who did the writing.

“Thin Man Washing” is preceded by a quote lifted from a poem by René Char. Some basic information about this French poet might be in order here to understand the reason why Bringhurst has prefaced his poem with a handful of words from one of his poems. René Char¹² (b. June 14, 1907, L’Isle-sur-la-Sorgue, Fr.–d. Feb. 19, 1988, Paris) is an important 20th-century French poet who began as a Surrealist but who, after his experiences as a Resistance leader in World War II, wrote economical verse with moralistic overtones. (This tendency towards moralization may have something to do with the ultimate message we infer from Bringhurst’s poem “Thin Man Washing”.) After completing his education in Provence, Char moved in the late 1920s to Paris, where he became friends with Surrealist writers and wrote poems about his native Provence. His most important early book of verse, *Le marteau sans maître* (1934), was Surrealistic in style, being marked by verbal luxuriance and a free play of imagery. During World War II Char led a Resistance unit in the French Alps. After the war’s end, he published some of his finest (and most politically committed) poems in the collections *Seuls demeurent* (1945) and *Feuillets d’Hypnos* (1946). The latter work, his poetic journal of the war years, reflects his humanism, his belief in man’s high calling, and his anger at the brutality of war. Char’s subsequent volumes include *Les Matinaux* (1950), *Recherche de la base et du sommet* (1955), and *Commune présence* (1964). His *Oeuvres complètes* was published in 1983. Char was a master of poetic brevity, which he achieved by the use of the ellipse, the aphorism, the terse image, and the “heraclitic” phrase – i.e., the merging of contradictory ideas. The result is a poetry (including prose poems) that is austere, dense, and somewhat difficult. Needless to say, Bringhurst must have admired for sure the terseness and simplicity and beauty of Char’s language. Both compose poetry that is demanding, intellectual and complex; both seek a rare form of austerity and elegance in their language and in their ideas.

“Thin Man Washing” is a peculiar poem of rare intensity. To begin with, it has a clearly identifiable narrative compulsion to it – i.e., it tells a story in miniature which consists of four distinct parts or stanzas. The language is simple and straightforward; there is no obscurity inherent in the poem at all, though there is a moral to be learnt from it when we reach the end. Hunger is not just hunger, but something else, as we shall see below, which means that this is a deceptively simple poem. The very beginning, the traditional opening of folktales and stories (*Once upon a time...*), announces the fact that the reader is about to encounter a short story:

Once upon a time there was a man
 who never hungered any more, [anymore in *The Calling & SP*]
 or so I heard – he had devoured so many legacies,
 bitten off anything, eaten through anyone who came near –
 who one day found

¹² See the entry on “Char, René” in the *Encyclopaedia Britannica*, volume 6, pp. 3156-57, for more detailed information.

that his table was cleared,
his bed emptied, his children renamed,
and the soil gone sour in the uplands of his heart.

BW, p. 121.

From a syntactic point of view, these two stanzas are closely linked to one another, as they expand on the antecedent “a man” by means of two long defining relative clauses. In the first stanza we learn that there was a man who knew no hunger any more. He had swallowed everything he found in his way and so he had reached a point at which utter satiety made it impossible for him to hunger any longer. Hunger is not physical alone; it is both literal and figurative at the same time. Here, hunger possibly denotes appetite for everything that is worth living in one’s lifetime, including the most sacred of things, which is human relationships, commerce with other fellow human beings. It is hunger that makes us feel alive, in much the same way desire sets the targets or goals we direct our efforts towards. Because we are hungry (i.e., we need something else apart from ourselves) we might say that we are alive. If we did not need anyone or anything, we would be simply dead in life, or trapped within the limits of a frightening solipsism, or completely isolated within the crystal spheres of our minds, unconnected to everything else in the world.

In the second stanza, we readers learn that the man realizes that the heart is empty or absent, as the poem “Absence of the Heart” appears to suggest, if there is no ample room for love, which renders life meaningful all of a sudden. The sudden realization that emptiness pervades his life brings about paralysis and terror to a consciousness that is alert to these nuances of existence. The epigraph preceding the poem, “... *et la terre mauvaise dans le champ de son coeur*,” lifted from a poem by René Char entitled “Le Masque funèbre,”¹³ is now rendered into English: “*and the soil gone sour in the uplands of his heart.*” The heart is conceptualized as being a patch of soil, located up there in the uplands, far away from the coast and the life-giving substance which water is, which has gone unpleasant. Land gone sour gives no crops, brings no sustenance for humans; the same happens to a heart that is bad-tempered or not cheerful any more. It is gone sour because it is incapable of feeling anymore; it remains impassible, imperturbable, unmoved, dead. This is *la terre mauvaise* of which Char speaks in the words Bringhurst has quoted at the beginning of the piece and then naturally woven into the very fabric of his own poem in an English rendering of the same. Deprived of wife and children, of his family, and of the safety of the domestic realm, the man is nothing at all. Thus, in the third stanza he is depicted as a complete monad, with no warmth or protection, completely isolated from all creatures on Earth, with no bonds reconciling him with anything living or non-living in the world (“*Objects avoided him, animals lied to him*”). Worst of all, he had come to think he would be immortal forever (“*he had dug no grave*”), and he had forgotten what generosity means, or how to give or receive, as expressed in the parallelistic verse line “He had nothing to give; he had less to receive”. By the way, the Diamond Sutra mentioned at the end of the stanza, which the man is unable to comprehend, is probably meant as a reference to a sutra that encourages the cultivation of generosity.

¹³ This is the original French text of the poem “La Masque funèbre”, published in *Les Matineaux* (1950): “Il était un homme, une fois, qui n’ayant plus faim, / plus jamais faim, tant il avait dévoré d’héritages, / englouti d’aliments, appauvri son prochain, trouva / sa table vide, son lit désert, sa femme grosse, et la / terre mauvaise dans le champ de son cœur. / N’ayant pas de tombeau et se voulant en vie, / n’ayant rien à donner et moins à recevoir, les objets / le fuyant, les bêtes lui mentant, il vola la famine et / s’en fit une assiette qui devint son miroir et sa propre dérouté.” See René Char, *Poesía esencial*, translated into Spanish by Jorge Riechmann, Barcelona: Galaxia Gutenberg, 2005, p. 454.

In the final stanza, we witness the return to hunger, which is to say the return to life. The man of our story undergoes an epiphany-like moment of revelation. As if he were Prometheus himself, who stole the fire from the gods to give it to humans as a gift, he steals hunger, shapes it into a bowl and bathes it when no one can see him. This is the *thin man washing* of the title; it remains unclear whether he has managed to go back to humanity or not:

It was only then that he crept back in
and stole hunger and shaped it into
a bowl, in which, to this day, when no one
is looking, and the wind not blowing, he bathes. [isn't in TC & SP]

BW, p. 121.

III · ABSENCE OF THE HEART

“Absence of the Heart” could be interpreted as a counterpoint piece to others collected in Bringhurst’s *The Beauty of the Weapons*, such as “The Heart Is Oil”, for instance, which explores the heart from a completely different perspective. The epigraph, “*Douceur d’être et de n’être pas*”, is lifted from a poem by Paul Valéry entitled “Les Pas” published in a poetry book entitled *Charmes*.¹⁴ Translated into English, it would go like this: “sweetness of being and of not being”. The relevant questions to ask at this point might possibly be these: Why did Bringhurst decide to preface his poem with these words by a French poet? And in what ways was Valéry relevant to his own poetic sensibility? We know that Bringhurst is a poet concerned with exploring the problem of *what is* and *what isn’t*, the problem of metaphysics, or the fundamental question of the ultimate reality of things (which is a concern shared by poetry, philosophy and science), as the sequences devoted to the Presocratics since the mid-1970s (*Pythagoras* 1974, *Eight Objects* 1975, *Bergschrund* 1975; the section entitled “The Old in Their Knowing” in *The Beauty of the Weapons* 1982, *The Calling* 1995 and *Selected Poems* 2009; and the separate book entitled *The Old in Their Knowing* 2005) and to the Oriental sages and philosophers since the mid-1980s (the section entitled “The Book of Silences” in *Pieces of Map, Pieces of Music* 1986, *The Calling: Selected Poems 1970-1995* 1995, and *Selected Poems* 2009; and the separate book *The Book of Silences* 2001) make crystal-clear. As we go into the basic contours of Valéry’s life and work, we realize that there was much to the French poet that Bringhurst must have admired for sure. There are also subtle parallelisms between both of them when seen as erudite men interested in poetry and science and cultural ideas in general. The echoes of Valéry’s life in Bringhurst’s are simply astonishing in a way when analyzed in depth with careful attention.

Paul Valéry¹⁵ (b. Oct. 30, 1871, Sète, Fr.–d. July 20, 1945, Paris) is mostly known as one of the most renowned French poets of the late 19th century and first half of the 20th century, but he also gained a solid reputation as a prolific essayist and critic. He was a good friend to the writer André Gide, and his early literary idols were E. A. Poe, J.-K. Huysmans

¹⁴ “Tes pas, enfants de mon silence, / Saintement, lentement placés, / Vers le lit de ma vigilance / Procèdent muets et glacés. // Personne pure, ombre divine, / Qu’ils sont doux, tes pas retenus ! / Dieux !... tous les dons que je devine / Viennent à moi sur ces pieds nus! // Si, de tes lèvres avancées, / Tu prépares pour l’apaiser, / À l’habitant de mes pensées / La nourriture d’un baiser, // Ne hâte pas cet acte tendre, / Douceur d’être et de n’être pas, / Car j’ai vécu de vous attendre, / Et mon coeur n’était que vos pas.” See *Oeuvres de Paul Valéry*, vol. I, édition établie et annotée par Jean Hytier, Paris: Éditions Gallimard, 1957, pp. 120-121.

¹⁵ See the entry on “Valéry, Paul” in the *Encyclopaedia Britannica*, volume 29, pp. 17267-68.

and Stéphane Mallarmé, to whom he was introduced in 1891 and whose artistic circle he came to frequent regularly. The time-span between 1888 and 1891 was truly productive in his literary career as a poet: Valéry composed innumerable poems that were published in Symbolist magazines and were critically appraised in very favourable terms. However, 1892 was an important year in his life, for, having undergone a painful experience of unrequited love and feeling artistic frustration, he made up his mind to forget about all emotional preoccupations and to dedicate himself entirely to the life of the intellect. From 1894 onwards he would untiringly wake up early in the morning and meditate on such profound issues as consciousness, the nature of language, or the scientific method, and he would jot down his ideas and record his thoughts in aphoristic form in his famous notebooks, which were later published as his *Cahiers*.

He had almost completely forgotten about his early poetic output, but 1912 was something of an *annus mirabilis* in his life. André Gide encouraged him to revise some of his early writings for publication and Valéry began work on the collection *La Jeune Parque*, centred on the awakening of consciousness in the youngest of the three ancient “Fates”, which traditionally symbolized the three stages of human life. Such was the technical challenge inherent in the whole enterprise, that it took him five years to finish the long symbolic work. Published in 1917, it brought him immediate success and public recognition as his greatest poem. Shortly afterwards, it was followed by two volumes that consolidated his reputation as the most outstanding poet of his time – *Album de vers anciens, 1890-1900* (1920) and *Charmes ou poèmes* (1922), a collection that includes his long poem “Le cimetière marin”, his famous meditation on death in the cemetery at Sète (where he now lies buried). 1922 was also an important year somewhere else: it saw the publication of T. S. Eliot’s *The Waste Land*, James Joyce’s *Ulysses*, and Hermann Hesse’s *Siddharta*. All of his poems seemed to be subtly united by a single thread: the tension within the human consciousness between the desire for contemplation and the will to action, or, in other words, the infinite potentialities of mind and the inevitable imperfections of action. Thus, in “Le cimetière marin” he broods by the sea at noon on *being* and *not-being*, on the living and the dead. Similarly, his many letters regularly complain of the conflict in his own life between the dictates of public life and his desire for solitude. Some centuries earlier the Italian humanist and poet-diplomat Francesco Petrarca had also meditated on this same issue.

After 1922 Valéry wrote almost no poetry comparable to his earlier achievements; he devoted his energies to the cultivation of prose and criticism instead. He began work on a large number of essays, occasional papers and lectures on a wide range of topics. Profoundly interested in the problems of writing poetry, in scientific discoveries and in the political problems of his time, he devoted considerable time and attention to a wide range of subjects that testify to his abiding interests: writers and writing, philosophers and language, painters, dancing, architecture, the fine arts, education, politics, and cultural values are topics he reexamined with a lucid mind and a refreshing vigour. His essays and prefaces were not, of course, the result of improvisation, but rather the fruits of his regular meditations sustained over time. In his insatiable appetite for ideas, he resembled Bringham – or the other way around. Like Bringham himself, Valéry was greatly interested in the state of modern physics and mathematics in particular, and, through extensive reading and personal acquaintance, he became well versed in the work of such scientists and mathematicians as Michael Faraday and Albert Einstein, among others. His reputation as an erudite and courteous man, endowed with dazzling conversational gifts, made him very appealing in the society of his time, and so famous writers, scientists and politicians of the day sought his company. In 1937 he became professor of poetry, a chair

created especially for him, at the Collège de France, and he spent all his days meditating, writing, and delivering lectures. He was capable of writing sensuous poetry and prose: his poetry, at its best, was rich in natural images and allusions, classical in form, melodious in ways reminiscent of Racine or Verlaine; his prose was graceful, elegant and aphoristic. Despite his complete dedication to the life of the mind, he remained keenly responsive to the pleasures of the senses.

Like other pieces in “The Lyell Island Variations”, Bringhurst starts with the experience of a writer in another language and absorbs the poem so completely that it becomes simply a take-off point for another, similar, development. Even without reference to the originals, all the poems in the sequence are superb pieces. Like many other Bringhurst poems, “Absence of the Heart” is not easy to decipher; it is an obscure poem. The references of personal pronouns and possessive demonstratives suggest the presence of a female character and a male voice in the poetic universe evoked within the boundaries of the poem. The opening lines remain a true mystery; not much is revealed about the physical space or setting where the events in the poem take place:

Her footfalls, born of his voicelessness,
 paving their way, like a saint’s steps, patiently
 lead, windchilled and mute, [wind-chilled in *The Calling & SP*]
 toward the watchman’s bed.

BW, p. 120.

It is only conjecture to say that this might be a poem about communication among human beings, about silence and words, and about the love that renders the heart meaningful, even though, at times, it turns out to be absent for whatever reasons. It explores voicelessness and the things unsaid (“*All the words, all the silences disguised as words, / adrift between us and the unsaid.*”), but also the redemptive power of love: “*the invisible / nutrition of the kiss / opening the bark bouquet of mouths / fitted into his head*” [*wadded* in later version in *Pieces of Map, Pieces of Music, The Calling* and *Selected Poems*]. It remains unclear whether the imperative “Take your time” is addressed to the female presence in the poem approaching the male presence in the form of a watchman. In the closing stanza, pervaded by somewhat ominous connotations, the heart is depicted as being stalking all the time: “*still / when you are still and moving as you move, / matching your stride, echoing your tread.*” What is out of the question is that “Absence of the Heart” is an impressive technical accomplishment:

Out of Valéry’s short poem ‘Le Pas’, which is virtually untranslatable because of its Racinian limpidity as well as the profound differences between French and English, Bringhurst has created a moving equivalent – cello music which is deeper, softer, darker than the violin of the French. For instance, ‘pieds nus’ and ‘dieux’, with ‘ombre divine’, have suggested ‘shoeless like the gods, and the long light / laid across hear arms.’ He has added his own alchemy, ‘the dark bouquet of mouths wadded into his head.’¹⁶

¹⁶ G.V. Downes’ review of *Pieces of Map, Pieces of Music*, “Breathing in Tune and Time”, in *Event* (New Westminster, B.C.) 16.2 (Summer 1987), p. 117.

IV · THE READER

The fourth piece in “The Lyell Island Variations” is “The Reader”, a poem prefaced by a luminous fragment lifted from a poem entitled “Der Leser” by Rainer Maria Rilke. It was originally published as part of C.42 and then reprinted in *Pieces of Map, Pieces of Music* (1986) and in all the subsequent incarnations of this nine-part sequence. Rilke is one of the gigantic, indispensable poets on the horizon of world twentieth-century poetry admired by Robert Bringham. “The Reader” is both a moving meditation on the act of reading itself, and a homage to the German-speaking poet. But why should have Bringham chosen him as the starting point or source of inspiration for this poem? According to W. H. Auden (*New Republic*), Rilke’s most obvious influence on twentieth-century poetry has been on diction and imagery, but there is something else about his poetry that must have made it truly fascinating to Bringham himself: Rilke thinks of the human in terms of the non-human, and he expresses ideas with physical rather than intellectual symbols. His intensely unique vision and his love of the world must have made him an irresistible choice for inclusion in “The Lyell Island Variations”.

Rainer Maria Rilke¹⁷ (b. 4 December 1875, Prague – d. 29 December 1926, Valmont, Switzerland) is an Austro-German poet who became internationally famous with such works as *Duino Elegies* and *Sonnets to Orpheus*. Being the only son of a not-too-happy marriage, from early in his life he knew he would pursue a literary career. His father became a railway officer after an unsuccessful military career, and his mother belonged to a well-to-do family in Prague. Rilke’s education was ill planned and fragmentary, and his parents pressured the talented young boy into entering a military academy. It was a waste of time for the poetically talented youth. At the age of 11, Rilke began his formal schooling at a military boarding academy, but in 1891 he was discharged due to health problems. In 1895 and 1896 he attended university in Prague and Munich, where he studied literature, art history and philosophy. But soon he became disenchanted and he left university to devote himself entirely to poetry. His mature life, as a man driven by inner needs and as an artist endowed with a unique vision, was marked by restless travels on the European continent in all its breadth and variety – Russia, France, Spain, Austria, Switzerland and Italy were the physical setting of different moments in his spiritual and creative lifetime.

Among Rilke’s earlier collections of poetry were *Leben und Lieder* (1894), *Larenopfer* (1895), *Traumgekrönt* (1897) and *Advent* (1898). They show the influence of the German folk song and so they have been compared to Heinrich Heine’s work. Russia was one of those elective homelands that had a decisive impact on his sensibility and his work. During two extensive trips, he discovered this land with Lou Andreas-Salomé, a married woman with whom he had a love affair from 1897 to 1900, and a friendship that lasted till the end of his life. In Russia he met Leo Tolstoy, L. O. Pasternak (father of Boris Pasternak), and the peasant poet Spiridon Droschin. Soon after his return from Russia, he started work on an important book: between 1899 and 1903 he completed a long three-part cycle of poems entitled *Das Stunden-Buch* (1905), consisting of three volumes (*Das Buch vom mönchischen Leben*, 1899; *Das Buch von der Pilgerschaft*, 1901; and *Das Buch von der Armut und vom Tode*, 1903), where the poetic persona is that of a monk addressing his prayers to a god that is the pure incarnation or embodiment of life (as conceived in Nietzsche’s philosophy), the numinous quality of the worldly diversity of things. So God is not the traditional deity of Christianity, but rather the embodiment of life force, nature, an all-embodying pantheistic

¹⁷ For basic bio-bibliographical information on this poet, see the entry on Rainer Maria Rilke in *Encyclopaedia Britannica*, volume 24, pp. 14183-14185.

consciousness as it were. At the core of *The Book of Hours* are the central themes of the poet's own inner life, as well as the apotheosis of art – the artist's role in society, his inner doubts about his belief in the superiority of poetry.

In 1902 Rilke settled in Paris and the city became the geographical centre of Rilke's life for the next 12 years, though he frequently travelled to other cities and countries in search of new experiences and inspiration. Paris was his second elective home, no less important than Russia, as it meant an intellectual challenge to the artist with all its historic, human and scenic qualities. It was not the *belle époque* capital imbued by luxury and eroticism, though, but a city of anonymous masses, of dehumanizing misery, of the dispossessed, faceless, aged and sick. 1902-1906 saw the publication of *Das Buch der Bilder* in four parts. However, in Paris he made the acquaintance of Auguste Rodin, the famous French sculptor, who taught him a new form of artistic discipline, characterized by close attention to detail, nuance and form in art. Rilke was deeply involved in the sculpture of Rodin, on whom he wrote a monograph (*Auguste Rodin*, 1903), and the paintings of Paul Cézanne. As a result, in his *Neue Gedichte* (1907-1908) Rilke developed a new style in his lyrical poetry, the so-called *Ding-Gedicht* ("object poem"), which focuses on the plastic essence of a particular physical object. In a way, these poems are verbal translations of works of the visual arts in which Rilke is after well-wrought artifacts, written in a language of an astonishing subtlety and refinement. Language and poetic form become shaped and shaping materials in his hands; Rilke used simple vocabulary to describe concrete subjects experienced in everyday life. The poet's verse became more objective, evolving from an impressionistic or personal vision to a representation of this vision with impersonal symbolism. The novel *Die Aufzeichnungen des Malte Laurids Brigge*, started in 1904 and completed in 1910, is the prose counterpart to the *Neue Gedichte*. It concerns the subjective, personal problems of a young Danish expatriate, the lonely occupant of a Paris hotel room, for whom fear is the inspiration for the creation of poems that are perfect objects. All of Rilke's major themes seem to be present here: love, death, the fears of childhood, the idolization of woman, and the matter of "God", who is not the traditional deity of Christianity. Both works questioned Rilke's very reason for writing poetry: the search for deeper meaning in life through art, his belief in the creative and transforming powers of art. He realized that life was much more creative than art itself, and that this new objectivity he had found in his new poems and novel did not really open the secret of living things though.

After the completion of these two masterworks, and with the imminent outbreak of World War I, Rilke entered a critical period of creative paralysis that lasted for almost 13 years. Though he was able to write two long poems early in 1912 in the style of elegies (which were to become part of a longer cycle) while he was staying at Duino Castle, near Trieste, and then he completed a short poetry cycle entitled *Das Marienleben* (1913) and wrote the fourth Duino Elegy in the fall of 1915, the writing block and severe depression lasted until 1922. Having come to a dead end in the objective poetry of his *Neue Gedichte*, he needed to find a new path for himself. After the inspiration-stifling depression Rilke suffered during and after the Great War, within the space of a few days of amazing productivity, in February 1922 Rilke managed to complete the ten-part Duino cycle begun years earlier, as well as another mastery cycle of 55 sonnets entitled *Sonnets to Orpheus*. The *Duineser Elegien* and the *Sonette an Orpheus* represent the apex of Rilke's poetry. The unifying poetic image in the *Elegies* is that of angels, representing a higher force in life, both beautiful and terrible, and Rilke's personal struggle to reconcile art and life into a unifying whole. He was determined to praise existence, although the pervasive tone was that of a lament. In the *Sonnets to Orpheus*, pervaded by an overwhelming sense of joy, he produced

the songs of his victory, a complement to the distress and anxiety of the elegies. From 1923 onwards, Rilke had to struggle with serious health problems and spend long periods of time at a sanatorium near Lake Geneva. However, innumerable poems of great value were published between 1923 and 1926, as well as his abundant lyrical work in French inspired by such poets as Paul Valéry and Jean Cocteau. His illness was diagnosed as leukemia, of which he died on 29 December 1926.

“The Reader” opens with this epigraph: “... *der da mit seinem Schatten / getränktes liest*”, a quote lifted from “Der Leser”,¹⁸ a poem by Rilke. The translation into English of these German words is naturally incorporated into the fabric of the poem in the second stanza. Here Bringhurst has chosen to focus his attention on a simple, everyday scene: that of a young woman reading a book. This is a recurrent theme in Western painting, by the way, particularly since the 16th century, if one thinks of the work of such painters as Jan Vermeer, for instance. The whole piece is an original meditation on the act of reading. What happens when a woman takes a book in her hands, opens it and crosses the threshold separating this world from an alternative universe? The poem opens with a rhetorical question that awaits no answer:

Who reads her while she reads? Her eyes slide
under the paper, into another world
while all we hear of it
or see is the slow surf of turning pages.

SP, p. 146.

Not much of a transcendental nature appears to happen during the act of reading. Though the only thing we get to see is a woman turning the pages of the book she is reading, she is quietly falling down into an elemental realm which is outside the province of this world. In this context, reading a book is tantamount to stepping into a different universe. There is something truly fascinating about this miracle: it is not necessary to leave home, travel or take a means of transport so as to experience other worlds, far remote in time or in space. That is part of the everlasting fascination exerted by books: it is possible to establish a dialogue with men and women who are not present here and now any more. More intriguing though is the suggestion that the reading woman is being read by someone else. This is a bit uncanny. Is there a presiding consciousness that gazes upon everything that is going on in this world?

At the geographical heart of the poem the focus is on the state of self-absorbed concentration the young woman finds herself in while reading the book. “*Soaked to the skin as she is in her own shadow*” is Bringhurst’s translation into English of Rilke’s original German words quoted in the epigraph, as well as the expression of the strange metamorphosis the woman undergoes in the act of reading. Isolated from the world outside, ignorant of the teeming life unfolding outside the book, the woman becomes alert to a new form of reality and, in the process, she becomes unrecognizable, even to her mother and to the passing

¹⁸ This is the original German text of Rilke’s poem: “Wer kennt ihn, diesen, welcher sein Gesicht / wegsenkte aus dem Sein zu einem zweiten, / das nur das schnelle Wenden voller Seiten / manchmal gewaltsam unterbricht? // Selbst seine Mutter wäre nicht gewiss, / ob er es ist, der da mit seinem Schatten / Getränktes liest. Und wir, die Stunden hatten, / was wissen wir, wieviel ihm hinschwand, bis // er mühsam auf sah: alles auf sich hebend, / was unten in dem Buche sich verhielt, / mit Augen, welche, statt zu nehmen, gebend / anstießen an die fertig-volle Welt: / wie stille Kinder, die allein gespielt, / auf einmal das Vorhandene erfahren; / doch seine Züge, die geordnet waren, / blieben für immer umgestellt.” Published in *Der neuen Gedichte anderer Teil* (1908).

intruder that the poetic voice addresses. Three rhetorical questions follow then: “*how much does she lose when she looks up? When she lifts / the ladles of her eyes, how much / flows back into the book, and how much / spills down the walls of the overflowing world?*” These are variations on one and the same question: how much gets lost when one’s eyes are not fixed on the book anymore? The very moment the woman looks up in some other direction, something is being inevitably lost in the act of reading, either falling down back into the labyrinthine recesses of the book itself or covering the walls of this new world being built by the unfolding story told by the book. As is common practice in Bringham’s poems, he makes use of an apt metaphor: “*the ladles of her eyes*” suggests that the parallel world built during the act of reading has a very different kind of texture than the real world we live in. It is almost of a liquid nature, it can vanish into airy nothingness any moment in time, and so the woman’s eyes are spoons as it were catching the precious, nourishing liquid before it is gone.

The closing stanza seeks to make the previous message clearer: in their games and their innocent playing, charged with symbolic meaning, children are self-absorbed, isolated and ignorant of their surrounding world as well. They are absent from this world, from the spatio-temporal constraints of human experience as it were, for a while and then they return to see what it is “*to be here.*” Their eyes get to see something endowed with the very texture of transcendence. The reading woman’s eyes are also altered in this way, because of a new vision. The only outward evidence that she is going through a transforming experience is then to be found in her eyes, but also in her lips: “*Words / she’s never said reshape her lips forever.*” That is also part of the miracle of reading: uttering, even if only silently, the words conceived by another mind, at a different moment in time and in a different place in space. The whole experience transmutes her forever: the very moment one closes a book, something has changed for good.

V · THE STARLIGHT IS GETTING STEADILY DIMMER

“The Starlight Is Getting Steadily Dimmer” was originally published in *Pieces of Map, Pieces of Music* (1986) and then reprinted in *The Calling: Selected Poems 1970-1995* (1995), *The Lyell Island Variations* (1995) and *Selected Poems* (2009). It was also reprinted as C.53, “Three Poems from *The Lyell Island Variations*”, in *Landfall* (Christchurch, New Zealand) 159 (September 1986): 325–327, together with “The Long and the Short of It” and “Riddle” (all reprinted from *Pieces of Map, Pieces of Music*), and as C.57, *Rubicon* (Montreal) 8 (Spring 1987): 103–107, alongside “Hóng Zichéng”, “Bodhidharma” and “Sengzhào”, all reprinted from *Pieces* too, but with two stanzas missing from the first poem. The poem is meant to be a tribute to the Polish author Jarosław Iwaszkiewicz and so it is prefaced by a handful of words lifted from his poetry: “*Miesiac jak królik wśród obłoków byca.*” Like other pieces in “The Lyell Island Variations”, the resulting composition is bilingual to a certain extent, for Iwaszkiewicz’s Polish words are tessellated in the form of a textual threshold that invites the reader to enter the perfect artefact woven of English words that appear to emanate directly from Bringham’s voice. There is a natural spontaneity and naturalness, in fact, about the way the poem flows towards its own end with perfect simplicity and beauty.

Jarosław Iwaszkiewicz¹⁹ (b. 20 February 1894, Kalnik, Russian Empire [now in Ukraine] – d. 2 March 1980, near Warsaw, Poland) is a Polish poet, novelist, playwright, and essayist who was actively involved in the literary life of Poland during his whole lifetime. His worldwide reputation largely rests on his achievements in poetry. Though he studied Law at the University of Kiev from 1912 to 1918, Iwaszkiewicz devoted his time and energy to literary creation. In 1919 he published his first poetry collection, *Oktostrychy* (*Octoverses*), and with Julian Tuwim and Antoni Słonimski he cofounded the Skamander group of experimental poets the same year. Between 1923 and 1935 Iwaszkiewicz was active in political life and diplomatic service, but he continued to write poems, novels and plays with prodigious energy, which made him one of the leading writers of the period. He published poems in numerous periodicals like *Gazeta Polska* (1934-1938) and *Ateneum* (1938-1939). With the outbreak of World War II in 1939, Iwaszkiewicz provided a shelter for intellectual life on his small estate, Stawisko, near Warsaw. Once the war was over, he associated himself with the Defenders of Peace movement, a pro-Soviet organization of leftist intellectuals, and he continued his political and literary activities with renewed energies. He was a secretary to The Society for the Encouragement of Fine Arts, a member of the Polish PEN Club, and an active member of The Trade Union of Polish Writers. He edited the literary monthly *Twórczość* (*Creation*) from 1955 until his death in 1980. His poems appeared in a number of books, including *Dionizje* (*Dyonisiacs*, 1922), *Kaskady zakończon siedmioma wierszami* (*Cascades Ending in Seven Poems*, 1925), *Pejzaże sentymtalne* (*Sentimental Landscapes*, 1926), *Księga dnia i księga nocy* (*The Book of Day and the Book of Night*, 1929), *Powrót do Europy* (*Return to Europe*, 1931), *Inne życie* (*Another Life*, 1938), *Lato 1932* (*Summer 1932*, 1933) and *Wiersze zebrane* (*Collected Poems*, 1968). In many cases, his poems are lyrical evocations of the Polish landscape. His prose production was also quite prolific and included such varied forms as several short stories collections, novels, essays, plays, biographies and translations. One of his most well-known novels is the three-volume *Sława i chwala* (*Fame and Glory*, 1956-1962), a saga that examines the turbulent Polish society from 1914 to 1967. He was awarded the Lenin Peace Prize as a recognition of his work.

“The Light Is Getting Steadily Dimmer” is characteristically written in the simple, transparent language Bringham is so fond of using in the making of his poems. The simplicity might be reminiscent of the original words that inspire this piece, placed as an epigraph right before the poem. In this sense, Iwaszkiewicz’s words are the starting point for a meditative piece that evokes a literal night landscape that becomes something that transcends itself into a cosmic level by the end of the poem. It seems to us that two parts might be easily identified in the unfolding of Bringham’s poem. In the first two stanzas, the moon is invoked as presiding a night landscape of peace and quiet:

The moon sneaks like a rabbit from cloud to cloud.
In the darkness you can’t see the funerals.
The light – no matter how little or much
we are given – spills down our cheeks,
though a portion is eaten each day
by our eyes, to feed the inedible
fruits of our voices.

SP, p. 147.

The moon resembles a rabbit that hides itself behind the clouds covering the night sky. The reference to *funerals* is a gloomy one. The moonlight or the starlight that illuminates the sky

¹⁹ See the entry on ‘Jarosław Iwaszkiewicz’ in the *Encyclopaedia Britannica*, vol. 15, pp. 8552-8553, for the essentials on the life and work of the Polish author.

resembles something else too: it spills down the gazers' cheeks as if it were human tears. In Bringhurst's poetic universe light is of the essence, like air, water or stone. Our eyes feed on light every day; *the inedible fruits of our voices* also feed on light. We need light to live – to see, to breathe, to speak. It is absolutely indispensable. Light illuminates the world for all of us to see and for the poet to be able to celebrate its glory and beauty in the form of perfect poems. However, there is something gloomy about the moon too: it "*scares me,*" says the poetic persona, and though it is priestly it might visit him "*any, day, shaped / like a boy.*" The *white goddess* to Robert Graves's eyes, the moon figures prominently in many mythologies around the world since antiquity. It also figures in the poetry of such major poets as Federico García Lorca (another great poet admired by Bringhurst himself), for whom there was something uncanny and gloomy about the moon. In Bringhurst's poetry the moon is sometimes associated with a woman with breasts full of musical instruments, with an elemental feminine principle or life force as it were.

In the second part of "The Light Is Steadily Getting Dimmer" the focus is on the departure of both gods and stars: "*The gods and the stars are all flying away.*" That the starlight is steadily getting dimmer means that the world is changing all the time and that it is getting somehow older, with the light of the stars proceeding towards a relentless self-extinction or self-annihilation. Gods are akin to stars in this respect: they are progressively hiding themselves away, into the unknown, travelling almost at light-speed in the direction of who knows where. The whole universe is leaving, fading away: "*Does anyone still think anything really / remains here? You're leaving too, I guess, / are you? Already?*" asks the poetic voice. Humans are no exception: in much the same way starlight is getting dimmer and dimmer with the passing of time, so are humans changing incessantly in their walking towards their own death. Nothing remains the same, everything is in a state of perpetual flux, and so we humans cannot delude ourselves into thinking that we remain exactly as we are. We might be dying a bit faster than our ancestors did just because we no longer acknowledge the presence of gods and goddesses that men and women in days of old sensed in trees, mountains, stones, rivers, grass, or in the moon itself. Their mythological accounts were a form of homage, a tribute, to this acknowledgment: they said, *we know the invisible exists, we know gods are by our side, pervading everything.* This seems to be the core message or elemental lesson the poetic persona is trying to convey to the reader. And so the closing words of the poem direct our attention to the clarity of the language and the importance of the message just delivered:

Listen in simple words
to what I say. I know I sometimes
speak it, like an educated
foreigner, a little too
clearly. Even so, it is
your own tongue – which no one
anywhere may ever speak to you again.

SP, p. 147.

The message is spoken in the simple language of human beings, in the mother tongue of the addressee implicit in these verse lines. Like the gods or the stars, even human languages might be flying away too, dying slowly and fading into nothingness. There might be a time when words are no longer needed and then the only thing left for humans to do might be to raise their eyes and look at the stars silently, with a feeling of gratitude that recognizes the kinship with those little shining specks scattered in the night sky.

VI · THE LONG AND THE SHORT OF IT

“The Long and the Short of It” appeared originally under the title “Piece after Supervielle”²⁰ in Robert Bringhurst’s unpublished MFA thesis, *Carmina propria et opuscula translata*, submitted at the University of British Columbia (Vancouver) in 1975. Afterwards, it was revised as C.33 in *New Orleans Review* 6.2 (January 1979): 155, and reprinted in *Pieces of Map*, *Pieces of Music* (1986), *The Calling: Selected Poems 1970-1995* (1995), *The Lyell Island Variations* (1995), *Selected Poems* (2009) and in C.53, “Three Poems from *The Lyell Island Variations*”, in *Landfall* (Christchurch, New Zealand) 159 (September 1986): 325-327, alongside “The Starlight is Getting Steadily Dimmer” and “Riddle”. Bringhurst’s poem is a homage to the French poet born in Uruguay, whose words preface this short composition in six symmetrical stanzas. Jules Supervielle²¹ (b. 16 January 1884, Montevideo, Uruguay – d. 17 May 1960, Paris) is one of the great 20th-century poets writing in French. He was an accomplished poet, a short-story writer and a playwright. In fact, T. S. Eliot was convinced that both Jules Supervielle and Saint-John Perse were the two most accomplished poets of their generation, being the authors of a work of lasting value. At a time when Surrealism was dominant, Supervielle tried hard to keep away from the tyranny of the unconscious and rejected automatic writing, while advocating a more attentive look at the real world, at the universe that surrounded him. Thus, paying attention to the world outside in its manifold subtleties and to the reactions of the interior world, he embraced a more modest approach to the mysteries of the universe without radically questioning the reliability of language as a tool of communication and knowledge. He somehow anticipated much of the poetry that was to be written by René Char, Henri Michaux, Saint-John Perse and Francis Ponge – all of them gigantic figures on the horizon of French poetry. Supervielle’s themes are the love of a lonely but fraternal man for the pampas and for the open spaces of his South American childhood and his nostalgia for a cosmic brotherhood of men.

A voracious reader, Supervielle sought the company of such classics of French literature as Paul Claudel, Arthur Rimbaud, Stéphane Mallarmé and Jules Laforgue, as well as that of the great American poet Walt Whitman. He became friends with two major poets, the French author Henri Michaux and the German titan Rainer Maria Rilke. 1922 saw the publication of his first poetry book, entitled *Débarcadères*. Other works would follow: *Le Voleur d'enfants* (1926), his first collection of fantastical short stories, *L'Enfant de la haute mer* (1931), the stories collected in *L'Arche de Noé* (1938), the play *La Belle au bois* (1932); the poetry collections *Gravitations* (1925), *Les Amis inconnus* (1934) and *La Fable du monde* (1938), rich in sensitive, often humorous or precious poems; a collection of mythological tales entitled *Orphée* (1946), the plays *Shéhérazade* (1947) and *Robinson* (1949), the book of poems *Oublieuse mémoire* (1949), the autobiographical book *Boire à la source*. *Confidences* (1951), and his last poetry collection *Le corps tragique* (1959).²² Supervielle was

²⁰ This is the original text of “Piece after Supervielle”: “Starving giraffes, you / star-lickers. Steers seeking / the infinite in / a disturbance of the grass. // Greyhounds planning to catch it / on the run. Roots / that know that it is / hidden down there somewhere. // What have you turned / into to me now / that I’m only a live and have no / handhold but the unseen sand? // The air contracts at times / toward taking form. / but what will happen not on / one but at once on both sides of the soul? // Terrestrial / recollections, what do you call / a tree, a sea-wave breaking / up, a sleeping child? // If only I could / pacify my long-faced memory, / if only I / could tell it a forbearing story.” See Bringhurst’s MFA Thesis (unpublished), p. 23.

²¹ See the entry on Jules Supervielle in *Encyclopaedia Britannica*, vol. 27, p. 16029, for the essentials of his life and work.

²² His complete works were published as *Oeuvres poétiques complètes*, édition publiée sous la direction de Michel Collot, avec la collaboration de Françoise Brunot-Maussang, Dominique Combe, Christabel Grare, James Hiddleston, Hyun-Ja Kim-Schmidt, Michel Sandras, Paris, Gallimard, coll. «Bibliothèque de la Pléiade», 1996, 1112 p.

also a skilled translator and he translated from the work of such diverse authors as William Shakespeare, Jorge Guillén or Federico García Lorca, among others. Like Bringham himself, he was also an exacting self-editor and would revise his own works incessantly, and this resulted in new republications in which he tried to improve upon earlier incarnations of his own texts.

“The Long and the Short of It” begins with a handful of resonant words lifted from Supervielle’s poetry: *“Parfois l’air se contracte / Jusqu’à prendre figure.”* These French words are translated almost literally into English and spontaneously incorporated into the living fabric of the poem. How is it possible for air to contract into recognizable shapes or forms? A certain degree of semantic indeterminacy pervades the whole piece, particularly the first of the two parts it appears to consist of. The title itself already points to this sense of vagueness and imprecision: the expression ‘the long and the short of it’ is used when you are telling someone the essentials about something without explaining all the details. The reader is thus plunged into a world of oneiric texture, while at the same time the real world of stubborn physicality is evoked with utter precision. This might sound paradoxical, but this is the overall impression one gets in the end after reading “The Long and the Short of It”. In the first part of the poem (stanzas 1 to 3) the poetic voice addresses “*ravenous giraffes*” that are “*star-lickers*”, steers “*seeking the infinite in / a movement of the grass*”, greyhounds “*out to catch it / on the run*”, and roots “*who know that it is / hidden down there somewhere.*” The picture is a bit surrealistic: giraffes are hungry and lick the stars up above in the star, possibly conceived as the embodiment of everything that is mysterious and impenetrable in the universe; steers feed on grass while paying attention to the subtle movement of blades that evoke the presence of the infinite in the little small things of this world; and greyhounds, lovers of motion and speed, try to catch this indeterminate something that is unstoppable and eel-slippery. It remains unclear what exactly the *it* refers to. Is it the infinite or the mystery inherent in *what is?* Animals and plants seem to be endowed with an innate capacity to look for this mystery; unlike humans, they instinctively know the path leading to the inner recesses of *being*. Roots are in fact personified, as the use of the relative pronoun *who* seems to suggest, and they point to something beyond themselves, deep inside the bosom of living earth, out of which all life springs. The recognizably human voice speaking beneath the lines of the poem affirms that it is lingering mid-air without heading towards a definite destination, wandering aimlessly now that there are no handholds left other than “transparent sand”:

what has it turned into
in me now that I am no more
than alive and all my handholds
are transparent sand?

SP, p. 148.

The second part of the poem opens with Bringham’s rendering into English of Supervielle’s words. Air, which is invisible and unformed, solidifies as it were into clearly shaped form. Like mystery, air is an intangible and pervasive presence that surrounds everything we know exists in this world. Humans cannot touch it or see it, but they do know it is out there. Air, light, water, stone, bone, blood are essential ingredients in the poetic universe of the poet, who is eager to turn the reader’s attention to the world just as it is, while opening his/her eyes to the invisible and the mysterious. Now, the poetic voice invokes “*earthly recollections*” and asks them in lines marked by strong enjambment to tell him “*how to speak / with trees, with sea-waves / breaking, with a sleeping child.*” Trees, sea-waves and a sleeping child are all incarnations of innocence, purity and naturalness. To be able to speak

to them appears to be tantamount to being able to understand what they all have to teach the sensitive adult. The elemental lesson they do teach all those who are eager to listen is possibly one that encourages paying attention to the details of the world with all five senses. Patience and gratitude are also of the essence: trees grow slowly into full maturity with a staunch loyalty to *being* that is simply admirable; breaking sea-waves are ready to sacrifice themselves time and again against the shore cliffs, to be born into a new form of existence once more; and a sleeping child still believes in the redeeming power of dreams, a haven of warmth and protection from the mediocrity of waking life (no matter whether asleep or awake, a child's gaze is an unprejudiced and transparent one after all). Now the speaking voice seems to be floating amid an indeterminate realm or space where it only wants "to pacify [his] long-faced / memory, to tell it / a more patient story." Nature seems to be able to restore the peace of mind lost somewhere along the way.

VII · A RIVER, A RUNNER

A tribute to the ancient, classical Greek poet Pindar (Pindaros in the Greek language), "A River, a Runner" was published for the first time in book form in *Selected Poems* (2009) as the seventh piece in the sequence "The Lyell Island Variations". This is not, however, the first time Bringhamurst pays due homage to the great poet: the set of broadsides entitled *Under Strange Sail: Translations & Improvisations from Many Hands*,²³ published in 2007 by Jan and Crispin Elsted at the Barbarian Press, already included an earlier incarnation of this

23 See the entry B.101 in Robert Bringhamurst's bibliography. The poem was first published as one sheet in a set of 16, loose in a folder, in *Under Strange Sail: Translations & Improvisations from Many Hands* [Mission, British Columbia: Barbarian Press, 2007: s.n.] Bringhamurst's contribution, "For the Sprinter Asopikhos / & for Others: A Version of Pindar's Olympian 14", is exactly a translation from Greek, originally made for the Olympic Literary Festival, Calgary, Alberta, in 1988. *Under Strange Sail* was designed and printed by Crispin and Jan Elsted at Barbarian Press from November to January 2006-7 – ISBN 0-920971-37-7. There are 100 sets for sale, with 15 sets for contributors *hors commerce*. We consulted it at UBC Library (Special Collections) on the 28th July 2010, under the call number PN 6101 U53 2007. The whole set consists of 15 broadsides, of which 13 are translations from different languages by several hands: (1) Fereydoun Faryad, "Master Craftsman Nikos Kapsis. Greek Woodworker", translated from the Farsi by Scott King; (2) Stéphane Mallarmé, "Apparition", translated from the French by Albert Moritz; (3) Doris Kareva, "Three Poems", translated from the Estonian by Toomas Hendrik Ilves; (4) Nichita Stanesco, "The Lightning & the Chill", translated by Oana Avasilichioaei; (5) "From the Amours of Pierre de Ronsard, Englished by John Pass"; (6) "A Dream of Ronsard. Wood Engraving by Peter Lazarov"; (7) Pierre-Jean Jouve, "The Sadness of a Lovely Day", translated from the French by Albert Moritz; (8) Rainer Maria Rilke, "Herbsttag", translated from the German by Crispin Elsted, and Georg Trakl, "Verfall", translated from the German by Manfred Meurer; (9) Willem van Toorn, "In zijn hoofd" / "In his Head", translated from the Dutch by Francis Jones; (10) "Tessellations, from fragments after Sappho of Mytilene", translated from the Greek by Crispin Elsted; (11) Eugenio Montale, "The House at Olgiate", translated from the Italian by Francis Phillimore; (12) Philippe Jaccottet, "Renverse. A version, or inversion, of Jaccottet's 'La nuit est une grande cite encornie', translated from the French by John Francis Phillimore; (13) "For the Sprinter Asophikos, & for Others: A Version of Pindar's Olympian 14", translated from the Greek by Robert Bringhamurst. The 14th broadside in the set is on "The Types & the Papers" and the 15th broadside is on "The Poets & the Translations". Bringhamurst's poem on Pindar is in Van Dijk with Open Kapitalen on Barcham Green Chilham (handmade paper). One of the broadsides is on the poets and the translations, and it tells us that "Pindar (*circa* 520-440 BC) was born into a noble Spartan family, but adopted Athens as his home. He was known as a poet at twenty, and was revered by his death. His odes are the most complex and crystalline examples of the form in antiquity or in the modern period. Robert Bringhamurst is one of Canada's most notable poets and translators. His selected poems appeared in *The Calling* (1995) and his translations include *The Fragments of Parmenides* and two volumes of classical Haida poems by Ghandl of the Qayahll Llaanas and Skaay of the Qquuna Qiighawaay. He is also known internationally as a typographer; his *The Elements of Typographic Style* is now in its third edition, & has become so widely used by designers and typographers that it has become eponymous."

poem entitled “For the Sprinter Asophikos, & for Others: A Version of Pindar’s Olympian 14”, prefaced by these Greek words Πίνδαρος Καφισίων ὑδάτων λαχοῖσα. The latest version has been changed in remarkable ways with respect to the original, which is much more explicit in the references to the characters involved in this epinikion. The 2007 version of the poem exhibits tremendous energy and is worth quoting in full:

Where the trout streams feed
the Kaphisos, your house made of water, you run
with your sundappled horses. Queens of Orkhomenos,
Ladies of Grace, see how your names
gleam through our voices. Every man’s ration
of wisdom, his beauty, his rightness,
comes from your hands. Even the gods
cannot manage their dances without you.
Your place is that close to the master
of music and death, with his golden bow
on his shoulder; that close to your father,
that close to the mountain.

