## Technological approaches creating novel biobased products with lignin

A Dutch company is a leading technology development company and forerunner in renewable chemistry. The company developed a process that converts non-food plant-based feedstock into industrial sugars and lignin. The company is looking for novel technologies, applications and ideas for the lignin that would bring added value and strengthens the circular economy. Cooperation would be in the frame of a research or a technical cooperation agreement. This request is part of an open innovation challenge.

## Technologies and ideas for creating products by applying humins as a novel sugar-based raw material

A Dutch technology development company is a forerunner in renewable chemistry. The Company produces liquid humins in the production process of the new plant-based plastic polyethylene furanoate (PEF). The company is looking for technologies, applications and ideas for creating products by applying humins as a novel sugar-based raw material. Cooperation would be in the frame of a research or a technical cooperation agreement. This request is part of an open innovation challenge.