Lady of Light, Lady of Happiness, Lady of Flowers,
born of the mountain god, watch
how they dance to a Lydian song
for Asóphikos. No one knows dancing
better than you. And they dance for a man
who comes from your country, Orkhomenos.
Dance with us too, if you will. I must call
other goddesses’ names now.

Walk to the black wall at the back
of the house of Persephone, Echo, and let them
know. Touch Kleódamos’ shoulder. Say
that his son has been in the place so many men
speak of: Olympia. Say in his flowing hair
he is wearing the wings of wild olive leaves
given to winners. Say that the light
rests on those feathers. Say
they are shining.

Born to an aristocratic family, possibly a Spartan family, near Thebes, Pindar²⁴ (b. probably 518 BCE, Cynoscephalae, Boeotia, Greece – d. after 446, probably *c.* 438, Argos) is considered by some scholars to be the greatest lyric poet of ancient Greece and the master of epinikia (victory songs), i.e. choral odes intended to be sung by choirs in celebration of the victories achieved by athletes in the Olympian, Pythian, Isthmian, and Nemean games. Whereas the works of other Greek lyric poets have survived only in bits and pieces, Pindar is one of the few ancient poets represented by a substantial body of work. Seventeen volumes of Pindar’s poetry,²⁵ comprising almost every genre of choral

²⁴ See entry on ‘Pindar’ in *Encyclopaedia Britannica*, vol. 22, pp.13222-13224, for the essentials on the poet’s life and work.

²⁵ According to William H. Race, “The ancient editors divided Pindar’s poems into seventeen books (papyrus rolls) by genres: 1 book of hymns to various gods; 1 of paeans (hymns addressed mainly to Apollo); 2 of dithyrambs (hymns addressed mainly to Dionysos); 2 of prosodia (hymns for approaching a god’s shrine); 3 of partheneia (hymns sung by maidens); 2 of hyporchemata (dancing hymns); 1 of encomia (songs in praise of men at banquets); 1 of threnoi (songs of lament); and 4 of epinikia (victory songs). Although numerous fragments of his paeans and other poems have survived on papyrus or through quotation by

lyric, were known in antiquity. Only four books of epinikia have survived complete though, doubtless because they were chosen by a teacher as a schoolbook in the 2nd century CE. Divided as Olympian, Pythian, Isthmian, or Nemean (the games in which the victories he celebrated were held), the surviving epinikia number 45 odes in all. Pindar had an assured mastery of his medium. They are supplemented by numerous fragments: poems that have survived only in quotations from other authors or on fragmented scraps of papyrus discovered in the 19th and 20th centuries. These have contributed to a deeper understanding of Pindar's achievement, especially in paeans and dithyrambs. All the evidence, however, suggests that the epinikia were Pindar's masterpieces.

Written on commissions from the victors' family, friends, or benefactors, the victory odes place the athletes within the contexts of family history, festivals, and stories of the gods, to whom the pious Pindar attributed their victories. The 1997 Loeb Classical Library edition of the poet's work, edited and translated by William H. Race, provides an excellent assessment of Pindar's literary qualities. In W. H. Race's formulation, the generic function of the poems is that of "praising men within the religious and ethical norms of aristocratic fifth-century Greece."²⁶ Being of noble birth, his poetry evinces a conservative attitude of absolute adherence to aristocratic values,²⁷ a rigorous sense of piety, and a familiarity with the great mythological heritage that had achieved a first systematic presentation in the work of Pindar's Boeotian predecessor Hesiod at the end of the 8th century BCE. With Hesiod he shared a deep religiosity, a groping toward something more profound and satisfying than contemporary cults could offer, a fondness for abrupt and violent transitions in thought and mood, and a forthright pungency of speech. In athletic contests the palm goes to superior physique and morale, believed to derive from superior birth and the favour of the gods. The notion that poetry mediated between the memorable achievement and the deserved glory is a recurrent motif in epinikian poetry. The poet's songs spread their legacy ever further through the community and into the future; in that way, Pindar argued, poems were superior to the other popular medium of praise, the statue, which transmitted its message only to those who could see it.

Certain recurrent elements are found in almost all of Pindar's epinikia. The praise and worship of the god whose festival is being celebrated sets the tone, and thanksgiving is an integral part of the structure. A second constituent element is the myth, impressionistically treated in a series of short sharply visualized scenes and meant to link

ancient authors, only the four books of epinikia, comprising forty-five odes in celebration of athletic victors, have been preserved almost intact in a continuous manuscript tradition, and it is upon them that his reputation has largely rested as Greece's greatest poet of praise." See the two-volume edition of Pindar's work, and, in particular, volume I: *Olympian Odes, Pythian Odes*, edited and translated by William H. Race, Cambridge, Mass.: Harvard University Press, The Loeb Classical Library, 1997, pp. 1-2.

²⁶ See the critical Introduction to Pindar's *Olympian Odes, Pythian Odes*, edited and translated by William H. Race, The Loeb Classical Library, Harvard University Press, 1997, p. 3. Consider also this reflection: "'Of the nine Greek lyric poets Pindar is by far the greatest for the magnificence of his inspiration, his precepts, figures of language, lavish abundance of matter and words, and river (so to speak) of eloquence.'" This assessment by Quintilian in his survey of Greek poets (*Inst. Or.* 10.1.61) was the standard evaluation of Pindar in antiquity and helps to explain why nearly one fourth of his odes are well preserved in manuscripts..." (p. 1)

²⁷ See W. H. Race on this particular issue: "Pindar's poetry expresses the conservative, so-called "archaic," mores of the sixth and early fifth century. His thought is ethically cautionary and contains frequent reminders of man's limitations, his dependence on the gods and nature, and the brevity of life's joys. He espouses moderation [...], the aristocratic ("Doric") values of civic order [...] and peaceful concord [...], and reverence for the gods [...]. His gaze is primarily backwards toward the models of the past, as they are exemplified in the legends from Hellenic myth, and it is against these that the victors' achievements are measured." Pindar's *Olympian Odes, Pythian Odes*, p. 3.

the glorious present to the yet more glorious past and to give a new dimension to the transient moment of victory. Somehow Pindar manages to explicitly connect the person, the family, and the city or divinity to the celebrated. A third element is the aphoristic moralizing, often in Pindar resulting in passages of extreme beauty, even sublimity. Aphorisms link the present reality with the mythic narrative and repeatedly stress the dangers of excessive pride in achievement. The emotional impulse stems from the aristocratic ideal of self-assertion, competition and leadership. Pindar's odes are, however, notoriously difficult to understand. Every ode has an actual victory as its occasion, and so the odes refer to historical persona and events. In fact, one of the most enduring difficulties of interpreting Pindar derives from the fact that his poetry was composed for special occasions and is rich with references to persons, places, mythical figures, and historical events that were known to the original audience but are obscure for modern readers. Although careful valuation of the ancient testimonies can provide useful indications, Pindar's odes are complex mixtures of praise, mythical narratives, prayers and hymns, advice, athletic triumphs (and failures), and current historical events, conveyed in highly artificial language and in often complicated poetic meters and meant to be sung and danced to the accompaniment of lyres and pipes. In fact, Pindar's metrical range is exceptionally wide, with no two poems being identical in metre, and he controls difficult and convoluted techniques with consummate professional mastery. His style is frequently cryptic and oracular, subtle and complex at the same time. According to William H. Race, "Pindar's verse gives the impression of ever new creativity." He then gives us the essential clues as to the Pindaric style:

The best known characterization of Pindar's style is by Horace in Odes 4.2.5-12: "like a river rushing down a mountain which rains have swollen above its normal banks, the deep-voiced Pindar seethes and floods far and wide, sure to win Apollo's laurels when he tumbles new words through his daring dithyrambs, and is carried along by rhythms freed from rules." From these descriptions we can isolate the following general characteristics of Pindar's style: it is abundant, creative of new words and expressions, bold, passionate, old-fashioned, tinged with aristocratic bluntness, disdainful of the ordinary, and displays a rough strength typical of nature rather than of balanced art.²⁸

In his duties as a poet, he travelled extensively around the Greek world; though he was subject to the complicated political tensions of the period, he did not avoid expressing his political and moral views. It is a tribute to the quality of Pindar's poetry that he was universally respected and accepted as a major creative artist. In his lifetime Pindar found a growing demand for his poetry and a growing appreciation of his skill. It remains a mystery, or a miracle, how Pindar's subject matter – victory in an athletic contest or in a chariot race – could inspire poetry characterized by high seriousness and deep feeling. Pindar cannot, indeed, speak across the centuries with the directness of Homeric epic poetry or Sophoclean tragedy, but he does create, with disciplined mastery of a sophisticated and complex art form, a choral lyric of unsurpassed splendour and sustained nobility. After a long and prosperous career, he died at Argos in 443 BCE at the age of 79. It is reported that when Alexander the Great sacked Thebes more than a hundred years after Pindar's death, the poet's house was the only one that was spared.

There is no doubt that Pindar's victory ode must have provided an aesthetic and intellectual challenge for Robert Bringhurst. In this respect, "A River, a Runner" marks a high point in Bringhurst's career as a poet and translator, one of those pinnacles that are

²⁸ Pindar's *Olympian Odes, Pythian Odes*, p. 26.

truly a miracle, in that it is a most original version of Pindar's Olympian 14. For him, poems are not conceived as expressions of the poet's personal opinions and subjective feelings, and so it is only natural that he should try his hand at translating one of the most accomplished epinikia by the ancient Greek poet. Like Bringhurst, Pindar does not seek to express personal feelings in his poems. In his victory odes, we see him striving to catch the fleeting radiance that plays about the moment of supreme endeavour when a man transcends his own limitations of physique and character and so proves worthy of his birth and ancestry. Though successful men, like those who have failed, are destined to die, though all human beings appear to be insignificant in the grander scheme of things, when success or victory comes, there is something sublime about a man reaching the limits of human achievement. This is a theme that plays a large part in Pindar's epinikia and it must have been truly appealing to Bringhurst himself. The early German Romantics also admired Pindar (especially Hölderlin, who translated a number of his epinikia), but afterwards his influence began to diminish.

Bringhurst's version of Pindar's epinikion consists of two clearly distinguishable parts: whereas part 1 (first stanza) praises the victor's homeland while addressing the three Graces, part 2 (second and third stanzas) celebrates more explicitly the sprinter's victory. Hence, "A River, a Runner", like Olympian 14, begins with an elaborate hymn to the Graces (Aglaia, Euphrosuna and Thalia), who provide the grace needed for poetry, victory, dancing and singing. This is the right mythical background against which to measure the praise of the victor. In generic terms, Pindar's epinikia are "occasional poems that invoke shared social values to praise victors and offer them immortality in verse. For this task there is no set prescription, and each ode is a unique blend of praise, myth, and argumentation."²⁹ Well aware that "the word lives longer than deeds" (*Nem.* 4.6), Pindar celebrated the victories of athletes from a wide range of places in the ancient Greek world. "The geographical dispersion of the victors celebrated by Pindar indicates how broadly his reputation and associations had spread"³⁰ and testifies to the Panhellenic reputation he enjoyed in the century following his death."³¹

"A River, a Runner" is prefaced by Pindaros' Greek words: *Καφισίων ύδάτων...*, lifted from Olympian 14. Like the original epinikion, Bringhurst's poem opens with a reference to the land where the celebrated victor comes from, as well as with an invocation to the indwelling powers – i.e., the Graces – that bless the land. In this way, the opening stanza in Bringhurst's version of Pindar's victory ode constitutes an elaborate hymn to the Graces, as well as a moving depiction of Orchomenos, the homeland of the sprinter Asophikos, the victor at the Olympian games:

Where the trout streams feed
the Kaphísos, your sinuous
house made of water, you run with your sundappled
horses. Your country, that dancing ground,
shudders with beauty. Even our own voices
glow in the darkness of speech when we speak of you.
Everyone's ration of wisdom, gracefulness, rightness,
is lifted and poured with your hands.
Men and gods are alike when they call to you:
neither can manage their dances without you.
Your place is that close

²⁹ Pindar's *Olympian Odes, Pythian Odes*, p. 16.

³⁰ Pindar's *Olympian Odes, Pythian Odes*, p. 9.

³¹ Pindar's *Olympian Odes, Pythian Odes*, p. 7.

to the master of music and death, with his golden
bow on his shoulder; that close to your father,
that deep in the mountains.

SP, p. 149.

This first stanza serves a clear purpose: it celebrates the land of the victor by invoking the Graces and by offering a comprehensive glance at the services which they perform for mankind and on Olympus, for “the land and the powers which make it holy are so plainly the source of the victory” of the sprinter.”³² According to D.S. Carne-Ross, “there is every reason to believe that the Graces meant a great deal to Pindar and that his devotion to them finds beautiful expression” in Olympian 14,” for he saw that “he would best serve his young client by letting the Graces take the primary stress.”³³ Thus, the stanza opens with a reference to an earthly river (the Kaphísos), and then it rises to the heavens where the Olympian deities dwell, Zeus (the god honoured in the Olympian games) on top of them. We have already mentioned the importance of the religious dimension to Pindar’s odes. Like most Greeks, Pindar “thought both that to achieve success one needs the help of the gods and that too much success and prosperity is dangerous and will attract the jealousy of the gods.”³⁴ In fact, his victory odes are divided into four categories after the four great athletic Panhellenic games, which were part of a religious festival in honour of gods or heroes. The Olympic games, consecrated to Zeus, were the oldest and most prestigious. However, among his gods were not only the great Olympian deities, but also other lesser divine figures and powers, such as the Graces. The invocation to the Graces allows Pindar to enhance the athlete’s victory and to idealize him. In any case, every ode has an actual victory as its occasion. To put it very simply, Olympian 14 is

An odd epinician, of uncertain date, since no indication is given in the ode of which event the victor Asopichus had won. It is mainly a hymn to the Graces (Aglaia = Radiance, Euphrosyne = Good Cheer, Thalia = Festivity [...]), specially worshipped at the victor’s home-city of Orchomenus in Boeotia, about 30 miles north-west of Pindar’s Thebes. The ode reveals [...] how important Pindar thought divine help was for any type of human success.³⁵

All that remains to be done now that the victor’s homeland has been celebrated through such a moving invocation to the Graces is to celebrate his victory openly. In the second part of “A River, a Runner” (stanzas 2 and 3) we see what Pindar’s (and Bringhurst’s) intention must have been: that “the Graces must play the central role, and that if in a brief space he [Pindar] could convey all that they meant and all they gave, and

³² See D. S. Carne-Ross, *Pindar*, New Haven and London: Yale University Press, 1985, p. 61.

³³ See D. S. Carne-Ross, *ibid.*, pp. 61-62. Carne-Ross dwells extensively on the meaning of “kharis”: “kharis is the splendour and glory granted by victory and is also the poem praising the victory; it is the bond of goodwill and gratitude between victor and poet that is sealed by the victory poem, and sometimes that poem itself; it is the divine power of fertility quickening the limbs that won the victory [...] and inspiring the poet who celebrates it; it is the gladness in which the festivity crowning the victory is bathed; it is the favour or grace granted by a god which makes victory possible in the first place.” See p. 63.

³⁴ Pindar, *The Complete Odes*, translated by Anthony Verity, with an introduction and notes by Stephen Instone, Oxford: OUP, 2007.

³⁵ Pindar, *The Complete Odes*, pp. 154-155. D. S. Carne-Ross provides us with a much more detailed analysis of the original Olympian 14: “Written perhaps in 488 when Pindar was thirty, Olympian 14 consists of only two twelve-line stanzas. [...] The victor, named Asopikhos, had won the footrace at Olympia. He was apparently still a boy and came from Orchomenos in Pindar’s own province of Boiotia, [...] a great center in the Mycenaean period but now fallen on quiet days and renowned only for its cult and sanctuary of the Graces. They were worshipped there in the form of three great stones which were said to have fallen from heaven.” See D. S. Carne-Ross, *Pindar*, p. 59.

then bring this concentrated richness to bear on the boy, he would have a victory poem the like of which no victor had ever been granted.”³⁶ In the first place, the poetic voice addresses the Graces directly and celebrates their precious dancing abilities. In the original 2007 version of Pindar’s Olympian 14, Bringhurst invokes and ceremoniously names the three goddesses: “*Lady of Light, Lady of Happiness, Lady of Flowers, / born of the mountain god, watch / how they dance to a Lydian song / for Asóphikos.*” These are “Aglaiá, the splendor or radiance surrounding the victor; Euphrosuna, the joy of victory; and Thalia, not simply festivity but *floraison.*”³⁷ However, in the 2009 incarnation of the text the invocation becomes more elusive and the names of the Graces are done without completely:

And the sprinter who’s standing here
comes from that country. You see
how we dance for him. No one knows dancing
better than you, the mountain god’s daughters.
Dance with us too, if you will. I must call
other goddesses’ names now.

SP, p. 149.

In the closing stanza a dead relative of the victor receives word of the sprinter’s victory. The dead are set apart from the world of the living, but they are not altogether excluded. The poetic voice now bids Echo take the news of the celebration to one person who is not directly present and yet should take part in the occasion: the boy’s dead father. Pindar/Bringhurst states that an individual has reached the limits of human success, and that there is something truly sublime about this. Echo must go the realm of the dead or Underworld in Greek mythology (Hades, “*the house of Persephone*”) to tell Asophikos’ father (Kleódamos, “*the old fellow*”) that he must share in the victor’s good fortune. In order to express the exaltation of being celebrated in poetry, Bringhurst describes the victor Asophikos in moving terms in the third stanza. The lines contain several perceptual categories – height, brightness and sound – from which the poet draws metaphors to designate the joy and celebration of victory:

Walk to the black wall at the back
of the house of Persephone, Echo, and let them
know. Go in there and touch
the old fellow’s shoulder. Say
that his son stands in the place so many men
dream of. Say in his hair he is wearing
the twist of wild olive leaves given to winners.
Say that the light rests like the voice of a bird on those
earth-colored feathers. Say they are shining.

SP, p. 149.

Obvious information from the original 2007 text is withheld, omitted or simply evoked: the father’s name (Kleódamos) or the name of the setting for the games being celebrated (Olympia, “*the place so many men / dream of*”) are simply taken for granted. Here Bringhurst uses repetition to obvious effect. Four sentences begin with the verb “say” in the imperative form; they serve a simple purpose: by insisting on the simple fact that a mere

³⁶ D. S. Carne-Ross, *Pindar*, p. 63-64.

³⁷ D. S. Carne-Ross, *Pindar*, p. 64.

mortal has reached the limits of human success, they insist on the sublimity inherent in the fact that “the victory celebration will reverberate even to the house of the dead.”³⁸

There is a rare and precious coherence about Robert Bringhurst’s entire poetic corpus which is also discernible in “A River, a Runner”. By variations of wording, rhythm and emphasis, the poet avoids exact repetition and produces strikingly new formulations. The most pervasive aspect of Bringhurst’s style is variety: his poetry gives the impression of ever new creativity. Another is the constant and habitual use of metaphor. There are many metaphorical expressions in his poems, some so slight as to be barely perceptible, other extremely bold. As for the lexicon, the evidence of his poetry shows that he uses numerous words pertaining to knowledge, body, speech, the mind and the physical world – bone, blood, water, air, song, being, stone. Bringhurst’s poems are also rich textures of verbal echoes, and we have already carefully listed many occurrences of repeated words in Bringhurst’s pieces. The frequency of recurrent words such as *water*, *air*, *blood*, *being*, *stone*, *mind* and *speech* in Bringhurst’s poetry is indisputable. By careful sifting, we can isolate such words in “A River, a Runner” too.

VIII · RIDDLE

Robert Bringhurst is a devout admirer of the work of the great Chilean poet Pablo Neruda, and so it comes as no surprise that “Riddle”, the eighth perfect jewel-like poem in “The Lyell Island Variations” sequence, should be inspired by a handful of seven words (“debo reanudar mis huesos en tu reino”) lifted from one of his poems, *Aún* (1969).³⁹ Originally published as C.44 in *Canadian Literature* 105 (Summer 1985): 15, “Riddle” was reprinted in *Pieces of Map*, *Pieces of Music* (1986), *The Calling: Selected Poems 1970-1995* (1995), *The Lyell Island Variations* (1995) and C.53, “Three Poems from *The Lyell Island Variations*”, in *Landfall* (Christchurch, New Zealand) 159 (September 1986): 325-327, alongside “The Starlight is Getting Steadily Dimmer” and “The Long and the Short of It” (all reprinted from *Pieces of Map*, *Pieces of Music*). Furthermore, it was also partially reprinted in C.46, *Ring of Bone Zendo Newsletter* (North San Juan, California, 15 October 1985): 1, which is a partial reprint from C.44 and includes only the first four lines of the poem. The epigraph prefaced to the poem as textual threshold, Neruda’s words “debo reanudar mis huesos en tu reino”, are the starting point for a crystal-clear poem that is entitled nonetheless “Riddle”. Upon closer inspection, it turns out that the poem has some riddle-quality about it in the end, for, even if the language is transparent and simple, the message remains evocatively imprecise at some points. This is part of the grandeur of a poem that catches the reader’s attention precisely by almost surrealistic references to men and birds singing a song which is none other than the flesh song of the Earth, the ultimate essence of the poetry implicit in the real. At the same time, there are suggestive echoes from Neruda’s poems, read between the lines if one pays enough attention, and there is a profound meditation on the nature of poetry itself. “Riddle” is both a *sui generis* love poem and a meta-poem.

³⁸ Pindar, *The Complete Odes*, p. 155.

³⁹ See Pablo Neruda, *Aún*, Barcelona: Editorial Lumen, 1971, p. 7. This is the third stanza of section I of *Aún* where the words quoted by Bringhurst occur: “Tú, mi bella, dormida aún en agosto, / mi reina, mi mujer, mi extensión, geografía, / beso de barro, cítara que cubren los carbones, / tú, vestidura de mi porfiado canto, / hoy otra vez renaces y con el agua negra / del cielo me confundes y me obligas: / debo reanudar mis huesos en tu reino, / debo aclarar aún mis deberes terrestres.”

Neruda remains one of the great twentieth-century poets and his work has been translated into virtually all the major languages of the world, which testifies to his being a universal poet, one capable of touching and speaking to the sensibility of readers from different cultural backgrounds. Celebrated as the greatest Latin-American poet since Rubén Darío, he was awarded important literary prizes in his lifetime, including the Nobel Prize for Literature in 1971. Neftalí Ricardo Reyes Basoalto⁴⁰ (b. 12 July, 1904, Parral, Chile – d. 23 September, 1973, Santiago, Chile) chose his pen name ‘Pablo Neruda’ after Czech poet Jan Neruda, whom he greatly admired. He attended university with the intention of becoming a French teacher, but he gave up his studies at the age of 20 to devote himself completely to the art of poetry. Throughout his lifetime he worked as a diplomat holding a number of posts around the world (particularly in the Far East and in Europe), integrating private and public concerns as an active poet-politician. Thus, he produced a prolific output of literary work in a huge variety of styles, ranging from the youth poems published in his first poetry book, *Crepusculario (Book of Twilights)*, 1923), and the explicitly erotic love poems of his immensely popular *Veinte poemas de amor y una canción desesperada (Twenty Love Poems and a Song of Despair)*, 1924), rich in their explicit celebration of sexuality and suggestive in their equation of woman with nature on a cosmic level (the feminine being an irresistible force at the heart of the universe); through the surrealist poems in the first two volumes of his *Residencia en la tierra (Residence on Earth)*, 1933 and 1935; a third volume of a very different nature was published in 1947); the overtly political poems of an ardent communist supporting the Republican side of the Spanish Civil War in *España en el corazón (Spain in the Heart)*, 1938), which signaled a shift in his conception of poetry as being an active agent in social and historical change; to the historical epic *Alturas de Macchu Picchu*, a book-length poem in twelve parts completed in 1945, which betrays a growing interest in the ancient civilizations on American soil which he would also explore in *Canto general* (begun as early as 1935 and finished in 1948), a lengthy epic poem on an entire continent and its people, or an almost Whitmanesque catalog of the impressive history, geography, flora and fauna of South America (i.e., the land’s rich natural heritage and the defeat of the native Americans by the Europeans), pervaded by the poet’s own observations and experiences, which might have been an indispensable source of inspiration for Robert Bringhurst’s own *New World Suite No. 3* (2005) – his own epic on the richness inherent in the New World and a denunciation of greedy humans’ mismanagement of the Earth’s resources for the sake of purely material benefit. Neruda spent the last twenty years of his life writing innumerable fine love poems (*Cien sonetos de amor / One Hundred Love Sonnets*, 1959) and poems on common, ordinary everyday things like plants, feet, rain, a stone, a flower or a bird, all of which are observed with care and attention and a form of grateful love which glorifies experience in itself (*Odas elementales / Elemental Odes*, in several volumes published in 1954, 1956, 1959). He accomplishes this through a language marked by spontaneity, emotional urgency and passionate directness.

Bringhurst’s poem is a moving tribute to the universal Chilean poet. The piece consists of three stanzas and three distinct movements for the soul. That the first stanza is a straightforward statement on the poet’s own poetics becomes crystal-clear upon closer inspection, as the poem itself unfolds into full bloom. The poet is he who has no hands (hands, unlike feet, are damaging to the world, according to Bringhurst) and keeps singing his song from immemorial times for anybody willing to listen to what he has to say. Hands handle writing tools, but in Bringhurst’s poetics poems are born out of the living voice in the first place (and so there is initially no need for hands holding pens to write down poems) and poetry is a pervasive quality found in reality. Humans have no monopoly on

⁴⁰ For essential bio-bibliographical information, see the entry on ‘Neruda, Pablo’ in *Encyclopaedia Britannica*, vol. 20, pp. 11853-11855.

poetry then, and this partly accounts for the presence of a bird with no hands either, asking the world one of those fundamental questions any sensitive human being must ask at some point in their life: what is the gist, the core or the heart of the song poets must sing? The answer is simple enough: Earth is the ultimate source of all poetry, the only theme, the final truth. The use of the present continuous (*is singing, is asking and is answering*) and of parallelism in these opening lines reminds the reader that this has been going on for long. Humans have looked at the awe-inspiring beauty of the world and have surrendered to the mystery that the real *is*, the perpetual riddle that *what is* poses to humans' inquisitive gaze. Or, in Bringhurst's memorable words:

A man with no hands is still singing.
A bird with no hands is asking the world,
and the world is answering every day:
earth is the only flesh of the song.

SP, p. 150.

An ominous picture is shown in the second stanza, where "*a man with now wings is crossing / the sky's black rapid on his hands.*" Wings recall Icarus, the mythological figure who dared fly too close to the sun, which melted the wax in his wings in the end and made him inevitably fall down and plunge into the vast sea. But they are also evocative of imagination, of the highly narcissistic musings the poet is prompt to surrender to from time to time in his poems. This is a man who has no wings, and yet he is capable of touching the real with his own hands, of giving himself up to the changing and changeable world, in a state of perpetual flux, or so seem to suggest the *black rapids* mentioned in the poem. This is a man who is aware that bones are the only thing that remains after one's residence on Earth: "*His mother's bones lie slumped / by the stumps of the cedars.*" Trees are also mutilated; they are not healthy or complete, but mere stumps. They suggest that the human hand has been damaging their physical integrity, possibly in the service of progress, comfort or money. Like bones, stumps are remains, almost organic debris. However, *bones* is a recurrent word in Bringhurst's entire poetic universe: they are sacred too, they are what links us humans to the very physicality of the world. We are bones and dust. We are not special or different in any way, as we tend to think, for life is a most subtle continuum upon which all beings, animate and inanimate, are to be found. If all existing things were ground down to their bare essentials (the four classical elements explored by Bringhurst in *Elements* in 1995, or the elements recorded in the periodic table), then we would stumble upon a simple truth we usually overlook: we are all made of the same basic chemical elements and there is nothing that sets humans apart in the grander scheme of things. Trees are also central to Bringhurst's oeuvre; they are the perfect embodiment of the natural, spontaneous force of life implicit in Nature, in the real. If there are only stumps left, instead of living trees, then there must be something wrong about the way humans relate to the world.

The word 'bones' is repeated three times throughout the poem, which is no random choice or happy coincidence at all. Now the speaking voice of the poem, which we might take to be the poet's, addresses a *you*, which possibly stands for Neruda himself. Neruda's country, like Bringhurst's, is part of the New World, a land of ancestral wisdom, natural richness and diversity spoiled by the hand of European colonizers. The land belonged to the native people of the continent, the First Nations or the indigenous people that emerged out of the living soil that gave them their own sustenance, and the conquest of the New World by greedy Europeans was a shameless rape of the pristine lands that sustained environment-friendly lifestyles of people who knew exactly how to preserve the right equilibrium within the natural world. Now the poet is coming to Neruda's land, to the

American continent, carrying his own bones in his own hands (for that is the only thing he has, even if only for rent, because he must give them back to earth's lap when death comes), to find out that the land is no compartmentalized kingdoms or legends. The land is Mother Earth and also a woman's body – the feminine principle and primordial force at the heart of the universe in many of Neruda's love poems. The land is a telluric realm out of which all creatures emerge into the light of day; the living soil is the ultimate source of life. Are the strangers the indigenous people that were deprived of their own land, resources, cultural heritage, dignity and life? Possibly. The strangers, the others, are the poet's (and everyone's) brothers. Bringhurst conveys all this wealth of meaning with memorable and musical words, endowed with an irresistible beauty:

I carry my own bones in my hands
into your country,
and there are no kings; it is not a kingdom;
and there is no legend; it is the land
and a woman's body, and these are my bones.
What do I owe to these strangers my brothers?

SP, p. 150.

IX · DAY IN, DAY OUT

“Day In, Day Out”, the closing piece in “The Lyell Island Variations”, was first published in *Selected Poems* (2009). It looks like a most accomplished composition to mark the end of a sequence of nine poems that has been in the making for such a long time. The textual threshold preceding Bringhurst's poem is lifted from one of the many poems written by Michelangelo, who lived in sixteenth-century Italy, during one of those historical periods that represent an unsurpassable peak of accomplishment in the history of humankind. The artist whose genius produced such masterworks of Western art as the fresco paintings of the Sistine Chapel (particularly the scenes from Genesis on the ceiling and *The Last Judgment* on the altar wall), or the sculptures of the *Pietà* (1499) or *David* (1504) (made before he turned 30), Michelangelo Buonarroti⁴¹ (b. 6 March 1475 – d. 18 February 1564) was a prolific sculptor, painter, architect, engineer and poet. Together with his contemporary Leonardo da Vinci, he embodies the ideal of the Renaissance humanist – a versatile polymath at home in a number of disciplines at which he excelled with contributions of a high order. Thus, the archetypal Renaissance man produced a prodigious output in every field, so that the sheer volume of works, sketches, poems and correspondence preserved to this day make him the best-documented artist of the sixteenth century and the first Western artist whose biography was published while he was still alive. Two biographies were published in fact: one by his apprentice Ascanio Condivi (*The Life of Michelangelo*) and another by the well-known Italian biographer Giorgio Vasari. In *Lives of the Artists*, Vasari said of him that he represented the true pinnacle of all artistic achievement since the beginning of the Renaissance. Aware of the potentialities and force of the art of sculpture, Michelangelo knew how to take beauty out of marble blocks. It is a miracle that Michelangelo managed to carve out of formless stone blocks such beauty and perfection as he achieved in the *Pietà*, a depiction of the body of dead Jesus on the lap of the Virgin Mary after the Crucifixion that the artist completed at the age of only 24; in the colossal statue of *David*, one of the most renowned works of the Renaissance and the symbol of Florentine

⁴¹ For essential information regarding the life and work of Michelangelo, see the entry on ‘Michelangelo’ in the *Encyclopaedia Britannica*, vol. 19, pp. 11081-11088.

freedom, carved from a marble block from the quarries at Carrara that established his pre-eminence as a sculptor of amazing technical skill and imaginative strength; or in other technical accomplishments like *Moses* or *Laocoön and his Sons*, the latter residing now in the Vatican.

Michelangelo is also known as a most accomplished fresco painter and prolific architect. He is especially remembered for his frescoes of the Sistine Chapel, which originally were meant to represent only the twelve apostles against a starry sky. The final project took him almost four years to complete (1508-1512) and included over 300 figures drawn largely from the Bible and representing much of the Catholic Church doctrine. Representing the creation of mankind, the downfall of man, and the promise of eternal salvation, at the centre of the painting sequence were nine episodes from the Book of Genesis, arranged into three parts – God’s creation of the Earth, God’s creation of humankind and the fall from His grace, and Noah and his family. On the other hand, among Michelangelo’s major architectural projects are the unexecuted façade of the Basilica of San Lorenzo, the Medici Chapel, and the Laurentian Library and the fortifications of Florence; in Rome he executed such ambitious projects as Saint Peter, Palazzo Farnese, San Giovanni dei Fiorentini, the Sforza Chapel in the Basilica di Santa Maria Maggiore, Porta Pia and Santa Maria degli Angeli. The sheer bulk of his work gives an idea of the kind of human being Michelangelo was: an abstemious and hard-working person of monk-like chastity all his life according to his biographer Condivi, he always lived like a poor man, indifferent to food or drink, and he was a solitary and melancholy person by nature. He avoided the company of human beings, and impressed his contemporaries with his *terribilità*, a sense of awe-inspiring grandeur that stemmed from his own personality, genius and talent. It comes as no surprise that such a man should have attracted the attention of Robert Bringhurst, a tireless craftsman, a polymath himself, a committed poet, linguist and typographer who puts all his passion and attention into every single project he embarks on. “Day In, Day Out” is a memorable tribute to the Italian artist.

The poem is prefaced by these Italian words by Michelangelo: “*il saggio al buon concetto arriva / d’ un’ immagine viva / vicino a morte.*” He was a truly talented genius, a polymath in a number of artistic disciplines. As a poet, he wrote hundreds of love sonnets and madrigals addressed to friends for whom he nurtured a great love (Cecchino dei Bracci, Tommaso dei Cavalieri or Vittoria Collona), pervaded in many cases by Neoplatonic notions and openly erotic connotations. The words with which Bringhurst has chosen to preface his tribute to this unique, irreplaceable human being are lifted from poem number 241 of his *Rime*. Upon closer inspection, it turns out that “Day In, Day Out” is an accomplished translation of Michelangelo’s poem.⁴² Translation is a most fruitful practice and intellectual discipline Bringhurst has never abandoned since he started his literary career. The piece consists of three stanzas and three clearly distinguishable movements. What makes this such a poignant poem is that it is almost a meta-poetic meditation on the work of a whole lifetime: through the practice of sculpture, painting and architecture, Michelangelo devotes his whole life to a passionate search after beauty and truth, and he somehow feels that he is closer to the ultimate vision exactly at the moment when death is closing in. Thus, in the first part, the image of the artist as thinker or sage

⁴² This is poem 241 from Michelangelo’s *Rime*: “Negli anni molti e nelle molte pruove, / cercando, il saggio al buon concetto arriva / d’ un’ immagine viva, / vicino a morte, in pietra alpestra e dura; / c’ all’ alte cose nuove / tardi si viene, e poco poi si dura. / Similmente natura, / di tempo in tempo, d’ uno in altro volto, / s’ al sommo, errando, di bellezza è giunta / nel tuo divino, è vecchia, e de’ perire: / onde la tema, molto / con la beltà congiunta, / di stranio cibo pasce il gran desire; / né so pensar né dire / qual nuoca o giovì più, visto ’l tuo ’spetto, / o ’l fin dell’universo o ’l gran diletto.”

constantly seeking the truth is presented in a language of lyric urgency and passionate clarity that is simply moving in its straightforward simplicity:

After many years and versions,
then the thinker finally manages,
in hard, high-country stone, a clear
conception of a living image, death is closing in.
We come so late to high, bright things
we can't stay long.

SP, p. 151.

Michelangelo chose the path of sculpture as a way of capturing the fleeting beauty and truth he intuited pervaded the universe. Punctuated by a system of trial and error, his entire oeuvre is conceptualized as being nothing more than a relentless sequence of tentative approaches to touch an irreducible core of meaning, or the truth. Day in, day out, his struggle with colour, line, perspective, stone and words takes him ever closer to his goal. It remains a true miracle that Michelangelo should have been able to shape the formless marble blocks into the beautiful sculptures of utter perfection he made. Needless to say, his art was his way of capturing the beauty and eternity of the world, the ultimate vision he distilled from the fleeting appearances of the real, and his precious gift to posterity. In this respect, the “*hard, high-country stone*” is possibly meant as a reference to the Carrara marble, and the “*clear conception of a living image*” is a generic allusion to the many sculptures he produced. That stone should be made to sing like this by Michelangelo remains a welcome mystery. And yet he cannot avoid feeling a certain sense of belatedness: he arrives too late at the clear conception, to “*high, bright things*,” so late that he feels death is just round the corner. Truth is elusive, eel-slippery, and so it does not let itself be trapped that easily – it keeps hiding from humans’ inquisitive gaze. Beauty is also such an overwhelming thing that we humans, mere mortals, cannot bear their presence for so long. The interesting point is that the sculptor is a thinker: he thinks with his mind and his hands in shaping formless stone blocks into meaningful and clear images that point to the ultimate beauty and truth of this world.

The second stanza and part of the poem is a meditation on the unstoppable flux of reality, and it seems to juxtapose Herakleitos’ flux-doctrine with Platonic notions on the realms of appearance and immutable ideas. That “*reality keeps wandering, / day in, day out, from one / incarnation to another*” suggests that everything is in flux, that reality is perpetually in the making, always in a state of pure metamorphosis, and so it must be extremely complex for the artist to cling to unchangeable forms, to “*hang on / to anything it’s found.*” There are no reliable handholds or footholds either for the audacious imagination of the artist in search of eternal essentials. “*In the upper / reaches of loveliness,*” up there in the Platonic realm of pure ideas, maybe there is a chance that “*reality / is very nearly done.*” If objects of this world are nothing but pale shadows or reflections of the unchanging forms populating the realm of ideas, then the ultimate reality must be looked for there. Beauty, perfection and eternity dwell together in this divine realm, placed outside the province of time and space as it were, away from this perishable world.

The closing stanza brings together two key words: the *terror* evoked by death closing in and the *beauty* of the ultimate insight into reality, knowledge, wisdom, the final revelation:

So terror, coming deeply into beauty,
calms huge hunger with strange food.
I see your face and cannot think or say

which is the greater – the damage or the joy,
or the end of the world or the ultimate pleasure.

SP, p. 151.

The *huge hunger* is the desire for knowledge; the *strange food* is the vision, “*il buon concetto [...] d’ un’ imagine viva*”, in Buonarrotti’s words. Looking at or scrutinizing the thinker’s face, the poetic voice is unable to say whether it is the terror evoked by closing death or the beauty of knowing at last something of everlasting value that is greater. With every single person’s death, *the end of the world* is enacted time and again, but *the ultimate pleasure* is something that cannot be stolen once it has been experienced first-hand – not even death can spoil that last, decisive moment at which the sage comes to experience the truth face to face at last. There is something sublime about the closing lines of “Day In, Day Out”: they do bring the circle of the poem into perfect completion, while at the same time they make human life a meaningful *Gestalt* that death ends for good.

The Physics of Light

Light Is Vision Is Knowledge

INTRODUCTION

Robert Bringhurst is a diverse, talented and profound poet, widely read in science, history and world literature. The poems included in the section entitled “The Physics of Light” in *Selected Poems* (2009) are compositions one might expect from a poet as learned as Bringhurst is. In addition, the compositions have a complex literary history behind them. The whole section consists of thirteen poems, of which nine had already been published in previous collections and scattered literary periodicals. The genesis of these poems is to be traced back to the section “Gifts & Presences” in *Pieces of Map, Pieces of Music* and to the section “Their Names” in *The Calling: Selected Poems 1970-1995* (1995). With the passage of time, the section has been subtly revised and expanded into a complex sequence comprising poems dealing with being, nature, knowledge and humans’ interaction with the world at large. The very title, “The Physics of Light”, reminds us that Bringhurst’s poems are firmly rooted in the real, and that he is after a serious investigation into fundamental questions pertaining to humankind in its entirety. The poems are accomplished pieces of literary composition, words set to the music of breathing speech, insights into the ultimate essence of reality. As is common practice with Bringhurst, the poems have also evolved textually over time, as if to adapt themselves to the excellence level “his living repertory” or whole corpus of poems demands: technical perfection going hand in hand with profundity of thought, clarity and musicality. Thus, the editorial history of the poems can be best summarized as follows:

- (1) A.32 *Pieces of Map, Pieces of Music* (1986). Section entitled “Gifts & Presences”, consisting of five poems: “Sutra of the Heart” (reprinted from C.50); “Thirty Words” (reprinted from C.50); “Rubus Ursinus: A Prayer for the Blackberry Harvest” (reprinted from A.28); • “Sunday Morning” (reprinted in B.42, C.52; revised in A.47, B.69); “For the Bones of Josef Mengele, Disinterred June 1985” (reprinted from C.50).
- (2) A.47 *The Calling: Selected Poems 1970-1995* (1995). Section entitled “Their Names”, consisting of ten poems: [•] “Sutra of the Heart” (revised from A.32), [•] “Gloria, Credo, Sanctus et Oreamnos Deorum” (revised from B.47), • “Kol Nidre”, “Rubus Ursinus: A Prayer for the Blackberry Harvest” (reprinted from A.32), “For the Bones of Joseph Mengele” (reprinted from A.32), • “Fathers and Sons”, • “Hick & Nillie”, • “Demons and Men”, • “The Flowers of the Body”, [•] “Sunday Morning” (revised from A.32).
- (3) A.92 *Selected Poems* (2009). Section entitled “The Physics of Light”, consisting of thirteen poems: “Sutra of the Heart” (slightly revised from A.47), “Kol Nidre” (reprinted from A.47), “Gloria, Credo, Sanctus et Oreamnos Deorum” (reprinted from A.47), “Rubus Ursinus: A Prayer for the Blackberry Harvest” (reprinted from A.47), “For the Bones of Joseph Mengele” (reprinted from A.47), “Fathers and Sons” (slightly revised from A.47), “Hick & Nillie” (reprinted from A.47), “Demons and Men” (slightly revised from A.47), “Sunday Morning” (reprinted from A.47), • “Children of the Old Horse”, • “The Physics of Light”, • “The Occupation”, • “Long Poem on Four Feet”. Notice that “The Flowers of the Body” is included in a different section entitled “The Living”, the closing handful of poems in *Selected Poems* (2009).

THE POEMS: A CRITICAL ANALYSIS

I · “Sutra of the Heart”

“Sutra of the Heart” was first published in C.50 and reprinted in C.51, *Canadian Forum* (Toronto) LXVI.760 (June/July 1986): 34-35. In book form it was first reprinted from C.50 in *Pieces of Map, Pieces of Music* (1986), slightly revised in *The Calling: Selected Poems 1970-1995* (1995), and reprinted in this definitive 1995 incarnation in *Selected Poems* (2009). Bringhurst’s long composition is a string of 45 different definitions of what the heart is. The language is kept crystal-clear, elegant and moving in an astonishing way. In simple declarative sentences, the poetic voice makes tentative approaches to pin down the essence of the human heart. From beginning to end, the emphasis seems to be placed on the very physical dimension and anatomy of the heart. However, the concept is explored in depth and new insights into what is the beating motor of the human body come up to the light. Through illuminating analogies and apt metaphors (of the kind *A is B*), the whole universe (all spaces and all times) is conceptualized as being contained in the human heart. To this end, Bringhurst makes use of very simple literary devices – alliteration, lexical repetition, parallelism and metaphor. The result is a memorable poem rich in profound insights into the human condition, for the heart, like thought or speech, is at the very core of what it means to be human. Through purely objective, impersonal and detached statements, the poet manages to define, and yet not to exhaust, all the thematic potential implicit in the subject. The tone remains meditative throughout the entire composition, though, and the rhythm of the lines becomes incantatory¹ through the sheer repetition of a simple syntactic pattern (*A is B*) at the heart of each single metaphor. Metaphor is precisely of the essence in this particular poem, for it becomes an intellectual tool of precision in the poet’s confrontation with his subject matter. It might be easy to fall into narcissism, subjectivity and cliché when dealing with the human heart, but Bringhurst succeeds in producing a unique poem which is both a beautiful artefact of tessellated words that sound euphonically when spoken aloud and a beautiful, profound meditation on the heart.

The poem is entitled “Sutra of the Heart”, but what does ‘sutra’ mean exactly? If we look up the word in the *Encyclopaedia Britannica*, this is exactly what we find out under the ‘sutra’ entry:

Sūtra (Sanskrit: “thread”), Pāli SUTTA, in Hinduism, a brief, aphoristic composition; in Buddhism, a more extended exposition, the basic form of the scriptures of both the Theravāda and Mahāyāna traditions. The early Indian philosophers did not work with written texts and later often disdained the use of them; thus, there was a need for very brief explanatory works that could be committed to memory. The earliest *sūtras* were expositions of ritual procedures, but their use spread. The *sūtras* of the Sanskrit grammarian Pāṇini (5th-6th century BCE) became in many respects a model for later compositions. Nearly all the Indian philosophical systems had their own *sūtras*, most of which were preserved in writing in the early centuries CE.

In the Buddhist *sūtras* a particular point of doctrine is propounded and deliberated. The most important collection of the Theravāda *sūtras* is to be found

¹ According to Patricia Keeney Smith, ““Sutra Of The Heart” seems more rigorously Bringhurst’s than other pieces, although it still resonates wonderfully of old chants, stories and ancient ways of seeing. Sutra beats with a pulse that is uniquely its own...” See her review of *Pieces of Map, Pieces of Music* in *The Star* (Toronto), 29 November 1986: M4.

in the Sutta Pitaka section of the Pāli canon, which contains the discourse attributed to the Buddha Gotama. In Mahāyāna Buddhism *sūtra* is applied to expository texts.²

A *sūtra* is then a brief, expository statement that sheds light on the nature of the subject of meditation. There is something gnomic about these concise sentences, which, upon closer inspection, turn out to be rich in nuances of meaning and profundity of thought. Thus, Bringhurst's poem can be said to be a string of beautifully written and linked *sūtras* that clarify the nature of the human heart. When put together, these 45 illuminating *sūtras* written in the language of philosophical thinking might look like the scriptures of a new school of humanist and scientific descent that advocates a stern look at the heart just as it is. And so the poem opens like this, with a handful of four *sūtras*:

The heart is a white mountain
left of centre in the world.
The heart is dust. The heart is trees.
The heart is snowbound broken
rock in the locked ribs of a man
in the sun on the shore of the sea who is dreaming
sun on the snow, dreaming snow on the broken
rock, dreaming wind, dreaming winter.

SP, p. 155.

The heart is a mountain, dust, trees and rock broken by snow. This simple enumeration of living and non-living things in the world suggests that the heart contains everything we know to exist within its boundaries in the human breast. Morphologically speaking, the heart resembles a mountain, placed almost at the uppermost part of the trunk, near the summit of the head. It is also dust, because, like the rest of the flesh-and-blood body, it is perishable and must turn to the earth's lap when death comes. And it is trees, the perfect incarnation or embodiment of all that is natural and spontaneous and worth preserving in Bringhurst's poems. The fourth definition is the most elaborate and complex of all: the heart is snowbound broken rock in the chest of a man dreaming the natural elements in the world, as if dreaming itself were tantamount to creating the thing dreamt of out of the blue.

The rest of "Sutra of the Heart" is a string of perfectly linked sutras, which constitute a prolonged and sustained meditation on the nature of the heart. The theme is observed with uttermost attention and tranquility, with a detached peace of mind, and the insights into its ultimate nature are recorded with astonishing immediacy in a masterly language. As a matter of fact, Bringhurst's poems are loved at first sight just for the very texture of his limpid language – one marked by simplicity, clarity and a precious elegance. It seems to us that it has always been Bringhurst's aim to write one simple true sentence, the truest and profoundest sentence he could find. From there, he would go on and write his magnificent poems, which turn out to be scintillating constellations of jewel-like words. Necklaces of meaning or concentric ripples on the surface water of an untroubled lake, his words are to be tasted on the tongue as we read them aloud as if they were solid food or drink – oysters, wine, or bread, as Hemingway would put it. These are words that sit upright like solstice stars and light the dark sky of a winter night. Wordsworth said that poetry is recollection of memories from the past in tranquility. Modernist authors would no doubt insist on the fact that those precious memories are then transmuted into a memorable poem as *a thing made* or *artifact*, precisely because the memories are intangible

² See the entry on 'sutra' in the *Encyclopaedia Britannica*, volume 27, p. 16048.

and are written in the same fugitive alphabet of dreams. It is through the prism of language that memories must first pass if they are to become part of an everlasting well-wrought poem, or a piece of prose beautifully written, capable of touching the reader's sensibility. But Bringhurst's poems are not about memories, but about real things in the real world perceived fully and in depth by the senses and the mind instead. He works with his mind and with words that are tools with which to shape his poems. That he should pay attention to every single detail and nuance of meaning is a proof of his sincerity, his vocation and his serious commitment to a millennial art to which he has devoted a whole lifetime. In any case, poems are not just the words they are made of; words are just the tiny blocks with which the poet orchestrates a whole composition. Poetry is something larger and vaster that goes beyond the clear-cut boundaries of a poem. To Bringhurst, it is an attribute of reality, it is in the very texture of living things.

Poetry is also a form of knowledge in Bringhurst's hands, and there is something exploratory or inquisitive about "Sutra of the Heart" indeed. Let us have a look at a handful of brief sutras lifted from the poem:

- (1) *"The heart is a flute with four fingerholes / played in the rain."* The heart is a musical instrument with four fingerholes that stand for the four cavities inside it. That it is played in the rain, and not in the sun for instance, remains a mystery. Is this meant as a reference to the wet nature of the heart as a handful of meat or flesh full of blood?
- (2) *"The heart is a deep well dug upward."* This looks like an enigmatic riddle, for wells are dug downward, not upward. Is it because the heart's aspirations reach upward, toward some kind of goal somewhere up above?
- (3) *"The heart is a deepwater sponge / tied up with smooth muscle in two / double half-hitches, sopping up blood / and twice every second wrung out like a rag."* This sutra explores the anatomy itself of the heart, which resembles a sponge living in the deep sea and consists of two halves pumping blood all the time. Something similar happens in *"The heart is three bowls / always full and one empty"*: a sutra of Oriental inspiration in its very reference to bowls, which stand for the heart's cavities emptying and filling constantly with flowing blood through the diastole and systole stages. Similarly, in *"The heart is a four-winged / moth as it lifts and unfolds."* (in *Pieces of Map, Pieces of Music*, 'moth' was replaced with 'bird') the anatomy of the heart is explored in more subtle ways. Now the heart is like a moth (or a bird) which is about to flap its wings and take flight.
- (4) *"The heart is a cut root / brooding in the worn earth, / limping, when no one is watching, / back into the ground."* The heart is also a half-dead root trying to find its way back to the living soil, back to the lap of Mother Earth, the ultimate source of life for everything in this world. In a way, the deepest affiliations of the heart are ultimately telluric, and so it seeks to go back to the earth, which means that there is nothing special about the human heart – i.e., it belongs to the larger scheme of things in this world.
- (5) *"The heart is a place. The heart / is an unmentioned name."* The heart is a physical and meaningful space too where emotions and feelings are thought to gather and reach momentum, or so we think. It is also a word, a name that remains unmentioned, an inaccessible mystery.
- (6) *"The heart is everything, but nothing / is the heart."* This paradoxical statement is rich in nuances of meaning and it hides a wealth of potential interpretations. The heart is beneath each single decision we make in our lifetime, its constant beating guarantees that the body goes on existing, but, paradoxically enough, it is nothing at the same time. Or is this nothing something positively real? A synonym for *non-being* or *what-isn't*?
- (7) *"The heart is lime and dung and diapers / in a hole."* The heart is found even in the heterogeneous debris and detritus in a hole. It does not have to be something necessarily sublime, as we might think at first. It is therefore ubiquitous.
- (8) *"The heart is / diamond and cooked turnip, lead and precious metal, / stone."* This is a most curious enumeration: it brings together a precious stone with a cooked vegetable, metal and common stone. It is a diamond because it is precious, invaluable, irreplaceable in itself.

- (9) *“The heart is wood.”* Back in an elemental world of essentials, the heart is trees and the wood trees are made of. And wood is good in itself: it gives humans warmth and protection in the form of houses and fire.
- (10) *“The heart is light. The heart is cold.”* Light is an essential ingredient in Bringhurst’s poetic universe: it renders the world visible, it makes sight possible, it signifies the benign presence of the life-giving sun. At the same time, it is cold, as opposed to heat.

Other sutras are longer and even more complex. In one of them the whole history of humankind seems to be captured in only five verse lines. The heart is a canyon, a manifestation of earth, in the Triassic period, populated by such elemental things as grass, bones and remains of corn. The prehistoric paintings on the canyon’s walls evoke humans and animals from a time long past:

The heart is a sandstone canyon in the high
Triassic fields, inhabited by grass,
potsherds and scapulae, femurs and burnt corn,
with horned men and mountain sheep
painted and pecked in the straw-colored walls.

SP, p. 155.

And somewhere at the heart of this meditation on the heart we find an amazing constellation of three completely different sutras. In the first place, one jewel-like sutra goes like this: *“The heart is four unintersecting / strokes of the brush in Chinese...”* Here Bringhurst draws on the realm of writing to try to define the essence of the heart. It turns out that the Chinese ideogram for *heart* consists of four brushstrokes that do not touch one another and that possibly evoke the heart’s cavities. Also, the Chinese word has got seven interesting homophones (i.e., words that are pronounced exactly the same) in the language: it is a happy coincidence (and good news too) that *daylight*, *zinc*, *firewood*, *bitterness*, *joy*, *earthbreath* or *lampwicking* should be pronounced like the word *heart* itself. Speech brings together or reconciles the heart with daylight (*“The heart is light”*), with metal (*“The heart is [...] precious metal”*), with firewood (*“The heart is wood”*), with such elemental states of mind as bitterness and joy (thought to reside in the heart), with earthbreath (because the heart is *a cut root* trying to find its way back to the ground, to Mother Earth, when no one is looking) and with lampwicking (because the heart is cold but it is also a flickering, passionate flame illuminating the path of our life). Secondly, a simple, brief sutra follows: *“The heart is a pitcher of untasted water.”* Like light, water is of the essence in Bringhurst’s conception of the world and the real – *“This music is all about water,”* said one of the voices in *The Blue Roofs of Japan* (1986). That the heart is a pitcher containing water that has not been tasted yet suggests the pristine state or purity of the heart itself. And thirdly, there is a beautiful myth-like definition of the heart, rich in resonances and echoes reminiscent of such central Bringhurst poems as *“Bone Flute Breathing”*, *Tzjubalem’s Mountain* (1982) or *Tending the Fire* (1985). The heart is still the “white mountain” of the opening line of *“Sutra of the Heart”*, but now a woman living in the moon with breasts that are musical instruments climbs it. Sometimes the very motion accompanying the rhythm of the heart (systole and diastole) carries her up and down the mountain:

The heart is a white mountain
which the woman in the moon,
her left breast full of cellos and her right
breast full of violins,
climbs and is sometimes carried
up and down.

“Sutra of the Heart” closes with sutras that resonate in the echo-chamber of the reader’s mind long after finishing reading the poem aloud: “*The heart is being / knowing only that it is; / the heart is dumb; the heart is glass.*” The heart is nothing more, and nothing less, than *being* itself, or the embodiment of *being*, and it knows a simple thing: it exists. It does not need words to give voice to this simple truth, to this intimate awareness that it is alive. It is dumb, and it is also fragile and vulnerable like glass, which can easily break down into a million pieces. The closing lines of Bringhurst’s poem are incantatory and alliterative, and they remind us once again that the heart is *being*, and that *being* aches and beats at the same time, and that it knows itself:

The heart is being aching, being
beating,
being knowing being
that not what not
who not how not why
it is the beating that it is.

SP, p. 157.

II · “Kol Nidre”

“Kol Nidre” was first published in *The Calling: Selected Poems 1970-1995* (1995). It was then reprinted with no textual variants at all in “The Physics of Light” section in *Selected Poems* (2009). The title is, to begin with, enigmatic. What does *Kol Nidre* exactly mean? Though not exactly a prayer, Kol Nidre is an Aramaic declaration recited in the synagogue before the beginning of the evening service on every Yom Kippur, the Day of Atonement. It concerns the vows and promises one makes and one must live up to. When first confronted with this lyric poem, one cannot help feeling that every indispensable word that has been threaded into the living fabric of the composition falls exactly into place and that if one single word were removed, something would inevitably go wrong with the whole organic *Gestalt* of the piece. Once again, the language is kept simple, transparent and elegant. Though there is no rhyme here, there is a subtle musicality implicit in the cadences of the words making up the poem when spoken aloud. The pervasive tone from beginning to end is meditative, almost elegiac, as if the voice speaking in the poem were whispering a prayer, addressing an unknown *you* and asking for forgiveness. Marked by such a simple literary strategy as repetition and parallelism, these lines have a litany-like quality about them that makes them memorable:

Forgive me my promises. Those I have kept
and those I have broken. Forgive me
my pledges, my vows and the rest
of my boasts and concessions.

SP, p. 158.

If “Kol Nidre” opens precisely with an implicit vocative addressed to this unknown *you*, then the heart of the poem is a detailed record of a revelation which has the precious texture of transcendence: what the poetic voice learns all of a sudden is that “*what is is what links us,*” and this *us* is meant to reach beyond the realm of the human into the non-human, as we shall see below. The epiphany-like moment of revelation comes in the most uncanny of situations though, as the speaking subject is raking his “*father’s bones out of the long furnace.*”

Now, Bringhurst's poems are rich in references to bones, one of those recurrent words found time and again in his poetic corpus. "For the Bones of Josef Mengele, Disinterred June 1985" is one such eloquent example, but in many other Bringhurst poems bones are the embodiment of something primordial that links the human body to the stones of the earth and the rest of the constituent elements of reality. One is also inevitably reminded of Paul Celan's "Todesfuge" and Bringhurst's "Larix lyalii", a variation on the Romanian poet's short lyric poem "Faddensonnen" in "The Lyell Island Variations". But there is nothing truly uncanny about the bones in "Kol Nidre", we learn as we read further into the poem as it unfolds into a celebration of *what is* in its manifold manifestations. As a matter of fact, what follows is a rather exhaustive catalogue of *what is*, lifted from the human and non-human realms. What links all creatures on Earth, human and non-human, living and non-living alike, is nothing more than the ground we all tread upon, the air we all breathe (the air all living things inhale into their lungs and exhale back to the exterior lung of the world), and "*the rocks and trees that look down on us all in their candor.*" This is an elemental universe of earth, air, water, stones, trees and animals. But this catalogue does not exhaust the rich diversity of links or bonds uniting humans to other humans when living in society.

More than 2,000 years ago, Aristotle claimed that humans are *political animals*, which means that we are bound to live together in social communities governed by laws agreed upon by consensus and sanctioned by custom. It is the presence of the others that makes us truly human; it is impossible to conceive of a man or a woman living in complete isolation, unconnected to any other human being. Living together with other human beings is no easy undertaking though. This is what Bringhurst's words appear to convey through the long enumeration of things that link us to one another:

all that remains of all that surrounded us when we were sane –
and the eyes; the hands; the silence; reciting the names
of what is in the world; divining the names
of what isn't; the wounds we inflict

to relay and mirror the wounds we receive;
and the knots that we cannot undo
between father and son, daughter and mother,
mother and father, the one

God and all his believers:

SP, p. 158.

The reference to everything that remains from a time when we were all sane is enigmatic. What follows this statement is of a metonymic nature: eyes and hands are projections of the self out onto the world outside that link us to other human and non-human beings. Like speech, silence is also of the essence in our reconciliation with *what is*, because apprehension of *what is* demands respectful attention if we are to feel its presence in reality. Reciting the names of what exists in the whole world is no minor undertaking: it begins with an act of humility and it turns out to be a gesture of gratitude, for it acknowledges the inexhaustible diversity of *what is*. Amid the living mesh of things, along this uninterrupted continuum, humans belong among all the rest of creation. And *what isn't* is the other side of the coin; we cannot try to divine the names of *what isn't*. Furthermore, wounds are a quintessentially human trait and they do unite us to one another, both the ones we inflict and the ones we receive. As the natural or spontaneous expression of love and hate, wounds remind us that we are fallible creatures and that we need the other's presence to

make sense of ourselves. The knots that bring humans together are innumerable and sacred at their very roots, and so the poetic voice speaks of the unbreakable bonds within a family and of the powerful religious bonds between “*the one / God and all his believers.*” That there is one God is possibly meant as a defence of religious tolerance and solidarity. *Alle Menschen werden Brüder* – those were the words of the dream Schiller dreamt of in his “Hymnen an die Freude” so long ago –, regardless of religious, political or ideological beliefs. And “Kol Nidre” closes with one more sacred knot that brings two human beings together: “*the marriage made without vows / between those who have pleased / and hurt one another that deeply.*” Are these words meant as a reference to the passionate love that unites two people forever? In genuine love relationships pain and pleasure go hand in hand; no doubt, the intimacy born between two persons that are unique and irreplaceable has got a moving sacred quality about it. After all, communion of body and mind enacts an emotional, intellectual and physical bond that is simply astonishing, beyond verbalism.

III · “Gloria, Credo, Sanctus et Oreamnos Deorum”

“Gloria, Credo, Sanctus et Oreamnos Deorum” saw the light of day in 1985, when part 1 of the poem was published in an untitled promotion piece (A.25) by The Writers’ Union of Canada in Toronto, in a single sheet, 21.5 × 28 cm., containing a poem entitled “Thirty Words for Deborah Peaker”, accompanied by a brief commentary and a photograph, and issued in conjunction with Bringhurst’s 1985 reading tour of Australia and New Zealand. Afterwards, it was reprinted as “Thirty Words” in *Pieces of Map, Pieces of Music* (1986) and in C.50.³ Later, it was reprinted as part 1 of “Gloria, Credo, Sanctus et Oreamnos Deorum” in B.47⁴, A.47 and A.92. The title of the poem brings together several Latin words that function as subtitles for each of the four parts the composition consists of. Thus, part 1 would be *Gloria*, i.e. the celebration or praise of *what is*; part 2 would be *Credo*, dwelling on human knowledge and on the poet’s own immutable convictions and beliefs; part 3 would be *Sanctus*, a treatise in miniature on the nature of knowledge and the sacredness of the Earth; and part 4 would be *Oreamnos Deorum*, i.e. a meditation on the ubiquitous presence of gods in this world, desperately calling to be felt by human beings. All four parts constitute a moving prayer in which the words “*knowing, not owning*”, ascribed to Canadian poet Don McKay, one of Bringhurst’s contemporary fellow poets and one of the most prominent authors of the so-called *Group of Five* (Jan Zwicky, Dennis Lee, Tim Lilburn, Don McKay and Robert Bringhurst himself), are repeated in all but one of the four sections to direct the reader’s attention to a new form of environmental awareness and ethics.

Part 1 of “Gloria, Credo, Sanctus et Oreamnos Deorum” has remained immutable in spite of the passing of time and the revisions the composition has undergone through successive textual incarnations. The poem opens with McKay’s words, “*Knowing, not*

³ See C.50 [Eleven poems]. *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58. Contents: 1) “Six Poems from *The Book of Silences*”: • “Uddalaka Aruni: A Song for the Weavers” (rev. in A.32); • “Wáng Bì” (rpt. in A.32, B.44; rev. in A.65); • “Jízàng” (rpt. in A.32, A.65); • “Línjí Yìxuán” (rpt. in A.32, rev. in A.47, A.65); • “Dānxiá Zìchún” (rpt. in A.32, A.47, A.65); • “Nánquán Puyuàn” (rpt. in A.32, A.65; see also F.2); 2) • “Sutra of the Heart” (rpt. in A.32, A.47, C.51; cf. Vancouver: Arsenal Pulp Press, 1994: pp. 266–268. Contribution: • “Gloria, Credo, Sanctus & Oreamnos Deorum” (part 1 is reprinted from “Thirty Words” in A.32; full text is revised in A.47; the A.92 text is reprinted from A.47.)

owning”, which in their linguistic concision (only five syllables) remind us that *we do not own what we know*. Knowledge usually brings a sense of intellectual security or control, but also a form of dominion over what is known by the human mind. Humans *want* to know and *need* to know, which is a universal compulsion indeed, in much the same way they want to be happy and lead an authentic life. The whole history of humankind is nothing but a titanic effort sustained over time in reaching towards absolute knowledge of *what is*. Self-absorbed as we are, human beings tend to think that we are at the top of creation and take for granted that we do have a right to manage the Earth and everything in it as we please. But this poem is precisely a praise of what is objectively and stubbornly real, a moving celebration of the inexhaustible richness of *what is*. Two short four-line stanzas turn out to be enough to give voice to the conviction that the real is always more complex and interesting than whatever we might think or feel about it. Flattering or pleasure, narcissism or egotism, are secondary to the preeminence of what simply *is*, and so are mental constructs, simplifications of what is really real:

Knowing, not owning.
Praise of what is,
not of what flatters us
into mere pleasure.

Earth speaking earth,
singing water and air,
audible everywhere
there is no one to listen.

SP, p. 159.

The second stanza offers a view of Mother Earth as the primordial goddess out of which everything we know to exist springs to life. Humans have no monopoly on meaning or language, and so Earth is endowed with speech, for it does speak its own language, one made of earth, not of human words. It also sings *water and air* (only *fire*, the fourth of the classical elements, seems to be missing here). What Earth speaks or sings is to be heard everywhere as long as humans are ready to pay attention. But the Earth’s speaking and singing is moving further back into somewhere else where there is no one to listen. It is hiding itself, possibly because of humans’ greedy manners in their interaction with the world.

Part 2 sings of the poetic voice’s convictions or beliefs; it is as though it were saying, *This is what I firmly believe in*. Interestingly enough, the poem tessellates the three fundamental concepts of *being*, *knowing* and *touching* to advocate a total communion between *the knowing self* and *the known world*. The relationship holding between them should be balanced or harmonious, not one of subjugation. We humans are what we know, but absolute knowledge of *what is* is simply impossible, an intellectual undertaking that is doomed to failure from the start. A certain degree of humility is necessary in our intellectual confrontation with the real, and so the poet reminds us that it is essential to learn to value whatever “*rags*” and “*blisters*” we manage to possess of our knowledge of the world. The “*rags*” point to the impossibility of achieving a completely reliable or total knowledge of the world; the “*blisters*” are possibly meant as a reference to the pain inherent in much of our knowledge of what surround us. Indeed, blisters proliferate in hands and feet, which are the body’s prolongations in our interaction with reality, and the skin, that gigantic organ covering the human body, is our primary link with the world out there. In this respect, touching is meant as a reminder of human beings’ need for reliance on the first-hand raw materials the senses provide the mind with. The *I* is *a big eye* that sees

everything around it, but it is also *a vastly sensitive skin* capable of touching what it learns. Possibly there exists only what we can touch and what can touch us. However, touching something to know it does not necessarily mean that we own what we touch or try to know. We have to be ready to be touched by the world we touch, to let it go, to release and be released, and to become what we know and what we do not know during our knowing and unknowing at the same time. Thus, the ultimate message is a defence of humans' willing surrender to *what is*, of humble acknowledgement that we are not superior to what this world has to offer us. The whole poem is worth quoting in full:

Knowing, not owning:
being, not having,
the rags and the blisters
of knowledge we have:

touching the known
and not owning it. Holding
and held by the known,
and released and releasing,

becoming unknowing.
Touching and being
unknowing and knowing,
known and unknown.⁵

SP, p. 160.

Part 3 is a treatise on knowledge in miniature and a celebration of the sacredness of Earth, which is the immediate subject of investigation, the ultimate object and source of human knowledge. Bringhurst's poetry is rich in images of sharpened objects; the mind is usually conceptualized as being a sharpened tool to make sense of reality. Knowing is but an act of perpetually sharpening one's mind in our confrontation with the world, hence the opening verse lines of part 3: "*Sharpening, honing / pieces of knowledge, / pieces of earth.*" Earth and knowledge belong together, they go hand in hand, and so it does make sense to speak of sharpening handfuls of earth or pieces of human knowledge. *Sharpening*, in this context, means making more perfect, clearer or distinct to the human mind's apprehension. In any case, knowledge, like plants, springs from earth itself, one of the four classical elements out of which all things are made in this world. Therefore, getting to know anything at all is tantamount to "*unearthing the knowledge / and planting the knowledge / again,*" for the question arises from Earth itself and the answer is to be found in Earth itself – both question and answer "*inhabit the ground.*" As a token of gratitude an offer is made to Earth: "*hunger, not anger, / wonder, not terror, / desire, not greed*". The parallelism of these short verse lines emphasizes an important aspect: hunger for knowledge, or the irresistible desire to know, is a universal compulsion among humans of all times and historical periods, just because one cannot help but feel overwhelmed in the face of the grandeur of the universe. However, in the present state of affairs, anger, terror and greed seem to shamelessly dominate humans' way of relating to the world. Having forgotten the fundamental truth that we belong among a grander scheme of things, humans are angry at a world which has become a victim, a prey, an entity to be wringed, spoilt and abandoned. *Knowing, not owning* – this is

⁵ In B.47, the poem reads like this: "Knowing, not owning, / Being, not having / what knowledge we have. / Not owning the knowing. // Knowing the known / and not owning it means / embracing unknowing, / releasing the known // and becoming unknowing, / touching and being / knowing, unknowing, / known and unknown." *Witness to Wilderness: The Clayoquot Sound Anthology*, edited by Howard Breen-Needham, Sandy Frances Duncan, Deborah Ferens, Phyllis Reeve, Susan Yates. Vancouver: Arsenal Pulp Press, 1994: p. 266.

what we should be doing instead: trying to understand what it means to be alive in this irreplaceable world of ours, amid so much beauty, with humble respect and gratitude. Reality, the universe, is sacred at its roots. The whole of the human enterprise on earth is nothing but an attempt to make things cohere. Curiosity is of the essence; it is the prerequisite for humans to start inquiring about the ultimate nature of things. You cannot walk in a forest and simply ignore the teeming forms of life surrounding you everywhere you turn to look.

The five stanzas that follow convey a sense of emotional urgency and so they flow into one another in a spontaneous way. A series of indiscrete and seemingly unconnected elements brings together “*the touch of another, / the other’s reluctance, / the incense of fear*” as well as “*the smell of the horses / in darkness, the thread / of the story, the thread / of the thread of the story.*” What these words suggest is that the poet might be urging the reader/hearer to acknowledge the sense of communion uniting all humans, and humans and animals alike. However, *arrowhead*, *bowstring* and *snare* are all weapons to subdue or subjugate animals, which testifies to our thirst for dominion over the rest of creation. Of a very different nature is the beautiful meditation on breath that follows:

... the breath
going out, the breath
going all the way out

and half-turning⁶
and waiting there, listening.
Yes. Breath
that is lifted and carried

and entered and left.
Through the doorway of flesh,
the barely invisible
footprints of air.

SP, pp. 160-161.

Like speech, breath is of the essence in Bringhurst’s poetry. Like feet, breath is our most elemental link with the exterior gigantic lung of the world, and the body is the connection between the world at large and the self. In breathing, we are inhaling the air breathed by all other nonhuman creatures, and so this is a natural and democratic action we usually overlook or take for granted. Breathing is also a form of attention and a form of acknowledging the sense that we belong among the other living and nonliving creatures that populate this world. Breath is also inextricably linked to speech: words are semantic air that emanates from one’s lungs and manages to convey a wide range of meanings to our fellow human beings. This is truly a miracle that we tend to ignore.

Part 4 is a meditation on the ubiquitous presence of the gods, wandering homeless in this world of ours because we no longer acknowledge their existence. In his foreword to *The Calling: Selected Poems 1970-1995* (1995), Bringhurst himself speaks of “a lot of homeless gods – who dream of alpine meadows, rivers, rocks and trees and coral reefs and coves – forced to make do for a time with a diet that might consist of little more than sterile earth

⁶ In B.47, these lines of the poem read like this: “and stopping. The breath / stopped. Waiting there. / Listening. Not / breathing. And then // breathing, the breath / breathing again. / The breath going out, / the breath coming in.”

and poisoned air and water.” Killing and eating the gods is no crime though. It means trying to absorb them and make them part of our very flesh. Gods are innumerable and different in human cultures: they are *four-footed*, *winged*, *rooted*, *footless*, or *one-footed*, which are references to the presence of the divine, or spirit beings, in animals, birds, trees, mountains, and other creatures of the world, for instance among the native peoples of North America or in ancient Graeco-Latin mythology. This divine presence at the heart or core of things is no longer perceived by humans, but this does not preclude its existence, of course. We still need the gods for a number of purposes:

gods: making flesh
of their flesh, thought
from their thought in the form
of the traces they leave,

words from their voices,
music and jewellery
out of their bones,
dreams from their dances,⁷

SP, p. 161.

Our thinking and our singing and our dancing are all made possible by the very existence of gods, the poet tells us. And the poem closes with a prayer addressed to the stones, from which the poetic voice begs *forgiveness* for all the pain inflicted upon the Earth (of which the stones are the exterior skin) and *continuance* – i.e., the survival or the persistence of life in spite of the destruction of the world in the hands of greedy humans. However, stones remain unperturbed, impassive, unmoved. They are stones after all, in spite of the poetic voice’s attempt at personifying them. But if you put your ear to them, they will tell you something you never heard before: they will teach you the stricture of being a stone, they will teach everything they have been mute witnesses to, they will sing you a song without words or notes.

IV · “*Rubus Ursinus*: A Prayer for the Blackberry Harvest”

“*Rubus Ursinus*: A Prayer for the Blackberry Harvest” was first published in 1985 as a broadside (A.28), 26 × 33 cm., issued in Mission, British Columbia, by Barbarian Press. According to the colophon, there are 126 copies, but, in fact, the edition consisted of only 25 signed and numbered copies, numbered from 1/126 through 25/126, with perhaps a few unnumbered strays. The poem would be later reprinted in A.32 *Pieces of Map, Pieces of Music* (1986), in C.50 *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 37–58, along with ten more poems (see footnote above), in A.47 *The Calling: Selected Poems 1970-1995* (1995) and in A.92 *Selected Poems* (2009).⁸ The title combines both Latin and English, a classical and a modern language. But what exactly does *Rubus Ursinus* mean? It is Latin for *blackberry*, a small soft fruit that grows on a bush (also called a blackberry or a bramble) with thorns in gardens or in the countryside. Clearly, this poem belongs among the jewel-

⁷ In B.47, these lines read like this: “gods: making flesh / of their flesh, thought / from the traces they leave, / words from their voices, // music and jewelry / out of their bones / to rekindle their lives / in our dreams and our dances.”

⁸ “*Rubus Ursinus*” was later reprinted in B.106, *Affix This to That with Poetry*, Gaspereau Press poetry sampler. Kentville, N.S.: Gaspereau, 2009: [ii–v], alongside “The Greenland Stone” and “Herakleitos,” all rpt. from *Selected Poems* (A.92).

like short lyric poems in Bringham's literary corpus – among such early poems as “Poem About Crystal”, “A Scholium” or “An Augury”. In its verbal concision, the poem, consisting of only eight short verse lines, tessellates three little movements for the soul: the description of the picking of blackberries amid the stinging thorns of the bush that hurt one's hands, a vocative addressed to three different people in lines marked by strong enjambment, and what looks like a rhetorical question awaiting no answer. This is the poem in full:

Reaching through thorns,
milking the black
udders with stung
wrists. Sister and
mother and un-
named stranger, say:
whose is this dark
blood on my hands?

SP, p. 162.

Blackberrying (i.e., harvesting blackberries from their bush) is akin to milking the udders of a cow, but the difference here lies in that what the harvesters get from the thorny bush is not white milk but dark blood that stains their hands. It remains a mystery why the speaking voice in the poem should address a sister, a mother and an unnamed stranger, all of them probably taking part in the same act of picking blackberries. In any case, the moment has the texture of mystical transcendence: the Earth is bleeding in the form of blackberries' juice giving way in the harvester's hands. This dark blood is not dissimilar from the one running through humans' veins, for human and nonhuman creatures alike are born from the bosom of Mother Earth. This appears to be the profound message beneath the lines, or so it seems. Stylistically, it is no random choice that adjectives (*black*, *stung* and *dark*) should be left lingering mid-air at the end of lines 2, 3 and 7, and that even a prefix (*un-*) should be rent apart from its past participle at the end of line 5, since the voice speaking in the poem is tentative and advances falteringly in the unfolding of this prayer. It is not known whether the prayer in itself is meant to accompany the blackberrying or not, as is the case with popular songs sung in traditional agrarian societies. Whichever the case, this short composition keeps on resonating in the echo-chamber of one's mind long after one has finished reading it aloud and tasting its very texture on one's tongue.

V · “For the Bones of Josef Mengele, Disinterred June 1985”

Published for the first time alongside other poems in *CutBank* (Missoula, Montana) 26 (Spring/Summer 1986): 36–58 (C.50), “For the Bones of Josef Mengele, Disinterred June 1985” is a poem central to Bringham's poetic corpus. Shortly afterwards, it was reprinted in *Pieces of Map, Pieces of Music* (1986), and almost ten years later in Bringham's major anthologies – *The Calling: Selected Poems 1970-1995* (1995) and *Selected Poems* (2009). It has also been reprinted in a number of anthologies throughout the years,⁹ which testifies to its

⁹ (1) In B.21, *Fifteen Canadian Poets Times Two*, edited by Gary Geddes, Toronto: Oxford University Press, 1988: pp. 490–505. Contributions: “The Beauty of the Weapons”, “The Sun and Moon”, “Poem about Crystal”, “Anecdote of the Squid”, “Xenophanes”, “The Stonecutter's Horses”, “The Song of Ptahhotep” (all rpt. from A.14), “For the Bones of Josef Mengele, Disinterred June 1985” (rpt. from A.32). (3) In B.78a, *Fifteen Canadian Poets Times Three*, edited by Gary Geddes, Toronto: Oxford University

central position in the authors' entire work. Written in the tradition of Paul Celan's "Todesfuge", Bringham's poem concerns the horrors of the Holocaust as embodied in the so-called *Todesengel* (Angel of Death) – i.e., Josef Rudolf Mengele (b. Günzburg, Bavaria, 16 March 1911), an infamous SS captain and physician known for his horrible medical experimentation on prisoners at the Nazi concentration camp of Auschwitz-Birkenau and his selections of prisoners to be executed in the gas chambers. He was in charge of supervising the arrival of new prisoners in the camp, determining who was to survive as a forced labourer and who was to be immediately gassed. He was also known as *der weiße Engel*, for, as he stood on the platform wearing his white coat and inspecting new arrivals, directing some to the left and some to the right, he looked like a white angel with outstretched arms. During his 21-month stay at Auschwitz, he gained notoriety for performing grisly medical experiments on camp inmates: he was particularly interested in twins and in physical abnormalities, and performed terrible medical experiments upon the camp prisoners such as changing eye colour by injecting chemicals into children's eyes, amputations of limbs, sterilization and shock treatment performed on women, vivisections on pregnant women, or shameless dissection of twins' bodies. Even if his chosen victims were placed in special barracks and saved from the gas chamber, most of the experiments resulted in painful deaths. Cosmic justice did not apply in his case: he evaded capture and managed to escape Germany after the war. In spite of being hunted as a Nazi criminal war, he spent the rest of his life under a false name quite unmolested in a number of places in South America – Argentina, Paraguay and Brazil, where he died in Bertiooga on 7 February, 1979. He never showed regret or remorse for the crimes he had committed while at Auschwitz. On 6 June 1985 his bones were exhumed in Brazil and identified as his by forensic experts. In 1992 a DNA test confirmed the identity of the bones. There was no doubt about it: these were the bones of the Nazi war criminal who managed to evade capture for 34 years.

It is not necessary to know all these background details to be in a position to understand this moving poem, the work of a passionate intelligence and a technical accomplishment. Bringham writes with emotional force about Mengele and those who dug up his bones in Latin America. In the glossaries at the end of *Pieces of Map, Pieces of Music* (1986) and of *The Calling* (1995), the author gives the reader the essential pieces of information needed for a proper understanding of the poem:

JOSEF MENGELE (1911-1979?) The German physician in charge of medical experiments at Auschwitz-Birkenau. After the war, he was rumoured to be living in South America, then to have drowned near São Paulo. In 1985 a skeleton said to be his was exhumed and its identity exhaustively tested.

Bringham's poem consists of three stanzas and three movements for the hearer's or reader's soul. In the first stanza, the speaking voice addresses the war criminal through three vocatives and meditates on the ultimate ownership of these bones researchers are unearthing. There is no need to dwell on the heinous medical experiments he performed on camp inmates; the vocatives are eloquent enough: this is a murderer, a physician who

Press, 2001: pp. 388–400. Contributions: "The Beauty of the Weapons", "Anecdote of the Squid", "The Stonecutter's Horses", "These Poems, She Said", "Poem without Voices", "For the Bones of Josef Mengele, Disinterred June 1985" (rpt. from A.47). (4) In B.83a, *Literature: Reading, Reacting, Writing*, edited by Laurie G. Kirszner, Stephen R. Mandell & Candace Fertile. Scarborough, Ontario: Thomson/Nelson, 2003: pp. 541–542. Contribution: "For the Bones of Josef Mengele" (rpt. from A.47). (5) In B.93, *Literature: Reading, Reacting, Writing*, edited by Laurie G. Kirszner, Stephen R. Mandell & Candace Fertile, 2nd Canadian ed., Toronto: Nelson, 2007 [actually distributed in spring 2006]: pp 597, 838–844. does not save humans from death or illness, but who causes people's death through horrible procedures. In any case, the act of exhuming Mengele's bones prompts a profound meditation on the symbolic significance of bones, which are central to Bringhurst's poetry from beginning to end. The bones resemble old bread that crumbles into pieces as soon as one touches it with one's fingers, and so the German physician is not drowning (he is thought to have drowned accidentally while swimming in the Atlantic, or to have died of a stroke while swimming), but eating:

Master of Auschwitz, angel of death,
murderer, deep in Brazil they are breaking
your bones – or somebody's bones: my
bones, your bones, his bones, whose
bones does not matter. Deep in Brazil they are breaking
bones like loaves of old bread. The angel
of death is not drowning but eating.

SP, p. 161.

In the second stanza, a sort of violence is being exerted upon the bones, which are inanimate, seemingly devoid of speech, nothing more than the mute remains of a monster. The researchers unearthing the corpse are urging the bones to speak: "*Speak!* they are saying. *Speak! speak! / If you don't speak we will open and read you!*" With guns to their heads, the bones are personified and all of a sudden they start confessing their guilt: "*Yes! It is true, we are guilty!*" The bones' identity was exhaustively tested, Bringhurst tells us. All kinds of forensic tests were performed on the bones to make them reveal their owner's identity. There is a sense of emotional urgency conveyed in this second stanza which is simply moving. A sort of climax is reached in its last verse line, where the bones give up and confess their guilt openly. The premise that the bones are guilty is central to the second stanza, and is certainly found at the geometrical centre of the composition, but the third stanza will prove that bones are not guilty at all.

"*Butcher, baker, lampshade and candlestick / maker*": the opening vocatives suggest, again very subtly, the horrors attributed to Mengele while exercising as SS physician at Auschwitz-Birkenau. He was a true butcher because of the many limb amputations and dissections he performed on children and women alike; he was a baker because he sent thousands of innocent human beings to the gas chambers and then their bodies were burnt into ashes; he was a lampshade and candlestick maker who performed horrible experiments on the bodies of the Jews, from whose skins it is said the Nazis made lampshades. The bones have nothing to do with the monster, with the man who committed these atrocities. They are nothing but "*earth, metals, teeth,*" Bringhurst claims. They are not guilty. What is left from Mengele is nothing but a handful of dust, which is part of Earth itself, which is innocent. The guilt is found in the heart or the mind of the living human being; once dead, the horror is found in other human beings' hearts and minds:

These are not guilty. The minds of the dead
are not to be found in the bones of the dead.
The minds of the dead are not anywhere to be found,
outside the minds of the living.

SP, p. 162.

In a brief and lucid analysis of the poem, Robyn Sarah points out that Bringhurst's poem belongs to a tradition of poems written about the Holocaust, in spite of Theodor Adorno's statement that "After Auschwitz it is barbaric to write poetry." Among the most powerful

poems about the Holocaust are, of course, Celan's "Todesfuge" ("Death Fugue") and Anthony Hecht's "The Book of Yolek". But Bringhurst's poem does not deal with the subject of the Holocaust directly:

Vancouver poet Robert Bringhurst's "For the Bones of Josef Mengele, Disinterred June 1985", does not directly address the Holocaust. Its focus is an event decades later: the arrival in Brazil of a forensic team to exhume remains thought to be those of the infamous physician in charge of medical experiments in Auschwitz. Bringhurst's poem addresses the human need to seek what the tired jargon of recent years has named "closure"... [...]

The power of this poem sneaks up on us. The closing lines quietly deliver a message we weren't expecting, whose truth nevertheless hits straight home: The bones may be Mengele's, but the evil that was Mengele – the dehumanizing hatred, contempt for the sanctity of life – is not there to be found. Bones are only bones. But the evil that demonizes Otherness will exist as long as the human mind exists. We will not find it in a grave. If we would root it out, we must be vigilant against its manifestations among the living.¹⁰

VI · "Fathers and Sons"

Dedicated to Jan Conn and first published in *The Calling: Selected Poems 1970-1995* (1995) and then reprinted with a minor textual variant in "The Physics of Light" in *Selected Poems* (2009), "Fathers and Sons" is a moving meditation on the relationship between a father and a son. There might be autobiographical resonances beneath these terse verse lines: Bringhurst was an only child and he must have spent long periods of time in his father's company walking in the mountains of Montana, Utah and Alberta where he was raised as a young man. Those were formative years spent outdoors, in close contact with a vast natural space where he learnt to listen attentively to whatever the mountains, the rivers and the trees had to teach him in the form of welcome revelations. In the book of Nature¹¹ he would learn to read many pages that would later inform his own poems. As a matter of fact, Bringhurst's poems are full of air, water, stones, blood, trees, animals and the whole

¹⁰ See Robyn Sarah's article "Good poetry stands up to evil", published in *The Gazette* (Montreal), November 17, 2001: J3. Column on "For the Bones of Joseph Mengele," from *The Calling*.

¹¹ Sandee Wong, in a newspaper article entitled "Western's writer-in-residence provides safe environment for budding authors", published in *Western News* (London, Ontario) 35.12 (1 April 1999): 11, records a story and interview occasioned by Bringhurst's tenure as writer-in-residence at the University of Western Ontario. At some point, Bringhurst tells of how his mother taught him to read: "Born in south central Los Angeles, now a place "full of barbed wire and broken glass," Bringhurst immigrated to Canada at the age of five. His father was an ambitious man with little education. His mother taught him to read and write at the age of three. "She used to give me legal pads and a pencil," says Bringhurst of his mother. "She taught me the alphabet first of all and I spent hours happily filling the pages with letters before I could read or write anything. She would come along and find the words that I had written quite by accident." Bringhurst's mother also instilled in him a love of books. "She used to read stories to me which I would memorize," he says. "I can remember she would get bored reading these stories over and over again and would change them, and I would then correct her because I had memorized them. So I was using my mother as a tape recorder, which is a terrible thing to do to anybody, especially a mother." Bringhurst was writing by the time he was 12, and published his first book when he was 25, but it was not "commercial," he says. "Poets don't make money by writing poems. I don't think I published anything of any interest or importance until I was almost 30." At some other point of the same article, the author speaks of the decisive role his mother played in his becoming a poet: "Perhaps [becoming a writer was a decision] made for me by my mother who did not happen to be able to play the piano or the violin or to paint or to speak Yiddish," says Bringhurst, "but she did know how to read and write and it occurred to her for some reason to teach me these skills very early." So whereas his father taught him to read the book of Nature, his mother taught him to read books full of letters.

living Earth in its entirety, but humans seem to be always somewhat dispensable or dwarfed, standing somewhere far away in the background. Now, “Fathers and Sons” is uncommon in Bringham’s corpus, concerned as it is with human relationships in such an explicit manner. At least three distinct parts are identifiable in this composition: a fragmentary, or to be more precise, metonymic portrait of the father’s physical appearance and character in stanzas 1 and 2; a meditation on the kind of emotional containment that dominated the relationship between a taciturn father and a son willing to be spoken to (stanzas 3 and 4); and the kind of outdoor *Bildung* the father provided the son with without his being aware that he was teaching him a fundamental lesson (stanzas 5 to 7).

The poem opens with a recollection of isolated but relevant fragments from the father’s anatomy. The son remembers the face, particularly “*the mouth crouched in the silence*” and the eyes, “*bright as ripe olives, slippery as stones / in the sunlit creek bed, and suddenly / lightless as ash.*” That the father was not a talkative man is crystal clear from the start. The string of similes relies on elements drawn from the natural world (*olives, stones and ash*) to try to make sense of the father’s inscrutable eyes. The bright and slippery eyes betray reserve, emotional distance, but what does strike one as a surprise is that they become suddenly “*lightless as ash*”, which suggests that there is no passionate light in them, no capacity for empathy or for placing oneself in the other’s shoes, not even the son’s. There is something uncannily frightful and impersonal about these eyes. That there might be a difficult or strained relationship between father and son is made clear by the words spoken by the autobiographical *I* in the second stanza, where he remembers the father’s voice. The poetic device at stake here is synaesthesia – i.e., the mixing of senses so as to shed light on a difficult emotion the poet is trying to convey. It is not the tone, pitch or quality of the father’s voice that the son remembers, but the taste instead. How is it possible for a voice to have a taste? A voice that is salt and that sits in the son’s throat only evokes pain. There is also salt in the tears one sheds, and emotional tension or pain usually gathers force or momentum in one’s breast or throat:

I remember
the taste of his voice, not the sound.
It was wet, salt, warm,
and it sat in my own throat, not in his,
like a mouthful of tears.

SP, p. 163.

The second movement of the poem (stanzas 2 and 3) dwells on the silence reigning between father and son. Theirs is a relationship marked by silence and emotional containment, as if they were incapable of giving voice to the unacknowledged feelings in their chests. It seems the father seldom addressed the son: he never spoke to him, he only “*yelled his name, and no more.*” What is simply astonishing is that the son dies before the father passes away, which is rationally impossible because, if that were the case, he would not be able to tell of his father, unless he were a ghost speaking his words from the afterlife in an afterworld. This is possibly intended as meaning that the son died or starved emotionally because he was deprived of the sense of warmth or protection a father is supposed to give a son. So the speaking voice in the poem tells of his own death in these moving terms:

I remember him
yelling my name, and no more. My father
outlived me. There was a light and I reached for it. He
touched the air’s cheek. Touched it
and floated there. Soared.

I suppose
he told everyone, later, how well [later is new in *SP* text]
he had warned me and coached me, but nobody
coached me. No one said anything then.
Not to me.

SP, p. 163.

The father does not talk to the son, even if he boasts that he has coached his son pretty well. Under these circumstances the son has been forced to become a self-made man, an autodidact, to learn everything there is to learn in life on his own. However, the father did teach him something of the utmost importance: spending long periods of time with his son outdoors, in the mountains, this father who could or would not talk to “*that halfbreed / thing he had sired or midwived*” (which is a pitiful self-reference) would teach him the elemental lesson of how to listen to the world, breathing through the feet, paying respectful attention to *what is*. Even if he would not talk personally to his son, the father taught the son to love the world (the stones, trees and animals in it), which is no unfruitful or dispensable lesson at all. The son’s emotional attitude towards the paternal figure is one of mixed feelings, and so he cannot help hating and loving him at the same time:

I watched him.
I listened. He talked
to the rocks and the trees,
the bees and the hawks, not to me. But he gave me
the wings.

And for this, for a moment, I loathed
and revered him.

SP, p. 164.

As if he were a modern version of Icarus, the son/poet learns to fly on his own with the wings his father has given him. This is no small legacy. If he is given the wings, then he is in a position to soar much higher, away from mediocrity and into the *numen* of things, to look at reality with fresh eyes and to listen to the polyphonic world of speaking nonhuman beings with open ears. Thus, the closing note is one of forgiveness and emotional reconciliation; the son has at last found a new peace of mind and reconciled himself with the father’s figure, through whose eyes and ears he learnt to pay attention to the beauty inherent in this world of ours. Even if silence was predominant in their relationship, the son has also learnt to hoard as little silence as he can get amid a chaotic world. After all, silence is one of the elemental prerequisites to pay respectful attention to what is worth listening to. We need speech, but we also need silence, and there is a pregnancy of meaning in silence itself. Silence *means*. It might denote spiritual affinity, profound thinking, humility and gratitude. In any case, this poem is a moving tribute to the father, whose death confirms that he has been alive in this world for a while. The section entitled “Their Names” in *The Calling*, where “Fathers and Sons” was published for the first time, is prefaced by a quote lifted from Vladimir Jankélévitch’s *L’Irréversible et la nostalgie*. And so is the section entitled “The Physics of Light” in *Selected Poems* (2009). When placed against the words of this poem, this epigraph resonates with a powerful energy:

Paradoxalement c’est la mort elle-même, décidant pour l’éternité, qui à jamais nous
sauve de l’inexistence.... Celui qui a été ne peut plus désormais ne pas avoir été....
Tout est perdu, tout est donc sauvé.

Strange to say, it is death itself, making a final decision, that rescues us once and for all from nonexistence.... What has once been can henceforth never not have been.... All is lost, so all is saved.

VII · “Hick & Nillie”

“Hick and Nillie” was first published in the section “Their Names” of *The Calling: Selected Poems 1970-1995* (1995) and later reprinted in “The Physics of Light” in *Selected Poems* (2009). Like “Demons and Men”, “Hick and Nillie” is a conversational poem, reminiscent of other pieces in the Bringhurst canon like section I, “One-Room School”, in the seven-part poem *Elements* (1995), a meditation on the four classical elements. And it is also reminiscent of the Platonic dialogue *Cratylus*, a meditation on the relationship holding between names and objects, which resonates powerfully beneath the lines of a conversation between the god and the poet on the ultimate nature of words. The composition has got a tripartite structure: firstly, both poet and god dwell on the statement that “*all words are true*”; secondly, the poet stumbles upon the insight that words end up emptying themselves of meaning due to sheer repetition, by both humans and gods; and thirdly, the meditation closes with the conviction that silence has got a therapeutic or purifying effect on human language, for it cleanses words and takes them back to their pristine condition. The tension at the heart of the poem lies in the profundity of the thought being conveyed to the reader and the outward literary form the poem assumes, as a light-hearted conversation of no seeming transcendence at all. The very title, “Hick & Nillie”, suggests informality, irrelevance of content, a funny exercise in intellectual gymnastics. The truth is that there is profundity of thought in the poem though, as it seeks to penetrate the ultimate essence of nothing more and nothing less than human language and its relation to the truth. Words are windows open onto the flux of reality, tools in our intellectual confrontation with the world, sharpened things we handle to build knowledge over time. This is real dialectic, with Bringhurst at his most teasing in his effort to make us think about the truth-value and reliability of those mouthfuls of air charged with semantic meaning that we do not normally notice or tend to take for granted when using speech.

So the poem opens with a reflection on the truth that appears to be inherent in all words. It is the god that starts the conversation and asks the first fundamental question:

- Poet, said the god, Is this the truth?
— All words are true, the poet said.
— All words?
the god said.
— All words, said the poet.
— Lies are also true then, said the god.
— They are, the poet said. All words
are empty, useless, placeless, true.
— Some words have places, said the god.
— Many words have places, said the poet.
— Are those with places empty? asked the god.
— Not if they’re in place, the poet said.

SP, p. 164.

It seems to us that echoes from Plato’s *Cratylus* are heard between these lines. Concerned with the relationship holding between language and reality, the central theory of Plato’s dialogue is that names have a natural affinity with their objects. There is a natural

rightness implicit in names and so one cannot but embrace the impossibility of false speaking. In *Cratylus*, Plato sets out two opposing theories regarding the relationship holding between words and objects. Two main characters are the protagonists of the Platonic dialogue: Hermogenes holds that names are attached to things by convention, that they are merely conventional labels imposed by agreement or custom (*nomos*) and changeable at will, whereas Cratylus claims that everything has a naturally correct name. Cratylus himself is a disciple of Herakleitos, who believed that names give some indication of the nature of their objects and bear an essential relation to it (fr. 48, βίος-βίος). To Hermogenes, things have names by nature, actions are realities, and speech is an action performed with words, which are its proper instruments and serve a twofold function – communication (informing) and the differentiation of one real thing from another (i.e., distinguishing things as they really are). The general essence of a name is to be an informative and diacritical instrument. But any tool, to perform its function properly, must be made by a skilled worker, and names are no exception. Their maker must have been a lawgiver, the rarest of all human craftsmen. For Plato this is none other than the philosopher, the dialectician, who handles words with utmost sensitivity and skill. Naming is no light undertaking: a name is only correct if it makes clear the nature of the things it names. Socrates, the third speaker in the dialogue, shows, by a torrent of etymologies, how certain words or names reveal the nature of their objects. He reflects on how Homer speaks of different names given by gods and men, and presumably the gods know the right ones (*Iliad*, 20.74, 24.291 and 2.813 f.). People with no respect for truth distort words with the passing of time. But, according to Socrates, truth is not to be got from names (428c-40e).

By contrast, Cratylus' premise is that correctness of names lies in their power to reveal the nature of their objects. False speech is impossible, he claims. To speak falsely would be to speak what is not, and to say what is not is not to say anything, but only utter meaningless sounds. Cratylus insists that the resemblance between names and their objects is so close that names are the only source of information and so he who knows the names knows the objects too. Names are the only source of knowledge for him. The idea that the correct concept of a thing must be inherent in its name was widespread in Plato's time. In this respect, a true word is one which speaks of (or describes) things as they are. In Greek eyes, names themselves fulfilled this condition: the correctness of a name means that it will show the object as it is. However, Socrates says that to take names as a guide to realities is dangerous, for names are copies of realities, and it is more enlightening to learn from the original directly. Names are imitations of their objects, representations. Names, as copies, cannot be perfect, or they would be indistinguishable from their objects, which is absurd. Thus, in the world of sense, accuracy is never more than approximate. The true power of names is that they deal with essences; only by using words can we exercise the uniquely human capacity to generalize. The correctness of names must be tested by their capacity to distinguish the essences, or indwelling nature, of things. Thus, the effective resemblance is not between things and their names, but between things and forms – those steadfast and unchanging ideas. "The upshot of the *Cratylus* is that names do give information by distinguishing between classes or essences of things."¹² The conclusion of the whole dialogue is "that names offer no help in discovering the essential natures of things, though they serve to communicate those natures when known."¹³ And so we must find something other than names to reveal the truth. If we embrace the Heraclitean flux-doctrine (the idea that everything is in perpetual change) and take it to an extreme, then if all things are

¹² W.K.C. Guthrie, *A History of Greek Philosophy*. Volume V: *The Later Plato and the Academy*, Cambridge: CUP, 1978 (reprinted 1979), p. 28. See pages 1-31 for a detailed discussion of this dialogue.

¹³ W.K.C. Guthrie, *The Later Plato and the Academy*, p. 30.

actually in flux, they cannot even be spoken of. What is continually changing cannot be spoken of or known, because even as the knower approaches it, it becomes something different. Thus, knowledge itself cannot exist. Either it remains the same (which contradicts the flux doctrine) or if the very form of knowledge is always changing, it will no longer be knowledge.

Turning back to Bringhurst's poem, if we presume that "*all words are true*," then lies are also true, because they are also made of words and so there is no way of admitting the falsity of speech. However, the poetic voice resorts to paradoxical statements – "*All words / are empty, useless, placeless, true*." – and to tautological statements – "*All words are true, the truth is true, / and lies are also true*." – when trying to pin down the ultimate essence of words. The words used by the gods must be of necessity different from the words used by simple mortals. Even if words are the tools poets use to make their own poems ("*you / and I stand eye-deep in our words*," says the god), it might seem appropriate to think that maybe only gods know the right words, the ones that truly uncover the essence of things. However, the second movement of "Hick & Nillie" dwells precisely on the pernicious effect repetition, by humans and gods alike, has got on words:

— Words become less true with repetition,
even by a god.
— And less true still,
with repetition by a poet.
— Yes. All words were true in the beginning,
but all words now are less true, and a time
will come when all words will be false.
— What happens then? the god said.
— Speech will happen only in
the spaces that remain between the words.
— But speech is action, said the god.
— When words turn false, all acts
will do the same, the poet said.
— And then?
— The gods will stop. The poets
will grow silent, or turn vicious,
or turn coy.

SP, pp. 165-166.

These verse lines tell the story of the fall of language, as it were. Once upon a time, words were reliable tools of communication and knowledge, and they unveiled the heart of truth at the core of things. In the beginning was the *λόγος* – a primordial force that allowed humans to name things as they are. The pristine *λόγος* was true, but then something ominous happened and words started to be less and less true owing to sheer repetition. In due time all words will be false and true speech will have to be looked for somewhere else – in the spaces between the words, i.e. in silence. Speech is an action humans perform with the help of words and if words turn false, then "*all acts will do the same*," nothing will matter that much because of radical epistemological indistinguishability and moral degeneracy. At that point in time when words cease to be sharpened tools of precision in our naming of reality, "*the gods will stop*", which means that their presence will go unnoticed to humans (we live in a world where gods wander homeless from one place to another, says Bringhurst), and poets will have no option left but to remain silent, not to utter a single word. Silence will prove to be the only effective cure in that state of affairs:

— Silence, like clear speaking,
washes words. In time they will
come true again. But then, of course,
they will be different words.

— How long

will all this take? the god asked.

— Moments, said the poet.

— Moments?

— Less than the time it takes to speak a word.

SP, p. 166.

Silence will return words to their pristine condition of epistemological precision. Words will be true once again as soon as they pass through the therapeutic or purifying prism of silence. We might come to think that this will take a long time, but the poet informs the god that it will only take moments – a minimum fraction of a second. Maybe poets themselves are in charge of purifying the *words of the tribe*, the language that is wounded or in tatters due to shameless misuse or abuse by humans who do not have any regard for the truth or the cultivation of language with some degree of elegance, beauty and precision. Or maybe it is silence that carries out this self-regeneration process at the heart of words used for innumerable purposes in everyday communicative transactions among humans. Like philosophy or science, serious poetry also cares for the state of well-being and health of the words with which poems as beautiful artefacts and containers of truth are woven. Poets handle words as tools of precision, charged with meaning and a degree of musicality: their choice and arrangement on the page is not random at all. Every word falls into place; the words that are *in* place, the poet speaking in “Nick & Nillie” says, are not empty, for they manage to convey a meaning worth communicating to other fellow human beings. If that were not the case, then silence might as well be a better path to choose.

VIII · “Demons and Men”

“Demons and Men” was published for the first time in *The Calling: Selected Poems 1970-1995* (1995), and then reprinted with just one textual variant in *Selected Poems* (2009). Every poem of Robert Bringham is a self-contained, organic unity, yet each is bound to its fellows by a subtle web of interconnecting threads. “Demons and Men” is no exception in this respect and might be said to be linked to “Hick & Nillie” inasmuch as they share a similar dialogic structure. However, from a purely thematic point of view, it is closely connected to “Children of the Old Horse”, a short poem also included in “The Physics of Light” section; to “Herakleitos”, the opening poem in the Pre-Socratics’ sequence of “The Old in Their Knowing”; and to the second of the “Six Epitaphs” in the section “Bone Flute Breathing” in *Selected Poems*. Even “The Occupation”, a poem also found in “The Physics of Light”, is subtly based on the Heraclitean doctrine of the eternal flux of sensible things in the world. What all these pieces have in common is a concern with the thinking of Herakleitos, one of the essential pre-Socratic philosophers. Not much is known about the details of his life. This is what Guy Davenport tells us of the unknown man in his brilliant introduction to *7 Greeks*, which gathers an ambitious handful of translations from the classical Greek of Archilochos, Sappho, Alkman, Anakreon, Herakleitos, Diogenes and Herondas:

Of Herakleitos we know only that he lived in Ephesos between 540 and 480 BC, and that he wrote a book dedicated to Artemis, fragments of which have survived through quotation by later writers.

The astuteness and comprehensiveness of his insight into the order of nature have commanded attention for 2500 years, exhibiting a freshness for every generation. Plato counted him among the transcendent intelligences, as did Nietzsche, Gassendi, Niels Bohr, Spengler. His presence as a spirit in both modern poetry (Eliot, Pound, William Carlos Williams, Hopkins) and modern physics makes him peculiarly a twentieth-century guide, one of our daimons.¹⁴

Even in the handful of tattered fragments we have of Herakleitos' poem *On Nature*, the extraordinary form of this sage's mind is discernible in the precious, isolated strings of gnomic words. Not all philosophers can be so broken and still compel attention for over 2,500 years. It is good news to learn that Herakleitos still has an important lesson to teach to present men and women of the third millennium CE, and that his philosophy has been preserved in scattered jewel-like fragments that have managed to survive into the present in one way or another. What Bringhurst so marvellously accomplishes in "Demons and Men" is rescuing precisely two fragments of Heraclitean wisdom from the past and tessellating them into a unique poem of rare beauty and perfection. Herakleitos' words in classical Greek are placed side by side with the poet's rendering into English, so that if the reader does not read Greek, this should not be an obstacle for a proper understanding and enjoyment of the poem. Communication with the reader in crystal-clear and elegant language is a recurrent concern of Bringhurst's entire literary career indeed.

"Demons and Men" consists of at least four clearly identifiable parts and, curiously enough, the whole composition exhibits what looks like a circular structure. The opening stanza strikes the reader as an unexpected surprise: "*Nature, Mr Alnutt, / is what we are put in the world / to rise above.*", says Katharine Hepburn to Humphrey Bogart in the film *The African Queen* (1951). Hepburn's words make sense when placed against Herakleitos' first words, which are quoted at the heart of the poem. The first of the Heraclitean fragments Bringhurst resorts to is fragment 119, lifted from Stobaeus, *Anth.* IV, 40, 23: ἦθος ἀνθρώπου δαίμων, which Kirk, Raven and Schofield translate as "Man's character is his daimon."¹⁵ According to these scholars, the gnomic sentence contained in this fragment is

a denial of the view, common in Homer, that the individual often cannot be held responsible for what he does. δαίμων here means simply a man's personal destiny; it is determined by his own character, over which he has some control, and not by external and often capricious powers acting perhaps through a 'genius' allotted to each individual by chance or Fate. Helen traditionally blamed Aphrodite for her own weakness, but for Heraclitus (as indeed for Solon, who had already reacted against the moral helplessness of the heroic mentality) there was a real point in intelligent and prudent behaviour.¹⁶

For his part, Guy Davenport translates ἦθος ἀνθρώπου δαίμων as fragment 69 in his book in the following concise terms: "Character is fate." In the introduction preceding his translations, he dwells on the decision he has made in translating these words like this, following Novalis' example:

¹⁴ See Guy Davenport, *7 Greeks. Translations by Guy Davenport*, New York: New Directions, 1995, p. 15. Davenport published his own translation of the Pre-Socratic philosopher's fragments in a beautifully designed book entitled *Herakleitos*, published by Peter Koch in a special limited edition in 1990.

¹⁵ See the classic *The Presocratic Philosophers*, Cambridge: Cambridge University Press, 2nd edition, 1983, p. 211.

¹⁶ See G. S. Kirk, J. E. Raven and M. Schofield, *The Presocratic Philosophers*, pp. 211-212.

In Fragment 69 I have departed from literalness and accepted the elegant paraphrase of Novalis, “Character is fate.” The Greek says that ethos is man’s daimon: The moral climate of a man’s cultural complex (strictly, his psychological weather) is what we mean when we say daimon, or guardian angel. As the daimons inspire and guide, character is the cooperation between psyche and daimon. The daimon has foresight, the psyche is blind and timebound. A thousand things happen to us daily which we sidestep or do not even notice. We follow the events which we are characteristically predisposed to cooperate with, designing what happens to us: character is fate.¹⁷

In Bringham’s poem, Herakleitos’ words are placed at the heart of the second movement of the piece. *Dichtung* = *condensare*, said Ezra Pound. The poet has an elegant way of compressing a wealth of information into a few verse lines with the astonishing economy of just a few linguistic strokes. Bringham reveals the literally physical source of the Heraclitean words he has rescued from oblivion: “*chicken-scratched / papyrus*” in the temple of Artemis, the sylvan goddess to whom the philosopher dedicated his now-lost poem *On Nature*. The classical Greek words ἥθος ἀνθρώπου δαίμων Bringham translates as “convention is a demon” (“habituation is a demon” in the first version of the poem published in *The Calling*). And what follows this translation is a gloss or detailed explanation on the word ‘demon’, which has nothing to do with devils, sin or damnation – words belonging to the Christian discourse of salvation or damnation of the human souls in an afterlife:

Herakleitos to Artemis,
 leaving a fraying brick of chicken-scratched
 papyrus on the sunlit polished stone:
 ἥθος ἀνθρώπου δαίμων –
 “convention is a demon” – meaning [habituation in *The Calling* version]
 nothing to do with devils or damnation;
 meaning nothing to do with sin, for which
 there is no word in Herakleitos’ language.

SP, p. 166.

What ‘demon’ in this context means is, according to Bringham, “*everybody’s culture, custom, manner – / her identity, his ethos – is a minor, mortal god.*” A man’s personal fate or destiny is determined by his own character and by the conscious decisions he makes at every step of the way. ‘Demon’ means “*each of us is both / a being and a character, / a person and the armour that it wears.*” Hepburn’s words make sense now: if Nature is what we are put in the world to rise above, it is because we have free will and the capacity to make our own decisions to direct our life path in the direction we choose. It is no happy coincidence that Hepburn should be uttering these words as they descend the river, for the river is essential in Herakleitos’ thought: the perfect embodiment of the flux-doctrine that everything is in perpetual change and yet there is an immutable or unchangeable substratum to reality, the ultimate principle of which was fire for this philosopher. The rest of lines in the third stanza is a chain of seemingly paradoxical statements that do make perfect sense in the wider context of Heraclitean thought regarding the existence of opposites at war at the heart of reality: “*You are you and not you. / A is A and not A. / I is not reducible to I.*” The I is a plurality, a crowd of people including the other, a set of cultural and personal circumstances that determine the shape of one’s lifetime.

¹⁷ See Guy Davenport, *7 Greeks. Translations by Guy Davenport*, New York: New Directions, 1995, p. 16.

The second string of Heraclitean words quoted by Bringhurst in his poem is lifted from fragment 78, which, in his monumental history of Greek philosophy, W.K.C. Guthrie translates as “Human nature has no insight, but divine nature has it.”¹⁸ Guthrie tells us that these words betray the philosopher’s “religious sense of the worthlessness of human knowledge in comparison with divine, his contempt for humankind in general, and his conviction that the “truth is something that is there for all men to grasp (in his language it is ‘common’), yet most men are too stupid to see it, and live as if they had their own ‘private’ wisdom.”¹⁹ For his part, Guy Davenport translates these words as fragment 61 in his book: “Men are not intelligent, the gods are intelligent.”²⁰ In Bringhurst’s rendering, we get to listen to Herakleitos speaking to his daughter in an idyllic setting:

And in the sea-blue sky
above the sky-blue sea, the still,
dry lightning of the pine branch
and the migratory jewel of the evening star.
Beneath the pine,
the thinning smell of sheep and lupine,
and the day’s heat seeping from the stone.

SP, p. 167.

Standing somewhere near a flowing river, an ubiquitous presence throughout “Demons and Men”, Herakleitos’ words are a meditation on the fragile nature of human understanding of *what is* as compared to the divine knowledge of omnipotent gods, for “The boy is to a man as a man is to a god” (fr. 105 in Davenport’s translation). The whole world is teeming with the presence of gods we humans are no longer able to see: “There are gods here, too” (fr. 74). *All humans think*, says the philosopher in one of his fragments (fr. 80), but only gods appear to be in a position to truly understand the ultimate essence of the real. Fragment 5 reminds us that “Our understanding of the greatest matters will never be complete.” However, it is at least good news to know that gods can truly grasp the irreducible core of meaning at the heart of things:

Herakleitos, looking out across the river
in the shrinking sunlight, thinks
the silt is rising in the river as the pine forest falls.
Looking out across the river,
he mutters to his daughter:
ἦθος γὰρ ἀνθρώπειον μὲν οὐκ ἔχει
γνώμας, θεῖον δὲ ἔχει –
“human culture has no purchase on what is,
but god-culture does.”

SP, p. 167.

Herakleitos’ daughter does not seem to understand the point her father is trying to make and so the philosopher goes on with his thinking:

— Touch is the condensation of vision,
Herakleitos says. The mind
is a string-game played
with fingers, ears and eyes.

¹⁸ W.K.C. Guthrie, *A History of Greek Philosophy*. Volume I: *The Earlier Presocratics and the Pythagoreans*, Cambridge: CUP, 1962 (reprinted 1967, 1971, 1977), p. 413.

¹⁹ W.K.C. Guthrie, *ibid.*, p. 413.

²⁰ Guy Davenport, *ibid.*, p. 164.

— You used to say the brain
is a swollen nose, his daughter answers.

SP, p. 167.

“I honor what can be seen, what can be heard, what can be learned.” (fr. 11), says Herakleitos. Sensation is the starting point: from sensations all human beings have the power of forming general concepts, making possible the use of general terms. The senses provide humans with the raw materials upon which to build reliable knowledge, but it is necessary to discriminate and critically analyze whatever information they give us about the world. Herakleitos is prompt to warn us that “eyes and ears are poor informers to the barbarian mind.” (fr. 13) The mind or soul grows dizzy and confused when it relies on the bodily senses, which can only show it what is constantly changing. Thus, the senses and the mind cooperate in the construction of human knowledge about the world, and so, in Bringhurst’s metaphor, the mind becomes a musical instrument played by touch, hearing and sight. That the brain is conceptualized as being a “swollen nose” is a reminder of the common characterization of Herakleitos as being “the weeping philosopher” in the Roman period, “founded partly on humorous references to the idea that all things flow like rivers (cf. e.g. Plato *Crat.* 440C, believers in flux are like people with catarrh).”²¹ The daughter asks the father whether the gods could possibly help humans to learn to know *what is*, but it seems that this is a titanic effort humankind has to resume every single day we are given upon Earth. In much the same way “There is a sun for every day” (fr. 36), humans are to start from scratch every day. Truth is immutable, eternal, and we only need to look at the world with cleansed senses, even if “Nature loves to hide” (fr. 17):

— Thought starts from scratch each day, says Herakleitos,
and the fallers start wherever they left off.
Thought starts from scratch.
Understanding starts from scratch.
And the truth will save itself instead of you.

SP, p. 168.

“Demons and Men” closes with an explicit anachronism that takes the reader back to the opening stanza. It shows Herakleitos’ daughter at the cinema, watching presumably *The African Queen*, from which Katharine Hepburn’s words quoted in the first stanza are lifted. The river, embodying the perpetual change inherent in the real, manages to survive despite the devastating effects of colonization on the African continent, and despite the nonsense of human wars. Truth saves itself and *being* manages to survive – it *persists* – in spite of the destruction of the world in the hands of greedy human beings:

— In the city last week I saw a film,
says Herakleitos’ daughter.

— What did it say? asks Herakleitos.

— Two empires fought, and one of them won.
The jungle was thick, and the river survived.
But the missionary married the mechanic.
After that, who knows?

IX · “Sunday Morning”

Dedicated to Jan Zwicky and Don McKay, “Sunday Morning” is a poem which remains central to Robert Bringhurst’s poetic corpus. Originally published in *Pieces of Map, Pieces of Music* (1986), it was then reprinted with no textual variants at all in several publications and revised in subsequent textual incarnations.²² To the best of our knowledge, the best critical interpretation of this poem to this day is provided by Bringhurst himself and by professor Laurie Ricou, from the University of British Columbia (Vancouver), in a text entitled “Robert Bringhurst’s “Sunday Morning”: A Dialogue” (see footnote below for the detailed bibliographical reference). There is not much to be added to this illuminating analysis, for it looks at all the subtle nuances of meaning embedded in the texture of this unique composition. We can only state the obvious: that Bringhurst comes back from the wilderness to tell us what he has seen and heard in the form of welcome revelations or epiphanies (his poems are his gift to the world); that his love of and respect for the world makes his poems beautiful works of intellectual precision firmly rooted in the real; and that he is ultimately concerned with *being*, which is universal, indestructible, and human as well non-human. If anything, this is a poem in honour of *being* that directs the reader’s attention to the inexhaustible beauty inherent in the world. This might sound like an irreverent oversimplification in the face of the complexity of the exegetical analysis undertaken by Bringhurst and Ricou in their original approach to the intricacies of the poem. In the face of this complex composition, the only homage left us is paying attention to its details with due linguistic reverence and listening to what it has to tell us with open ears.

Bringing together a piece of living landscape and ideas on the mind and on what it means to *know* the world at all, “Sunday Morning” constellates resonant words into three 10-line stanzas followed by a compact final stanza of four short lines.²³ There is something beautifully inevitable about the linguistic shape of the poem, as if every single word fell exactly into place. In this respect, on the very genesis of the poem, fictional Laurie and real Bringhurst point out:

— I have a poem here entitled “Sunday Morning” and circumstantial evidence that indicates you wrote it. It includes a great white pelican, the sun, the moon, a saxifrage, a mountain, Guatemala, Great Slave Lake, two kinds of pines, and a considerable clutter of abstractions. Or it includes words that symbolize all these. It is a page and a half long and lives in a book. Is it a bird? Are you a tree?
— It sings and I don’t. At least, it makes a noise – like a breeding pelican or a jay – that I call singing.

²² (1) B.42, *Inside the Poem*, edited by W.H. New, Toronto: Oxford University Press, 1992: pp. 14-15, 88–93. Contributions: Sunday Morning (rpt. from A.32); • White Pelican, Blue Jay: Part I of Robert Bringhurst’s “Sunday Morning”: A Dialogue, by Robert Bringhurst & Laurie Ricou. The other half of this “dialogue” is S.125. (2) S.125, Laurie Ricou, “Saxifraga punctata, Raven”: Part II of “Robert Bringhurst’s ‘Sunday Morning’: A Dialogue,” by Robert Bringhurst & Laurie Ricou, in *Inside the Poem*, edited by W.H. New, Toronto: Oxford University Press, 1992: 93-100. Ricou appears as a fictional character in the portion of the dialogue written by Bringhurst, while Bringhurst appears as a fictional character in the portion written by Ricou. (3) C.52, “Sunday Morning”, *The Paris Review* (New York) 100 (Summer/Fall 1986): 54-55. Rpt. from A.32, *Pieces of Map, Pieces of Music* (1986). On the other hand, “Sunday Morning” was revised in A.47, *The Calling: Selected Poems 1970-1995* (1995), and in B.69, *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin, Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58.

²³ Laurie Ricou claims that the structure of the poem is argumentative: “You have there something like an expanded Shakespearean sonnet form marking three stages – I would label them setting (or occasion), exposition, and resistance – followed by a pithy, witty paradox that sums up and sends your reader back through the poem, back to look at the line, back to consider the puzzles of transcribing in mute type the mysteries of the speaking voice going out of existence.” “Saxifraga punctata, Raven”, *ibid.*, p. 95.

— Did you write it?

— I don't know. It came together in my mind, in my limbs. (In you, those may be different; in me, they are the same.) I saw it, heard it, felt it, thought it, tasted it. I began to mumble, to stutter, of my own incoherence. So I kept at it until I could speak a few clear phrases. After a time, I even grew fond of them. Then, so as not to forget them, I wrote them down...²⁴

What is interesting about Bringhurst's reflection on the genesis of his own poem is precisely that the birth of "Sunday Morning" is no less a bodily experience than an intellectual or emotional experience. Poetry is a form of groping forward, a search for the right words – those minimal means available to humans – to capture the unspeakable and the unspoken as it were. What sets the unspeakable and the accompanying meditation going in this particular case is the sighting of a migrating pelican that "has veered from its normal migration route, which lies several hundred kilometers inland."²⁵ The first stage or movement for the soul in this poem describes the explicitly physical setting for Bringhurst's meditation:

Moonset at sunrise, the mind
dividing between them. The teeth
of the young sun sink through the breast of the cloud.
And a great white pelican rests in the bay,
on his way from Great Slave Lake
to Guatemala.
The mind is made out of the animals
it has attended.
In all the unspoken languages,
it is their names.²⁶

SP, p. 168.

The setting is evoked with an astonishing linguistic economy, with just a few brush strokes reminiscent of Oriental painting or Zen Buddhism. By what looks like a most curious celestial phenomenon, the moon and the sun coexist up above in the sky. The sun is rising and the moon is setting at the same time, while sharing exactly the same portion of space in the sky. Against this background, a big white pelican is seen resting in the bay, in Vancouver bay, for we learn that there was a real pelican Bringhurst saw on the outer harbor of Vancouver on a Sunday morning.²⁷ After all, the poem is *about migration*, says Laurie Ricou:

²⁴ See Bringhurst's "White Pelican, Blue Jay", Part I of Robert Bringhurst's 'Sunday Morning': A Dialogue, by Robert Bringhurst & Laurie Ricou, in *Inside the Poem*, edited by W.H. New, Toronto: Oxford University Press, 1992, p. 89.

²⁵ See Laurie Ricou's "Saxifraga punctata, Raven", Part II of "Robert Bringhurst's 'Sunday Morning': A Dialogue," by Robert Bringhurst & Laurie Ricou, in *Inside the Poem*, edited by W.H. New, Toronto: Oxford University Press, 1992, p. 94.

²⁶ An extra verse line is added in *The Calling* (1995) and *Selected Poems* (2009) version of the poem: "Mule deer, black bear, killer whale, salmon." The very animals mentioned here evoke the oral literatures of the First Nations of North America Bringhurst is so fond of.

²⁷ According to Bringhurst, the title "Sunday Morning" is not really an allusion to Wallace Stevens's well-known poem. "The most important source of the name is simple fact. It was Sunday morning when I saw the pelican." *Ibid.*, p. 90. And he did not compose the poem immediately after seeing the pelican. It was a busy time in his life and he had friends (Gary Snyder, Jan Zwicky and Don McKay, among them) visiting, so it was only weeks and months later that he set to work on the poem. "But of all those conversations, which were many and intense, the wordless one with the pelican is the one that stayed most vividly in my mind. And I contributed nothing to it: nothing but intent inaction. The pelican had been gone for weeks or months before I found my tongue." *Ibid.*, p. 90.

Cosmic migrations, if more predictable, figure aviary migrations. Moonset, for example, coincides with sunrise once each lunar month, at the new moon. The conjunction of sun, a stationary heavenly body (at least relative to earth), which is perpetually seen as mobile, and a continuously circling moon which only shows one face, is a paradigm of migration. The poem enacts a condition of moving between limits, of living in the spaces between.²⁸

Laurie Ricou claims that Bringhurst's poem "combines species names and biological, geographical particulars with abstracts, ambient pronouns, and copula constructions. So it's typically cerebral in that sense. The poem as brain teaser: how do you say the unsayable."²⁹ Thus, the second stanza of "Sunday Morning" concerns knowing, the mind and a tree called *Saxifraga punctata*. It opens with a complex definition of the verb 'to know': "*To know means*³⁰ *to hold no opinions: to know / meaning thinks, thinking means.*" This double aphorism might "teach that complete knowledge depends on setting aside the prejudices and feelings our culture has induced."³¹ But this paraphrase does not exhaust the wealth of meaning conveyed by these words. The double aphorism is reminiscent of the Zen koan or riddle. Opinions are not true knowledge, but mere shadows or tentative approximations to *what is*. Knowledge is objective, impersonal, detached. By means of intent inaction and effortless attention, knowing comes to happen. Knowing means that you are aware that every single thing in the world seeks to mean something, that meaning is larger than speech, that humans have no monopoly on meaning, that thinking is *its own purpose and significance*, as Laurie Ricou suggests. After dwelling on what it means *to know*, the poetic voice essays three different definitions of the mind. Ricou directs our attention to the mesmerizing repetition of the formula "*the mind is...*", which is put to eloquent use. In the first definition the mind is conceptualized as being a space, a place not taken or trodden upon: "*The mind is the place not already taken.*" There is a sense in which knowing is a form of groping forward into the unknown (i.e., what remains to be known), and so in this respect the mind might be said to resemble a place we have never been to. The second definition is much more complex in that it equates the mind with a constellation of water, tree leaves, a mountain and the moon:

The mind is not-yet-gathered beads of water
in the teeth of certain leaves –
Saxifraga punctata, close by the stream
under the ridge leading south to Mount Hozameen,
for example – and the changing answers of the moon.

SP, p. 168.

Saxifraga punctata is a flower species. Bringhurst himself gives us essential information about the proper names and trees mentioned in the poem (in the second and third stanzas). What they do have in common is that they are figments of the truth he is trying to penetrate and convey to the reader. By paying attention to the little details of the natural world, he is paying homage to *what is*, acknowledging a kind of beauty that is not man-made (but Nature-made) that deserves our attention and respect:

²⁸ Laurie Ricou's "Saxifraga punctata, Raven", *ibid.*, p. 94.

²⁹ Laurie Ricou's "Saxifraga punctata, Raven", *ibid.*, p. 94.

³⁰ "To know *is* to hold no opinions..." in the previous incarnation of the poem in *Pieces of Map, Pieces of Music*.

³¹ Laurie Ricou's "Saxifraga punctata, Raven", *ibid.*, p. 94.

Other fragments of the truth, come to roost in the tree or stand with it, in honour of the pelican. Bristlecone pines, from the Shoshone and Paiute country in Nevada. Whitebark pines from the Rockies and Cascades. Dotted saxifrage from Mount Hozameen, which is a long, toothy ridge in the Interior Salish country, on the B.C./Washington line. Glaciers and rivers, and glacier-scraped granite and grasses and schists. The immensely delicate, persistent little flowers that grow in the palms and fists of the rock, and the intricate, sensuous hardness of the stone. Reminders that beauty is not of our making. Reminders that beauty requires our respect far more than our protection.³²

Bringhurst's is an accurate mind in love with precision, and this scientific accuracy is palpable in the references to trees and places mentioned in this quote. According to the second definition, the mind resembles the tiny beads of water that have not gathered yet in the leaves of the *Saxifraga punctata* that grows close to Mount Hozameen. What Bringhurst finds truly fascinating about these little flowers is their "diminutive glory in the early morning, wearing necklaces of tears"³³ (i.e., dewdrops). Finally, the third definition ("*The mind is light rain gathered / on the ice-scarred rock, a crumpled mirror.*") equates the mind with the rain gathered on rocks that have been disfigured through erosion, and so the water on its surface resembles "*a crumpled mirror.*"

The third stanza of "Sunday Morning" deals with *being*. To the poet, *to be* means to speak with the different tree species that inhabit this world, and also with all other living forms such as streams, glaciers, grass or birds. Speaking with them is tantamount to setting up a relationship of intense communion with all living things. This is after all a primordial encounter between self and Nature. Therefore, Bringhurst is absolutely precise about the use of names; he handles them with care and devotion. There is a wealth of information that is encoded (or embodied) in the names of the trees themselves: "Their names have meaning, more and deeper than the names of London or Jerusalem or Hadrian or Keats or Waterloo."³⁴ What they are is implied in "Sunday Morning", subtly evoked in between the lines. The implication is that the world is alive, and that it thinks and speaks. Thus, Laurie Ricou points out that the ultimate message of the poem might be "that the physical and breathing things of the world are profoundly to be thought about [...] that the way to deep thinking is through the plants and rocks."³⁵ The conversation between the self and the world has been going on uninterrupted possibly since the dawn of time; *being* embraces everything the mind encounters in reality, everything it comes to love. What one loves has meaning, which is indestructible and goes on forever. Bringhurst makes use of gnostic language to convey such profundity of thought:

To be is to speak with the bristlecone
pines³⁶ and the whitebarks,³⁷

³² Bringhurst's "White Pelican, Blue Jay", *ibid.*, p. 90.

³³ Bringhurst's "White Pelican, Blue Jay", *ibid.*, p. 92.

³⁴ Bringhurst's "White Pelican, Blue Jay", *ibid.*, p. 91.

³⁵ Laurie Ricou's "Saxifraga punctata, Raven", *ibid.*, p. 97.

³⁶ Bringhurst's "White Pelican, Blue Jay", *ibid.*, p. 91: "Bristlecones trees aren't pretty at all, but they are extraordinarily beautiful. They don't grow very tall, but the oldest ones go back about 5,000 years, which is to say they are the oldest individual, independent living beings in the world. What may have been the oldest of them all – the senior-most sentient being on the planet – was deliberately felled with a chainsaw in 1964 by a scientist, so-called, who couldn't wait to count the rings."

³⁷ Bringhurst's "White Pelican, Blue Jay", *ibid.*, pp. 90-91: "Whitebark pines are very pretty trees, as most sub-alpine species are. They're as flexible as yogis. You can tie their limbs in knots, and that's how they outwit the mountain snowloads and the wind. They carry their needles in bundles of five, like a wild rose or a human hand. And they depend on other creatures, not as intermediaries in actual copulation, as flowering plants so often do, but as midwives performing a kind of Caesarean section. Whitebark cones don't open of their own

glaciers and rivers, grasses and schists,
and if it is permitted, once also
with pelicans. Being
is what there is room for in that
conversation. The loved is what stays
in the mind; that is, it has meaning,
and meaning keeps going. This
is the definition of meaning.

On another level, the theme of the poem might be trees. Trees are at the palpating heart of the third stanza, which is a tribute to them. Trees are serenity in themselves. They are recurrent in Bringham's poems in fact. The poet himself claims that the mind is omnivorous, that it encompasses the whole world it has experienced and loved first-hand, that it consists of all the plants and animals it has known, and that speech is not enough to capture *what is*, which is vaster than what humans might say about it:

The theme of this confession seems to be trees. I, as a tree, am inclined to speak about other trees. The theme of the poem, I think, is what it says: that the mind is made out of the plants and animals it has watched, touched, smelled, thought and listened to, that being consists in speaking with other species of beings; that meaning is persistence, and that meaning in the end is what we love; that what-is is more than language; that language is a charming metaphor, but *out there* and *in here* and the arteries and veins and nerves which bind them are still present, functional, meaningful, even when language disappears.³⁸

Hence the poem closes with a four-line stanza that echoes the Zen riddles. It is still an intense meditation on *what is* and on language. The poetic voice claims that "*What is is not speech,*" which is our favourite tool to try to capture it, but something else. "*What is is the line / between the unspeakable / and the already spoken.*" Language is no panacea at all. *What is* is beyond verbalism; it resists being caught through words. It might be elusive, eel-slippery, evanescent. Words will not suffice to reduce the varied exuberance of the world into neat categories. Reality is a continuum of subtle nuances and connections between glaciers and rivers, grasses and schists, trees and lichen. The mutual interdependence between organisms reminds the poet that we live in the ruins of what was once a functioning whole, in an "impotent, directionless, and atomized" world where we appear to have lost all sense of communion with the larger world, which is largely nonhuman. It has taken the poet a lot of patience, love and attention to the minute details of the world to carve a poem like "Sunday Morning", a masterwork in miniature, out of the living mouthfuls of words that emanate from all living things in the world. This poem is the fruit of this uninterrupted conversation that the poet has conducted with *what is* for a long time now.

accord. They wait for Clark's nutcracker – a long-billed cousin of the whiskeyjack, the Steller's jay, the crow – to pry them open and eat the seeds. What passes intact through the nutcracker's guts – along with whatever he spills in his greed, unless it is eaten by ptarmigan, grouse, grey jays, winter wrens, and rosy finches, or by marmots and picas and voles – is what seeds the new generation."

³⁸ Bringham's "White Pelican, Blue Jay", *ibid.*, p. 91.

X · “Children of the Old Horse”

“Children of the Old Horse”³⁹ is closely connected to “Demons and Men”, another poem in “The Physics of Light” section in *Selected Poems* (2009), in its concern with Herakleitos’ flux-doctrine. What is striking about this short poem, written in spontaneous conversational English, is that Bringhurst manages to bring together into a brief composition of six three-line stanzas the thinking of two eminent philosophers: Herakleitos, the pre-Socratic philosopher who lived in Asia Minor in the sixth century BCE, and Zhào zhōu Cōngshēn (778-897),⁴⁰ a Zen Buddhist master who lived in Tang Dynasty China and was particularly known for his paradoxical statements and strange deeds. Paradox and obscurity seem to be two aspects both sages, Western and Eastern, had in common. At an early age, Zhào zhōu became ordained as a monk and then, at the age of 18, he met Nánquán Pǔyuàn (Nan-ch’uan P’u-yuan, 738-834), “a Zen monk trained, like Baǐzhàng⁴¹, under ‘The Old Horse,’ Mazǔ Daòyì, in Jiangxi. His own hermitage was farther north, in the oak forests of Anhui”, as Bringhurst himself tells us in the glossary at the end of *Pieces of Map, Pieces of Music* (1986). Zhào zhōu received the Dharma from Nánquán Pǔyuàn through a dialogue in which the master asked the young monk the koan “What is the Way?”. Zhào zhōu attained enlightenment at the height of that intense conversation and continued to practice under the master’s guidance till he died. Afterwards, he wandered from one place to another, travelling throughout China, visiting the prominent Zen masters of the time before finally, at the age of eighty, he settled in Guānyīn àn, a ruined temple in northern China, where he taught a small group of monks for another 40 years till the very moment of his death. He became one of the great masters of Tang Dynasty China during a decadence time when the imperial hegemony was disintegrating due to the emergence of more and more regional military governors asserting their power. Many koans in the Buddhist classics *Blue Cliff Record* and *The Gateless Gate* concern Zhào zhōu.

The later title of Bringhurst’s poem, “Children of the Old Horse”, makes sense as soon as we learn that “The Old Horse,” Mazǔ Daòyì, was a Zen master, under whose guidance many prestigious Zen monks were trained, Nánquán Pǔyuàn among them. Both Herakleitos and Zhào zhōu are considered to be children of the Old Horse, heirs to the same ancestral legacy and form of wisdom. And both sages are put in the improbable anachronistic situation of a modern classroom. Herakleitos is a visiting professor in some kind of university,⁴² giving a lecture to avid learners, and Zhào zhōu is one of the students

³⁹ “Children of the Old Horse” was originally published under the title “Zhào zhōu Cōngshēn” in C.73 [Two Poems]. *Canadian Literature* 154 (Autumn 1997): 8, 110. Contents: • “Zhào zhōu Cōngshēn” (rev. in A.65, A.85); • “The Living Must Never Outnumber the Dead”. It was then revised in A.65 *The Book of Silences* (2001), and reprinted from A.65 as A.85 *Zhaozhou Congshen*. Sherman Oaks, California: Ninja Press, 2007 (a broadside, 43 × 28 cm, 75 copies on Nideggen paper). Recently it has been reprinted from C.73 as “Children of the Old Horse” under the section heading “The Physics of Light” in *Selected Poems* (2009).

⁴⁰ In *The Book of Silences*, Los Angeles: Ninja Press, 2001, Bringhurst gives us only essential information concerning this sage’s life: “Zhào zhōu Cōngshēn (Chao-chou Ts’ung-shen) 778-897? Traveled most of his life, setting in Hebei, northeastern China.” See the separately bound section entitled “Contents & Notes” at the end (unpaged).

⁴¹ In the glossary at the end of *Pieces of Map, Pieces of Music* (1986), Bringhurst tells us who this sage was: “BAǏZHÀNG HUAIHAI (Pai-chang Huai-hai, 720-814) Reputedly the author of the first set of Zen monastic rules, including the famous formulation ‘One day no work, one day no eat.’ Born in Fujian, he succeeded Mazǔ Daòyì (Ma-tsu Tao-i) as Abbot at Nanking in Jiangxi, then moved to Xinwu, also in Jiangxi, under Baizhang Mountain.”

⁴² At this point, it might be worth dwelling for a while on Bringhurst’s relationship with the university over the years: “Robert Bringhurst is one of those scholars who work best outside the formal academic setting. Although he has had brief affiliations with universities since leaving academia after earning his Master of Fine Arts at UBC, this prodigious scholar, poet, and translator, currently based on Quadra Island, has mostly

in the room. The Greek philosopher is expounding his flux doctrine, i.e. the notion that all sensible things in this world are in a state of permanent flux: “*Can’t step twice / into the same river, Visiting / Professor Herakleitos said.*” These simple words embody the Heraclitean view of the world as all flow and movement. One of Herakleitos’ most famous sayings is: ‘One cannot step twice into the same river, for the water into which you first stepped has flowed on.’ (fr. 21, Davenport’s translation). He also said: ‘Everything flows; nothing remains. [Everything moves; nothing is still. Everything passes away; nothing lasts.]’ (fr. 20, Davenport), and ‘The river we stepped into is not the river in which we stand.’ (fr. 110, Davenport). W.K.C. Guthrie tells us that “the statement of the flux-doctrine which has become almost canonical in later ages, πάντα ῥεῖ, occurs in the ancient authorities only in Simplicius (*Phys.* 1313-11), and is unlikely to have been a saying of Heraclitus.”⁴³ In *The Presocratic Philosophers*, Kirk, Raven and Schofield claim that “the river-image illustrates the kind of unity that depends on the preservation of measure and balance in change”, and that the river-statement is found in at least two relevant fragments:

214 Fr. 12, Arius Didymus *ap.* Eusebius *P.E.* XV, 20, + fr. 91, Plutarch *de E* 18, 392B. [...] Upon those that step into the same rivers different and different waters flow... They scatter and... gather... come together and flow away... approach and depart. [...] According to the Platonic interpretation, accepted and expanded by Aristotle, Theophrastus and the doxographers, this river-image was cited by Heraclitus to emphasize the absolute continuity of change in every single thing: everything is in perpetual flux like a river. So **215** Plato *Cratylus* 402A... [...] *Heraclitus somewhere says that all things are in process and nothing stays still, and likening existing things to the stream of a river he says that you would not step twice into the same river.*⁴⁴

So the river is the embodiment of the perpetual change inherent in reality. Everything is pure metamorphosis, nothing stays the same, and ‘Change alone is unchanging’ (fr. 23, Davenport). Once Herakleitos has propounded his flux-doctrine with such concision, Zhàozhou gives voice to what looks like common sense and says something to this effect:

Zhàozhou rose. Sir, he said, far

worked independently. “Robert Frost said he had a lover’s quarrel with the world; I’ve had one with the university,” said Bringhurst. “I spent 10 years getting my BA. I started off majoring in physics and wandered all over the academic map before getting a degree in comparative literature. I’ve been a student all my life, but never a model student – and I haven’t proven a model teacher either. “In a normal year, I visit five or 10 different campuses, giving lectures, doing readings, sometimes teaching a seminar, but never sticking around. For me this has been an ideal arrangement. I’m not the sort of person who should stay very long in either a city or an institution. I’m happier zipping in and out again, giving my lecture, having a day or two of non-stop conversations, and going on my way. And equally happy staying home, writing and tending my little patch of forest.” Despite his reticence about long-term ties with universities, Bringhurst appreciates the honorary Doctor of Letters degree awarded him by the University College of the Fraser Valley. “I am thoroughly delighted to be receiving this honorary degree,” he said. “My relationship with the university is like a series of love affairs, not like a marriage. And I think that there is nothing the least bit shameful in intellectual promiscuity. Now and again, one encounters institutional scholars who are suspicious of non- institutional people like me. I see the degree not only as an honour but in a way as a vindication, and as evidence that institutions, like individuals, can think beyond their own immediate self- interest.” See the newspaper article entitled “Quadra Island Author Awarded Honorary Degree”, published in *Campbell River Mirror* (Campbell River, B.C.), June 16, 2006: A16. This is a lengthy news release evidently issued by the University College of the Fraser Valley.

⁴³ W.K.C. Guthrie, *ibid.*, p. 450, footnote 1. Footnote 3 informs us that Aristotle, in *Metaphysics* 987a32, explains how Cratylus “carried the views of Heraclitus to their logical extreme by correcting the sentence ‘You can’t step into the same river twice’ to ‘You can’t step into it once’. Between the instant when your foot touched the surface and the instant when it reached the bottom the river at that point had already changed.”

⁴⁴ G. S. Kirk, J. E. Raven and M. Schofield, *The Presocratic Philosophers*, Cambridge: Cambridge University Press, 2nd edition, 1983, pp. 194-195.

over your head there,
treading flowing water,

or standing in the middle
of your one-inch square
of dry rock,

five thousand miles from the closest
shore, where else
do you expect to step?⁴⁵

SP, p. 170.

If Herakleitos happens to be somewhere in the heart of continental China, with his feet pressing firmly on the ground, it is certain that the sea is far away from the exact location where he stands now. And if he is actually “*treading flowing water*,” then there is no way of stepping twice into the same river, because the river and the man are different from one moment to another. What is the point in reminding a classroom full of avid students like Zhàozhou that you can’t step twice into the same river? They already know. They have known it all the time. The Zen monk’s words are enigmatic, though, and still more enigmatic are the closing words of the poems: “*Quite, said Herakleitos, / and how often / can you step there?*” Zhàozhou leaves the classroom and marches away while singing “*left, right, left,*” which is a most curious reaction to the question asked by the visiting professor. His answer does not assume the expected form of words, but of an action instead. But, how are we to interpret this action? Possibly it is meant as a reminder that we humans flow in much the same way this incessantly changing river of reality flows. Actually, we are somewhere in the middle of the river of changing life, bathed by the flowing waters in all directions. Therefore, we can step into the river any moment we choose to do so, or cannot avoid doing it, because motion is the very essence of the real.

XI · “The Physics of Light”

Like the poem entitled “Giotto’s Bones” included in the section “The Living”, “The Physics of Light”, published for the first time in *Selected Poems* (2009), is a short poem concerned with painting and the way it comes to terms with interpreting light, colour, form and perspective in the world. At the core of the poem is what looks like Cézanne’s meditation on the nature of the real from a painter’s point of view. A French Post-Impressionist painter, Paul Cézanne (b. 19 January 1839 – d. 22 October 1906) produced a body of work that laid the very foundations for the transition of 19th-century to 20th-century painting. It is no exaggeration that both Picasso and Matisse should have considered him the father of all new modern artists, for he was a sort of bridge between Impressionism and Cubism. In fact, his explorations of geometric simplification and optical phenomena inspired Picasso, Matisse, Juan Gris, Georges Braque and many other painters to experiment with ever more complex multiple views of the same subject and eventually the fracturing of form. Fascinated about the complexity of human visual perception, the penetrating gaze beneath his paintings tries to convey both a direct expression of the sensations of the observing eye and an abstraction from observed nature. Cézanne’s mastery in his use of design, planes of colour, tone, composition and draughtsmanship to

⁴⁵ This stanza reads differently in its A.65 textual incarnation: “five thousand miles / from the nearest shore, where / else will you step?”

create complex fields through small brushstrokes reveals a lifelong passion to explore the ways in which painting reaches into the heart of *what is*, which must have been an appealing source of inspiration for Bringham's poem.

Cézanne struggled throughout his life to develop an authentic observation of the seen world by the most accurate method of representing it in paint that he could find. To this end, he structurally ordered whatever he perceived into simple forms and colour planes, as he was interested in the simplification of naturally occurring forms to their geometric essentials – such as the sphere, the cone, the cylinder. Of course, this demanded from him a profound knowledge of the complexity of spatial relationships and depth perception. His desire to capture the truth of his own perception compelled him to render the outlines of forms so as to attempt to display the distinct views of both the left and right eyes (binocular vision). Thus, his paintings augment and transform earlier ideals of perspective, in particular single-point perspective. Capturing all the complexities that an eye observes: this is what Cézanne was after. He wanted to see and sense the objects he was painting rather than think about them. Ultimately, he wanted to get to the point where sight became also touch. While painting, he was somehow capturing a moment in time⁴⁶ that, once passed, would never come back, and so he would take hours to put down a single brushstroke needed to contain the air and the light surrounding a single object. This love of precision, this physical exploration of *what is*, must have been truly fascinating to Bringham himself. Cézanne was also irresistible to Ernest Hemingway, who, in a memorable passage in *A Moveable Feast*, dwells on his own technique of writing simple, true sentences so as to build his own stories. Possibly what he had in mind was the use of simple brushstrokes that cumulatively create the impression of a rounded, perfect object placed in space, in much the same way simple sentences make paragraphs that make whole stories with a beginning, a middle and an end:

I was learning something from the painting of Cézanne that made writing simple true sentences far from enough to make the stories have the dimensions that I was trying to put in them. I was learning very much from him but I was not articulate enough to explain it to anyone. Besides it was a secret.⁴⁷

“The Physics of Light” consists of two clearly distinguishable parts: whereas the first concerns an explicit meditation on the nature of reality as seen from a painter's eyes, which reduce the real to such essentials as lines, planes, colours, geometrical forms and

⁴⁶ *Mutatis mutandi*, this is what Virginia Woolf and James Joyce tried to do in the masterworks of Modernist narrative through the so-called stream-of-consciousness technique: their appetite for perfection and faithful representation of the real compelled them to try to capture evanescent moments in time as seen through the unique prism of the characters' idiosyncratic minds.

⁴⁷ Ernest Hemingway, *A Moveable Feast*, London: Arrow Books, 2004. See, in particular, chapter 2 – “Miss Stein Instructs”, p. 9. Somewhere else, in chapter 8 – “Hunger Was Good Discipline”, p. 39, Hemingway meditates on the way hunger is a good discipline for the creative spirit and on how he used it to profoundly appreciate the art of Cézanne when he observed his paintings as he was hollow-hungry: “You got very hungry when you did not eat enough in Paris because all the bakery shops had such good things in the windows and people ate outside at tables on the sidewalk so that you saw and smelled the food. When you had given up journalism and were writing nothing that anyone in America would buy, explaining at home that you were lurching out with someone, the best place to go was the Luxembourg gardens where you saw and smelled nothing to eat all the way from the Place de L'Observatoire to the rue de Vaugirard. There you could always go into the Luxembourg museum and all the paintings were sharpened and clearer and more beautiful if you were belly-empty, hollow-hungry. I learned to understand Cézanne much better and to see truly how he made landscapes when I was hungry. I used to wonder if he were hungry too when he painted; but I thought possibly it was only that he had forgotten to eat. It was one of those unsound but illuminating thoughts you have when you have been sleepless or hungry. Later I thought Cézanne was probably hungry in a different way.” Cézanne's hunger was for perfection in painting as a way of exploring the innermost recesses of reality.

perspective, the second part appears to dwell on perspective and on the axis of *what is*, making every single thing or object in the world fall into place. The poem opens with a simple statement or piece of thinking attributed to Cézanne: “*nature, for us humans, / is more depth than it is surface.*” This is the French painter singing reality. Painting might seem to reduce the three-dimensional space found wherever one turns to look in the world to uncomplicated surfaces on the canvas, but the truth is that painters explore complex spatial relationships in their work. The elemental truth Cézanne stumbles upon is that the real exists in space (as well as in time) and that the perception of space through the human eye is far from simple or straightforward:

What exists, from our perspective,
is always a little bit wider than it is tall
and a little bit deeper than it is wide,

and full of sloping planes and sharpened corners.
The colors charge each other up.
Light dances in between them.
That is where the truth begins and hides.

SP, p. 171.

What we see is “*wider than it is tall*” and “*deeper than it is wide*”: this looks like a reflection on optical phenomena and spatial depth. Thus, the painter reduces the complexity of the world to a handful of essential ingredients: “*sloping planes*”, “*sharpened corners*”, “*colors*” and “*light*”. Truth, or at least the kind of truth that interested Cézanne, begins precisely at that point where these simple elements converge into one another in mid-air and mid-light. That the poet and the painter are after one and the same thing seems to be out of the question. Even if they make use of different tools and strategies in their respective art forms, they are always trying to find ways of capturing the truth. This sounds like a truism, repeated time and again by practising poets and painters from different traditions and artistic trends. In an essay entitled “The Relations between Poetry and Painting”, included in *The Necessary Angel* (1960), the great American poet Wallace Stevens claims that both the poet and the painter do their job making use of the same tool, which is to say the mind:

... the greater the mind the greater the poet, because the evil of thinking as poetry is not the same thing as the good of thinking in poetry. The point is that the poet does his job by virtue of an effort of the mind. In doing so, he is in rapport with the painter, who does his job, with respect to the problems of form and color, which confront him incessantly, not by inspiration, but by imagination or by the miraculous kind of reason that the imagination sometimes promotes. In short, these two arts, poetry and painting, have in common a laborious element, which, when it is exercised, is not only a labor but a consummation as well.⁴⁸

In the second part of the composition, the speaking voice in the poem dwells on what looks like single-point perspective and on the way the imaginary axis of *what is* makes every single thing in the world fall into place. *What is* is moving away from where the observer stands and coming back to him/her at the same time, nailing him/her in place. Perception is of the essence here: perceiving space through one’s eyes is a way of imposing order on the incessant flux of sensations coming from all directions and encroaching the

⁴⁸ Wallace Stevens, “The Relations between Poetry and Painting”, in *The Necessary Angel. Essays on Reality and the Imagination*, London: Faber and Faber, 1984, p. 165. For his part, Bringham has also written a number of lucid essays on painting, such as “Into the Absolute of Nature: The Face of Joan Miró” (in *Everywhere Being Is Dancing*), “The Audible Light in the Eyes” and “The Voice in the Mirror” (in *The Tree of Meaning*).

perceiving subject, as it were. It might seem we are in control, but reality is also in control in one way or another: what is real and exists places you in the right place in relation to all the rest of things and creatures in the world. The poem closes, in fact, with a string of alliterative verbs (*pins*, *plants* and *puts*) that reminds us that the sight of *what is* is inevitable and inescapable in its capacity to place the perceiver where he/she must be:

the longest axis of what is
leads straight away from where you are
and comes straight toward you,
nailing you in place.

When you open your eyes
the sight of it pins you,
plants you, puts you where you are.

SP, p. 171.

XII · “The Occupation”

“The Occupation”, a poem dedicated to Canadian musician Janet Danielson, was published for the first time in “The Physics of Light” section in *Selected Poems* (2009). The poem consists of four simple stanzas written in what looks like elegant, conversational and yet poetic language. At the heart of the composition is Herakleitos’ notion that everything is in perpetual motion. Somewhere on the coast of Asia Minor, almost 2,500 years ago, the eminent pre-Socratic philosopher stumbled upon this simple truth, which he formulated with utter poetic concision: *πάντα ῥεῖ* (*everything flows*). There is no single thing in the world that does not change from one moment to another; eternal metamorphosis is the essence of all things, living and non-living alike. Life moves fast; nothing stays the same for long. For better or for worse, we humans tend to think that it is our job to change the world, which is of course unnecessary because it is already changing all the time. Bringhurst’s poem is an account of a woman telling a story of how the world changed in the end: “*I will tell you how it was the world / changed, she said – and darkness / wrapped us round.*” So here we are, listening to a poem telling of a story being told to someone else. This is the magical moment of storytelling; darkness is closing in all around and the listener (or listeners) pays attention to the woman’s spoken words. The language of the poem itself evokes the natural flow of the female speaking voice, telling her story unimpeded by unwelcome interruptions. All the while, the (male) listener of the story (and speaker in the poem) remembers how the telling resembled pure singing, and how he could hear her clearly even if he “*barely heard the words*”, which sounds like a paradox. The final revelation or gist at the heart of the story being told by the woman comes as a most precious gift in the two closing stanzas:

Our job, she was saying, is not
to change the world – nor even
to keep it from changing.

No, she was saying (the story
was over already): our only
job is being changed.

SP, p. 172.

This is a moving meditation on the need for human beings to let themselves be changed in their lifetime by all the myriad circumstances that happen to a person from the very moment he/she is born till the moment of his/her death. Far from being a solid matter,

life is amorphous, fluid, malleable, a bunch of potential paths that individuals might take, even if they are not absolutely sure about where they might lead. Along with learning, love is of the essence because, it seems to us, love is the embodiment of a primordial feminine principle. In the beginning of the world there was not much; there will not be probably much at the end either. There were the sky and the earth, and out of their union through love all the rest of the universe came into existence. At least, that is the elementary lesson many cosmogonies from all around the world have to teach us. There is no mystery inherent in life; life *is* the mystery, and love is at the very centre of it. Out of love comes everything else; it is because of love that all human enterprises seem to make sense all of a sudden. Life is simple enough to be understood by the human mind: it consists of two fundamental events in the history of a human being – birth and death – and towering high between them, right in the middle, is love. Love leads a chameleonic existence in human languages: *ἔπος* in Greek, *amor* in Latin, *amore* in Italian, *l'amour* in French, *die Liebe* in German. Whereas love is masculine in most other languages, curiously enough it turns out to be feminine in German. Is this just a happy coincidence? Maybe not. The German language might have come to the sudden realization that love, together with learning, is the most fundamental vocation of *being*. In a sense we are born to love, not just ourselves, but rather other human beings and the vast world surrounding us – of which we are but a tiny part. There is so much beauty in the world that human life would be inconceivable if it were not meant to love itself and the larger world where it belongs. And yet we keep constantly changing the world, inflicting ineffable pain and wounds on Mother Earth, raping its resources, which are not boundless, infinite or inexhaustible. It takes a great dose of humility and wisdom to acknowledge that our most elemental occupation is *being changed*. The rest is all additional or dispensable paraphernalia. Life is in essence perpetual change; let us allow change to mould our spirit and soul in fruitful ways so that we may lead a genuine life.

XIII · “Long Poem on Four Feet”

“Long Poem on Four Feet” follows closely in the steps of Ezra Pound’s well-known haiku-like composition entitled “In a Station of the Metro”, published in the early years of the twentieth century, almost a hundred years ago. In April 1913 the Modernist master published in the prestigious magazine *Poetry* the famous haiku, which, in its original typographical arrangement, looked like this on the page:

The apparition	of these faces	in the crowd:
petals	on a wet, black bough.	

The memorable two-line haiku on the apparition of faces in the subway, resembling wet leaves on a bough, was soon incorporated into the literary magazines Pound was championing at the moment and probably into *Des Imagistes*, the Imagist anthology published in 1915. The three famous principles of the Imagist manifesto of summer 1912 demanded that poetry be founded on the Image: “An “Image” is that which presents an intellectual and emotional complex in an instant of time. [...] It is the presentation of such a ‘complex’ instantaneously which gives that sense of sudden liberation; that sense of freedom from time limits and space limits; that sense of sudden growth, which we experience in the presence of the greatest works of art.” Pound’s “In a Station of the Metro” is a masterpiece of its kind and presents the reader with the precious intensity of an illuminating insight into the essence of things. Written in the best tradition of the Japanese haiku, it offers the reader a snapshot, a moment frozen in time, associated with a sudden

epistemological revelation. The epiphany-like moment of revelation has the texture of transcendence: faces are petals on a bough, humans are trees in the woods. The whole of Western literature is full of such mystic moments of intense vision, and Bringham's "Long Poem on Four Feet" testifies to this:

LONG POEM ON FOUR FEET

Emptied of humans
the dancing ground dances.

There is a precious musical cadence that makes these lines memorable and poetic in a way. The title is ironical, of course: how could this be a "long poem on four feet" when two verse lines and seven words should suffice to convey the poet's illuminating insight into the joyful nature of Earth, our only home? Unless the word *feet* is meant as a reference to *metrical feet*, not to a part of the body. Earth itself could be thought of as dancing all the time, as it moves constantly, rotating around its own axis and around the Sun. The unexpected revelation in this particular case is simple enough: when no one is looking, the ground dances joyfully on its own, relishing the pleasure inherent in motion *per se*. Needless to say, motion is the essence of all living things, and the Earth is no exception in this respect. It *speaks earth* and it *sings water and air* (see "Gloria, Credo, Sanctus et Oremus Deorum"), and it also dances to the rhythm of *being* itself. It is hiding and in hiding because of humans' greedy attitude in their relation with all the richness and exuberance the Earth has to offer them.

The Living

The Body Is Flowers

INTRODUCTION

Selected Poems (2009), a beautifully designed book (an art object) with an elegant layout and sewn pages, draws on 16 books and spans 35 years of work. *Selected Poems* replaces Bringhurst's previous volumes of selected poems, *The Beauty of the Weapons* (1982) and *The Calling* (1995), as his new living repertory.¹ The anthology is indeed marked by comprehensiveness and a generous selection of a prolific poetic output. The collection gives "the striking impression of coherence and continuity" for, though the book is divided into roughly chronological sections,² one feels that Bringhurst has been engaged by "a

¹ According to Nicholas Bradley, "This collection replaces Bringhurst's previous volumes of selected poems: *The Calling* and *The Beauty of the Weapons* (1982), both long out of print. It forgoes the explanatory notes and statements of poetics included in those books and in *Pieces of Map, Pieces of Music* (1986), and is consequently more difficult. But it has the relative advantage of comprehensiveness; the poems shed light on each other, amply rewarding the meticulous reader. *Selected Poems* is not, however, simply an updated version of *The Calling* – it is a new selection and thus provides a slightly revised account of Bringhurst's career. In *The Beauty of the Weapons*, he wrote that a "selected poems ought to mean not [a poet's...] historical record but his living repertory: not a catalogue of the animals he has named but a festival of those who are still speaking." In these terms, *Selected Poems* is a livelier festival, a more expansive habitat for talkative animals. [...] The final section, "The Living," contains nine poems that have, to date, only appeared in journals or limited-edition books, and in Bringhurst's collected lectures and essays, *The Tree of Meaning* (2006) and *Everywhere Being Is Dancing* (2007). A quibble with the generous selection concerns the absence of samples of Bringhurst's translations of Haida poetry, which would have complemented the monologues and choruses from *Ursa Major* (2006 [sic]), a book-length masque. The poetry of Ghandl and Skaay is not Bringhurst's poetry, of course, but his powerful translations represent, I think, an integral aspect of his poetic thinking and craft." See Nicholas Bradley's review of *Selected Poems*, published in *The Malabar Review* 169 (Winter 2009): 97-102. See, in particular, p. 101.

² I · "THE BEAUTY OF THE WEAPONS": "The Beauty of the Weapons", "Song of the Summit", "Ararat", "A Quadratic Equation", "One Glyph", "The Greenland Stone", "Poem About Crystal", "A Lesson in Botany", "Some Ciphers", "Anecdote of the Squid"; II · DEUTERONOMY: "Jacob Singing", "An Augury", "Essay on Adam", "Deuteronomy"; III · THE OLD IN THEIR KNOWING: "Herakleitos", "Parmenides", "Miletos", "A Short History", "Empedokles: Seven Fragments", "Empedokles' Recipes", "Pherekydes", "Pythagoras", "Demokritos", "Xenophanes", "Of the Snaring of Birds", "The Petelia Tablet"; IV · THE STONECUTTER'S HORSES; V · BONE FLUTE BREATHING: "These Poems, She Said", "The Heart Is Oil", "Ptahhotep's River", "Death by Water", "Leda and the Swan", "The Better Man", "Cave of the Nymphs", "Six Epitaphs", "Poem Without Voices", "Bone Flute Breathing"; VI · TZUHALEM'S MOUNTAIN; VII · THE BOOK OF SILENCES: "Short Upanishad", "Pārsvanātha", "Uddālaka", "Nāgārjuna", "Bodhidharma", "Sengzhào", "Yongjiā Xuánjué", "Sarāha", "Sarāha's Exercise for Beginners", "Baizhang Huaihai", "Nanquan Puyuan", "Hán Shān", "Yúnyán Tánshèng", "Línjì Yìxuán", "Dòngshān Liángjiè", "Xiāngyán Zhixián", "Yunmen Wenyan", "Fayan Wenyi", "Lianhua Fengxian", "Xuedou Zhongxian", "Danxia Zichun", "Dahui Zonggao", "Tiāntóng Rújìng", "Dōgen", "Keizan", "Jakushitsu", "Bankei Yōtaku", "Hakuin"; VIII · LYELL ISLAND VARIATIONS: "Larix lyallii", "Thin Man Washing", "Absence of the Heart", "The Reader", "The Starlight Is Getting Steadily Dimmer", "The Long and the Short of It", "A River, a Runner", "Riddle", "Day In, Day Out"; IX · THE PHYSICS OF LIGHT: "Sutra of the Heart", "Kol Nidre", "Gloria, Credo, Sanctus et Oreamnos Deorum", "*Rubus ursinus*: A Prayer for the Blackberry Harvest", "For the Bones of Josef Mengele", "Fathers and Sons", "Hick & Nillie", "Demons and Men", "Sunday Morning", "Children of the Old Horse", "The Physics of Light", "The Occupation", "Long Poem on Four Feet"; X · THE BLUE ROOFS OF JAPAN; XI · CONVERSATIONS WITH A TOAD; XII · NEW WORLD SUITE N° 3: "All the Desanctified Places", "Who Is the Fluteplayer?", "The Children of Zhuang Zi Confront the Frozen Saskatchewan River", "Winter Solstice, Cariboo Mountains"; XIII · URSA MINOR; XIV · THE LIVING: "Finch", "Birds on the Water", "The Flowers of the Body", "Giotto's

single, decades-long poetic project.”³ The poems included in the volume range from short jewel-like lyrics to the long polyphonic poems that occupy a large portion at the end of the book, but the thematic concerns are essentially the same: “the recurrence of philosophical obsessions and favoured images (knife-edges, blood, bones, birdsong) reveals a tightly focused vision.”⁴ All the poems form a sort of gigantic *Gestalt* in which even the longer poems are subtly connected to the dramatic monologues and sculpted lyrics by their concerns and vocabulary. In any case, this collection shows Bringhurst as a mystic trying hard to escape fuzziness “with a steady stream of direct statements and concrete images.”⁵ According to Fraser Sutherland, in *Selected Poems* the poet plays “many variations on a basic theme: body and mind are one, and there can be no distinction between the container and what is contained.”⁶ The unity of body and mind is an equation central to Bringhurst’s poetry, which “aims at lines of paleographic permanence.” Bringhurst’s metaphysics is physics, which is to say that his poems are firmly steeped or rooted in the real, and that his meditations on the ultimate nature of reality stem directly from his acute observation of the world around him. He feels that the world is a much more complex and interesting place than personal relations or even history.⁷ In his search for a permanent form of truth, he ventures into the wilderness in search of inspiration in the company of mountains, trees and birds. His poems could be seen then as being transcriptions of what he has seen and heard in the open air, in close contact with the natural world. Given his love of intellectual precision, it is only natural that he should be endowed with an exact knowledge of flora and fauna, and that all this knowledge should find its way into the making of his own poems.

Now, the last section in *Selected Poems* (2009) brings together under the curious heading “The Living” a handful of new poems – “Finch”, “Birds on the Water”, “The Flowers of the Body”, “Giotto’s Bones”, “The Focal Length of Fuel”, “So Do We”, “The Living Must Never Outnumber the Dead”, “At Last”, and “For the Geologist’s Daughter”. Of these nine compositions only two had been previously published in book form in poetry volumes by Bringhurst – i.e., “The Flowers of the Body”, a long poem included in the section “Their Names” in *The Calling: Selected Poems 1970-1995* (1995), and “The Focal Length of Fuel”, another long poem in several sections based on the seven-part poem entitled *Elements* (1995), Bringhurst’s extended meditation on the four classical elements (earth, water, air and fire) out of which the entire world is made. Five of the remaining poems had been previously published in scattered periodicals or books, and one would be later published in a collection of essays to honour the work of Canadian poet and philosopher Jan Zwicky. This is then the editorial history of the poems included in this section:

Bones”, “The Focal Length of Fuel”, “So Do We”, “The Living Must Never Outnumber the Dead”, “At Last”, “For the Geologist’s Daughter”.

⁶ “Art and Nature, Body and Mind”, published in Toronto *Globe and Mail*, 11 July 2009: F12.

⁷ In a review of *Selected Poems* (2009) entitled “Art and Nature, Body and Mind” and published in Toronto *Globe and Mail*, July 11, 2009: F12, Fraser Sutherland dwells on the impersonality of Bringhurst’s poems: “Only a few poems, such as “The Beauty of the Weapons” and “For the Bones of Josef Mengele, Disinterred June 1985”, allude to recent history. With the exception of “These Poems, She Said”, his poems seldom venture into personal relations. He prefers the company of the wilderness. For Bringhurst, universal, enduring truth locates itself in the four elements and humours: “Air, earth, water, fire, be here/ to rebuild what we destroy,” he declaims in *Ursa Minor*. Yet this nod to environmental correctness in a sense belies the sombre celebration of change and transformation that he sustains for much of his book.” The thought occurs that even “These Poems, She Said” is not strictly speaking about personal relations: it is more a metapoem and a moving meditation on the nature of love.

The whole section is preceded by an epigraph lifted from Jan Zwicky’s “Beethoven, Op. 95”, a piece included in her poetry book *Songs for Relinquishing the Earth: “For still, that is / earths’ definition: / whatever it knows, / that is enough.”* The quotation sheds light on Bringhurst’s poems collected under this section, for most of them are concerned with the pure physicality of what it means to be alive in a tangible world we can perceive and enjoy through the senses. They constitute a moving song and tribute to the living, while they do not forget that the real also includes what remains invisible to human eyes – not just the roaming, wandering, homeless gods we no longer seem to be able to perceive, but also the dead, whose presence may turn to be overwhelming at times, and not just in the form of voices preserved in books full of the wisdom and knowing of the sages from the old days. Like Bringhurst’s poems, Zwicky’s poems are firmly rooted in the real and show a moving reverence towards the sacredness of Earth, a sense of gratitude and humble willingness to give in to the grandeur and beauty of life, which transcends purely human limitations. The words lifted from one of her poems reveal much of this: the Earth is a sacred place that knows and speaks its own language; it knows and thinks and celebrates every single creature of the many that populate this world. Thus, it is only appropriate that this section of Bringhurst’s poems should be entitled “The Living”.

I · “Finch”

“The Living”, the closing section of *Selected Poems* (2009), opens with two closely related poems, “Finch” and “Birds on the Water”. A passionate lover of birds, in these two accomplished pieces Bringhurst is following closely in the steps of such Modernist masters as Marianne Moore and Elizabeth Bishop, the example of British poet Ted Hughes’s well-known poetry volume *Crow*, and of earlier Romantic poets such as Percy Bysshe Shelley (“Ode to a Skylark”) and John Keats (“Ode to a Nightingale”).⁸ Birds, like trees, have

⁸ See Scott Ellis’ review of *The Calling*, “Where the Music Goes”, published in *Books in Canada* 24.5 (Summer 1995): 30-31. See, in particular, p. 31: “If there’s a good summary word for a poet like Bringhurst, it’s “bracing.” In a poetry scene overrun with slack confessional verse and semiotic object lessons, he brings to mind someone like Ted Hughes, whose territory his overlaps, though without the British laureate’s density of word-play or syntactic piling on... [...] He shares Hughes’s quick eye for life in the wild and his metaphoric

elemental lessons to teach, and so the poet spends much time outdoors, seeking their company to listen to whatever they have to tell him. Nature is no ornament for Bringhurst, either. The presence of the natural world, with its mountains, trees and birds, is an overwhelming presence in his everyday life on Quadra Island. In the wilderness, the sense of sublime grandeur and beauty transcending the human scale is simply inescapable. Alert to these subtle nuances of the natural world, the poet cannot but produce poems like these: a direct emanation from his pristine encounter with the real, objective and stubborn physicality of *what is*. And birds are an essential part of *what is*, no doubt. Bringhurst is then an avid outdoorsman. As Chris Dafoe points out in a beautiful meditation on Bringhurst's *poetics of bearing or listening*,

... if you ask Robert Bringhurst to describe what he does, chances are he'll say that he listens. Not only to the voices of other people, but also to trees, birds, the Earth. If that makes Bringhurst sound like some sort of West Coast mystic, he certainly doesn't seem the part, either on the page or in person. His poetry, praised by the likes of Stephen Spender for its "dazzling purity," is austere and precise, dotted with references to philosophers from ancient Greece and China, Haida storytellers as well as powerful, vivid images from the natural world.

Bringhurst is an avid outdoorsman and the wild is where he goes to hear his poetry. "Poetry is still an outdoor activity for me," he says, "and it really does have to do with listening. That's not so unusual. We expect people who paint to look at things, and when you write poetry you listen to the world and you hear things and you try to translate that into English or French or whatever.

"I know a lot of 20th-century literature is about the human world – it's part of that feedback loop – but that can turn into an ugly hum pretty quickly; and it seems to me that if you open a window and stick your ear outside, you can hear some pretty interesting things. I can learn a lot about poetry by listening to birds, for example, or by listening to trees. They speak ancient languages. And if I can't exactly transcribe them word for word, at least I can make some kind of counterpart in my own language. It's not that I want to escape from the human world, it's just that I don't want to be confined to it."⁹

"Finch" was originally published in *Onearth* (New York) 28.2 (Summer 2006): 28, and three years later it was reprinted in *Selected Poems*. The poem is descriptive and meditative in nature, and stems directly from Bringhurst's direct, attentive, first-hand observation of the world. To a certain extent, it also does tell a simple story: the story of a finch badly wounded, "*who must have tangled with a predator, / or maybe with a truck*", with one eye missing and a stump for a beak, either because it has been attacked by a predator or because it has collided with a truck, there is no way of knowing for sure. The poet keeps a bowl with birdseed in his garden for birds to eat from. The variety of birds gathering round this bowl every day is expressive of the rich diversity of the natural world at large: siskins, finches, crossbills, cowbirds, chickadees and blackbirds all come together to feast in his garden. Among them is a female finch that is a true survivor. Out of his sheer love of scientific precision and respect for the real, Bringhurst invokes its Latin name: it is a *Carpodacus mexicanus*, he says tentatively. What is simply moving about the presence of this finch among the other healthy birds is that none of them seems to care in the way humans would under the same circumstances:

suppleness..." See Scott Ellis' review of *The Calling*, "Where the Music Goes", published in *Books in Canada* 24.5 (Summer 1995): 30-31. See, in particular, p. 31.

⁹ See Chris Dafoe, "Robert Bringhurst: in ink and paper", Toronto *Globe and Mail*, 24 June 1995: C1-2. Article based on an interview conducted in Vancouver in April 1995, with reference to *The Calling*.

Not one among the others acts
concerned. No one seems, in fact,
to notice the black cavity that once
was her right eye, the shattered
stump that used to be her upper beak.

And no one gawks or whispers
at the awkward sidewise motion
that enables her to eat. And no one
mocks, crunching a sunflower seed,
her preference for millet.

SP, p. 247.

From the naturalness of the whole scene presented in these stanzas the poet learns an elemental lesson: whereas humans would show concern or unhealthy curiosity in the presence of a handicapped person, these birds simply keep on eating birdseed as if the wounded finch were one more of them and belonged among them with perfect spontaneity. There is no room here for what we would view as genuinely human feelings such as empathy or compassion in the face of the other's pain: "*Where ostracism, charity or pity / might have been, there is reality / instead.*" Self-absorbed as we are, humans might think that there is something cruel about the birds' not caring about the ugly deformity in the wounded finch's anatomy, but the poet tells us that "*their superlative / indifference is a kind of moral / beauty, as perfect as the day.*" This is not amoral behaviour, but a form of natural morality that takes for granted the profound bonds uniting all living creatures. Thus, if other animals (the red-tailed hawk or the neighbour's cat) come near the bowl half full of birdseed, they simply have a look at the scene, exchange a couple of words and are gone. There is no cruelty at stake here: animals acknowledge one another's presence and seem to be grateful for the simple fact of being alive on Earth. They do speak a language of their own, but they do not gossip, they do not whisper pain-inflicting words, they do not hurt each other in the way humans do. This is the poet's meditation on the ultimate nature of birds and on the elemental lesson they teach us all:

But I never
hear them talk of one another.
They speak of what they are, not who
they do or do not wish to be.
That is a form of moral beauty

too, as perfect as the day. Which is
to say they sing. By nothing
more than being there and being
what they are, they sing.
They sing. And that is that.

SP, p. 248.

The tone of these lines is beautifully conversational and have a freshness of their own that emulates the naturalness with which birds live and sing their song. In singing, birds celebrate their being alive. They do not pretend to be what they are not; they talk to one another of what they are instead. They are grateful and respectful with the real and with *being*, of which they are a tiny but indispensable part. One cannot help thinking of desire, which is the driving force and motivation for humans every step they take in their lifetime. It is as if birds had not desire other than the natural wish to be themselves and to keep on

living in the world. Like θάνατος, ἔπος is universal, which is to say that everyone (all living creatures) wants to live, one might think, but, unlike humans, animals live in a natural way that complies with the flux of life implicit in the world. They let themselves go, they do not force any kind of situation. They simply *exist*. Their song has the beauty of all natural things, which cannot avoid being what they are. “*And that is that,*” concludes the poet, as if there were nothing else to be said once one stumbles upon this simple fact. This is a form of gratitude that we rarely find in the company of other human beings, and so the poet naturally seeks the birds’ company.

II · “Birds on the Water”

Originally published in *Words on the Water: Campbell River Writers’ Festival 2006*, Campbell River, British Columbia: Words on the Water Festival Society, p. 2, “Birds in the Water” is the companion poem of “Finch” and another accomplished tribute to all the birds in the world. Thus, the words “*There are birds on the water, / birds in the air*” (or the other way around) are repeated time and again throughout the whole composition as an incantatory refrain. The piece consists of six six-line stanzas of perfect symmetry and three movements for the mind. In the first part (stanzas 1 and 2), the poet celebrates the ubiquitous presence of birds everywhere one turns to look in the world: birds are creatures that populate water, air and trees (“*on the snags, in the conifers*”), and they are also to be found “*flying down to the lakefloor,*” on the ice “*melting away at the foot of the world*” (in the South Pole), and on the ground, “*overturning the layers / of last summer’s leaves,*” as if birds could read the words written in the book of nature. The crucial image is found in the second stanza: “*There are birds who are building invisible, audible nests / in the bare-naked limbs of the alders in winter.*” These two lines are a jewel-like technical accomplishment on the part of the poet: to the euphony of beautifully arranged sounds (notice the alliteration of /b/ in *birds, building* and *bare*, or the sheer repetition of /l/ in *building, invisible, audible, limbs* and *alders*) one must add the beautiful idea conveyed by the words of birds building invisible but audible nests. This is a complex image isolated in time and in space in what looks like an autonomous haiku-like composition within the framework of “Birds on the Water”: birds build their nests in the upper branches of alders, and so they are invisible to the naked human eye, but they are audible, for the laborious birds keep on singing their melodious songs.

The second part of the poem dwells on the relationships between birds and human beings. Whereas birds are shown to be endowed with a sort proverbial wisdom and generosity in that they come close to humans, “*storing food in their ears*” and “*bringing mosses and twigs to their half-zipped pockets and palms*”, giving us food for thought and their songs as a most welcome gift, humans are shown to be somewhat egoistical and opaque creatures:

Birds break their necks
flying into your eyes
in the perfect belief
that the brilliant interior world
is as spacious and seamless and real
as the world outside.

SP, pp. 248-249.

The “*brilliant interior*” is possibly a reference to the inner geographies of the human soul, which turn out to be not so diaphanous, vast and real as the realm of water and air populated and known by birds so instinctively. Birds sacrifice themselves, flying unafraid

into humans' eyes, unaware that the space humans hide inside themselves is an unknown and obscure territory. Labyrinthine and convoluted, complex and difficult – this is what the interior spaces in humans look like, or so seem to imply these verse lines. The perfect naturalness of birds is thus placed against the deceptive nature of appearances surrounding humans. Birds simply give in or give up, not pretending to be what they are not, and they are ready to die. Thus, in the third movement of “Birds on the Water” the birds are seen lying dead at humans' feet. These birds never feared “*that your eyes might not mean what they're seeing, / your mind might not mean what it bears.*” Once again, as in many other Bringhurst pieces, the senses and the mind are invoked as the tools by means of which humans come to terms with the real in their tireless attempt at understanding *what is*. Wrongly assuming that human eyes do mean what they actually see, birds fly directly to their secure death, unaware that the senses and the mind are not completely reliable and might be deceptive after all. And where do birds go to once they die? Is there a special heaven or hell awaiting them? Or do they share the same heaven and hell with humans? In the closing stanza of the poem, the poet's voice does not hesitate for a second to give a forceful and conclusive answer: birds populate the air and the water, but there are no birds in heaven or hell:

There are birds in the air,
birds on the water,
but no birds in heaven
and no birds in hell
and no one to tell them the difference,
not here and not there.

SP, p. 249.

Because birds commit no crimes and they remain content to lead a life of simplicity, flying and singing their own existence into bloom, there is no punishment for them in a terrific hell in flames. There is no reward for them either in heaven, for they enjoy an untroubled life of natural acquiescence with the world. They do not pretend to be what they are not, they do not think or talk of “*who they do or do not wish to be,*” as the poet said in “Finch”. Not even humans are in a position to tell them the difference between heaven and hell, possibly because they coexist here and now, upon this Earth of ours. Not even the gods are able to tell the difference either.

Bringhurst's poems about birds remind us of an elemental truth: his view of the world is not anthropocentric at all; humans are not at the very centre of creation. Most of the time, his poems concern the realm of the nonhuman, which is larger and of greater interest to the poet. His primary interest is getting at a profounder apprehension of *being*, and by going to the mountains and spending time in the company of trees, stones and birds he has come to learn a new way of looking at the world – one that is less egoistical, less selfish, less egocentric. *Being* means ‘largesse’ after all in his ecological conception of reality. So he goes to the wilderness and he comes back whole, with a bundle of poems born in the voice, informed by the music of the teeming forms of life that populate the woods, away from the nonsense of city life in industrial societies:

... an eco- rather than a socio-poet, raising his exquisitely chiseled and stunningly spun word-dwellings within a radically different conception of the spacetime of history and tradition: not only are Bringhurst's poems more actively, consistently, and deeply engaged with non-Western thought- and word-worlds, recording elemental conversations with worthies dead only in body; they also pointedly neglect to centre themselves in the lyric ego, or even sometimes in the human sphere; whereas many of us habitually truncate the phrase “human being” to

“human,” Bringhurst effectively truncates it to “being,” and his poems haunt an ontic domain unconstrained by the anthropic.... [...] Not for him the stock-in-trade poetic personae of sensitive soul, wild bore, or hardboiled egghead; rather, a set of unlikely, often archaic avatars and totems, amongst them toad, squid, and the stone bone of the earth’s breathing body. The result of this anti-Viconian and stateless independence is a book of fiercely intelligent poems that regard their readers as certain birds do their watchers: like northern flickers, they are at home in the air, the trees, and on the ground, refusing to be known except in motion and only then if you dwell with them as they go.¹⁰

III · “The Flowers of the Body”

A long poem in seven closely interconnected parts, “The Flowers of the Body” is an atypical love poem and a celebration of the pleasure implicit in being alive in a world that all of us can perceive and enjoy through our senses and our mind. That it is a love poem is confirmed by the fact that Bringhurst has dedicated this moving and accomplished composition to his wife, Jan Zwicky, whose words on Earth’s definition preface the whole section entitled “The Living”. The title itself brings together the Earth, as embodied by flowers sprouting from the living ground, and the human body, which is shown to be covered by flowers sprouting from every single bodily part. At some point in the poem, the body becomes a potent microcosm (i.e., the representation or embodiment of the whole world in miniature) and the whole world in its manifold manifestations turns out to be subtly connected to the human body in astonishing ways. The first of the seven parts in the sequence opens with a powerfully straightforward metaphor: “*We are the flowers we bring / to one another: two bouquets / of changing colors.*” The lovers themselves are bouquets of flowers they give one another as a token of their love, as the supreme gift. When in love, the lovers give themselves completely as the best gift they can offer to each other and as a proof of their genuine love. There is something sacred about the intimacy and communion of two bodies loving and knowing each other so profoundly. That they should see themselves as being fragile and vulnerable and changing as flowers, comes as a welcome surprise to the reader. The flowers in the lovers’ bodies are seven flowers “*flowering in layers,*” says the speaking voice in the poem:

The first is a flower the color of earth,
in which the other flowers flower.
The second is all the colors of bone and
cornstraw, chlorophyll and blood.
The third is flame. The fourth
is turquoise, ochre, jade.
The fifth shifts like the mountain sky
or the sea from rose to indigo. The sixth
is the colorless color of water and air.
And there is one more, rainbow-colored like the deer.

SP, p. 249.

All four classical elements out of which reality is thought to be made are invoked in these lines – earth, flame (fire), water and air – and so the seven flowers encompass the whole world in its entirety. The colours of the flowers of the lovers’ bodies embrace the whole

¹⁰ See Iain Higgins’ “Many Mansions”, published in *Canadian Literature* 154 (Autumn 1997): 197-203. This is a review of many books, including *The Calling*. See, in particular, p. 200.

world: one is the colour of earth, the basic ingredient in reality out of which literal (non-figurative) flowers sprout; another is the colour of “*bone and blood*” (present in animals and humans) and of “*cornstraw and chlorophyll*” (present in trees and plants in general), which evokes the whole realm of living creatures in the world; another is the colour of flame (which might be intended as a reference to the passion of love); another is turquoise, ochre, jade (a subtle reference to stones and minerals); another shifts from rose to indigo in the sky and in the sea (the mythological partner of the earth in many cosmogonies or creation myths around the world); another is colourless like water or air; and the last one brings together the colours of the rainbow. Thus, if the colours of the flowers of the body embrace the whole world with all its living creatures (earth, sky, sea, mountains, air, plants and animals), the lovers *are* the world. Something similar happens in John Donne’s “The Canonization”, where the lovers in their bedroom stand in a world apart, away from warring empires, and yet embody the whole world through their love. Every little, tiny part of the universe contains the universe in its entirety: a drop of water contains the rain, the oceans and rivers of the world; and a speck of dust is the innumerable mountains, hills, deserts and stones of the world. As William Blake put it in “Auguries of Innocence” so long ago, it is possible *to see the world in a grain of sand, to hold infinity in the palm of your hand, and eternity in an hour.*

In the second part of “The Flowers of the Body”, the poet calls these seven flowers by a different name: “*Their common names are smell, taste, / sight, touch, sound, thought.*” The flowers of the body are nothing more (and nothing less) than the five senses (and their corresponding physical prolongations or bodily organs), plus thought, “*the one sense these lead from and toward,*” which is to say that, in our intellectual confrontation with the world, the mind operates with the first-hand data or raw materials provided by the senses, and that the senses direct the myriad sensations we receive from all directions to the centre of the mind, which metamorphoses them into a meaningful *Gestalt*. Thus, part 3 of Bringhurst’s poem consists of an exhaustive or precise catalogue of the knowledge organs of the human body, which include all five senses and thought. All of them are firmly ingrained in the living fabric of the body, or are a prolongation of its very physicality, and sprout as flowers sprouting from the living soil of earth:

These are the flowers of the body:
the nose at the base of the body;
the lips and tongue at the root of the body;
the eye looking out from the palm of the body;
the drum of the blood, strummed by the hand
that roosts like a bird in the heart of the body;
the ear in the pit of the throat, which is
the midpoint of the skin; the brain
in its leaking chalice of bone; the moon.

SP, pp. 249-250.

Marked by incantatory parallelism, these lines tessellate a series of daring and compelling metaphors. These lines show Bringhurst at his best, building musicality upon the sheer repetition of sounds (near-rhymes and assonance) and syntactic structures (parallelism). Needless to say, the nose stands for smell, the lips and tongue stand for taste, the eye stands for sight, the complex metaphor in “*the drum of the blood, strummed by the hand / that roosts like a bird in the heart of the body*” stands for touch, the ear stands for hearing (*sound* in Bringhurst’s poem), the brain stands for thought, and the moon does come as a surprise as the seventh flower. All five senses and the mind are once again invoked as the inevitable

link between the human body and the world, which we come to know through the very pores of our skin.

The fourth and fifth sections of “The Flowers of the Body” dwell on the flowers that sprout from the face and from the limbs, respectively. Thus, poem 4 reminds us that “*In the fist of the face, the flowers / reappear: nose, lips, eyes, ears.*” through a simple alliterative enumeration (notice the repetition of /f/ in *fist-face-flowers*). The face is conceptualized as being a hand where the flowers of the body sprout; five-fingered hands are an effective and useful prolongation of the human body in our daily interaction with the world. We tend to overlook the simple fact that the face is the meeting point for at least four fundamental senses (smell, taste, sight and hearing). By contrast, touch is ubiquitous in that it is to be found throughout the whole skin covering the human body. These flowers or blossoms commonly called ‘senses’ are in charge of “*reading and writing the light / on tattered scraps of air*”, which is to say that the senses read and interpret the world, and that in this interpretive process they re-write *what is* and translate it into humanly understandable terms. Light floating mid-air is what we perceive first of all, and light is rich in signs for us to interpret and make sense of. Somewhere in the echo-chamber of the brain is the mind (“*the face’s other hand*”) producing “*meaningful wholes*” out of all the pieces of information provided by the senses: “*The blind roots listen through their pores, / squeezed in the face’s other hand.*” Similarly, arms and legs, and feet and hands are also covered with flowers sprouting in the form of “*Ankles, elbows, shoulders, hips / and fingertips.*” The metaphors at the heart of poem 5 are daring: arms and legs are “*slender bodies*” and feet and hands are “*blinded faces*”. They are also prolongations of the body into the world that they seek to perceive and enjoy to the full.

Whereas sections 1 to 5 explore the sheer anatomy of the flowers of the body as it were, section 6 focuses on their voices. This section is crucial, for the human body becomes a miniature representation of the world in its entirety, i.e. a microcosm that comprises all the elements in reality. We learn that the voices of the flowers of the body are those of the *stars, the sea, the sea air, deep-sea ores*, and “*the sounds below the throat, / for which there are no letters*” – these are probably a reference to the ineffable, to the realm of feelings and emotions that are not easily verbalized. From the stars up above in the sky to the unknown world of under the sea, the whole cosmos is invoked and condensed into these verse lines. The flowers of the body speak a language of their own which is the language of the whole universe. *Eyes, hand and tongues* are flowers in themselves too, immersed in the act of coming to terms with and interpreting the real. As in many other Brinhurst poems, the precedence of speech over writing is out of the question. The language of the body’s flowers *speaks* us, but these flowers are simply indecipherable (silent or half-dead) when we try to freeze or record their speaking voices through writing. Spoken words are a living emanation from the lungs, whereas writing seems to have a deadening effect on speech:

Eyes, hands, tongues can become
the flowers again and again but cannot
turn to pick and dry them. In their voices
we are spoken. They are silent
in the tongues in which we try to write them down.

SP, p. 251.

“The Flowers of the Body” closes with poem 7, which brings together all the pieces scattered in all previous six sections. Whereas the lovers were *bouquets of flowers* of changing colours in the opening poem, now they become trees they plant in one another’s earth so

that they might flower together. The bodies are now earth and trees at the same time; loving someone is akin to planting one's tree (body, mind and speech) in their earth:

We are the trees we plant
in the one earth of one another,
that they flower there
together: flowers we bring on the living
branch to one another,
uncut, rooted
in the darkness where there are
no other faces, shapes or colors,
no bouquets, no other
others...

SP, p. 251.

The poet seeks to convey a sense of complete communion between the lovers, and he does succeed. Being trees in one another's earth, the lovers give each other flowers that are uncut, rooted, truly alive, as a token of their real love. There appears to be no room for anyone or anything else (for the others) in their love relationship, which is self-sufficient and all they truly need. However, as the poem unfolds we soon learn that *all others* are present somehow in one way or another, and that they are absent at the same time too, because this love is only theirs, it belongs to them and nobody else. Thus, the closing movement of the poem is pervaded by the incantatory rhythm of short verse lines of only a few words each, rich in alliteration and *-ing* forms. These words give an idea of the flux of life implicit in reality, away from which the lovers are experiencing the precious and rare intensity of their love:

no faces, voices, colors,
no bouquets,
no bringing,
no song singing itself
in the fingertips,
no tongues, no teeth,
no taut lips softening,
no opening
and closing, no
unsoftening,
no thought
of light and fire and
no fire
and no flowers
and no hands.

SP, p. 252.

IV · “Giotto's Bones”

Originally published in *Many-voiced fountains: Studi di anglistica e comparatistica in onore di Elsa Linguanti*, a cura di Mario Curreli e Fausto Ciompi, Pisa: ETS, 2003: pp. 16–29, together with “And So Do We” and “The Living Must Never Outnumber the Dead”, in honour of Elsa Linguanti, and later revised in 2004 in the *Times Literary Supplement* (London), “Giotto's Bones” is a poem reminiscent of “For the Bones of Josef Mengele, Disinterred June 1985” in many respects. Thematically speaking, both pieces constitute a moving meditation on the

bones of two very different men and personalities: whereas the latter concerns the finding of the remains of the Nazi physicist who conducted horrible medical experiments on the inmates at the concentration camp of Auschwitz-Birkenau, the former explores the technical accomplishments of the Italian painter and architect Giotto di Bondone¹¹ (b. 1266/7 – d. 8 January, 1337, Florence), one of the first great artists contributing to the Italian Renaissance, whose bones were found under very different circumstances in the 1970s. Thus, bones are the starting point for two very different pieces of meditation: where Mengele, the *Angel of Death*, destroys human lives in the belief that he is making a contribution to medical progress, Giotto is concerned with the creation of beauty in multiple forms – through the masterly combination of colours, planes and lines in his paintings and his frescoes. The fundamental dichotomy at the bottom is that between creation and destruction, and it is almost a truism to say that it is always more difficult to create than to destroy, for it takes time, talent, patience, creativity and vocation. Set apart by four hundred years, Mengele and Giotto are human types of a very different nature. They give Bringham an opportunity to meditate on the human condition, even if this meditation should start almost from scratch, or better, from the essentials – the bones that have managed to persist despite the passing of time. Like other signs populating the world, bones can be read and interpreted by the inquisitive gaze of the human mind. The act of exegesis and interpretation of Mengele’s and Giotto’s bones on the part of Bringham produces two memorable poems, two perfect artifacts that bring to light the lives and work of two human beings that left some kind of trace on the memory of subsequent generations.

In the late sixteenth century, the biographer Giorgio Vasari, in *Le vite de più eccellenti pittori, scultori e architetti* (1568), translated into English as *Lives of the Artists* by George Bull, Penguin Classics (1965), said of Giotto that he was held responsible for resurrecting the art of painting as the expression of drawing accurately from life, which had been neglected for almost two centuries by the more crude traditional Byzantine style. In fact, Giotto’s figures are solidly three-dimensional, they have faces and gestures based on close observation of reality, and they are dressed with garments that hang naturally on them, endowed with spontaneous form and weight. Also, he paid attention to the careful arrangement of figures on the canvas or the fresco wall, so that the viewer appears to have a particular place within the scene being represented, which gives an astonishing dramatic immediacy to his paintings. Thus, he set a new standard for representational painting in his works, where the depiction of the human face and emotion is a new feature, an expression of his interest in psychological penetration. Among Giotto’s masterworks are the decoration of Scrovegni Chapel in Padua (completed around 1305), a fresco cycle depicting the life of the Virgin and the life of Christ, one of the supreme masterpieces of early Renaissance, and the design of the *campanile* (bell tower) of the Florence Cathedral.

According to Vasari, upon his death the artist was buried in Santa Maria del Fiore, the Cathedral of Florence, on the left of the entrance and with the spot marked by a white marble plaque. By contrast, other sources claimed that he was buried in the Church of Santa Reparata. There is no contradiction implicit in these two reports though, for the remains of Santa Reparata lie directly beneath the cathedral, and the church continued in use while the cathedral was being built in the early 14th century. During an excavation conducted in the 1970s, bones were discovered beneath the paving of Santa Reparata at a spot close to the exact location given by Vasari. The detailed forensic examination of the bones revealed that these were the remains of a painter, possibly Giotto’s, because of the

¹¹ For basic biographical information, see the entry on ‘Giotto di Bondone’ in the *Encyclopaedia Britannica*, vol. 11, pp. 6628-6631.

presence of certain chemicals (arsenic and lead among them) commonly found in paint that had been absorbed by the bones while their owner was still alive. In Bringhurst's account, which follows closely the latest scholarly discoveries, the bones are found where Vasari said they should be found and they show evidence that they absorbed certain chemicals ("*heavy with mercury, lead and selenium*") associated with paint:

They were underneath the Duomo – just
below the stone floor, precisely where
Vasari said the marker used to be – and no one
meant to set them free – and yet they lie here
naked in fluorescent light, for anyone to see –

SP, p. 252.

There is something irreverent about someone's *naked bones* being exhibited like this, beneath a crystal panel on the ground, illuminated by fluorescent light. Bones, anyone's bones, are not meant to be displayed like this, for they are the innermost and most intimate part of any human being, the almost irreducible core of what is left of a person's remains. Giotto's bones did not ask to be discovered and unburied in this way; they were found quite by accident and science did his job well in the form of DNA tests and chemical analyses. Forensic examination of what were thought to be Giotto's bones brought to light that they belonged to a short man who may have suffered from a form of congenital dwarfism. The reconstruction of the skeleton revealed a short man with a disproportionately large head, a large hooked nose and one eye more prominent than the other. In addition, there was plenty of evidence that these were the remains of a painter. For instance, the neck bones indicated that the man had spent much time with his head tilted backwards, which was the natural thing to do while painting frescoes on the wall or on the ceiling, and the front teeth were worn due to the habit of frequently holding the brush between teeth. The man was 70 at the moment of his death, and that is the age at which Giotto is said to have died too. As a result, the team of researchers involved in the whole process was convinced that the body belonged to the Italian painter. On the other hand, there were additional pieces of evidence to be found somewhere else. That the bones found were Giotto's is backed by Vasari's description of the painter in his well-known biography, which is based on a description by Boccaccio, one of Giotto's friends. According to the Italian biographer, Giotto was the ugliest man in Florence, and his children were also plain and ugly.

In Bringhurst's meditation on Giotto's bones, the emphasis is laid on the hunger for beauty that inspired the painter's work and on his technical accomplishments. These are "*the twisted, mismatched bones,*" he says, of the man who was able to make "*plaster dust / and water, egg yolk, charcoal and red ochre / bunker down and sing the blues*". This is clearly a reference to his mastery of the fresco technique, to the way in which he combined basic ingredients to make colour an effective means of communicating subtle nuances of meaning in his paintings, in the service of psychological penetration and controlled naturalism, for his was a painting closely based on the real. In this particular respect, "Giotto's Bones" also recalls a companion poem entitled "The Physics of Light", concerned with Paul Cézanne's meditation on perspective and the nature of spatial relationships as represented in painting. In Bringhurst's short treatise on the art of Giotto, the painter is shown making use of all the typical painting tools of the time,

touching his brush – a vulture's quill,
tipped with a cluster of boiled weasel hair –

to his lips, lifting his hunched right shoulder
a little bit higher, bringing his clenched left foot
a little bit closer, making a taut and perfect
gesture with a splotched, disfigured hand.

SP, p. 253.

The physical description of the painter's disfigured body suggests once again that Bringhurst is following modern scholarship on the discovery of Giotto's remains to make his own poem as much accurate as possible. At the heart of the stanza is the evocative contrast between the ugliness of the painter's body and the beauty of the paintings he was able to produce in his lifetime for the sake of posterity, for generations still unborn who would enjoy the aesthetic experience of contemplating his frescoes, true masterpieces of early Renaissance painting. If poets working on speech as the ultimate basis of genuine poems make words (*le mot juste*) sing, then great painters make *the blues sing* on the canvas. What poetry and painting sing ultimately of is *being*: there are different paths leading to the same destination, and the same creative compulsion is to be found beneath the act of creation of the poet and the painter to convey to humankind the beauty and truth inherent in the world. There is no other option left for spectators and readers than to feel truly awe-struck in the face of the sense of the sublime pervading the world that great artists manage to capture in one way or another.

V · “So Do We”

Dedicated to the Italian literary scholar Elsa Linguanti, who has devoted much of her time and attention to the study of Bringhurst's work, “So Do We” is one of the three poems originally published as a homage to this university professor in *Many-voicèd fountains: Studi di anglistica e comparatistica in onore di Elsa Linguanti*, a cura di Mario Curreli e Fausto Ciompi. Pisa: ETS, 2003: pp. 16–29. The piece is a short lyric poem of only four stanzas and a straightforward meditation on the nature of language. At the heart of the meditation is the premise that humans have no monopoly on language. Language is conceptualized as being a body endowed with all the characteristically human bodily parts, including a gigantic ear it rests on the breast of the world, which is also personified. The intimation that everything is alive and connected to everything else in this world informs much of what is said in this poem. If the emphasis of the meditation in “Hick & Nillie” was laid on the relationship holding between words and objects, on their truth-value, here the reader's attention is directed to the simple fact that language is nothing more than a prolongation emerging out of the earth itself, as it were – a telluric emanation born from the dark bosom of Mother Earth. In the fundamental purposes language serves in humans' interaction among themselves and with the world as an effective tool of both communication and knowledge, it has to listen attentively to what the world has to say and teach if it is to work properly and to remain healthy. Its ear listens both inward and outward, to the beating heart of the living Earth and to its own rhythms:

The ear of language rests
on the breast of the world,
unable to know and unable to care
whether it listens inward or outward.

SP, p. 255.

It turns out that the language's ear is also the world's ear. It is not humans' ear, self-absorbed and egoistic as we are most of the time. This is the world singing its own song of flesh, while listening to itself singing. And the ear is the prototypical organ of speech, which is no prerogative of humans alone. Like one's own skin, bones, fingertips or hair, speech does not truly belong to us humans: "*Your / speech, of course, is yours. It is another's / even so. So is your skin. So are your bones. / So are your fingertips, your hair.*" Speech is grander than ourselves, larger than what we think it to be. Every little thing in the world speaks a language of its own, wants to mean, conveys a message in the grander scheme of life. Both living and nonliving, human and nonhuman creatures are inextricably linked to one another in the living mesh of things we call *reality*, a true continuum of differences we impose upon the Heraclitean, ever-flowing reality. It does remain a fact that whenever we open our mouths to utter a single word, what we say does not belong to us, is not even quintessentially human: "*When we are actually / speaking, what we say is not man-made.*" Language speaks through us, the whole of existence resonates in one way or another in the mouthfuls of words we utter, for language is universal, pervasive, to be found in the realm of the non-human too. It is there where it remains purer and more pristine, closer to the things it names. The final lesson this seemingly simple poem teaches us is that we have to learn to be humble in the face of the sublime nature of language, and grateful for being given the opportunity to belong to something grander than ourselves. And it is good news that we do have language as well to be able to convey the sense of gratitude and humility to ourselves and to one another.

VI · "The Living Must Never Outnumber the Dead"

First published as C.73 in *Canadian Literature* 154 (Autumn 1997): 8, 110, together with "Zhàozhou Congshen" and republished as B.83 in *Many-voiced fountains: Studi di anglistica e comparatistica in onore di Elsa Linguanti*, a cura di Mario Curreli e Fausto Ciompi. Pisa: ETS, 2003: pp. 16–29, alongside the essay "What is Found in Translation" (rev. in A.83) and the poems entitled "Self-Portrait: Giotto's Bones" and "And So Do We", "The Living Must Never Outnumber the Dead" is a powerful piece at the centre of "The Living" in *Selected Poems* (2009). A short lyric poem of only three four-line stanzas, the title itself points explicitly to the thematic concern of the composition. In simple declarative sentences, the speaking voice beneath the poem states that there are more living human beings than there should be. This is clearly a case of world overpopulation: we live in an overcrowded planet¹² where there is more life than the Earth's resources can afford to sustain. Environmental sustainability demands that the living never outnumber the dead; this is a tacit rule that we appear to have broken in the present state of affairs:

It is that simple. The living
must never outnumber the dead.
With us, at the moment, they do.
We have broken the rule.

SP, p. 256.

¹² Currently estimated to be seven billion by the United States Census Bureau as of January 2012, the world population comprises the total number of living humans on the planet Earth and has experienced continuous growth since the end of the bubonic Plague, Great Famine and Hundred Years Wars in 1350, when it was about 300 million. Current projections show a continued increase of population (but a steady decline in the population growth rate), so that by the year 2050 the world population will be somewhere between 7.5 and 10.5 billion.

The speaking voice admits that these are “*hard words / to say to a woman*”, because how is it morally possible to prevent a woman from her right to give birth to her own children? Birth control policies come up immediately to one’s mind. And they are “*preposterous words / to say to a child*”, because how on earth are we to prevent children from living into adulthood and enjoying the gift of life every human being has an inalienable right to? Once uttered, there is not much the poet can do about his own words. Where can he hide these sharpened words? These mouthfuls of live air he chooses to abandon somewhere mid-air in the hope that no one may find them. These are spoken words blowing in the wind that nobody might notice after all. *Littera scripta manet*, said Horace many centuries ago, and so does the spoken word. Once uttered, there is no way of *unsaying* one’s spoken words, as they *persist* somehow as part of the living fabric of air itself:

And I do not know what to do
except leave them behind
here in the air
where no one will find them.

SP, p. 256.

We might think that what gets spoken is easily forgotten because writing has a stubborn consistency about it that makes a verbal message durable in the solid form of language, while speaking has not. No matter whether spoken or written, words do remain in one way or another, they manage to survive, and the message in a bottle uttered by the poet in these lines has reached to us in the form of a memorable poem that looks reality in the eye and says in natural language what no one dares to say: that there are too many of us human beings on Earth, and that we have disturbed the balance that there ideally should be.

VII · “At Last”

“At Last” is another enigmatic short lyric poem. Written in simple declarative language, it has the purity and perfection of crystal, and it conveys profundity of thought once again. The whole composition is one extended stanza, even if subtle modulations of thinking are distinguishable as the poem unfolds like an astounding flower. As in many of Bringham’s poems, the reader is plunged back into an elemental world of air and earth where the dead, the living and the never-born coexist with one another in a seemingly spontaneous way. Metaphor is of the essence and parallelism is the main structural device around which the whole poem is masterly constructed, as can be seen from the very first opening verse lines. The air and the earth are mirrors hiding hearts that are beating at a different pace. That the air and the earth should have innumerable hearts, that most human of organs, means that they are alive with presences that we do not even notice or take for granted. It is not *one* heart, but *hearts*, in the plural, which evokes the immense richness and diversity of life forms populating the air and the earth. If reality is a continuum teeming with sacred life, then there is no reason to think that only humans have monopoly in hearts. What is fascinating about the statements in the first stanza is that the air’s hearts beat faster than human hearts, while the earth’s hearts beat slower and slower. Is it because Mother Earth is sick and tired of humans’ greedy manners in their relation to the real? Fed up with the way we manage the Earth’s resources with a shameless view to make the greatest profit possible? The poet does not judge, he simply puts forward the facts:

In the mirror of the air

are the hearts that are
faster than yours.
In the mirror of the earth,
the hearts that go
slower and slower.

SP, p. 256.

At the core of “At Last” is what looks like a passing meditation on the Beothuk. One of the First Nations of North America, the Beothuk were native inhabitants of the island of Newfoundland at the time of European contact in the fifteenth and sixteenth centuries. They spoke a language isolate, a language thought to be a branch of Algonquian according to some linguists, but there are only limited records of the language to draw definitive conclusions. Beothuk means ‘people’ in the Beothuk language, which is significant enough. It is estimated that there were about 2,000 inhabitants at the time of European contact, possibly no more than 500 to 700 people, living in independent and autonomous family groups of 30 to 55 members. Being a hunter-gatherer people, their main sources of food were caribou, salmon and seals, and they also hunted or harvested other animal and plant species. They made their own warm clothes from the fur-bearing animals they hunted, they built their own canoes from bark with their own hands, and they lived in conical dwellings known as *mamateeks*, structures built around poles arranged in a circle and covered with birch bark. Unlike other native peoples, the Beothuk always strived to avoid contact with European settlers, who often treated them inhumanly. Population estimates of surviving Beothuks by the end of the nineteenth century vary from about 150 up to 3,000, but the point is that their relentless struggle for subsistence was doomed to failure due to the superiority of arms technology of European settlers and the territorial pressure exerted by other encroaching native peoples (the Inuit and the Mi’kmaqs) living nearby. Due to the loss of access to sufficient food resources, to the spread of infectious diseases such as smallpox brought to the New World by the European settlers, and to the violent encounters with settlers and other natives, Beothuk numbers dwindled rapidly toward extinction. They became officially extinct as a separate ethnic group in 1829, with the death of the last known survivor of the Beothuk, a young woman in her early twenties by the name of Shanawdithit. “*Did you suppose, after / the last Beothuk died, / that the cod and the lobster / would feed you forever?*,” asks the poet. Is this question addressed to humankind in general? The Earth’s resources are only limited, they are not boundless or infinite – this seems to be the message at the core of the heart of “At Last”. The pressure of European colonizers that the Beothuk had to endure brought about their final annihilation, but the Earth’s generous provision is not endless.

The closing lines of Bringham’s poem are disquieting enough. All human beings that have been long dead are “*dying of thirst*”, they have an unquenchable thirst for life, they are asking for another chance on this irreplaceable home of us. Similarly, the living are also “*dying of eating*”, because of sheer excess and shameless abuse of what the Earth has to offer us generously and in abundance. It is a matter of *not enough* or of *too much* in each case. A third category, somewhere beyond that of the dead and the living, includes “*the ones who have never been born*”: Is this a reference to the gods, eternal and immutable creatures? Possibly. They too are at last disappearing, because we no longer care whether they exist or not, because we do not acknowledge their invisible presence upon Earth. It is for the gods that the poet makes his poems as part of the universal poetry implicit in *what is*, not for us mortals, made of perishable flesh and bone after all. Thus, the closing lines of “At Last” echo beautifully in one’s mind long after we read the words of the poem aloud, noticing their parallelism and their musicality:

The dead are dying
of thirst, and the living
are dying of eating.
The ones who have never
been born, and for whom
we exist, are at last
disappearing.

SP, pp. 256-257.

VIII · “For the Geologist’s Daughter”

Five three-line stanzas are enough to make up this jewel of a poem, another perfect short lyric included in “The Living” with which Bringhurst puts a full stop to his *Selected Poems* (2009). Shortly afterwards, it was reprinted in a collection of essays entitled *Lyric Philosophy*, conceived as a tribute in honour of the subtlety of the thinking and the singing of Canadian poet and musician Jan Zwicky, whose presence is felt somehow beneath the lines. She is possibly the geologist’s daughter mentioned on the title. Despite its deceptively simple structure and language, “For the Geologist’s Daughter” shares no doubt powerful affinities in its profundity of thought with the major philosophical poems in Bringhurst’s corpus – the sequence of the pre-Socratics of *The Old in Their Knowing* and the sequence of Oriental sages in *The Book of Silences*. The language remains gnomic, enigmatic, ringing with echoes from Parmenides’ philosophizing on *being* and *non-being* as the fundamental foundations of the real, on the persistence of immutable *being* and the destruction of this world of ours in our stubborn and unknowing and damaging hands. Thus, the whole poem could be said to be a meditation in miniature on *what is*, or so seem to suggest the opening lines of the poem. Thus, the first part of the poem is built around a constellation of two key words – *nothing* and *everything*. Everything we know to exist in the world came up out of nothingness. *Nothing* is what there was at the beginning and what there will be in the end. An absolute void, a blank space, a zero amid the universe. *Nothing* positively exists, which is to say that *what is* and *what is not* are the two sides to one and the same coin: *what is* is *resonant and clear*, the poet tells us, like nothing itself:

There will be nothing in the end,
and that is everything that ever was
and will be.

Yet what-is is sometimes every
bit as resonant and clear
as nothing ever could be.

SP, p. 257.

The second part of the poem shows “*the philosopher of music*” (whom we take to be Zwicky) and “*the musician of ideas*” (Bringhurst himself) musing together on the nature of *what is*: “*what has been / can never not have been.*” *What is* is real for sure; it *is* and cannot not have been. There is no way of undoing this. But *what is* (being) is also moving fast into *what has been*, into *what is not* (non-being), and then “*its having been will sing / its silent song as long / as no one listens.*” Something must be left of what has been for sure, lingering somewhere in mid-air, singing “*its silent song*” (notice the alliteration of the closing lines) provided there are no humans nearby, close at hand, listening. Which is to say that *being* and *non-being* like to

hide away from humans' inquisitive, penetrating gaze.¹³ Everywhere being is singing and dancing, but we might need cleanse our senses and look at the world with open eyes and listen to its song with open ears. After all, a geologist is someone who looks at the world with fresh eyes and reads in the book of nature what normally passes unnoticed to the rest of common mortals. The geologist's daughter must have inherited a passion for what is tangible and real like mountains, rocks, a handful of sand, a heap of stones, ground layers, and all the words in the language spoken by earth itself. Which is to say that Bringhurst's metaphysics is physics in the end: his speculation about the real is firmly based on what the senses perceive and handle. The mind sings then its own subtle song out of the materials the eyes, the ears and the hands give it to start from.

¹³ As Fraser Sutherland points out in a review of *Selected Poems* (2009) entitled "Art and Nature, Body and Mind", published in *Toronto Globe and Mail*, 11 July 2009: F12: "If one gets a little lost here in the shunt between being and non-being, the lines may relate to a quotation from French philosopher and musicologist Vladimir Jankelevitch, which Bringhurst uses as an epigraph to "The Physics of Light" section: "What has once been can henceforth never not have been..." By punctuating life, death gives it definition. A variant of this sentiment appears in "Sunday Morning"."

CONCLUSION

Poetry is a mystery because it is as vast as reality or life itself. And life is a mystery indeed that defies discursive reasoning and intellectual oversimplification. There is something truly unassailable and ineffable about it, even if we humans strive to make sense of it so stubbornly that one is brought to a sense of astonishment at the determination with which humankind has devised all sorts of stylized explanations throughout history and the unfolding of successive civilizations on Earth just to account for it. What we have learnt from a close reading of Bringhurst's poetry could be summarized in just a handful of resonant words. Simplicity and brevity are a precious virtue after all. Poetry is in the very texture of *being*; it has nothing quintessentially to do with language, though we humans tend to try to capture it through words. And yet Bringhurst has taught us that there are certainly other paths leading to the heart of things: philosophy, science and art are just instances, ways of responding to the world with a maximum of intensity. Love is possibly another instance, another way of producing knowledge and of touching the truth of the world. The erudite scholars of the European Renaissance were convinced that man was the measure of all things, the centre of the universe, and the real object of human knowledge. They were humanists after all, nothing human was alien to them, and so it seems to us that Bringhurst is following closely in their steps. But to Bringhurst, who has a vast mind and a generous heart, the true object of knowledge is the world at large, which is both human and nonhuman. Though immensely varied and manifold in its expressions, *being* is just *one*, and so knowledge is also *one*. In his love of all things human and nonhuman, Bringhurst does not care about disciplinary boundaries. He is a polymath because his sense of curiosity in the face of the awe-inspiring grandeur of reality cannot be simply contained in any way.

Passion and enthusiasm are vital ingredients in all human endeavour. There is plenty of both ingredients in Bringhurst's life-long enterprise and calling. Not without good reason, he claims that learning is the most elemental vocation of all human beings – i.e., learning for the sake of learning, for the sheer pleasure of getting to know anything at all. Thus, it seems to us that gratitude, if anything, is the palpating heart of the poet's entire work, for Bringhurst's poetics is *a poetics of listening* or *a poetics of hearing*, which is to say a poetics of paying attention to the world. Paying attention to the real, Bringhurst finds out that poetry is pervasive, that it is implicit in the very texture of reality, that it is an attribute of the world. The ancient Greek philosophers, the Buddhist monk-scholars and the mythtellers of the oral literatures of North America were convinced that this was the case. Their pristine look at the world revealed nuances of meaning to them which are simply not audible or visible to us anymore. What they found in the world was a subtle sense of interconnectedness, a form of ecological integrity that has been lost for us now a few centuries later. In this respect, the sense of historical continuity is amazing with Bringhurst though. Centuries are nothing to him; all intellectual accomplishments are atemporal to his beautiful mind. Breathing through the feet, he stumbles upon the simple fact that the world speaks in many different voices and so his poems are attempts at *echolocation*, gestures to capture the polyphony inherent in reality. It is only natural that he should affirm time and again that his poems are more the product of oral composition than of writing. His poems come out of his mouth (they are mouthfuls of living words), but also out of the rhythms of his feet walking in the woods, for he is an avid outdoorsman eager to listen to the world with open ears and attentive eyes. He comes as an explorer back from long voyages into

exotic lands, bringing invaluable poems in his hands as a gift to humankind. His poems exist to honour the world and everything in it, human and nonhuman, but also to honour being and nonbeing, to honour our ancestors, the living, the dead, and the unborn. Bringhurst's poems are also born out of his hands, which handle the solid form of language with utter dexterity to reach the ultimate elegance of well-wrought books conceived as beautiful artifacts. The fascinations language and typography hold for the author are simply inexhaustible. Hence he has devoted much time and attention to book design, to the history of letterforms, to translation as a form of intellectual gymnastics. All these intellectual or creative enterprises are integral to his poetic endeavour. To do justice to his work as a conscientious, perfectionist and accomplished typographer would require another long dissertation.

Being has no more devoted student than Bringhurst himself. Reading his poems and his prose pieces, the reader comes out of the experience with the comforting sense that the world coheres and makes sense. There is such a precious sense of intellectual coherence and such a moving love of precision at the heart of his *oeuvre*, that one is under the impression that his corpus is a gigantic work in progress that has the simplicity, the beauty and the perfection of a circle. To this, one must add an impeccable use of language, as well as such an inescapable sense of ethical integrity and respect for the real that one cannot help surrendering to his unique, idiosyncratic *Weltanschauung*. This is poetry of great heights, and so it is only natural that many of his poems should measure themselves against the sheer magnitude of mountains, the beauty of trees, or the silence of stones. Looking at reality through the prism of his work, we come to learn that the core of his view of the world is that *being* is sacred at its very roots. It takes humility, integrity and *claritas* of mind to affirm this. *Being* is the talismanic word repeated over and over again throughout the entire work of Robert Bringhurst. So are *body* (blood or bone), *speech* and *mind*, which constitute a potent triad at the heart of his work. The Cartesian *res extensa* / *res cogitans* dichotomy is abolished or cancelled in his work. But deep inside his *oeuvre* there is a potent equation that brings *being*, *poetry* and *knowing* in depth together into a single whole. *Everywhere being is dancing and singing, knowing is known*, says Bringhurst. *All things think*. And humans have no monopoly on meaning or language, for every single thing in this world seeks to *mean* something. He speaks indeed of *the tree of meaning*, which is an apt metaphor that reconciles Nature and human language, that affirms the simple fact that words are an emanation from the world itself as it were. *Wörter blühen*. The thought occurs that, had he had the opportunity to read Bringhurst's works, Johann Gottfried Herder might have liked this metaphor for sure: the tree of meaning is an all-encompassing massive treasure, and out of an *Ursprache* have evolved the myriad languages spoken by *homo sapiens sapiens*, but also by birds, mountains, trees, lichen, toads, moss, rivers, and stones. *Die Sprache spricht*, and everything speaks.

Bringhurst's inquisitive or penetrating mind finds connections that pass unnoticed to most of us. The result is poems that are rich in profundity of thought and musicality; poems that are born of breathing, which, like feet, constitutes human beings' elemental link with the world. It is no exaggeration to say that *being* is the true and ultimate concern of Bringhurst's entire work, and so his poetry is universal. Transcending all sorts of spatial and temporal boundaries, he seeks the company of the ancestors who have devoted themselves to a profound meditation on *being* as well. As a result, his poems are philosophical poems or lyric philosophy, to borrow the title of Jan Zwicky's masterpiece. They are also portable, fluid structures of knowledge that have rescued from oblivion the best that has been said

and thought by our ancestors. And they are a temporary cache where the precious treasure of human legacy (both intellectual and emotional) is preserved. What he performs in his poetry is *an archaeology of human knowledge* whereby the best, and only the best, is captured in elegant language of utter transparency and simplicity. Thus, the cultural syncretism of his work betrays an immense erudition and a love of intellectual precision. This is the work of a man who writes with the whole burden of tradition not on his shoulders, but in his bones. Herakleitos, Pythagoras, Empedokles, Parmenides, Demokritos, Pindar, Sophocles, Nagarjuna, Saraha, Dogen, Haikun, Han Shan, Michelangelo, John Swanton, Ghandl, Skaay, Franz Boas, Edward Sapir, Dell Hymes, T.S. Eliot, Ezra Pound, Wallace Stevens, Rainer Maria Rilke, Paul Valéry, René Cher, Martin Heidegger, Paul Celan, Federico García Lorca, Pablo Neruda, among others, are all his walking companions, or, to put it differently, the human beings constellated into the living fabric of his personal canon. As a serious author, he is desperately in need of a vast (polyglot) literary map of the world, but also in need of a map of *homo sapiens sapiens* in and through time as one more species among all other species in this world. His elegant meditations on language are a powerful expression of what could be called *ecological linguistics* – one that contemplates the profound connections between meaning, language, being, Nature and philosophy with great insight and *claritas* of mind.

In addition, Bringhurst has spent much time studying the purely technical part of poetry: years of indefatigable study of different prosodic systems, of literary traditions other than European or Western traditions, have led to his finding his own distinct poetic voice. His poems have evolved towards prosodic experimentation, towards more complex experiments with voice. Musicians, painters and mythtellers have taught him much about the texture of the human voice, and about how to thread different voices into the living architecture of a single poem. Whereas his early poems of the 1970s – those collected in *The Shipwright's Log* (1972), *Cadastré* (1973), and *Bergschrund* (1975) – show the poet as territorial recorder, at pains to faithfully record *what is* with emotional detachment, objectivity and impersonality, but also the poet wearing the masks of such *poetic personae* as Moses, Jacob or Francesco Petrarca – in *Deuteronomy* (1974), *Jacob Singing* (1977) and *The Stonecutter's Horses* (1979) –, the work of the 1980s – *Tzubalet's Mountain* (1982), *The Beauty of the Weapons* (1982), *Tending the Fire* (1985), *Pieces of Map, Pieces of Music* (1986) – reveals a poet walking towards his own poetic maturity with impressive assurance and dexterity. The 1980s and 1990s are marked by a keen interest in the oral literature and visual art of the indigenous people of North America (especially the Haida), but also by an interest in the philosophy of the Oriental sages revisited in *The Book of Silences*, a companion to his sequence on the Presocratics (*The Old in Their Knowing*), begun with the publication of “Herakleitos” in *Cadastré* (1973), *Pythagoras* (1974) and *Eight Objects* (1975), and an interest in exploring poems for several voices. Thus, Bringhurst has evolved towards prosodic experimentation in his attempt at creating poems meant to be spoken by several voices that speak simultaneously or react to one another in producing a kaleidoscopic message rich in subtle nuances. Hence his polyphonic poems – *The Blue Roofs of Japan* (1986), *Conversations with a Toad* (1987), *New World Suite No. 3* (2005) and *Ursa Major* (2003/2009) – are a tribute to the human voice and to the world at large, which is a many-voiced place where humans and nonhumans live together. And polyphony is inextricably linked to a deep sense of ecological awareness and commitment: the Earth is the only home for humans and nonhumans alike, and we do not own it in any way. This is, at any rate, the immense literary legacy Bringhurst has given the Earth and humankind so far as his personal gift. We are immensely grateful for this generous gesture.

A BIBLIOGRAPHY OF ROBERT BRINGHURST

Robert Bringhurst is the author of a very prolific literary output which includes poems, essays, and translations. Not only has he produced his own books, but also contributed to innumerable magazines, journals and books by other authors. Indeed, he started his literary career while he was still an undergraduate and has been writing uninterruptedly since at least 1972 – i.e., for over 40 years so far. The essential bibliography that follows is the fruit of a collective effort begun a long time ago. Anne Hamilton Tayler (Yukon College, Whitehorse) began compiling the entries that make up this document in the early 1980s and since then many different people have progressively polished this document. Robert Bringhurst provided me with a working draft in June 2010, some of whose entries I have corrected myself. More recently, I have contributed other entries to this ongoing project, which is truly a work in progress. At any rate, the chronology of Robert Bringhurst's writings is somewhat complicated by his habit of revising, often extensively. Bringhurst himself opens this exhaustive bibliography with a preface from which I wish to quote here at least the opening words:

This bibliography was begun by Anne Hamilton Tayler in 1983 and has been continued by several hands since 1987. In its present form it lists about 350 publications, nearly 250 studies and reviews of Bringhurst's work by other hands, and about 30 translations into ten other languages: a total of some 650 items. It includes books, chapbooks, broadsides, contributions to periodicals, edited works, published sound recordings, films, and archival collections of manuscripts and other material by Robert Bringhurst. While an attempt has also been made to record reviews and other published responses to Bringhurst's work, and to list translations of his writings, it is certain that in both these categories this bibliography is incomplete. [...] In short, the bibliography lists primarily works of literature and criticism: poetry, translation, art history, literary criticism, and other forms of literary prose. It does, however, include recordings, films and archival collections as well as printed publications. The first appearance of any individual poem or other item is marked with a bullet (•). First editions of separate publications are marked with double bullets (••). Following every listing of the first known appearance of an item, all known reprintings and revisions are listed. In the listing for each subsequent appearance, the apparent source is given. Where no parenthetical information follows the listing of an item, this is its only known appearance in print. Minor typographic variants are not catalogued as revisions. Dimensions of separate publications are given in metric units, width followed by height. The ISBN (international standard book number) is given where known, but for separate publications only. Page counts for separate publications give the binder's measure (i.e., they include both printed pages and blanks). Page counts in all other cases include printed pages alone.

For the purposes of our doctoral dissertation, we have slightly abridged this working draft. Thus, we list the following entries:

- A** *Books & Other Separate Printed Works*
- B** *Contributions to Books & Other Separate Works*
- C** *Contributions to Periodicals: Poems*
- D** *Contributions to Periodicals: Prose*
- E** *Edited and Co-edited Works*
- F** *Films & Recordings*
- R** *Archival Collections*
- S** *Critical Studies, Reviews & other Secondary Sources*

These are the abbreviations used:

- first appearance of an individual poem or other work
- [•] first appearance of a substantive revision
- first edition of a book or chapbook
- [••] first printing of a subsequent edition which the author has substantially revised
- rpt* reprinted without substantive change
- rev* revised and republished
- Red** incomplete entry awaiting further information

A.31a *The Blue Roofs of Japan*. Vancouver: William Hoffer, 1986. [28] p. Paper, sidelaced, 19.5 × 28.5 cm. “150 copies, hand-numbered in Arabic numerals & signed....” Same as A.31 except for cover, copyright page, title page, paper, and details of artwork and design. ISBN 0-919758-17-7.

A.32 •• *Pieces of Map, Pieces of Music*. Toronto: McClelland and Stewart, 1986. With calligraphy by Yim Tse. 128 p. Paper, 14 × 21.5 cm. isbn 0-7710-1661-1. (See also A.35.) Contents: The Book of Silences: Untitled headnote; • Parśvanatha (rpt. in B.65, C.58, C.70, rev. in A.47, A.65, B.69); Uddalaka Aruni: A Song for the Weavers (revised from C.50); • Nagarjuna (rev. in A.47, A.65, B.69); Wáng Bì (rpt. from C.50); • Sengzhaò (rpt. in A.47, A.65, B.69, C.57, C.58); • Bodhidharma (rpt. in A.47, A.65, C.57); Jízàng (rpt. from C.50); Saraha (rpt. from A.23); • Saraha’s Exercise for Beginners (rpt. in A.47); • Baizhàng Huaíhai (rpt. in A.47); Hán Shan (rpt. from C.48); Línji Yixuán (rpt. from C.50); Nánquán Puyuàn (rpt. from C.50); Danxiá Zichún (rpt. from C.48); • Hóng Zichéng (rpt. in C.55, C.57); Jakushitsu (rpt. from C.43); • Hakuin (rev. in A.65); The Lyell Island Variations: Untitled headnote (cf. introduction to A.22); I: Larix lyallii (rpt. from C.42); II: Thin Man Washing (rpt. from A.14); III: Absence of the Heart (rpt. from A.14); IV: The Reader (rpt. from C.42); • V: The Starlight is Getting Steadily Dimmer (rpt. in A.47, A.48, C.53, C.57); VI: [•] The Long and the Short of It (rev. from C.33); VII: Riddle (rpt. from C.44); Gifts & Presences: Sutra of the Heart (rpt. from C.50); Thirty Words (rpt. from C.50); Rubus Ursinus: A Prayer for the Blackberry Harvest (rpt. from A.28); • Sunday Morning (rpt. in B.42, C.52; rev. in A.47, B.69); For the Bones of Josef Mengele, Disinterred June 1985 (rpt. from C.50); Tending the Fire: [•] Untitled headnote (rev. from C.50); Tending the Fire (rpt. from A.27); The Blue Roofs of Japan: A Score for Interpenetrating Voices: [•] Untitled headnote (rev. from A.31); The Blue Roofs of Japan (rev. from A.31); Thinking & Talking: A Prose Caboose: [•] Breathing through the Feet: An Autobiographical Meditation (rev. from D.31); • Vietnamese New Year in the Polish Friendship Centre (partial rpt. in B.71); Cast of Buddhas, Ghosts & Other Creatures; Key to the Calligraphy; Acknowledgements. Reviews: S.62, S.64, S.66, S.67, S.71, S.74, S.77, S.83, S.84, S.95. (Cf. S.241.)

1987

A.33 •• *Conversations with a Toad*. Vancouver, B.C. and Shawinigan, Québec: Éditions Lucie Lambert, 1987. [25] p. Accordion-fold codex in cloth-covered boards, 26.5 × 34.5 cm. According to the colophon, the edition consists of 55 numbered copies, including the eleven deluxe copies (A.33a), numbered 1–11. Evidently, fewer than forty copies were bound, including the eleven deluxe. Thus the regular edition consists of no more than 29 bound copies with the remainder in sheets. All copies are signed by author and artist. The papers were advertised as hankusa for the deluxe edition (A.33a) and kizuki hoshō for the remainder (A.33), but in some copies the papers (not easily distinguished) were evidently mixed. (See also A.33a.) Contents: A poem in ten numbered sections, accompanied by eleven woodcuts by Masato Arikushi, from drawings by Lucie Lambert. Section v of the text is rpt., and sections III and VI rev., from C.56. Full text rev. in C.59. Excerpts rpt. in B.72, C.61; further rev. in A.47, B.114, C.72. Also rpt. in B.81a. Reviews: S.70, S.76, S.84, S.91, S.127.

A.33a •• *Conversations with a Toad*. Deluxe edition of eleven copies, printed on hankusa, with silver medallion inset into front cover, and including one of the artist’s eleven original drawings. Otherwise the same as A.33.

A.34 • *Pebble/Pond/Errata Slip: A Codicil to Ocean/Paper/Stone*. Vancouver: privately printed. 1987. 8 p. Paper. 14 × 21.5 cm. “Printed ... in a few copies to commemorate the annual meeting of the Bibliographical Society of Canada, Vancouver, June 1987, and in a few more for distribution to members of The Alcuin Society.” Issued as a separate item and as an insert to issue 69 of the Alcuin Society’s journal, *Amphora* (see D.44). Contents: Reflections on and corrections to A.18.

A.35 *Pieces of Map, Pieces of Music*. Port Townsend, Washington: Copper Canyon Press, 1987. First US edition. 128 p. Paper. Same as A.32 except for the title page, copyright page,

acknowledgements, cover, and occasional minor typographic changes. ISBN 0-55659-003-2. Reviews: S.72, S.78, S.79, S.80, S.86, S.90, S.96, S.97.

A.36 •• *Part of the Land, Part of the Water: A History of the Yukon Indians*. Catharine McClellan, with Lucie Birckel, Robert Bringhurst, James A. Fall, Carol McCarthy and Janice R. Sheppard. Vancouver & Toronto: Douglas & McIntyre, 1987. vi + 330 p. Trade edition bound in cloth with dustjacket, school edition in printed paper over boards, 22 × 28.5 cm. ISBN 0-88894-553-1. Contents: Preface signed by McClellan; twelve chapters on various topics – 1: The Changing Ways of Yukon Hunters and Fishers; 2: The Yukon as It Is Now: Landscape, Animals, People; 3: The Earth and Her Memories: Geology and Archaeology in the Yukon; 4: Yukon Indians Meet White People; 5: It's a Long Way to Ottawa: Yukon Indians and the Government; 6: Yukon Indian Languages; 7: Living in the Land: Traditional Food, Shelter and Clothing; 8: Are You a Crow or a Wolf? Traditional Social Patterns; 9: From Birth to Death: Traditional Life Cycles; 10: Special People, Special Events, Special Skills; 11: The Old People's Worldview; 12: What Yukon Indians Are Saying Today – with numerous photographs, drawings and maps; Acknowledgements signed by McClellan; Index. Portions of chapters 2, 4, 6, 7, 9, 11 by Bringhurst; remainder of text edited by him. Reviews: S.81.

1988

A.37 *1989 Desk Calendar*. Vancouver: Benwell-Atkins Ltd., 1988. Unpaged. Spiralbound paper, 21 × 21 cm. Authorship of the included text matter is indicated only on the copyright page. Contents: • Untitled sequence of illustrations and accompanying text on the subject of typographic history. (The sequence of 53 black-and-white photos and drawings – one per week throughout the calendar – was compiled by Bringhurst, and the running commentary, printed at the back as a “Key to the Illustrations,” was written by him.)

1990

A.38 • *A Maxim*. Chilliwack, British Columbia: Barbarian Press & Fraser Valley Regional Library, 1990. Broadside, 25.5 × 27 cm. Perhaps 60 copies. Contents: A single sentence – “The difference between books and computers is that books make governments afraid of the people.” This is reputedly a quotation from one of Bringhurst's lectures on the history of the book (see A.16, A.20 & A.21). Printed by Barbarian Press as part of a letterpress demonstration at the Chilliwack Library, 20 October 1990. Since the type remained standing at the press for some time, there may be other equally fugitive broadside editions of the same text but with different colophons.

1991

A.39 •• *The Black Canoe: Bill Reid and the Spirit of Haida Gwaii*. Text by Robert Bringhurst; photos by Ulli Steltzer. Vancouver/Toronto: Douglas & McIntyre, 1991. 176 p. Cloth in dustjacket, 23.5 × 27.5 cm. isbn 0-88894-679-1. (See also A.39a, A.40, A.41, A.41a, F.3.) Contents: Prologue; I: Haida Gwaii; II: Hunting & Painting; III: Copper, Wood & Stone; IV: Bill Reid; V: Stone, Bronze & Politics; VI: Thirteen Passengers; VII: The Raven & the Snag; VIII: Paddling to Byzantium; The Photographic Record [photos by Steltzer with captions by Bringhurst]; Note on Interpretations & Sources; Technical Summary; Suggestions for Further Reading; Acknowledgements. (Excerpts from Chapter III rpt. in D.59.) Reviews: S.109, S.110, S.111, S.112, S.113, S.114, S.115, S.116, S.117, S.118, S.119, S.120, S.120a, S.122.

A.39a *The Black Canoe: Bill Reid and the Spirit of Haida Gwaii*. Text by Robert Bringhurst; photos by Ulli Steltzer. Vancouver/Toronto: Douglas & McIntyre; Seattle: University of Washington Press, 1991. 176 p. Cloth in dustjacket, 23.5 × 27.5 cm. ISBN 0-88894-679-1 (Canada); 0-295-97144-4 (USA). Same as A.39 except for the title page, copyright page and jacket. Rev. as A.41, A.41a. Note: This joint-imprint edition is in fact the us edition in disguise. The decision to replace the separate us edition with this joint-imprint edition was made by the us publisher, seeking to insulate itself from

the prepublication disputes that developed between Bringhurst and several Haida activists. (Excerpts from Chapter VI rpt. in D.61.)

1992

A.40 • *The Spirit of Haida Gwaii*. Washington, DC: Canadian Embassy [1992]. Four-panel folding brochure, 10 × 23 cm. The unsigned text (published in English with anonymous French translation) is by Bringhurst.

A.41 [••] *The Black Canoe: Bill Reid and the Spirit of Haida Gwaii*. Text by Robert Bringhurst; photos by Ulli Steltzer. Second, augmented edition. Vancouver/Toronto: Douglas & McIntyre, 1992. 176 p. Cloth in dustjacket, 23.5 × 27.5 cm. ISBN 1-55054-037-8. (See also A.41a.) Rev. from A.39, from which this differs as follows. There are amendments to the copyright and contents pages. Text has been added to p 47. The sidenote on p. 64 has been altered. Two photos have been added to pp 160–161, and one photo moved from p. 160 to p. 163. Text from pp. 161–166 has been moved to pp. 163–168. Text from p. 167 has been revised and relocated to p. 174. Reviews: S.133, S.141.

A.41a *The Black Canoe: Bill Reid and the Spirit of Haida Gwaii*. Text by Robert Bringhurst; photos by Ulli Steltzer. First paperbound edition. Vancouver/Toronto: Douglas & McIntyre, 1995. 176 p. Paper, 23 × 27 cm. ISBN 1-55054-403-9. Same as A.41 except for the binding, cover and copyright page. Jacket quotation taken from S.141.

A.42 •• *The Elements of Typographic Style*. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1992. 256 p. Cloth in dustjacket. 14 × 23.5 cm. ISBN 0-88179-110-5. (See also A.42a; rev. as A.42b, A.42c, A.42d, A.55, A.55a, A.57, A.57a, A.60, A.60a, A.73, A.73a. Excerpts rpt. in A.44, A.46, A.50.) Contents: Foreword; 1: The Grand Design; 2: Rhythm & Proportion; 3: Harmony & Counterpoint; 4: Structural Forms & Devices; 5: Alphabetic Symbols; 6: Choosing & Combining Type; 7: Historical Interlude; 8: Shaping the Page; 9: Finishing Touches; 10: Prowling the Specimen Books; Appendix A: Sorts & Characters; Appendix B: Glossary of Terms; Appendix C: Further Reading; Appendix D: Status of Digital Faces; Index. Reviews: S.123, S.130, S.131, S.132, S.134, S.135, S.136, S.137, S.138, S.140, S.143, S.149, S.151, S.165, S.166, S.172.

A.42a *The Elements of Typographic Style*. Paper, 13 × 23 cm. ISBN 0-88179-033-8. Same as A.42 except for the binding and dustjacket.

A.42b [•] *The Elements of Typographic Style*. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1992 [1994]. 256 p. Paper. 14 × 23.5 cm. ISBN 0-88179-033-8. (Rev. from A.42.) This appears to be merely a second printing, on different paper, of A.42, but the text has been silently altered on pp. 64, 112, 113, 152, 177 & 213. All copies of this printing have a defective 4th signature. (This printing was withdrawn and replaced by A.42c, but not before thousands of copies had entered circulation.)

A.42c *The Elements of Typographic Style*. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1992 [1994]. 256 p. Paper. 14 × 23.5 cm. ISBN 0-88179-033-8. (Rev. from A.42.) Third printing, identical with A.42b except for the copyright page and correction of the printing error marring the 4th signature.

A.42d *The Elements of Typographic Style*. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1992 [1994]. 256 p. Cloth in dustjacket. 14 × 23.5 cm. ISBN 0-88179-110-5. This is the hardcover version of A.42c.

1993

A.43 •• *The Ballad of Alastair Poltroon*. [Oakland, California]: Whut the Press, 1993. 4 pp, loose in paper wrapper. 13.5 × 21.5 cm. Contents: Rhyming lampoon, published anonymously in response to S.132, a review of *The Elements of Typographic Style* (A.42). See also S.158.

A.44 *A Well Made Book* [sic]. Minneapolis: Coffee House Press, 1993. Broadside, 28 × 19 cm. Five-line excerpt from §1.1.2 of *The Elements of Typographic Style* (A.42), with an illustration by Leslie Ross and numerous typographic errors.

A.45 *Trial design proof for a projected edition of 'New World Suite N° 3'*. Mission, British Columbia: Barbarian Press, 1993. Broadside, 31.5 × 41 cm. • One-page excerpt from the second movement of *New World Suite N° 3*. One copy was printed for exhibit at the Clark Library, Los Angeles, in the fall of 1993. A small number of additional copies are known to exist. The book itself was never printed. A.79, the Center for Book Arts edition, was issued in its stead.

1994

A.46 *Typographic Style*. New York: Oliphant Press, [1994]. Broadside, 25.5 × 33 cm. Contents: Excerpt from §7.3.6 of *The Elements of Typographic Style* (A.42).

1995

A.47 •• *The Calling: Selected Poems 1970–1995*. Toronto: McClelland & Stewart, 1995. 256 p. Paper. 14 × 22 cm. ISBN 0-7710-1651-4. Contents: Foreword (partial rpt. in B.71); [•] Conversations with a Toad (rev. from A.33); Hunters & Pilgrims: [•] The Beauty of the Weapons (rev. from A.14), Song of the Summit (rpt. from A.14), Ararat (rpt. from A.14), A Quadratic Equation (rpt. from A.14), The Greenland Stone (rpt. from A.14), Poem About Crystal (rpt. from A.14), [•] A Lesson in Botany (rev. from A.14), [•] Some Ciphers (rev. from A.14), Anecdote of the Squid (rpt. from A.14); Deuteronomy: [•] Jacob Singing (rev. from A.14), An Augury (rpt. from A.14), [•] Essay on Adam (rev. from A.14), [•] Deuteronomy (rev. from A.14); The Old in Their Knowing: i: [•] Herakleitos (rev. from A.14), ii: Parmenides (rpt. from A.14), iii: Miletos (rpt. from A.14), iv: A Short History (rpt. from A.14), v: Empedokles: Seven Fragments (rpt. from A.14), vi: Empedokles' Recipes (rpt. from A.14), vii: Pherekydes (rpt. from A.14), viii: Pythagoras (rpt. from A.14), ix: Demokritos (rpt. from A.14), x: [•] Xenophanes (rev. from A.14), xi: [•] Of the Snaring of Birds (rev. from A.14), xii: The Petelia Tablet (rpt. from A.14) [The sequence is the same as in A.14, but the poems are numbered here for the first time, and there are several small revisions to the text.]; Hachadura (rpt. from A.14); [•] The Stonecutter's Horses (rev. from A.14); Bone Flute Breathing: These Poems, She Said (rpt. from A.14), The Heart is Oil (rpt. from A.14), [•] Death by Water (rev. from A.14), Leda and the Swan (rpt. from A.14), [•] The Better Man (rev. from A.14), Poem without Voices (rpt. from A.14), [•] Bone Flute Breathing (rev. from A.14); Tzuhalem's Mountain (rpt. from A.14); The Book of Silences: I: • Short Upanishad (rpt. in A.65), II: [•] Parśvanatha (rev. from A.32), III: [•] Nagarjuna (rev. from A.32), IV: Bodhidharma (rpt. from A.32), V: Sengzhao (rpt. from A.32), VI: [•] Yongjia Xuanjue (rev. from C.63), VII: Saraha (rpt. from A.32), VIII: Saraha's Exercise for Beginners (rpt. from A.32), IX: Baizhang Huaihai (rpt. from A.32), X: • Yunyan Tansheng (rpt. in A.65), XI: Han Shan (rpt. from A.32), XII: [•] Linji Yixuan (rev. from A.32), XIII: [•] Dongshan Liangjie (rpt. from C.63), XIV: [•] Yunmen Wenyan (rev. from C.62), XV: [•] Fayen Wenyi (rev. from C.62), XVI: [•] Xuedou Zhongxian (rev. from C.63), XVII: Danxia Zichun (rpt. from A.32), XVIII: • Dahui Zonggao (rpt. in A.65), XIX: Tiantong Rujing (rpt. from C.62), XX: [•] Dogen (rev. from C.63), XXI: Jakushitsu (rpt. from A.32), XXII: Bankei (rpt. from B.48, where it appears as Bankei Yotaku in Los Angeles, dedicated to Leonard Cohen) [The sequence is much enlarged from A.32, and the poems are numbered here for the first time. As in C.63, all titles are now printed without accents, apart from the ś in Parśvanatha; but the names are spelled with full diacritics in the glossary at the back of the book.]; Lyell Island Variations: I: Larix lyallii (rpt. from A.32), II: Thin Man Washing (rpt. from A.32), III: Absence of the Heart (rpt. from A.32), IV: The Reader (rpt. from A.32), V: The Starlight is Getting Steadily Dimmer (rpt. from A.32), VI: [•] The Long and the Short of It (rev. from A.32), VII: Riddle (rpt. from A.32), Their Names: [•] Sutra of the Heart (rev. from A.32), [•] Gloria, Credo, Sanctus et Oreamnos Deorum (rev. from B.47), • Kol Nidre, Rubus ursinus: A Prayer for the Blackberry Harvest (rpt. from A.32), For the Bones of Joseph Mengele (rpt. from A.32), • Fathers and Sons, • Hick & Nillie, • Demons and Men, • The Flowers of the Body, [•] Sunday Morning (rev. from A.32); The Blue Roofs of Japan (rev. from A.32); • New World Suite n° 3: I: All the Desanctified Places (rev. from C.60), II:

Who is the Fluteplayer?, III: The Children of Zhuang Zi Confront the Frozen Saskatchewan River, IV: Winter Solstice, Cariboo Mountains (rev. from B.37) (full suite rev. in A.79); Cast of Suspicious Characters; Index of Titles and First Lines; Acknowledgments. Jacket contains a comment by Jan Zwicky and quotes from S.32, S.34 and S.54. Reviews: S.161, S.162, S.163, S.164, S.167, S.168, S.170, S.171, S.174, S.177, S.187, S.193; see also S.245.

A.48 •• *Ljell Island Variations*. Calligraphy by Diane Amarotico; gouache, watercolor and torn paper illustrations by John Goodyear; oasis goatskin binding and box by Carol Joyce. 1995. 00 p. 19 × 31 cm. Manuscript book produced in an edition of four copies. Contents: Untitled preface and poem in 7 sections: I: *Larix lyallii*; II: Thin Man Washing; III: Absence of the Heart; IV: The Reader; V: The Starlight is Getting Steadily Dimmer; VI: The Long and the Short of It; VII: Riddle (all rpt. from A.35).

A.49 •• *Elements*. Text by Robert Bringhurst; drawings by Ulf Nilsen; designed and printed by Russell Maret. New York: Kuboaa Press, 1995. [17 + 21] p. 24.5 × 24.5 cm. Contents: Poem in 7 sections – I. One-Room School; II. Prayer; III. A Periodic Table; IV.1 [air]; IV.2 [earth]; IV.3 [fire]; IV.4 [water] – with four suites of five drawings by Ulf Nilsen realized in paper (through watermarking, wet-pulp embossing, branding, and letterpress printing) by Russell Maret. The text is printed letterpress on loose unnumbered sheets with title page and colophon page contained in a cloth-covered box. Each suite of illustrations is also contained in a box. The five component boxes and a loose title page are contained in a larger box “[D]esigned, printed and housed ... by Russell Maret in an edition of 20 signed & numbered copies, plus 5 artist’s proofs.... All printing was done at the Center for Book Arts in New York City during August and September of 1995.” (§IV.1 [Air] rpt. in A.69. Whole work rev. as a poem in 6 sections, C.81.)

A.49a Prospectus for *Elements* (A.49). Riverside, Connecticut: Kuboaa Press. 1995. [8] p. 13.5 × 22 cm. Contents: §iv.1 [air] from A.49, with one drawing from the water suite by Ulf Nilsen.

1996

A.50 *A Book is a Flexible mirror...* [Vancouver: Hartley & Marks, 1996.] Untitled broadside, 28 × 48 cm. Excerpt from chapter 8 of *The Elements of Typographic Style* (A.42).

A.51 *The Raven Steals the Light*. Boston: Shambhala Publications, 1996. xiv + 156 p. 11 × 13 cm. ISBN 1-57062-173-X. Contents: Same as A.22 but redesigned and reset, with new front and back matter and minor typographic emendations. Includes English translation of the preface by Claude Lévi-Strauss.

A.52 *The Raven Steals the Light*. Vancouver/Toronto: Douglas & McIntyre; Seattle: University of Washington Press. 1996. 112 p. 15 × 21.5 cm. ISBN 0-55054-481-0 (Canada) & 0-295-97524-5 (USA). Contents: Slightly revised from A.51, but this is a separate edition, redesigned and reset.

A.53 *Tiantong Rujing*. [Vancouver: University of British Columbia. 1996.] Broadside, 21.5 × 28 cm. Contents: A poem (rpt. from A.47), with announcement of a reading by Bringhurst, 9 October 1996.

A.53a *Tiantong Rujing*. Flyer, 11 × 14 cm. Same as A.53 but in a reduced size.

A.54 *Tending the Fire*. n.p. [Regina, Saskatchewan], 1996. 8 p. Paper, 14 × 21.5 cm. “100 copies ... reformatted and printed by Heather Hodgson with the permission of Robert Bringhurst.” Contents: A poem, rpt. from A.32. See also A.54a.

A.54a *Tending the Fire*. Regina, Saskatchewan, 1997. 8 p. Paper, 14 × 21.5 cm. Issued in a printed envelope bearing a short text by the Cree elder Ékosi (Christine Wilna Hodgson) and a folded sheet entitled “Robert Bringhurst: Biographical Sketches,” by Heather Hodgson. “100 copies ... printed

by Heather Hodgson for delegates attending the 36th Canadian Regional Conference....” (A variant edition of A.54, issued later.)

A.55 [••] *The Elements of Typographic Style*. 2nd edition. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1996. 352 p. Paper, 13 × 23 cm. ISBN 0-88179-132-6. (Rev. from A.42 & A.42c. Excerpts rpt in B.70. See also A.55a, A.57, A.60.) Contents: Foreword; Historical Synopsis; 1: The Grand Design; 2: Rhythm & Proportion; 3: Harmony & Counterpoint; 4: Structural Forms & Devices; 5: Alphabetic Symbols; 6: Choosing & Combining Type; 7: Historical Interlude; 8: Shaping the Page; 9: The State of the Art; 10: Prowling the Specimen Books; Appendix A: Sorts & Characters; Appendix B: Glossary of Terms; Appendix C: Type Designers; Appendix D: Typefoundries; Appendix E: Recapitulation; Appendix F: Further Reading; Afterword to the Second Edition; Index. Much changed from A.42 & A.42c, and 96 pp longer than they, though the plan of the book remains the same. Reviews: S.181, S.182, S.183, S.184, S.185, S.212. Studies: S.186.

A.55a *The Elements of Typographic Style*. 2nd edition. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1996. 352 p. Cloth in dustjacket. 14 × 23.5 cm. ISBN 0-88179-133-4. Same as A.55 except for the binding and dustjacket.

1997

A.56 •• *Boats is Saintlier than Captains: Thirteen Ways of Looking at Morality and Design*. [New York]: Edition Rhino, 1997. [24] p. 19 × 33 cm. “...designed by Russell Maret, & printed ... in an edition of 100.” (See also A.56a.) Contents: Essay in 13 numbered sections (rev. from D.86, though A.56 was the first to appear). [This was originally intended as a fund-raising publication for the Center for Book Arts, New York City. After disagreements between the management of the Center and the printer-in-residence, Russell Maret, the printer issued the publication under an imprint of his own.]

A.56a Prospectus for *Boats is Saintlier than Captains*. New York: Edition Rhino, 1997. 4 p. 19 × 33 cm. Contents: Excerpt from A.56, with the publisher’s advertising copy. [Very scarce. Due to errors at the press, the prospectus was produced in fewer copies than the publication it was meant to advertise.]

A.57 *The Elements of Typographic Style*. 2nd edition, corrected 2nd printing. Point Roberts, Washington & Vancouver, B.C.: Hartley & Marks, 1997. 352 p. Paper, 13 × 23 cm. ISBN 0-88179-132-6. Contents: Superficially the same as A.55, with the same ISBN, and a different cover. 2008

A.86 *The Tree of Meaning: Language, Mind and Ecology*. Berkeley: Counterpoint, 2008. [viii] + 329 + [xv] p. 14 × 21.5 cm. ISBN 978-1-59376-179-0 / 1-59376-179-1. First US edition of A.81, with a foreword by Jim Harrison. Bringham's original foreword is accordingly retitled "Prologue." Otherwise identical to the second printing of the Canadian edition except for the change in subtitle and changes throughout to US spelling. Physically, the paper is different, and the second color is absent from the title and contents pages. Last 5 leaves are blank.

A.87 •• *The Surface of Meaning: Book Design in Canada*. Vancouver: CCSP Press. 2008. 240 p. 23 × 28 cm. ISBN 978-0-97387727-2-9. Contents: Acknowledgements; Prologue; (1) The Invisible Book; (2) The Echo of Tangibility; (3) Stills from the Typographic Movie; Appendices; Index. Substantial excerpts rev. in D.132 and A.88. Reviews: S.309, S.310, S.311, S.316, S.319, S.322.

A.88 • *Why There Are Pages and Why They Must Turn*. Code(x)+1 Monograph Number One. Berkeley: Codex Foundation. 2008. 16 p. 14 × 19.5 cm. ISBN 978-0-9817914-1-8. Essay, adapted from the text of *The Surface of Meaning*, A.87 (rev. from D.132). "Five hundred copies were printed on the Heidelberg cylinder press ... by Peter Koch, Jonathan Gerken, and Shanna Mahan..."

A.89 • *First Meditation on Time*. Vernon, British Columbia: Greenboathouse Press, 2008. Broadside, 25.5 × 53 cm, 76 copies on Zerkall Wove paper. Contents: Prose.

2009

A.90 *Everywhere Being Is Dancing: Twenty Pieces of Thinking*. Berkeley: Counterpoint, 2009. 352 p. 14 × 21.5 cm. ISBN 978-1-58243-438-4 / 1-58243-438-7. First US edition of A.83, Identical to the second printing of the Canadian edition except for changes to the copyright page, Americanization of the spelling, and authorial revision to "Licking the Lips with a Forked Tongue." (In this essay, the three-color illustration of the Canadian edition has been deleted and half a page of text added.) Physically, the paper is different, and the second color is absent from the title and contents pages.

B.38 In *The Form of the Book*, by Jan Tschichold, translated from the German by Hajo Haderer, edited with an introduction by Robert Bringhurst. Vancouver: Hartley & Marks, 1991: pp ix–xviii & passim. Contribution: • Introduction; several signed footnotes pertaining to Tschichold’s text; • four lines of Heine’s *Lorelei* in English translation. (Same as E.7.) Reprinted in E.7a, E.7b.

1992

B.39 In *In a Word: A Dictionary of Words that Don’t Exist But Ought to*, edited by Jack Hitt. New York: Dell, 1992: pp. 89-90. Contribution: • Entry for “illiterature.”

B.40 In *The Burning Words*, by Gaoyuan Wei. Cambridge, England: privately printed, 1992: pp. 29-30. Contribution: “Of the Snaring of Birds” (rpt. from A.14), with Wei’s Chinese translation on pp. 10-11.

B.41 In *Spit Delaney’s Island*, by Jack Hodgins. Toronto: McClelland & Stewart (The New Canadian Library), 1992: pp. 237-242. Contribution: • Afterword.

B.42 In *Inside the Poem*, edited by W.H. New. Toronto: Oxford University Press, 1992: pp. 14-15, 88–93. Contributions: Sunday Morning (rpt. from A.32); • White Pelican, Blue Jay: Part I of Robert Bringhurst’s ‘Sunday Morning’: A Dialogue, by Robert Bringhurst & Laurie Ricou. The other half of this “dialogue” is S.125.

B.43 In *Lyric Philosophy*, by Jan Zwicky. Toronto: University of Toronto Press, 1992: pp. 33, 175, 459. Contributions: “Poem about Crystal”; “The Beauty of the Weapons”; “Body, Speech and Mind” [*Tzubahalem’s Mountain IV*] (all rpt. from A.14). See also S.159.

1993

B.44 In *Literature in English: Writers and Styles from Anglo-Saxon Times to the Present*, edited by W.H. New & W.E. Messenger. Scarborough, Ontario: Prentice-Hall Canada, 1993: pp. 1401-3, 1529-30. Contributions: “The Raven Steals the Light” (rpt. from A.22); “Some Ciphers”; “Essay on Adam” (both rpt. from A.14); “Wáng Bi” (rpt. from A.32).

B.45 In *Riffs*, by Dennis Lee. London, Ontario: Brick Books, 1993: back cover. Contribution: • Lengthy jacket blurb.

B.46 In *Gáigivdul.àt: Brought Forth to Reconfirm: The Legacy of a Taku River Tlingit Clan*, by Elizabeth Nyman and Jeff Leer. Fairbanks & Whitehorse: Alaska Native Language Center & Yukon Native Language Centre, 1993: pp. viii–xv. Contribution: • Foreword (rev. in A.83).

1994

B.47 In *Witness to Wilderness: The Clayoquot Sound Anthology*, edited by Howard Breen-Needham, Sandy Frances Duncan, Deborah Ferens, Phyllis Reeve, Susan Yates. Vancouver: Arsensal Pulp Press, 1994: pp 266–268. Contribution: • “Gloria, Credo, Sanctus & Oreamnos Deorum”. (Part 1 is rpt. From “Thirty Words” in A.32; full text rev. in A.47.)

B.48 In *Take this Waltz: A Celebration of Leonard Cohen*, edited by Michael Fournier and Ken Norris. Ste Anne de Belleville, Québec: The Muses’ Company / La Compagnie des Muses, 1994: pp. 20-21. Contribution: • “Bankei Yōtaku in Los Angeles”. (Here dedicated to Leonard Cohen. Rpt. as “Bankei,” minus the dedication, in A.47, and as “Bankei Yōtaku” in A.65 and A.92.)

B.49 In *Robert Fones: Historiated Letters*. North Vancouver, B.C.: Presentation House Gallery, 1994: pp. 36-43. Contribution: • “Literal Meaning,” an essay on the sculpture of Robert Fones.

B.50 In *Howe Sounds: Fact, Fiction and Fantasy from the Writers of Bowen Island*, edited by Richard Littlemore. Bowen Island, B.C.: Bowen Island Arts Council, 1994: pp. 3-11. Contribution: “Fast Drumming Ground2”, rpt. from D.62.

B.51 In *Wisdom of the Mythtellers*, by Sean Kane. Peterborough, Ontario: Broadview Press, 1994: pp. 28-31, 54-60. Contribution: Editions and English translations of two Haida texts: Skaai’s • *Stluujagadang* (“Sapsucker”) and • *Xbunya Qagaangas* (“Raven Travelling”), opening scene. The latter is rpt. with additional material in C.65/D.77. Both are rev. in A.59. See also S.156.

B.52 In *Contemporary Authors*, new revision series, vol. 44, edited by Susan M. Trosky. Detroit: Gale Research, 1994: p. 47. Contribution: • Untitled statement beginning “I walk in the mountains, come back to my desk and am whole, and can speak in a whole voice, though often it seems to be somebody else’s. But equally often now I walk in the ruins of history....”

B.53 In *Diogenes Defictions*, by Thomas McEvelley. Berkeley: Peter Koch, 1994: pp. 5-8. Contribution: • Introduction. The book was printed to accompany a set of eleven lead plates, imprinted with sayings (in McEvelley’s English paraphrase) attributed to Diogenes of Sinope, encased in a ceramic box. The companion piece is a 72-page book containing Bringhurst’s introduction, an essay by McEvelley, photographic reproductions of the lead plates, and notes by the printer, Peter Koch. (There is a further edition of the sayings printed on card instead of lead, with a brief commentary by McEvelley, contained in a cardboard box. This edition includes no contribution by Bringhurst.)

1995

B.54 In *Peter Koch, Printer: Surrealist Cowboys, Maverick Poets, and Presocratic Philosophers*. New York & San Francisco: New York Public Library & San Francisco Public Library, 1995: pp. 7-13. Contribution: • Essay, “Stepping Again Into the Same Stream, Catching Different Fish: The Printing of Peter Koch.” Reviews: S.158.

B.55 In *The Dreamer Awakes*, by Alice Kane, edited by Sean Kane. Peterborough, Ontario: Broadview Press, 1995: pp. 11-18. Contribution: • Introduction (rpt. in A.83). Excerpts from the introduction are reproduced (with a slight emendation) on dustjacket as well.

B.55a In *The Dreamer Awakes*, by Alice Kane, edited by Sean Kane. Peterborough, Ontario: Broadview Press, 1995: pp. 11-18. Special Edition for Friends of the Osborne & Lillian H. Smith Collections, Toronto Public Library. Contribution: Same as B.55.

B.55b In *The Dreamer Awakes*, by Alice Kane, edited by Sean Kane. Peterborough, Ontario: Broadview Press, 1995: pp. 11-18. (Softcover edition.) Contribution: Same as B.55.

B.56 In *Poetry and Knowing: Speculative Essays and Interviews*, edited by Tim Lilburn. Kingston, Ontario: Quarry Press, 1995: pp 52–64. Contribution: [•] “Everywhere Being is Dancing, Knowing is Known” (rev. from D.73). Also includes S.159.

B.57 In *Coming to Light: Contemporary Translations of the Native Literatures of North America*, edited by Brian Swann. New York: Random House, 1995: pp. 225-249. Contribution: • “John Sky’s *The One They Gave Away*.” Narrative poem translated from the Haida of John Sky of the Qquuna Qiighawaai, with introduction and notes (rpt. in B.57.a; rev. in A.59).

B.57a In *Coming to Light: Contemporary Translations of the Native Literatures of North America*, edited by Brian Swann. New York: Vintage, 1996: pp. 225–249. Contribution: “John Sky’s *The One They Gave Away*.” Rpt. from B.57, of which this is the subsequent softcover edition.

B.58 In *Windhorse Reader*, 2nd edition, edited by John Castlebury. Yarmouth, Nova Scotia: Samurai Press, 1995: pp. 38–39. Contribution: “Xuedou Zhongxian” (rpt. from C.63).

B.59 In *The Norton Introduction to Literature*, 6th edition, edited by J. Paul Hunter & Jerome Beaty. New York: Norton, 1995: p.--. Contribution: “For the Bones of Josef Mengele, Disinterred June 1985” (rpt. from A.32).

B.60 In *The Norton Introduction to Poetry*, 6th edition, edited by J. Paul Hunter. New York: Norton, 1995: p. 425. Contribution: “For the Bones of Josef Mengele, Disinterred June 1985” (rpt. from A.32).

B.61 In *The 1995 AAUP Book, Jacket and Journal Show*. New York: Association of American University Presses, 1995: pp. [vi–ix]; 2–105. This is the catalogue of an annual exhibition for which Bringham served as one of the jurors. Contribution: • Essay and • 52 brief comments on individual books and journals.

B.62 In *Gone Fishing*, by Brian Gauvin. Victoria, B.C.: Sono Nis Press, 1995: p. 30. Contribution: Excerpt from “Ararat” (rpt. from A.6).

1996

B.63 In *Climate and the Affections: Poems 1970–1995*, by Crispin Elsted. Victoria, B.C.: Sono Nis Press, 1996: back cover. Contribution: • Jacket blurb of approximately 300 words.

B.64 In *Vultures’ Country / Krajina supů*, by Kerry Shawn Keys. [Olomouc, Czech Republic]: Votobia, 1996: pp. 113, 131–132, 133, 150–151. Contribution: “Kerry Shawn Keys” (rpt. from A.2), with Czech translation by Petr Mikeš; and what appears to be an unauthorized excerpt from a letter of recommendation, quoted by Hana Waisserová in her essay “Natural Fire: An Introduction to the Life and Poetry of Kerry Shawn Keys.”

B.65 In *The Gift of Tongues: Twenty-Five Years of Poetry from Copper Canyon Press*, edited by Sam Hamill. Port Townsend: Copper Canyon, 1996: pp. 27-30. Contributions: “The Song of Ptahhotep” (rpt. from A.26); “Parśvanatha” (rpt. from A.35). The editor’s supplementary comments appear on pp. 319 & 323.

B.66 In *Parole sull’acqua: Poesie dal Canada anglofono e francofono*, a cura di Liana Nissim e Caterina Ricciardi. Roma: Edizioni Empiria, 1996: pp. 200-204. Bilingual anthology (English and Italian). Contributions: “Death by Water” (rpt. from A.14); “Saraha’s Exercise for Beginners” (rpt. from A.32), with Italian translations.

1998

B.67 In *World Poetry: An Anthology of Verse from Antiquity to Our Time*, edited by Katharine Washburn, John S. Major & Clifton Fadiman. New York: W.W. Norton & Book-of-the-Month Club, 1998: pp. 83, 284-290, 815-816. Contributions: “The Petelia Tablet” (trans. from Greek, rpt. from A.14); “The Ode of Imr el-Qais” (trans. from Arabic, rpt. from A.2); “Antistrophe” (trans. from the Italian of Leopardi, rpt. from A.2.)

B.68 In *West by Northwest: British Columbia Short Stories*, edited by David Stouck & Myler Wilkinson. Victoria, B.C.: Polestar. 1998: pp. 11-14. Contribution: “The Raven and the First Men” (rpt. from A.22). Note: This piece is Reid’s alone, but it is credited here to Reid & Bringhurst.

B.69 In *A Matter of Spirit: The Recovery of the Sacred in Contemporary Canadian Poetry*, edited by Susan McCaslin. Victoria, British Columbia: Ekstasis Editions, 1998: pp. 41-58. Contributions: Ten poems and a short prose piece. “Poem about Crystal”, “Deuteronomy”, “Herakleitos”, “Parśvanatha”, “Nagarjuna”, “Sengzhào”, “Hán Shan”, “Yúnmén Wényan”, “Thin Man Washing”; “Sunday Morning” (all rpt. from A.47); • brief essay, “In Praise of Vacant Lots.”

B.70 In *On Book Design*, by Richard Hendel. New Haven, Conn.: Yale University Press, 1998: pp. 13-14. Contribution: • Lengthy excerpt from a letter to Rich Hendel. Quotations from *The Elements of Typographic Style* (A.55) are scattered elsewhere through the text.

1999

B.71 In *Coterminous Worlds: Magical Realism and Contemporary Post-Colonial Literature in English*, edited by Elsa Linguanti, Francesco Casotti and Carmen Concilio. Cross/Cultures 39. Amsterdam: Rodopi, 1999: pp. 139-149. Contribution: “Coterminous Worlds”: Excerpts (chosen by the editors) from “Breathing through the Feet” (rpt. from A.32), “Vietnamese New Year in the Polish Friendship Centre” (rpt. from A.32), Foreword to *The Calling* (rpt. from A.47) and [•] “The Persistence of Poetry and the Destruction of the World” (Bringhurst’s partial translation & revision of D.87, rev. in A.81).

2000

B.72 In *Poetry Comes Up Where It Can*, edited by Brian Swann. Salt Lake City: University of Utah Press, 2000: pp. 27-28. Contributions: Excerpts from “Conversations with a Toad” (rpt. from C.72) and from “Dogen” (rpt. from C.71).

B.73 In *Currents: Stories, Essays, Poems, and Plays*, edited by Kevin McNeilly, Noel Elizabeth Currie, William H. New & William E. Messenger. Scarborough, Ontario: Prentice Hall, 2000: pp. 354-356. Contribution: “Bone Flute Breathing” (rpt. from A.14).

B.74 In *New Life in Dark Seas: Brick Books 25*, edited by Stan Dragland. London, Ontario: Brick Books, 2000: pp. 25-28. Contribution: “Jacob Singing” (rpt. from A.47).

B.75 In *Canadá: un estado posmoderno*, coordinado por Teresa Gutiérrez-Haces. Mexico, DF: Plaza y Valdés, 2000: pp. 521-525. Contribution: “La persistencia de la poesía y la destrucción del mundo” (rpt. from D.87). [Incorrectly labelled a translation.]

B.76 In *Solitary Raven: Selected Writings of Bill Reid*, edited by Robert Bringhurst. Vancouver/Toronto: Douglas & McIntyre; Seattle: University of Washington Press, 2000: pp. 9-34 & passim. Contribution: • Acknowledgements, • Introduction, extensive notes and chronology by Bringhurst. Same as E.8. Rev. as B.110.

2001

B.77 In *Letterletter*, by Gerrit Noordzij. Vancouver: Hartley & Marks, 2000 [actually 2001]: pp. vii–ix. Contribution: • Introduction. (The book also includes, on p. 115, a footnote written by Bringhurst.)

B.78 In *The Griffin Poetry Prize Anthology*, edited by Esta Spaulding. Toronto: Anansi, 2001: pp. 53-63. Contribution: “The Way the Weather Chose to be Born, translated from the Haida of Ghandl” (rpt. from A.62).

B.78a In *Fifteen Canadian Poets Times Three*, edited by Gary Geddes. Toronto: Oxford University Press, 2001: pp. 388-400. Contributions: “The Beauty of the Weapons”; “Anecdote of the Squid”; “The Stonecutter’s Horses”; “These Poems, She Said”; “Poem without Voices”; “For the Bones of Josef Mengele, Disinterred June 1985” (rpt. from A.47). See also B.27, S.240a.

2002

B.79 In *Thinking and Singing: Poetry and the Practice of Philosophy*, edited by Tim Lilburn. Toronto: Cormorant Books, 2002: pp. 79-93, 155-172. Contributions: • “The Philosophy of Poetry and the Trashing of Doctor Empedokles” (essay, based in part on D.8; rev. in A.83) and • “Poetry and Thinking”, essay based on a lecture delivered in January 2001 at Luther College, University of Regina (rev. in A.81). Reviews: S.264b.

B.80 In *Encyclopedia of Literature in Canada*, edited by W.H. New. Toronto: University of Toronto Press, 2002: pp. 432-3, 464-7, 571-2, 573, 596-9, 708, 790-94, 872, 953-4, 997-8, 1031, 1051-2. Contributions: 13 articles: • Ghandl; • Haida Oral Literature; • Kâ-kîsikâw-pîhtokêw; • Kanyátaííyo; • K’atchodi; • Kwakwala Literature; • Mandeville, François; • Mythology (rev. in A.83); • Petitot, Émile; • Reid, Bill; • Saayaach’apis; • Seidayaa; • Skaay. The article “Kâ-kîsikâw-pîhtokêw” is coauthored with Heather Hodgson. (See also D.98. In the same issue with S.256.)

B.81 In *Language Culture Type*, edited by John D. Berry. New York: Association Typographique Internationale & Graphis, 2002: pp 3–23. Contribution: • Voices, Languages and Scripts around the World (essay). Rev. as “The Solid Form of Language,” A.72.

B.81a In *A New Anthology of Canadian Literature in English*, edited by Donna Bennett & Russell Brown. Toronto: Oxford University Press, 2002: pp. 954-975. Contributions: “Essay on Adam”; “The Stonecutter’s Horses”; “Leda and the Swan”; “These Poems, She Said”; “The Reader”; “Conversations with a Toad”; “Bone Flute Breathing” (all rpt. from A.47).

2003

B.82 In *This Art: Poems about Poetry*, edited by Michael Wieggers. Port Townsend, Washington: Copper Canyon, 2003: pp 25, 94. Contributions: “These Poems, She Said” and “Parable of the Voices” [*Tzûhalem’s Mountain* §XVII], (both rpt. from A.26).

B.83 In *Many-voicèd fountains: Studi di anglistica e comparatistica in onore di Elsa Linguanti*, a cura di Mario Curreli e Fausto Ciompi. Pisa: ETS, 2003: pp. 16-29. Contributions: Three Poems for Elsa: • ‘Self-Portrait: Giotto’s Bones’ (Rev. as C.80), • ‘And So Do We,’ • ‘The Living Must Never Outnumber the Dead’; • essay, “What is Found in Translation” (rev. in A.83). See also D.118.

B.83a In *Literature: Reading, Reacting, Writing*, edited by Laurie G. Kirszner, Stephen R. Mandell & Candace Fertile. Scarborough, Ontario: Thomson/Nelson, 2003: pp. 541-542. Contribution: “For the Bones of Josef Mengele” (rpt. from A.47).

2004

B.84 In *Voices from Four Directions: Contemporary Translations of the Native Literatures of North America*, edited by Brian Swann. Lincoln: University of Nebraska Press, 2004: pp. 105-120. Contribution: “The Sea Lion Hunter”, translated from the Haida of Ghandl (rpt. from A.62), with new • Introduction and • Postscript.

B.85 In *Literature: A Pocket Anthology, Canadian Edition*, edited by R.S. Gwynn & Wanda Campbell. Toronto: Pearson Longman, 2004: p. 779. Contribution: “Essay on Adam”, rpt. from A.47.

B.86 In *Poetry: A Pocket Anthology, Canadian Edition*, edited by R.S. Gwynn & Wanda Campbell. Toronto: Pearson Longman, 2004: p. 347. Contribution: “Essay on Adam”, rpt. from A.47.

B.87 In *Carving the Elements: A Companion to the Fragments of Parmenides*. Berkeley: Editions Koch. 2004: pp. 13-17, 91-99, 123-138. Contents: • Introduction; • “Finding the Form of an Ancient Text” (essay); • “Raven’s Wine Cup” (essay, rpt. in A.83). Includes several photos by and of Bringhurst. (See also A.70, D.119, E.9.)

B.88 In *Presiding Spirits: Poetry International 2004*. London: Southbank Centre. 2004. This is an envelope of 12 postcards, together with a title card containing a preface by Ruth Borthwick. Each

of the 12 cards carries a short poem chosen by one of the participants in Poetry International 2004, together with a • short untitled comment. The subject of Bringhurst's comment is Wallace Stevens's "Anecdote of Men by the Thousand."

B.89 In *Coming to Shore*, edited by Marie Mauzé, Sergei Kan & Michael Harkin. Lincoln: University of Nebraska Press, 2004: pp. 163-182. Contribution: • "The Audible Light in the Eyes", essay based on a lecture delivered at the Collège de France, June 2000 (rev. in A.81). See also the editors' introduction, pp. xxiii-xxiv.

B.90 In *Hoi Barbaroi: A Quarter-century at Barbarian Press*. Mission, British Columbia: Barbarian Press, 2004: pp. 17-21. Contribution: • "Shouldering Civilization: The Private Search for Public Good", an essay on typographic history with special reference to the work of Barbarian Press.

2005

B.91 In Dennis Lee, *Dimora del cuore / Heart Residence*, a cura di Branko Gorjup e Francesca Valente. Ravenna: Longo, 2005: pp. 10-11. Contribution: Two paragraphs excerpted from "At Home in the Difficult World" (B.11/D.21), with facing translation into Italian.

2006

B.92 In *Words on the Water: Campbell River Writers' Festival 2006*. [Campbell River, British Columbia: Words on the Water Festival Society]: [p. 2]. Contribution: • "Birds on the Water" (poem), commissioned by the festival and printed on the inside front cover of the festival program (March 24-25, 2006). Photograph and brief biography of Bringhurst on p. [4].

B.93 In *Literature: Reading, Reacting, Writing*, edited by Laurie G. Kirsznner, Stephen R. Mandell & Candace Fertile. 2nd Canadian ed. Toronto: Nelson, 2007 [actually distributed in spring 2006]: pp. 597, 838-844. Contributions: "For the Bones of Josef Mengele" (rpt. from A.47); "The Way the Weather Chose to Be Born" (rpt. from A.62).

B.94 In *The Alcuin Society 2005 Awards for Excellence in Book Design in Canada / Prix pour l'excellence de la conception graphique du livre au Canada conférés par la Société Alcuin, 2005* [edited by Leah Gordon]. Vancouver: The Alcuin Society, 2006: pp 4, 12, 18, 24, 29, 34, 38, 43, 47-51. Contributions: As revealed on pp. 56 & 59, all the judges' comments are by Bringhurst – dictated rapidly into a tape recorder, then edited by Leah Gordon.

B.95 In *Reading Writers Reading: Canadian Authors' Reflections*, edited by Danielle Schaub. Edmonton: University of Alberta Press / Jerusalem: Hebrew University Magnes Press, 2006: 195. Contribution: • "Reading What Is," a short prose meditation, facing Schaub's photograph of Bringhurst on p. 194.

B.96 In *Encyclopedia of Language and Linguistics*, 2nd ed., edited by Keith Brown et al. Oxford: Elsevier, 2006 (14 vols.): vol. 10: 104-106; vol. 13: 202-205. Contribution: two multi-page encyclopedia entries: • "Printing and Typewriting" and • "Typography."

B.97 In *Don McKay: Essays on His Works*, edited by Brian Bartlett. Toronto: Guernica, 2006: 29-34. Contribution: "The Antithesis of Rape, Which Is Not Chastity" (rev. from D.35).

2007

B.98 In Gary Snyder, *He Who Hunted Birds in His Father's Village*. [Emeryville, California]: Shoemaker & Hoard, 2007: pp. vii-xv. Contribution: • Foreword (rev. in A.83).

B.99 In Robyn Sarah, *Little Eureka's: A Decade's Thoughts on Poetry*. [Emeryville, Ontario]: Biblioasis, 2007: 205-226. Contribution: • Two letters to Robyn Sarah, incorporated (along with letters from Dennis Lee) in Sarah's "A Dangling Conversation (for multiple voices)," a discussion of literary polyphony. (See also D.89, S.189, 190.)

B.100 In *Gaspereau gloriatur: Liber beati anni decimi*, vol. 1: Poetry, edited by Michael deBeyer, Kate Kennedy & Andrew Steeves. Kentville, N.S.: Gaspereau, 2007: 23-35. Contribution: Scene 2 from *Ursa Major* (A.69).

B.101 In *Under Strange Sail: Translations & Improvisations from Many Hands*. Mission, British Columbia: Barbarian Press, 2007: s.n. [One sheet in a set of 16, loose in a folder]. Contribution: • “For the Sprinter Asopikhos / & for Others: A Version of Pindar’s Olympian 14.” Translation from Greek, originally made for the Olympic Literary Festival, Calgary, Alberta, in 1988.

B.102 In *Gaspereau gloriatur: Liber beati anni decimi*, vol. 2: Prose, edited by Michael deBeyer, Kate Kennedy & Andrew Steeves. Kentville, N.S.: Gaspereau, 2007: 26-43. Contributions: Untitled excerpt from *The Solid Form of Language* (rpt. from A.72); Untitled talk [“The Tree of Meaning and the Work of Ecological Linguistics”] from *The Tree of Meaning* (rpt. from A.81).

2008

B.103 In *Water: A Selection of Poems on the Theme of Water*. [Edited by Graham Moss.] Oldham, Greater Manchester: Incline Press, 2008. [The pages are unnumbered. Bringhurst’s poem is the last one in the book.] Contribution: “Death by Water” (rpt. from A.47).

B.104 In *Book Art Object*, edited by David Jury. Berkeley: Codex Foundation, 2008: 79-97. Contribution: • “Spiritual Geometry: The Book as a Work of Art” (print version of Bringhurst’s keynote lecture at the Codex Symposium, UC Berkeley, 2007).

B.105 In *CJKV Information Processing*, 2nd edition, by Ken Lunde. Sebastopol, California: O’Reilly, 2008: xiii–xv. Contribution: • “Foreword.”

2009

B.106 In *Affix This to That with Poetry*. Gaspereau Press poetry sampler. Kentville, N.S.: Gaspereau, 2009: [ii–v]. Contributions: “The Greenland Stone,” “Rubus Ursinus,” “Herakleitos,” all rpt. from *Selected Poems* (A.92).

B.107 In *The Broadview Anthology of Poetry*, edited by Herbert Rosengarten & Amanda Goldrick-Jones. 2nd ed. Peterborough, Ontario: Broadview, 2009: 904–910. Contributions: “Deuteronomy,” “The Beauty of the Weapons,” “These Poems, She Said,” “Leda and the Swan,” all rpt. from *The Calling* (A.47).

B.108 In *From a Speaking Place: Writings from the First Fifty Years of ‘Canadian Literature’*, edited by W.H. New et al. Vancouver: Ronsdale, 2009: 265-284. Contribution: “Singing with the Frogs,” rpt. from D.89.

B.109 In *This Is What They Say: Stories by François Mandeville*, translated from Chipewyan by Ron Scollon. Vancouver/Toronto: Douglas & McIntyre; Seattle: University of Washington Press, 2009: pp. 7-12 [& p. 265]. Contribution: • Foreword by Bringhurst. Same as E.10.

B.110 In *Solitary Raven: The Essential Writings of Bill Reid*, edited by Robert Bringhurst. Vancouver/Toronto: Douglas & McIntyre, 2009: pp. 5, 9-35 & passim. Contribution: • Foreword, • Introduction, extensive notes and chronology by Bringhurst. Same as E.11. Rev. from B.76.

B.111 In *About More Alphabets: The Types of Hermann Zapf*, by Jerry Kelly. New York: Typophiles, 2009: pp. 7-9. Contribution: • Foreword.

B.112 In *Arc Poetry Annual 2010*. Ottawa: Arc Poetry Society, 2009: pp. 75-77. Contribution: “The Beauty of the Weapons,” rpt. from A.14. With commentary by David Seymour.

2010

B.113 In *Elements of Literature: Fiction, Poetry, Drama*, 4th Canadian edition, ed. by David Staines et al. Don Mills, Ontario: Oxford University Press, 2010: pp. 693-700. Contribution: "Essay on Adam"; "The Stonecutter's Horses"; "Leda and the Swan," all rpt. from A.92.

B.114 In *An Anthology of Canadian Literature in English*, 3rd ed., ed. by Donna Bennett & Russell Brown. Don Mills, Ontario: Oxford University Press, 2010: pp. 989-1005. Contribution: "Essay on Adam"; "Leda and the Swan"; "These Poems, She Said"; "The Reader"; "Conversations with a Toad"; "Bone Flute Breathing", all rpt. from A.92.

B.115 In *Lyric Ecology: An Appreciation of the Work of Jan Zwicky*, ed. by Mark Dickinson & Clare Goulet. Toronto: Cormorant Books, 2010: p. 259. Contribution: "For the Geologist's Daughter," rpt. from A.92. [Bringinghurst also designed the book and wrote the colophon, supplied the photographs, and wrote the photo caption on p. 260.]

2011

B.116 In *XXX*, edited by John Berry. Hamburg: XXX, 2009: 00-00. Contribution: • "The Road to Palatino Nova." [Looks like this may never be produced.]

B.117 In *About More Alphabets. The Types of Hermann Zapf*, by Jerry Kelly. New York: The Typophiles, 2011. ISBN 978-0-9842744-0-6. Contribution: • Foreword.

C CONTRIBUTIONS TO PERIODICALS: POEMS

1963

C.1 [Two poems]. *Pegasus* (Salt Lake City, Utah) 1963: 31. Contents: • "Dead City" and • "Toward Boston", both signed "Bob Bringinghurst."

(Beginning with this issue, Bringhurst’s *Fine Print* reviews are signed only with the initials “R.B.” This is in accord with the magazine’s custom in identifying reviews by its contributing editors. See S.58.) See also “Letters to the Editor,” *Fine Print* 12.4: 236.

D.39 • Review of Edition Tiessen: *Über die Wiederherstellung der ursprünglichen Anlage zum Guten in ihre Kraft* by Immanuel Kant, *Römische Elegien* by Wolfgang von Goethe, *Die Troerinnen* by Euripides (translated by Ernst Buschor), etc. *Fine Print* 12.4 (October 1986): 200-203, 219. See also the anonymous note on Tiessen’s *Serving Author and Reader*, *Fine Print* 14.3: 105-106.

D.40 “Breathing through the Feet.” *Margin* (London) 1 (Winter 1986): 4-11. Essay, rpt. from A.32.

1987

D.41 • Review of Red Ozier Press: *Careless Love and Its Apostrophes* by William Bronk, *The Bicycle Rider* by Guy Davenport, *Small Ceremonies* by Connie Martin, and *Five Journals* by Charles Wright. *Fine Print* 13.2 (April 1987): 93-98.

D.42 • “Making Draft Horses Out of the Gods: An Interview with Robert Bringhurst.” *Prairie Fire* (Winnipeg) 8.1 (Spring 1987): 4-15. Interview conducted by Kristjana Gunnars.

D.43 • Review of Bieler Press: *Albert's Horoscope Almanac* by Albert Goldbarth, and *After the Long Train* by James Masao Mitsui. *Fine Print* 13.3 (July 1987): 159. See also “Letters to the Editor,” *Fine Print* 14.1: 5, 44-45.

D.44 “Pebble/Pond/Errata Slip: A Codicil to *Ocean/Paper/Stone*.” *Amphora* 69 (September 1987): insert, paginated 1-8 internally and 11-18 in reference to the magazine. Same as A.34.

D.45 • Review of *Twentieth Century Type Designers* by Sebastian Carter, *Letters of Credit* by Walter Tracy, and *Type Design Developments 1970 to 1985* by L.W. Wallis. *Fine Print* 13.4 (October 1987): 204-206, 211-212.

1988

D.46 • Review of Landlocked Press: *The Weather Within* by Theodore Enslin, *Walking with My Sons* by Joe Bruchac, and *A Trek of Waking* by Will Inman. *Fine Print* 14.1 (January 1988): 15-17.

D.47 Emmanuel Levinas. • “From Being to the Other: Paul Celan.” *Descant* 59 (Winter 1987 [published 1988]): 99-105. Essay, trans. by Bringhurst from French, with his brief introduction. In same issue with C.59.

D.48 • “Myths Create a World of Meaning.” *The Globe and Mail* (Toronto), 7 May 1988: C1, C7. Essay based on Bringhurst's participation in a panel discussion of “History and Mythology in the Modern World,” at the 1988 Olympic Writers' Festival in Calgary.

D.49 • Review of Peter and the Wolf Editions: *Point Lobos* by Robinson Jeffers. *Fine Print* 14.3 (July 1988): 112-115, 127. See also D.57a.

D.50 • “A Measure of Freedom.” *Toronto Globe and Mail*, 28 October 1988: C1. Essay on art, money and subsidy, in response to John Metcalf's pamphlet *Freedom from Culture* (Vancouver: The Fraser Institute, 1988).

D.51 • Review of Yolla Bolly Press: *The Inland Whale* by Theodora Kroeber. *Fine Print* 14.4 (October 1988): 186-188.

D.52 • “Off the Road: Journeys in the Past, Present and Future of Canadian Literature.” *Margin* 7 (1988): 82-93. Text of a lecture delivered at the University of Vienna in April 1988. Rev. in B.29, B.30.

D.53 • “Nootka Rag: Funeral Music for George Clutesi, 1905–1988.” *Canadian Literature* 118 (Autumn 1988): 190-193. Memorial essay comparing the writing and painting of George Clutesi to the music of Scott Joplin.

1989

D.54 • Review of Songs Before Zero Press: *The Heights of Macchu Picchu* by Pablo Neruda, translated by David Young. *Fine Print* 15.1 (January 1989): 37.

D.55 • “Social Responsibility of the Artist.” *Regional and Committee Reports to the Annual General Meeting*, published with *The Writers' Union of Canada Newsletter* (Toronto) 132 (May 1989): insert pp 23–24.

D.56 • Letter to the Editor. Toronto *Globe and Mail*, August ??, 1989. ?? Letter concerning the editorial policies of the CBC and the *Globe and Mail*.

D.57 • “Into the Absolute of Nature.” *Margin* 10 (1989): 62-69. Essay on the self-portraits of Joan Miró (rev. in A.83). In same issue with C.60.

D.57a Review of Peter and the Wolf Editions: *Point Lobos* by Robinson Jeffers. *Robinson Jeffers Newsletter* (Los Angeles) ?? (October 1989): ?? Unauthorized reprint of D.49.

1990

D.58 • “That Also is You: Some Classics of Native Canadian Literature.” *Canadian Literature* 124–5 (Spring 1990): 32-47. Essay, same as B.32.

1991

D.59 “The Black Canoe.” *Canadian Forum* LXX/803 (October 1991): 19-21. Excerpts from Chapter iv of *The Black Canoe*, A.39. [Replete with typographical errors.]

1992

D.60 • “One Small Island: A Case Study in the Contest between History and Literature.” *Bells: Barcelona English Language and Literature Studies* (Barcelona) 3, n.d. [1992]: 11-19. Essay, rev. as “Fast Drumming Ground,” B.50, D.62, D.138. [The name *Squamish* has been “corrected” throughout to *Spanish* by the Catalonian proofreader.]

D.61 “Bill Reid and the Spirit of Haida Gwaii.” *Shaman’s Drum: A Journal of Experiential Shamanism* (Willits, California) 27 (Spring 1992): 30-39. Unauthorized excerpt from Chapter vi of *The Black Canoe*, rpt. from A.39a. [Published here, without permission of author or photographer, by the University of Washington Press.]

D.62 [•] “Fast Drumming Ground.” *Howe Sound Review* (Bowen Island, British Columbia) 1.2 (Winter 1992): 16-21. Essay, rev. from “One Small Island,” D.60.

D.63 • Letter to the Editor. *Montreal Gazette*. March 16, 1992: B2. Response to S.120a, the *Gazette’s* reprint of a review from the *New York Times*.

D.64 “Raven’s New Playthings.” *Elmwood Quarterly* (Berkeley, California) 8.3 (Fall Equinox 1992): 11. Unauthorized excerpt from “The Raven and the First Men,” rpt. from *The Raven Steals the Light*, A.22.

1993

D.65 • Review of *Haa Twunnáagu Yís / For Healing Our Spirit: Tlingit Oratory*, ed. Nora Marks Dauenhauer & Richard Dauenhauer. *Language in Society* (New York: Cambridge University Press) 22.1 (March 1993): 151-4.

D.66 • Untitled statement. *Verse* (St Andrews, Scotland) 10.1 (Spring 1993): 105-106. Text of a letter dated 23 June 1989, published as one of eight responses to enquiries by David Hart. Other respondents include Robert Creeley, Denise Levertov, Ron Silliman, Phyllis Webb, Judith Wright. These statements, and the text of Hart’s original inquiry, are assembled under the general title “rsvp” on pp. 102-112.

D.67 • Review of *Robert Davidson: Eagle of the Dawn*, ed. Ian M. Thom. *The Reader* 12.2 (Summer 1993): 25-28.

D.68 • “Patricia Murphy.” *C Magazine* (Toronto) 39 (Fall 1993): 64-65. Review of an exhibition of watercolors.

D.69 • “Everywhere Being is Dancing, Knowing is Known.” *Chicago Review* (Chicago) 39.3–4 (1993): 138–147. Essay, rpt. in D.73, rev. in B.56, A.83.

D.70 • “Herakleitos in California.” *Amphora* 93 (Autumn 1993): 26–29 Review of Peter Koch: *Herakleitos*. Greek fragments with English translation by Guy Davenport.

1994

D.71 • Review of *Mantinia* and *Sophia* by Matthew Carter. *Print* (New York) 48.2 (March/April 1994): 121–122. Review of two typeface designs.

D.72 • Review of *George Grant: A Biography* by William Christian. *The Reader* 14.1 (Summer 1994): 3–5.

D.73 “Everywhere Being is Dancing, Knowing is Known.” *Poetry Canada* (Kingston, Ontario) 14.3 (1994): 8–11. Essay, rpt. from D.69.

D.74 • “On the Classification of Letterforms.” *Serif: The Magazine of Type & Typography* (Claremont, California) 1 (Fall 1994): 30–39. Essay on the principles of type classification, with repeated reference to botanical and zoological taxonomies. Includes “Appendix: Rough Map of the Kingdom of Letterforms.” But the sidebar, “A Note on Type Classification Systems,” was written by the editor of the journal, Donald Hosek, and not by Bringhurst. A quotation from *The Elements of Typographic Style* (A.42) is printed as filler on page 63 of the same issue. This is the first essay in an incomplete series, which continues with D.78, D.79, D.82 and D.88. For typographical corrections, see the corrigenda in *Serif 2* (Winter 1995): 6.

D.75 • “A Story as Sharp as a Knife, Part 3: The Polyhistorical Mind.” *Journal of Canadian Studies* (Peterborough, Ontario) 29.2 (Summer 1994): 165–175. Text of the third of Bringhurst’s three Ashley Lectures, delivered at Trent University, Peterborough, Ontario, in the spring of 1994. Prefaced by S.152. See also S.144. Rev. in A.81.

D.76 • Review of *On the Translation of Native American Literatures*, edited by Brian Swann. *American Ethnologist* (Arlington, Virginia) 21.4 (1994): 1038–1039.

1995

D.77 • “Raven Travelling: Page One: A Lost Haida Text by Skaai of the Qquuna Qiighawaai, Transcribed at Skidegate in October 1900 by John Swanton, Edited & Translated by Robert Bringhurst.” *Canadian Literature* 144 (1995): 98–111. Introduction, Haida text and translation. Same as C.65. This is the first appearance of the prose introduction, but the text and translation per se are rpt. from B.51.

D.78 • “Holding Ideas in the Hand: The Physics and Metaphysics of Renaissance Letterforms.” *Serif 2* (Winter 1995): 15–24. Second essay in the series which begins with D.74. Again there is a sidebar written by the editor of the journal, Donald Hosek. (On p. 6 of the same issue is a list of typographic corrections to D.74.)

D.79 • “Painting with Ink and Steel: The Roman and Italic Types of the Baroque Age.” *Serif 3* (Fall 1995): 21–30. Third essay in the series which begins with D.74.

D.80 • “Belay to Words.” *Antigonish Review* (Antigonish, Nova Scotia) 102–103 (Summer–Autumn 1995): 307–310. Short essay on the poet John Thompson. (See also S.169.)

1996

D.81 “Tales from Haida Gwaii.” *Shambhala Sun* (Boulder, Colorado) 4.3 (January 1996): 48–57. Prologue and two stories from A.22, in anticipation of A.51. The prologue includes some bizarre typographical errors and omissions but is correctly credited to Bringhurst. The stories – “Raven and

the First Men” and “Raven Steals the Light,” both written by Reid – are credited to Bringhurst by mistake, and the titles of both are altered by removing the initial definite article. See also D.83.

D.82 • “The Invisible Hand, Part I: Neoclassical Letterforms.” *Serif* 4 (Spring 1996): 19-29. Fourth essay in the series which begins with D.74. The unsigned “Annex” on p. 29 is by the journal’s editor, Don Hosek, not by Bringhurst. Continued by D.88. See also D.88a.

D.83 • Letter to the Editor. *Shambhala Sun* 4.4 (March 1996): 5. Abbreviated text of a letter pertaining to D.81.

D.84 • “El turismo es una lepra cultural.” *Diario de Avisos* (Santa Cruz de Tenerife), 10 de mayo 1996: 25. Interview conducted by María Jesús Llarena Ascanio (in Spanish).

1997

D.85 • “The Typographic Nude.” *Critique* (Palo Alto, California) 4 (1997): 86-91. Essay on typography, in the same issue with S.183.

D.86 “Boats is Saintlier than Captains: Thirteen Ways of Looking at Morality and Design.” *Zed* (Richmond, Virginia) 3 (1997): 19-28. Essay (rev. in A.56, which was however the first to appear; further rev., in A.83).

D.87 • “La Persistencia de la poesía y la destrucción del mundo.” *Presencia Literaria* (La Paz, Bolivia), 4 May 1997: 3-4. Essay written in Spanish, originally delivered as a lecture “en el Segundo Seminario de Poesía y Poética de la Universidad de La Laguna, San Cristóbal de la Laguna, Tenerife, Islas Canarias, ocurrido el 8 de mayo de 1996.” A quotation from Sophocles, present in the original text both in Greek and in English translation, has been abridged to a single line. In the same issue with T.Sp.1. Rpt. in B.75. Partial English translation in B.71; partial Italian translation in T.It.5.

D.88 • “The Invisible Hand, Part II: Romantic Letterforms.” *Serif* 5 (Fall 1997): 19-29. Fifth essay in the series which begins with D.74. Continuation of D.82. In the same issue with D.88a.

D.88a • “New and Improved Didot Family.” *Serif* 5 (Fall 1997): 6. Letter to the editor correcting an error in D.82. In the same issue with D.88.

D.89 • “Singing with the Frogs.” *Canadian Literature* 155 (Winter 1997): 114-134. Essay. In the same issue with C.74. Rev. in A.83. Rpt. in B.108. Responses: S.189, S.190.

1998

D.90 • “Dismembered Culture.” Review of *Haida Art*, by George F. MacDonald. *Canadian Literature* 156 (Spring 1998): 147-149. In the same issue with S.189 & S.190.

D.91 • Review of *The Birds of British Columbia*, by R. Wayne Campbell et al. *The New Reader* (Vancouver) 3.1 (1998): 3-5.

D.92 • Review of Jan Tschichold: *A Life in Typography*, by Ruari McLean. *Bulletin of the Printing Historical Society* (London) 45 (1998): 29.

D.93 • “Tierra, tecnología, polifonía y antepasados.” *Barcelona English Language and Literature Studies* 9 (1998): 171-175. Biographical essay written in Spanish, originally delivered as a lecture at the Universidad de Salamanca in 1990.

1999

D.94 • Review of *Paul Renner: The Art of Typography*, by Christopher Burke. *Bulletin of the Printing Historical Society* 47 (Summer 1999): 20-21.

D.95 • Reply to a Critique by John Enrico. ssila (Society for the Study of the Indigenous Languages of the Americas) *Newsletter* (Arcata, California) 18.3 (October 1999): 8. A rebuttal to John Enrico's attack (S.217) on *A Story as Sharp as a Knife* (A.59), which appears in the same issue.

D.96 • "Since when has culture been about genetics?" Toronto *Globe and Mail*, November 22, 1999: R3. A reply to Adele Weder's attack (S.218) on *A Story as Sharp as a Knife* (A.59), published in the same paper one week earlier.

2000

D.97 • Tribute to Al Purdy. Toronto *Globe and Mail*, April 24, 2000: R8. One of a group of tributes occasioned by Purdy's death on April 21.

D.98 • "Editing the Pretext." *Journal of Scholarly Publishing* (Toronto) 31.3 (April 2000): 113-125. Essay on typography and linguistics, discussing among other things Bringhurst's involvement with W.H. New's *Encyclopedia of Literature in Canada*. In the same issue with S.222. (See also B.80.)

D.99 • Review of Ninja Press: *The Architectures 1-7*, by Nathaniel Tarn. *Parenthesis*: Newsletter of the Fine Press Book Association (London/San Francisco) 4 (April 2000): 39-40.

D.100 • "Lo Sfiato della mongolfiera: Intervista a Robert Bringhurst di Carmen Concilio." *L'Indice* (Torino) 17.6 (Giugno 2000): 18.

D.101 • Review of *Artistry in Native American Myths*, by Karl Kroeber. *Language in Society* (New York: Cambridge University Press) 29.3 (Sept. 2000): 460-463.

D.102 "An Introduction to 'The Sealion Hunter.'" *Brick* (Toronto) 65/66 (Fall 2000): 65-67. Excerpt from the introduction to A.62, introducing C.77.

D.103 • "The Origin of Mind." *Canadian Literature* 167 (Winter 2000): 157-166. Essay incorporating a text in Nootka with English translation (rev. in A.83). In the same issue with S.233 & S.234.

2001

D.104 "Introduction to the Sealion Hunt" [sic]. *Storytelling Magazine* (Jonesborough, Tennessee) 13.5 (Fall 2001): 14-15. Excerpt from the introduction to A.62, reproduced (with numerous errors) from D.102, but without the accompanying translation.

D.105 • "The Life of Letterforms: The 1998 Georg Svensson Lecture." *Biblis* (Stockholm) 13 = 4.1 (2001): 6-17, 35-40. Text and 39 photographs, reproducing an illustrated lecture given by Bringhurst at the Royal Library, Stockholm, on 10 November 1998.

2002

D.106 • Review of *Spar: Words in Place*, by Peter Sanger. *The Globe and Mail*, August 10, 2002: D7.

D.107 • "The Tree of Meaning and the Work of Ecological Linguistics." *Canadian Journal of Environmental Education* (Whitehorse). 7.2 (2002): 9-22. Text of Bringhurst's keynote lecture at the Conference on Environmental Ethics & Education, Whitehorse, 19 July 2001. Rev. in A.81.

D.108 • "Half a Life." Review of *Franz Boas: The Early Years, 1858-1906*, by Douglas Cole. *Canadian Literature* 173 (Summer 2002): 129-131. In the same issue with S.255.

D.109 • "And Sheila is an honourable woman." *The Globe and Mail*, October 14, 2002: A13. Editorial concerning the response of the Canadian Heritage Minister, Sheila Copps, to appeals for support of the Bill Reid Museum.

D.110 • Review of *Northern Haida Master Carvers*, by Robin K. Wright. *Oregon Historical Quarterly* (Portland) 103.3 (Fall 2002): 398-399.

2003

- D.111 “Disconnection and Its Contents.” *The Malabat Review* 144 (Fall 2003): 64. Four paragraphs rpt. from D.7.
- D.112 • “Water Works.” *The Globe and Mail*, October 25, 2003: D31.
- D.113 • Review of *Bill Reid: The Making of an Indian*, by Maria Tippet. *The National Post*, November 8, 2003: RB9.

2004

- D.114 • “A Short History of Typography.” *The Walrus* (Toronto) 3 (February/March 2003): 23-24. A chart in the form of alpha and omega, with brief snippets of narrative text, comments and illustrations.
- D.115 • “The Voice in the Mirror.” *Printing History* (Rochester, NY) 46 (23.2, 2004): 3-20. Text of Bringhurst’s keynote address at the American Printing History Association’s 25th annual conference, October 2000. Includes 11 illustrations. Rev. in A.81.
- D.116 • “Celebrating Gaspereau Press.” *Books in Canada* 33.2 (March 2004): 39. Brief article on Gaspereau Press. The title is not Bringhurst’s. In the same issue with S.271.
- D.117 • Remembrance of John Dreyfus (1918–2003). *Parenthesis*. (London/Mission, B.C.) 9 (March 2004): 6-7.
- D.118 • “Consider Translation: A Roundtable Discussion.” With Steven Engler, Susan Bassnett & Susan DiGiacomo. *Religious Studies Review*. (Valparaiso, Indiana) 30.2–3 (April, July 2004): 107-120. Outgrowth of Engler’s review (S.248) of *Nine Visits to the Mythworld*. Text overlaps in part with the essays “What is Found in Translation” in B.83. & “The Future of the Past” in D.126.
- D.119 “Finding the Form of an Ancient Text.” *Letter Arts Review* (Greensboro, NC) 19.2 (2004): 36-41. Essay on translating Parmenides, rev. from B.87 (disfigured by several typographical errors).
- D.120 • Review of *Lichens of North America*, by Irwin M. Brodo. *The National Post*, December 4, 2004: RB6. This micro-review – some sixty words – is part of a feature in which 17 writers “pick the perfect gift book for this holiday season.” The feature is run as a series of headers from p. RB6 to p. RB11.

2005

- D.121 • “Finding Home: The Legacy of Bill Reid.” *Canadian Literature* 183 (Winter 2004): 180-191 [actually published in April 2005]. Text of a lecture delivered at the First Nations House of Learning, University of British Columbia, on 6 February 2004. Rev. in A.81.
- D.122 • “Also known as.” *The Times Literary Supplement*, May 6, 2005: 26. Review of *The Ends of the Earth*, by W.S. Merwin.
- D.123 • “The Critic in the Rain.” *B.C. Studies* 2005 (Vancouver) 147: 103–107. Review of *The Arbutus/Madrone Files*, by Laurie Ricou (rev. in A.83).
- D.124 • Review of *Early Type Specimens in the Plantin-Moretus Museum*, by John Lane. *Papers of the Bibliographical Society of Canada/Cahiers de la Société bibliographique du Canada* (Toronto) 43.2 (Autumn 2005): 79-81.
- D.125 [With Peter Koch & Dan Carr] “Excerpts from *Carving the Elements: A Companion to the Fragments of Parmenides*.” *Parenthesis* (Vancouver) 11: 10-13. Excerpts from B.87/E.9, with commentary by the editors of *Parenthesis*. In the same issue with S.281.

2006

D.126 • “The Future of the Past: Translating Native American Literature into Colonial Tongues.” *Ellipse* (Fredericton, NB) 76 (Winter 2005–6): 11-22. Text of Bringhurst’s keynote lecture at the *Congrès trisannuel de la Fédération Internationale des Traducteurs*, Vancouver, 8 August 2002.

2007

D.127 • “The Art of Overhearing Charlie Mitchell’s Prayer.” *Ellipse* 78 (2006-7): 17-22. Essay, rev. in A.83.

D.128 “Licking the Lips with a Forked Tongue.” *Event* (New Westminster, BC) 36.1 (2007): 7-16. Essay, rpt. from A.79.

D.129 “Goldilocks and the Three Alphabets.” *Communication Arts* (Menlo Park, Calif.) 49.6 (2007): 230-238.

2008

2004

E.9 •• Robert Bringhurst et al. *Carving the Elements: A Companion to the Fragments of Parmenides*. Berkeley: Editions Koch. 2004. 144 p. 15 × 23 cm. ISBN 0-88179-116-4. Companion to A.70 & A.70a. See also B.87. Reviews: XXX.

2009

E.10 François Mandeville. *This Is What They Say: Stories*, translated from Chipewyan by Ron Scollon. Foreword by Robert Bringhurst. Vancouver/Toronto: Douglas & McIntyre. 2009. 286 p. 15 × 23 cm. ISBN 978-1-55365-473-5. Same as B.109. The Appendix, “Four States of an Oral Text,” is based on pp 22–25 of *The Surface of Meaning* (A.87). Softcover.

E.10a François Mandeville. *This Is What They Say: Stories*, translated by Ron Scollon. Foreword by Robert Bringhurst. Seattle: University of Washington Press. 2009. 286 p. 15 × 23 cm. ISBN 978-1-55365-473-5. Identical to E.10 except for the cover.

E.11 Bill Reid. *Solitary Raven: Essential Writings*, edited with commentary and notes by Robert Bringhurst. Vancouver/Toronto: Douglas & McIntyre. 2009. 252 p. 19 × 22 cm. ISBN 978-1-55365-448-3. Same as B.110. Revised and expanded edition of E.8. Includes revised introduction, chronology and bibliography, as well as additional notes by Bringhurst. Softcover. Reviews: S.325.

E.11a Bill Reid. *Solitary Raven: Essential Writings*, edited with commentary and notes by Robert Bringhurst. Vancouver/Toronto: Douglas & McIntyre. 2009. 252 p. 19 × 22 cm. ISBN 978-1-55365-448-3. Special edition for the Bill Reid Foundation and Bill Reid Gallery of Northwest Coast Art. Identical to E.11 except for the back cover.

F FILMS & RECORDINGS

1986

F.1 *The Blue Roofs of Japan*. Vancouver, B.C.: privately published, 1986. Cassette tape. Contents: Acoustic version of A.31. Pirated from the 1985 CBC Radio studio tape. Voices by Robert Bringhurst and Donna White, produced for the CBC by Don Mowatt.

1989

F.2 *In Rage for Order: Poems with Music*. Galiano Island, B.C.: René Mahlow, 1989. Cassette tape. Contribution: “Nánquán Puyàn”, from A.32. Voices by Heather McRae & René Mahlow. Produced by René Mahlow using texts by various authors.

F.3 *The Spirit of Haida Gwaii*. Documentary film, produced & directed by Alan Clapp. First broadcast: CBC national television, September 1992. One-hour documentary on the creation of Bill Reid's sculpture *The Spirit of Haida Gwaii*. (See also A.39.)

R ARCHIVAL COLLECTIONS

R.1 *Carmina propria et opuscula translata*. Unpublished MFA thesis, University of British Columbia, 1975. Location: Special Collections, University of British Columbia Library, Vancouver. Contents: I. *Carmina*: An Augury (from C.21); Genesis Frozen (from C.16); Essay on Adam (from C.11); Patrimony (first pub. in A.6); Deuteronomy (from A.3); Babylon (from C.13); • Decalogue; A Short History (first pub. in C.22); Parmenides (first pub. in A.5); Pythagoras (from A.4); Pherekydes (first pub. in C.25); Empedokles' Recipes (first pub. in C.24); Three Deaths (first pub. in A.6); The Dogs of New Spain (first pub. in A.6); A Quadratic Equation (from C.11); Sleep Does Not Have Chinese Eyes (from C.17); Piece After Supervielle (first pub. as "The Long and the Short of It" in C.33); • One Out of Six; Some Ciphers (from C.16); For Robert Grosseteste (from C.18); Phoenix (from C.16); Notes to the Reader (first pub. in A.6); Hachadura (first pub. in C.26); II. *Opuscula Translata*: El-Samau'al, "Fragment" (trans. from Arabic, from C.2); El-Khansa, "Elegy" (trans. from Arabic, from C.15); El-Ma'arri, "Five Poems" (trans. From Arabic, first pub. in C.29); Badr Shakir el-Sayyab, "City of Mirage" (trans. From Arabic, from C.3); Badr Shakir el-Sayyab, "The Cry of the Mallard" (trans. From Arabic, from C.15); Mahmoud Darweesh, "Waiting for Them" (trans. from Arabic, from C.15); "The Petelia Tablet" (trans. from Greek, first pub. in C.22); Aeschylus, "Four Fragments" (trans. from Greek, from C.11); Empedokles, "Seven Fragments" (trans. from Greek, rev. from C.12).

R.2 Kanchenjunga Press Archive. Location: Special Collections, University of British Columbia Library, Vancouver. Acquired in 1979. Copies of the publications, correspondence with authors, editorial correspondence, financial records, manuscripts, and other files of the Kanchenjunga Press, which was active from 1972 to 1978. The press was founded by Bringhurst in collaboration with Miki Sheffield, and Bringhurst served as senior editor throughout the life of the firm. The operation was based in Bloomington, Indiana, during 1972–73, and in Vancouver (with branch operations in Red Bluff, California, and in San Francisco) during 1973–78. (See also D.20.)

R.3 The Robert Bringhurst Papers. Location: Special Collections, University of British Columbia Library, Vancouver. Acquired in 1983. Despite its name, this archive is devoted entirely to manuscripts and working papers for *Visions: Contemporary Art in Canada* (E.5). It includes six manuscript drafts and extensive editorial correspondence, along with design sketches, layout grids and working notes for the typography and illustration.

R.4 Robert Bringhurst Archive. Location: National Library of Canada, Ottawa. Acquired in 1987; additional material acquired in 1990 and in 2000. Manuscripts and correspondence, teaching notes, translations, copies of early journalism, financial records, photographs, academic and military records, advertisements and announcements for books and readings, tape recordings of readings, reviews, and other files from the 1960s through the end of 1999. Includes copies of nearly all books and other publications designed by Bringhurst during this period, with records concerning the typography, and the business records of Robert Bringhurst Ltd. Journals are included for the period 1964–75.

S CRITICAL STUDIES, REVIEWS & OTHER SECONDARY SOURCES

S.1 Anonymous. Review of *The Shipwright's Log* (A.1). *Choice* (Chicago) 10.11 (January 1974): 1714.

S.2 Anonymous. Review of *Cadastre* (A.2). *Choice* 10.11 (January 1974): 1714.

1976

S.3 Norman Stock. Review of *Bergschrund* (A.6). *Library Journal* (New York) 101 (15 March 1976): 819. Stock calls Bringhurst “a poet who looks outward to the world and draws strength for his vision from the hardness of nature itself” and says that “Bringhurst’s poetry is distinguished by a lack of self-pity in facing reality and history, and by a willingness to grapple with the problem of finding an original language for that which is not-man.”

S.4 Robert A. Lecker. Review of *Bergschrund* (A.6). *Quill & Quire* (Toronto) 42.5 (April 1976): 46.

S.5 Raymond J. Smith. “Poetry Chronicle.” *The Ontario Review* (Windsor, Ontario) 4 (Spring/Summer 1976): 104-110. Review of several books, including *Bergschrund* (A.6).

S.6 Anonymous. Review of *Bergschrund* (A.6). *Choice* 13.7 (September 1976): 815.

S.7 John Biguenet. “Stones are to Silence as Darkness is to Light.” *West Coast Review* (Burnaby, British Columbia) 11.2 (October 1976): 39. Review of *Bergschrund* (A.6). “The disciplined imagination behind his images is as precise as the disciplined light of a laser. That imagination is informed by many traditions (Semitic, Greek, Precolumbian) which it not only absorbs but reiterates.... *Bergschrund* is not a book; it is a library.” (See also S.10.)

1977

S.8 William Meads. “The Holes in the Stone.” *Kayak* (Santa Cruz, California) 44 (February 1977): 60-65. Review of *Bergschrund* (A.6). “The extraordinary thing about Robert Bringhurst is that he really knows how to see. And he takes his seeing seriously: seeing is his way of thinking, of knowing, of being. His images, even the most daring ones, are never merely invented.... And he has absolute control of his rhythms, particularly in the matter of defining the line.... Like Brecht, he writes a ‘perfectly natural’ idiom which no one speaks.... There are no gimmicks: everything is in a natural speech rhythm. Yet its taste on the tongue seems somehow distilled.”

S.9 Kerry Shawn Keys. “Bringhurst Aorist.” *Loose Leaves Fall: Selected Poems*. Camp Hill, Pennsylvania: Pine Press, 1977: 72. A poem. (See also “Kerry Shawn Keys” in A.2.)

1978

S.10 John Biguenet. Review of *Jacob Singing* (A.7). *The New Orleans Review* ?? (??1978): ?? (See also S.7.)

S.11 Marilyn Bowering. “Long Poems from the Little Presses.” *Quill & Quire* 44.9 (July 1978): 42. Review of several books, including *Jacob Singing* (A.7).

S.12 Douglas Barbour. “Canadian Poetry Chronicle: VI.” *Dalhousie Review* (Halifax) 58.3 (Autumn 1978): 555-578. Review of many books, including (p. 569) *Bergschrund* (A.6). (See also S.53.)

S.13 Gail McKay. *The Pat Lowther Poem*. Toronto: Coach House Press, 1978: unpagged. Section XLIV of the poem is a portrait of Bringhurst, who replaced Pat Lowther as Visiting Lecturer in the University of British Columbia’s Dept. of Creative Writing after Lowther was murdered in 1975.

1980

S.14 [Colin Browne]. “I Believe in Vengeance.” *CVII [Contemporary Verse Two]* (Winnipeg) 5.2 (Winter 1980/81): 10-17. Interview with Vancouver bookseller William Hoffer, in which Bringhurst and others also appear. (The title is a quotation from Hoffer. See also S.82, S.93, S.106, S.191.) In the same issue with S.15.

S.15 Jane Munro. "Bringhurst's Range: Essential Information." *CVII [Contemporary Verse Two]* 5.2 (Winter 1980/81): 38-41. Review of *Bergschrund* (A.6), *Jacob Singing* (A.7), and *The Stonecutter's Horses* (A.9), with a partial account of an interview. In the same issue with S.14.

1981

S.15a Elsa Linguanti. "Allo-Fanìe: I Poeti Canadesi Della West Coast." *Letterature d'America. Rivista trimestrale* (??: Bulzoni) 2.7 (Primavera 1981): 123-153. Essay on the poetry of the Canadian West Coast from 1961 to 1981, focussing especially on the work of Earl Birney, George Bowering, and Bringhurst. (See also S.157.)

1983

S.16 Robin Skelton. "Poetry Selected, Collected, and Resurrected." *Quill & Quire* 49.3 (February 1983): 33. Review of several books, including *The Beauty of the Weapons* (A.14). "Bringhurst is an acutely intelligent writer, his mind at once austere and sensual. He reanimates fragments of Greek, Chinese, Egyptian and Aztec thought so that they illuminate our present, and he does so in a style of utmost clarity and simplicity.... *The Beauty of the Weapons* is a book to place beside Eliot's *Prufrock* and Stevens's *Harmonium*." (See also S.34.)

S.17 Alan Twigg. "From Indian Legends to Feminist Mythology." *The Province* (Vancouver), 20 March 1983: Magazine, 6. Review of several books including *The Beauty of the Weapons* (A.14). Nominates Bringhurst as "the Colonel Kurtz of Canadian poetry."

S.18 David Helwig. "Irving Layton: Orator Howling in an Empty Stadium." *The Star* (Toronto), ?? 1983: ?? . Review of two books: *The Beauty of the Weapons* (A.14) and Layton's *A Wild Peculiar Joy*. [The howling orator mentioned in the headline is Layton rather than Bringhurst.]

S.19 Wayne Holder. Review of *The Beauty of the Weapons* (A.14). *The Vancouver Literary News* 4.83 (April 1983): 26-31.

S.20 Charles Seluzicki. Review of *Albion Broadbeats 1980-81*. *Fine Print* (San Francisco) 9.2 (April 1983): 51-52. Includes review and partial reproduction of *The Knife in the Measure* (A.10).

S.21 Charles Lillard. Review of *Tzubahalem's Mountain* (A.12) and *The Beauty of the Weapons* (A.14). *The Reader* 2.2 (Vancouver), June 1983: 1-4.

S.22 Sam Hamill. Review of *The Beauty of the Weapons* (A.14). *Western American Literature* (Logan, Utah) 18.2 (Summer 1983): 187-189. "Bringhurst possesses an enormous appetite for the history of ideas. That alone would make him valuable. But his extraordinary ear and exceptional attention to craft bring to his poems a sense of living speech, of musically alive speech, that is rare.... He combines translation with imaginative writing as well as anyone since Rexroth and Duncan.... There is a depth of humanity in these poems, one that will grow, one from which we all may learn. *The Beauty of the Weapons* is a wonderful introduction to one of the finest younger poets in North America."

S.23 Steven Smith. "Blood and Butterfly Bones". Review of *The Beauty of the Weapons* (A.14). *Books in Canada* (Toronto) 12.7 (August/September 1983): 25-27.

S.24 Sr Anne Leonard. Review of *The Beauty of the Weapons* (A.14). *CM* (Ottawa) 11.5 (September 1983): 213.

S.25 W.J. Keith. Review of *The Beauty of the Weapons* (A.14). *Canadian Book Review Annual 1982*. Toronto: Simon & Pierre, 1983: 164.

S.26 Sandra Djwa & Ronald B. Hatch. Review of *The Beauty of the Weapons* (A.14). *University of Toronto Quarterly* 52.4 (Summer 1983): 347-348. In the Poetry section, "Letters in Canada 1982."

S.27 Chaviva Hosek. "Poetry in English 1950 to 1982." *The Oxford Companion to Canadian Literature*, edited by William Toye. Toronto: Oxford University Press, 1983: 667-668. There is no entry on Bringhurst in this initial edition of the *Companion*, but Hošek discusses his work briefly in relation to that of Christopher Dewdney and others. (See also S.188.)

S.28 Russell Bingham. "In-depth Look at Canadian Art." *Edmonton (Alberta) Journal*, 11 December 1983: B6. Review of *Visions* (E.5).

S.29 Harold Town. "Critics, History and Art." *Toronto Globe and Mail*, 24 December 1983: Entertainment, 15. Review of *Visions* (E.5).

S.30 Adele Freedman. Review of *Visions* (E.5). *Quill & Quire* 49.12 (December 1983): 24.

1984

S.31 Susan Crean. Review of *Visions* (E.5). *Books in Canada* 13.1 (January 1984): 23-24.

S.32 Robert Fulford. "By Persons Unknown." *Saturday Night* (Toronto), March 1984: 9-11. Discussion of several poets including Bringhurst. In "*The Beauty of the Weapons* ... one senses a writer whose austerity hides a minefield of complex passions.... Bringhurst has something in him of the physicist, philosopher, biologist, and poet.... He reads and thinks widely, and his work is the poetry of a passionate cultural historian.... In some poets this burden of reference might be oppressive; in Bringhurst it's carried with both ease and conviction. Bringhurst seems at home wherever he travels."

S.33 Pete McMartin. "Fruits of the excavation...." *The Vancouver Sun*, 16 March 1984: A5. Account of an interview, provoked by S.32.

S.34 Robin Skelton. "Recent Canadian Poetry." *Poetry* (Chicago) 144.5 (August 1984): 297-307. A wide-ranging discussion. Pp. 303-304 are devoted to Bringhurst – who, Skelton says, "may be the poet we have all been waiting for: one who can reclaim for poetry the dignity, wit, brilliance, and wisdom it has recently appeared to have mislaid. He is without doubt a major poet, not only in the context of Canadian letters, but in that of all writing of our time." (See also S.16.)

S.35 Robert J. Belton. Review of *Visions* (E.5). *University of Toronto Quarterly* 53.4 (Summer 1984): 507-511. In the Humanities section, "Letters in Canada 1983."

S.36 Anonymous. Review of *Visions* (E.5). *Publishers Weekly* (New York) 226.7 (17 August 1984): 51.

S.37 Reginald Berry. "Natural & Unnatural." *Canadian Literature* (Vancouver) 102 (Autumn 1984): 136-138. Review of several books including *The Beauty of the Weapons* (A.14). Describes Bringhurst as "one of the wisest voices in Canadian poetry" and "an eloquent guide to the dark places of intellect and flesh."

S.38 Stephen Allan Patrick. Review of *Visions* (E.5). *Library Journal* 109.14 (1 September 1984): 1664.

S.50a Carol Hunter. Review of *The Raven Steals the Light* (A.22) In *SAIL* 9.3 (*Studies in American Indian Literature*), (Summer 1985): 138-139.

S.51 L.R. Ricou. Untitled review, beginning “The work of Claude Lévi-Strauss...” *Canadian Literature* 105 (Summer 1985): 201–202. Review of several books, including *The Raven Steals the Light* (A.22). “These are, simply, the best versions of Indian tales I have read: they are colloquial yet poetic, precise yet spilling outside their boundaries, accumulating and then blending into one another. The writers, like Raven, are intelligent yet irreverent.... In such collisions, we recognize that ‘the purpose of myths ... is not merely to relate experiences, but to lead to significant changes in the structure of things.’ Bringhurst and Reid share this passion in a truly extraordinary, liberating collection.” (See also S.65, S.102, S.125.)

S.52 Yoshikawa, Tsuneko. “Kanada no shijin: shishi nado no koto: Autrey Thomas-shi Robert Bringhurst-shi no rainichini furete.” *Nihon Gendai Shijin Kaiho* (Tokyo) ns 27 (August 15, showa 60 [1985]): 6. Article about Thomas and Bringhurst, in Japanese.

S.53 Douglas Barbour. *Canadian Poetry Chronicle* (1984). Kingston, Ontario: Quarry Press, 1985. Includes (pp. 16-17) a discussion of *The Beauty of the Weapons* (A.14). (See also S.12.)

S.54 Stephen Spender. *Journals 1939–1983*, ed. John Goldsmith. London: Faber & Faber, 1985. The entry for 4 April 1982 (pp. 442-443) recounts a meeting with Bringhurst in Vancouver and describes Spender’s first encounter with *Bergschrund* (a10.): “poems of dazzling purity ... the work of a mind dwelling on great geographical and historical heights, completely unlike anything else, showing the utter commonplaceness of the confessional writing fashionable now.”

S.55 Anonymous. Review of *The Beauty of the Weapons* (A.26). *Publishers Weekly* 228.21 (22 November 1985): 8, 50.

S.56 Glennis Zilm. Review of *Tending the Fire* (A.27). *Amphora* (Vancouver) 62 (December 1985): 24-25. Reprinted as S.126.

S.79 Robert Solomon. Review of *Pieces of Map, Pieces of Music* (A.35). *Small Press (The Magazine and Book Review of Independent Publishing)* (New York) 5.2 (December 1987): 48.

1988

S.80 M. Waters. Review of *Pieces of Map, Pieces of Music* (A.35). *Choice* 25.5 (January 1988): 764.

S.81 Dan Davidson. "Book Gives Native View of History" and "Yukon Book Reflects Indian Anthropology." *The Whitehorse Star* (Whitehorse, Yukon), 3 February 1988: 28. Review of *Part of the Land, Part of the Water* (A.36) and local gossip concerning the book.

S.82 [William Hoffer]. In *List No. 69: Canadian Literature*. Vancouver: William Hoffer, n.d. [1988]. One of many Hoffer catalogues which depart from bibliographical description into anecdote, criticism and invective. Entry 25 (p. 3), which begins as a bibliographical description of *The Stonemason's Horses* (A.9), goes on to address the strained relationship between poet and bookseller. (See also S.14, S.93, S.106, S.191.)

S.83 Maggie Helwig. Review of *Pieces of Map, Pieces of Music* (A.32). *What* (Toronto) 13 (November/December 1987, "Publication date: March 10, 1988"): 8-9.

S.84 Larry Scanlan. "Notebook: Interview with Robert Bringhurst." *The Whig-Standard Magazine* (Kingston, Ontario), 26 March 1988: 25. A discussion devoted chiefly to *Pieces of Map, Pieces of Music* (A.32) and *Conversations with a Toad* (A.33).

S.85 Zdenek Volný. "Útržky mapy, útržky hudby." *Svetová literatura* (Prague) 33 (n° 2, 1988): 50-51. A discussion of Bringhurst's poetry and politics, in Czech, with translations of nineteen poems (see T.Cz.2).

S.86 Steven Pugmire. Review of *Pieces of Map, Pieces of Music* (A.35). *Western American Literature* 23.1 (May 1988): 88-89. Reviewed with Sam Hamill's *The Nootka Rose*.

S.87 Nancy Campbell. "Storytelling the Oldest Tradition." *The Whitehorse Star*, 22 June 1988: 36. Interview occasioned by Bringhurst's participation in the First Northern Storytelling Festival, Whitehorse, June 1988.

S.88 Anonymous. "Poet Says Native Tradition is Largely Ignored." *The Yukon News* (Whitehorse, Yukon), 22 June 1988: 5.

S.89 Gary Geddes. "Robert Bringhurst." *Fifteen Canadian Poets Times Two*. Toronto: Oxford University Press, 1988: 527-528. Critical summary accompanying anthology selections. (See also B.27, S.95, S.240a.)

S.90 Roman Gadzo. Review of *Pieces of Map, Pieces of Music* (A.35). *The Fessenden Review* (San Diego, Calif.) 11.4 (1988): 33-34.

S.91 Glennis Zilm. Review of *Conversations with a Toad* (A.33). *Amphora* 73 (September 1988): unpaginated “special insert” between pp. 10 & 11. Enlarged and corrected from S.76, as explained by the editor’s note on p. 10 of this issue.

S.92 Jan Conn. “Beneath the Silk Print of Bamboo.” *This Magazine* (Toronto) 22.4 (August/September 1988): 41. This poem (which carries a dedication to Bringhurst) recounts a visit to the Point Grey Road garret in Vancouver where Bringhurst lived from 1977 to 1986.

S.93 [William Hoffer]. In *List No. 71: Canadian Literature*. Vancouver: William Hoffer, n.d. [1988]. Entry 67 (pp. 7-9) begins as a bibliographical description of *Ocean/Paper/Stone* (A.18) and its codicil, *Pebble/Pond/Errata Slip* (A.34). Then, with reference to “A Measure of Freedom” (D.50), it continues the diatribe begun in S.82. (See also S.106, S.191.)

S.94 Kelly Savage. “Magical myths entertain, educate.” *Southbridge News* (Southbridge, Mass.), 29 October 1988: 13. Review of two books including *The Raven Steals the Light* (A.22b).

S.95 Gary Geddes. Review of *Pieces of Map, Pieces of Music* (A.35). *Journal of Canadian Poetry* (Nepean, Ontario) n.s. 3 (1988): 15-18. (See also S.89, S.240a.)

S.96 Glenn Sheldon. Review of *Pieces of Map, Pieces of Music* (A.35). *Small Press Review* (El Cerrito, California) 20:12 (December 1988): 12.

1989

S.97 Jon Davis. “For What We Fashion.” *American Book Review* (Boulder, Colorado) 2.1 (March/April 1989): 22. Review of two books including *Pieces of Map, Pieces of Music* (A.35).

S.98 Anonymous. “The Owl and the Bluejay.” *Margin* 8 (1989): 44. A parody of sorts, published under Bringhurst’s name though not written by him. It is part of a series entitled “Alpha and Digby Birds” (pp. 30-53), which includes other examples of the same genre – passages fictitiously attributed to D.H. Lawrence, Thomas Hardy, Gerard Manley Hopkins and others– along with several items whose attributions appear to be genuine.

S.99 Roo Borson. “The Gift, for Robert Bringhurst.” In *Intent, or the Weight of the World*. Toronto: McClelland & Stewart. 1989: 28. A poem.

S.100 John Whatley. “Readings of Nothing: Robert Bringhurst’s *Hachadura*.” *Canadian Literature* 122-23 (Spring/Summer 1989): 108-122.

1990

S.101 A[listair] P[eebles]. “Listening to a Different Voice.” *The Orcadian* (Stromness, Orkney, Scotland), 19 April 1990. Account of a poetry and storytelling performance by Bringhurst in Stromness.

S.102 Laurie Ricou. “Poetry.” In *The Literary History of Canada: Canadian Literature in English*, 2nd ed., vol. IV. Toronto: University of Toronto Press. 1990: 3-45. The section of Ricou’s essay devoted to the metaphysical lyric is largely devoted to Bringhurst and begins by quoting in full the short lyric “Poem about Crystal,” from A.14. Further references to Bringhurst can be found in the index to the volume. (See also S.51, S.65, S.125.)

S.103 Mordecai Richler. *Solomon Gurski Was Here*. 1990. Richler’s novel recasts Haida trickster mythology in Jewish terms, acknowledging *The Raven Steals the Light* (A.22) as its source. (See also S.155.)

S.104 Joy Asham Fedorick. “Fencepost Sitting and How I Fell Off to One Side.” *Artscraft* (xx) 00 (Fall 1990): 9-14. A Cree woman, writing on the issue of whites, natives, and the revival of aboriginal literature, discusses Bringhurst’s involvement with the Cree and Ojibwa. (Rpt. as S.104a.)

S.104a Joy Asham Fedorick. "Fencepost Sitting and How I Fell Off to One Side." In *Give Back: First Nations Perspectives on Cultural Practice*. North Vancouver, B.C.: Gallerie, 1992: 27-46. Republication of S.104.

S.105 Russell Brown et al. "Robert Bringhurst." *An Anthology of Canadian Literature in English*. Toronto: Oxford University Press, 1990: 695. Critical and biographical summary accompanying anthology selections. (See also B.36.)

1991

S.106 [William Hoffer]. In *List No. 77: Canadian Literature*. Vancouver: William Hoffer, 1991. Entries 85 and 86 (pp. 16-17) begin as bibliographical descriptions of *The Blue Roofs of Japan* (A.31a) and *Shovels, Shoes and the Slow Rotation of Letters* (A.29), and continue with gossip and complaint. (See also S.82, S.93, S.191.)

S.107 Peter Sanger. "Poor Man's Art: On the Poetry of Robert Bringhurst." *Antigonish Review* (Antigonish, Nova Scotia) 85-86 (Spring/Summer 1991): 151-169.

S.108 Fraser Sutherland. "Robert Bringhurst." In *Contemporary Poets*, ed. Tracy Chevalier. Chicago & London: St James Press. 1991: 99-100.

S.109 Nancy Beale. "Everyone's in the Same Boat." *The Ottawa Citizen*, 3 November 1991: C2. Article on Bill Reid's *The Spirit of Haida Gwaii* and Bringhurst's *The Black Canoe* (A.39).

S.109a Bette S. Weidman. Review of *Native Writers and Canadian Writing* (B.32) In *SAIL* 2.3.4 (*Studies in American Indian Literature*, Series II), (Winter 1991): 61-65.

S.110 Chris Dafoe. "An Odyssey of Mythic Proportions." Toronto *Globe and Mail*, 16 November 1991: C5. Article on Reid's *The Spirit of Haida Gwaii* and Bringhurst's *The Black Canoe* (A.39).

S.111 Benjamin Forgey. "Canada's Sculptured Spirit." *The Washington Post*, 19 November 1991: C1-2. Article on Reid's *The Spirit of Haida Gwaii* and Bringhurst's *The Black Canoe* (A.39a).

S.112 Renée Blackstone. "A New-Day Noah's Ark." *The Province* (Vancouver), 24 November 1991: C14. Review of *The Black Canoe* (A.39).

S.114 Norbert Ruebsaat. Review of *The Black Canoe* (A.39). *The Reader* 10.4 (Vancouver), December 1991: 41-44.

S.115 Elizabeth Anthony. "The Sacred and the Profound." *Books in Canada* 10.9 (December 1991): 31-33. Review of several books, including *The Black Canoe* (A.39).

S.116 Ann Rosenberg. "Native Myth to Urban Ornament." *The Vancouver Sun*, 7 December 1991: Saturday Review section. Review of several books, including *The Black Canoe* (A.39).

S.117 Elizabeth Beauchamp. Review of *The Black Canoe* (A.39). *Edmonton Journal*, December 22, 1991: D4.

S.118 John Lekich. "Poetic Vision: Bill Reid's Spirit of Haida Gwaii." *The Vancouver Star* (Vancouver) 2.6 (December/January 1991-92): 14-19. Feature article based on *The Black Canoe* (A.39) and an interview with Bringhurst.

1992

S.119 Kay Kritzwiser. "A Visible Heritage." *Quill & Quire* 58.1 (January 1992): 24. Review of several books, including *The Black Canoe* (A.39).

S.120 Karal Ann Marling. "A Noah's Ark of the North." *The New York Times Book Review*, February 9, 1992: 13. Review of *The Black Canoe* (A.39a).

S.120a Karal Ann Marling. "Unique Vision Lies Behind Launch of the Black Canoe." *Montreal Gazette*, February 29, 1992: K5. Reprint of S.120. (See also D.63.)

S.121 Calvin Luther Martin. *In the Spirit of the Earth: Rethinking Time and History*. Baltimore: Johns Hopkins University Press, 1992. Bringhurst is quoted repeatedly in Chapters 4-5, and his work discussed in Chapter 6, "Between the Lines: Bibliographical Essay and Epilogue."

S.122 Anonymous. "Reid's Chroniclers Edge Out Competition." *The Vancouver Sun*, 2 May 1992: Saturday Review section, SR9. Chiefly an account of an anonymous interview with Bringhurst on the subject of *The Black Canoe* (A.39).

S.123 Richard Bingham. Review of *The Elements of Typographic Style* (A.42). *Quill & Quire* 58.9 (September 1992): 68-69.

S.124 Ruari McLean. "Master Bookmaker." *Times Literary Supplement* 4665 (28 August 1992): 25. Review of Jan Tschichold, *The Form of the Book: Essays on the Morality of Good Design* (E.7a).

S.125 Laurie Ricou. "Saxifraga punctata, Raven": Part II of "Robert Bringhurst's 'Sunday Morning': A Dialogue," by Robert Bringhurst & Laurie Ricou. In *Inside the Poem*, edited by W.H. New. Toronto: Oxford University Press, 1992: 93-100. The other half of B.42. Ricou appears as a fictional character in the portion of the dialogue written by Bringhurst, while Bringhurst appears as a fictional character in the portion written by Ricou. (See also S.51, S.65, S.102.)

S.126 Glennis Zilm. Review of *Tending the Fire* (A.27). In *Praise of the Book: Being a facsimile of important articles ... from Amphora 1965-1990*. Vancouver: Alcuin Society, 1992: 46-47. Reprint of S.56.

S.127 Jean-Pierre Duquette, "Écrire l'image." *Ellipse* 48 (1992): 15-21. Essay on the *livres d'artiste* of Lucie Lambert, including *Conversations with a Toad* (A.33). Repeated in English translation by Hugh Hazelton, pp. 22-28. In the same issue with C.61 and T.Fr.3.

S.128 Francesco M. Casotti, "The Stonecutter's Horses." *La Cultura Italiana e le Letterature Straniere Moderne*, ed. Vita Fortunati. Bologna: Università di Bologna / Ravenna: Longo Editore, 1992: 305-312. Essay (in English) on the poem (A.9, rev. in A.14) and its sources.

S.129 Anne Taylor. "Largo" and "The Garden." *Writing North: An Anthology of Contemporary Yukon Writers*, ed. Erling Friis-Baastad & Patricia Robertson. Whitehorse: Beluga Books, 1992: 158-160. The first of these short prose pieces is a portrait of the author in relation to Bringhurst, the second a portrait of Bringhurst in relation to the author. The garden in question is one Bringhurst built – quite successfully by other accounts – in the late 1980s and early 1990s in front of his cabin on Bowen Island.

S.130 Mark Woodhouse. Review of *The Elements of Typographic Style* (A.42). *Library Journal* 117: 21 (December 1992): 130-132.

S.284a Nicholas P.R. Bradley. *Ecology and Knowledge in the Poetry of Pacific North America*. Dissertation. University of Toronto. 2006. Discusses "the works of five poets, each affiliated to some extent with the west coast of North America: Robinson Jeffers, Gary Snyder, Don McKay, Jan Zwicky, and Robert Bringhurst.... I demonstrate first that Jeffers and Snyder depict a world marked by intricate interrelationships and dependencies; they attempt to explore the essence of the world by escaping an anthropocentric point of view.... In turn I demonstrate that Bringhurst incorporates into his poetry elements of various mythologies and Buddhist philosophy in order to create a poetics of radical anti-anthropocentrism. I conclude by discussing the question of political efficacy in contemporary nature poetry."

S.285 "Quadra Island Author Awarded Honorary Degree." *Campbell River Mirror* (Campbell River, B.C.), June 16, 2006: A16. Lengthy news release evidently issued by the University College of the Fraser Valley.

S.286 Noah Richler. *This Is My Country, What's Yours?: A Literary Atlas of Canada*. Toronto: McClelland & Stewart. 2006: 48–54, 82–83, 459. Chapter 2, "Stories and What They Do," is based largely on a reading of *A Story as Sharp as a Knife* (A.59) and on interviews and correspondence with Bringhurst.
